

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

INTRODUCTION.

IN the preparation of this Work, it has been the aim of the Editor to make it, to the utmost of his ability, a useful companion to the Bible,—a companion, however, not in the sense of a master or equal, but of a ministering attendant. He is not one of those who consider the word of God without note or comment, so far as relates to the great doctrines of salvation, as either defective, equivocal, or obscure. On the contrary, he believes that, notwithstanding all the disadvantages of a translation, a foreign idiom, and an Oriental drapery, it is, in every really important point, full, unambiguous, and clear. A distinction should, however, always be made between its history and its poetry, between its doctrine and its allusions. The transparent and vigorous simplicity of the former requires little aid from learned labours: *the way-faring man, though a fool, shall not err therein*; but, besides its history and its doctrine, or, in other words, its facts, moral principles, precepts, and promises connected with those facts, the Bible abounds in allusions, geographical, historical, and analogical, and these, together with prophecy and its accomplishment, form the proper field for Biblical illustration.

Bishop Van Mildert, in his *Bampton Lectures*, observes, “The knowledge of Divine truth is, indeed, perfectly distinct from human science, in that it emanates immediately from the fountain of Infinite Wisdom. Yet it has this in common with human science, that it is made by its Heavenly Author to flow through the channel of human instruction. While, therefore, we receive it not as the word of men, but, as it is in truth, the word of God, (1Thess. 2. 13,) we must nevertheless examine it as it is delivered to us, clothed in the language of man, and subject to the general rules of human composition. The deference due to it as a Divine production does not interfere with this province of human learning; it only exacts submission with respect to the subject-matter of the revelation, to which the critical investigation is entirely subordinate.”

The Bible, viewed merely as a collection of ancient writings, comprising history, philosophy, jurisprudence, morals, poetry, and prophecy, is a volume of incomparable value to the philosopher, and of inexhaustible interest to every inquiring mind. It comprises *all the treasures of wisdom and knowledge*; the simple eloquence of its narratives, the sublime imagery of its poetry, the grandeur of its descriptions, and the persuasive power of its moral lessons, combine to render it a book which will amply repay any amount of thought or labour that may be expended upon its study and interpretation. The Bible may also be considered as the highest source of historical knowledge, as it contains the only authentic, clear, and consistent account of the remotest ages of the world, communicated in a manner adapted to subserve the highest moral and religious purposes.

Archbishop Secker well observes, “The Bible comprehends, in the grandest and most magnificent order, the various dispensations of God to mankind, from the forming of this earth to the consummation of all things. It begins with the groundwork of

natural religion, the creation of the universe by one holy and good and wise Being : relating distinctly how all those parts of it to which the heathens paid Divine worship, were in truth the work of God's hands. It proceeds to the origin of the patriarchal, Jewish, and Christian religion; the introduction of sin by the fall of our first parents, of which we experience the wretched effects. It recites the second peopling of the world, the relapse of mankind into wickedness, the choice of one family and people to preserve the knowledge of God, and to be as a light shining in a dark place, for the benefit of all about them that would turn their eyes and feet to the way of peace. It lays before us the laws given to this people; it recounts their history chiefly with regard to their moral and religious behaviour, and dwells on the character and actions of their most remarkable persons. It supplies us with admirable patterns of genuine piety in the Psalms, most virtuous instruction for the prudent conduct of life in the Book of Proverbs, for bearing afflictions in that of Job, for thinking justly of wealth, honour, pleasure, science, in Ecclesiastes. Then in the prophetic books, it gives us, together with the sublimest and worthiest ideas of God, and our duties towards Him, the most affecting denunciations of that private and public misery and ruin which will ever attend sin, whether cloaked by superstition or displayed in profaneness. And, along with all these things, it unfolds a series of predictions, reaching from the beginning of the Old Testament to the end, and growing from obscure and general, continually clearer and more determinate, concerning the appearance of a Divine person on earth, for the recovery of fallen man, and for the revival and propagation of true religion throughout the world. The books of the New Testament open to us the execution of this great design. The Gospels record his supernatural birth, his unspotted and exemplary life, his astonishing and gracious miracles, his pure and benevolent doctrine, his dying for our offences, and rising again for our justification, his mission of fit persons endued with the gifts of the Holy Spirit to teach all nations; his own ascension into Heaven, and sitting at the right hand of God, till He shall come to judge the quick and the dead. The Acts of the Apostles represent the wonderful success of their preaching, and the original foundation of the Catholic Church. The Epistles contain their admirable directions to clergy and laity; and the Revelation concludes with foretelling the state of Christianity, primitive, degenerate, and reformed, to the last ages. A grander, a more comprehensive, and more useful scheme of instruction than this cannot possibly be conceived."

The illustration of the Holy Scriptures must, therefore, be considered an object of paramount importance to every devout Christian. The varied stores of information which have been accumulating for ages in the numerous works relating to the civil and ecclesiastical history of ancient empires, the interesting and valuable researches of modern travellers, particularly those relating to Egypt, have for this purpose been carefully examined, and the results placed before the inquirer, combining and condensing at the same time the works of numerous writers on all subjects within the range of Biblical investigation.

In duly estimating the importance of critical and philological research, in clearing away some of the obscurities of the Scriptures, the Editor considers the Bible, in its structure, spirit, and character, to be essentially an Eastern book; and, therefore, the natural phenomena and moral condition of the East should be made largely tributary to its elucidation. In order to appreciate fully the truth of its descriptions, and the

accuracy, force, and beauty of its various allusions, it is indispensable that the reader, as far as possible, separate himself from his ordinary associations, and place himself by a kind of mental transmigration in the very circumstances of the writers. He must sit down in the midst of Oriental scenery,—gaze upon the sun, sky, mountains, and rivers of Asia,—go forth with the nomade tribes of the desert,—follow their flocks,—travel with their caravans,—rest in their tents,—lodge in their khans,—load and unloose their camels,—drink at their wells,—repose during the heat of noon under the shade of their palms,—cultivate the fields with their own rude implements,—gather in or glean after their harvests,—beat out and ventilate the grain in their open threshing-floors,—dress in their costume,—note their proverbial or idiomatic forms of speech, and listen to the strains of song or story, with which they beguile the vacant hours. In a word, he must surround himself with, and transpose himself into, all the forms, habits, and usages of Oriental life. In this way only can he catch the sources of their imagery, or enter into full communion with the genius of the sacred penmen.

True to the traditions of their ancestors, and impenetrable thus far to the spirit of innovation, their manners and customs, opinions and institutions, retain all the fixedness of their mountains, and flow on as unvarying as their streams.

Sir John Chardin states, “In the East they are constant in all things; the habits are at this day in the same manner as in the preceding ages; so that we may reasonably believe, that in that part of the world the exterior form of all things (as their manners and customs) are the same now as they were two thousand years since, except in such changes as have been introduced by religion, which are nevertheless very inconsiderable.

Mr. Morier also says, “The manners of the East, amid all the changes of government and religion, are still *the same*; they are living impressions from an original mould, and at every step, some object, some idiom, some dress, or some custom of common life, reminds the traveller of ancient times, and confirms above all the beauty, the accuracy, and the propriety of the language and the history of the Bible.”

This testimony to the conformity, or rather identity, of the modern with the ancient usages of the East, is fully confirmed from other sources, as scarcely a traveller has set foot upon Oriental soil without professing himself to be at once struck with the remarkable coincidence between the picture of ancient manners, as drawn in the Sacred Writings, and the state of things which actually meets his eye. This stedfast resistance to the spirit of innovation and change, which thus remarkably distinguishes the nations of the East, will probably, in the Providence of God, remain unsubdued till it shall have answered all the important purposes of Biblical elucidation; when it will give way to the all-pervading, all-regenerating influence of the Bible itself, borne upon the bosom of a new tide of civilization and improvement, which shall, ere long, set in upon the East from the nations of Europe and the great continent of the West. “By a wonderful provision of Providence,” says M. Lamar-tine, “who never creates wants without at the same time creating the means of satisfying them, it happens, that at the moment when the great crisis of civilization takes place in Europe, and when the new necessities resulting from it are revealing themselves, both to governments and people, a great crisis of an inverse order takes

place in the East, and a vast void is there offered for the redundancy of European population and faculties. The excess of life which is overflowing here, may and must find an outlet in that part of the world; the excess of force which overstrains us, may and must find employment in those countries, where the human powers are in a state of exhaustion and torpidity, where the stream of population is stagnant or drying up, where the vitality of the human race is expiring."

In the mean time, while the inevitable moral change and transformation that awaits the East lingers, it behoves us to make the most for all useful purposes of that state of society which still exists, but which ere long will have passed away. The Editor, therefore, has drawn largely from those rich and abundant stores which the spirit of modern enterprise has recently unfolded for the important purposes of Biblical illustration.

The tide of travel within a few years has turned remarkably to the East; men of intelligence and observation have made their way into every region on which the light of revelation originally shone; exploring its antiquities, mingling with its inhabitants, detailing its manners and customs, and displaying its physical, moral, and political circumstances. From these expeditions they have returned richly laden with the results of their industry and the fruits of their patient research.

Nor has the progress of our knowledge during the present century, with respect to the institutions, manners, and customs of the ancient Egyptians, been less remarkable. In this department, the labours of Young, Denon, Champollion, Cailliaud, Belzoni, and Wilkinson, have opened a new and interesting path to the Biblical student, developing a rich mine of information in reference to that extraordinary people, and illustrative of the Mosaic records.

In some respects, the plan upon which this work has been constructed differs, it is hoped advantageously, from that of preceding publications of its class. Thus Scripture biography, which usually occupies a large space in Bible Dictionaries, is here treated of in a brief and concise manner, giving only the characteristic outlines, except when difficulties occur which require to be cleared up. The ancient history of the places or nations mentioned has also been given but briefly, as the best, and frequently the only, source of information is open to all, and a series of chronological tables, with which the work concludes, supersedes the necessity of a variety of details; but in those cases where it appeared necessary to bring down the narrative to modern times, due diligence has been used in procuring the materials for as ample statements as the limits of the work would allow. The space gained has been devoted mainly to the topography of the Bible, a subject hitherto little cultivated, and beset by difficulties, which, however, are daily lessening. In some cases it has been found impossible, at present, to arrive at perfectly satisfactory conclusions, yet the Editor may truly affirm that no diligence, no research, no comparison of statements, no sifting of authorities, has been spared in the pursuit of truth. For the purpose of illustration, numerous wood-cuts have been given, carefully selected from trustworthy sources. Some will be found to exhibit the costume of the modern Orientals, by which many passages of Scripture will be explained at a glance; others are copied from the paintings in the Egyptian monuments, and, beside serving the same purpose as the former, present to our view a variety of highly-interesting particulars concerning the political and social state of the land of the Pharaohs; others offer correct

representations of the present aspect of some of the most renowned cities of ancient days, or of less celebrated places connected with Scripture history; some preserve memorials of those that have perished, in coins, medals, and gems; and lastly, there will be found a variety of specimens of the botany and zoology of Southern Europe, Egypt, Syria, and Asia Minor, in cases where the objects mentioned in the Sacred Writings can be satisfactorily identified.

Upon another matter, too, a difference will be remarked. Many infidel objections to the Scriptures have been raised, either through misapprehension or plausible misrepresentation of the sacred text, and though these objections have been repeatedly shown to be utterly futile, they still maintain their ground, because the eminent men who have answered them have but too frequently addressed themselves only to the learned, and have interpreted a difficult passage in Hebrew or Greek by another in Latin, forgetting that those with whom the objections in question are most likely to have weight, are ignorant of all languages but their own. To remedy this evil, the Editor has taken care, while giving the opinions of the most learned commentators upon difficult passages, to render the matter intelligible to all, by presenting the result alone.

With a view to economy of space, a number of names occurring but seldom in the Scriptures, and also a variety of chronological tables and other documents, have been reserved for the APPENDIX, where they will be found given in the most compendious form; and with the like purpose of keeping the work within moderate limits, the custom of affixing the authorities to each article has been deviated from, the space which the constant and useless repetition of well-known names would occupy being very considerable. Instead of this, a brief Sketch of the Progress of Biblical Illustration and a Bibliographical Catalogue will be found in the APPENDIX; of which the first will indicate the gradual progress of Scriptural Illustration, and the second, while pointing out at a glance the principal authorities consulted, will also serve to indicate to the Biblical student a number of works of merit by which his inquiries may be assisted.

Whilst labouring to give to the BIBLE CYCLOPÆDIA a comprehensive character at least equalling any former work devoted to the illustration of the Holy Scriptures, the Editor's especial attention has been directed to the all-important subject of the fulfilment of Prophecy, on which the researches of modern tourists have poured a flood of light. It is perfectly astonishing to one who has never examined the subject, to find how *literally* and *minutely* the prophetic declarations of Scripture have been fulfilled. Indeed, it is impossible for the most determined infidel carefully to examine and weigh this subject, and not be forced to admit that the Bible is Divine; or, in the words of Bishop Newton, "he is reduced to the necessity, either to renounce his senses, deny what he reads in the Bible, and what he sees and observes in the world, or acknowledge the truth of prophecy, and, consequently, of Divine revelation." A writer in the *Quarterly Review* justly observes, "We confess that we have felt more surprise, delight, and conviction, in examining the accounts which the travels of Burckhardt, Mangles, Irby, Legh, and Laborde, have so recently given of Judæa, Edom, &c., than we have ever derived from any similar inquiry. It seems like a miracle in our own times. Twenty years ago, we read certain portions of the prophetic Scriptures with a belief that they were true, because other similar passages had, in the course of ages, been proved to be so, and we had an indistinct notion that

all these (to us) obscure and indefinite denunciations had been, we know not very well when or how, accomplished; but to have graphic descriptions, ground plans, and elevations, showing the actual existence of all the heretofore vague and shadowy denunciations of God against Edom, does, we confess, excite our feelings, and exalt our confidence in prophecy to a height that no external evidence has hitherto done. Here we have bursting upon our age of incredulity, by the labours of accidental, impartial, and sometimes incredulous (infidel) witnesses, the certainty of existing facts, which fulfil what were considered the most vague and least intelligible of the prophecies. The value of even one such contemporaneous proof is immense."

In the execution of the task he has undertaken, it has been the aim of the Editor everywhere to exhibit the Bible as Scripture given by inspiration of God, not as mere human composition. He has, therefore, earnestly desired to avoid that spirit of error which has, unhappily, too much prevailed of late on the Continent, which, by arrogating to itself the claim of superior sagacity and learning, has sought to reduce everything in the Sacred Volume to the level of its own limited views and narrow conceptions, denying or explaining away the miracles, and seeking thereby to lower our reverence for the Word of God, and Divine things in general. Such views and principles, usually classed under the term Neology, will, it is trusted, be found to receive no countenance in the pages of this Work.

Having thus briefly stated what *has been* intended and attempted in the construction of the BIBLE CYCLOPÆDIA, the Editor feels himself called upon to state what has *not been* either contemplated or professed, much less aimed at, in the discharge of his undertaking.

He has not usurped the duties of the divine, by presuming to enter into theological disquisitions, nor has he undertaken the advocacy of particular doctrines, or entered into the discussion of questions upon which differences of opinion exist in the Protestant community. These subjects are most properly in the hands of learned and able persons, well qualified, by their studies and their stations, to do far greater justice to such various and important matters than he could hope to achieve. His undertaking to the public was to produce *a digest of the civil and natural history, geography, and general literary information connected with the Sacred Writings*; to this end he has laboured diligently and incessantly—with what success it will be for the reader to decide.

With the views and intentions herein expressed, the BIBLE CYCLOPÆDIA is submitted to the Public, in the hope and belief that it will be found to contain much collateral information that will prove both useful and instructive in the study of the HOLY SCRIPTURES.

BIBLE CYCLOPÆDIA.

AARON.

THE name of Aaron is connected with some of the most remarkable events in Sacred History. He is known to every reader of the Bible as the first high-priest of the Hebrew nation, and the brother of its inspired lawgiver, Moses. He bore a principal part in carrying into effect the deliverance from Egyptian bondage which God wrought for the Israelites, and in establishing that system of religious polity by which they have ever since been distinguished from all the nations of the world.

But though Aaron is thus conspicuous in Sacred History, the materials which it affords us for an outline of his life and character are, comparatively, brief and scanty. His personal history is noticed only so far as it is connected with the great events which he was instrumental in accomplishing, and even in them it is obscured by that of his more illustrious brother. But the Scripture narrative of his life, though short, affords some valuable lessons, and is remarkable for that extreme fidelity which distinguishes every part of the Word of Truth. The great defects of his character, the sins into which he fell, and the punishments with which he was visited for his offences, are all faithfully recorded. Though the transgressions of the high-priest might tend to injure the holy cause of God, yet truth required that they should be told. And it is this inflexible adherence to truth, in all parts of Sacred History, which brings to the mind a strong and powerful conviction of the authenticity and credibility of the whole.

Aaron was the son of Amram and Jochebed, the daughter of the patriarch Levi. He was the elder brother of Moses, having been born three years before that illustrious lawgiver, during the sojourn of the Israelites in Egypt. (Exod. 7. 7.) His birth appears to have happened before the cruel edict of the Pharaoh then reigning over Egypt, who, in order to prevent the rapid increase of the Hebrews, decreed that all their male infants should be thrown into the Nile; for there is no account of Aaron's exposure to any danger in consequence of that decree, although the escape of Moses is so minutely detailed. The birth of Aaron took place, according to the common chronology of the English Bible, B.C. 1574.

On the early history of Aaron, the Scriptures are silent. He is first noticed as having married Elisheba, the daughter of Amminadab, and sister of Naashon, a prince of the house of Judah, whence it may be inferred that he was a person of some distinction. Some writers have supposed, without sufficient grounds, that he was the governor of the Israelites under Pharaoh. By his wife, Elisheba, he had four sons, Nadab, Abihu, Eleazar, and Ithamar. (Exod. 6. 23.) He is next mentioned on the occasion of his conference with Moses on Mount Horeb. The journey which he undertook thither was under a Divine command, and he found, on his arrival at that place, that he had been associated with his brother in the important work of delivering his countrymen from their Egyptian bondage. (Exod. 4. 27.) His eloquence peculiarly qualified him for the task of

pleading the cause of the oppressed Israelites before Pharaoh, and of denouncing those terrors of the Lord, which were more especially to be wrought through the hand of his brother. On this account, though the authority of his commission was honoured, as well in the outset as afterwards, by the possession of miraculous power, he is, by a strong figure, called the prophet of Moses, who was made as it were, "a god unto Pharaoh," (Exod. 7. 1.) Aaron was eighty-three years old, when, in conjunction with his brother, he delivered to Pharaoh the Divine message, requiring that prince to allow the Israelites to proceed three days' journey into the wilderness, to offer a sacrifice to the Lord. Their first mission was unsuccessful. The king, regarding the application as a sign that the Hebrews were becoming restless, and were endeavouring to escape from their bondage, treated them with additional cruelty and severity; but after a train of the most astonishing miracles had been wrought by God, through the hands of the two brethren, they succeeded in their mission, and Pharaoh reluctantly consented to the departure of the people. See MOSES and EXODUS.

In the progress of the Israelites through the wilderness, Aaron was distinguished by peculiar marks of the Divine favour. Although not admitted to communications with God so immediate as those enjoyed by Moses, he was permitted, together with his sons, Nadab and Abihu, and seventy of the elders of Israel, to behold the symbol of the Divine Presence. On this account it is said that they "saw the God of Israel." (Exod. 24. 10.)

During the absence of Moses and Joshua in the mount, Aaron, together with Hur, had the charge of the people. It was during this period that the flagrant act of idolatry was perpetrated, which has affixed so great a stain upon his character. The people, who had become restless at the protracted absence of Moses, were clamorous that Aaron should make them "gods," to go before them, that they might pursue their journey. And even while God was designating him high-priest of his people, and giving commands respecting the mode of his ordination, his office, and sacred habits, Aaron, notwithstanding all he had witnessed, and all the miracles of which he had been the instrument, yielded to their importunity. Whether he had himself imbibed the idolatrous notions of the people, or whether he yielded through want of firmness, or fear of the consequences of opposition, is very uncertain, but the last seems most probable.

In order to gratify their wishes, he commanded them to break off their golden ear-rings, and bring him the gold. The precious metal was melted and moulded into the form of a calf, or rather of a young bullock, the same Hebrew word, *בן*, being also used in that sense in other passages. (See Gesenius *in voce*.) The idol was set up by Aaron, and an altar erected before it, on which they offered sacrifices with great rejoicings. (Exod. 32. 1-6.)

But why should the Israelites have chosen a calf as the object of their idolatry, in preference to any other

animal? Calmet and the commentators are generally agreed, that this was done in imitation of the worship of Apis: and it seems impossible to give any reasonable account of the transaction, without some reference to Egyptian superstitions. Yet it would appear that the commentators are not quite correct, in supposing Apis to be the deity whose worship was imitated on this occasion. The Egyptians gave that name to a living bull which they worshipped at Memphis: but they also worshipped another living bull, in the city of On, or Heliopolis, which they called *Mne*, or, according to the Greek form, Mnevis, and which they adored as the living emblem of the sun. Now, the Israelites, from the circumstance of their living in the land of Goshen, in or near which Heliopolis was situated, and also, from the connexion of Joseph, the head of their nation, with one of the priestly families of that city, must have been well acquainted with its peculiar forms of idolatry.

It is also very probable that many of them had joined in those rites during their sojourn. We might, therefore, naturally suppose that they would adopt them on this occasion; and the supposition that they did so, is confirmed by a very curious fact, which has not yet been noticed, as bearing upon this question. Champollion has observed, in his *Panthéon Egyptien*, that Mnevis is said by Porphyry and Plutarch to have been a black bull, as Apis unquestionably was; but he assures us that this is not the case with regard to the existing remains of ancient Egypt. For, although in the Egyptian paintings Apis is either coloured black, or black and white, Mnevis, on the contrary, in the only figure of him hitherto discovered, is coloured *bright yellow*, evidently with the intention of representing a *golden image*. This fact, though not a conclusive proof, affords a strong presumption, that the golden calf was made according to the usual form and colour of the images of Mnevis.

The annexed engraving represents this symbolical deity of Heliopolis, as he is painted on the coffin of a mummy at Turin, the name being distinctly written in hieroglyphical characters, MNE, without the Greek termination. It differs in colour only, and not in form, from another painting on the same coffin, which bears the name of Apis. Both have the same trappings; the sun's disk between the horns, surmounted by the plume of ostrich feathers, signifying justice, and the whip, the emblem of power; and both are accompanied by the serpent, representing the spirit of the gods. The engraving may therefore, at all events, be fairly considered as a correct representation of the *form* of the *Golden Calf*, which was set up by Aaron, at Sinai.

It does not follow, from this view of Aaron's transgression, that either he or the Israelites intended to worship the sun, when they set up this idol. For, as Mnevis was only a symbol of the power and attributes of the luminary, considered as the chief deity of Heli-

opolis, they might mean to worship, under the same symbol, their own guardian deity, Jehovah. Indeed, it is evident from the narrative, that the Israelites, or at least Aaron himself, did intend the calf for a symbolical representation of the true God. Aaron announces the festival, which was to take place in honour of the calf, in these words:—"To-morrow is a feast to the Lord." And the Psalmist, speaking of the transaction, observes, "they changed *their glory* into the similitude of an ox that eateth grass." But the offering was heathenish in its character, and it was, as might be expected, not unattended with heathenish excesses and abominations. For this deadly transgression, Aaron, and, indeed, the whole nation, were with much difficulty saved from extermination, at the earnest intercession of Moses. A terrible example was, however, made of the principal offenders. At the call of Moses, "Who is on the Lord's side?" the tribe of Levi, eager, apparently, to obliterate the stain which so illustrious a member of their tribe had brought upon the people, "gathered themselves unto him," and executed the judgment of God, by destroying 3000 Israelites with the sword. (Exod. 32. 28.)

Aaron having repented, and acknowledged his transgression, was received to pardon and favour with God; and, afterwards, with ceremonies of much pomp and solemnity, was ordained the high-priest of the people, and the office was restricted to his family; but his family were not all of them worthy of their high distinction. Shortly after their consecration, two of his sons, Nadab and Abihu, having acted contrary to the command of God, by putting "strange fire" into their censers when they offered incense, were destroyed by fire from the Lord. The cause of their offending in this manner against God, is supposed by some commentators to be pointed out by a law which was made immediately after this occurrence—"Do not drink wine nor strong drink, thou, nor thy sons with thee, when ye go into the tabernacle of the congregation, lest ye die." This heavy calamity was represented in its true light by Moses, and the unhappy father submitted with resignation to the will of God. (Levit. 10. 1-3.)

The conduct of Aaron was, however, on other occasions, far from blameless. We find him afterwards involved with his sister, Miriam, in a kind of rebellion against the authority of Moses. Their brother's marriage had, it appears, given them some offence, and on this, they took occasion to set up their authority as equal with his. Miriam was immediately stricken with leprosy. Aaron was not thus punished, either because the uncleanness of the high-priest would have left Israel without ministration, and exposed the priesthood itself to contempt, or because, as is much more probable, he had only been accessory, and his fault was immediately acknowledged, as we find was the case. He was, however, more appropriately punished for this sin of rebellion against lawful authority, by the prevalence of a similar spirit against himself. Korah, Dathan, and Abiram, together with 250 principal persons, disputed the peculiar priestly rights of Aaron, and contended that, because all the congregation were, in one sense, holy, they had, therefore, an equal right to exercise that ministry to which Aaron, by the appointment of God, was exclusively designated. The heads of the conspiracy fell by a conspicuous judgment of God; the ringleaders were engulfed in the earth, which opened to swallow them alive, and their 250 immediate adherents were consumed by fire from God, in the act of offering incense.

The conspiracy, however, seems to have been much more extensive, inasmuch as 14,700 died in consequence

by the pestilence; and it was only at Aaron's official intercession with God that "the plague was stayed." But it pleased God to afford a testimony to the authority of Aaron, which might, by its permanence, vindicate the rights of his posterity also from similar intrusion. Not only, in memorial of the transaction, were the censers, offered by Korah and his company, "made broad plates for a covering of the altar, that no stranger, who is not of the seed of Aaron, come near to offer incense unto the Lord;" but the princes of the different tribes were commanded to bring their rods or sceptres of office to Moses, with their names written thereon; Aaron's name was written on the rod of Levi, and the whole deposited in the tabernacle of the congregation before the testimony. On the following morning, Aaron's rod "was budded, and brought forth buds, and blossomed blossoms, and yielded almonds." Moses commanded this rod to be laid up before the testimony, for a token against the rebels. How long it continued there is uncertain; but such was the effect of the warning, that, until the time of King Uzziah, we read of no further invasion of the high-priest's office in Judah.

Aaron was implicated in the disobedience of Moses at the water of Meribah. The people had murmured on account of the absence of water in the wilderness of Sin, and Moses and Aaron were commanded to speak to the rock in their presence, which should immediately produce water for their relief. This command both the brothers disobeyed; for, instead of speaking to the rock, they spoke to the people; and, by saying, "Must we fetch you water out of this rock?" and striking the rock, they appeared to appropriate to themselves the glory of the miracle that followed. For this transgression both Moses and Aaron were forbidden to enter the promised land. About a twelve-month after this transaction, Aaron's life drawing towards its close, he was commanded to come up into Mount Hor, and there to be divested of his priestly garments, which were put upon his son Eleazar. He then expired on the mountain, at the age of 123 years, and was buried there. (Numb. 20. 28.) It is said, in Deut. 10. 6, that he died at Mosera; but as that is mentioned as the place of encampment, it seems to mean that he died while the Israelites were encamped there.

Aaron is justly regarded as a type of Christ, but it is rather officially than personally; we, therefore, refer our readers, for the typical part of his character, to the article HIGH PRIEST.

The figures of Aaron, in his priestly robes, which have appeared in Calmet, and in various editions of the Bible, have been drawn merely from the written descriptions given in the Book of Exodus. And as these descriptions themselves have not been always well understood, the representations are, in a great degree, fanciful. Nothing, surely, can be more absurd, than to give a Turkish dress to a person who was born and educated in Egypt, under the command of the Pharaohs. The only source from whence we are likely to gain accurate information upon this point, is in those monuments of ancient Egypt, in which the dress of the Egyptians is described. But before we refer to these monuments, it is necessary to say a few words, in order that we may not be misunderstood.

Some writers seem to have been deterred from acknowledging the resemblance which exists between certain parts of the Mosaic ritual, and the religious ceremonies of ancient Egypt, by the fear of being thought to countenance the infidel notion, that Moses borrowed his religion from the Egyptians. Nothing, certainly, can be more false than such a notion; for, in all important points, the religion taught by the inspired lawgiver was in direct contradiction to the Egyptian superstitions; yet we need

not scruple for a moment to acknowledge, that in mere ritual observances, and other unimportant points, a considerable resemblance may be traced. How, indeed, could it be otherwise? The Israelites were only seventy in number when they went into Egypt. They married into Egyptian families, and adopted Egyptian customs; and though they still preserved their Hebrew peculiarities, yet they must, necessarily, have become, in a great degree, identified in their habits and modes of thinking with the Egyptian people. Unless, therefore, God had chosen, not only to order every minute point of the new ritual, so as to make it entirely different from that of the Egyptians, but also miraculously to alter the habits and notions of the Israelites individually, it would be impossible that there should not be a strong resemblance, in many points, between them. And this, so far from detracting from the claims of Moses to Divine inspiration, or from his veracity as a historian, serves the more strongly to confirm them. The sublime doctrines of the unity and spirituality of the Godhead were taught and preserved by means of institutions, which, when purified from the alloy of heathenism and superstition, were most admirably adapted to the state and condition of the chosen people; and those fragments of primeval knowledge and truth, which had been preserved among the Egyptians, were, no doubt, embodied in the new revelation given by Moses.

As the Israelites had just left a country which was distinguished for the splendour of its religious ceremonies, God saw fit, in condescension to their weakness, to ordain for them a ritual which, while it was perfectly free from idolatry and superstition, was peculiarly solemn and magnificent. The robes of Aaron, as the high-priest, were expressly ordered to be made "for glory and for beauty," and appear, from the description, to have been exceedingly splendid; the colours were blue, and purple, and scarlet, "curiously embroidered" with gold. Next to his body he wore drawers and a tunic, or shirt, of very fine cotton, called, apparently from the material of which it was made, Khetoneth, כֶּתֶנֶת, and, in the New Testament, χιτων. This is rather oddly translated by the word *coat* in our English version. Over this he wore a larger garment, called in Hebrew, Meil, מֵעַל, or the *robe*, in our English Bible. This appears to have been, in later times, furnished with sleeves. It reached from the shoulders to the ankles. At the bottom it was adorned with a golden border, consisting of bells and pomegranates alternately. (See BELL.) For common occasions this garment had merely a fringe instead of the golden border. His uppermost garment was called the Ephod in Hebrew, and επωμῖς, or shoulder-covering, in the Septuagint. This was fastened upon the shoulders, and had sleeves which covered the upper part, at least, of the arms. It did not cover the breast completely, but left a part uncovered. The ephod was girded round the waist by a broad girdle or zone, which also confined the other parts of the dress. Upon his head he wore a mitre, (Mitzepheth,) the shape of which is not very certain. The commentators generally consider it to have been a kind of turban, consisting of many folds of linen wrapped round a cap; but as nothing is said of the folds of linen in the Bible account, we may suppose that part to have been an addition made to the high-priest's head-dress in after-ages, as the golden circlelets, or crowns, worn in the time of the Maccabees, undoubtedly were. (See Josephus, *Antiquities*, lib. iii., c. 7, sec. 7.) On the forehead, upon the edge of the mitre, was a plate, or rather leaf, of gold, inscribed with the words, HOLINESS TO THE LORD.

On his breast Aaron wore a breast-plate, about ten inches square, called the breast-plate of Judgment, in

which were set twelve precious stones, on which were engraven the names of the twelve tribes of Israel. This filled the space left open in the ephod, to which it was attached by rings of gold, and completely covered the breast.

Upon the breast-plate, (see Levit. 8. 8; Heb. and Sept.) and not in it, as in our version, and as Michaëlis and Jahn suppose, were put the *Urim* and *Thummim*. These words are generally translated "lights and perfections;" or, according to the Septuagint, "manifestation and truth." This, however, is still a very obscure and difficult point; yet we may, perhaps, be able to throw a little more light upon it from the Egyptian monuments.

The dress of Aaron was certainly not borrowed from that of the Egyptian *Priests*, their official dress being a panther's skin worn over their ordinary dress; but it appears, by the above description, to have resembled very closely that of the Egyptian *Kings*. In the opposite engraving, the whole-length figure is a representation of the Pharaoh, Ramses the Sixth, who, according to Manetho, was one of the grandsons of the Pharaoh under whom the Exodus took place. He is here represented offering incense and libations, as he is painted in his tomb among the royal sepulchres at Thebes. He differs very little, if at all, in the different parts of his dress, from the earlier monarchs who lived during the time of Moses; but we have copied his portrait from Rosellini's engraving, because his robes are more complete than those of any of the earlier remaining representations. They are represented as having exactly the same colours as those which adorned the robes of Aaron, namely, scarlet, purple, blue, and gold. The parts of the dress which corresponded with those of Aaron are the linen, or rather cotton, *drawers*; the tunic, or shirt, (called *coat* in the English Bible,) reaches below the knees to the upper row of fringe. The *robe* reaches to the ankles; and the *ephod* covers the shoulders and arms. The two last parts of the dress are partly confined by the girdle, which is "of curiously embroidered work," and the fringe may be noticed at the bottom of the robe. Aaron seems to have had no collar, though worn almost universally by the Egyptians. But it appears, that all the parts of his dress, which are described in the Book of Exodus, are found in this figure, except the mitre and breast-plate. These, however, may be easily supplied from similar representations of Egyptian monarchs.

The mitred, or crowned head, fig. 1, is that of Amenoph III., the Memnon of the Greeks, who probably flourished before the time of Moses. Another common, and very ancient form of mitre, is that found on fig. 2;

Fig. 1.

Fig. 2.

but it is impossible to determine, whether either of them was of exactly the same form as that which was worn by Aaron.

The breast-plate, fig. 3, is from another figure of Amenoph-Memnon, in the sanctuary of Kneph, or Cnoph, at Elephantine, given by Sir John Wilkinson in the *Hieroglyphics* published by the Royal Society of

Literature. The device on this breast-plate is also remarkable. It consists of the title of the king, which was "*the Sun, the Lord of Justice and Truth.*" This is expressed by a circle representing the sun, and by the female figure representing justice or righteousness. The square breast-plate, fig. 4, is that of the Pharaoh Osiree-

Menephthah, copied from the portrait in his tomb, discovered by Belzoni at Thebes. It contains also the figure of Horphre, or Horus, the *sun*, (here represented under the form of a man with the head of a hawk,) and also that of Justice, with an obelisk between them.

Now the Egyptians considered the sun to be the *manifestation* (*δηλωσις*) of *celestial light* in the material world. This celestial light they called *Hor*, and *Or*, which is evidently the *Ur* of the Chaldeans and Hebrews; and, as their kings wore a representation of it on their breast-plates, it seems but a fair inference to suppose, that the *Urim* (the plural of *Ur*) worn by Aaron, was either that word itself in Hebrew characters, or a symbolical representation of Divine light, engraved, or in some way fixed, upon the breast-plate. And so of the word *Justice* and *Truth*; these two attributes being expressed by the same hieroglyphical character. (See Champoll. *Lettre* XVIII.) The name of the female figure representing these attributes, was *Them*, or *Themé*, (whence the *Themis* of the Greeks,) the plural of which in Hebrew would be *Themim*, or *Thummim*. Hence the meaning of the words or symbols *Urim* and *Thummim* on Aaron's breast-plate, would be either "manifestation and truth," as in the Septuagint, or, literally, "light and righteousness," referring the words, in their highest sense, to the attributes of light, and of justice and truth, as revealed, or *manifested*, in the revelation given by Moses. (See *URIM* and *THUMMIM*.)

With regard to the etymology of Aaron's own name, Gesenius observes, that its root is not to be found in Hebrew; and, although he gives an Arabic root from whence it might be derived, yet the derivation is anything but satisfactory. We may, therefore, venture to suggest an Egyptian origin; for Aaron, or Aahron, or Aharon, אַהֲרֹן would be more easily derived from the Egyptian word *Aah*, the *moon*; as in the common name, Ahmes; and there do not seem to be any valid reasons why we should not derive it from that language. The name of Moses is undoubtedly Egyptian, and though given by an Egyptian princess, was retained by him to the end of his life.

It is a very singular fact, that idolatrous customs are still connected with the name of Aaron, in the regions in which he led, or sanctioned, the idolatry of the Israelites, though in a very different manner. For he has himself long been an object of superstitious worship to the Arabs, who offer sacrifices at his tomb on Mount Hor.

Burckhardt has given us a very curious account of this superstition. He was the first European in modern times who visited the ruins of Petra, and he found great difficulty in reaching that place, on account of the suspicions entertained of him by the people. He everywhere passed for an Arab, and, being not very scrupulous in the use of means to keep up his assumed character, he pretended that he had made a vow to slaughter a goat in honour of Aaron. "To this," says

Dress of King Ramses the Sixth, offering incense and libations.

he, "my guide had nothing to oppose; the dread of drawing upon himself, by resistance, the wrath of Haroun, completely silenced him. The sun had already set when we arrived on the plain (called Szetouh Haroun, or Aaron's terrace), at the foot of the mount on which his tomb is situated. It was too late to reach the tomb, and I was excessively fatigued; I hastened, therefore, to kill the goat in sight of the tomb, at a spot where I found a number of heaps of stones, placed there in token of so many sacrifices in honour of the saint. While I was in the act of slaying the animal, my guide exclaimed aloud, 'O, Haroun, look on us! it is for you we slaughter this victim. O, Haroun, protect us and forgive us! O, Haroun, be content with our good intentions, for it is but a lean goat! O, Haroun, smooth our paths, and praise be to the Lord of all creatures!' This he repeated several times, after which he covered the blood that had fallen upon the ground with a heap of stones; we then dressed the best part of the flesh for our supper as expeditiously as possible, for the guard was afraid of the fire being seen, and of its attracting hither some robbers." (*Travels in Syria and the Holy Land.*) Burckhardt did not ascend to the tomb at the summit of Mount Hor, but it was afterwards visited by Mr. Legh, in company with Captains Irby and Mangles, who gives the following account of his visit.

"The ascent was rugged and difficult in the extreme, and it occupied us one hour and a half to climb up the almost perpendicular sides. A crippled Arab hermit, about eighty years of age, the one half of which he had

spent on the top of the mountain, living on the donations of the few Mahomedan pilgrims who resort thither, and the charity of the native shepherds, who supply him with water and milk, conducted us into the small white building, crowned by a cupola, that contains the tomb of Aaron. The monument is of stone, about three feet high; and the venerable Arab, having lighted a lamp, led us down some steps into a chamber below, hewn out of the rock, but containing nothing extraordinary. Against the walls of the upper apartment, where stood the tomb, were suspended beads, bits of cloth, and leather, votive offerings left by the devotees. On one side, let into the wall, we were shown a dark-looking stone, that was reputed to possess considerable virtues in the cure of diseases, and to have formerly served as a seat to the prophet." Legh's *Journey into Syria*, in Dr. M'Michael's *Journey from Moscow to Constantinople*.

The annexed plate, copied from Laborde's *Voyage en Arabie Pétrée*, represents the summit of Mount Hor, apparently taken from the plain mentioned by Burckhardt. The tomb of Aaron is hewn in the rock beneath the small building, which is shown to travellers as his burial-place, and which is distinguishable in this view of the mountain. There seems to be no doubt of its identity. Josephus, Eusebius, and Jerome, all speak of Mount Hor, near Petra, as the place of Aaron's sepulture, and the spot has always been held in reverence on that account by the natives of the country. See Josephus, *Ant.* IV., 47; Euseb. *Onomast.*, Art. "Ὠρ, and Jerome's *Version*.

AARONITES.—These were the priests of the family of Aaron, whose duty it was to take charge of the sanctuary. The other families of the tribe of Levi were appointed to the care of the tabernacle, and other subordinate offices. In the time of David, the Aaronites were a numerous body; for when Jehoiada, their chief, went over to join David in Hebron, on the death of Saul, he took with him 3700 men, commanded by Zadok, and 22 captains of his father's house. (1Chron. 12. 27; Numb. 4. 5.)

AB, אב is the Hebrew word for father, and enters very frequently into the composition of proper names, as Absalom, Abijah, &c.

AB is the name of one of the Hebrew months; it is the fifth month of the *sacred* year, and the eleventh

of the civil year; and, according to Michaëlis and Jahn, (*Bibl. Arch.* sec. 103,) is reckoned from the new moon of July. (See **CALENDAR** and **MONTH**.) The Jews observe the first of this month in memory of Aaron's death; and the ninth they keep as a fast, as the anniversary of the destruction of the Temple by Nebuchadnezzar. Josephus informs us, that the second Temple was destroyed by Titus on the very same day.

ABADDON. This is the Hebrew name of the angel of the bottomless pit, mentioned in the Book of Revelation, (9. 11,) as the king of the destructive locusts which arose out of the abyss, upon the sounding of the fifth trumpet. **APOLLYON** is the Greek name of this angel of darkness. Both the Hebrew and the Greek names have the same meaning, namely, the *destroyer*.

ABAGARUS. See **ABGAR.**

ABAGTHA; the name of one of the seven Chamberlains of Ahasuerus. (Esther 1. 10.)

ABANA; the name of a river of Damascus. It occurs only once in the Bible, (2Kings 5. 12,) where Naaman, the captain of the host of the king of Assyria, having been ordered by the prophet Elisha to wash himself in the Jordan, to be cured of his leprosy, exclaimed, "Are not Abana and Pharpar, rivers of Damascus, better than all the waters of Israel?" The Hebrew marginal reading of this name is *AMANA*, which is also the name of one of the summits of Lebanon, or rather of Anti-Libanus, noticed in Solomon's Song, (4. 8.) For this reason, Gesenius considers the modern *Barrady* to be the *Amana*, or *Abana*; for this river, which was the *Chrysorroas* of the Greeks, rises in Anti-Libanus, and flows through Damascus. This supposition is confirmed by the discovery of the ruins of *Abila* on the banks of the *Barrady*: for the medals of that city have on them the name of the *Chrysorroas*. (See *ABILENE*.) The *Pharpar* is considered to be the modern *Fijih*, or *Fege*, a very remarkable river, which is described by Dr. Richardson as issuing from a limestone rock in a deep rapid stream of about thirty feet wide, pure, and cold as iced water. It rises near a village of the same name, in a pleasant valley, about fifteen or twenty miles N.W. of Damascus, and falls into the *Barrady*, after a course of only about a hundred yards.

ABARIM, or **AVARIM**, עֲבָרִים This is the general name of a ridge of mountains on the east of the Jordan. (Numb. 27. 12; 33. 47; Deut. 32. 49.) The name is also found in the Hebrew text of Jer. 22. 20, where the words "cry from the *passages*," should be rendered "cry from *Abarim*." Among these mountains the most celebrated are *Mount Nebo*, *Mount Peor*, and *Mount Pisgah*. Eusebius and Jerome place *Nebo* near the Jordan, opposite to *Jericho*, six or seven miles west of *Heshbon*, and seven east of *Livias*. They also mention that, near *Heshbon*, one part of the ridge still retained its old name of *Abarim*. Dr. Shaw describes them as "an exceedingly high ridge of desolate mountains, no otherwise diversified than by a succession of naked rocks and precipices, rendered, in some places, the more frightful by a multiplicity of torrents, which fall on each side of them. This ridge is continued all along the eastern coast of the Dead Sea." (*Travels*, p. 277.) *Ije-Abarim*, (heaps or heights of *Abarim*), where the Israelites encamped in the desert of *Moab*, seems to have been an eastern branch of this ridge. (See Numb. 21. 11.)

The derivation of the name *Abarim*, or *Avarim*, is uncertain, but would appear to be connected with the ancient mythology of the country. This is certainly the case with two of the mountains, which bear the names of the deities *Nebo* and *Peor*, who are identical (as will be shown hereafter) with the Egyptian gods *Anebo* (*Anubis*), and *Pehor* (*Horus*). And we may also trace a connexion between the name of this ridge and that of the district of *Avaris*, or *Abaris*, in Lower Egypt, which is said, by *Manetho*, to have been so called from its connexion with a certain ancient theology, or doctrine of the gods. Now this Egyptian *Avaris* was the strong-hold of the Shepherd-kings, who, in early times, had invaded Egypt from this part of Palestine, but had been driven back into it again before the time of *Moses*. The theology spoken of was, therefore, most probably, the religious system of this ancient and warlike race, and they would naturally give the names of their deities to those mountains on which they were worshipped, and which were also their strong-holds in

Palestine. This local worship seems to be distinctly pointed at in Numbers 33., when, after descending from the mountains of *Abarim* to the plains of *Moab*, the children of Israel received the divine command "to destroy the molten images," and quite pluck down their *high places*." *Beth-abara*, beyond *Jordan*, may have been the place where a temple, or high-place, stood.

ABBA, is a Chaldee word, which signifies *father*. It seems to have been used as a term of endearment by children, in speaking to their father, and was retained even after the Jews adopted the Greek language. When, therefore, St. Paul said, "Ye have received the spirit of adoption, whereby we cry *Abba*, Father," he seems to have meant, that they had been enabled to address their Heavenly Father as his adopted and affectionate children in Christ. (Rom. 8. 15.) The word is used by our Lord in Mark 14. 36, as the beginning of a prayer. Winer supposes that the Chaldee word was so much used, because the Jewish prayers commonly began with *Abba*, and that the Greek was added for the sake of those who did not understand the Chaldee. *Abba* is also found in Gal. 4. 6. *Abba* is the title given to the bishops of the Oriental churches, and from it was derived the English title of abbot, given to the superior of an abbey.

ABDA, *Servant*, one of the Levites who assisted in the service of God in the second Temple, after the return from the Babylonish captivity. (Nehem. 11. 17.) Another person of this name is mentioned. (1Kings 4. 6.)

I. ABDON, the name of the tenth Judge of Israel, who lived about 1160 B.C. He was the son of *Hillel*, the *Pirathonite*. Having succeeded *Elon*, he judged Israel eight years. Nothing remarkable is related of *Abdon*, except that he had forty sons and thirty grandsons, or nephews, who rode upon seventy asses' colts. (Judges 12. 13, 15.)

II. ABDON, the son of *Micah*, was one of the persons sent by King *Josiah* to *Huldah*, the prophetess, upon the discovery of a copy of the book of the Law, to inquire of the Lord what was to be done by him and his people, to avoid the punishments which were written against them. In the Second Book of Kings, 22. 12, he seems to be the person called *Achbor*, the son of *Michaiah*.

III. ABDON, one of the four cities within the limits of the tribe of *Asher*, which were given to the Levites of the family of *Gershom* for their residence, together with the suburbs, or surrounding country, for their cattle. (Joshua 21. 30.)

ABEDNEGO, the Babylonian name given by *Nebuchadnezzar's* chief eunuch to *Azariah*, one of the three captive princes, who were companions of *Daniel* at the court of *Babylon*. He was one of the three Jewish captives who were miraculously preserved, when thrown into the fiery furnace for refusing to worship the golden image, set up by *Nebuchadnezzar* in the plain of *Dura*. (Daniel 3. 12.) *Azariah* has been supposed to be the same person as *Ezra*; but that could not be the case, *Ezra* being not of the blood-royal of *Judah*, but a priest of the tribe of *Levi*. (*Ezra* 7. 5.) His Babylonian name seems to have been altered from *Abed-nebo*, (which signifies *Abode of Nebo*), into *Abednego*, either by an error of the transcribers, or because the historian did not like to affix the name of an idol to that of so holy a person.

ABEL, or rather *Hebel*, הֵבֶל was the name of the second son of *Adam* and *Eve*. He was born after the fall and expulsion of his parents from the garden of *Eden*,

and, consequently, was an inheritor of their nature after it had been corrupted by sin. He is, however, the first recorded example, after the fall, of man's acceptance and favour with God. And he became so eminent for his piety, that he is honoured by Christ himself with the title of "Righteous Abel." He is also remarkable, as the first of the human race who paid the penalty of death. His very name appears to be prophetic of his early fate; for it is supposed, by the best authorities, to mean "short continuance," and he early fell a victim to the envy of his brother Cain. The sacred narrative tells us, that, "in process of time," or, as it is in the margin of the English Bible, at the "end of days," (meaning, probably, at the end of the week, on the Sabbath,) they both came to make their offerings to the Lord. Cain, as a tiller of the ground, brought an offering of its fruits; but neither the offering nor the worshipper found favour with God. Abel, as a keeper of sheep, had brought the firstlings of his flock; "and the Lord had respect unto Abel and to his offering." This excited the envy and wrath of Cain, "who was of that wicked one," by whom his parents had been first led into sin; and he slew his brother as they were talking together in the field.

The Samaritan version says expressly, that Cain invited his brother to go with him into the field, and the Septuagint agrees with it; but there is no such clause in the Hebrew.

Jewish tradition places the scene of Abel's murder in the neighbourhood of Damascus; and a tomb is still shown, between Damascus and Baalbec, in which they pretend that he was buried. The name of the ancient city of Abel, which was in this neighbourhood, may have given rise to the tradition.

Whether Abel's offering was more acceptable, on account of its being more agreeable to any particular Divine command, is a point not decided in Scripture. Many commentators are of opinion, that it was more acceptable on account of its reference to the "Lamb of God," slain from the foundation of the world. At all events, there was a great difference between the worshippers; and the ground of this difference is explained by St. Paul, (Heb. 11. 4,) who tells us that, "by faith Abel offered unto God a more excellent sacrifice than Cain, by which he obtained witness that he was righteous, God testifying of his gifts;" and our Lord has placed him at the head of those who have suffered for righteousness' sake. (Matt. 23. 35.) With regard to the manner in which the Divine acceptance of Abel's sacrifice was manifested, neither the words of the narrative in Genesis, nor the allusions in the New Testament, give us any certain information; but we may infer, from the circumstance of its having been perceived by Cain, that it was a visible manifestation. The most ancient commentators are of opinion, that it was manifested by fire from heaven consuming the sacrifice, as on many occasions in after-times.

Archbishop Magee, in his learned treatise on atonement, supposes that the superiority of Abel's *faith* consisted not merely in the greater degree of its strength, but in its being directed to the promise of the Great Redeemer, which God had made to his parents immediately after the fall; the animal sacrifice which he offered being typical of the method by which the Deliverer was to effect the redemption of mankind.

ABEL, אֵבֶל a word which is spelt differently in Hebrew from the foregoing word, and has a different signification. It is the name given to several places in Palestine.

I. ABEL-BETH-MAACHAH, (*House of Maachah.*) This was a city of some importance in very early times, being

called a mother city (*Metropolis*, in the Septuagint,) in the reign of David. It was besieged by Joab, the general of that monarch, on account of its having sheltered Sheba, the son of Bichri, a Benjamite, who had rebelled against the king, but was saved from an assault by the prudence of a "wise woman" of the place, who persuaded the men to put the traitor to death, and to throw his head over the wall: upon which the siege was immediately raised. (2Sam. 20. 14-22.) It seems to have been also called Abel-Maim. (2Chron. 16. 4.) And Gesenius suggests that *Belmen*, mentioned in Judith 4. 4, is a corruption of the latter name. Josephus (*Antiq.* vii. 11,) calls it Abel-Machea.

There has been great difference of opinion respecting the situation of Abel-Beth-Maachah. Calmet considers it to be the same as Abila of Lysanias, and Gesenius has adopted the same opinion. But it was evidently within the land of Naphtali; and Reland is clearly right in denying that the territory possessed by the tribes could ever have included a place situated to the north-west of Damascus. In 1Kings 15. 20, it is mentioned after Ijon and Dan, among the cities of Naphtali, which were taken by Benhadad, on his way from Damascus, when he invaded Israel. Now the city of Dan is stated by Eusebius to have been four miles from Paneas, near the sources of the lesser Jordan. It might, therefore, be reasonably supposed that Abel was not far from that neighbourhood. And accordingly we find from Eusebius that there was a city, which he calls Abila of Phœnicia, situated between Damascus and Paneas. Eusebius does not identify it with Abel-Beth-Maachah, but there is little doubt remaining of their identity; and as the site of Paneas is well known, that of Abel may hereafter be determined.

II. ABEL-CARMAIM, אֵבֶל הַכֶּרְמִים or *Abel of the Vineyards*; called in the English Bible the *plain* of the vineyards, though the word would seem rather to mean the rock or hill. (Judges 11. 33.) It was originally a village of the Ammonites, but afterwards became an important city. Eusebius (*Onomast. in voc.*) mentions two places of this name, both of them celebrated for their vineyards, one of which was six Roman miles from Philadelphia, or Rabbath Ammon. The other was Abila of the Decapolis, situated twelve miles east of Gadara. This is mentioned by Pliny as one of the cities of the Decapolis, and Josephus speaks of it as having been given to Agrippa by Nero, but it does not seem to be noticed in Scripture. Its ruins are still extant, and there is a curious inscription relating to it in Lord Besborough's collection, in Greek and Palmyrene. *Quart. Review*, xxvi.

There is a medal extant of Abila, with a bunch of grapes on the reverse; a copy of which is annexed.

It bears the inscription *Abil. Leuc.*, and is referred by the last Editor of Calmet to Abila of Lysanias; but Vaillant has shown that the date will not allow of such an appropriation. The *grapes* seem to refer us to Abel of the *vineyards*, but we have no doubt that it belongs to Abila of the Decapolis. Burckhardt discovered the ruins of Rabbath Ammon about fifteen miles S. E. of the modern town of Szalt, and by this the situation of Abel-Carmaim may be pretty nearly ascertained.

III. ABEL-MEHOLAH, (*Place of Dancing.*) was the birth-place of the Prophet Elisha. (1Kings 19. 16.)

According to Eusebius, it was situated about sixteen miles to the south of Scythopolis, or Bethshan. (See 1Kings 4. 12; Judges 7. 22.)

IV. ABEL-MIZRAIM, (*the Mourning of the Egyptians*), a place so called by the Canaanites because there Joseph and his brethren, and the Egyptians, "mourned with a great and very sore lamentation" over the patriarch Jacob, when they brought him out of Egypt to bury him in the field of Machpelah, in the sepulchre of his fathers. (Gen. 50. 11.) The name of this place, before this event, was the "threshing-floor of *Atad*," which, according to Gesenius, means a thorn, (*Rhamnus palustris*, Linn.) Jerome says it was situated between Jericho and the Jordan, two miles from the city and three from the river, on the spot where Bethagias afterwards stood. (*Onomast. in voc. Area Atd.*)

V. ABEL-SHITTIM, (*the Place of Acacias*), a place in the plains of Moab, where the Israelites encamped before they entered the promised land. (Numb. 33. 49.) It was here (says Josephus, *Antiq.* iv. 8, 1,) that Moses gathered the congregation together near Jordan, where the city Abila now stands; "which place is full of palm-trees." And he mentions (*Antiq.* v. 1) that it was sixty stadia from the Jordan. This is the place where the Israelites were seduced by the Moabitish women into the idolatrous worship of Baal-Peor, and into fornication. They were punished for these offences by the execution of the principal offenders, and by a plague which destroyed 24,000. (Numb. 25. 1-9.) In this passage, and in Micah 6. 5, this place is called Shittim only.

ABELA. See ABILENE.

ABEZ, a city which fell to the lot of the tribe of Issachar, the exact situation of which is unknown. It is mentioned in Joshua 19. 20.

ABGAR, or ABGARUS, was the name of many of the kings of Edessa, in Syria. There are none of them mentioned in the Bible; but one of them, the seventeenth of that name, is celebrated in ecclesiastical history, on account of a very ancient legendary story, which brings him into connexion with the personal history of Christ. The tradition says, that Abgar wrote a letter to our Saviour, requesting him to come and heal him of the leprosy. This, however, he declined to do, but sent Thaddeus instead. The letters are evidently apocryphal, though they have been considered genuine by Cave and a few other writers. They are curious as specimens of very early forgeries, but are of no historical value. They will be found in the *Codex Apocr. Novi Test.* of Fabricius, and in the folio edition of Calmet.

ABI, or ABIAH, was the mother of Hezekiah. (2Kings 18. 2.)

ABIA, in the New Testament, is the Greek form of the name Abijah in the Old Testament.

ABI-ALBON, the Arbathite, was one of the thirty distinguished men in David's army. (2Sam. 23. 31.)

ABIAH, the second son of the Prophet Samuel, by whom he was appointed one of the judges over Israel. But he and his brother Joel were so corrupt and partial in their judgments, that they excited great discontent among the people; and, in the end, the elders demanded to be governed by a king. (1Sam. 8. 2-5.)

ABIATHAR, the son of Abimelech, or Ahimelech, was the tenth high-priest of Israel, and lived in the reigns of Saul, David, and Solomon. His father, and the rest of his family, were put to death by Doeg the Edomite, at the command of Saul, on account of

their having favoured David in his flight. Abiathar, having escaped from the slaughter, fled to David, who protected him, and seems to have appointed him high-priest in the room of his father. (1Sam. 22. 9-23.) But Saul appears at the same time to have raised Zadok to that office. Thus, there were two high-priests at the same time; and they appear to have been both continued in that office by David, after the death of Saul, for they are both mentioned as having the charge of the ark during the rebellion of Absalom. (2Sam. 15. 29.) On the accession of Solomon, Abiathar joined the party of Adonijah, and was on that account deprived of his office. Solomon spared his life, on account of his services and sufferings in the cause of David, but would not allow him to remain high-priest. This event fulfilled the prediction which Samuel delivered to Eli, that his family should be deprived of the priesthood; for Abiathar was the last of Eli's family who held it, Zadok being of the family of Eleazar, in which the priesthood afterwards remained. (1Kings 2. 27; 1Sam. 2. 30, 36.)

Two difficulties have been noticed in the history of Abiathar. It would appear, from the foregoing passages, that Abiathar continued in the office of high-priest till the reign of Solomon; but in 2Sam. 8. 17, and 1Chron. 24. 3, Ahimelech, the son of Abiathar, is mentioned as being high-priest with Zadok during the reign of David; and in Mark 2. 26, Abiathar is said to have given David the shew-bread, though it appears from 1Sam. 21. 1, to have been done by his father, Ahimelech. Commentators have endeavoured to remove these difficulties, by the supposition that the two high-priests bore each of them the two names of Ahimelech and Abiathar. But this is mere conjecture; nor has any very satisfactory solution of these difficulties been given. Bishop Middleton interprets the words of St. Mark, ἐπὶ Ἀβιάθαρ τοῦ ἀρχιερέως, "in the time of Abiathar, the person who was (afterwards) high-priest." This would remove the difficulty with regard to the passage in St. Mark, but it leaves the other untouched.

ABIB, the name of one of the Hebrew months. It was reckoned the first month of the sacred, or ecclesiastical year, because, on the fifteenth day of it, the departure of the Israelites from Egypt took place. The name signifies *green corn*, probably in reference to the corn of Egypt; for we are told that the barley was then "in the ear," and was smitten by the miraculous hail, which God sent upon the land as a punishment for the tyranny and obstinacy of Pharaoh and his subjects. (Exod. 9. 31.)

This month was afterwards called Nisan. (Nehem. 2. 1.) According to the best authorities, the sacred year, and consequently the month Abib, began with the new moon of April, though the Jewish rabbins say that the year began in March. In latter times this appears to have been the case, but the change was, most probably, owing to the authority or example of the Romans, who began their year in March. And the reckoning of the rabbins is not only opposed to Josephus, but to the prescribed observances of the three great festivals. Jahn, *Bibl. Arch.* § 103. Michaëlis, *Comment. de Mensib. Hebr.*

The Feast of the Passover was observed in this month, in commemoration of the destroying angel *passing over* the houses of the Israelites, when the first-born of the Egyptians were destroyed. It began on the fourteenth, "between the two evenings," that is, between three and six o'clock. (Exod. 12. 6.)

ABIDAN, the son of Gideoni, was the prince of the children of Benjamin, when Moses set up the tabernacle in the wilderness. On this occasion, Abidan made

offerings in proportion to the size of his tribe, consisting of gold and silver vessels, with incense, and oil, and flour, for the use of the sanctuary, and also of oxen, kids, and goats, for the sacrifices. (Numb. 7. 60.)

ABIEL, the father of Kish, and grandfather of Saul, the first king of the Hebrews. (1Sam. 9. 1.)

ABIEZER, (*Father of Help*), was one of the thirty valiant chiefs in David's army. He was a native of Anathoth, a city belonging to the tribe of Benjamin. (2Sam. 23. 27.)

ABIGAIL, the Carmelitess, was the wife of Nabal, a rich man, whose possessions were in Carmel, a place in the southern part of Judah, which, according to Eusebius and Jerome, was about ten miles east of Hebron, and, consequently, was a different place from the celebrated Mount Carmel, on the coast of the Mediterranean. Abigail, as the sacred historian informs us, "was a woman of good understanding, and of a beautiful countenance," but Nabal "was churlish and evil in his doings," and this evil disposition was, in the end, fatal to its possessor. For it so happened that David, in his flight and banishment from Saul, took refuge in the mountains where Nabal's flocks were fed. The presence of David and his troops was so great a protection to the property of Nabal, that during the whole time he lost none of his cattle. And as protection of this kind in those countries is either purchased at a high price, or requited by handsome presents, David sent to Nabal a peaceful and complimentary message, reminding him of this, and requesting him to send such a present as he thought proper for him and his young men. The request was not only refused, but an insulting message was returned to David, treating him as a runaway servant of Saul. This irritated David exceedingly, and, in his anger, he vowed that he would destroy Nabal and all his house before the morning. From this act of vengeance he was dissuaded by Abigail, who, having heard of the insulting message, came herself to bring him the present, and made him an apology. Her husband was unaware of his danger, and was revelling in a drunken feast; but, when he was made acquainted with it, he became so frightened, that "his heart died within him, and he became as a stone." In ten days he died, and David, who had been highly pleased with the conduct of Abigail, demanded her in marriage. The offer was accepted, and, after the days of mourning were over, she returned with the messengers and became his wife. (1Sam. 25.)

ABIHAIL. There are several persons of this name mentioned in Scripture.

I. ABIHAIL, the son of Huri, one of the heads of families of the tribe of Gad, who settled in Bashan. (1Chron. 5. 14.)

II. ABIHAIL, the father of Zuriel, the father of the Levitical families of Merari. (Numb. 3. 35.)

III. ABIHAIL, the father of Queen Esther, and the brother of Mordecai. (Esther 2. 15.)

IV. ABIHAIL, the wife of Rehoboam, king of Judah. She is called the daughter of Eliab, David's elder brother; but as David began to reign more than eighty years before her marriage, and was thirty years old when he became king, it most probably means that she was a descendant of Eliab, the words son and daughter being often used in this general sense. (2Chron. 11. 18.)

ABIHU, one of the sons of Aaron, who was consecrated to the priesthood with his father, but afterwards was consumed by fire from heaven, together with his

brother Nadab, because they offered incense to the Lord with strange fire; that is, with fire not procured, according to the commandment, from the altar of burnt-offerings. (Levit. 10. 1,2.) The cause of their offending in this manner has been supposed by the rabbins, and by some Christian commentators, to have been their having drunk too much wine. This opinion is grounded upon a law which we find in the same chapter, ver. 8; "The Lord spake to Aaron, saying, 'Do not drink wine nor strong drink, thou, nor thy sons with thee, when ye go into the tabernacle of the congregation, lest ye die.'" Mr. Blunt considers this to be one of those undesigned coincidences, which prove the authenticity of the sacred narrative; and it is exceedingly probable, that there was a relation between this general law and the particular offence of Aaron's sons. But, at all events, it is quite clear, that this awful example of Nadab and Abihu was intended as a caution in future to the priests of the Lord, that they should strictly observe all the commands and ordinances of God, without consulting their own opinions, or their own convenience. And the faithful record of such an offence, and of such a punishment, affords no slight argument for the veracity of the sacred historian.

I. ABIJAH (*Will of Jehovah*) was the name of a son of Jeroboam, who died in his childhood. During his son's illness, Jeroboam sent his wife in disguise to consult Abijah, the prophet, whether the child would recover. The answer was not only unfavourable, but the prophet, who was not deceived by the disguise, foretold that Abijah should be the only person of Jeroboam's house who should come to the grave, and be mourned for by the people. (1Kings 14. 1-18.)

II. ABIJAH, or Abijam, king of Judah, was the son of Rehoboam and of Maachah, the daughter of Absalom. He began to reign B.C. 958, and reigned only three years. (1Kings 15. 1,2.) Abijah was not a good king; he followed too closely the bad example of his father, Rehoboam, yet he did not, like some of his successors, forsake the worship of the true God. He acknowledged the sovereignty of JEHOVAH, and kept up the services of the temple at Jerusalem; and in the war which broke out between him and Jeroboam, king of Israel, he rested his cause upon the assistance of JEHOVAH. In his address to the men of Israel at Mount Zemaraim, he reproached them with having forsaken the Lord, and declared that God himself was with the men of Judah as their Captain; and this trust in God was followed by a great and important victory, which humbled the king of Israel, and gave Judah the ascendancy. (2Chron. 13. 1-20.)

III. ABIJAH was the name of King Hezekiah's mother. She was the wife of Ahaz, and the daughter of Zechariah. (2Chron. 29. 1.) If this Zechariah be the person of that name who is mentioned in 2Chron. 26. 5, as one who "had understanding in the visions of God," his daughter, Abijah, was most probably faithful to the God of her fathers, though she was the wife of Ahaz; and we may reasonably suppose that Hezekiah derived some of his personal piety from the instructions of his mother.

ABILA. See ABEL.

ABILENE; the name of a country on the eastern side of Anti-Libanus, so called from its chief city, ABILA. This district, which lay between Damascus and Heliopolis (Baalbec), was only about eight miles in length, but was a fertile and valuable territory. Abila was situated on the river Barrady, the Chrysorroas of the Greeks, about twelve miles north-west of Damascus. Its ruins were visited by Mr. Bankes, who brought home

a long inscription, copied from the face of a rock, in which the Abilenians record the making of a new road to their city. (*Quart. Review*, xxvi.) The medals of this city show that it also bore the names of Leucadia and Claudia, and was seated on the Chrysorrhoas. The annexed engraving is copied from the *Fragments* to Calmet. The capital was called Abila of Lysanias, from its having been governed by Lysanias, the son of Ptolemy, and grandson of Mennæus. This prince, having been accused of intriguing with the Parthians, was put to death by Antony, at the instigation of Cleopatra, who thus obtained possession of the country, B.C. 36. Joseph. *Antiq.* xv. 4.

On the death of Cleopatra this province was farmed of Augustus by a person named Zenodorus; but this man having made himself obnoxious by encouraging the bands of robbers in the neighbouring country, the district was given to Herod the Great. (*Antiq.* xv. 10, 1.) After Herod's death, part of the territory was given to Philip, and part to another person, whose name is not mentioned by Josephus, (*Antiq.* xvii. 11, 4,) but who appears, from St. Luke, (3. 1,) to have been a tetrarch, called Lysanias. From him it seems to have regained its former name, "Abila of Lysanias;" for Josephus mentions that the tetrarchy of *Lysanias* was given by Caligula to Agrippa the Elder, and confirmed to him by Claudius. (*Antiq.* xix. 5, 1.) Agrippa the Younger received this province, together with other possessions of his father, from Claudius Cæsar, by whom he was much esteemed.

ABIMAEI, אַבִּימַלְךְ the proper name of one of the sons of Joktan. (Gen. 10. 28; 1Chron. 1. 22.) He probably settled in Arabia, but no name has been found in Arabian writers which can be fixed upon with certainty as corresponding with Abimael. The name of *Mali*, as a city in Arabia-Thurifera, is referred to by Bochart, who interprets Abimael "Father of Mali, or of the Malitæ." *Phaleg.* 2, 24.

I. ABIMELECH, אַבִּימֶלֶךְ *Father-king*, or *Royal Father*. This was most probably a common title of the Philistine kings of Southern Palestine, as Pharaoh was of the Egyptian monarchs. The first of these kings mentioned in Scripture was Abimelech, king of Gerar, who was contemporary with Abram. That patriarch having gone to reside in Gerar, and being fearful that the beauty of his wife would tempt the men of that country to kill him, induced her to pass herself off as his sister. But this stratagem was attended with evil consequences; for Abimelech, having heard of her beauty, exercised the privilege which eastern princes have always claimed, and took her into his palace. But the mother of the chosen seed had been the subject of prophecy, and was preserved from dishonour by a Divine interposition. Abimelech appears to have been a worshipper of the true God, and being warned by the Lord in a dream, upon pain of death, to restore Sarah to her husband, he complied with the admonition, and made great presents to them both, as an atonement for the wrong which he had done. The present which he made to Abraham for Sarah consisted of a thousand pieces of silver, with the intimation, "behold, it is to thee a covering of the eyes." This seems intended as a reproof to her for not having worn a veil, which, as a married woman, according to the

custom of the country, she ought to have done. (Gen. 20. 16.) Our translation reads, "behold, *he* (Abraham) is to thee a covering of the eyes;" but the best commentators consider the other to be the proper meaning. Gesen. *in loc.*

It is difficult to affix any exact date to the reign of Abimelech; for, although the circumstance which connects his name with Scripture History makes him contemporary with Abraham, yet it is highly improbable that it took place between the promise made to Abraham of a son and the birth of Isaac, as we might be led to expect from its place in the sacred narrative, because Sarah was at that time ninety years old. It seems, therefore, most probable, that the chronological order is not observed in this place; but that this event happened about the period of Abraham's journey to Egypt, where Sarah was exposed to similar danger from Pharaoh. (Gen. 12.) In that case the date of the occurrence would be, according to the common chronology, about B.C. 1920. After this event, Abraham entered into a covenant with Abimelech at Beersheba, and lived many years in that country.

II. ABIMELECH was the name of another king of Gerar, a contemporary with the patriarch Isaac, and probably a son of the former king. It is remarkable that Isaac, like his father, Abraham, having gone to reside in the country of Gerar, on account of a famine, was apprehensive of losing his wife among the Philistines, on account of her beauty; and that he had recourse to the same artifice of pretending that she was his sister. Abimelech, however, having discovered, from their manner towards each other, that Rebekah was the wife, and not the sister, of Isaac, abstained from taking her away, but reproved Isaac for his dissimulation. He also charged all his people, on pain of death, that they should do no injury to Isaac or his wife, during his residence in their country. (Gen. 26.) But after a time, when, by the blessing of God, Isaac had grown rich and powerful, he became an object of jealousy to Abimelech, and was ordered to leave the place, which he did, and went to Beer-sheba; but Abimelech being still apprehensive of the power of Isaac, followed him to Beer-sheba, where they entered into a covenant with each other, and bound themselves by an oath to do each other no harm. (Gen. 26. 26-31.) This event took place about the year 1804 B.C.

III. ABIMELECH was the name of an illegitimate son of Gideon, the judge of Israel. Gideon left seventy sons behind him, but none of them appear to have partaken of the valour of their father, except Abimelech, whose character is stained by an act of the greatest cruelty. Upon the death of his father, he went to Shechem, where his mother's family lived, and by their means was enabled to corrupt the minds of some of the people. They gave him money out of the temple of Baal-Berith, with which he hired a band of profligate and dissolute men, to seize his brothers at Ophrah, and kill them. This cruel deed was so effectually done, that only Jotham, the youngest, escaped, the rest were all slaughtered on one stone. After this, the people assembled in the plain near Shechem, at the foot of Mount Gerizim, to make Abimelech their king. Jotham having been informed of this, went up the mountain to a place from whence he could speak to them in safety, and addressed a speech to them, containing his well-known parable of the trees assembling to choose a king. And although he could not turn them from their purpose, but was obliged to fly for his life, yet his speech seems to have had its effect upon their minds. Three years after this event, by an act of retributive justice, these guilty parties were made the means of punishing each other.

The Shechemites were the first to rebel against Abimelech, in which they were encouraged by a chieftain, named Gaal, the son of Ebed: but having failed in their attempt to cut him off by an ambush, he laid siege to the city, and totally destroyed it. "He beat down the city, and sowed it with salt." A thousand of the inhabitants had fled to a tower in the temple of the god Berith, which seems to have been too strong to be forced. But Abimelech, who was determined upon their destruction, went to Mount Zalmon, and having set his men the example, each cut down a bough from the trees, and the wood, being heaped against the tower, was set on fire, and thus the whole of the inmates were destroyed. Abimelech's own fate was now not far distant. Having laid siege to Thebez, a city about thirteen miles from Shechem, he soon made himself master of the place; but the people retreated to their strong-hold, which was also a tower, like that of Shechem. Abimelech then endeavoured to destroy them, in the same way that he had destroyed the Shechemites; but as he was attempting to set fire to the door of the tower, a woman threw down a piece of a mill-stone and broke his skull. Finding himself mortally wounded, he commanded his armour-bearer to thrust him through the body, that it might not be said "a woman slew him." The command was obeyed, and Abimelech died. "Thus," says the sacred narrative, "God rendered the wickedness of Abimelech which he did unto his father, in slaying his seventy brethren; and all the evil of the men of Shechem did God render upon their heads; and upon them came the curse of Jotham, the son of Jerubbaal." The date of this event is about B.C. 1233. (Judges 9. 1-57.)

IV. ABIMELECH was a high-priest in the reign of David. In 1Chron. 18. 16, he is called the son of Abiathar, and is supposed to be the same with Abimelech mentioned in 2Sam. 8. 17; but there is a difficulty concerning these names. See ABIATHAR.

ABINADAB was the name of several persons mentioned in the Old Testament.

I. ABINADAB, a Levite of the city of Kirjath-Jearim, in whose house the ark was deposited, after the Philistines had restored it back to the Israelites. (1Sam. 7. 1.)

II. ABINADAB, the son of Saul, who was killed with that king at the fatal battle of Gilboa. (1Sam. 31. 2.)

III. ABINADAB, the second son of Jesse, and an elder brother of David. (1Chron. 2. 13.)

ABINOAM was the father of Barak, the conqueror of Sisera. (Judges 4. 6.)

ABIRAM. There were two persons of that name

I. ABIRAM, the son of Eliab, of the tribe of Reuben, who was one of the leaders in the conspiracy against Moses and Aaron, in the wilderness. For this transgression, Abiram, together with Korah and Dathan, was swallowed up alive by the earth which opened beneath them. (Numb. 16. 32.)

II. ABIRAM, the eldest son of Hiel, the Bethelite, who is remarkable as having died prematurely, in consequence of his father attempting to rebuild Jericho. When that city was destroyed by the Israelites, Joshua said, "Cursed be the man before the Lord, that riseth up and buildeth this city Jericho: he shall lay the foundation thereof in his firstborn, and in his youngest son shall he set up the gates of it." (Joshua 6. 26.) Hiel, who lived in the days of Ahab, five hundred and thirty-seven years after, and who was either ignorant or regardless of the curse, attempted to rebuild the city; but in so doing, he lost his eldest son, Abiram, when laying the foundation,

and Segub, his youngest, when setting up the gates. (1Kings 16. 34.) So exactly was the prophetic denunciation fulfilled.

ABISHAG, the Shunammite, was a young virgin of great beauty, whom David chose in his old age, by the advice of his servants. She appears to have held the rank of a subordinate wife. The marriage was not consummated, but she nourished the aged and declining monarch during the last years of his life. (1Kings 1. 3.) After his death, Adonijah, his son, most improperly sought her in marriage for himself, but this being considered a proof that he kept up the pretensions to the crown which he previously made, Solomon ordered him to be put to death. (1Kings 2. 25.)

ABISHAI, the son of Zeruiah, was nephew to David, and one of the bravest of his chiefs. He was David's companion in that daring exploit, when they surprised Saul at Hachilah, and entered into the royal tent, while the guards were asleep around the king. Abishai would have killed Saul, but David prevented him, and only brought away the king's spear and a cruse of water as trophies. (1Sam. 26. 12.) During the rebellion of Absalom, Abishai remained faithful, and commanded one of the three divisions of David's army, at the battle in which Absalom was killed. (2Sam. 18. 2.) Afterwards, when David was in great danger of being slain in battle by a gigantic Philistine named Ishbi-benob, Abishai came to his rescue, and killed the giant. (2Sam. 21. 17.) Abishai was the chief of the second three of David's chosen warriors. He is celebrated for having lifted up his spear against three hundred men, who were slain by him. (1Chron. 11. 20.) The Septuagint adds, that they were slain "at one time," but this is not in the Hebrew.

ABISHALOM, the father of Maachah, and grandfather of Abijam, king of Judah. (1Kings 15. 2.)

ABISHUA, the son of Phinehas, and great-grandson of Aaron, was the fourth high-priest of the Hebrews. (1Chron. 6. 50.) Neither the time of his continuing high-priest, nor any particulars of his life, are mentioned in Scripture. The Alexandrine Chronicle places him under Ehud. He is called Abiezer by Josephus.

ABITAL, the sixth wife of David, by whom he had a son, named Shephatiah. (1Chron. 3. 3.)

ABIUD, the son of Zorobabel, whose name is found in the genealogical table in Matt. 1. 13, as one of the ancestors of the MESSIAH.

ABLUTION, or Bathing, as a religious ceremony, is of great antiquity, and was practised not only by the Jews, but by almost all the early nations of the world. The Egyptians had this practice from the most remote antiquity, especially the priests. (Herod. ii. 35; Porph. iv. 8.) The Syrians made it a part of their religious rites, and it is of immemorial antiquity in India. The Greeks and Romans had their lavations and lustrations, and the practice is an essential part of the modern Hindoo and the Mohammedan superstitions. From the extensive prevalence and great antiquity of this usage, we may reasonably infer that it was a part of the patriarchal religion before the dispersion, or at least before the world was extensively colonized. The first time we read of washing the body, by way of religious purification, was in the case of Aaron and his sons, who were thus prepared for their investiture with the sacred robes, and the other ceremonies of their consecration. (Levit. 8. 6.) And on other occasions, the priests were commanded to wash themselves, when they had contracted any legal pollution. (Levit. 22. 6.) It does not appear

that the people were anywhere commanded to wash their bodies, as the priests were, as a preparatory rite of purification. At Sinai, they were commanded to wash, not their persons, but their *clothes*, to prepare themselves for receiving the law. (Exod. 19. 10.) On many other occasions, they were commanded to wash their persons, but that was to cleanse them from legal pollution. (Levit. 14. 8, &c.)

In later times, the Jews washed, or rather baptized by immersion, every proselyte, preparatory to his being received into the Jewish church. But it does not appear that this was any part of the original law of Moses. See BAPTISM and PROSELYTE.

With regard to their common ablutions, the Jews in our Lord's time were exceedingly strict. They would not eat until they had washed their hands; and even their vessels and furniture were washed, as a part of their religious duties. (St. Mark 7. 3,8.) This was also an Egyptian practice. (Herodot. *Euterp.* 37.) Jamblichus notices the ablutions of pagans, both before and after meals. (Wait's *Jewish Antiquities*.) And Mr. Maddox informs us, that in the country about Mount Lebanon, it is still the practice to wash both before and after dinner. (*Excursions*, vol. ii.)

The Oriental Christians adopted some of the Jewish notions on the subject of ablution, and traces of it may still be found in the Roman Liturgy, and in that of Milan, where the priest is directed to wash his hands, as a part of the sacramental ritual. It is probable, however, that this ceremony was not introduced into the western churches, till after the time of Gregory the Great. (Palmer's *Orig. Litur.*)

ABNER, the son of Ner, was the captain of the host, or chief leader of Saul's armies, and the cousin of that king. (1Sam. 14. 50.) After the death of Saul, Abner proclaimed Ish-bosheth, the son of that monarch, king over Israel, whilst the tribe of Judah adhered to David. Ish-bosheth reigned two years, and during this period, a battle was fought between the contending parties, headed by Abner on one side, and Joab on the other, in which Abner was beaten. In his flight, he was closely followed by Asahel, the brother of Joab, and having in vain attempted to divert him from the pursuit, he killed him with the hinder end of his spear. (2Sam. 2. 23.) Some time after this event, Abner, having quarrelled with Ish-bosheth, who had reproached him for his conduct to Rizpah, one of Saul's concubines, threatened in his anger to transfer the whole kingdom to David. This threat he proceeded to put into execution; and having had a conference with David at Hebron, was returning from that place, when Joab, who had heard of his having been with David, sent for him back without the knowledge of the king. Fearing that, after having rendered such service to David, Abner would acquire great power, and desirous of revenging the death of Asahel, Joab took him aside, as if to speak peaceably to him, and then stabbed him, so that he died on the spot. Abner was buried with great honour, David himself following the body to the grave, and making a funeral ode on the occasion. (2Sam. 3. 6-39.) This event took place, B.C. 1048.

ABOMINATION. The most usual application of this word in the Scripture, is to idols and idolatry. Every object which was connected with idol-worship was called an abomination. The sacred animals of the Egyptians are spoken of under this name by Moses. (Exod. 8. 26.) Hence, on the other hand, we may understand why *shepherds*, such as the Israelites were, should naturally be held in abomination, by the Egyptians, because they slew and ate without scruple, those animals which were

worshipped as gods by those idolaters. Shepherds may also have been held in abomination, because the Egyptians had been conquered by a nation whose rulers were called the Shepherd-kings, and who were, in after-ages, confounded by historians with the Israelites. See EGYPT and EXODUS.

ABOMINATION OF DESOLATION, was a prophetic description, by the Prophet Daniel, of the power which was to pollute and make desolate the holy place. (Dan. 9. 27.) This was referred by Calmet and many commentators to the idol of Jupiter Olympius, which was set up in the temple at Jerusalem, by Antiochus Epiphanes. (1Macc. 6. 7; 2Macc. 6. 2.) But our Lord applied the expression to something which was to take place after his time, as one of the approaching signs of the destruction of the city, and by which he warned his disciples to escape. (Matt. 24. 15.) This was, doubtless, the abomination of idols and idolatrous ceremonies brought into the holy place by the Roman armies, whose very standards received idolatrous worship from the soldiers. Josephus has given an account of the introduction of these idolatrous ensigns during the last siege; and we learn that when the city was taken, one of them was placed against the eastern gate of the temple, and sacrifices were offered before it by the soldiers.

ABRAHAM, אַבְרָהָם originally called ABRAM, אַבְרָם son of Terah, brother of Nahor and Haran, and uncle of Lot. He was born in the land of Ur of the Chaldees, about 1996 years B.C. (Gen. 11. 27.) The Chaldees were an idolatrous people; in fact, it is said of Terah himself, that he served other gods. (Josh. 24. 2.) And most probably Abram did likewise. He left this land in obedience to a call and promise of the Lord, and set out for Canaan, B.C. 1921, accompanied by Sarai, his wife, and by Terah and Lot. But they stopped on the journey, in the land of Haran or Charan; perhaps on account of the age and infirmity of Terah, who died there. (Gen. 11. 31,32.) After this event, they departed from Haran, (Gen. 12. 1; Acts 7. 2,3) (Abram being seventy-five years old,) and completed their journey to Canaan, and passed through the land. When they arrived at Sichem, the Lord appeared again to Abram, and renewed his gracious promise; and Abram built there an altar to the Lord. (Gen. 12. 4-8.) Thence he went to Bethel, and built another altar, and called upon the name of the Lord. The call and promise had been given in these words: "Get thee out of thy country, and from thy kindred, and from thy father's house, unto a land that I will show thee: and I will make of thee a great nation, and I will bless thee, and make thy name great; and thou shalt be a blessing: and I will bless them that bless thee, and curse him that curseth thee; and in thee shall all families of the earth be blessed." (Gen. 12. 1-3.) Here is a clear intimation of the Messiah, and of the universal extent of the blessings which he would convey to mankind.

2. In consequence of a grievous famine in Canaan, at this time, Abram went forward with his family into Egypt, which was a land of plenty. Here, in the midst of a sensual people, he soon found himself in danger, and became alarmed for his safety. He saw reason to fear, that Pharaoh, their king, struck with the beauty of Sarai, would desire her for himself; and probably would not scruple to kill her husband, in order to obtain her. On this occasion, the holy patriarch gave a melancholy proof of weakness and of sin; and showed how frail are even the best of men, even the strongest believers, in some of the hours of temptation. He counselled her to declare, that she was his sister, in order that, whatever became of *her*, his life might be thereby preserved.

Some persons have sought to defend Abram in this instance, on the ground of Sarai being a very near relation, and therefore a *sister* in the language of old. (Matt. 13. 56.) And in truth, it appears that she was the daughter, or grand-daughter, of Terah, by another wife. (Gen. 20. 12.) But there was evident deceit in this story; it was intended to assure Pharaoh, that Sarai was not Abraham's wife; and it was exposing her to shame and guilt, for the preservation of her husband. The transaction is, undeniably, related in this way; and it is one of the many proofs of veracity and candour in the sacred historians, showing that they would not disguise the truth, even for the credit of God's cause and people. Yet the Lord mercifully overruled this evil counsel of his servant, so that both Abram and Sarai escaped without injury, and were dismissed in peace. (Gen. 12. 10-20.)

3. Abram went out of Egypt, returning towards Canaan, and upon his arrival at Bethel, renewed his religious rites and services. From Pharaoh's bounty, both he and Lot had acquired considerable possessions, and these increased so rapidly, after they left Egypt, that the country in which they dwelt together, would no longer contain them; they agreed, therefore, to separate; and the condescending and affectionate manner in which Abram made the proposal to his nephew, beautifully represents him as a man of charity and peace. Lot remained in the plain of Jordan, travelling to the east; while Abram went forward into Canaan, where the Divine promise was again announced to him in all its gracious fullness. (Gen. 13.)

4. The patriarch, though a man of peace, proved himself, when occasion called for it, to be also a man of great valour. The kings of the neighbouring countries rebelled against Chedorlaomer, king of Elam, and a war ensued, in which Lot was involved, and taken prisoner, in Sodom, and all his servants, and cattle, and goods, were carried with him into captivity. Abram, on receiving intelligence of this, went forth immediately to his rescue, having obtained the assistance of several Canaanitish princes. But his own retinue was not inconsiderable at this time, and shows that he was well established in the land of promise: for "he armed his trained servants, born in his own house, three hundred and eighteen." (Gen. 14. 14.) And there must have been a great number of others upon his estate, men, women, and children. With this band, he sallied forth to attack the enemy, gained a complete victory, and "brought again his brother (nephew) Lot, and his goods, and the women also, and the people." After his return, he was met by Melchisedek, the priest of God, (See art. MELCHISEDEK), to whom he gave a tenth of all his spoil, and from whom he received a blessing.

5. The patriarch complained that he was childless, so that he should be driven to make one of his servants his heir. And probably his impatience was increased by the heavenly assurances he had received of a numerous offspring; and by his looking with the eye of faith to the promised Seed. On this occasion, the Lord favoured him with a more particular promise, of a son of his own, and an innumerable train of descendants. He fully believed this, notwithstanding his advanced age; and hereupon we find the first mention of Abram's faith, as the ground of his acceptance and justification before God, and the fruitful source of all his obedience: "he believed in the Lord, and He counted it to him for righteousness." (Gen. 15. 6; Rom. 4. 3.) During this conference with the Lord, he received a very remarkable assurance of the sojourn and slavery of his posterity, the people of Israel, in the land of Egypt; and of their subsequent return to Canaan, when

the inhabitants thereof should have filled up the measure of their iniquity, and be ripe for punishment. And in the Books of Exodus and Joshua, we find how accurately this prophecy was fulfilled.

6. Abram still having no child was advised by Sarai to marry Hagar, her maid, by whom he had Ishmael (Gen. 16.), and thus became, in a literal sense, the father of a great nation, even of all the Ishmaelite Arabs. (See art. ISHMAEL.) In a few years after, the time came for a confirmation of the spiritual promise (Gen. 17.), for a sealing, by some visible sign, of the covenant which had been made with Abram; that he should be the father of many nations of the Church of God, in all future ages, through Jesus Christ. This confirmation, this visible seal, was the rite of circumcision; from which circumstance it is sometimes called the covenant of circumcision (Acts 7. 8), that is, the covenant thus ratified. Upon this the change was made in the name of the great patriarch: he had hitherto been called ABRAM, "a high father," but henceforth was to be called ABRAHAM, "the father of a great multitude." The name of his wife also was changed from Sarai, "my princess," to Sarah, "a princess" of all nations, and from her it was now promised that Israel should be born. On the hearing of these "good tidings of great joy," Abraham fell on his face with holy reverence, and he laughed—laughed in exultation and delight, as Sarah did afterwards in unbelief. (Gen. 18. 12-15.)

7. We learn from Gen. 18. that Abraham enjoyed at this time an additional mark of Divine favour and honour. It is said in verse 1, that "the Lord appeared unto him;" and, in the following verses, the mode of this appearance is described. Three men, as Abraham supposed them to be, suddenly stood by him, as he was sitting at the door of his tent: observing, as it appears, one of them superior to the rest, he addressed him separately, and said, "Lord, if now I have found favour in thy sight, pass not away, I pray thee, from thy servant;" and it is very clear, from what follows, who this personage was, namely, Jehovah himself, for he makes the promise in his own name, and from his own authority: and he said, "I will certainly return unto thee according to the time of life; and lo, Sarah thy wife shall have a son;" verse 10. And, in verse 13, he is called by his proper title, "the Lord said unto Abraham," &c. We are not to understand by this that it was the eternal Father who appeared and spoke; for no man hath "heard his voice at any time, nor seen his shape." (John 1. 18; 5. 37; 6. 46.) It is rightly considered to have been the Son of God, who assumed a human form, having two attendant angels with him. (Heb. 13. 2.) In the entertainment given by Abraham to these strangers, we have an observable instance of the simplicity of ancient manners and customs; though so great a man, he himself "ran unto the herd and fetched a calf," and Sarah made and baked the cakes. Abraham and his mysterious guests then went together toward Sodom, and on their way the Lord informed him of his intention to punish that guilty city; and when the two angels were gone to execute the command, Abraham began to intercede with the Lord. His intercessions for the city were exceedingly urgent and affecting; and the Lord graciously listened to him, and answered as he alone could answer who had power to punish or to forgive, that he would spare it if ten righteous persons were in it. But not even that small number could be found, and Lot himself seems to have been delivered partly for Abraham's sake. "And it came to pass, when God destroyed the cities of the plain, that God remembered Abraham, and sent Lot out

of the midst of the overthrow, when he overthrew the cities in the which Lot dwelt." (Gen. 19. 29.)

8. "And Abraham journeyed from thence toward the south country, and dwelled between Kadesh and Shur, and sojourned in Gerar. And Abraham said of Sarah his wife, She is my sister: and Abimelech king of Gerar sent, and took Sarah." (Gen. 20. 1,2.) Here is another instance of duplicity, similar to that above mentioned, which was practised before Pharaoh. (2.) This second fall into the same temptation is confessedly the more grievous, especially after so many signal tokens of Divine power and mercy. But we find that Abraham had devised, from his very first setting out, this mode of self-preservation in the strange countries through which he had to travel (Gen. 20. 13); and this unworthy device, formed in the infancy of his faith, took such possession of his mind as afterwards to prevail against him, even in his maturer years; a deplorable instance of the sin and selfishness of the human heart, and a warning, even to the best of men, to watch and pray against the beginnings of evil.

9. About the year B.C. 1897, Isaac, the child of promise, was born, and was taken into covenant with God, by the seal of circumcision, as an inheritor of the promised blessings. But this comfort was not without its alloy. As Isaac grew, the envy and jealousy of Ishmael were excited; and Sarah was constrained to recommend, sorely against Abraham's will, the dismissal of Hagar and her son from the family:—"Cast out this bondwoman and her son, for the son of this bondwoman shall not be heir with my son, even with Isaac." (Gen. 21. 10; comp. Gal. 4. 30,31.) And God commanded Abraham to "hearken unto her voice; for in Isaac shall thy seed be called." So Hagar and Ishmael departed. After a lapse of more than twenty years, which Abraham had passed, no doubt, in the highest enjoyment of parental affection, it pleased God to tempt and prove him, in a most extraordinary and wonderful manner. This child, this only son, this gift of promise, this hope and stay of his remaining years, was ordered to be laid upon an altar and sacrificed, and this deed was to be done by the hand of his father. All the circumstances weighed together, never was faith, never was obedience put to so severe a trial. How many arguments, how many remonstrances, how many reasons for hesitation, must have presented themselves, both to the understanding and heart of the astounded parent! But we hear not of the smallest resistance: the Lord who gave had a right to take away; and the Lord who took away one pledge of his love and truth, could as easily give another. Faith was triumphant, acquiescence complete, and the gold, thus tried in the furnace, came forth purified and accepted: the reward was at hand: the obedience of the heart was sufficient; God required not the deed. The son was bound, the knife taken, the arm of the father uplifted, but an angel was sent to stay the sacrifice: "Lay not thine hand upon the lad, neither do thou anything unto him; for now I know that thou fearest God, seeing thou hast not withheld thy son, thine only son, from me." (Gen. 22. 12.) And Abraham offered a ram for a burnt-offering instead of his son; and the Divine promise was renewed again to him, more emphatically than before. Abraham took care to provide a wife for Isaac out of his own family, and not from the unbelieving and idolatrous Canaanites. (Deut. 7. 3; Josh. 23. 12; 2Cor. 6. 14.)

There is a very interesting account of the embassy sent for this purpose in Gen. 24.; and after this we draw to a conclusion of the history. "And Abraham gave all that he had unto Isaac. But unto the sons of the concubines, which Abraham had, Abraham gave gifts,

and sent them away from Isaac his son, while he yet lived, eastward, unto the east country. And these are the days of the years of Abraham's life which he lived, an hundred threescore and fifteen years. Then Abraham gave up the ghost, and died in a good old age, an old man, and full of years; and was gathered to his people. And his sons Isaac and Ishmael buried him in the cave of Machpelah, in the field of Ephron the son of Zohar the Hittite, which is before Mamre; the field which Abraham purchased of the sons of Heth; there was Abraham buried, and Sarah his wife." (Gen. 25. 5-10.)

10. Abraham was, in many respects, the most distinguished of all the ancient servants of God: he was the father of the faithful (Rom. 4. 11,16,18; Gal. 3. 7), and the friend of God. (James 2. 23; Isai. 41. 8.) In him the covenant of grace was sealed, and the Gospel in effect was preached. (Gal. 3. 8,9.) We know not the extent to which the great mystery of godliness was unfolded to him; but it is certain that he was favoured with considerable discoveries of the future Messiah, and of the truth "as it is in Jesus;" to this our Lord himself bears testimony. "Your father Abraham rejoiced to see my day: and he saw it, and was glad." (John 8. 56.) And his character, as a whole, shines forth with peculiar brightness in the pages of sacred history.

It is remarkable that St. Paul quotes Abraham as an example of justification by faith, and St. James of justification by works. (Rom. 4; James 2.) Thus was Abraham a splendid pattern both of faith and righteousness, both of the principle and the fruit.

[The dates of the various events in the life of Abraham are given from the common chronology; but Mr. Fynes Clinton, in his learned treatise on Scripture Chronology, gives the date of B.C. 2130, for the birth of Abraham, and B.C. 2055, for his calling. See CHRONOLOGY.]

The exact situation of Abraham's native country has been disputed. Mr. Taylor, in the *Fragments to Calmet* (Nos. 532, 533), indulges in some fanciful notions on this point. In accordance with his theory respecting the ultra-oriental origin of the Chaldeans, he brings him from the remote country of Transoxiana, and says that the rivers between which the patriarch's native land was situated were the Gihoon and the Jaxartes. These fancies were incorporated with the article in the condensed edition of Calmet (London, 1832), but judiciously expunged by the learned Editor of the American edition. The situation of Haran, where he afterwards dwelt, and its identity with the Charræ of the Romans, are not very certain; but Ur was, beyond all reasonable doubt, in the north-western part of Mesopotamia. (Josh. 24. 2.) Nicholas of Damascus, an ancient author quoted by Josephus (*Antiq. lib. i. 6*), says that Abraham came "from the country above Babylon, called the land of the Chaldeans." And the traditions of that country have fixed it at the city which was afterwards called Edessa, and Calirrhoe by the Greeks, and which is called, in modern times, Orfah or Orrha. Tavernier, Hyde (*de Relig. vet. Pers.*, c. ii.), and Pococke (vol. i.), consider that it has retained its ancient name, Orra being a corruption of Ur. Rosenmüller, and others, suppose it to have been identical with the Persian fortress Ur, which, according to Ammianus Marcellinus (25. 8), was situated between Nisibis and the Tigris. The only reasons given for this supposition are the identity of names, and the fact that the road from that fortress to Palestine passed through Charræ, or Haran, where Terah died. But the road from Edessa, or Orfah, might also pass through Haran, which was only a few miles from it; and, moreover, Orfah has the advantage of tradition in its favour.

Mr. Buckingham, who stayed some time at Orfah, has given an account of the wandering pastoral tribes of Turcomans in that country, which is strikingly illustrative of the history of Abraham. In speaking of the plain which he entered after crossing the Euphrates, he observes:—

“This great plain, as it is called, was under the direction of the sheikh, who received the tax from his people, and paid it to the pasha of Aleppo, and who pitched his tent at different periods near all the villages and wells of his territory in succession. When we alighted at his tent door, our horses were taken from us by his son, a young man well dressed in a scarlet cloth benish, and a shawl of silk for a turban. The sheikh, his father, was sitting beneath the awning in front of the tent itself: when we entered, he rose up to receive us, exchanging the salute of welcome, and not seating himself until all his guests were accommodated.

“The tent occupied a space of about thirty feet square, and was formed of one large awning, supported by twenty-four small poles, in four rows of six each, the ends of the awning being drawn out by cords fastened to pegs in the ground. Each of these poles giving a pointed form to the part of the awning which it supported, the outside looked like a number of umbrella-tops, or small Chinese spires. The half of this square was open in front and at the sides, having two rows of poles clear, and the third was closed by a reeded partition, behind which was the apartment for the females, surrounded entirely by the same kind of matting.

“The sheikh, whose name was Ramadān, was an old man of eighty, of fine features, combining the characteristics of the Turkish and Arabic race, with large expressive eyes. His complexion was darker than that of the people of Yemen, though somewhat less so than that of the common order of Abyssinians, and this was strongly contrasted by a long beard of silvery white. His divan was spread out with mats and cushions, covered with silk; his dress and arms were plain, yet of the best qualities of their kind: before his tent were two fine mares, well caparisoned, and everything about his establishment wore an appearance of wealth and comfort.

“Others of the caravan, seeing us halted here as they passed by, alighted likewise, and took their seats without invitation, all being received with the same welcome salute, until the party amounted to twenty-six in number. While we were talking of the Turcomans, who had alarmed us on our way, a meal was preparing within; and soon afterwards, warm cakes baked on the hearth, cream, honey, dried raisins, butter, lebben, and wheat boiled in milk, were served to the company. Neither the sheikh himself, nor any of his family, partook with us, but stood around, to wait upon their guests, though among those who sat down to eat were two Indian fakirs, or beggars, a Christian pilgrim from Jerusalem, and the slaves and servants of Hadjee Abd-el-Rakhmān, all dipping their fingers into the same dish. Coffee was served to us in gilded china cups, and silver stands or finjans, and the pipes of the sheikh and his son were filled and offered to those who had none.

“If there could be traced a resemblance between the form of this tent, and that of the most ancient buildings of which we have any knowledge, our reception there no less exactly corresponded to the picture of the most ancient manners of which we have any detail. When the three angels are said to have appeared to Abraham in the plains of Mamre, he is represented as sitting in the tent-door in the heat of the day. ‘And when he saw them, he ran to meet them from the tent-door, and bowed himself to the ground.’—‘And Abraham

hastened into the tent, unto Sarah, and said, Make ready quickly three measures of fine meal, knead it, and make cakes upon the hearth. And he took butter and milk, and the calf which he had dressed, and set it before them, and he stood by them under the tree, and they did eat.’ When inquiry was made after his wife, he replied, ‘Behold, she is in the tent.’ And when it was promised him, that Sarah should have a son, it is said, ‘And Sarah heard in the tent-door, which was behind him.’ The angels are represented, as merely passengers in their journey, like ourselves; for the rites of hospitality were shown to them, before they had made their mission known. At first sight, they were desired to halt and repose, to wash their feet, as they had apparently walked, and rest beneath the tree, while bread should be brought them to comfort their hearts. ‘And after that,’ said the good old patriarch, ‘shall ye pass on, for therefore are ye come unto your servant;’ so that the duty of hospitality to strangers seems to have been as well and as mutually understood in the earliest days, as it is in the same country at present.

“The form of Abraham’s tent, as thus described, seems to have been exactly like the one in which we sat; for in both there was a shaded open front, in which he could sit in the heat of the day, and yet be seen from afar off; and the apartment of the females, where Sarah was, when he stated her to be within the tent, was immediately behind this, wherein she prepared the meal for the guests, and from whence she listened to their prophetic declaration.

“I have noted those points of resemblance, chiefly because the tents of the Turcomans here are different from all those of the Arabs that I have ever seen in the countries of the south: these latter being of an oblong form, and divided in the middle, so as to form two compartments by, the side of each other, both of them open in front, and closed at the back and sides, but without either a shaded porch or door before them, or an apartment of any kind behind.

“The Turcomans, on the borders of Turkey, seem to hold the same position as the Bedouins on the borders of Syria. They dwell chiefly in the plains, south of the range of Mount Taurus, and extend from the sea-coast, near Antioch, to the borders of the Euphrates. They are, however, more wealthy than the Arabs, from having richer pastures, and more numerous flocks, and from being cultivators, as well as shepherds. They are, therefore, also more fixed in their stations, and live both in tents and in villages. There are among them peculiar tribes, as among the Arabs, some remaining almost stationary, and others mounted on fleet mares, scouring the plains, and living more by depredations on caravans, and even on single passengers, than by agriculture or pastoral labours.”—Buckingham’s *Travels in Mesopotamia*.

The fame of Abraham was very great in ancient times: and we find traditions of him in almost all the countries of the East. Some of these traditions are absurd enough; and most of them may be traced, though in a distorted shape, to the Scripture narrative. Nicholas of Damascus says, that he came with an army, and reigned at Damascus. This story might have arisen from his having defeated Chedorlaomer, and the confederate kings, whom he pursued almost to Damascus. (Gen. 14. 15.) Some make him the inventor of letters, and the author of many books. The rabbins say, that he is the author of the eighty-ninth Psalm. The Apocryphal works attributed to Abraham are enumerated in Fabricius, (*Coder. i.*) Josephus (*Antiq. i.* 8, 2,) tells us, that Abraham gained great reputation in Egypt, which is very probable; and that he taught the Egyptians arithmetic and astronomy, (Artapanus says astrology,) which is very impro-

bable: nor is the reason which he gives for the assertion very convincing; namely, "that science came from the Chaldeans into Egypt." This was probably the case; but it by no means follows, that Abraham was the person who brought it there. And modern discoveries tend to prove, in perfect accordance with Scripture, that Egypt was a highly civilized nation when it was visited by Abraham.

The sacred historian has not told us the name of the Pharaoh who reigned at that time: nor is it possible, without more certain data than we at present possess, to determine that point exactly. Josephus, indeed, in a speech which he made to the Jews, during the siege of Jerusalem, (*Bell. Jud.* v. 9, 4,) calls him *Necho*; but there is no king of that name in the Egyptian annals, except two in much later times, one of whom fought against Josiah, king of Judah. In Malala, (*Chron.*, p. 71, quoted by Winer,) the name is written *Narracho*; and Artapanus calls him *Pharethones*; (qu. Phara or Pharaoh *Thones*,) and says that Abraham remained in Egypt twenty years. But none of these names are found among the Egyptian kings who reigned about the time of Abraham. Eusebius supposes him to have been born in the first year of the first king of the sixteenth dynasty, but this is more agreeable to his own hypothesis than to facts. That he was contemporary with some of the kings of that dynasty seems probable; but whether they ruled in Lower Egypt, or whether the Pharaoh whom Abraham visited was one of them, or one of the Shepherd-kings, are doubtful points.

The researches in Egyptian antiquities which have been so successfully pursued of late, may, however, ultimately lead to a satisfactory arrangement of the earlier periods of Egyptian chronology. And as the existing monuments have already given us proofs long despaired of, that the latter periods are in exact accordance with sacred history, and have supported the veracity of the Bible, by evidence addressed to the senses; so we may feel certain, that if ever sufficient data should be recovered for determining the early chronology of Egypt, they will afford similar evidence with regard to those parts which we have not now the means of comparing with the Scriptures.

The Mohammedans, who entertain very great reverence for Abraham, have invented or adopted more fables respecting him than even the Rabbins. In fact, he is regarded by almost all the nations of Central and Western Asia, as a powerful prince and a great prophet. The Arabians make Abraham the grandson, instead of the son of Terah: they call his father Azar, and say that he was the guardian of the Chaldean temple, or, according to other accounts, the chief maker of idols in Babylon. D'Herbelot thinks that Terah was the name of both the father and grandfather, and that the father was also surnamed Azar: and proposes by this means to obviate the difficulties which have presented themselves respecting the age of Abraham, and his departure from Ur of the Chaldees.

The Koran has preserved many of the traditions which existed before the time of Mohammed, and among the rest, that which relates to his persecution by Nimrod; who, in spite of the historical impossibility of the story, is reported to have thrown Abraham into a fiery furnace, at the instigation of his father Azar, whose idols he had destroyed. They also relate that Abraham conducted Hagar and Ishmael to Mecca; and that when, in order to procure them water, he stamped with his foot on the ground, in the place pointed out by an angel, the holy well Zemzem was opened. And they believe that he was the builder of the Caaba, or Sanctuary, at Mecca. Calmet; and Taylor's *History of Mohammedanism*.

D'Herbelot quotes an account of the discovery of Abraham's tomb, near Hebron, in the year 1119, in which it is stated that the bodies of the three patriarchs were found together, with many gold and silver lamps which had been buried with them. (*Bibl. art. Ben. Scholmah.*) But the traveller Sandys tells us, "there is a little village, seated in the field of Machpelah; where standeth a goodly temple, erected over the cave of their burial by Helena, the mother of Constantine, converted now into a mosque;" and, therefore, the discovery (if ever such a discovery took place) must have been at a much earlier date. There seems, however, to be great doubt, whether this mosque stands upon the exact spot where was the cave "of the field of Machpelah which was before Mamre." See *Modern Traveller*, Palestine.

ABSALOM, son of David, king of Israel, and of Maacah, daughter of Talmi, king of Geshur. (2Sam. 3. 3.) Of his early life we have no account; but he seems to have been a favourite child, and had, probably, been very much indulged and spoiled by his father. As he grew up, his evil disposition manifested itself in acts of violence and deceit; and of those remarkable acts of retributive justice which are found in the Divine government, he became the signal instrument employed by God to chastise his father for the murder of Uriah, and the seduction of Bath-sheba. About three years after that event, David had the affliction to learn the violence done by his son Amnon with Tamar, sister to Absalom. (2Sam. 13.) From the moment of the act Absalom meditated revenge, which, two years after, he succeeded in accomplishing, by surprising the unguarded Amnon at a sheep-shearing at Baal-hazor, and killing him during the feast. Fearing his father's anger, and the retribution of the law, which provided no sanctuary for wilful murderers, Absalom fled to the court of his maternal grandfather, where he remained three years. David, however, appears to have been too much incensed against Amnon to have grieved bitterly for his death. (2Sam. 13. 39.) The crime of Absalom was not without high provocation; and, moreover, he seems to have been with his father, as with most others, in more than ordinary favour, on account of his very prepossessing manners and exterior. David was much grieved at Absalom's exile, and was, therefore, very readily prevailed on, by an artifice of Joab, to recall him. (2Sam. 14.) He had, however, firmness enough to deny his son access to his presence for two years, during which time Absalom resided in Jerusalem, apart from the court. (2Sam. 14. 28.) The manner in which Absalom procured his restoration to his father's favour is curiously characteristic of the habits of those times. After repeated applications to Joab to intercede for him, which that haughty chief disregarded, he ordered Joab's barley-field to be set on fire. (2Sam. 14. 30.) This produced a remonstrance from the injured party; and Absalom, taking advantage of the interview, with the consummate address in which he excelled, prevailed upon Joab to reinstate him in the king's regard. But ambition, or revenge, or a mixture of those passions, soon excited him to higher aims. He assumed a more splendid exterior and retinue, and by specious arts, insensibly allured a considerable proportion of the people to support his scheme. When his plans were sufficiently matured*, he asked, and obtained, his father's permission to pay in Hebron a vow, which he had vowed at Geshur. In the meantime spies had

* "After forty years." (2Sam. 15. 7.) There is a considerable difficulty here, which has not been satisfactorily explained. The point to be ascertained is, from what date the forty years commence.

been despatched through all the tribes to announce, that as soon as the trumpet should sound, they were to proclaim that Absalom reigned in Hebron. (2Sam. 15. 10.) Matters being thus arranged, Absalom set out for Hebron, accompanied by 200 men, who were altogether ignorant of the object of his expedition. Ahithophel, David's counsellor, treacherously took part in the scheme, which, as had been denounced against David, was permitted to succeed to so alarming an extent, that the king found he had no hope of safety except in flight. He left, however, behind him a serviceable friend, in the person of Hushai the Archite, to take advantage of circumstances. An opportunity soon presented itself to Hushai of serving his master's cause. The advice of Ahithophel was supreme with Absalom and the people. (2Sam. 16. 23.) At the suggestion of this unprincipled counsellor, the prince had already fulfilled the prophecy of Nathan, with regard to his father's wives. (2Sam. 12. 11; 16. 22.) Ahithophel next recommended an immediate pursuit of David, who was to be killed at once, and then the whole contest would cease. Absalom did not hesitate to applaud the scheme, but desired the advice of Hushai. The latter then represented the danger of encountering David with anything less than an overwhelming force, and the fatal result of an early discomfiture. Providence so ordered that Hushai's advice was followed, and Absalom, having accomplished his purpose as the scourge of his father, soon himself received the reward of his crimes.

The advice of Ahithophel was communicated by Hushai to David, who immediately crossed over Jordan, and was followed by Absalom. (2Sam. 17. 22, 24.) While this desperate rebel and parricide in heart was wickedly seeking the destruction of his father, David gave the strictest and most earnest charge to his three principal officers, Joab, Abishai, and Itai, to save the life of his son. (2Sam. 18. 5.)

The two armies engaged in "the wood of Ephraim," a place in the region of Gilead, probably named from the great slaughter of the Ephraimites there made by Jephthah. Here Absalom in the heat of the engagement, became entangled by his hair, which he wore of an ostentatious length, in the branches of an oak; his mule left him suspended in the tree, and Joab, in direct violation of the king's order, struck him through with three darts, and he was then despatched by ten of Joab's attendants. His body was afterwards cast into a pit and covered with stones. (2Sam. 18.)

The unnatural conduct of this rash and violent young man never produced any change in the parental feelings of his father; and the exclamation of David, on receiving the fatal intelligence, is well known as one of the most pathetic and touching historical passages on record. (2Sam. 18. 33; 19. 4.)

Absalom was celebrated for his personal beauty, and especially for the luxuriance of his hair, the pollings, or cuttings of which weighed 200 shekels,—about three pounds avoirdupois. It is a mistake, however, that this took place yearly, the original expression only signifies "at stated times," מִן הַיָּמִים לַיָּמִים *from end of days to the days*.

Absalom's male children being dead, he erected a column in the king's dale, near Jerusalem, to perpetuate his memory. (2Sam. 18. 18.) A monument called "Absalom's Pillar," is still shown in the Valley of Jehoshaphat; but there is great reason to doubt its identity with the column in question. "Absalom's place," (2Sam. 18. 18,) literally rendered, would be *Absalom's hand*; יַד אֲבִשָּׁלֹם and so Josephus, (*Antiq. Jud.* vii. 9.) and the LXX. take it. It probably bore the impress of a hand, as the emblem of power;

which is not uncommon in the Eastern nations at the present time. The custom is frequently alluded to in Scripture. (See the original of 1Sam. 15. 12; 2Sam. 8. 3; 1Chron. 18. 3.)

Absalom's Pillar.

The annexed engraving is taken from a recent work, *Three Weeks in Palestine*, in which the monument itself is thus described by the author. Speaking of the tombs in the Valley of Jehoshaphat, he says:—"That of Absalom is the most conspicuous, of which the lower portion is quadrangular, standing entirely detached from the living rock from which it was hewn. Upon the four façades are cut Ionic pilasters, over which is a frieze, with Doric metopes and triglyphs. Over this base rises a square piece of masonry, of smaller dimensions; and the whole is crowned by a tall conical dome, finishing in a point." The Ionic pilasters seem evidently to be of a later age, and unless we had some reason for believing that the monument had been "garnished" in after-times, we cannot suppose it to be the pillar mentioned in this history.

ABSALON. An ambassador of Judas Maccabeus to Lysias, general of the army of Antiochus, surnamed Eupator. (2Macc. 11. 17.)

II. See **ABSALOM**—rendered **ABSALON** in the Vulgate version.

ABSOLUTION signifies *acquittal*. It is taken also from that act whereby the priest declares the sins of such as are penitent remitted. The Romanists hold *absolution* a part of the sacrament of penance; and the Council of Trent, and that of Florence, declare the form or essence of the sacrament to lie in the words of *absolution*—"I absolve thee of thy sins." According to this, no one can receive *absolution* without the privity, consent, and declaration of the priest. The chief passage on which the Romanists ground their power of *absolution* is that in John 20. 23, "Whosoever sins ye remit, they are remitted unto them; and whosoever sins ye retain, they are retained." But, supposing the passage in question to apply to the successors of the apostles, and to ministers in general, it can only import that their office is to preach pardon to the penitent, assuring those who believe that their sins are forgiven through the

merits of Jesus Christ, and that those who remain in unbelief are in a state of condemnation. Buck.

ABSTINENCE, or keeping from the use of particular food or drink, or from the customary occupations and enjoyments of mankind, was a part of religion from the very earliest periods. It was, in fact, the first test of obedience required from the human race; for Adam was commanded to abstain from eating the fruit of the tree of the knowledge of good and evil in the garden of Eden. Some have supposed that the antediluvians abstained from wine and flesh, because herbs and fruits only were assigned to Adam for food at the creation. (Gen. 1. 29.) But this is not conclusive, and the contrary opinion has been more successfully maintained. The first notice of eating flesh is certainly the permission given to Noah. (Gen. 9. 3.) He was only required to abstain from blood.

The law of Moses required abstinence from various kinds of food. Some animals were declared to be unclean, and were altogether prohibited (see **ANIMAL**), and parts of others were forbidden. Blood was most strictly prohibited. (See **BLOOD**.) The priests were commanded to abstain from wine or strong drink, during the time they were employed in attending their ministry in the tabernacle. (Levit. 10. 9.) And the Nazarites were subject to the same abstinence during the time of their consecration or separation. They were even forbidden to eat any part of the vine or its fruit. (Numb. 6. 3, 4.) Abstinence from wine may be traced among the Egyptians, and other nations, as an observance of the priesthood. (Porphyr. *de Abst.*, iv.) Among the primitive Christians some abstained from the meats and drinks which had been prohibited under the law of Moses; others considered themselves freed from these restraints. From this arose dissensions and disputes, which required the interference of the apostles; and, in the council which they held at Jerusalem, they decreed that the heathen converts should be only required to abstain "from pollutions of idols, and from fornication, and from things strangled, and from blood." (Acts 15. 20.)

ABUBUS. Father of Ptolemy, by whose procurement his father-in-law, Simon Maccabeus, was assassinated in the castle of Docus. (1 Macc. 16. 11, 12.) A.M. 3869, ante A.D. 135.

ABUMA. The same as *Rumah*, (2 Kings 23. 36,) אבמה a city of Judah. Josephus states it to have been the birth-place of Zebudah, the mother of King Jehoiakim.

ABYSS, literally signifies any great depth or deep without bottom, and generally a mass of very deep water. According to the Jews, the abyss was a place under the earth, in the most internal parts of it, and was thought to be a great receptacle of waters to furnish all the springs or rivers. And this opinion was held by Homer, Socrates, Plato, and others, as well as by the Egyptians.

In Genesis 7. 11, it is called the *great deep*; or that vast body of waters which is conceived to exist in the hollow sphere of the earth, whence it was brought forth at the universal deluge. Isaiah 51. 10, "Art thou not it which hath dried the sea, the waters of the great deep?"

Isaiah (44. 27) refers to the method by which Cyrus took Babylon, viz., by laying the bed of the Euphrates dry, as mentioned by Xenophon and others. The same event is noticed in similar terms by Jeremiah 51. 36. A parallel passage, in relation to Egypt, occurs in Isaiah 19. 5, where the exhaustion of the country and its resources by foreign conquerors seems to be pointed out.

These conquerors were Nebuchadnezzar and the Persian kings, whose yoke was very grievous.

Luke 8. 31. The term *deep* should be rendered the *abyss*, as is justly remarked by Campbell; that part of Hades in which wicked spirits are in torment.

Romans 10. 7, "Who shall descend into the *abyss* to bring up Christ again from the dead?"

The Greek term, *αβυσσος*, occurs in Rev. 9. 1; 11. 7, *et alia loc.*

The **ABYSS** sometimes signifies, metaphorically, grievous affliction or calamities, in which, as in a sea, men seem ready to be overwhelmed. (Ps. 42. 7; 71. 20.)

The **PR.** (Ezekiel 32. 23.) *The region of the dead.* The spacious sepulchre, full of receptacles hewn round about its sides, in which the dead were deposited.

In the conception of the ancient Hebrews, and of the generality of Eastern people at this day, the *abyss*, the sea, or waters, encompassed the whole earth. This was supposed to float upon the *abyss*, of which it covered a small part. According to the same notion, the earth was founded on the waters, or at least its foundations were on the *abyss* beneath. (Ps. 24. 2; 136. 6.) Under these waters, and at the bottom of this *abyss*, they represented the wicked as groaning and suffering the punishment of their sins. The Rephaim were confined there; those old giants who, whilst living, caused surrounding nations to tremble. (Prov. 9. 18; 21. 16.)

In these dark dungeons, the kings of Tyre, Babylon, and Egypt are described by the prophets as suffering the punishment of their pride and cruelty. (Ezek. 28.)

The *abyss* is represented in the Book of Revelation as the abode of evil spirits and powers opposed to God. (Rev. 9. 1-11.)

See **HELL**.

ACCAD. ܐܬܬܐ; Sept. *Αρχαδ*; one of the four cities said to have been built by Nimrod, the founder of the Assyrian empire. (Gen. 10. 10.) The Jerusalem Targum, and Jerome, say, it is the same as *Nisibis*. It is not mentioned under its ancient name by any profane author; but modern travellers state that about six miles from Bagdad is a gigantic pile of ruins, called, by the Arabs and Turks, the hill of Nimrod, in which the materials and style of building are so perfectly similar to those of ancient Babylon, as to make it certain that here was the site of one of the four cities built by Nimrod.

Dr. Wells is of opinion that some traces of its name are still preserved in that of a small river called Argades, which flows near Sittace, a town situated at some distance from the Tigris, and which anciently gave the name of Sittacene to the district of country between Babylon and Susa.

It is further conjectured that Sittace was formerly called *Argad*, and that it received its present name of Sittace, or Psittace, from the great quantities of nuts, called *Psittacias*, which grow in its vicinity. Strabo mentions a district of that country by the name of *Artacene*, formed probably from *Arcad*, which might be the ancient name of the district *Sittacene*, as *Arcad* was of the city *Sittace*.

Pliny states that *Sittacene* was the same as *Arbilitis*, or the country of Arbela. Bochart; Michaëlis; Calmet.

ACCEPT—ACCEPTABLE—ACCEPTED. To *accept*, is not only to receive, but to receive with pleasure and kindness. (Gen. 32. 20.) It stands opposed to reject, which is a direct mode of refusal, and implies a positive sentiment of disapprobation. (Jer. 6. 30; 7. 29.)

To *receive*, is an act of right—we receive what is our own: to *accept*, is an act of courtesy—we accept what is offered by another. Hence an *acceptable time*, or *accepted time*, (Ps. 69. 13; 2Cor. 6. 2,) signifies, a favourable opportunity. “No prophet is *accepted* in his own country,” (Luke 4. 24,) that is to say, his own countrymen do not value and honour him as they ought.

“Neither *acceptest* thou the person of any,” (Luke 20. 21.) The word *person* here, is intended to denote the *outward appearance*, in contrast with inward character.

ACCESS is the privilege of approaching a superior with freedom. It is distinguished from admittance thus:—“We have *admittance* where we enter; we have *access* to him whom we address. There can be no *access* where there is no *admittance*; but there may be *admittance* without *access*. Servants or officers may grant us *admittance* into the palaces of princes; the favourites of princes only have *access* to their persons.”—Crabbe.

This word occurs but three times in the Scriptures.

ACCHO. אֲכֹ; Sept. *Ακχω*, *Асcho*; modern name, *ACRE*: a seaport of Palestine, (Judges 1. 31,) called afterwards *Ptolemais*, from Ptolemy Philadelphus, who rebuilt, enlarged and beautified it. (Acts 21. 7.) It is situated in the province of Galilee, in Syria, distant about 27 miles south of Tyre, and about 70 north of Jerusalem. On the land side, north and east, it is encompassed by a spacious and fertile plain. On the west, the walls are washed by the Mediterranean Sea, and, on the south, by a magnificent bay, extending from the city as far as Mount Carmel, being three leagues broad and two in depth. The port, on account of its shallowness, can only be entered by vessels of small burden, but there is excellent anchorage on the opposite side of the bay. With such advantages of situation, it is not to be wondered that great importance has at all times been attached to the possession of this place.

In the first partition of the Holy Land, under Joshua, Accho belonged to the tribe of Asher; but it was one of those places out of which they never extirpated the Canaanites. *Accho*, and all beyond it northwards, was considered as a heathen land by the Jews. When Syria was subjected by the Romans, it was made a colony by the Emperor Claudius. The Arabs still call it *Akka*. Its name can be traced to no Hebrew or Syriac root, and may be presumed of Arabic origin, from *Ak*, which signifies “sultry.”

There are several medals of *Accho* or *Ptolemais*. Those bearing its Phœnician name, *Ok* or *Akko*, have dates of the era of Alexander, whence it may be inferred that it received favours from that prince, probably at the time he was detained in Syria by the siege of Tyre. From others it appears that the city assumed the privilege of asylum and of sanctity, and that it possessed a temple of Diana.

Christianity was planted here at an early period; and here St. Paul visited the saints in his way from Ephesus to Jerusalem, and rested here one day, (Acts 21. 7, where it is called *Ptolemais*.)

This city is now called *Acre*. Subsequently falling into the possession of the Saracens, it recovered some semblance of its former name in that of *Akka*, by which it is at present known. By the knights of St. John of Jerusalem it was called *St. Jean d'Acre*, from a magni-

ficent church which was built within its walls, and dedicated to St. John.

It was first taken by the Saracens in 636, and the Christians first became masters of it in 1104. Salah'ddin got possession of it in 1184, and held it till 1191, when it was retaken by the Crusaders. The latter held it for exactly one century, it was then subject to the Mamlouk sultans of Egypt till the year 1382, when they were dispossessed by a body of Circassians who successively ruled till 1517.

During the frenzy of the religious war excited by Peter the Hermit, called the Crusades, it was repeatedly the object of obstinate and bloody contentions. When taken by the victorious Salah'ddin, it was speedily invested by all the Christian forces in Palestine, and, after a vigorous and obstinate resistance on the part of the Saracens, it surrendered to the armies of Philip Augustus of France, and Richard I. of England; two monarchs whose ardour in the cause of the crusades excited them to extraordinary deeds of valour. The possession of the city was dearly purchased by the assailants: they lost more than 100,000 men before its walls; more were destroyed by disease and shipwreck; and very few soldiers of the Christian armies, which amounted to nearly 600,000 persons, returned to their respective countries.

The pretended wood of the true cross was then in Acre, and of this enviable prize the Christians obtained possession. They also procured the liberation of numbers of Christians who had been made prisoners by the Saracens. Salah'ddin, however, refused to ratify the capitulation of the city, which so exasperated Richard I. that he ordered 5000 of the Saracens to be massacred; an act of cruelty that was severely retaliated on the Christians. About a century afterwards, when the Christians were finally expelled from Jerusalem by the Saracens, and when the attempts made by St. Louis of France, Edward I. of England, and other princes, had been completely unsuccessful, *Acre* became a kind of metropolis in Syria for the Latin Christians. The city was then adorned with many elegant and magnificent edifices, churches, aqueducts, and was strengthened by a double wall. Pilgrims and fugitives were attracted to it; and, as it increased in population, the morals of the citizens became extremely licentious. Bands of adventurers sallied out from its gates, and, under the banner of the cross, plundered the adjacent villages. Nineteen Syrian merchants were on one occasion robbed and murdered, under circumstances of peculiar atrocity, and, when satisfaction was demanded, it was refused with contempt. At length the Sultan Khalil, exasperated by these enormities, marched against Acre at the head of an army consisting of 160,000 infantry, and 60,000 cavalry. After a short siege, the besiegers forced the double wall, the city was stormed, and 60,000 Christians were either massacred or made slaves. The fortress of the Knights Templars was destroyed, the Grand Master slain, and out of five hundred of them only ten survived, who probably, as Gibbon observes, perished on the scaffold.

This event took place on the 21st of May, 1291, and on that day there was so great a tempest that numbers of the fugitives from the garrison, unable to reach the ships in the bay, perished. A few of the besieged, among whom were the King of Jerusalem, the Patriarch, and the Grand Master of the Hospital, escaped by sea to Cyprus. There was a convent, the abbess of which, says Maundrell, ordered the nuns to mangle their faces, in order to avoid the violence which was apprehended from the Saracens, setting the example herself: the victors, exasperated and disappointed, put them all to the sword. The Saracens then dilapidated *Acre*, and reduced it almost to a ruin. It remained in this condi-

Acre.

tion till 1750, when it was fortified by an Arab sheikh, named Dakir, who was in arms against the Grand Seignior, and had maintained his independence for many years, until he was basely assassinated at the advanced age of eighty-six. Under his wise administration, *Acre* recovered a part of its trade. He was succeeded by the famous tyrant, Djezzar Pacha, who fortified and embellished the town.

When the French army, under Napoleon, advanced against it in 1799, it could boast of little else than a few old towers mounted with rusty cannon, some of which burst when a round was fired.

Acre was invested by Napoleon, but the French were repulsed in every mode of attack, by the skill and intrepidity of Sir Sidney Smith. The garrison, assisted by the British marines, repulsed the French with great loss. At length, Bonaparte announced his intention of raising the siege, and on the sixty-first day of the siege commenced his retreat, and was finally driven out of Syria, into Egypt.

Such being the brief outline of its eventful history, it cannot be presumed to contain any edifice of great antiquity, entire. The havoc of war is everywhere apparent; a few prostrate columns of gray and red granite, and some stone balls lying about the streets, being the only relics observable, of early times. Among the Gothic remains are those of the Cathedral Church of St. Andrew, near the sea, now a modest chapel. The ruins of that of St. John, the tutelar saint of the place, and erected by the knights of that order, are likewise shown. Amongst the most remarkable modern buildings, is a beautiful mosque, erected by Djezzar Pacha. The interior court is entirely paved with white marble. The public is likewise indebted to this prince, for a very fine fountain, near the entrance of the Serai, or palace. The materials which served for its construction, as well as those of the mosque, were brought from Cæsarea.

The sites of ancient cities, particularly those lying on the sea-coast, at the present day, serve for quarries to more modern cities rising up in their vicinity, owing to the ready building materials they afford. Thus, many of the finest structures of antiquity, have been wantonly destroyed by the barbarous occupants of the soil.

The houses are mostly built of stone, and with a solidity that would indicate a necessity for defence. They are all flat-roofed; the terraces forming agreeable

recreation places, in fine weather. They are constructed in the following manner:—across the beams forming the ceiling of the uppermost story, deal planks are laid, fitting nicely together, over which, rafters are placed, in an opposite direction, the interstices being filled up with chopped hay or straw, mixed up with lime or small pebbles. Upon this, a layer of pounded charcoal is placed; then one of lime and sand, mixed up with ashes and charcoal, and levelled with a roller. The whole is beat down with a mallet, till it assumes a bright polish, and is rendered impermeable to rain. Lord Lindsay, in his *Letters from Edom, &c.*, states, that "*Acre* looks nobly from a distance; but within its walls is most wretched, houses in every direction in ruins, and broken arches." Robinson's *Syria; Script. Gazetteer*.

ACCURSED. Amongst the Hebrews, everything that was idolatrous, was **קֶרֶם**, that is, "devoted to destruction," and regarded as *accursed*, which no person might meddle with; if he did, he became himself a *curst* thing, or devoted to destruction. This was exemplified in the case of Achan, who took a wedge of gold and a Babylonish garment to his own private use, when it had been made *accursed*, (*Cherem*), on which account he was stoned to death. Compare Joshua 6. 17, 18, with 7. 21-26.

The cities of King Arad, the seven nations of Canaan, and the sacrifices of idols, were *accursed*. (Numb. 21. 23; Deut. 7. 26.) The Hebrew word *Cherem*, is sometimes, however, used to denote any sacred gift which was devoted to God or to holy purposes, as in Levit. 27. 28: "No *devoted* thing, that a man shall *devote* unto the Lord of all that he hath, both of man and beast, and of the field of his possession, shall be sold or redeemed: every *devoted* thing (*Cherem*) is most holy unto the Lord."

We also find, that though the city of Jericho was *Cherem* (*devoted* to destruction), (Joshua 6. 17,) yet the metals in it were sacred to the Lord, and set apart to holy purposes.

Roberts, in his *Oriental Illustrations*, states, that in India, whatever has been devoted to the gods can never be sold, redeemed, or applied to any other purpose. In every village there are chronicles of strange events, of

the visitations of the gods on men who did not act fairly and truly with their *devoted* things. There is a story generally received, of "a deranged man, who, in a lucid interval made a vow, that he would give his gold beads to the temple of Siva, and he became quite well. After this, he refused to perform his vow, and he died." "Another person, who was very ill of a fever, devoted a goat to the gods, and immediately became well; but some time after, he refused the gift, and his fever returned." When a child becomes sick, the parents forthwith inquire, "Have we given all the things we devoted to the gods?" The medical man also (when the disease baffles his skill,) inquires, "Have you given all the things you devoted to the gods?"

From the following passage in Strabo, (lib. xiii. ch. 1. 42.) it appears, that it was not unusual, in remote antiquity, to pronounce a *curse* upon those who should rebuild a destroyed city. "It is believed that those who might have afterwards wished to rebuild Ilium, were deterred from building the city, in the same place, either by what they had suffered there, or because Agamemnon had pronounced a *curse* against him that should rebuild it; for this was an ancient custom. Thus Croesus, after he had destroyed Sidene, into which the tyrant Glaucias had thrown himself, uttered a *curse* upon him who should rebuild the walls of that place." Zonaras says that the Romans pronounced a *curse* upon him who should rebuild Carthage. Joshua's *curse* upon the builder of Jericho was fulfilled according to 1 Kings 16. 34, on Hiel, who lost his eldest son, Abiram, when he laid the foundation, and his youngest son, Segub, when he built the gate. "*Cursed* be the man before the Lord, that riseth up and buildeth this city Jericho: he shall lay the foundation thereof in his first-born, and in his youngest son shall he set up the gates of it." (Josh. 6. 26.)

The fancies of the Rabbins, relative to the origin of excommunication, are endless. Some affirm that Adam excommunicated Cain, and his whole race; others, that excommunication began with Miriam, for having spoken ill of Moses; others again, find it in the song of Deborah and Barak (Judges 5. 23,) "*Curse ye Meroz*," interpreting Meroz as a person who had refused to assist Barak. But it is most probable that the earliest mention of this punishment occurs after the return from the Babylonish captivity in Ezra 10. 7,8; or in the anathema of Nehemiah (13. 29) against those who had married strange women.

In later times, there were three degrees of excommunication:—1st, the *Nedui*, removal or separation from all society; 2nd, the *Cherem*, or devoting to death: with persons under this malediction, it was not even lawful to eat; 3rd, and final degree of excommunication, was termed the *Shem-atha* or *Maran-atha*, intimating that those against whom it was fulminated, had nothing more to expect, but the terrible day of judgment. See ANATHEMA MARANATHA.

ACCUSER OF THE BRETHREN. A title given to Satan in Revelations 12. 10.

ACELDAMA, *The field of blood*. A piece of ground on the south of Jerusalem, beyond the pool of Siloam. It is said to have been the same with the Fuller's field, where they whitened their cloth. (Isaiah 7. 3.)

It was also called the Potter's field, (Matt. 27. 7-10,) because they dug thence the earth of which they made their pots.

When Judas brought back the thirty pieces of silver which he had obtained from betraying our Lord, the high-priest and the rulers contended that it was not law-

ful to cast it into the sacred treasury, as it was the price of blood, and therefore purchased with it this field to bury strangers in, and so it came to be called *Aceldama*, the field of blood. (Matt. 27. 8; compare with Zech. 11. 12,13.)

The place is described by Bishop Pococke, as an oblong square cavern, about twenty-six paces long, twenty broad, and apparently about twenty feet deep. It is enclosed on every side, either with the rock or by a wall, and covered over. There are six holes in the top, by which a person may look down into it; and through these holes, the dead bodies are thrown in.

A recent traveller states, "On a narrow slip of land, upon the acclivity of the hill, are the remains of a long square building, partly excavated in the rock, and formerly covered in with masonry, but now roofless, and filled up with loose stones. It stands in what is called the *Aceldama*, or field of blood. This was, perhaps, the building mentioned by Maundrell, as being used by the Armenians in his time, as a charnel-house, the bodies being let down by apertures in the roof. But it appears the practice is now discontinued, as the place is deserted. It was from hence, that ship-loads of earth were transported to the *Campo Santo* at Pisa, from a supposed virtue it possessed of consuming bodies in twenty-four hours, in common with quicklime!

"At the brow of a hill to the southward, tradition says, that the apostate betrayer of our Lord, sought his desperate end. (Matt. 27. 5.)"—Robinson's *Palestine*.

ACHAIA. A province of ancient Greece, of which Corinth was the capital, and, in the most extended sense, comprehends Greece properly so called. It is bounded on the west by Epirus, on the east by the Ægean Sea, on the north by Macedonia, on the south by Peloponnesus. It received the name of *Achaia* from Achæus, king of Thessaly, who, when banished from that kingdom, settled at Athens. Achæus afterwards recovered possession of Thessaly, but, having committed manslaughter, was obliged to take refuge in Laconia, a province of the Morea, where he died. His posterity remained in that province under the appellation of *Achaians* until they were conquered. They then laid claim to *Achaia*, and, having expelled the Ionians, took possession of the country. This appears to be the region intended, when St. Paul, according to the Roman acceptance, mentions all the regions of *Achaia*, and directs his second epistle to all the saints in *Achaia*. (2Cor. 11. 10.) Thus what is *Achaia* in Acts 19. 21, is Hellas, that Greece, (Acts 20. 2.) *Achaia*, strictly so called, is the northern region of Peloponnesus, bounded on the north by the Gulf of Corinth, on the south by Arcadia, on the east by Sicyonia, and on the west by the Ionian Sea.

St. Paul in writing his second epistle to the Corinthian Church includes "the saints in all *Achaia*." (2Cor. 1. 1, and 11. 10.) In Acts 18. 12, Gallio is called the deputy of *Achaia*, that is, the proconsul, which was the proper title for the chief magistrate there at the time it was written; but it had not long been so, nor did it long continue to be the case. The propriety of the appellation, however, in no small degree confirms the authenticity of the narrative in the Acts of the Apostles. (See CORINTH; GREECE.)

ACHAICUS, a native of *Achaia*. In modern geography this district is known by the term, *Romana Alia*. (1Cor. 16. 17.)

ACHAN, אֲחָנִי the proper name of an Israelite, the son of Carmi, of the tribe of Judah, who by his plunder of the accursed things (דָּבָר) occasioned a destruction among the people. (Josh. 7. 1; 22. 20.) He was stoned to death, together with all his family. His crime

was that of having purloined a costly Babylonish garment, aning of gold, and two hundred shekels of silver, from among the spoils of Jericho. The whole history is recorded in Josh. 7. In the parallel passage, 1Chron. 2. 7, he is called אַחִיר and this only is applicable to the etymology, (Josh. 7. 26,) notwithstanding that it is not so to be read in the cited passage of Joshua. The etymology only is inaccurate. Gesenius.

ACHAR. The same as *Achan*; mentioned in 1Chron. 2. 7; "*Achar*, the troubler of Israel, who transgressed in the thing *accursed*."

ACHBOR, אַחְבּוֹר one of the "kings that reigned in the land of Edom, before there reigned any king over the children of Israel." (Gen. 36. 31, 38.) In 2Kings 22. 12, *Achbor* is mentioned as one of those sent by the good king Josiah to inquire of the Lord, concerning the words of the book of the Law that was found, "for great is the wrath of the Lord that is kindled against us, because our fathers have not hearkened unto the words of this book, to do according unto all that which is written concerning us."

ACHIM. One of the names in the genealogy of Christ from Abraham to Joseph, recorded in the first chapter of St. Matthew's Gospel. In the Syriac text, it is written אֶחִים *I will prepare*; but most probably formed from אָרָם *to rise*, as the first sing. future of Hiphil, *I will rise up*.

ACHIMELECH, אֶחִימֶלֶךְ *Brother of the King*.

I. A priest in Nob to whom David went, and whom Saul commanded to be put to death with other priests for assisting David. (1Sam. 21. 2; 22. 18; Psal. 52.) He was afterwards his high-priest. (2Sam. 8. 17.)

II. A Hittite, a companion of David. (1Sam. 26. 6.)

ACHIOR. I. *Achior*, a friend and relation of Tobit; both he and Tobit were of the city and tribe of Naphtali, and were carried by Salmaneser to Nineveh.

II. **ACHIOR**, a general of the Ammonites who joined Holofernes with auxiliary troops in that general's expedition into Egypt. The inhabitants of Bethulia having shut their gates against Holofernes, he called the Princes of Moab and Ammon, demanding of them with great vehemence who those people were that opposed his passage? for he presumed that the Moabites and Ammonites being neighbours to the Hebrews, could better inform him than any others. *Achior* answered, My lord, these people are originally of Chaldaea; and because they would not worship the gods of the Chaldeans, were obliged to leave their country, &c. He related also Israel's descent into Egypt; the miracles of Moses; the conquest of Canaan, and that this people was visibly protected by God, while they continued faithful to him; but that for their infidelity, God never failed to take vengeance on them. Now, therefore, added he, even whether these people have committed any fault against their God; if so, attack them, for he will deliver them up into your hands; if not, we shall not be able to resist them, because God will undertake their defence, and cover us with confusion.

At these words, the great men of Holofernes' army, moved with indignation, were inclined to kill *Achior*; and Holofernes, transported with fury, said to him, Since you have taken upon you to be a prophet, in telling us that the God of Israel would be the defender of his people, to show you that there is no other God besides Nebuchodonosor, my master, when we have put all these people to the edge of the sword, we will destroy you likewise, and you shall understand that Nebuchodonosor is lord of all the earth, and that you may yourself experience the vanity of your own prophecy, I will have

you carried to Bethulia, there to run the same risks with this people whom you believe to be invincible. They carried him, therefore, near the city, tied his hands behind him, and fastened him to a tree, that the people of Bethulia might take him and carry him into the city, where he declared to the elders and the people what had happened. Then the people of Bethulia fell with their faces to the ground, and with great cries, begged God's assistance, beseeching him to vindicate the honour of his name, and to humble the pride of their enemies; after which, Ozias, a leader of the people, received *Achior* into his house and made a splendid entertainment for him.

Achior continued in Bethulia during the siege; and when Judith was returning to the city with the head of Holofernes, *Achior* was called, and Judith showed it to him, saying, Behold the head of that man who insulted the God of Israel, and boasted that he would put you and us to the edge of the sword. *Achior*, terrified, fell with his face to the ground, and his spirit failed him; but soon recovering, *Achior* abandoned the superstitions of the heathens, believed, was circumcised, and received into Israel.

The war with Holofernes, by some is fixed to the time of Manasse h, king of Judah, A.M. 3348, ante A.D. 653; by others, after the return from Babylon. (See JUDITH, vers. Vulg.) Calmet.

ACHIRAM, אֶחִירָם or *AHIRAM*, of the tribe of Benjamin, chief of a great family of this tribe when Israel came out of Egypt. (Numb. 26. 38.)

ACHISH, אֶחִישׁ the name of a king of Gath, (1Sam. 21. 10,) in whose court, David took refuge from Saul; but his life being in danger, he feigned madness before the king. When war broke out between Saul and the Philistines, David marched with his army; but the lords of the Philistines being apprehensive that he might turn against them in battle, desired Achish to dismiss him, which he did, commending him at the same time for his fidelity. (1Sam. 29. 29.)

It appears from the answer given by David to *Achish*, that David was not in the least displeased at his being dismissed, but gladly took *Achish* at his word, and laid hold of the first opportunity of disengaging himself from the service in which that prince expected his assistance.

ACHLAI, אֶחְלַי *a brother to me*. The father of Zabab (1Chron. 11. 41), erroneously given *Ahlai*.

ACHMETHA, אֶחְמֶתָא a name of *Ecbatana*, (Ezra 6. 2.) the capital of the Medes, and summer residence of the Persian monarchs, on the site of which stands the modern Hamadan. The winter residence was at Shushan. It was remarkable for the coolness of its temperature, on which account, it was chosen to be the summer residence of Cyrus. It was built and fortified by Deioces, king of the Medes. The tombs of Esther and Mordecai are said to be still preserved here, and a colony of Jews, who have been resident at Hamadan from time immemorial, protect their remains. (Alcock's *Travels in Russia, Persia, and Greece*.) In the Septuagint, it is called *Αμαθα*, and in the Apocrypha *Εκβατανα* (2Macc. 9. 3; Tobit 6. 5,) called by Ctesias and Herodotus *Αγβατανα*, probably derived from the Persian آبادان '*locus cultus incolisque frequens*.' The word *Achmetha* is explained in the marginal reading of our Bibles to denote a *coffer*, or it may be an office for records; but it is evidently a designation of *Ecbatana*. It was situated on a gentle declivity, distant twelve stadia from Mount Orontes, and, next to Nineveh and Babylon, was one of the strongest and most beautiful cities of the East.

In the Book of Ezra we are told, "that there was found at *Achmetha*, in the palace, that is in the province of the Medes, a roll, and therein was a record written," namely, the decree which Cyrus had made "concerning the house of God at Jerusalem." This is confirmed by the writer of the first book of Esdras or Ezra, the name being exactly similar. In compliance with the letter of Sisines, governor of Syria and Phœnicia, about 519 B.C. representing the proceedings of the Jews in rebuilding the Temple, and requesting the king, before he interfered to prevent or stop them, to "let search be made among the records of King Cyrus, and if it be found that the building the house of the Lord at Jerusalem hath been done with the consent of King Cyrus, and if our lord the king be so minded, let him signify unto us thereof. Then commanded King Darius to seek among the records at Babylon; and so at *Ecbatana*, the palace, which is in the country of Media, there was found a roll wherein these things were recorded." (1 Esdras 6. 21.)

The city is next mentioned as the scene of some of the events of Tobit's life. (Tobit 6. 5; 7. 1.) It was the residence of his father-in-law, Raguel, and he himself is alleged to have died in it, and "before he died, he heard of the destruction of Nineveh, which was taken by Nebuchodonozor and Assuerus," namely, Nabopolassar, the father of Nebuchadnezzar, and Astyages, the father of Darius the Mede. In the second book of Maccabees 9. 3, above mentioned, we read that Antiochus Epiphanes was in the city when he received intelligence of the defeat of his armies in Palestine under Nicanor and Timotheus.

Ecbatana is generally admitted to have been built by Deioces I., but the author of the book of Judith hints that its founder was Arphaxad, who is supposed by Archbishop Usher and Dr. Prideaux to be the same, and by Calmet to be the successor of that monarch, called Phraortes, who may have repaired the city or made additions to it. The Parthian kings who succeeded the Persian monarchs retired to it in the summer to avoid the sultry heats of Ctesiphon. It was surrounded by seven walls which rose in gradual ascent, and were painted in seven different colours. The most distant was the lowest, and the innermost contained the royal palace. Those seven enclosures are supposed by some writers to have represented the seven planetary spheres. Herodotus informs us "that the walls were built in circles one within another, rising above each by the height of their respective battlements. This mode of building was favourable to the situation of the place, which was a gentle rising ground. The largest of these walls was of a white colour, the next to it was black, the next purple, the fourth blue, the fifth orange. The two innermost walls were differently ornamented, one having its battlements plated with silver, the other with gold."

The circumference of *Ecbatana* is said to have been from one hundred and eighty to two hundred furlongs, which would amount to nearly twenty-four English miles. In the book of Judith, we are told, that the walls of the city which Arphaxad built were of "stone hewn, three cubits broad and six cubits long, and the height of the wall seventy cubits, and the breadth thereof fifty cubits; and he, Arphaxad, set the towers thereof upon the gates of it an hundred cubits high, and the breadth thereof in the foundation threescore cubits; and he made the gates thereof, even gates that were raised to the height of seventy cubits, and the breadth of them was forty cubits, for the going forth of his mighty armies, and for the setting in array of his footmen." (Judith 1. 2, 3, 4.) In opposition to the author of the book of Judith, it may be observed, however, that Diodorus Siculus expressly contradicts both his account and that of Herodotus,

asserting that the city had no walls, and we certainly find it offering little resistance to any enemy who appeared before it; but if the historian Ælian may be credited, the walls of *Ecbatana* were thrown to the ground by Alexander the Great, during the bursts of immoderate grief which that conqueror manifested for the death of Hephæstion, his favourite, who died in the city. The mode of ornamenting walls described in this instance by Herodotus, is said to be still used at the present day in many towns of India and China.

The palace of *Ecbatana* is described as having been about an English mile in compass, and was built in a style of great magnificence, some of its beams having been of silver, and others of cedar strengthened with plates of gold. Josephus informs us, that the prophet Daniel built a tower at *Ecbatana*, which existed in his time, of singular beauty and solidity; and some writers have conjectured that this tower, as the Jewish historian calls it, was the palace. If it was not built before the time of Daniel, he could merely have overlooked the work, or given the design by order of Darius, the Mede, with whom he was in high favour, and who is alleged to have built the palace when he selected *Ecbatana* as his summer residence.

The site of this ancient city has caused considerable discussion. Sir John Chardin, Gibbon, and Sir William Jones, are in favour of the modern Tauris, while D'Anville and Rennell declare for Hamadan, in the western Persian province of Irac. This latter has been supported by recent travellers of great learning and acute observation. Mr. Morier merely mentions "*Ecbatana* or *Hamadan*;" but Sir John Malcolm, Sir Robert Ker Porter, and Mr. Buckingham further confirm the site. *Hamadan*, the ancient *Ecbatana*, is situated in a fine plain near the base of the Orontes, and other widely extended hills. "This vale," says Sir Robert Ker Porter, "is varied at short distances, with numberless castellated villages, rising from amidst groves of noble trees, while the great plain itself stretches northward and eastward, to such remoteness, that its mountain boundaries appear like clouds upon the horizon. The whole tract seems one carpet of luxuriant verdure, studded with hamlets, and watered by beautiful rivulets. On the south-west, Orontes, or Elwund, (by whichever name we distinguish this most towering division of the mountain,) presents itself in all the grandeur of its form. Near its base, appear the dark-coloured dwellings of *Hamadan*, crowded thickly on each other, while the gardens of the inhabitants, with their connecting orchards, and woods, fringe the entire slope of that part of the mountain. If the aspect of this part of the country now presents so rich a picture, when 'its palaces are no more,' what must it have been when Astyages held his court here, and Cyrus in his yearly courses from Persepolis, Susa, and Babylon, stretched his golden sceptre over this delicious plain? I brought away from *Ecbatana*, several old coins of Alexander the Great, of different sizes. The identity of the situation of this city seems to be established beyond a doubt; the plain, the mountain, and the relative position of the place with regard to other noted cities, agreeing in every point. The site also of the modern town, like that of the ancient city, is on a gradual ascent, terminating near the foot of the eastern side of the mountain; but there all trace of past appearance would cease, were it not for two or three considerable elevations and overgrown irregularities on or near them, which may have been the walls of the royal fortress, with those of the palaces, temples, and theatres, seen no more. I passed one of those heights, standing to the south-west, as I entered the city, and observed that it bore many vestiges of having been strongly

fortified. The sides and summit are covered with large remnants of ruined walls of a great thickness, and also of towers, the materials of which were sun-dried bricks. It has the name of the *Inner Fortress*, and certainly holds the most commanding situation near the plain."

When the name of *Ecbatana* merged into that of *Hamadan*, the lofty city of Astyages lost its honour and importance. While it retained its ancient designation it was regarded as the city in which great monarchs had dictated their decrees, and where "Cyrus, the king, had placed in the house of the rolls of its palace, the record wherein was written his order for rebuilding Jerusalem." It was even of some consequence, three centuries after the commencement of the Christian era until towards the end of the fourteenth century, when it received its most disastrous blow, from Timour the Tartar, who sacked, pillaged, and destroyed its proudest buildings, ruined the inhabitants, and reduced the gorgeous summer residence of the Persian and Parthian kings, one of the most considerable cities of the East, to a mere skeleton of its former greatness.

In that dismantled state it lay, dwindled to a mere clay-built suburb of what it was, until the middle of the eighteenth century, although it still possessed iron gates, when Aga Mahomed Khan, then sovereign of Persia, not satisfied with the degradation of nearly four hundred years, ordered every memorial or building of consequence, to be destroyed. His commands were faithfully obeyed.

Narrow mud alleys occupy the sites of former streets and squares, interrupted by large holes or hollows, in the way, and crumbled walls of deserted dwellings. "A miserable bazaar, or two," says Sir Robert Ker Porter, "are passed through, in traversing the town, and large, lonely spots are met with, marked by broken low mounds, over older ruins, with here and there a few poplars, or willow trees, shadowing the border of a dirty stream, abandoned to the meanest purposes, which probably flowed pellucid and admired, when these places were gardens, and the grass-grown heap some stately dwelling of *Ecbatana*. The only thing that appears for some years to have kept the place in any degree of notice with the modern Persians, is the manufacture of an inferior sort of leather; but the very article of traffic proclaims the low order of population to which it has been abandoned, and, as I passed through the wretched hovelled streets, and saw the once lofty city of Astyages, shrunk like a shrivelled gourd, the contemplation of such a spectacle, called forth more saddening reflections, than any that had been awakened in me on any former ground of departed greatness. In some, I had seen mouldering pomp, or sublime desolation; in this, every object spoke of neglect, and hopeless poverty—not majesty in stately ruins, pining to final dissolution, but beggary, seated on the place which kings had occupied, squalid in rags, and stupid with misery."

Mr. Buckingham found *Hamadan* in almost the same situation, when he visited it; although it had, a few years previously, been created a royal government, to which Mahmoud Ali Mirza, a son of the Shah, had been appointed; and palaces, mansions, new bazars, and mercantile caravanserais, were erecting, or had been planned. "The entrance to the town of *Hamadan*, was as mean as that of the smallest village we had seen; and great ruin and desertion were apparent on every side. We continued our way through poor bazars, and miserable streets, until after much difficulty, we obtained shelter in a half ruined caravansera." Sir Robert Ker Porter estimates the number of houses at nine thousand, a third of which are inhabited by persons employed by the State, who are thereby exempted from the taxation of the town, and the population at between 40,000 and 50,000

souls, amongst whom, there are about six hundred Jewish families, and nearly the same number of Armenians.

In the time of Benjamin of Tudela, who visited *Hamadan*, and describes the tomb of Esther and Mordecai, there were no less than fifty thousand Jews settled in it, which is more than the whole of the present population; while in the city of Ispahan, although the chief priest, on whom all the Jews of Persia were dependent, resided there in a kind of college, there were not more than fifteen thousand. This fact certainly proves, not only the high antiquity of *Hamadan*; but that it was also regarded with such peculiar veneration by the Jews, as to draw more of them to reside in it, than in Ispahan.

Ecbatana, or *Hamadan*, is not without its local traditions, connected with sacred history. On the mountain Orontes, or Elwund, the body of a son of King Solomon is pretended to be buried, but what son is not mentioned. It is a large square platform, a little raised, formed by manual labour, out of the native rock, which is ascended by a few rugged steps, and is assuredly no covering of the dead. It is a very ancient piece of workmanship, but how it came to be connected, with a son of the Jewish monarch, does not appear. The Jewish natives of *Hamadan* are credulous as to the reputed story, and it is not unlikely that it was, originally, a mountain altar to the sun, illustrating what we often read in Scripture, respecting the idolatrous sacrificial worship, in "high places." The natives believe, that certain ravines of the mountain produce a plant which can transform all kinds of metal into gold, and also cure every possible disease. They admit that no one had ever found it, but their belief in its existence is nevertheless unshaken. They also have a fabulous legend respecting a stone on the side of this mountain, which reminds the English reader of the celebrated story of Ali Baba and the Forty Thieves, in the *Arabian Nights*. This stone contains an inscription in cabalistic characters, unintelligible to every one who has hitherto looked on it; but it is believed that if any person could read the characters aloud, an effect would be produced, which will shake the mountain to its centre, it being the protecting spell of an immense hidden treasure; and these characters, once pronounced, would procure instant admittance from the genii of this subterranean cavern, and the wealth it contains would be laid at the feet of the fortunate invoker of this golden "Sesame!"

The most interesting local tradition at *Hamadan*, is, that which alleges it to be the burying-place of Esther and Mordecai, the tomb of whom is still shown—a circumstance of itself sufficient to attest the antiquity of the place. Its dome roof rises over the habitations of the poor remnant of Israel who still linger in the land of their captivity, living memorials of the truth of the inspired record. This tomb is regarded by all the Jews of Persia as a place of peculiar sanctity; and pilgrimages are still made to it, at certain seasons of the year, in the same spirit of devout penitence, with which, in former times, they turned their eyes towards Jerusalem. "The sepulchre," says Sir John Malcolm, "is not splendid, but we must recollect it was not likely that either Ahasuerus, or his successor, would build a mausoleum, as such mode of interment was contrary to the religion they professed; but their permitting the Jews to build a tomb in the most public place of *Ecbatana*, implies an extraordinary respect for those, to perpetuate whose memory such an edifice was erected."

The original structure was destroyed, it is said, at the sacking of *Ecbatana*, by Timour, and after that disastrous event, the present unobtrusive building was erected, on the ancient spot, at the expense of several devout Jews; and about the end of the seventeenth century, it

E

was fully repaired by a rabbi, of the name of Ismael. It is a small square building of brick, having the appearance of a mosque, and a dome rather elongated on the top. It is described as being again in a frail state, and requiring another repair. The door of the tomb is very small, and consists of a single stone of great thickness, turning on its own pivot from one side. On passing through the little portal, the visitor is introduced into a small arched chamber, in which are seen the graves of several rabbis, some of which may contain the bodies of the first rebuilders of the tomb, after the destruction of the original one by Timour.

A second door, of very confined dimensions, is at the end of this vestibule, by which the entrance is made into a large apartment, on hands and knees, and under the concave, stand two sarcophagi, made of very dark wood, curiously and richly carved, with a line of Hebrew inscription running round the upper ledge of each. Other inscriptions, in the same language, are cut on the walls, while one of the most ancient, engraved on a white marble slab, is let into the wall itself. This slab is traditionally alleged to have been preserved from the ruins of the edifice destroyed by Timour, with the sarcophagi in the same consecrated spot.

Sir Robert Ker Porter was fortunate in procuring translations of these ancient inscriptions. The first is a Hebrew one, on the marble slab in the sepulchre of Esther and Mordecai, which is as follows:—"Mordecai, beloved and honoured by a king, was great and good. His garments were as those of a sovereign. Ahasuerus covered him with this rich dress, and also placed a golden chain around his neck. The city of Susa, (or Shushan,) rejoiced at his honours, and his high fortune became the glory of the Jews."

This entirely agrees with the early custom common with the Persian monarchs, of investing their ministers and favourites, with splendid robes, golden chains, and other ornaments; a custom which is still observed in Persia, when marks of distinction or favour are conferred; and, as Xenophon informs us that death would be the punishment of any noble, however illustrious, who dared to assume to himself, the royal mixture of purple and white, we may easily infer the peculiar honour bestowed on Mordecai. The inscription on the marble slab is corroborated by the account in the book of Esther. "And Mordecai went out from the presence of the king in royal apparel of blue and white, and with a great crown of gold, and with a garment of fine linen and purple: and the city of Shushan rejoiced, and was glad." (Esther 8. 15.) Again, it is said, "Mordecai the Jew was next unto King Ahasuerus, and great among the Jews, and accepted of the multitude of his brethren, seeking the wealth of his people, and speaking peace to all his seed." (10. 3.)

The inscription which encompasses the sarcophagus of Mordecai, is to the following effect:—

"It is said by David, Preserve me, O God! I am now in thy presence. I have cried at the gate of heaven that thou art my God, and what goodness I have received from thee, O Lord!

"Those whose bodies are now beneath, in this earth, when animated by thy mercy, were great; and whatever happiness was bestowed upon them in this world, came from thee, O God!

"Their griefs and sufferings were many at the first, but they became happy, because they always called upon thy name in their miseries. Thou liftedst me up, and I became powerful. Thine enemies sought to destroy me in the early times of my life; but the shadow of thy hand was upon me, and covered me as a tent, from their wicked purposes!—Mordecai."

The following is the inscription, carved round the sarcophagus of Esther the queen, one of Israel's fairest daughters, whose perfect beauty was even excelled by her virtue, modesty, and humility:—

"I praise thee, O God, that thou hast created me! I know that my sins merit punishment, yet I hope for mercy at thy hands; for whenever I call upon thee, thou art with me; thy holy presence secures me from all evil.

"My heart is at ease, and my fear of thee increases. My life became, through thy goodness, at the last, full of peace.

"Oh God! do not shut my soul out from thy Divine Presence! Those whom thou lovest never feel the torments of hell. Lead me, O merciful Father, to the life of life, that I may be filled with the heavenly fruits of Paradise!—Esther."

In the apocryphal book of Esther, there is an interesting confirmation of these pious sentiments. The key of the tomb is always in the possession of the head of the Jews resident at Hamadan, "and, doubtless," says Sir Robert Ker Porter, "has been so preserved from the interment of the holy pair, when the grateful sons of the captivity, whose lives they had rescued from a universal massacre, first erected a monument over the remains of their benefactors, and obeyed the ordinance of gratitude, in making the anniversary of their preservation, a lasting memorial of Heaven's mercy, and the just faith of Esther and Mordecai."

In the same apocryphal book of Esther (10. 12, 13) it is thus given. "So God remembered his people, and justified his inheritance. Therefore those days shall be unto them in the month Adar, the fourteenth and fifteenth day of the same month, with an assembly, and joy, and with gladness before God, according to the generations for ever among his people." It is remarkable, that this annual assembling or pilgrimage to the ancient city of Esther and Mordecai is still kept up; it has existed from the time of the memorable event; such a memorial, therefore, becomes an evidence of the fact, more convincing, perhaps, than even written testimony—it is a kind of eye-witness.

The climate of *Ecbatana* is delightful, during eight months of the year, the air being rendered agreeable by a light breeze blowing continually during the hot months, from the north-west. In winter, however, the cold is excessive, and fuel is procured with difficulty. The plain is intersected by innumerable little streams, covered with gardens and villages, and the vegetation is most luxuriant. *Ecbatana* is in latitude 34° 47' N., and longitude 47° 52' E. Sir Robert Ker Porter; Sir John Malcolm; Horne; *Script. Gaz.*; Calmet.

ACHOR, עֶכֶר The name of a valley not far from Jericho, (Joshua 7. 26,) near to the river Jordan, in the allotment of the tribe of Benjamin. It was in this valley that Achan, his sons, and his daughters, the concealed articles, his cattle, his tent and everything which belonged to him, were taken, and after being stoned to death, their bodies and the goods were consumed by fire.

The Israelites raised a heap or cairn of stones over their ashes, which the author of the Book of Joshua says, remained in his time. This event occurred A.C. 1451. See *Ar.*

ACHSAH, עֲכָסָה The daughter of Caleb, who promised her in marriage to him who should conquer Kirjathsepher from the Philistines. Othniel took the place and married *Achsa*. (Josh. 15, 16, 17.)

ACHSHAPH, אֶשְׁפָּח The name of a city which belonged to the tribe of Asher. (Josh. 19. 25.) The

king of Achshaph was conquered by Joshua, (12. 20.) Some writers are of opinion, that Achshaph is the same as Eodippa on the Mediterranean, between Tyre and Ptolemais; others that Eodippa is described in Josh. 19. 29, under the name of Achzib. In St. Jerome's time, about 400 years after Christ, it was a small village called Chasalus. Mr. Buckingham, who visited this place in January, 1816, found it a small town situated on a hill near the sea, and having a few palm trees rearing themselves above the houses.

ACHZIB, אַחְזִיב The name of a sea-port town belonging to the tribe of Asher, between Accho and Tyre, situated on the shores of the Mediterranean. (Josh. 19. 29.) It is denominated Zib by the Arabs.

Another town of this name belonged to the tribe of Judah and was strongly fortified. (Josh. 15. 44.) The prophet Micah says, (1. 14,) "the houses of Achzib shall be a lie to the kings of Israel," i. e. that the kings of Israel were deceived or disappointed by the inhabitants of Achzib during the Assyrian invasion.

ACRA, a Greek word, *Ἀκρά*, signifying a citadel. Antiochus Epiphanes built a citadel at Jerusalem, north of the Temple, on an eminence which commanded the Holy Place; and for that reason was called *Acra*. Josephus says that this eminence was semicircular, and that Simon Maccabæus, having expelled the Syrians, who had seized *Acra*, demolished it, and spent three years in levelling the mountain on which it stood; that no situation in future should command the Temple. On Mount *Acra* were afterwards built the palace of Helena, also that of Agrippa, the place where the public records were lodged; and also that where the magistrates of Jerusalem assembled. On it now stand, the Latin convent of the Terra Santa, the castle of the Pisans, or citadel of David, as it is popularly called; the gate of Jaffa, &c., overlooking the whole of the town. See JERUSALEM.

Mr. Robinson who visited the spot in 1831, says, "We entered by the gate of Jaffa, or Bethlehem, as it is indifferently called, when turning suddenly to the left, in a few minutes we arrived at the Latin convent of Saint Salvador, situated in the north-west corner of the city on the sloping edge of what is supposed to be Mount Gihon. Our party being rather numerous, apartments were assigned to us in the Casa Nova. The large room that fell to our lot had been at one time occupied by the late Queen Caroline of England. Jerusalem is the headquarters of the chapter for the government of the Terra Santa establishments. They receive their nomination from the General of the order of St. Francis. The usual complement of monks is about forty. The convent is a large irregular building of stone, with several courts and gardens, the whole enclosed by a strong wall."

ACRABATENE, a district of Judæa, extending between Shechem and Jericho, inclining east. It was about twelve miles in length according to Eusebius. The *Acrabatene* had its name from a place called *Akrabbim*, about nine miles from Shechem. It was also the name of another district of Judæa, on the frontier of Idumæa towards the northern extremity of the Dead Sea.

ACRE. The English acre is 4840 square yards; the Scotch, 6150 and two-fifths; the Roman, 3200; and the Egyptian *aroura*, 3608 and seven-eighths.

The Hebrew word *אֵכָר* translated *Acre*, is a piece of land which can be ploughed by a pair of oxen in one day, and might be properly termed a yoke. (1Sam. 14. 14; Isaiah 5. 10.) The Egyptians ploughed with two oxen yoked together.

ACRE. See **ACCHO**.

ACTS OF THE APOSTLES. 1. The *Acts of the Apostles* form the fifth and last of the historical books of the New Testament, constituting an interesting and important record of the early history of the Christian Church. In several very ancient manuscripts and versions it is placed after the Epistles of St. Paul. It has had several titles; Oecumenius termed it *The Gospel of the Holy Spirit*; and Chrysostom *The Book of the Demonstration of the Resurrection*. In the *Codex Beza*, or Cambridge manuscript, it is called *The Acts or Transactions of the Apostles*. In the *Codex Alexandrinus*, and many other manuscripts, it is entitled *The Acts of the Holy Apostles*, which title is also adopted by many of the Greek and Latin fathers.

2. That St. Luke the Evangelist was the author, is affirmed by the unanimous testimonies of the early Christians, and demonstrated also from its introduction. He appears to have accompanied Saint Paul from Troas to Philippi; he also attended him to Jerusalem, and afterwards to Rome, where he remained two years, during that Apostle's first confinement. Accordingly we find St. Luke particularly mentioned in two of the epistles written by St. Paul from Rome during that imprisonment. (Col. 4. 14; Philem. 24.) As the book of the Acts is continued to the end of the second year of Saint Paul's imprisonment, it could not have been written before the year 63; and as the death of that Apostle is not mentioned, it is probable that the book was composed before that event, which is supposed to have happened A.D. 65. For these reasons, Michaëlis, Dr. Lardner, Dr. Benson, Rosenmüller, Bishop Tomline, and the generality of critics, assign the date of this book to the year 63.

3. Chrysostom, and other writers inform us that this book was annually read in the churches, every day between the festivals of Easter and Pentecost or Whitsuntide. The Valentinians, indeed, as well as the Marcionites, Severians, and some Manichæans, rejected the Acts of the Apostles, not from historical reasons, but because they opposed their opinions; for the Gnostics, of which sect, the Valentinians and Marcionites were a branch, affirmed that the God of the Old Testament was different from the God of the New Testament; and that another Christ, different from our Saviour, was promised. The Severians and Encratites strenuously insisted upon abstinence from certain articles of food; whereas in the book of the Acts, the promiscuous use of food is allowed. Manes wished himself to be taken for the "Comforter" who had been promised by Christ to his Apostles; but in the Acts it is related, that the Comforter that had been so promised, was the Holy Spirit who had been sent.

The reasons, therefore, why the book was rejected by the above-mentioned sects, were not historical, but doctrinal; because the narrative of the sacred historian contradicted their dogmas; and as their errors were detected and refuted by contemporary writers, the unqualified and unsupported assertions of these heretics are so far from impugning the veracity and genuineness of the Acts of the Apostles, that, on the contrary, they afford a decisive testimony in favour of the book.

4. The design of St. Luke not being to write a general history, he passes by all the transactions in the Church of Jerusalem after the conversion of St. Paul, though the Apostles continued for some time in Palestine. He also omits to notice the propagation of Christianity in Egypt or in the countries bordering on the Euphrates and the Tigris. The journey of St. Paul into Arabia; the state of Christianity in Babylon (1Peter 5. 13); the foundation of the Church at Rome, which had already received an Epistle from St. Paul; several of his voyages; and many other matters of which he could not possibly be

ignorant, as may be seen in Lardner. Here, therefore, as in the Gospels, a selection of facts, though not regularly disposed in chronological order, was designed to serve for the evidence and illustration of certain important religious truths.

5. If we carefully examine the Acts of the Apostles, we shall perceive that St. Luke had two objects in view: 1. To relate in what manner the gifts of the Holy Spirit were communicated on the day of Pentecost, and the subsequent miracles performed by the Apostles, by which the truth of Christianity was confirmed. An authentic account of this matter was absolutely necessary, because Christ had often assured his disciples that they should receive the Holy Spirit. Unbelievers, therefore, whether Jews or Heathens, might have made objections to our religion, if it had not been shown that Christ's declarations were really fulfilled. 2. To deliver such accounts as proved the claim of the Gentiles to admission into the Church of Christ; a claim disputed by the Jews, especially at the time when St. Luke wrote the Acts of the Apostles. And it was this very circumstance which excited the hatred of the Jews against St. Paul, and occasioned his imprisonment in Rome, with which St. Luke closes his history. Hence we see the reason why he relates, ch. 8, the conversion of the Samaritans, and, ch. 10, 11, the story of Cornelius, whom St. Peter, to whose authority the adversaries of St. Paul had appealed in favour of circumcision, baptized, though he was not of the circumcision. Hence also St. Luke relates the determination of the first council in Jerusalem relative to the Levitical law; and for the same reason, he is more diffuse in his account of St. Paul's conversion, and St. Paul's preaching the gospel to the Gentiles, than on any other subject. It is true that the whole relation which St. Luke has given, ch. 12, has no connexion with the conversion of the Gentiles; but during the period to which that chapter relates, St. Paul himself was present at Jerusalem, (see Acts 11. 30; 12. 25,) and it is probable for that reason, that St. Luke has introduced it. But there is a third opinion which Michaëlis thinks not devoid of probability, viz.: that St. Luke might design to record only those facts which he had either seen himself, or had heard from eye-witnesses.

6. The Acts of the Apostles, Michaëlis observes, were evidently written with a tolerably strict attention to chronological order; though St. Luke has not affixed a date to any one of the facts recorded by him. There are, however, several parts of this book in which ecclesiastical history is combined with political facts, the dates of which are known; and these Michaëlis has endeavoured to determine, because the chronology will not only contribute to illustrate the Acts of the Apostles, but will also assist us in fixing the year when many of St. Paul's epistles were written. Taking for granted therefore that this book commences with the year 33 of the Christian æra, he has divided the history into five epochs. It will be evident, however, from an inspection of his scheme, and a careful perusal of the book itself, that the time occupied by the narrative, cannot be so divided into distinct periods within one or other of which each fact may with certainty be placed.

7. The following division, adopted by Bishop Percy, is perhaps the most just and useful. Part I. The account of the first Pentecost after Christ's death, and of the events preceding it. (Ch. 1, 2.) II. The Acts at Jerusalem and throughout Judæa and Samaria among the Christians of the circumcision. (Ch. 3-9, 12.) III. The Acts in Cæsarea and the receiving of the Gentiles. (Ch. 10, 11.) IV. The first circuit of Barnabas and Paul among the Gentiles. (Ch. 13, 14.) V. The embassy from

Antioch and the first council at Jerusalem, wherein the Jews and Gentiles were admitted to an equality. (Ch. 15.) VI. St. Paul's second departure from Antioch. (Ch. 15: 36-41; ch. 16.) VII. St. Paul's third departure from Antioch. (Ch. 18. 23-28; ch. 19.)

8. The narrative of the Acts of the Apostles is picturesque and noble. Though not entirely free from Hebraisms, its style is pronounced by Michaëlis to be much purer than that of most other books of the New Testament, particularly in the speeches delivered by St. Paul at Athens, and before the Roman Governors. It is further worthy of remark, that St. Luke has well supported the character of each person whom he has introduced as speaking. Thus the speeches and discourses of St. Peter are recorded with simplicity, and are destitute of all those ornaments which usually occur in the orations of the Greeks and Romans. Nearly similar are the speeches of St. Paul, which were addressed to the Jews, while those delivered by the same apostle before a heathen audience are widely different. Thus in his discourse delivered at Antioch in Pisidia, he commences with a long periphrasis, which would not have been either instructive or entertaining in any other place than a Jewish synagogue. On the contrary, the speech of the martyr Stephen (Acts 7), is altogether of a different description. It is a learned but unpremeditated discourse, pronounced by a person totally unacquainted with the art of oratory; and though he certainly had a particular object in view, to which the several parts of his discourse were directed, yet it is difficult to discover this object, because his materials are not regularly disposed. Lastly, St. Paul's discourses before assemblies that were accustomed to Grecian oratory, are totally different from any of the preceding. Though not adorned with the flowers of rhetoric, the language is pointed and energetic, and the materials are judiciously selected and arranged, as is manifest in his speech delivered at Athens (Acts 17. 22-31), and in his two defences of himself before the Roman Governors of Judæa. (24. and 26.) Dr. Benson and Michaëlis, however, are both of opinion that St. Luke has given abstracts only, and not the whole of St. Paul's speeches; for in his speech before Felix, he must certainly have said more than is recorded by St. Luke (24. 10-21); unless we suppose that St. Paul merely denied the charge which had been laid against him, without confuting it. Michaëlis adds, that in his opinion, St. Luke has shown great judgment in these extracts; and that if he has not retained the very words of St. Paul, he has adopted such as were well suited to the polished audiences before which the apostle spoke.

9. The Acts of the Apostles afford abundant evidence of the truth and divine original of the Christian religion; for we learn from this book that the Gospel was not indebted for its success to deceit or fraud, but that it was wholly the result of the mighty power of God, and of the excellence and efficacy of the saving truths which it contains.

In addition to external evidences derived from the early and unbroken tradition of the Christian Church, the most indubitable evidences of the truth of the book may be deduced from its style and composition. It was written by a person who was acquainted with the various circumstances which he relates, and who was both able and disposed to give a faithful narrative of everything that occurred.

The historical details, and especially the incidental circumstances mentioned by St. Luke, so exactly correspond, and that evidently, without any design on the part of the writer, with the accounts furnished in St. Paul's Epistles, and in ancient historians both Jews and Heathens, that no person who had *forged* such a history

in later ages, could have had the same external confirmation; but he must have betrayed himself, by alluding to some customs or opinions which have since sprung up, or by misrepresenting some circumstances, or employing some phrase or expression not then in use.

Since, therefore, the *Acts of the Apostles* are in themselves consistent and uniform; the incidental relations agreeable to the best ancient historians that have come down to us; and the main facts supported and confirmed by the other books of the New Testament, as well as by the unanimous testimony of so many of the ancient fathers, we are justly authorized to conclude, that if any history of former times deserves credit, the *Acts of the Apostles* ought to be received and credited; and if the history of the *Acts of the Apostles* is true, Christianity cannot be false; for a doctrine so good in itself, so admirably adapted to the fallen state of man, and attended with so many miraculous and divine testimonies, has all the possible marks of a true revelation. Benson's *History of Christianity*; Horne's *Introd.*; Carpenter's *Guide*.

ACTS OF PILATE. The ancient Romans were scrupulously careful to preserve the memory of all remarkable events which happened in the city; and this was done either in their Acts of the Senate (*Acta Senatûs*), or in the Daily Acts of the People (*Acta Diurna Populi*), which were diligently made and kept at Rome. In like manner it was customary for the governors of provinces to send to the Emperor an account of remarkable transactions that occurred in the places where they resided, which were preserved as the *Acts* of their respective governments. In conformity with this usage, Eusebius says, "Our Saviour's resurrection being much talked of throughout Palestine, Pilate informed the Emperor of it, as likewise of his miracles, of which he had heard; and that being raised up after he had been put to death, he was already believed by many to be a God." (Euseb. *Eccl. Hist.* lib. 2. c. 2.) These accounts were never published for general perusal, but were deposited among the archives of the empire, where they served as a fund of information to historians. Hence we find long before the time of Eusebius, that the primitive Christians, in their disputes with the Gentiles, appealed to these *Acts of Pilate* as to most undoubted testimony. Thus, Justin Martyr, in his first Apology for the Christians, which was presented to the Emperor Antoninus Pius and the senate of Rome, about the year 140, having mentioned the crucifixion of Jesus Christ and some of its attendant circumstances, adds, "And that these things were so done, you may know from the *Acts made in the time of Pontius Pilate*." Afterwards in the same Apology, having noticed some of our Lord's Miracles, such as healing diseases and raising the dead, he says, "And that these things were done by him you may know from the *Acts made in the time of Pontius Pilate*." Justin Martyr, *Apol. Pr.* pp. 65, 72, edit. Benedict.

Tertullian, in his Apology for Christianity, about the year 200, after speaking of our Saviour's crucifixion and resurrection, and his appearance to the disciples and ascension into heaven in the sight of the same disciples, who were ordained by him to publish the Gospel over the world, thus proceeds:—"Of all these things relating to Christ, *Pilate* himself, in his conscience already a Christian, sent an account to Tiberius, then emperor." (Tertull. *Apolog.* c. 21.) The same writer in the same Apology, thus relates the proceedings of Tiberius on receiving this information:—"There was an ancient decree that no one should be received for a deity unless he was first approved by the senate. Tiberius, in whose time

the Christian religion had its rise, having received from Palestine in Syria an account of such things as manifested the truth of his" (Christ's) "divinity, proposed to the senate that he should be enrolled among the Roman gods, and gave his own prerogative vote in favour of the motion. But the senate rejected it, because the emperor himself had declined the same honour. Nevertheless, the emperor persisted in his opinion, and threatened punishment to the accusers of the Christians. Search your own Commentaries, or public writings; you will there find that Nero was the first who raged with the imperial sword against this sect, when rising most at Rome." Tertull. *Apol.* c. 5.

These testimonies of Justin and Tertullian are taken from public apologies for the Christian religion, which were presented either to the emperor and senate of Rome, or to magistrates of public authority and great distinction in the Roman empire. Horne's *Introd.*

ADADAH, אָדָדָה a city in the southern part of the possessions belonging to the tribe of Judah, not far from the boundaries of Idumæa or Edom. (Josh. 15. 22.)

ADAD RIMMON, or HADAD RIMMON, אָדָד רִמּוֹן the name of a place in the plain of Megiddo. (Zech. 12. 11.) According to Jerome it was afterwards called Maximianopolis, in honour of the Emperor Maximian. It was a city in the valley of Jezreel in the half tribe of Manasseh, where a disastrous battle was fought between Josiah, king of Judah, and Pharaoh-Necho, king of Egypt, in which the former was slain. (2Kings 23. 29.) It was situated seventeen miles from Cæsarea in Palestine, and ten from Jezreel. רִמּוֹן Rimmon was the name of an idol of the Assyrians, (2Kings 5. 18,) who was probably the tutelary deity of pomegranates. Jahn; Gesenius.

ADAH, אָדָה the name of one of the wives of Lamech, (Gen. 4. 23,) also the name of one of the wives of Esau, the daughter of Elon the Hittite. (Gen. 36. 2-12.)

The names of men and women, and of the lower animals, and the names of many places, particularly in the remoter ages, frequently allude to some remarkable characteristic in the person or creature named; or in reference to place, to some uncommon circumstance or event. There is scarcely a proper name which alludes not to something of this kind, though in some instances we may be at a loss for the right meaning.

ADAI AH, אָדָיָה "Josiah was eight years old when he began to reign, and he reigned thirty and one years in Jerusalem. And his mother's name was Jedidah, the daughter of *Adai ah* of Boscath." (2Kings 22. 1.)

ADALIA, אָדָלִיָּה One of the ten sons of Haman. (Esther 9. 8.)

ADAM, אָדָם The name of the first man, the progenitor of the human race. The etymology may be gathered from Genesis 2. 7: "And the Lord God formed man of the dust of the ground." It is said by Josephus (*Antiq.* lib. 1. cap. 1), that he was called *Adam* by reason of the reddish colour of the earth of which he was formed.

Sir William Jones suggests whether *Adam* may not be derived from *Adim*, which in Sanscrit means the first, and is a name of the first Menu. By his wife Satarupa he had two sons and three daughters. *Asiatic Researches*.

The history of *Adam* is given with great simplicity in the first four chapters of *Genesis*. The veil of time is removed by the spirit of revelation, and the past appears just as it once appeared, but the vision is distant, and therefore dim. No explanations are offered, though our curiosity is often ready to ask them; facts of the most interesting character and deepest import are stated without the slightest colouring, and we are left to judge of causes from their effects, of principles from actions, just as we judge of the qualities of a soil from the aspect of its productions.

In reviewing the history of *Adam*, several things appear worthy of particular remark.

1. The time at which he was created is strongly expressive of the importance of his character. Man, for whom all other things were made, was himself made last of all. In the Mosaic narrative, the only rational account that was ever given of the origin of things, we are taught to follow the heavenly Artist, step by step, first in the production of the inanimate elements, next of vegetables, and then of animal life, till we come to the master-piece of the creation, *man*, endowed with reason and intellect. The house being built, its inhabitant appeared; the feast being set forth, the guest was introduced to behold the splendid and magnificent scenery in the heavens above and the earth beneath.

2. The manner in which the creation of *Adam* is narrated, indicates something peculiar and eminent in the being to be formed. Not that it could be a matter of more difficulty to Omnipotence to create *man*, but principally because he was to be the lord of the whole, and therefore himself accountable to the original Proprietor; and was to be the subject of another species of government, a moral administration; and to be constituted an image of the intellectual and moral perfections, and of the immortality of the common Maker. Everything therefore as to man's creation is given in a solemn and deliberative form.

3. It may next be inquired, in what that image of God in which *man* was made, consists.

It is manifest from the history of man, that human nature has two essential constituent parts: the *Body* formed out of pre-existent matter, the earth; and a *Living Soul*, breathed into the body by an inspiration from God. "And the Lord God formed *man* of the dust of the ground, and breathed into his nostrils (or face) the breath of life (*lives*); and *man* became a living soul." Whatever was thus imparted to the body of *man* already "*formed*," and perfectly finished in all its parts, was the only cause of life; and the whole tenor of Scripture shows that this was the rational spirit itself, which by a law of its Creator, was incapable of death, even after the body had fallen under that penalty.

The sentiment expressed in *Wisdom* 2. 23, is an evidence that in the opinion of the ancient Jews, the image of God comprised immortality also. "For God created *man* to be immortal, and made him to be an image of his own eternity," and though other creatures were made capable of immortality, and at least the material human frame, whatever we may think of the case of animals, would have escaped death had not sin entered the world; yet, without admitting the absurdity of the "natural immortality" of the human soul, that surely must have been constituted immortal in a high and peculiar sense which has ever retained its prerogative of continued duration, amidst the universal death, not only of animals, but of the bodies of all human beings. There appears also a manifest allusion to man's immortality, as being included in the *image of God*, in the reason which is given in *Genesis*, for the law which inflicts death on murderers: "Whoso sheddeth man's blood, by man

shall his blood be shed; for in the image of God made he man."

The essence of the crime of homicide is not confined here to the putting to death the mere animal part of man; and it must, therefore, lie in the peculiar value of life to an immortal being, accountable in another state for the actions done in this, and whose life ought to be specially guarded for this very reason, that death introduces him into changeless and eternal relations, which were not to be left to the mercy of human passions.

To these we are to add the *intellectual powers*, and we have what divines call, in perfect accordance with the Scriptures, "the *natural image of God in his creatures*," which is essential and ineffaceable. *Man* was made capable of *knowledge* and he was endowed with liberty of *will*. This natural image of God was the foundation of that moral image by which *man* was also distinguished. The divine image is to be found in the mind, that is, in the understanding, the will, and the affections. In *Adam's* understanding there was no error; nor was there any obliquity in his will. His knowledge was according to truth, and all the affections of his soul moved in the pursuit and practice of it.

Man, therefore, in his original state was sinless both in act and principle. Hence it is said, that God made *man upright*. That this signifies moral rectitude cannot be doubted; but the import of the word is very extensive. It expresses by an easy figure, the exactness of truth, justice, and obedience. Such, then, was the condition of primitive man; there was no obliquity in his moral principles, his mind, or affections; none in his conduct. He was perfectly sincere and exactly just, rendering from the heart all that was due to God. Tried by the most perfect rule, the law of God, he was faultless.

4. In the complex constitution of *Adam*, the soul bearing as it did, the Divine image, was united to a far inferior element, the body. Yet even in this, whether we consider its materials, or its organization, we find much which merits attention, much which marks the superiority of *man* over the other animal races around him. The human body was not made of the celestial elements, light and air; but of the more gross terrestrial matter, as being designed to receive and communicate notices of terrestrial objects, through the medium of organs similar to them.

"The Lord God formed *man* of the dust of the ground," He moulded or modelled him as a potter does the clay under his hand; we see the work as it were upon the wheel, gradually rising and growing under the hands of the Divine Artificer; and at length producing from the dust of the ground, a frame superior in rank and dignity. They whose profession has led them to examine the structure of this astonishing piece of mechanism, contemplate the works of the Lord, and his wonders in the formation of the human body. An examination of its parts and the admirable skill with which they are disposed, brought Galen upon his knees in adoration of the wisdom with which the whole is contrived. And while the world shall last, genius and diligence will be producing fresh proofs that we are "fearfully and wonderfully made."

Adam differed from all his descendants in this particular, that he was not to attain the maturity of his intellectual powers, by a gradual process from infancy, but came into being in full stature and vigour of mind, as well as body. He found creation likewise in its prime; it was morning with *man* and the world. How long he was allowed to make his observations upon the different objects with which he found himself surrounded, we are not told; but it should seem, either that sufficient time

was allowed him for that purpose, or that he was enabled in some extraordinary manner to pervade their nature, and discover their properties.

The creatures were brought to him that he might impose upon them suitable names. The use of names is to express the nature of the things named, but in the knowledge of those natures at the beginning, God, who made them, must have been *man's* instructor. Without such an instructor, indeed, it is not likely that *man* could ever have formed a language at all, since it is a task that requires much thought, and the great masters of reason seem to be agreed, that without language we are incapable of thinking to any purpose. However this may be, from the original imposition of names, by our first parent, we may infer that his knowledge of natural objects must have been very eminent and extensive; nothing inferior, we may suppose, to that of Solomon, who spake of trees from the cedar to the hyssop, and of beasts and fowl, and creeping things and fishes. It is, therefore, probable that Plato asserted no more than the truth, when, according to the traditions he had gleaned up in Egypt and the East, he affirmed that the first *man* was of all men "the greatest philosopher."

From the circumstances related by Moses concerning the placing of *Adam* in the garden of Eden; from his causing the creatures to come before him; from his bringing Eve to him; and from his communicating to him a law which he was strictly to observe, we may judge of the familiar intercourse to which the Almighty condescendingly admitted him. He conversed with him probably under some visible appearance, as He afterwards did with Moses, "as a man converseth with his friend;" no doubt instructing him, as far as was necessary, in the knowledge of his own immortal spirit and destiny, of the temptations he had to encounter, of the consequences to which disobedience would subject him, and probably of those invisible glories, a participation of which was to be the reward of his obedience.

The breaking of a beautiful vase, may afford some idea of *Adam* after his sin. The integrity of his mind was violated; the first compliance with sin opened the way to future compliances; grosser temptations might now expect success; and thus spotless purity becoming impure, perfect righteousness becoming warped, lost that integrity which had been its glory. Hereby *Adam* relinquished that distinction which had fitted him for immediate communion with supreme holiness, and was reduced to the necessity of soliciting such communion, immediately, not immediately; by another, not by himself; in prospect, not instant; in hope, not in possession; in time future, not in time present; in another world, not in this.

It would be idle to repeat the absurd traditions and fables of the Rabbinnical and Mohammedan writers respecting the first *man*. Some of them indeed are monstrous, unless we suppose them to be allegories in the exaggerated style of the Orientals. Some say that he was nine hundred cubits high; whilst others not satisfied with this, affirm that his head touched the heavens. The Jews think that he wrote the 91st Psalm, invented the Hebrew letters, and composed several treatises. The Arabians inform us that *Adam* received twenty books which fell from heaven, and contained many laws, promises, and prophecies.

The Gnostics had a book entitled "The Revelations of *Adam*," which is placed among the apocryphal writings by Pope Gelasius, who also mentions a book called "*Adam's* Penance." Calmet; Jones; Watson; Dwight.

ADAMAH or ADMAH, אַדְמָה One of the five cities which, together with the valley of Siddim, were overwhelmed and swallowed up in the Dead Sea. (Gen. 10. 19; 14. 2; Hos. 11. 8.) A town of this name must have been subsequently built by the inhabitants of that country, for, according to the version of the Septuagint, Isaiah says, that "God will destroy the Moabites, the city of Ai, and the remnant of *Adamah*." Isaiah 15. This town was situated not far from the site of the old one, on the eastern shore of the Dead Sea.

It was also the name of one of the "fenced cities" which belonged to the tribe of Naphtali. (Josh. 19. 36.) Calmet; *Script. Gaz.*; Gesenius.

ADAMANT, אֲדָמָן a diamond. A stone of impenetrable hardness used in cutting and engraving. (Jer. 17. 1.) Our translators have rendered the word *Adamant* in Ezekiel 3. 9, and Zechariah 7. 12. See DIAMOND.

ADAMI, אֲדָמִי a city of Naphtali. (Jos. 19. 33.)

ADAR, the sixth month of the civil year, the twelfth month of the ecclesiastical year; it has only twenty-nine days, and corresponds with part of our February and March.

1. The new moon.

3. The lessons for this day were from Exod. 30. 11 to Exod. 35. 1, and from 1Sam. 18. 1 to 1Sam. 18. 39.

7. A fast on account of the death of Moses. (Deut. 34. 5.)

9. A fast. The school of Schammai and Hillel began to be divided on this day.

12. The lessons are from Exod. 35. 1 to Exod. 38. 21, and from 1Sam. 17. 13 to 1Sam. 17. 26. This day is also a feast in memory of the death of Hollianus and Pipus, two proselytes and brothers, who chose rather to die than violate the law. (Selden, lib. iii. c. 13. *De Syned. e Megill. Taanith*.)

13. A festival on account of the death of Nicanor. (2Macc. 15. 37.) The fast of Esther. (Esth. 4. 16.)

14. Purim the first, or the little feast of Lots.

15. Purim the second, or the great feast of Lots. (Esther 9. 19, 21.)

The dedication of the Temple of Zorobabel (Ezra 6. 16.) was made in this month, but the day is not known.

18. Lessons from Exod. 38. 21 to the end of the book, and from 1Sam. 7. 50 to 1Sam. 8. 21.

20. A fast in memory of the rain obtained by one Onias Hammagel in a time of great drought.

25. The lessons are the first five chapters of Leviticus, and from Isaiah 43. 21 to Isaiah 44. 24.

28. A feast. The Grecian edict which forbid the Jews the use of circumcision recalled.

The Sabbath previous to Purim is Sabbath Zacher (Remember), so called from the first word in the passage in Deut. 25. 17, read to remind the people of the inveterate enmity of Amalek of whom Haman was a descendant.

The third Sabbath is Sabbath Parah (heifer). Burnt at this season according to the ordinance. (Numb. 19. 1-10.)

The last Sabbath is Sabbath Ahodes (month). On which, the ordinance that the month of Nisan should be the first month of the year is read, (Exod. 12. 2,) from which the ecclesiastical year is counted, and all the festivals ordained in conformity; thus New Year is ordained to be observed in the seventh month, &c.

VEADAR. In embolismic years, all the observances of *Adar* are kept in this month in the same order. Sabbath Shekalim is then the last Sabbath of *Adar*, but should the New Moon of *Adar* (or *Veadar*) in embolismic years, happen on the Sabbath, that day is then Sabbath Shekalim.

ADAR or HAZAR-ADDAR, the name of a village mentioned in Numbers 34. 4. Also a city of Judah. (Josh. 15. 3.) Eusebius places another town of this name in the neighbourhood of Lydda, or Diospolis.

ADARCONIM, אֲדַרְכִּימִן *a piece of money*. Occurs in the plural, 1Chron. 29. 7; Ezra 8. 27. The same as the *Dareikas*, Δαρεικος. In the Talmud אֲדַרְכִּי, the א is formative. אֲדַרְכִּימִן a Persian coin of pure gold, which was also in circulation among the Jews under the Persian government. The value of this coin was reckoned at χρυσός, which our modern authors value at fifteen shillings. According to Dr. Bernard, its weight was two grains more than the English guinea, and worth about 25 shillings. Its impression was an archer who was crowned with a spiked crown, had a bow in his left hand, an arrow in his right, and was clothed in a long robe, hence, in Numismatography, Sagittarii.—Ekhel. *Doctr. Numm.*

ADARSA, or in the Greek (1Macc. 7. 40,) *Adasa*, a city of Ephraim, four miles from Bethoron and not far from Gophna, (Josephus, lib. xii. c. 17.) The same city is likewise called *Adazer* and *Adaco* in Josephus.

Here Nicanor was overcome and his army put to flight by Judas Maccabæus.

ADBEEL was the third son of Ishmael, and the chief of a tribe of Ishmaelites. (Gen. 25. 13.)

ADDER, a venomous serpent, more usually called the viper. In our translation of the Bible, we find the word *Adder* five times, but without sufficient authority from the original.

1. שִׁפִּיֹן *Shephiphon*, (Gen. 49. 17,) is probably the *Cerastes* or horned serpent, according to Jerome and Bochart, one of the viper kind of a light brown colour which lurks in the sands and the tracks of the wheels in the road, and unexpectedly bites, not only the unwary traveller, but the legs of horses and other beasts. By comparing the Danites to this artful reptile, the patriarch intimated that by stratagem more than by open bravery, they should avenge themselves of their enemies and extend their conquests. See Bochart. *Hieroz.* lib. 2.

2. פֶּתֶן *Pethen*, in Psalm 58. 4; 91. 13, signifies an *Asp*. We may perhaps trace to this the Python of the Greeks and its derivations, (Arabic بَتن according to Forskal, *Coluber baetaen*.) See *Asp*.

3. עֶכְשֹׁב *Achsub* is found only in Psalm 140. 3. The root signifies in Arabic to fold itself together; to coil itself in a circle. The Chaldee paraphrasts render it עֶכְשִׁי *Acchabis*, which we translate elsewhere spider; they may therefore have understood it to be the Tarantula. It is rendered *Asp* by the Septuagint and Vulgate, and is so taken, Romans 3. 13. The name is from the Arabic *Achasa*. But there are several serpents which coil themselves previously to darting on their enemy; if this be a character of the *Asp*, it is not peculiar to that reptile.

4. צִפְפָּה *Tzephpa*, or צִפְפוֹנִי *Tziphoni*, (Prov. 23. 32; Isaiah 11. 8; 14. 29; 59. 5; and Jer. 8. 17,) is that deadly serpent called the *basilisk*, said to kill with its

very breath. According to Bochart from *פס* to hiss venomously. See *COCKATRICE*.

In Psalm 58. 5, reference is made to the effect of musical sounds over serpents. That they might be rendered tame and harmless by certain charms, or soft and sweet sounds, and trained to delight in music, was an opinion which prevailed very early and universally. Many ancient authors mention this effect. See Bochart. *Hieroz.* l. iii. cap. 6. Virgil speaks of it particularly. *Æn.* 7. 750.

Quin et Marrubia venit de gente sacerdos,
Fronde super galeam, et felici comptus oliva,
Archippi regis missu, fortissimus Umbro;
Vipereo generi et graviter spirantibus hydrys
Spargere qui somnos cantuque manique solebat
Mulcebatque iras, et morsus arte levabat.

Umbro, the brave Marrubian priest, was there,
Sent by the Marsian monarch to the war;
The smiling olive with her verdant boughs,
Shades his bright helmet, and adorns his brows,
His charms in peace the furious serpent keep,
And lull the envenomed viper's race to sleep;
His healing hand allayed the raging pain,
And at his touch the poisons fled again.—PITT.

Shaw, Bruce, and indeed all travellers who have been in the Levant, speak of the charming of serpents as a thing frequently seen.

The much dreaded *Cobra di Capello*, or *good Serpent* of the Hindoos, is capable of being tamed; and the Malabar jugglers have the art of teaching them to dance to the inharmonious and slow notes of their flageolet. The *serpent* first seems astonished, then begins to rear himself, and sometimes by a gentle undulatory motion of the head, and with distended hood, seems to listen with pleasure to the notes. These "dancing snakes" are carried about in baskets by the jugglers all over India, and Mr. Forbes states it as a well attested fact that when a house is infested with these snakes and some others of the *Coluber* genus, which destroy poultry, or with some even of the larger serpents of the boa tribe, the musicians are sent for, who charm the reptiles from their hiding-places to their own destruction. *Oriental Memoirs*.

The deaf-adder or asp may either be a serpent of a species naturally deaf, (for such kinds are mentioned by Avicenna as quoted by Bochart,) or on account of its appearing to be so. In either case, in the language of poetry, it may be said to *stop its ear*, from its being proof against all the efforts of the charmer:

Ad quorum cantus mites jacuere cerastæ.

Dr. Blayney remarks, "that some persons possessed the faculty of rendering serpents harmless is a fact too well attested by historians and travellers, to admit of contradiction. But by what means this effect was produced is not quite so clear."

The scripture word אֲשַׁפֵּן seems to be used in conformity to the common opinion, ascribing to it the power of certain cabalistical words and incantations muttered through the teeth. But whatever were the methods commonly practised, the enemies of the Jews were compared to such serpents as were not to be mollified nor disarmed by any of those means. "They shall bite you," saith Jehovah." The passage in Psalm 58. 5, 6, requires a further illustration, and it is furnished by the author of *Scripture Illustrated*. "After mentioning the obstinacy of his enemies, which David compares to the untamed malignant spirit of a serpent, our translators make him add, 'Break their teeth, O God, in their mouth; break out the great teeth of the young lions.' And why *young lions*? The passage requires strong lions to equal, much more to augment, the ideas already attached to the poisonous bite of serpents." To which we ought to add that immediately afterwards the writer

Serpent-Charmers.

returns to the reptile tribe, the slug or snail (rendered by error, *waters*). With what propriety then does the lion, the young lion, come in between them? Would it not be better to render instead of כַּפְרִים *Capharim*, כִּנְפָרִים *Ci-apharim*, from *aphar*, dust; and to consider the word as denoting serpents which dwell in dust, or spotted over as with dust, speckled *serpents*?

In the authorized version, the lion is again found in the company of *serpents*, and even like them to be trodden upon. (Psalm 91. 13.) The most ancient interpreters suppose a snake of some kind to be meant, and Bochart thinks it to be the black serpent or *Hæmorhous*. The word rendered young lion, may be the *cenchris*, which Nicander (*Theriac*. v. 463) calls *λεων αιολος*, a spotted lion: spotted, because he is covered with specks; a lion, because, like that animal, he raises his tail when about to fight, and because, like the lion, he bites and fills himself with blood. Harris, *Nat. Hist. Bible*. See *ASP*; *SERPENT*.

The most famous serpent-charmers of antiquity were the *Psylli*, a people of Cyrenaica; and that theirs was believed to be a natural power appears from the story told by Pliny, that they were accustomed to try the legitimacy of their new-born children by exposing them to the most cruel and venomous serpents, who dared not molest or even approach them unless they were illegitimate. He thinks their power resided in some peculiar odour in their persons which the serpents abhorred. (*Nat. Hist.* lib. vii. c. 2.) Lucan says the same; and the passage in which that poet speaks of them affords a complete exposition of the ancient belief concerning their charming of serpents. He chiefly describes the measures which they took to protect the Roman camp. When the encampment was marked out, they marched around it chanting their charms, the "mystic sound" of which chased the serpents far away. But not trusting entirely to this, they kept up fires of different kinds of wood, beyond the farthest tents, the smell of which prevented the serpents from approaching. Thus the camp was protected during the night. But if any soldier when abroad in the day-time happened to be bitten, the *Psylli* exerted their powers to effect a cure. First, they rubbed the wounded part around with saliva to prevent, as they said, the poison from spreading while they essayed their arts to extract it.

Then sudden he begins the magic song,
And rolls the numbers hasty o'er his tongue;
Swift he runs on, nor pauses once for breath,
To stop the progress of approaching death.
He fears the cure might suffer by delay,
And life be lost but for a moment's stay.
Thus oft though deep within the veins it lies,
By magic numbers chased, the mischief flies;
But if it hear too slow, if still it stay,
And scorn the potent charmer to obey;
With forceful lips he fastens on the wound,
Drains out and spits the venom to the ground.

Pharsalia, ix. ROWE.

In this account, we find the voice repeatedly mentioned; and it is to the "voice of the charmer" that the Psalmist refers. Eusebius, in mentioning that Palestine abounded in serpent-charmers in his time, says, that they usually employed a verbal charm. This is still one of the processes of the Oriental serpent-charmers. Roberts says, that the following is considered in India the most potent form of words against serpents: "Oh! serpent, thou who art coiled in my path, get out of my way; for around thee are the mongoos, the porcupine, and the kite in his circles is ready to take thee."

The Egyptian serpent-charmers also employ vocal sounds and a form of words to draw the venomous creatures from their retreats. Mr. Lane says, "He assumes an air of mystery, strikes the walls with a short palm stick, whistles, makes a clucking noise with his tongue, and spits upon the ground, and generally says, 'I adjure you by God, if ye be above, or if ye be below, that ye come forth: I adjure ye by the most Great name, if ye be obedient, come forth; and if ye be disobedient, die! die! die!'" *Mod. Egyptians*.

In these cases we may be sure that if any true effect were produced, it was by the sound of the voice, not by the form of words, which was doubtless addressed to other ears than those of serpents; and in the latter instance, we may conclude the whistling and clucking to have been the most operative parts of the process.

We see nothing difficult to believe in the statement that serpents may be, as some other creatures are, influenced or attracted by music, or even the voice of man properly regulated; or that the proper regulation of the music or the voice for the designed end, may not have been discovered and rendered most effective by men; who for successive generations have given their sole

F

attention to the subject. Indeed, it is perhaps capable of proof that music even in common hands has power over serpents; Sir William Jones believed so, although not on ocular evidence. Enumerating instances of the powerful effects of music upon animals, he says, "A learned native of this country (India) told me that he had frequently seen the most venomous and malignant snakes leave their holes upon hearing notes from a flute, which as he supposed, gave them peculiar delight." *Asiatic Researches*, vol. iii.

It is an impression that the serpent-charmers possess some knack in seizing and handling serpents, which prevents them from biting till their poison fangs have been extracted. Their presence of mind and the possession of such a secret easily accounts for all the stories told on this point. But when they do happen to fail, they die as others. They seem also to trust to the effect of their music in so diverting the attention of the serpents as to prevent them from attempting to exercise the fatal power they possess. Roberts mentions an Indian serpent-charmer, who came to a gentleman's house to exhibit his tame snakes. He was told that there was a *cobra di capello* in a cage, and asked if he could charm it. "Oh, yes!" said the charmer, and the serpent was accordingly released from its cage. The man began his incantations and charms; but the reptile fastened upon his arm, and he was dead before night. This serpent would not listen to the voice of the charmer!

As the houses in some parts of the East are much infested with serpents, the most profitable part of the charmers' business is to detect their retreat and draw them forth. They certainly discover where they are without ocular evidence, and make them come forth either in the manner already described, or by the notes of a pipe. It is often said that the charmer introduces his tame serpents, and that they obey the accustomed call, and are exhibited in proof of the triumph of the charmer's art. This may sometimes be the case, but instances are known in which there could not have been any collusion or contrivance; and after the severest test and scrutiny, many have been obliged to rest in the conclusion that the charmers do really possess the physical means of discovering the presence of serpents without seeing them, and of attracting them from their lurking places. This is Mr. Lane's conclusion, who also suspects that they discover the presence of serpents by the smell, and compares their attractive powers to those of the fowler, who by the fascination of his voice allures the bird into his net. A missionary to India states, that "some incredulous persons after the most minute and careful precaution against artifice of any kind, sent a serpent-charmer into the garden. The man began playing with his pipe, and proceeding from one part of the garden to another for some minutes, stopped at a part of the wall much injured by age, and intimated that a serpent was within. He then played quicker and his notes were louder, when almost immediately a large *cobra di capello* put forth his hooded head, and the man fearlessly ran to the spot, seized it by the throat and drew it forth. He then showed the poison fangs and beat them out; afterwards it was taken to the room where his baskets were left, and deposited amongst the rest."

Does not this beating out the poison fangs explain what is said by the Psalmist, (Ps. 58. 6.) "Break their teeth, O God, in their mouth?" This is usually done by the serpent-charmers, who then tame them, and use them in various exhibitions. The most usual are thus described: "Taking out eight or ten different kinds, they cast them on the ground. The reptiles immediately make off in different directions. The *sap-mullah* (charmer)

then applies his pipe to his mouth, and sends forth a few of his peculiar notes, and all the serpents stop as though enchanted; they then turn towards the musician, and approaching him within two feet, raise their heads from the ground, and bending backward and forward keep time with the tune. When he ceases playing they drop their heads, and remain quiet on the ground." The missionary adds that "there is another and inferior kind of serpent-charmers, who are Bengalese of the lowest caste. They do not use the pipe, but merely beat with their fingers a small drum which is held in the hand. Sometimes these men, sitting on the ground, hold the cover of a basket in one hand, and with the other pull the tails of the serpents, and otherwise irritate them, until the reptiles become so infuriated, that they dart forward, and seize the naked arm of the *sap-mullah*, which he exposes for the purpose. They sometimes allow their arms to be bitten in this manner till they are covered with blood.

"Other serpent-charmers allow large serpents to twine around their bodies as if merely to show their perfect tameness, and the impunity with which they are able

To dally with the crested worm,
To stroke his azure neck, or to receive
The lambent homage of his arrowy tongue.

Others, again, in this situation, allow themselves, when compressed in the serpent's folds, to be dreadfully wounded in many places, (the poison fangs being extracted,) till when streaming with blood, tortured, swollen, and in a really dangerous condition, the coadjutor makes his appearance, and applies the pipe or whistle to his lips. The serpents listen to the music, gradually unloose their coils and creep back to the cage from which they had been released at the commencement of the awful and cruel exhibition."

When Chateaubriand was in Canada, a rattle-snake entered their encampment; a young Canadian, one of the party, who could play on the flute to divert his associates, advanced against the serpent with his new species of weapon. "On the approach of his enemy, the haughty reptile curled himself into a spiral line, flattened his head, inflated his cheeks, contracted his lips, displayed his envenomed fangs, and his bloody throat; his double tongue glowed like two flames of fire; his eyes were burning coals; his body, swollen with rage, rose and fell like the bellows of a forge; his dilated skin assumed a dull and scaly appearance; and his tail which sounded the denunciation of death, vibrated with so great rapidity as to resemble a light vapour. The Canadian now began to play upon his flute; the serpent started with surprise, and drew back his head. In proportion as he was struck with the magic effect, his eyes lost their fierceness, the oscillations of his tail became slower, and the sound which it emitted became weaker and gradually died away. Less perpendicular upon their spiral line, the rings of the fascinated serpent were by degrees expanded, and sunk one after another upon the ground in concentric circles. The shades of azure, green, white, and gold, recovered their brilliancy on his quivering skin, and slightly turning his head, he remained motionless, in the attitude of attention and pleasure. At this moment the Canadian advanced a few steps, producing with his flute sweet and simple notes. The reptile, inclining his variegated neck, opened a passage with his head through the high grass, and began to creep after the musician, stopping when he stopped, and beginning to follow him again as soon as he moved forward." In this manner he was led out of the camp, attended by a great number of spectators, who could scarcely believe their eyes, when they beheld this wonderful effect of harmony. The assembly unanimously

decreed, that the serpent which had so highly entertained them, should be permitted to escape.

ADDI, the son of Cosam, and the father of Melchi, placed by St. Luke in the genealogy of our Saviour. (Luke 3. 28.)

ADDON or **ADDAN**, a place whence certain persons went up out of the captivity, who could not show whether they were of Israel. (Nehem. 7. 61.)

I. ADER, one of the sons and chief men of Benjamin, who took the city of Gath. (1Chron. 8. 15.)

II. ADER. The tower of *Ader*. St. Jerome mentions, *Epist.* 27, that the place where the angels declared the birth of Jesus Christ to the shepherds was called by this name. (Luke 2. 8-14.)

III. ADER or **HADAD**, one of the adversaries raised up against Solomon. (1Kings 11. 14.) See **HADAD**.

ADIABENE, a country in Assyria. Josephus mentions Helena, queen of *Adiabene* (lib. xx. 2), and her son, Izates, who changed their course of life, and embraced the Jewish customs. *Adiabene* is thought to be the province of *Ava*, through which the river *Ahava* flows. See **AHAVA** and **AVA**.

ADIDA. A city of Judah, at which Simon Macabæus encamped to dispute the entrance into the country with Tryphon. (1Macc. 13. 13.)

ADIEL, a descendant of Simeon. (1Chron. 4. 36.)

ADIN, a person carried away to Babylon by Nebuchadnezzar; four hundred and fifty-four of his posterity returned from the captivity. (Ezra 2. 15.)

ADINA, the son of Shiza the Reubenite, one of David's mighty men. (1Chron. 11. 42.)

ADINO, the Eznite, one of the mighty men whom David had. (2Sam. 23. 8.)

ADITES, or the tribe of *Ad*, were a very powerful tribe of the ancient Arabians, and are said to have been descended from *Ad*, the son of Aws or Uz, (Gen. 10. 23,) who was a grandson of Shem, and great-grandson of Noah. After the confusion of tongues, the *Adites* settled in the province of Arabia Petrea, now called Al Akkaf, or the winding sands, where they appear to have greatly increased. Like the other kindred tribes of those early times, the *Adites* soon abandoned the true worship of God, and set up four idols whom they worshipped: *Sakia*, whom they imagined to supply rain; *Hafedha*, who preserved them from all foreign and external dangers; *Razeka*, who provided them with food; and *Saléma*, who restored them from sickness to health. It is said that God commissioned the prophet Hud or Heber to attempt their reformation, but remaining obstinate in their idolatry, they were almost all destroyed by a suffocating wind. The few who escaped retired with the prophet Hud to another place. Before this severe punishment, they had been visited with a dreadful drought for four years, which killed their cattle, and reduced them to great distress. They are often mentioned in the Koran, and some writers, on the authority of that work, affirm that they were of gigantic stature. *Script. Gaz.* See **AMALEKITES** and **ARABIA**.

ADITHA or **ADATHA**, same as **ADITHAIM**.

ADITHAIM, a city belonging to the tribe of Judah. (Josh. 15. 36.)

ADJURE. 1. To bind by oath, as under the penalty of a fearful curse. (Josh. 6. 26.)

2. To charge solemnly, as by the authority and under pain of the displeasure of God. (Matt. 26. 63; Mark 5. 7; Acts 19. 13.)

St. Paul also uses this expression (1Thessa. 5. 27) as a solemn adjuration, that his "epistle be read unto all the holy brethren."

ADLAI, father of Shaphat, one of the chief hardmen to King David. (1Chron. 27. 29.)

ADMAH. See **ADAMAH**.

ADMATHA, one of the seven princes of Persia and Media, at the court of Ahasuerus, "which saw the king's face, and which sat the first in the kingdom." (Esther 1. 14.)

ADNA, one of the sons of the priests, who had taken a strange wife, and when he returned from Babylon, put her away. (Ezra 10. 30.)

ADNAH, one of the valiant men of Manasseh, who helped David against the band of the rovers. (1Chron. 12. 20.)

ADOM or **ADAM**, אָדָם The proper name of a town on the banks of the Jordan, to the south of Galilee, in the district of Perea, and opposite to Jericho. It is supposed that it received its name from the peculiar colour of the soil in its neighbourhood, which is represented to be a red stiff clay. It is celebrated as the spot where the Israelites crossed the Jordan on dry land, the waters of which "stood and rose up upon an heap," till they passed over, thus presenting a miniature resemblance of the memorable passage through the Red Sea. (Josh. 3. 16.)

ADONAI, אֲדֹנָי According to an old superstition, the Jews read this for the *nomen ineffabile*, אֲדֹנָי, as in the Sept. *Kypios*, for אֲדֹנָי. They contend that the true pronunciation of this word has been lost, and that whoever possesses it could reveal secrets or mysteries. Of this nature is the ineffable O'M of the Brahminical school, which Dara Shekoh (the Persian translator of the Sanscrit terms, in the Halhed MSS. in the British Museum) renders *Om*. It does not appear that the ancient Jews were so scrupulous, nor is there any law which forbids them to pronounce the name of God. Our English translation follows the Septuagint, by rendering the word *Jehovah*—Lord, whenever it occurs in the Hebrew text. Buck; Wait's *Jewish Antiq.* See **JEHOVAH**.

ADONI-BEZEK, the Lord of Bezek. The name of a powerful and cruel king of the city of *Bezek*, seventeen miles east of Napolis. He was the first Canaanitish king conquered by the Israelites after the death of Joshua. He was taken to Jerusalem, where he died, after his toes and thumbs had been cut off, which he owned to be a just retribution of Divine Providence in retaliation of what he had himself inflicted upon others. Similar cruelties to those recorded of *Adoni-Bezek*, are by no means uncommon in the wars of the East. (Judges 1. 7.)

ADONIJAH, the fourth son of King David, by Hagith; he was born at Hebron. He aspired to the kingdom before the death of his father, but was disappointed of his hopes by the command of David, who ordered Solomon to be proclaimed king. He afterwards desired Abishag the Shunammite, to wife; this request was rejected, and he was ordered to be put to death as one guilty of treason. (1Kings 2. 13-25.)

ADONIKAM. The descendants of Adonikam, six hundred and sixty-six in number, were among those who returned from the captivity in Babylon. (Ezra 2. 13.)

ADONIRAM, the receiver of the tribute of King Solomon. (1Kings 4, 6.)

ADONIS. The text of the Vulgate in Ezekiel, 8, 14, says, that the prophet saw women in the Temple weeping for *Adonis*, but the Hebrew reads נַמְּזַם *Tammuz*. This is the proper Syrian name for the *Adonis* of the Greeks, i. e., ἸϛΝ Lord (Creuzer, *Symbolik des Alterthums*, tom. ii. p. 86). Moses Maimonides (*More Nevochim*, 3. 29. ed. Buxtorf,) explains it according to a tradition of the Sabians, as the name of an idolatrous priest, who was murdered by his king on account of having recommended the worship of the stars and the Zodiac. At his death it was said, that all the idols of the whole earth came together in one night, into a Babylonian temple, to lament and bewail him. S. Carpzov. *Apparat. ad antiq. Sac. Cod.* p. 492.

The Egyptians had a fable, that their god Osiris, shut up in a box by Typhon, and thrown into the Nile, was found by Isis at Byblos, in Syria. Typhon, however, obtained possession of the body, cut it into many pieces and scattered them abroad, but Isis succeeded in collecting them again, and burying them. These stories respecting Osiris and *Adonis*, though quite dissimilar, were at last connected together. For in Syria, the women spent the anniversary of the death of *Adonis* in much grief, while the Egyptian women spent that of Osiris in the same manner, and in both cases, the period of mourning was followed by a festival of joy; in Syria, for the return of *Adonis* to life, and in Egypt, for the limbs of the dismembered Osiris, collected and buried. The Egyptians were in the habit, on this occasion, of writing an epistle, enclosing it in a box of the papyrus, and throwing it into the sea. The account enclosed therein, which was said to be wafted by water to Byblos, concerned the discovery and burial of the limbs of Osiris, but the inhabitants of Byblos interpreted it of the restoration of *Adonis* to life.

In Syria this festival was held in the month of Tammuz, or July, at which time the torrent of *Adonis*, a small river which falls into the sea at Byblos, having through rains in the mountains contracted a red colour from the earth, was fabled to be tinged with the blood of the deity, and at that time the grief of the women began. When this colour in the water was no longer perceivable, the return of *Adonis* to life was announced, and sorrow was converted into joy. The women, when they mourned for *Adonis*, were expected to shave their heads; in failure of which they were bound to prostitute themselves to some stranger, and pay the price to the temple of Venus. This is, therefore, the festival alluded to by the prophet as quoted above.

The name *Adonis*, is in itself an intimation that the sun is implied under it, whose departure, in autumn, is observed with grief. Lucianus *de Dea. Syr.* tom. 3. p. 454, edit. Reiz; M. Norbergii *Onomast. cod. Nasaræi*; Jahn's *Biblical Archaeology*, art. *Tammuz*.

ADONI-ZEDEK, *Lord of Zedek*, was king of Zedek, or Jerusalem, and one of the five Canaanitish kings shut up in the cave of Makkedah, whither they fled after their defeat by Joshua, at whose command they were taken out and put to death, and their bodies hung on five trees. (Josh. 10. 26.)

ADOPTION. A child by this act is taken into a family, not his own, in order to be made a part of it, and entitled to all the privileges belonging to the relation. It was very generally practised in the East, in the time of our Saviour, though it does not appear to have been used by the elder Hebrews. Moses makes no reference

to it in his laws; and Jacob's *adoption* of his two grandsons, Ephraim and Manasseh, (Gen. 48. 1,) is rather a kind of substitution, by which he intended that the two sons of Joseph should each have his lot in Israel, as if they had been his own sons. As he gave no inheritance to their father Joseph, the effect of this *adoption* extended only to their increase of fortune and inheritance; that is, instead of one part, giving them (or Joseph by means of them) two parts. Two other kinds of *adoption* among the Israelites are mentioned in the Scriptures.

1. The first consisted in the obligation of a surviving brother to marry the widow of his brother, who had died without children, (Deut. 25. 5; Ruth 4. 5; Matt. 22. 24,) so that the children of this marriage were considered as belonging to the deceased brother, and went by his name; but this manner of adopting was not practised among the Greeks and Romans; neither was that kind of *adoption* intended by Sarah, Leah, and Rachel, when they gave their handmaidens to their husbands. (Gen. 16. 2; 30. 3.)

2. Various instances of another kind of *adoption* are recorded in the Old Testament; that of a father having a daughter only, and adopting her children. Thus, in 1Chron. 2. 21-23, Machir, the grandson of Joseph, who is called father of Gilead, (that is, chief of that town,) gave his daughter to Hezron, who married her when he "was three score years old, and she bare him Segub. And Segub begat Jair, who had three and twenty cities in the land of Gilead." Jair acquired a number of other cities, which made up his possessions to three score cities. (Josh. 13. 30; 1Kings, 4. 13.) However, both he and his posterity, instead of being reckoned to the family of Judah, as they ought to have been by their *paternal* descent from Hezron, are reckoned as sons of Machir, the father of Gilead. It further appears from Num. 32. 41, that this very Jair, who was in fact the son of Segub, the son of Hezron, the son of Judah, is expressly called Jair, the son of Manasseh. In like manner, we read that Mordecai *adopted* Esther, his niece: when her father and mother were dead, he took her for his own daughter. So the daughter of Pharaoh *adopted* Moses, "and he became her son." (Exod. 2. 10.) So we read in Ruth 4. that Naomi had a son: "There is a son born to Naomi:" when indeed it was the son of Ruth, and only a distant relation to Naomi, who was merely the wife of Elimelech, to whom Boaz was kinsman.

Among the Mohammedans the ceremony of *adoption* is performed, by causing the adopted to pass through the shirt of the person who adopts him. For this reason, to *adopt* among the Turks, is expressed by saying—to draw any one through one's shirt; and an *adopted* son is called by them *Akietogli*, the son of another life; because he was not begotten in this. D'Herbelot, *Bibl. Orient.*

Something like this is observable amongst the Hebrews: Elijah *adopted* the prophet Elisha, by throwing his mantle over him (1Kings 19. 19), and when Elijah was carried off in a fiery chariot, his mantle, which he let fall, was taken up by Elisha, his disciple, his spiritual son, and *adopted* successor in the office of prophet. (2Kings 2. 15.)

This circumstance seems to be illustrated by the conduct of Moses, who dressed Eleazar in Aaron's sacred vestments, when that high priest was about to be gathered to his fathers; indicating thereby that Eleazar succeeded in the functions of the priesthood, and was in some sense *adopted* to exercise that dignity. The Lord told Shebna, the treasurer of the Temple, that he would deprive him of his honourable station, and substitute Eliakim, the son of Hilkiah, in his room. (Isai. 22. 21.) "I will clothe him with thy robe, and strengthen

him with thy girdle, and I will commit thy government into his hand." St. Paul, in several places, says, that real Christians put on the Lord Jesus; and that they put on the new man in order to denote their *adoption* as sons of God. (Rom. 13. 14; Gal. 3. 26,27.) Taylor, in *Calmet*; Horne's *Introd.*

ADORAIM, ADORA, ADOR, or DORA. A city belonging to the tribe of Judah, which was fortified by Rehoboam. (2Ch. 11. 9.)

ADORAM, the officer who, under the government of David, was receiver-general of the tribute money. (2Sam. 20. 24.) A person of the same name is also mentioned as sustaining the same office under the reign of

Rehoboam. (1Kings 12. 18.) He was sent by that prince, in the commencement of his reign, to the rebellious tribes, to endeavour to reduce them to their allegiance; and perished, the victim of an infuriated populace. It is uncertain whether this Adoram was the same as Adoniram, who had filled the same office under Solomon. (1Kings 4. 6.) He might be his son, and one of the young men who gave evil counsels to Rehoboam. However this may be, it was the height of imprudence to send him to the revolted tribes, who had complained of the burden of taxes; and hence some expositors have imagined, that Rehoboam sacrificed his chief treasurer in the vain hope that his death would calm the effervescence of popular fury. (Josephus viii. 2.)

Tribute Money.

ADORATION, an act of worship strictly due to God alone, but performed to other objects also, whether idols or men. The term appears to be derived from the Latin *ad* and *orare*; signifies to apply the hand to the mouth, or to kiss the hand. There is an allusion to this in Job 31. 26-28, "If I beheld the sun when it shined, or the moon walking in brightness; and my heart hath been secretly enticed, or my mouth hath kissed my hand: this also were an iniquity to be punished by the judge: for I should have denied the God that is above."

To kiss the hand and place it on the head is a token of respect. An Oriental pays his respects to a person of superior station by kissing his hand and putting it to his forehead; but if the superior be of a condescending temper, he will snatch away his hand as soon as the other has touched it; then the inferior puts his own fingers to his lips, and afterwards to his forehead. In the same way, the ancient idolaters worshipped their distant or unseen deities.

In the East, it is still considered as a mark of the highest respect to take off the shoes and approach barefooted to perform adoration. (Exod. 3. 5; Josh. 5. 15.)

The Egyptians were particularly attentive to this practice, and the Mohammedans observe it whenever they enter their mosques; also when Mr. Wilkins wished to enter the inner hall of the college of Seiks, at Patna, he was told that it was a place of worship, open to him and to all men; but that it was necessary for him to take off his shoes*.

The ancient Persians, when performing their acts of adoration, always turned their faces towards the sun, or to the east, and among them the practice of kissing the hand is said to have originated. It was at first done as a token of respect and submission to their monarch and great men, and was easily and naturally transferred to idolatrous worship. Cyrus introduced the custom when adoring their prince, of bending the knee before him; falling on the face at his feet; striking the earth with the forehead; and even kissing the ground. The kings of Persia, indeed, never admitted any one into their

presence, gave audience, or conferred favours, without exacting this ceremony; and the history of Haman and Mordecai, in the Book of Esther, shows that similar reverence was paid to the favourites of princes. The Roman emperors borrowed this extravagant and impious homage from the kings of Persia. The common practice among their abject flatterers was to express their adoration by bowing or kneeling at their feet, laying hold of their purple robe, then presently withdrawing the hand and applying it to the lips; though this was an honour to which none were admitted but persons of rank and dignity. The usual mode of *adoration* consisted in falling on the ground and kissing the feet of the emperor. This humiliating reverence was exacted from all that entered the royal presence, even from ambassadors who represented their independent sovereigns*.

The Jewish forms of *adoration* were various; standing, bowing, kneeling, prostration, and kissing the hand. Hence, in their language, kissing is properly used for adoration. (1Kings 19. 18; Hosea 13. 2.)

The passage in Psalms 2. 12, "Kiss the Son (that is, pay him homage and worship), lest he be angry, and ye perish from the way, when his wrath is kindled but a little," is illustrated by a reference to these customs.

From the expression used by Pharaoh, in granting power to Joseph, we may infer that the people who received that order, adopted the usual Eastern mode of acknowledging their respect and obedience for the sovereign. The expression in the Hebrew is, "according to thy word shall all my people kiss ('be ruled');" alluding, evidently, to the custom of *kissing* a firman. (Gen. 41. 40.) Nor can there be any doubt that, besides the custom of *kissing* the signature attached to those documents, they were expected to "*bow the knee*." (Gen. 41. 43.) The word אָנָךְ is used to the present day by the Arabs, when requiring a camel to kneel and receive its load. In the presence of the monarchs and chiefs, persons were required to prostrate themselves to the earth before them. Joseph's brethren bowed to the

* Asiatic Researches, vol. i.

* Gibbon.

earth. (Gen. 43. 26, 28.) These prostrations are frequently represented in the sculptures. Wilkinson.

ADRA, or HADRACH, the name of a town, according to Ptolemy, in Cælo-Syria (Zech. 9. 1). The district of *Hadrach* was not far from Damascus. *Script. Gaz.*

I. ADRAMMELECH, אֲדַרְמֶלֶךְ was the son of Sennacherib, king of Assyria. Both he and Sharezar were probably the children of slaves, and had therefore no right to the throne. Sennacherib, on returning to Nineveh, after his expedition against Hezekiah, was put to death by them while worshipping in the temple of his god Nisroch; having accomplished this crime, they fled for safety to the mountains of Armenia, and their brother, Esarhaddon, succeeded to the throne. (2Kings 19. 37; Isa. 37. 38.)

II. ADRAMMELECH. The name of an idol worshipped by the inhabitants of Sepharvaim, who caused their children to pass through the fire to it. (2Kings 17. 31.) *Adrammelech*, it is supposed, represented the sun,—*Anammelech*, the moon.

ADRAMYTTIUM, a city on the west coast of Mysia, in Asia Minor, opposite the island of Lesbos, in the Archipelago, or Grecian Sea, and situated at the foot of Mount Ida. It was sometimes also called Pegasus. It is mentioned in Acts 27. 2. The ship in which St. Paul sailed from Cæsarea to Myra, belonged to this place. It also gave its name to an arm of the Ægean Sea, and is supposed to have derived its designation from *Adramys*, the brother of Cræsus, by whom it was built; or from Hermon, one of the kings of Lydia, who, in the Phrygian language, was called *Adramys*. It is now termed *Andramité*, and is a poor place, inhabited only by a few Greek fishermen. St. Jerome and others have erroneously supposed this city to be the same as that built by Alexander the Great, at the Canopic mouth of the Nile, in Egypt, and which is understood to be the same as Thebes. *Script. Gaz.*

ADRIA, or HADRIA, the name of two towns in Italy, one of which was situated in the country of the Veneti, on the river Tartarus, or *Adria*, and is called *Atrias*, by Ptolemy and Pliny; and the other in the country of the Piceni, now the dukedom of *Atri*, in Abruzzo, which was the country of the ancestors of the Roman emperor Adrian. *Adria* is mentioned in the Acts of the Apostles, 27. 27, where it is to be observed that, when St. Paul says they were tossed in *Adria*, he does not say in the Adriatic Gulf, which ends with the Illyrian Sea, but in the Adriatic Sea, which, according to Hesychius, is the same with the Ionian Sea; and therefore to the question, how St. Paul's ship, which was near to Malta, and so either in the Libyan or Sicilian Sea, could be in the Adriatic? it is well answered, that not only the Ionian, but even the Sicilian Sea, and part of that which washes Crete, was called the Adriatic. Strabo says that the Ionian Gulf is a part of that which, in his time, was called the Adriatic Sea. *Whitby. Script. Gaz.*

ADRIAN. Under this emperor, a rebellion against the Roman authority broke out in Judæa, headed by the

famous Jewish impostor, *Barchochebas*. According to St. Jerome, the war lasted three years and a-half.

Adrian changed the name of Jerusalem to *Ælia*, his family name, and forbade the Jews to enter it, under a severe penalty. St. Jerome applies the passage in Zech. 11. 7, "I will feed the flock of slaughter," to this calamity of the Jews. They purchased with a sum of money, the liberty, not of entering the holy city; but only of looking at a distance on it, and going to mourn its fall and desolation.

Medals were struck on this occasion, on the reverse of which, *Judæa* is represented as a woman holding two naked children, and sacrificing upon an altar. On another is represented *Judæa*, kneeling in submission to the emperor, and three children imploring mercy of him. *Tristan. Comm. Hist. Adrian; Freher. de Num. Census. See BARCHOCHEBAS.*

The Latin verses addressed to his soul, composed by Adrian a short time before his death, have been the subject of numerous translations and imitations:—

Animula vagula, blandula
Hospes, comesque corporis
Quæ nunc abibis in loca
Pallidula, rigida, nudula,
Nec, ut soles, dabis jocos!

Ah! fleeting spirit! wand'ring fire,
That long hast warmed my tender breast,
Must thou no more this frame inspire?
No more a pleasing, cheerful guest?
Whither, ah! whither art thou flying?
To what dark undiscovered shore?
Thou seem'st all trembling, shiv'ring, dying,
And wit and humour are no more!—*Pope.*

ADRIEL, the son of Barzillai, married to Merab, the daughter of Saul, who had previously been promised to David. (1Sam. 18. 19.) *Adriel* had five sons, who were delivered up to the Gibeonites, to be put to death before the Lord, in revenge for the cruelty which their grandfather, Saul, had exercised against the Gibeonites.

It would appear, from 2Sam. 21. 8, that Michal, who had no child to the day of her death, had adopted the five sons of her sister, Merab, whom she is said to have "brought up for Adriel, the son of Barzillai the Gileadite."

That children do, and very frequently too, suffer and die for the sins of their parents, in which they have had no share, is evident from history, and the constant experience of all ages and nations. Thus God punished David, by the death of his first child by Bathsheba, and Jeroboam, by the death of his eldest son, who was a religious and virtuous young prince. Indeed, this is a case that not unfrequently happens, according to that Divine threatening of "visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate Him."

ADULLAM, a city belonging to the tribe of Judah, situated towards the Dead Sea, in the southern territories of that tribe. (Josh. 15. 35.) It is said to have been a beautiful city. (Micah 1. 15.) Rehoboam strengthened it with fortifications. (2Chron. 11. 7.) Joshua killed the king of Adullam, in his conquering progress through the land of Canaan, and took the city. (Josh. 12. 15.) It was in a cave near this city, that David concealed himself from the rage of Saul, and his friends resorted to him there. (1Sam. 22. 1, 2.) Most of the mountains of Palestine were full of caverns, to which the people of the country betook themselves in time of war. Adullam was taken and plundered by

Dwellings in the Clefts of the Rock of Petra.

the army of Sennacherib, in the reign of Hezekiah. Judas Maccabæus passed a Sabbath-day in the plain of Adullam. (2Macc. 12. 38.) It continued to be a place of some importance even in the fourth century. Eusebius says, that, in his time, it was a very large town, ten miles east of Eleutheropolis. It has long since been reduced to ruins.

ADULTERY. By the law of Moses, *adultery* was punished with the death of both the man and the woman who were guilty of the crime. (Levit. 20. 10.)

Punishments have been annexed to adultery in all ages and nations, of various degrees of severity. The original institution of marriage appears to have been of Divine appointment, and intended for the happiness of the human race. (Gen. 2. 18-24.) The near proportion between the numbers of each sex, which has obtained in every age of the world, while it furnishes a convincing argument against the practice of polygamy, carries with it a strong intimation, independent of the positive testimony of revelation, that a promiscuous

intercourse between the sexes is both unnatural and contradictory to the will of God. Accordingly, we find the practice of *adultery* condemned in the Divine word in the most pointed manner. "Thou shalt not commit *adultery*," was an interdict delivered by God himself; and in both the Old and New Testament, the crime of *adultery* is denounced in the most explicit terms. (Heb. 13. 4.)

Adultery, even before the time of Moses (Gen. 38. 24), was reckoned a crime of a very heinous nature, and was punished with severity. In the penal code of Moses, the punishment was that of death, (Levit. 20. 10,) but the mode of being put to death is not particularly mentioned, because it was known from custom. It was not, however, as the Talmudists assert, by *strangulation*, but *stoning*, as we may learn from various parts of Scripture (for instance, Ezek. 16. 38, 40; John 8. 5), and as in fact Moses himself testifies, if we compare Exod. 31. 14, 35. 2, with Numb. 15. 35-6. Mohammed, it appears, distinctly understood that *stoning* was the punishment which the Pentateuch assigned, and thought that, in prescribing a similar punishment, he was following its authority. The Jews of his time had abolished capital punishment for *adultery* altogether, substituting stripes; and in this, Mohammed was so far from concurring, as Michaëlis seems to think he was, that he reproached them with the neglect of their law. The following anecdote, which forms one of the traditions which the Mohammedans consider most authentic, will illustrate this subject:—"A Jew came to the Prophet and said, 'A man and woman of ours have committed *adultery*;' and the Prophet said, 'What do you meet with in the Bible in the matter of stoning?' The Jew said, 'We do not find stoning in the Bible, but we disgrace adulterers and whip them.' Abdullah-bin-Salam, who was a learned man among the Jews, and had embraced Islam, said, 'You lie, O Jewish tribe! verily the order for stoning is in the Bible!' Then the Bible was brought and opened; and a Jew put his hand over the revelation for stoning, and read the one above and below it; and Abdullah said, 'Lift up your hand;' and he did so; and behold the revelation for stoning was produced in the Bible, and the Jews said, 'Abdullah spoke true, O Mohammed! the stoning revelation is in the Bible.' Then his Highness ordered the man and woman to be stoned, and they were so." *Mischcat-ul-Mâs'abih*.

If the adulteress were a *slave*, the *persons guilty* were both scourged with a leather whip, בָּקָרָה, the number of the blows not exceeding forty.

The adulterer, in this instance, in addition to the scourging, was subjected to the penalty of bringing a trespass offering, viz. a ram, to the door of the tabernacle of the congregation, to be offered in his behalf by the priest. (Levit. 19. 20-22.)

One of the most remarkable institutions to be found in the Mosaic economy, is the law which gave power to the husband who suspected his wife of infidelity, of exacting from her in the temple, or tabernacle, what may be termed the *ordeal oath*. (Numbers 5. 11-31.) To this oath were attached such dreadful penalties, that a person really guilty could not take it without betraying her criminality by some indications unless she possessed the extremity of hardihood. Moses appears to have substituted this oath, and the ceremonies attending it, instead of an ancient and pernicious custom, of which some traces still remain in Africa. See Oldendorp, *Geschichte der Mission*, s. 266.

Dreadful as it was, there were not wanting wives who set it at defiance; licentiousness increased, especially in the later periods of the Jewish state. The Talmudists themselves state (*Sota*, c. 9), that the law in regard to

the suspected wife was abrogated as much as forty years before the destruction of Jerusalem. The reason they assign for it is, that the men themselves were at that period generally adulterers, and that God would not fulfil the dreadful imprecations of the ordeal oath upon the wife alone, while the husband was guilty of the same crime. Comp. John 8. 1-8.

Several forms of Hindoo ordeal are mentioned in the first volume of the *Asiatic Researches*, one of which has a striking resemblance to that of the Hebrew water of jealousy. The accused party is made to drink three draughts of water, in which the images of the sun, of Devi, and of other deities, have been washed for the occasion; and if, within fourteen days, he has any sickness or indisposition, his crime is considered as proved. It would be endless to multiply instances of a mode of trial which has, in one form or another, been diffused over the world. It will be recollected that it applies exclusively to cases of suspicion incapable of proof. Michaëlis; Jahn; *Pict. Bible*.

Some have most erroneously been of opinion, that the history of the woman taken in adultery, recorded in the eighth chapter of St. John's Gospel, gives countenance to this crime. When our Saviour told the woman, "Neither do I condemn thee," we must believe, it is said, that he deemed her conduct, either not criminal, or not a crime, however, of a very heinous nature. "A more attentive examination of this case," says Paley, "will convince us that nothing can be concluded from it as to Christ's opinion concerning adultery, either one way or the other. The design of the persons, whose conduct on this occasion is recorded, and who are said to have tempted Christ, 'that they might have to accuse him,' was to draw him into an exercise of judicial authority, that they might be empowered to accuse him before the Roman governor of usurping or intermeddling with the civil government. Christ knew this to be their design, and determined to defeat it. When he asked the woman, 'Hath no man condemned thee?' he spoke, and was understood by her to speak, of a legal and judicial condemnation; otherwise her answer, 'No man, Lord,' was not true. In the same sense he uses the word *condemn* in his reply, 'Neither do I condemn thee; i. e., I pretend to no judicial character or authority over thee; it is no office or business of mine to pronounce or execute the sentence of the law. When he adds, 'Go and sin no more,' he, in effect, tells her, that she had sinned already; but as to the degree or quality of the sin, or Christ's opinion concerning it, nothing is declared or can be inferred in this way." *Moral Philos.* vol. i.

Some biblical critics have doubted the genuineness of this passage. They urge that this history is wanting in the Syriac version, as well as in the Alexandrian and Bodleian copies, and indeed in most of the oldest MSS., and that it was not acknowledged by several of the Greek fathers, which induced Beza to question, and Le Clerc, with many others, to reject its authority. In favour of this history, appeal is made to sixteen copies used by R. Stephens, to most of those consulted by Mills and Beza, to the Harmonies of Tatian and Ammonius, to the Apostolical Constitutions, and the Synopsis of Athanasius, to many of the Latin fathers, to several ancient Syriac MSS., to the Greek and Latin printed copies. Fabricius, *Codex Apocr. N. T.* vol. i.; Lardner, vol. v.

Adultery is used, symbolically, to denote idolatry, or any departure from the law, worship, or service of God, which might be construed into unfaithfulness to that covenant which God condescends to describe as equivalent to the marriage contract; a figure frequently used to signify the relation in which He was pleased to stand

to his people, speaking of them as a spouse, and of Himself as a husband. Thus in Jer. 3. 8,9; 5. 7; 13. 27. See DIVORCE; MARRIAGE.

ADUMMIM or ADUMMON, a mountain, and a city near Jericho, in the tribe of Benjamin, which some place north, and others south, of Jericho: but as the road from Jerusalem to Jericho passed through this town, it was most probably west of the latter city. It is called, in Joshua 15. 7, "going up to Adummim."

Dr. Shaw says, "that the mountain of *Adummim* belonged to Judah, and through it the road from Jerusalem to Jericho is cut." It is described as a very difficult and narrow pass, much infested by robbers, and the scene of many sanguinary murders; from hence, perhaps, it received its name, which signifies *the mountain of blood, or the bloody road*, אֶדְמוֹמִים. Some think that the traveller mentioned in the parable of the Good Samaritan, who, in his way from Jerusalem to Jericho, fell among thieves, was attacked in this road. (Luke 10. 30-37.)

Chateaubriand says, "This sombre dell is still entitled to its horrible distinction; it is still the place of blood, of robbery, and of murder; the most dangerous pass for him who undertakes to go 'down from Jerusalem to Jericho.'" Jerome in *Matt.*; Lord Lindsay; *Script. Gaz.*

ADVERSARY, in Hebrew אֹיֵב *an opposer*, as in war (1Kings 11. 14,23,25). Before a court of justice. (Ps. 109. 6.) It is also understood of one that puts an impediment in the way, and obstructs our progress. (Numb. 22. 22; 2Sam. 19. 22.)

The ADVERSARY, by way of pre-eminence, *Satan*, according to the later theological views of the Jews, an evil angel or spirit, who entices men to bad deeds (1Chron. 21. 1, comp. with 2Sam. 24. 1), and accuses and calumniates them before God. (Zech. 3. 1,2; Job 1. 7; 2. 2, comp. with Rev. 12. 10.)

Those who read in Job אֹיֵב, and translate it *περιουδυνης, a spy of the world*, violate the rules of grammar, criticism, and interpretation. In the New Testament, *αντιδικος* is understood as an opponent, an accuser, e. g., the plaintiff in a suit at law, "Agree with thine adversary quickly." (Matt. 5. 25.) Also, any enemy; "Avenge me of mine adversary." (Luke 18. 3.) Gesenius.

ADVERSITY. The opposite of prosperity. (Eccl. 7. 14.) It is that state in which the train of providential circumstances is contrary to our wishes. (Gen. 42. 36.) The duties of this trying state are, fortitude (Prov. 24. 10); consideration (Eccl. 7. 14); devout acknowledgment (Prov. 3. 6); prayer (James 5. 13); submission (1Sam. 3. 18); faith in the promises, perfections, and providential government of God (Rom. 8. 28).

ADVOCATE, *one who pleads the cause of another*. In the Greek, *παρακλητος*, from the verb, *to call upon*, i. e., for help; hence an *advocate*, an *intercessor*, who pleads the cause of any one before a judge: "We have an advocate with the Father." (1John 2. 1.)

The accuser was denominated in Hebrew אֹיֵב, *Satan*, or the adversary. (Zech. 3. 1,2; Psalm 109. 6.) The judge or judges were seated, but both of the parties implicated stood up, the accuser standing at the right hand of the accused. The latter, at least after the captivity, when the cause was one of great consequence, appeared with dishevelled hair, and in a garment of mourning.

Of advocates, such as ours, there is no appearance in any part of the Old Testament. Every one pleaded his own cause. (1Kings 3. 16-28.)

From the Romans, the use of advocates, or patrons, who pleaded the cause of another, might have passed to the Jews. In this view, the word *παρακλητος*, or advocate, is applied to Christ, our *intercessor*, who pleads the cause of sinners with his Father, as the exclusive mediator between God and man. Jahn, *Bibl. Arch.*; Horne.

ADYTUM; a Greek word, which signifies *in-accessible*; by it is understood the most retired and secret place of the heathen temples, into which none but the priests were allowed to enter. The *adytum* of the Greeks and Romans answered to the *holy of holies* of the Jews, and was the place from whence the oracles were delivered.

ÆLIA-CAPITOLINA; a name given to Jerusalem when the Emperor Adrian, about A.D. 134, settled in it a Roman colony, and entirely banished the Jews; who were forbidden, on pain of death, to continue in the city. See **ADRIAN**.

It was called Ælia from Ælius, the name of Adrian's family, and Capitolina, from Jupiter Capitolinus, to whom the city was consecrated. It was known by this name till the reign of the Emperor Constantine, when it resumed that of Jerusalem: but the name Ælia is occasionally met with in history after that period.

Jerome observes that "the Jews were forced to purchase from the Roman soldiery the privilege of seeing Jerusalem, and weeping over its ruins. Women and old men oppressed with years, and clothed in rags, assembled on the Mount of Olives to lament the destruction of the Temple. The figure of a hog was placed on the gate towards Bethlehem to prevent the Jews from entering the city." Hieron. in *Sophon*; Jahn.

ÆEN or **AIN** עין A city belonging to the tribe of Judah, but afterwards to Simeon. (Josh. 15. 32; 1Chron. 4. 32.)

עין signifies a *fountain*. It is found combined with the names of several cities:—as

1. עין נר (*buck fountain*.) A city in the desert of the tribe of Judah, not far from the southern point of the Dead Sea, in a grove of palm trees. (Plin. *Hist. Nat.* v. 17.) See **ENGEDI**. (Josh. 15. 62; 1Sam. 24. 1; Cant. 1. 14.)

2. עין דנר A city in the tribe of Manasseh. (Ps. 83. 10; 1Sam. 28. 7.) See **ENDOR**.

3. עין משפט (*fountain of judgment*.) (Gen. 14. 7.) The name of a fountain in the desert of Sin; otherwise קדש.

4. עין עזלים (*fountain of two calves*.) A place on the northern point of the Dead Sea. (Ezek. 47. 10.)

5. עין רנל (*fountain of the fuller*.) According to the Targum, "to tread with the feet as a fuller;" a fountain on the south-east side of Jerusalem, on the confines of the tribes of Judah and Benjamin. (Josh. 15. 7; 18. 16.) According to Josephus, it was situated in the royal pleasure garden.

Out of עין ורמון (Josh. 15. 32) is formed עין רמון (Nehem. 11. 29.)

עין also a place in the north-east of Palestine. (Numb. 34. 11.)

With respect to names of places it may be generally observed, that from want of local knowledge, most translators of the Holy Scriptures have in many cases combined such as should have been kept separate, and in others separated what ought to have been combined. Gesenius.

ÆENON or **ENON**, עין אינון, the place of springs, where John baptized, (John 3. 23,) a town in Samaria, not far from Salim, eight Roman miles south of Scytho-

polis, and fifty-three north-east of Jerusalem, according to Eusebius. Neither Æeon nor Salim are known with any certainty; the Syriac and Persian versions read it Ain-yon, "the doves' fountain," and the Arabic renders it the "fountain of Nun." Rosenmüller.

עין חצר HAZAR-ENAN, the court of wells, (Numb. 34. 9, 10; Ezek. 48. 1,) situated in the northern borders of Palestine.

ÆONS. Valentinus, a philosopher of the Platonic school, and of the sect of the Gnostics, taught that there were thirty gods, one half of them male and the other female, from whom sprang many others. These deities he called *Æons*, and from them he pretended that the Saviour of the world proceeded, and was perfected with all good gifts, like the Pandora of Hesiod. (Tertull. *contra Valent.* cap. 3.) Valentinus admitted that the Redeemer was born of an earthly virgin, but affirmed that he derived nothing from her, having merely passed directly from God through a mortal, bringing with him from heaven the very flesh in which he was clothed. Tertull. *advers. Val.* c. 27.

Cerinthus taught that the Most High God was utterly unknown before the appearance of Christ, and dwelt in a remote heaven called *Pleroma*, with the chief spirits or *Æons*. That this supreme God first generated an only Son, *μονογενης*, who again begat the Word, or *Λογος*, which was inferior to the first-born. That Christ was a still lower Æon, though far superior to some others. That there were two higher Æons, distinct from Christ; one called *Ζωη* or life, and the other *Φως* or the light. That from the Æons again proceeded inferior orders of spirits, and particularly one Demiurgus who created this visible world out of eternal matter. That this Demiurgus was ignorant of the supreme God, and much lower than the Æons, which were wholly invisible. That he was, however, the peculiar God, and protector of the Israelites, and sent Moses to them, whose laws were to be of perpetual obligation. That Jesus was a mere man; of the most illustrious sanctity and justice, the real son of Joseph and Mary. That the Æon Christ descended upon him in the form of a dove when he was baptized, revealed to him the unknown Father, and empowered him to work miracles.

Tatian, one of the Ante-Nicene Fathers, was led astray by the Gnostics, and began publicly to depart from the simplicity of the Christian faith about the year 170. He spoke of Æons, said to have been created by the supreme God, and of a Creator of the world distinct from the latter. Irenæus *adv. Hæres.*, lib. i. c. 28; Mosheim; Goodhugh's *Biblical Lectures*; Riddle's *Christian Antiq.*

ÆRA. The ancient Jews made use of several æras in their computations. 1st. From Gen. 7. 11, and 8. 13, it appears that they reckoned from the lives of the patriarchs, or other illustrious persons.

2nd. From their departure out of Egypt, and the first institution of their polity. (Exod. 19. 1; Numb. 1. 1; 33. 38; 1Kings 6. 1.)

3rd. Afterwards, from the building of the Temple, (1Kings 9. 10; 2Chron. 8. 1,) and from the reigns of the kings of Judah and Israel.

4th. From the commencement of the Babylonian captivity, (Ezek. 1. 1; 33. 21; 40. 1,) and, perhaps, also from their return, and the dedication of the second Temple. In process of time, they adopted,

5th. The Æra of the Seleucidæ, which in the books of Maccabees is called the Æra of the Greeks, and the Alexandrian Æra; it began from the year when Seleucus Nicanor attained the sovereign power; that is, about 312 years before the birth of Jesus Christ. This æra continued in general use among the Orientals, with

the exception of the Mohammedans, who employed it together with their own æra from the flight of Mohammed. The Jews had no other epoch, until A.D. 1040, when, being expelled from Asia by the caliphs, they began to date from the Creation, though still without entirely dropping the æra of the Seleucidæ.

6th. They were accustomed also to reckon their years from the years when their princes began to reign. Thus, in 1 Kings 15. 1; Isa. 36. 1; and Jer. 1. 2,3, we have traces of their anciently computing according to the years of their kings; and in later times (1 Macc. 13. 42; 14. 27,) according to the years of the Asmonean princes. Of this mode of computation, we have vestiges in Matt. 2. 1; Luke 1. 5; and 3. 1.

Ever since the compilation of the Talmud, the Jews have reckoned their years from the creation of the world. Reland. *Antiq. Hebr.*; Schulzii *Compend. Arch. Hebr.*; Jahn, *Arch. Bib.*; Horne's *Introd.*

AFAR, joined with *off*, signifies, 1. The distance between two places (Gen. 37. 18). 2. To be estranged from friends (Psal. 38. 11). 3. Absent from God (Psal. 10. 1). 4. Ungodly, not only out of the visible Church, but alienated from God (Eph. 2. 17).

AFFINITY. The restraints by which the fathers of families were limited in making choice of wives for their children, are mentioned in Levit. 18 and 20.

These regulations, founded in wisdom, forbidding the marriages of near relations, are still the basis of the laws now in operation in most of the Christian states; the modifications which these laws have received in later times, have rather tended to increase than diminish the number of prohibitions.

It is true, in that the earliest times men married their sisters, in consequence of the small number of persons in the world. The sons of Adam must of necessity have married their sisters. The practice, however, continued, after the necessity for it had ceased. Abraham's marriage with his sister does not seem to have been considered as an extraordinary circumstance, and in Egypt, marriages between brothers and sisters were sanctioned by the laws, in times much later than the date of this transaction. No instance, however, in the history of the Patriarchs, can be found of a man marrying his full sister; even marriages with sisters not by the same mother, such as that of Abraham and Sarah, were forbidden by the law of Moses; previously to which the Jewish doctors suppose that the only marriages considered unlawful, were of a man with his own mother, or step-mother, or his sister by the same mother. There was, however, an ancient usage existing prior to the time of Moses, (Gen. 38. 6-11,) to this effect. If, in any case, the husband died without issue, leaving a widow, the brother of the deceased, or the nearest male relation, was bound to marry the widow, to give to the first-born son the name of the deceased kinsman, to insert his name in the genealogical register, and to deliver into his possession the estate of the deceased. Jahn, *Bib. Arch.*; Calmet.

AFRICA. One of the four principal divisions of the globe. It is bounded on the north, by the Mediterranean Sea, which separates it from Europe; on the south, by the Southern Ocean; on the east by the Indian Ocean, the Red Sea, and part of Asia; and on the west, by the Atlantic.

Africa was chiefly peopled by the descendants of Ham; hence it is called the "land of Ham," in several of the Psalms. Egypt, one of its most celebrated countries, was peopled by Mizraim. (Gen. 10. 6,13.) The chief countries of Africa, mentioned in the Scriptures are Egypt, Ethiopia, and Libya. Africa ranks

next after Asia and America, in size and extent; but in political, religious, and moral importance, stands by far the lowest in the scale.

The Gospel is thought to have been carried to Africa by the eunuch of Candace, whom Philip baptized; and probably also by some of those who, from different parts of it, attended the feast of Pentecost (Acts 2. 10). Africa, it has been supposed, was first peopled by the descendants of Ham, and of those tribes whom Joshua drove out of Canaan. The negroes appear to be the aboriginal inhabitants of Africa, while other nations can be traced to an Asiatic origin, having poured into the African from the Asiatic continent, by the neck of land called the Isthmus of Suez.

The Africans were distinguished by the ancients, as living beyond the Ethiopians. Some derive the name of this quarter of the globe from Fhré, the sun, in its meridian heat, otherwise the south. The Greeks generally denominated it Libya. Sallust and Pomponius Mela did not comprise Egypt and Marmarica in Africa. See EGYPT; ETHIOPIA; LIBYA; NILE.

AFTERNOON. "And they tarried until *afternoon*," (Judges 19. 8,) or, as in the margin of our version, "till the *day* declined." The Hebrews, in conformity with the Mosaic law, reckoned the *day* from evening to evening, and divided it into six unequal parts;—

1. The break of day.
2. The morning, or sunrise.
3. The heat of the day. It begins about nine o'clock (Gen. 18. 1; 1 Sam. 11. 11.)
4. Mid-day.
5. The cool of the *day*, literally the *wind* of the *day*, from the fact that in Eastern countries, a wind commences blowing regularly for a few hours, before sunset, and continues till evening. (Gen. 3. 8.)
6. The evening. See DAY-HOURS.

AGABA. A fortress near Jerusalem, which Gales-tus, its governor, restored to Aristobulus, the son of Alexander Jannæus. Joseph. *Antiq. lib. xiii. c. 24.*

AGABUS; a prophet of the primitive Church, and one of the seventy disciples of our Saviour. (Acts 11. 28; 21. 10.) He foretold a great famine over all the Roman empire. Profane historians notice it as having happened in the reign of Claudius, A.D. 44. (Sueton. in *Claudio*, c. 18; Joseph. *Antiq. lib. xx. cap. 2.*) The Greeks assert that he suffered martyrdom at Antioch, and observe his festival, March 8. Calmet; Wolf. *Cur. ii.*; Eichhorn, *Bibl. der Bibl. Lit. vi. 20 ff.*

AGAG, אַגַּג A name which occurs at two different times, as that of a king of the Amalekites; possibly it was a title peculiar to these kings. (Numb. 24. 7; 1 Sam. 15. 8,9,20,32,33.)

One of this name, was conquered and taken prisoner, and, though condemned according to the law of the interdiction, he was spared by Saul. He was put to death at Gilgal, by Samuel. The fate of Agag has called forth the pity of sceptics: who, while they have affected to deplore his fate, have overlooked the fact of his having been a cruel and sanguinary tyrant; and that Samuel reproached him for his cruelty, before he "hewed him in pieces before the Lord."

AGAPÆ. The Greek word *Agape* (ἀγάπη), which signifies love or charity, is used in ecclesiastical antiquities, to denote a certain feast, of which all the members of the church, of whatever rank or condition, partook together. In the New Testament, the word occurs only once in this sense of *feast of charity, or love*

feast. (Jude 12.) The observance is alluded to under other names, as *meat, tables.* (Acts 2. 46; 6. 2.)

It is certain that the feast of charity was celebrated in the earliest period of the Christian Church. (Acts 2. 46; 6. 2; 1Cor. 11. 17-34.) Some writers suppose that this custom had its remote origin in the practice of the heathen; while others regard it as derived from the Jewish synagogue.

The bishop or presbyter presided at these feasts. Before eating, the guests washed their hands; and a public prayer was offered up. A portion of Scripture was then read, and the president proposed some questions upon it, which were answered by the persons present. After this, any accounts which had been received of the affairs of other churches, were recited. (Cyprian. *Ep. de Spectac.*; Tertull. *de Coron.* c. 3.) At the close of the feast, money was collected for the benefit of widows and orphans, the poor, prisoners, and persons who had suffered shipwreck.

While the Church was exposed to persecution, these feasts were not only conducted with regularity and good order, but were made subservient to Christian edification, and to the promotion of brotherly love, and of that kind of concord and union which was specially demanded by the circumstances of the times. Tertull. *Apol.* c. 39.

The passages of the New Testament which refer to the *Agapæ*, afford no intimation of the time of day in which they are celebrated, unless, indeed, we regard Acts 20. 7, as supplying some information on this point. From Tertullian it would appear that they were held in the night, for he calls them *Cenæ* and *Cenulæ*, in contradistinction to *Prandia*, and gives us to understand that lights were required in the place in which the feast was made. But it is probable that this nocturnal celebration was more a matter of necessity than of choice.

According to the account of Pliny, in his Letter to Trajan, it would seem that in his time (in Bithynia, at least,) these feasts were held in the day time. See Chrysostom *ad* 1Cor. 11.; *Hom.* 54, and *Hom.* 22.

At first they were celebrated in private houses, or in other retired places, in which the Christians met for religious worship. After the erection of churches, these feasts were held within their walls; until, abuses having occurred, which rendered the observance inconsistent with the sanctity of such places, this practice was forbidden. Riddle's *Manual of Christian Antiquities.*

AGAPETÆ. A name given to certain virgins and widows, who, in the ancient Church associated themselves with, and attended on ecclesiastics, out of a motive of piety and charity. See **DEACONESSES.**

Αγαπητοι, beloved, was a title given to baptized Christians in the primitive Church.

AGATE, אַגַּת A precious stone; Sept., ἀγάτης; Valgate, *achates.* (Exod. 28. 19; 39. 12.) Its Hebrew name is perhaps derived from the country whence the Jews imported it; for the merchants of Sheba brought to the market of Tyre, all kinds of precious stones.

(Ezek. 27. 22.) The agate was the second stone in the third row of the breastplate of the High Priest. (Exod. 28. 19; 39. 12.)

AGE, sometimes signifies an indefinite period; at others, it is used for

1. A generation of the human race, or thirty years.
2. As the Latin *sæculum*, or a hundred years.
3. The maturity of life. (John 9. 21.)
4. The latter end of life. (Job 11. 17.) See **CHRONOLOGY.**

The ancient Egyptians particularly inculcated respect for *old age*; and the fact of this being required towards strangers, necessarily argues a great regard for the person of a parent; for, we are informed that, like the Lacedæmonians, they required every young man to give place to his superiors in years, and even if seated, to rise on their approach, as with the Jews: "Thou shalt rise up before the hoary head, and honour the face of the old man." (Levit. 19. 32).

AGEE, the father of Shammah the Hararite. (2Sam. 23. 11.)

AGES OF THE WORLD. The time preceding the birth of our Saviour has been generally divided into six ages:—

1. From the beginning of the world to the Deluge, comprehending 1656 years.
2. From the Deluge to the entrance of Abraham into the Land of Promise, comprehending 426 years.
3. From the entrance of Abraham into the Land of Promise, to the Exodus, 430 years.
4. From the Exodus, to the foundation of the Temple, by Solomon, 480 years.
5. From the foundation of the Temple of Solomon, to the Babylonish captivity, 424 years.
6. From the Babylonish captivity, to the birth of Our Lord, 588 years.

See **CHRONOLOGY**; **EPOCH.**

As this subject is one of much importance, it is well to state, that our information is chiefly derived from the Scriptures. The first accounts are supplied by genealogies which ascend to Adam. They tell us at what age he begat a son, how long after he survived, and the number of years he lived; the same information is supplied concerning his son, and so continuing through many generations. By adding these particulars together, we have a tolerably clear estimate of the whole duration of time over which they extend; and as we know the ages of particular persons, we also know the date of such events as are said to have occurred in some particular year of their lives. Information of this kind comes down to the more proper historical data, in which we compute time, by adding together the particulars which inform us successively, of the durations of captivities, wanderings, reigns, and governments.

The following table will afford materials of comparison, deserving of consideration, by such as are desirous of applying it to historical uses.

AGRICULTURE. In the primitive ages of the world, agriculture, as well as the keeping of flocks, was a principal employment among men. (Gen. 2. 15; 3. 17-19; 4. 2.) It is an art which has been a prominent source, both of the necessities and the conveniences of life.

Those states and nations, especially Babylon and Egypt, which made the cultivation of the soil their chief business, arose in a short period to wealth and power; to these may be added the Hebrews, who learned the value of the art while remaining in Egypt, and continued afterwards celebrated for their industry in the cultivation of the earth.

1. Moses following the example of the Egyptians made agriculture the basis of the state. He, accordingly, apportioned to every citizen a certain quantity of land, and gave him the right of tilling it himself, and of transmitting it to his heirs. The person who had thus come into possession, could not alienate the property for any longer period than the year of the coming jubilee; a regulation which prevented the rich from coming into possession of large tracts of land, and then leasing them out in small parcels to the poor; a practice which anciently prevailed, and does to this day in the East. A tenant in the East, (as remarked by a modern writer of great ability,) and more especially in Egypt, has, even in his worst estate, that of the *fellah*, enjoyed almost a freehold right in his land, from which he could not be removed by the proprietor, and which he might transmit to his heirs, and might even alienate it by gift or sale to a stranger; although, in the last case, he had to obtain the permission of the proprietor and to pay him a fine. The proprietor could only resume the occupation of the land or introduce a new tenant when the last died without heirs. Regnier de l'*Economie Publique et Rurale des Egyptiens*; Heeren, *Policy and Commerce of Ancient Nations*, sec. iii. c. 2; Salvador *Hist. des Instit. de Moïse*.

Moses further enacted that the vendor, or his nearest relative, should have a right to redeem the land sold, whenever they chose, by paying the amount of profits up to the year of jubilee. (Ruth 4. 4; Jer. 32. 7.)

2. It was also required that the Hebrews, as was the case among the Egyptians after the time of Joseph (Gen. 47. 18, *et seq.*) should pay a tax of one-fifth of their income unto God, whose servants they were to consider themselves, and whom they were to obey as their king. (Levit. 27. 30; Deut. 12. 17.)

The sovereign in almost every country of the East has from the most remote times been regarded as the paramount proprietor of the soil. The tendency of Oriental ideas is decidedly to regard him as such; and under the Jewish theocracy, God, as the king of the Hebrew people, was mindful to instruct the Israelites that the land was his (Levit. 25. 23), which they held of him as hereditary tenants, much in the same way as that in which, under the regulation of Joseph, the Egyptians held their lands of Pharaoh; the offerings and tithes which they gave for the support of His worship, being in one point of view regarded as a produce rent paid to him for the land.

3. The custom of marking the boundaries of land by stones, although it prevailed much earlier than Moses (Job 24. 2), was confirmed and perpetuated by an express law, which denounced a curse against any one, who without authority removed them.

Regulations having been made in respect to the tenure, incumbrances, &c. of landed property, Joshua divided the whole country, which he had occupied, *first* among the respective tribes, and *then* among individual Hebrews, running it out with the aid of a measuring

line. (Josh. 17. 5, 14 compared with Amos 7. 17; Micah 2. 5; Psalm 78. 55; Ezekiel 40. 3.) From this circumstance the line is frequently used by a figure of speech. (Ps. 16. 6.)

4. The soil of Palestine is very fruitful, if the dews and vernal and autumnal rains be not withheld; but the Hebrews, notwithstanding the richness of the soil, endeavoured to increase its fertility in various ways. They not only divested it of stones, but watered it by means of canals communicating with the rivers or brooks; and thereby imparted to their fields the richness of gardens. (Psalm 1. 3; 65. 10.) With the use of *manure*, the Jews were undoubtedly acquainted. Doves' dung appears to have been highly valued, as it is to this day by the Persians. "The dung of pigeons is the dearest manure which the Persians use; and as they apply it almost entirely for the rearing of melons, it is probably on that account that the melons of Ispahan are much finer than those of other cities." Morier's *Second Journey through Persia*; Sir Robert Ker Porter's *Persia*.

5. Salt either by itself or mixed in the dung-hill in order to promote putrefaction, is specially mentioned as an article of manure. (Matt. 5. 13; Luke 14. 35.) The soil was enriched also by means of ashes; to which the straw, the stubble, the husks, the brambles and grass, that overspread the land during the sabbatical year, were reduced by fire, which had also another good effect, *viz.*, that of destroying the seeds of the noxious herbs. (Isai. 7. 23; 32. 13; Prov. 24. 31.)

6. In Egypt, such vegetable productions as require more moisture than that which is produced by the inundation of the Nile, are refreshed by water drawn out of the river, and afterwards deposited in capacious cisterns. When, therefore, their various sorts of pulse, melons, sugar-cane, &c., require to be refreshed, they strike out the plugs which are fixed in the bottom of the cisterns; whence the water, gushing out, is conducted from one drill to another by the cultivator, who is always ready, as occasion requires, to stop and divert the torrent, by *turning the earth against it by his foot*, and at the same time opening, with his mattock, a new trench to receive it. A similar mode of irrigating lands is practised in the island of Cyprus, and also in India. Rae Wilson's *Travels*; Statham's *Indian Recoll.*

7. This method of imparting moisture and nourishment to a land, rarely, if ever, refreshed with rain, is often alluded to in the Scriptures, where it is made the distinguishing quality between Egypt and Canaan. "For the land," says Moses, "whither thou goest in to possess it, is not as the land of Egypt, from whence ye came out, where thou sowedst thy seed, and wateredst it with thy foot, as a garden of herbs; but the land, whither ye go to possess it, is a land of hills and valleys, and drinketh water of the rain of heaven." (Deut. 11. 10, 11.) Springs, fountains, and rivulets, were held in as much honour and worth by husbandmen as by shepherds. (Judges 1. 15.)

8. The culture of the soil was at first very simple, being performed with no other instruments than sharpened sticks. With these the ground was loosened, until spades and shovels, and not long after, ploughs, were invented. All these implements were well-known in the time of Moses. (Deut. 23. 13; Job 1. 14.) The first plough was doubtless nothing more than a stout limb of a tree from which projected another shortened and pointed limb. This being turned into the ground made the furrows; while at the further end of the longer branch was fastened a transverse yoke, to which the oxen were harnessed. At last a handle was added, by which the plough might be guided. So that the plough was composed of four parts; the beam, the yoke, which was attached to the beam; the handle, and what we should call

Illustrations from the Egyptian Monuments.

The Sower

Ploughing with Oxen.

Reaping.

Winnowing.

Housing the Corn.

the coulter. (1Sam. 13. 20, 21; Micah 4. 3.) It was necessary for the ploughman constantly and firmly to hold the handle of the plough, which had no wheels, and that no spot might remain untouched, to lean forward and fix his eyes steadily upon it. (Luke 9. 62; Plin. *Hist. Nat.* xviii. 49. 2.) The staff by which the coulter was cleared, served also for an ox-goad. In the East at the present day, they use a pole about eight feet in length; at the largest end of which is fixed a flat piece of iron for clearing the plough, and at the other end a spike for spurring the oxen. Hence it appears that a goad might answer the purpose of a spear, which indeed had the same name. (Judges 3. 31; 1Sam. 13. 21.) There seems to have been no other harrow than a thick clump of wood, borne down by a weight or a man sitting upon it, and drawn over the ploughed field by oxen; the same which the Egyptians use at the present time. At a later period wicker drags came into use. (Plin. *Hist. Nat.* xviii. 43.) In Syria, the plough is still drawn, frequently by one small cow, or at most by two, and sometimes only by an ass. (Russell's *Hist. Aleppo*.) In Persia, Mr. Morier states, that it is for the most part drawn by one ox only, and not unfrequently by one ass. (*Travels in Persia*.) In Egypt they plough with two oxen, as was the practice in ancient times. (Richardson's *Travels*.) The beasts of burden employed in agriculture were bulls and cows, he-asses and she-asses. (Job 1. 14; 1Sam. 6. 7; Isaiah 30. 24.) It was forbidden to yoke an ass with an ox. (Deut. 22. 10.)

9. Those animals which in the Scriptures are called oxen, were bulls, for the Hebrews were prohibited from castrating, although the law was sometimes violated. (Malachi 1. 14.) Bulls in the warmer climates, especially if they are not greatly pampered, are not so ungovernable, but that they may be harnessed to the plough. If indeed any became obstinate by rich pasturage, their nostrils were perforated, and a ring made of iron or twisted cord was thrust through, to which was fastened a rope, which impeded his respiration to such a degree, that the most turbulent one might be easily managed. (2Kings 19. 28; Job 40. 24.) By this ring, also, camels, elephants, and lions, taken alive, were rendered manageable. When bulls became old, they were left to die a natural death.

10. The Hebrew word קִנְיָן which is variously translated by the words corn, grain, &c. is of general signification, and comprehends in itself different kinds of grain and pulse, such as wheat, millet, barley, beans, lentils, meadow cummin, pepperwort, flax, cotton; to these may be added the various species of gourd, and perhaps rice. (Isai. 28. 25.) Wheat grew in Egypt in the time of Joseph, as it now does in Africa, on stalks or branches, each one of which produced an ear. (Gen. 41. 47.) This sort of wheat is not cultivated in Palestine: the wheat there is of a much better kind, such as that of Heshbon, which accords with what is said of it in Matt. 13. 8, as yielding an hundred fold, some sixty, and some thirty.

11. In Judæa sowing commenced in the latter part of October; at which time, as well as in the months of November and December following, the wheat was committed to the earth. Barley was sown in January and February. The land was ploughed, and the quantity which might be ploughed by a yoke of oxen, in one day, is called סוּלָא a yoke, or an acre. (1Sam. 14. 14.) The yoke, affords numerous metaphors expressive of subjugation. (Hosea 10. 11; Isai. 9. 4; Matt. 11. 29, 30.)

12. The cultivated fields were guarded by watchmen, (as they still are in the East,) who sat upon a seat hung in a tree, or in a lodge, or watch-tower, made of planks, to keep off birds, beasts, and thieves. (Jer. 4. 16, 17;

Isai. 21. 5.) It was lawful for travellers to pluck ears from the standing corn in another's field, and to eat them; but they were on no account to use a sickle. (Deut. 22. 25, compared with Matt. 12. 1; Mark 2. 23; and Luke 6. 1.)

13. The corn-fields of Palestine were infested with a worthless kind of weed resembling corn, called ζιζάνιον in the New Testament, rendered tares; in Hebrew שֶׁנֶבֶל and שֶׁנֶבֶל. It is supposed to have been the *Lolium tremulentum*, a species of darnel growing among corn, to which it bears some resemblance, though the proper meaning cannot be determined; according to Celsius, the poisonous *coliquintida* or the *cicuta*. (*Hierobotan.* ii. 46.) In India at the present day, as in Judæa in the time of Our Lord, (Matt. 13. 25,) nothing is more common than for an enemy to come by night, and sow tares on the newly-ploughed land. (Robert's *Oriental Illustrations*.) When the grain has reached about a cubit in height, it is frequently so injured by cold winds and frosts that it does not come into ear. The effect thus produced is called *blasting*. Sometimes the crops are so affected by easterly winds as to turn yellow, and never come to maturity. This calamity is denominated *mildew*; רֵקָה *rotteness*; Sept., μοῦσος, *mouldiness*, or *mustiness*. (Deut. 28. 22; Amos 4. 9.) But whether the opinion that these effects are occasioned by winds is well founded, cannot, as it seems, be determined.

14. There were three months between their sowing and their first reaping, and four months to their full harvest; their barley harvest was at the Passover, and their wheat harvest at the Pentecost. The reapers made use of sickles, and according to the present custom, they filled their hands with the corn and bound it in bundles. There was a person "set over the reapers," (Ruth 2. 5.) to see that they did their work, that they had proper provision, and to pay them their wages. Women were employed in reaping as well as the men; and the reapers were usually entertained above the rank of common servants, though in the time of Boaz, we find nothing provided for them but bread and parched corn; and their sauce was vinegar (a kind of weak wine), which, doubtless, was very cooling in those hot countries. (Ruth 2. 14.) The poor were allowed the liberty of gleaning, though the landowners were not bound to admit them immediately into the field as soon as the reapers had cut down the corn and bound it up in sheaves, but after it was carried off; they might choose also among the poor whom they thought worthy or most necessitous. A sheaf left in the fields, even though discovered, was not to be taken up, but to be left for the poor. (Deut. 24. 19.) The conclusion of the harvest, or carrying home the last load, was with the Jews a season of joyous festivity, and was celebrated with a harvest feast. (Psalm 126. 6; Isaiah 16. 9, 10.) Hence the *joy in harvest* was a proverbial expression, denoting great joy. (Isaiah 9. 3.) It is also a Hindoo expression to denote great joy. (Robert's *Oriental Illustrations*.) The corn being pulled or cut, and carried in waggons or carts (Numb. 7. 3-8; Isaiah 28. 27, 28; Amos 2. 13), was either laid up in stacks (Exod. 22. 6), or barns (Matthew 6. 26; 13. 30; Luke 12. 18, 24), and when threshed out, was stored in granaries or garners. (Matth. 3. 12.) David had "store-houses in the fields, in the cities, and in the villages, and in the castles." (1Chron. 27. 25.)

15. The process of threshing was performed in various ways. Sometimes it was done by horses (Isai. 28. 28), as is the practice at this time among the Koords, (Buckingham's *Mesopotamia*), and by oxen that trod out the corn with their hoofs shod with brass. (Micah 4. 12, 13.) This mode is expressly referred to by Hosea 10. 11, and in the prohibition of Moses against muz-

sling the ox that treadeth out the corn. (Deut. 25. 4); it also obtains in Persia (Sir Robert Ker Porter's *Travels in Persia*,) and in India (Turner's *Embassy to Thibet*,) to this day, where oxen are employed, as buffaloes are in Ceylon, asses in North Africa, and horses in Crim Tartary. (Ward's *History of the Hindoos*; Davy's *Ceylon*.) Another mode of threshing was, by drawing a loaded cart with wheels over the corn backwards and forwards, so that the wheels running over it, forcibly shook out the grain (Isaiah 28. 28); but the most common mode appears to have been that which is in use in this country, viz., by flails. Thus the fitches are said to be beaten out with a staff, and the cummin with a rod. In this manner Gideon and Araunah or Ornan threshed out their wheat. (Judges 6. 11; 1Chron. 21. 20.)

16. The threshing-floor was generally in the field, in some elevated part of it; was destitute of walls and covering, and was nothing more than a circular space, thirty or forty paces in diameter, where the ground had been levelled, or beaten down. (Gen. 50. 10.) They were places of great note among the Hebrews, particularly that of Araunah the Jebusite, which was the spot of ground chosen by king David on which to build the altar of God (2Sam. 24. 25), and where the Temple of Solomon was afterwards erected. (2Chron. 3. 1.) These floors were sometimes covered at the top, to keep off the rain, but open on all sides, in order that the wind might come in freely, for the winnowing of the corn; they were shut up at night, with doors fitted to them, so that if anybody lay there he might be kept warm, and the corn be secured from robbers. (Ruth 3. 7.) The time of winnowing, or separating the corn from the chaff, was in the evening, when the heat of the day was over, and cool breezes began to rise. "Behold he (Boaz) winnoweth barley to-night in the threshing-floor." In India, "much of the agricultural labour is performed in the night." Roberts's *Oriental Illustrations*.

The grain, being threshed, was thrown into the middle of the threshing-floor; it was then exposed with a fork to a gentle wind (Jer. 4. 11,12), which separated the broken straw and the chaff; so that the kernels and clods of earth with grain cleaving to them, and the ears not yet thoroughly threshed, fell upon the ground. The clods of earth as is customary in the East at the present day, were collected, broken in pieces, and separated from the grain by a sieve; whence the operation of sifting is, in prophetic language, a symbol of misfortune. (Amos 9. 9; Luke 22. 31.) The heap thus winnowed, which still contained many ears that were broken, but not fully threshed out, was again exposed in the threshing floor, and several yoke of oxen were driven over it, for the purpose of treading out the remainder of the grain. At length the grain, mingled with the chaff, was again exposed to the wind by a fan, which bore off the chaff, so that the pure wheat fell upon the floor. (Ruth 3. 2; Isai. 30. 24.) The scattered straw, as much at least as was required for the manufacturing of bricks and for the fodder of cattle, was collected; but the residue was reduced to ashes by fire; from this custom the sacred writers have derived a figurative illustration, to denote the destruction of wicked men. (Isai. 5. 24; Nahum 1. 10; Mal. 4. 1; Matt. 3. 12.)

17. After the corn was threshed, it was dried either in the sun (2Sam. 17. 19), or by a fire, or in a furnace. This is called parched corn (Levit. 23. 14; 1Sam. 17. 17,) and was sometimes used in this manner for food without any further preparation, but generally the parching or drying of it was in order to render it more fit for grinding. This process was performed either in mortars or mills, both of which are mentioned in Numb. 11. 8.

Solomon also speaks of the former. (Prov. 7. 22.) But mills were chiefly employed for this purpose; and they were deemed of such use and necessity, that the Israelites were strictly forbidden to take the nether or upper mill-stone in pledge; the reason of which is added, because this was "taking a man's life to pledge," (Deut. 24. 6,) intimating that while the mill ceases to grind, people are in danger of being starved.

18. Grinding at mills was accounted an inferior sort of work, and, therefore, prisoners and captives were generally put to it. To this work Samson was set, while he was in the prison-house. (Judges 16. 21.) The expression in Isaiah 47. 2, "Take the millstones, and grind meal," is part of the description of a slave. In Barbary, most families grind their wheat and barley at home, having two portable mill-stones for that purpose; the uppermost of which is turned round by a small handle of wood or iron, placed in the rim. When this stone is large, or expedition is required, a second person is called in to assist; and it is in that country usual for the women alone to be thus employed, who seat themselves over against each other with the mill-stones between them. This practice illustrates the propriety of the expression of sitting "behind the mill" (Exod. 11. 5), and also the declaration of our Saviour, that "two women shall be grinding at the mill; the one shall be taken, and the other left." (Matt. 24. 41.) Those who were occupied in grinding beguiled their task by singing, as was the practice among the Egyptians, and as the Barbary women continue to this day. Shaw's *Travels*; Jahn, *Bibl. Archæol.*; Horne's *Introd.*

Wheat of Heshbon.

AGRIPPA, surnamed HEROD, was the son of Aristobulus and Mariamne, and grandson of Herod the Great. After the death of his father Aristobulus, Josephus informs us that Herod, his grandfather, took care of his education, and sent him to Rome to make his court to the Emperor Tiberius. At first he resided there as a private person, and ingratiated himself into the favour of Tiberius; but being accused of wishing him dead, in order that Caligula might reign, he was thrown into prison by order of Tiberius. On the accession of Caligula to the empire, Agrippa was created king of Batanæa and Trachonitis, to which Abilene, Judæa and Samaria were subsequently added by the Emperor Claudius. He returned to Judæa and governed it much to the satisfaction of the Jews. The desire of pleasing them and a mistaken zeal for their religion, induced him to put to death the apostle James, and to cast Peter into prison with the same design; and but for a miraculous interposition, (Acts 12. 1-19,) which, however, produced no effect upon the mind of the tyrant, his hands would have been imbrued in the blood of two apostles. At Cæsarea he had games performed in honour of Claudius, and here the inhabitants of Tyre and Sidon waited on him to sue for peace. Agrippa being come early in the morning into the theatre, with a design to give them audience, seated himself on his throne, dressed in a robe of silver tissue worked in the most admirable manner. The rising sun darted his golden beams thereon, and gave it such a lustre as dazzled the eyes of the spectators; and when the king began his speech to the Tyrians and Sidonians, the parasites around him began to say, "it was the voice of a god, and not of a man." Instead of rejecting these impious flatteries, Agrippa received them with an air of complacency; "and the angel of the Lord smote him, because he gave not God the glory." (Acts 12. 21-23.) Being therefore carried home to his palace, he died at the end of five days; racked with tormenting pains in his bowels, and devoured with worms. Such was the death of Herod Agrippa, A.D. 44, after a reign of seven years. He left a son of the same name, and three daughters:

1. Bernice, who was married to her uncle Herod, her father's brother.
2. Mariamne, betrothed to Julius Archelaus; and
3. Drusilla, promised to Epiphanus, the son of Archelaus, the son of Comagena. Watson; Horne's *Int.*

Agrippa I.

AGRIPPA, AGRIPPA II., or HEROD AGRIPPA, was the son of the preceding Herod Agrippa, and was educated under the auspices of the Emperor Claudius; being only seventeen years of age, at the time of his father's death, he was judged to be unequal to the task of governing the whole of his dominions. These were again placed under a Roman procurator or governor, and Agrippa was first king of Chalcis, and afterwards of Batanæa, Trachonitis and Abilene, to which other territories were subsequently added, over which he seems to have ruled with the title of king. (Joseph. *Antiq.* lib. xix. c. 9.) Festus coming to his government, King Agrippa and Bernice his sister, went as far as Cæsarea to salute him; and as they continued there for some time, Festus talked with the king concerning St. Paul, who had been seized in the Temple about two

years before, and within a few days previous to his visit, had appealed to the emperor.

Agrippa wishing to hear St. Paul, the apostle delivered before him that masterly defence which is recorded in Acts 26, and which drew from the astonished monarch, that memorable exclamation, "Almost thou persuadest me to be a Christian." He was the last prince of the Herodian family, and survived the destruction of Jerusalem. Watson; Horne's *Introd.*

Agrippa II.

AGUE; a disease of the fever kind, in which a cold shivering fit is succeeded by a hot one. In the Hebrew קדחת, a burning or inflammatory fever. (Levit. 26. 16; Deut. 28. 22.)

AGUR, אגור The name of a wise man, to whom in Proverbs 30. 1, the contents of that chapter are attributed, otherwise unknown. He is called the son of Jakeh, and is said to have originally addressed his wise sayings to Ithiel and Ucal; but it is a remarkable circumstance, that, of the four persons whose names are introduced on this occasion, we find not the slightest mention in any other part of the inspired writings. As an appellative אגור signifies in Syriac one who applies himself to the study of wisdom; whence it has been conjectured that the name is significant and allegorical. Gesenius; Bertholdt *Einl.* 2193.

AHAB, a king of Israel, who reigned twenty-two years, and surpassed all his predecessors in impiety. He was entirely under the influence of his idolatrous wife Jezebel. He died B.C. 897, of wounds received in battle with the Syrians, according to the prediction of Micaiah, the son of Imlah. (1 Kings 22. 17.)

AHAD or ACHAD, אחד A name under which the sun was worshipped by the Syrians, and also by the Israelites when they lapsed into idolatry: it is mentioned in Isaiah 66. 17, where the rites are described.

They who sanctify themselves and purify themselves
In the gardens, after the rites of Achad;
In the midst of those who eat swine's flesh,
And the abominations, and the field mouse;
Together shall they perish, saith Jehovah.—Lowth.

AHARAH, the third son of Benjamin. (1 Chron. 8. 1.)

AHARHEL, the son of Harum, of the posterity of Judah. (1 Chron. 4. 8.)

AHASAI, the son of Meshillemoth, one of those chosen by lot to dwell at Jerusalem. (Nehem. 11. 13.)

AHASBAI, the son of the Maachathite, one of David's mighty men. (2 Sam. 23. 34.)

AHASUERUS, אחשורוש the king of Persia who advanced Esther to be queen.

AHASUERUS is a title or surname of several, evidently different, Persian kings. (Daniel 9. 1; Ezra 4. 6; Esther 1. 1.) The word is of Persian origin, and the first half of the compound is the Persian آتش *excellence, greatness*; the second part is either پارس *Persian* or پارس *prince* (with the permutation of پ with ر) or *Zwarsch*, signifying in the *Pelvi* language, *hero*. Chronologers are greatly divided in opinion as to who was

the Ahasuerus of the sacred historian; Scaliger, who has been followed by Jahn, has advanced many ingenious arguments to show that it was Xerxes who was intended; Archbishop Usher supposes him to have been Darius, the son of Hystaspes. The most probable opinion is, that of Dr. Prideaux, (*Connexion*), who after a very minute discussion, maintains that the Ahasuerus of Esther was Artaxerxes Longimanus, agreeably to the account of Josephus, (*Antiq. Jud. lib. xi. c. 6.*) of the Septuagint version, and of the apocryphal additions to the Book of Esther. The opinion of Dr. Prideaux is adopted by Bishops Tomline and Gray, and the very accurate chronologer, Dr. Hales. (*Gray's Key*; Tomline's *Elements*; Hale's *Analysis*.) We may therefore conclude, that the permission given to Nehemiah to rebuild the walls of Jerusalem was owing to the influence of Esther and Mordecai, and that the emancipation of the Jews from the Persian yoke, was gradually, though silently, effected by the same influence. The extraordinary favour shown to the Jews by this prince, first in sending Ezra, and afterwards Nehemiah, to relieve them, and restore them to their ancient prosperity, affords strong presumptive evidence that they had near his person and high in his regard such an advocate as Esther. Gesenius; *Horne's Introd.*

AHAVA, the name of a river of Babylonia, or of Assyria, on the banks of which Ezra assembled those captives whom he afterwards brought into Judæa. (Ezra 8. 15.) It is thought to be that which ran along the Adiabene, where a river Diava or Adiava is mentioned, and on which Ptolemy places the city Abane, or Aavane. Here, probably, was the country called Ava, (2Kings 17. 24), whence the kings of Assyria removed the people called Avites, into Palestine, and in their room settled some of the captive Israelites. Ezra intending to collect as many Israelites as he could, to return with him to Judæa, halted in the country of Ava or Ahava, whence he sent agents into the Caspian mountains, to invite such Jews as were willing to join him. (Ezra 8. 16.) The history of Izates, king of the Adiabeniens, and of his mother Helena, who became converts to Judaism some years after the death of Jesus Christ, sufficiently proves that there were many Jews still settled in that country.

AHAZ, Sept. *Αχαζ*; Joseph. *Αχαζης*, king of Judah, son of Jotham, whom he succeeded B.C. 741. After the customs of the heathen, he made his children to pass through the fire; he shut up the Temple, and destroyed its vessels. He became tributary to Tiglath-pileser, whose assistance he supplicated against the kings of Syria and Israel. Such was his impiety, that he was not allowed burial in the sepulchre of the kings. (2Kings 16; 2Chron. 28.)

I. AHAZIAH, king of Israel, the son and successor of Ahab; he imitated his father's impiety, and worshipped Baal and Astarte, whose rites had been introduced into Israel by Jezebel, his mother. He reigned one year conjointly with his father, and one year alone. Hence he is said (1Kings 22. 52) to have "reigned two years over Israel."

II. Ahaziah, king of Judah, the son and successor of Jehoram and Athaliah. He succeeded his father in the twenty-second year of his age. (2Kings 8. 26.) He reigned only one year, but had previously acted as viceroy to his father during his sickness for the space of two years. He received his mortal wound by command of Jehu, and died at Megiddo. (2Kings 9. 27; 2Chron. 22.)

AHBAN, the son of Abishur, of the posterity of Judah, by Tamar. (1Chron. 2. 29.)

AHER, the father of Ir and Hushim, (1Chron. 7. 12,) was chief of the Ahiramites, a family of the tribe of Benjamin, when "the sum of all Israel was taken in the plains of Moab." (Numb. 26. 38.) He is there called Ahiram, and in Gen. 46. 21, Ehi.

I. AHI, the son of Abdiel, of the tribe of Gad. (1Chron. 5. 15.)

II. The son of Shamer, or Shomer, of the tribe of Asher. (1Chron. 7. 34.)

I. AHIAH, the son of Ahitub, or Ahimelech, a descendant of Eli. (1Sam. 14. 3.)

II. The son of Shisha, one of the secretaries of Solomon. (1Kings 4. 3.)

III. The son of Ehud, of the tribe of Benjamin. (1Chron. 8. 7.)

AHIAM, one of David's mighty men; he was the son of Sharar the Hararite. (2Sam. 23. 33.)

AHIAN, the son of Shemidah, of the tribe of Manasseh. (1Chron. 7. 19.)

AHIEZER, the son of Ammishaddai, chief of the tribe of Dan, who came out of Egypt. (Numb. 1. 12.) His offering at the dedication of the tabernacle was the same as that of his fellow chiefs. (Numb. 7. 66.)

I. AIIHUD, the son of Shelomi, one of those appointed by Moses to divide the land of Canaan. (Numb. 34. 27.)

II. The son of Ehud, of the tribe of Benjamin. (1Chron. 8. 7.)

I. AHIJAH, a prophet who dwelt in Shiloh, in the reign of the first Jeroboam. He is thought by some commentators to be the person who spoke twice to Solomon from God, once while he was building the Temple, (1Kings 6. 11,) at which time he promised him the Divine protection; and again, (1Kings 11. 11,) with great threatenings and reproaches from his falling into irregularities. Ahijah was one of those who wrote the annals of this prince. (2Chron. 9. 29.) Ahijah foretold the death of Abijah, the only pious son of Jeroboam. (1Kings 14. 5. *et seq.*)

II. The father of Baasha, king of Israel. (1Kings 15. 27.)

III. One of the keepers of the sacred treasury, under David. (1Chron. 26. 20.)

IV. One of the sons of Jerahmeel, the son of Hezron. (1Chron. 2. 25.)

AHIKAM, the son of Shaphan, sent with others by Josiah, king of Judah, to Huldah the prophetess, to consult her concerning the book of the Law, found in the Temple. (2Kings 22. 12-14.) By his care, Jeremiah was preserved when it was proposed to give him into the hands of the people, to be put to death. (Jer. 26. 24.)

AHILUD, the father of Jehoshaphat, who was the remembrancer, or writer of chronicles to King David. (2Sam. 8. 16.)

AHIMAAZ, the son of Zadok, the high-priest. Ahimaaaz succeeded his father under the reign of Solomon. He rendered David a very important service, during the war with Absalom. (2Sam. 17. 17.) He was succeeded in the priesthood by Azariah. (1Chron. 6. 9.)

AHIMAN, a giant of the race of Anak, who dwelt at Hebron, when the spies visited the land of Canaan. (Numb. 13. 22.)

I. AHIMELECH, a priest of Nob, to whom David went, and whom Saul commanded to be put to death, with other priests, for assisting him.

II. A priest in the reign of David the son of Abiathar; he is likewise called Abimelech. (1Sam. 22. 9; 2Sam. 8. 17; 1Chron. 18. 16; 24. 31.)

H

AHIMOTH, one of the sons of Elkanah, of the tribe of Levi. (1Chron. 6. 25.)

AHINADAB, the son of Iddo, one of the twelve officers set over Israel, by Solomon, to provide for his household. He was appointed to Mahanaim. (1Kings 4. 14.)

I. **AHINOAM**, the daughter of Ahimaaz, and wife to Saul. (1Sam. 14. 50.)

II. A native of Jezreel; second wife of David, and mother of Amnon. (1Sam. 25. 43; 30. 5; 2Sam. 2. 2.)

I. **AHIO**, with his brother Uzzah, sons of Abinadab, was charged with the conduct of the ark, when David removed it from their house, to place it in the tabernacle, which he had prepared for it in Jerusalem. (2Sam. 6. 3.)

II. The son of Jehiel, the ruler of Gibeon, and Maachah. (1Chron. 8. 31.)

AHIRA, the son of Enan, chief of the tribe of Naphtali, at the Exodus. (Numb. 1. 15.)

AHIRAM. See **AHER**.

AHISAMACH, father of Aholiab, a famous workman employed by Moses, in building the tabernacle. (Exod. 31. 6.)

AHISHAHAR, the son of Bilhan, of the tribe of Benjamin. (1Chron. 7. 10.)

AHISHAR, one of the principal officers over the household of King Solomon. (1Kings 4. 6.)

AHITHOPHEL, an eminent counsellor in the reign of David, so distinguished for his prudence and wisdom, that his advice obtained the confidence both of the people and the monarch. He joined the conspiracy of Absalom against his father, and as he was the father of Eliam, the father of Bathsheba, (2Sam. 23. 34; 1Chron. 3. 5,) there is every reason to think that in so doing he wished to revenge his grand-daughter; particularly when the infamous advice which he gave is considered, his eagerness for pursuing David, and the desire he expressed, to smite the king himself. Finding his counsel disregarded for that of Hushai, he went to his house at Giloh, and there hanged himself. (2Sam. 16. 21; 17. 1, 2, 23.)

I. **AHITUB**, the brother of Ichabod, the son of Phinehas, and grandson to Eli, the high priest. His father was slain in the engagement, in which the ark was taken by the Philistines. (1Sam. 4. 11; 14. 3.)

II. The son of Amariah, and father of Zadok, the high-priest. (1Chron. 6. 8.) It is not certain whether he ever himself exercised the office of high priest.

AHIUD. See **AHIUD**.

AHLAB, a city in the tribe of Asher, whose inhabitants were not driven out by the Israelites. (Judges 1. 31.) Its situation is now unknown.

AHLAI, the father of Zabad. (1Chron. 11. 41.)

AHOAH, one of the sons of Bela, of the tribe of Benjamin. (1Chron. 8. 4.) His descendants were called Ahohites.

AHOHITE אֲחִיטִי (2Sam. 23. 9.) "And after him was Eleazer, the son of Dodo the Ahohite, one of the three mighty men, when they defied the Philistines that were there gathered together to battle, and the men of Israel were gone away." (1Chron. 11. 12.)

AHOLAH and **AHOLIBAH**, two fictitious names, employed by the prophet Ezekiel (23. 4,) to denote the

two kingdoms of Judah and Samaria: They are represented as two sisters, of Egyptian extraction; the former being put for Samaria, the latter for Jerusalem. Both devoted themselves to the Egyptians and Assyrians, by imitating their idolatrous practices; for which reason God abandoned them to those very people for whom they had evinced so improper an affection. They were carried by them into captivity, and subjected to the severest servitude.

It is supposed they were the names of abandoned women; the first is usually taken for אֲחִיטִי signifying, very appositely, *she has her own tent*, i. e., her own temple. The second is explained by אֲחִיטִי בֵּיתִי *my tent is therein*. Gesenius; Calmet.

AHOLIAB, the son of Ahisamach, of the tribe of Dan, appointed with Bezaleel, an artificer in gold and silver, to construct the tabernacle. (Exod. 35. 34.)

I. **AHOLIBAMAH**, the daughter of Anah, and one of the wives of Esau. (Gen. 36. 2.)

II. A duke of Edom. (1Chron. 1. 52.)

AHUMAI, the son of Jahath, of the tribe of Judah. (1Chron. 4. 2.)

AHUZAM, the son of Ashur and Naarah, of the tribe of Judah. (1Chron. 4. 6.)

AHUZZATH, the friend of Abimelech, king of Gerar, who came with Phicol, his chief captain, to make an alliance with Isaac. (Gen. 26. 26.)

AI, **HAI**, **AIATH** or **AIJA**, אֵי Sept. *Ayyai*; Vulgate, *Hai*, a city of the Canaanites, westward of Bethel, on the northern confines of the tribe of Benjamin, about nine miles from Jerusalem. Near it the patriarch Abraham sojourned, and built an altar. (Gen. 12. 8; 13. 3.)

Ai was a very strong place, governed by a king. After the taking of Jericho, Joshua sent 3,000 soldiers against Ai, but they were repulsed by the inhabitants with the loss of thirty-six men, which made them panic-struck, and dispirited. It was revealed by the Lord to Joshua that this loss had befallen them in consequence of the trespass of Achan. That offence having been expiated, Ai was again attacked, taken by stratagem, burnt, and the inhabitants put to the sword. (Josh. 7 and 8.)

Ai was rebuilt by the Benjamites, and afterwards taken and destroyed by Sennacherib. (Isai. 10. 28, where occurs אֵי) It was again rebuilt, after the return of the Jews from the Babylonish captivity, (Nehem. 11. 31, as אֵי) but few remains of it are now left. The country in which the old city of Ai stood, is described as being most beautiful and fruitful, well cultivated, and clothed with the richest verdure. Bethel and Ai were so near to each other, that they are frequently mentioned together in the Scriptures. (Ezra 2. 28; Nehem. 7. 32.) Gesenius; Buckingham's *Palestine*. See **BETHEL**.

ALJELETH-SHAHAR, אֵילֵת הַשָּׁחַר *The hind of the morning dawn*. The superscription of Psalm 22, supposed to be the name of a song after which the melody of this Psalm is arranged.

Under this appellation of *hind of the morning*, may be understood the sun, which the Arabs poetically call *gazelle*. Should it refer to any particular time, then the easiest explanation may be found in the Rabbinical אֵילֵת הַשָּׁחַר *the dawn of day, the break of day*. The authors of the Jerusalem Talmud divided אֵילֵת הַשָּׁחַר *the break of day* into four parts, the first of which was called אֵילֵת הַשָּׁחַר and corresponds to the phrase *λαὸν πρωτῆ*, in the New Testament. (Mark 16. 2; John 20. 1.)

Later Eastern customs may possibly afford a little illustration respecting the titles given to books. D'Herbelot mentions that a Persian metaphysical and mystic poem was called a *Rose Bush*; a collection of moral essays, the *Garden of Anemones*; another Eastern book, the *Lion of the Forest*; and that Scherfeddin al Baussiri called a poem of his, written in praise of his Arabian prophet, who, he affirmed, had cured him of a paralytic disorder in his sleep, *The Habit of a Dervesh*; and because he is celebrated for having given his sight to a blind person; this poem is also entitled by its author, *The Bright Star*. Gesenius; Jahn, *Bib. Arch.*; Harmer's *Observ.*

AIAH, mother of Rizpah, who was Saul's concubine; David delivered Rizpah's children into the hands of the Gibeonites to be put to death. (2Sam. 21. 1-14.)

AICHMALOTARCH, a Greek term, signifying the *prince of the captivity*, or *chief of the captives*. The Jews pretend that this was the title of him who had the government of their people during the captivity at Babylon, but they give no satisfactory proofs of the real existence of such an office. There was no prince of the captivity before the end of the second century, from which period the office continued till the eleventh century. The princes of the captivity resided at Babylon, where they were installed with great ceremony, held courts of justice, and ruled over the Eastern Jews, or those settled in Babylon, Chaldæa, Assyria, and Persia.

The condition of the Hebrews during the captivity was far from being one of abject wretchedness. This is manifest from the circumstance that a pious Hebrew prophet held the first office at the court of Babylon; and that three devout friends of this prophet also occupied important political stations there.

AIN. See AEN.

AIR. The air or atmosphere surrounding the earth is often meant by the word *heaven*; *the birds of the heaven*, for *the birds of the air*.

It was the opinion of Pythagoras, as Diogenes Laërtius mentions, that "all the air was full of souls or spirits, and that by them dreams were sent to men," &c.

The Jews also believed that, from the earth to the firmament all things were full of these companies or rulers, and that there was a prince over them, who was called the Governor of the world, that is of the darkness of it. "The prince of the power of the air." (Eph. 2. 2.)

"The power of the air," says Chandler, "signifies that government and dominion which is exercised by evil spirits, who are supposed to have their habitation assigned them in the air above us; and who are represented in Scripture as subject to one who is the head or prince over them; called by the Apostles 'the prince of the power of the air,' or of that government which is exercised in the regions of the air, and amongst wicked and apostate spirits who now work in or amongst the children of disobedience, influencing them to continue in their idolatry and vices."

"The sun and the air were darkened;" (Rev. 9. 2;) a just representation of great errors, such as those of Mohammed.

The air as the midst of heaven, or the middle station between heaven and earth, may symbolically represent the place where the Divine judgments are denounced, as in 1Chron. 21. 16.

In the sense of *wind* or *breath*, it denotes the office of the Holy Spirit. (John 20. 22; Acts 2. 2-4; 1Cor. 2. 11.)

AJAH, the son of Zibeon, the son of Seir. (Gen. 36. 24.)

AJALON, a city of the tribe of Dan, and assigned to the Levites of the family of Koath. It was situated between Timnath and Beth-Shemesh, and is probably the city alluded to in Joshua 10. 12.

There were three other cities of this name; one in the territory of Benjamin, another in that of Ephraim, not far from Shechem, and the third in that of Zebulun; the situation of which is not known. It is not certain over which of these places, Joshua desired the moon to "stand still." The first lay south-west, the second north-east, and the fourth north-west of where he then was.

The valley of Ajalon is contiguous to the city of the same name, in the canton allotted to the tribe of Dan. It is said to be of sufficient breadth and compass to allow a numerous host to engage therein. This valley is better inhabited and cultivated than most other places in the territory, and seems to enjoy a more equal and healthful temperature. Carne's *Recollections of the East*; Buckingham's *Travels in Palestine*.

D'Anville has placed a town of Ajalon in Benjamin, having Bethel on the north and Jerusalem on the south.

AKAN or JAKAN, one of the children of Ezer, the son of Seir. (Gen. 36. 27; 1Chron. 1. 42.)

AKIBA, a celebrated Rabbini, who lived about A.D. 130. The Jews relate that Akiba was descended from Sisera, the general of the army of Jabin, king of Canaan. (Judges 4. 7.) They say he could give a reason for the minutest letter of the Law, that what God had concealed from Moses, He revealed to him. He was in the height of his reputation and prince of the Sanhedrin, when Barchochebas appeared. Calmet.

AKKUB, one of the sons of Elieonai, a descendant of David. (1Chron. 3. 24.)

AKRABBIM, מעלה עקרבים *the hill of scorpions*, a place on the southern confines of Palestine. (Numb. 34. 4; Josh. 15. 3; Judges 1. 36.)

ALABARCHUS. This term is not in the Scriptures. The Jews who were scattered abroad after the captivity, and had taken up their residence in countries at a distance from Palestine, had rulers of their own. The person who sustained the highest office among those who dwelt in Egypt was denominated Alabarchus; the magistrate at the head of the Syrian Jews was denominated Archon. The dignity of Alabarch was common in Egypt, as may be observed in Juvenal, *Sat.* I. 129.

inter quos ausus habere
Nescio quos titulos Ægyptius aut Alabarches.
Jahn, *Bib. Archæol.*; Calmet.

ALABASTER, αλαβαστρον, probably the Onychites of Pliny, a variety of gypsum differing from the alabaster of modern times, wherein precious liquors or unguents were generally preserved. Pliny says this kind of marble was found in the neighbourhood of Thebes in Egypt and about Damascus in Syria. (lib. 28. c. 8.) It is wrought into any form or figure with ease, and is capable of a fine polish. Vases or cruses were anciently made of it; they often had a long narrow neck, the mouth of which was sealed. The druggists in Egypt at this time have vessels made of it, in which they keep their medicines and perfumes.

In Matt. 26. 6, 7, we read that Jesus being at table in Bethany, in the house of Simon the leper, a woman came thither bringing an alabaster box of ointment which she poured upon his head. St. Mark adds (14. 3,) "she brake the box," which merely refers to the seal upon the vase that closed it and kept the perfume from evaporation. Cicero (*Acad.* lib. ii.) speaks of "alabaster plenus unguenti."

Alabaster was also the name of an ancient liquid measure, containing ten ounces of wine or nine of oil. Hence some have supposed that the box mentioned in the Gospel was made of glass and denominated alabaster from holding the measure known by that name. Calmet; Watson.

ALAMETH, the ninth son of Becher, the son of Benjamin. (1Chron. 7. 8.)

ALAMMELECH, a city mentioned in Joshua 19. 26. It belonged to the tribe of Asher. Its particular situation is uncertain, but it was not far distant from Mount Carmel.

ALAMOTH, אֶלְמוֹת A kind of tune or harmony in music. (1Chron. 15. 20; Psalm 46. 1.) Perhaps the female voice or manner which the chorister imitated, or to sing in the virgin's note. (Forkel, *Gesch. der Musick*.) In the first passage it appears rather to be used relatively to a high and low tone. Gesenius.

ALARM, a broken quivering sound of the silver trumpets of the Hebrews. It warned them in their journey in the wilderness. When the people or the rulers were to be assembled together, the trumpet was blown softly, when the camps were to move forward, or the people to march to war, it was sounded with a deeper note. (Numb. 10. 1-9; Joel 2. 1.) Jahn, *Bibl. Archæol*.

ALCIMUS, JACIMUS, or JOACHIM, high priest of the Jews, died about A.M. 3844, B.C. 160. He was of the race of the priests, but not of a family of the first rank, nor whose ancestors had enjoyed the high-priesthood. (Joseph. *Antiq.*) He was guilty of idolatry during the persecution of Antiochus Epiphanes. (2Macc. 14. 3.) After enjoying the pontificate three or four years, he died of the palsy. (Joseph. *Antiq.*) Michaëlis on 1Macc. 7. 5.

ALEMA, a city in the country of Gilead beyond the river Jordan. (1Macc. 5. 26.)

I. ALEMETH or ALMON, a sacerdotal city belonging to the tribe of Benjamin. (Josh. 21. 18.) Some ancient geographers assert that Alemeth (1Chron. 6. 60,) was a distinct city from Almon, but Calmet maintains the contrary.

II. Alemeth, the son of Jehoadah, of the tribe of Benjamin. (1Chron. 8. 36.)

ALEPH, א the name of the first letter of the Hebrew alphabet.

There are several Psalms and other parts of Scripture which begin with *Aleph*; and the verses following begin with the letters of the alphabet in their order, as the 119th Psalm: these are called Acrostics

The Jews use their letters as numeral characters; א stands for one, ב for two, and so on.

ALEXANDER THE GREAT, son and successor of Philip, king of Macedon, is denoted in the prophecies of Daniel by a leopard with four wings, typifying his great strength, and the unusual rapidity of his conquests, (Dan. 7. 6,) and by a one-horned he-goat running over the earth so swiftly as not to touch it, attacking a ram with two horns, overthrowing him, and trampling him under foot, without any being able to rescue him. (Dan. 8. 4-7.) The ram prefigured Darius Codomanus, the last of the Persian kings. In the statue beheld by Nebuchadnezzar in his dream, (Dan. 2. 32, 39,) the belly of brass was the emblem of Alexander. He was the instrument in the hand of God to destroy the Per-

sian empire, and to substitute in its place the Grecian monarchy.

Alexander succeeded his father Philip A.M. 3668, B.C. 336. He was chosen by the Greeks general of their troops against the Persians, and entered Asia at the head of thirty-four thousand men. In one campaign he subdued almost all Asia Minor; and afterwards defeated in the narrow passes which led from Syria to Cilicia, the army of Darius, which consisted of four hundred thousand foot, and one hundred thousand horse. Darius fled, and left in the hands of the conqueror his camp, baggage, children, wife and mother.

After subduing Syria, Alexander came to Tyre; and the Tyrians refusing him entrance into their city, he besieged it. At the same time he wrote to Jaddua, high priest of the Jews, that he expected to be acknowledged by him, and to receive from him the same submission which had hitherto been paid to the king of Persia. Jaddua refusing to comply, under the plea of having sworn fidelity to Darius, Alexander resolved to march against Jerusalem, when he had reduced Tyre. After a long siege, this city was taken and sacked; Alexander entered Palestine, and subjected it to his obedience. As he was marching against Jerusalem, the Jews became greatly alarmed, and had recourse to prayers and sacrifices.

But Jaddua was directed in a dream, to open the gates to the conqueror; and, at the head of his people, dressed in his pontifical ornaments, and attended by the priests in their robes, to advance and meet the Macedonian king. Jaddua obeyed, and Alexander, perceiving his company approaching, hastened towards the high priest, whom he saluted. He then adored God, the ineffable name being engraven on a thin plate of gold, worn by the high priest upon his forehead. The tributary kings, and the great officers who accompanied him, could not comprehend the meaning of his conduct. Parmenio alone ventured to ask him why he adored the Jewish high priest? Alexander replied that he paid this respect to God, and not to the high priest. "For," added he, "whilst I was yet in Macedonia, I saw the God of the Jews, who appeared to me in the same form and dress as the high priest at present, and who encouraged me, and commanded me to march boldly into Asia, promising that he would be my guide, and give me the empire of the Persians. As soon, therefore, as I perceived this dress, I recollected the vision, and understood that my undertaking was favoured by God, and that, under his protection, I might expect prosperity."

Having said this, Alexander accompanied Jaddua to Jerusalem, where he offered sacrifices in the Temple according to the directions of the high priest. At his departure, Alexander bade the Jews ask of him what they would. The high priest desired only the liberty of living under his government according to their own laws, and an exemption from tribute every seventh year, because, in that year, the Jews neither tilled their ground nor reaped their fruits. With this request Alexander readily complied.

Having left Jerusalem, Alexander visited other cities of Palestine, and was everywhere received with great testimonies of friendship and submission. The Samaritans who dwelt at Sichem, and were apostates from the Jewish religion, observing how kindly Alexander had treated the Jews, resolved to say that they were also by religion Jews. For it was their practice, when they saw the affairs of the Jews in a prosperous state, to boast that they were descended from Manasseh and Ephraim; but when they thought it their interest to say the contrary, they failed not to affirm, and even to

swear, that they were not related to the Jews. They came, therefore, with many demonstrations of joy, to meet Alexander, as far, almost, as the territories of Jerusalem. Alexander commended their zeal; and the Sichemites entreated him to visit their temple and city. Alexander promised this at his return; but as they petitioned him for the same privileges as the Jews, he asked them if they were Jews. They replied, they were Hebrews, and were called by the Phœnicians Sichemites. Alexander said that he had granted exemption only to the Jews, but that, at his return, he would inquire into the affair and do them justice.

This prince, having conquered Egypt and regulated it, gave orders for the building of the city of Alexandria, and departed thence, about spring, in pursuit of Darius. Passing through Palestine, he was informed that the Samaritans, in a general insurrection, had killed Andromachus, governor of Syria and Palestine, who had come to Samaria to regulate certain affairs. This greatly incensed Alexander, who loved Andromachus. He therefore commanded all those who were concerned in his murder, to be put to death, and the rest to be banished from Samaria; and settled a colony of Macedonians in their room. What remained of their lands he gave to Jews, whom he exempted from the payment of tribute. The Samaritans who escaped this calamity retired to Sichem, at the foot of Mount Gerizim, which afterwards became their capital.

Lest the 8000 men of this nation, who were in his service, and had accompanied him since the siege of Tyre, should, if permitted to return to their own country, revive the spirit of rebellion, Alexander sent them into Thebais, the most southern province of Egypt, where he assigned them lands.

Alexander, after defeating Darius in a great battle, and subduing all Asia with incredible rapidity, gave himself up to intemperance. Having drunk to excess, he fell sick and died, after he had obliged all the world to be "quiet before him." (1 Macc. 1. 3.) Being sensible that his end was near, he sent for the grandees of his court, and declared that he gave the empire to the most deserving. Some affirm that he regulated the succession by a will. The author of the first book of Maccabees says that he divided his kingdom among his generals while he was living. (1 Macc. 1. 7.) This he might do; or might express his foresight of what actually took place after his death. It is certain that a partition was made of Alexander's dominions, among the four principal officers of his army, and that the empire which he founded in Asia subsisted for many ages. Alexander died A.M. 3681, and B.C. 323, in the thirty-third year of his age, and the twelfth of his reign.

Many critics have expressed doubts as to the account given of the interview between Alexander and the high priest by Josephus. But the sudden change of his feelings towards the Jews, and the favour with which they were treated by him, render the story not improbable. Calmet; Watson.

I. ALEXANDER, a man whose father, Simon, was compelled to bear the cross of Our Saviour. (Mark 15. 21.)

II. One of the council present with the high priest at the interrogation of the apostles Peter and John, concerning the healing of the man who had been lame from his birth. (Acts 4. 6.) Some have imagined that he was the brother of Philo, the celebrated Jewish writer, who flourished in the reign of Caligula.

III. A Jew of Ephesus. At the time of the sedition raised in that city by Demetrius against Paul, the populace, in their blind fury, seem to have confounded

the Christians with the Jews; and the latter, being desirous that the mob should direct their vengeance against the believers in Jesus Christ, commissioned Alexander to harangue the Ephesians, and to plead their cause, but in vain. The Ephesians, as soon as they knew that he was a Jew, refused to listen to him. Beza and others have conjectured that this was the Alexander *ὁ χαλκεύς*, (the worker in metals, or smith,) who did the apostle much evil. (2 Tim. 4. 14.) As every male Jew was obliged to learn some trade, this is not improbable. Coquerel, however, thinks that he was one of those venal orators, whose eloquence was always at the command of any that would employ them.

IV. Alexander, who made shipwreck concerning the faith, (1 Tim. 1. 19, 20), and whom St. Paul "delivered unto Satan;" that is, expelled him from the communion of the Christian church, to be no longer considered as a Christian, but as a subject of the kingdom of Satan. Horne's *Introd.*

ALEXANDRIA, a celebrated city of Egypt, situated between the lake Mareotis and the Canopic, or westerly branch of the Nile, near the Mediterranean sea, 125 miles west of Cairo, latitude $31^{\circ} 13' N.$, and longitude $29^{\circ} 55' E.$ It was built by Alexander the Great, soon after his conquest of Tyre, B.C. 333.

1. Alexandria at present exhibits no vestiges of its former magnificence, except the ruins that surround it, which are of very remote antiquity. We read in the Scriptures of a city called No, or Ammon-No, (Jer. 46. 25; Ezek. 30. 14; Nahum 3. 8,) which is held by some writers to have been the city known as Diospolis, in the Delta, between Busiris and Mendesa. It is certain that there was a city on the site of Alexandria, before that city was founded or rebuilt by Alexander the Great; and the Arabians allege that it was anciently called *Caisoun*. The opposition and efforts of the republic of Tyre, which gave Alexander so long and so severe a check in the career of his victories, led him to perceive the vast resources of a maritime power, and suggested to him an idea of the immense wealth which the Tyrians derived from their commerce, especially with the East Indies. As soon, therefore, as he had accomplished the destruction of Tyre, and reduced Egypt to subjection, he formed the plan of rendering the empire which he designed to establish, the centre of commerce, as well as the seat of dominion.

2. The ancient city stood about twelve miles from the Canopic branch of the Nile, with which river it was connected by a canal, and thus participated in the benefits of the periodical inundations. The lake Mareotis bathed its walls on the south, and the Mediterranean on the north. Its circumference, including the suburbs, according to Pliny, was about fifteen miles. One great street, running directly north and south, thus allowing free passage to the northern wind, which alone conveys refreshing coolness to Egypt, was 2000 feet wide, and must have excelled anything of the kind in the world. It began at the gate of the sea on the north, and terminated at the gate of Canopus on the south. This magnificent street was intersected or crossed by another of the same width, which at their junction formed a grand square, half a league, or a mile and a half, in circumference; and from the centre of this great square the two gates were seen at once, and the vessels arriving both south and north, with the treasures of foreign merchandize, and the wealth of distant climes. In these two streets stood various palaces, temples, and public buildings, constructed of marble and porphyry, and those far-famed obelisks. The palace and gardens of the Ptolemies, the first of whom, Ptolemy Soter, one of

Alexander's generals, began a new dynasty of Egyptian kings, were without the walls, stretching along the shores of the Mediterranean beyond a promontory called Lectreos, and occupied a space equivalent to a fourth part of the city. Each of the Ptolemies who succeeded to the Egyptian throne added to those magnificent buildings and gardens. Within their inclosures were the museum, an academy or university, a stately temple, in which the body of Alexander was deposited, and groves and buildings worthy of powerful sovereigns and an enlightened people.

The palaces, temples, theatres and buildings of Alexandria were most numerous and splendid. But its chief glory was its magnificent harbour, situated in a deep and secure bay of the Mediterranean. A neck of land about a mile in length stretched from the continent to the Isle of Pharos, opposite the city. This neck of land divided the great harbour into two—that division towards the north being styled the Great Port, and the other Eunostos, or *the safe return*. A wall drawn from the island to the rock on which the Pharos, or light-house, was built, preserved the former port from the westerly winds. "In the great harbour," says a recent writer, proceeding on Strabo's account, "was the little island of Anti-Rhodes, where stood a theatre and a royal place of residence. Within the harbour of Eunostos was a small one, called Kibotos, dug by the hand of man, which communicated with lake Mareotis by a canal. Between this canal and the palace was the admirable temple of Serapis, and that of Neptune, near the great place where the market was held. Alexandria extended likewise along the northern banks of the lake. Its eastern part presented to view the Gymnasium, with its porticos of more than 600 feet long, supported by several rows of marble pillars."

Without the gate of Canopus was a spacious circus for the chariot races. Beyond that, the suburbs of Nicopolis ran along the sea-shore, and seemed a second Alexandria. A superb amphitheatre was built there, with a race-ground for the celebration of the Quinquennialia. The celebrated light-house, or watch-tower, of Pharos, built on the isle of that name, and reckoned one of the seven wonders of the world, was begun in the reign of Ptolemy Soter, and finished in the first year of the reign of Ptolemy II., surnamed Philadelphus, his son, who also that year joined the islet of Pharos to the continent, by a causeway seven furlongs in length. This was the work of Dexiphanes, a celebrated architect, whose son, Sostratus, at the same time completed the tower. The tower, or light-house, was an immense square building of white marble, on the top of which fires were constantly kept burning for the direction of mariners. It contained several stories adorned with columns, balustrades, and galleries, to which the architect had fastened looking-glasses, that vessels at a distance might be descried. The building cost 800 talents, which in Attic money would amount to 165,000 pounds English; if in Alexandrian, to double that sum.

3. The great features of ancient Alexandria were the Necropolis, or city of the dead (its general cemetery), and Cleopatra's Baths. Two granite obelisks, called Cleopatra's Needles, one still standing, and the other lying beside it, formed the entrance to the palace of Cæsar, and are built of red granite, or Syenite. These obelisks are sixty-five feet high, and between seven and eight feet square. The one standing was cleared of the sand that had accumulated round its base, by the French, down to the foundation, to a depth of sixteen feet. Each side is covered with sculptures; those on the west are in the best state of preservation; on two of the sides the hieroglyphics are nearly effaced.

Some years since, a subscription was raised by several officers of the British service, to remove the fallen obelisk to this country; but, for some unexplained reason, the sailors of our fleet were forbidden to assist in the labour. A proposition to effect the same object was made in the House of Commons on the 15th of April, 1832, under the sanction of Government. It was then stated that the huge mass of stone weighed 284 tons, and would cost 15,000*l.* for its transport. It has not transpired whether any farther steps have been taken. The well-known Pompey's Pillar stands between the walls of the city and the lake; and it is, according to Pococke, 117 feet high; but other authorities make it only 95 feet. The pedestal and shaft are each composed of single masses of granite, and it is reckoned one of the finest pillars in the world.

Alexander expired at Babylon, from whence his body was conveyed to Alexandria in a splendid car, and deposited in a coffin of gold in a temple erected to his memory. The fate of his remains has never been ascertained; but his mausoleum was violated by Seleucus Cibiactes, who carried off the golden coffin, and put a glass one in its place.

In 1804, a sarcophagus was discovered near Alexandria, in the hold of an hospital ship, by the celebrated traveller, Dr. Clarke, which is supposed to be that of Alexander the Great. It had been removed from the mosque, formerly the church of St. Athanasius, by the French while in Egypt. Dr. Clarke relates in a memoir how he got possession of this relic of antiquity. It was brought to England, and deposited in the British Museum; but the fact of its having been the tomb of Alexander the Great has been much disputed.

4. Alexander the Great gave considerable encouragement to the Jews to settle in this city. He allowed them the free exercise of their religion, and admitted them to a share of the same franchises and liberties which he granted to his own Macedonian subjects. Not long after the death of Alexander, Ptolemy, king of Egypt, invaded Judæa, laid siege to Jerusalem, and carried 100,000 Jews captive into Egypt; to whom he confirmed all the immunities and privileges which had been formerly granted to their brethren by Alexander the Great, and spared no encouragement to allure others to settle in Egypt. The consequence was, that multitudes were continually flocking thither from Judæa and Samaria, preferring rather to live under so generous and friendly a prince in a foreign country, than to be subject to the incessant changes of government which were occasioned by so many contending tyrants in their own. Accordingly, the city of Alexandria was in a great measure peopled by Jews, and it is chiefly this circumstance which connects its history with the elucidation of the Scriptures. Hence we read (Acts 2. 10) that, among those who came up to Jerusalem to keep the feast of Pentecost, there were Jews, devout men from Egypt, and the parts of Libya about Cyrene. Of this city, Apollos, the companion of St. Paul, was a native (Acts 18. 24); and of the Jews that disputed with Stephen and put him to death, many were Alexandrians, who, it seems, had a synagogue at that time in Jerusalem. (Acts 6. 9.) But in order to form an estimate of the number of Jews that stately resided at Alexandria, it may be sufficient to mention, that about the year of Christ 67, while the quarrel was going on between that people and the Romans, which ended in the destruction of Jerusalem and its Temple, the subversion of their ecclesiastical polity, and their ruin as a nation, 50,000 of them were put to death at one time in the city of Alexandria. It is said, that at the time this terrible event took place, there were not less than a million of Jews dispersed throughout the

whole province of Egypt, in which they had numerous synagogues and oratories, which were either demolished or consumed by fire, upon their congregations refusing to set up the statues of the Roman emperor, Caius Caligula.

Christianity was planted in Alexandria at a very early period; and it is possible that it was first carried there by some of the Jews who were converted by the preaching of St. Peter on the day of Pentecost.

5. Some illustrious names in the annals of the Church are found among the bishops of Alexandria, such as Clemens, St. Athanasius, and others, particularly Origen, who flourished here. The Arian heresy, which denies the divinity of our Saviour, was first embraced by Arius, a presbyter in this diocese, and, according to some writers, a native of Alexandria. The city still continues a bishopric and patriarchate in the Greek church, but most of its present inhabitants are Mohammedans.

The system of allegorizing the Scriptures was not an invention of Origen, nor of the Christian fathers; they found it already carried to a great length by the Alexandrian Jews, who seem to have adopted it in order to establish a resemblance between the writings of Moses and those of the Greek philosophers. There was not a passage in the Scriptures, even in the books which were purely historical, which was not supposed to contain a hidden or allegorical meaning. It was laid down as a principle with expositors of that school, that every passage of Scripture contained at least three meanings; one which was the literal or historical, another which conveyed some moral lesson, and a third which was still more sublime and mystical, and which, under the semblance of something visible and earthly, was intended to reveal the truths of the invisible and spiritual world.

6. The celebrated collection of books, called the Alexandrian Library, was first formed by Ptolemy Soter, for the use of the academy, or society of learned men, which he had founded at Alexandria. It was placed within the precincts of a magnificent temple, called Serapeum, which, according to Ammianus Marcellinus, was only inferior to the Capitol at Rome. Ptolemy Philadelphus, the successor of Ptolemy Soter, made so many additions to it, that, at his death, it had increased to 100,000 volumes. The method by which these books or manuscripts were collected, was, to seize all the books which were brought by the Greeks and other foreigners into Egypt, and send them to the academy or museum, where they were transcribed by persons employed for that purpose; and those transcripts were given to the proprietors, but the originals were retained in the library.

Ptolemy Euergetes borrowed the works of Sophocles, Euripides, and Æschylus, from the Athenians, but he returned only copies of them, transcribed in a most beautiful manner, depositing the originals in his own library, at the same time presenting the Athenians with fifteen talents, for the exchange. As the museum or academy was first in that quarter of the city called Brucheon, near the royal palace, the library was also deposited there; but when the manuscripts amounted to 400,000 volumes, another library was added within the Serapeum, or temple of the god Serapis, as a branch of the original library. The books lodged in this other branch of the Alexandrian library in course of time amounted to 300,000 volumes, which, in addition to the 400,000 contained in the library at the museum, amounted in all to 700,000 volumes, which the royal library of the Ptolemies was said to comprise.

When Julius Cæsar attacked Alexandria, in his Egyptian wars, that division of the library in the suburb Brucheon, was accidentally burnt, and the 400,000 volumes it contained were consumed; but the library in the temple of the Serapeum was preserved. Cleo-

patra also deposited in it 200,000 volumes of the Pergamean library, which had been presented to her by Mark Antony. These, and other additions from time to time, made the Serapean library more considerable than the former, and amply repaired the losses of the Brucheon; and though it was often afterwards plundered, it was continually restored, and filled with the same number of books. In this state it continued for centuries, long after Egypt had passed from the sceptre of the Ptolemies, who swayed it for 293 years, of great fame and use, till about the middle of the seventh century of the Christian æra, when Alexandria was stormed and taken by the Saracen general Amrou Ebn-al-Aas. At that period there resided in the city a famous peripatetic philosopher and grammarian, named John Philoponus, who, apprehensive of the fate of the library, from the well-known disposition of the Saracens, and being in high favour with Amrou, ventured to request its preservation. The Saracen general, in whose eyes such a request was of trifling importance, was inclined to accede to his wishes, but his rigid integrity scrupled to alienate the least object without the consent of the caliph. He accordingly wrote to Omar, whose laconic answer has been often quoted:—"If these writings of the Greeks agree with the Koran, or book of God, they are useless, and need not be preserved; if they disagree, they are pernicious, and ought to be destroyed." Nevertheless, the above story is disputed by several writers, and denied by Gibbon, who has placed his own simple negative against the concurrent testimony of antiquity; but whether true or not, it may be questioned if the loss to learning has been so great as is represented by some writers, who have enthusiastically deplored the destruction of those works of ancient times; for we must bear in mind that books then differed greatly from those in our days.

Although much interesting information was undoubtedly lost by the stern decree of the Arabian caliph, we may conclude that much of what is really valuable has been transmitted to us by other channels. The sentence of destruction was executed with blind obedience. The volumes of the Alexandrian library were distributed as fuel to the baths in the city, of which there were no less than 4000. Among the valuable books then destroyed, were an ancient copy of the Old Testament, the works of many of the ancient poets, historians, and philosophers, and others now unknown. Such was their number, that six months were hardly sufficient for their consumption.

7. Alexandria, when in its glory, was extremely populous. Diodorus Siculus relates, that in his time, B.C. 44, it contained 300,000 free inhabitants, and if, as has been well conjectured, the slaves were as numerous, the whole population would then amount to 600,000.

On the fall of the Ptolemies, Alexandria became a provincial city of the Roman empire; it was, A.D. 615, taken by the Persians, but recovered by Heraclius, the Emperor of the East; at length it fell, A.D. 640, into the hands of the Saracens. Amrou, the Saracen general, thus wrote to the caliph Omar:—"I have taken the city of the west. It is of immense extent. I cannot describe to you how many wonders it contains. There are 4,000 palaces, 4,000 baths, 12,000 dealers in fresh oil, 12,000 gardeners, 40,000 Jews who pay tribute, 400 theatres, or places of amusement."

8. From the consequences of this event Alexandria has never recovered, though during the middle ages it enjoyed some importance as the centre of the limited trade then carried on with the East by the nations of Europe. The discovery of the passage to India round the Cape of Good Hope, however, destroyed its commerce, and the city sank into apparently total ruin.

But another change has at length taken place, and it now stands a phenomenon in the history of a Turkish dominion. It appears once more to be raising its head from the dust. The Pacha of Egypt has made great efforts to restore its commercial prosperity, which have been attended with marked success. It is also the station of his fleet, is provided with fortifications, dockyards, and arsenal, and has a population three times as great as it was twenty years ago.

"It would be difficult," says a most intelligent and entertaining female traveller, (Baroness von Minutoli, in her *Recollections of Egypt*), "to express the sensations I experienced, when, for the first time, I passed through the streets of Alexandria. It would require the talents of a Hogarth, to paint all the various scenes of this magic lantern. What bustle, what confusion, is in these narrow streets, continually blocked up with an innumerable multitude of camels, mules, and asses! The cries of the drivers, incessantly calling to the passengers to take care of their naked feet; the vociferations and grimaces of the jugglers, the splendid costumes of the Turkish functionaries, the picturesque habit of the Bedouins, their long beards, and the grave and regular countenances of the Arabs; the nudity of some santons, round whom the crowd throngs; the multitude of negro slaves; the howlings of the female mourners, accompa-

nying some funeral procession, tearing their hair and beating their breasts by the side of a noisy train of a marriage; the cries of the muezzins from the top of the minarets, summoning the people to prayers; lastly, the afflicting picture of wretches dying with misery and want, and troops of savage dogs which pursue and harass you; all this every moment arrests the progress and attracts the attention of the astonished traveller."

Count Dumas says, "Donkeys are the vehicles of this country, and it is almost impossible to dispense with them in the midst of the mud. It is necessary to water the streets five or six times a day, on account of the heat. This measure of police is intrusted to the fellahs, who go about with a leathern bag under each arm; they press these alternately to force out the water, accompanying the alternate squeeze with a double Arabic phrase, which they pronounce in a monotonous voice, 'Have a care to the right—have a care to the left.' Thanks to this system of portable irrigation, which gives these fine fellows the appearance of Highland pipers, the sand and water form a kind of Roman cement, from which asses, horses, and dromedaries can alone extricate themselves with honour; Christians in some degree protect themselves by boots, but the Arabs leave their slippers behind them." Calmet; *Anc. Univ. Hist.*; Stephens' *Incidents of Travel*; Dumas' *Egypt and Sinai*.

Modern Alexandria.

ALEXANDRIAN VERSION. Nothing is so necessary to theologians as a close acquaintance with the Greek translation of the Old Testament, as it is undeniably a much older version of the Bible than any other now extant. On this account, the Alexandrian must be considered as the second best help to the explanation of the Old Testament; the more so, as the manuscripts from which this translation was made, are of uncommonly high antiquity. It is, besides, exceedingly literal in most passages, and the proper signification of Hebrew words can, therefore, be better learned from this, than from a more free translation. Seiler, *Bibl. Hermeneutik*. See SEPTUAGINT.

ALEXANDRIAN MANUSCRIPT, or CODEX ALEXANDRINUS. This celebrated copy of the Scriptures is now preserved in the British Museum, where

it was deposited in 1753. It consists of four folio volumes; the first three contain the whole of the Old Testament, together with the apocryphal books, and the fourth comprises the New Testament, the first epistle of Clement to the Corinthians, and the Apocryphal Psalms ascribed to Solomon.

In the New Testament there is wanting the beginning as far as Matt. 25. 6; likewise from John 6. 50 to 8. 52, and from 2Cor. 4. 13 to 12. 7. The Psalms are preceded by the epistle of Athanasius to Marcellinus, and followed by a catalogue containing those which are to be used in prayer for each hour, both of the day and of the night; also by fourteen hymns, partly apocryphal, partly biblical, the eleventh of which is the hymn of the Virgin Mary, usually termed the Magnificat. (Luke 1. 46-55.) The arguments of Eusebius are annexed to the Psalms, and his canons to the Gospels.

This manuscript was sent as a present to Charles I. from Cyrilus Lucaris, a native of Crete, and patriarch of Constantinople, by Sir Thomas Rowe, ambassador from England to the Grand Seignior in the year 1628. Cyrilus brought it with him from Alexandria, where probably it was written. In a schedule annexed to it, he gives this account; that it was written according to tradition by Thecla, a noble Egyptian lady, about thirteen hundred years ago, shortly after the council of Nice. He adds, "that the name of Thecla, at the end of the book was erased; but that this was the case with other books of the Christians, after Christianity was extinguished in Egypt by the Mohammedans; and that recent tradition records the fact of the laceration and erasure of Thecla's name."

Bishop Marsh observes, "Some centuries after the Codex Alexandrinus had been written, and the Greek subscriptions, and perhaps those other parts where it is more defective, already lost, it fell into the hands of a Christian inhabitant of Egypt, who not finding the usual Greek subscription of the copyist, added in Arabic, his native language, the tradition, either true or false, which had been preserved in the family or families to which the manuscript had belonged, 'Memorant hunc codicem scriptum esse calamo Theclæ Martyris.' In the seventeenth century, when oral tradition respecting this manuscript had probably ceased, it became the property of Cyrilus Lucaris."

Various disputes have arisen with regard to this manuscript. Some critics have bestowed upon it the highest commendation, whilst it has been equally depreciated by others. Of its most strenuous adversaries, Wetstein appears to have been the principal. Its antiquity also has been the subject of much controversy. Dr. Woide, who transcribed and published a fac-simile of it in 1786, containing the New Testament, with types cast for the purpose, concludes that it was written between the middle and the end of the fourth century; this has been objected to by Spohn. Schulze has given an opinion that it was written before the year 364; Wetstein thinks that it must have been written before the time of Jerome, before the Greek text of this manuscript was altered from the Old Italic; and Dietelmaier, who has more recently investigated this question, is of opinion that it was written towards the close of the fourth, or early in the fifth century; which view is also adopted by the Rev. H. H. Baber, one of the librarians of the British Museum, who printed a fac-simile edition of the Old Testament from the Codex Alexandrinus at London, 1816-28, in four volumes folio.

The manuscript is written in uncial or capital letters, without any accents or marks of aspiration; but with a few abbreviations, which are described by Dr. Woide. See SEPTUAGINT.

ALEXANDRIUM, a castle built by Alexander Jannæus, king of the Jews, on the top of a mountain near *Corea*. We do not know distinctly where *Corea* was, but it was the principal city of Judæa on the side of Samaria in the way to Jericho. Gabinius demolished this castle, but Herod rebuilt it. Joseph. *Antiq. lib. xiii. c. 24*; Calmet.

ALGUM, אֶלְגֻּם as transposed, (2Chron. 2. 8.) from אֶלְגֻּם. See ALMUG.

ALIAH, one of the dukes of Edom. (1Chron. 1. 51.)

ALIAN, the eldest son of Shobal, a descendant of Seir the Horite. (Gen. 36. 23; 1Chron. 1. 40.)

ALIEN. The wisdom and humanity of the Mosaic code in reference to aliens and the poor will be found not unworthy of a divinely inspired legislator.

There were two classes of persons denominated strangers: (1) זָרִים those who were strangers generally, and who possessed no landed property, though they might have purchased houses. (2) זָרִים אֲחֵרִים which means strangers dwelling in another country without being naturalized. (Levit. 22. 10; Ps. 39. 12.) Both of these classes were to be treated with kindness, and were to enjoy the same rights with other citizens. (Levit. 19. 33, 34; Deut. 10. 19; 23. 7; 24. 17.) Strangers might be naturalized or permitted to enter into the congregation of the Lord, by submitting to circumcision and renouncing idolatry. (Deut. 23. 1-8.)

The Edomites and Egyptians were capable of becoming citizens of Israel after the third generation. Doeg the Edomite (1Sam. 21. 7; Psal. 52) was thus naturalized, and, on the conquest of Idumæa by the Jews, about 129 years before the birth of Christ, the Jews and Idumæans became one people. It appears also that other nations were not entirely excluded from being incorporated with the people of Israel; for *Uriah the Hittite*, who was of Canaanitish descent, is represented as being a fully naturalized Israelite. But the Ammonites and Moabites, in consequence of the hostile disposition which they had manifested to the Israelites in the wilderness, were absolutely excluded from the right of citizenship. Michaëlis.

In the earlier periods of the Hebrew state, persons who were natives of another country, but who had come either from choice or necessity to take up their residence among the Hebrews, appear to have been placed in favourable circumstances. At a later period, viz., the reigns of David and Solomon, they were compelled to labour on the religious edifices which were erected by those princes. (2Chron. 2. 1, 17, 18, comp. with 1Chron. 22. 2.) Jahn, *Bibl. Archaeol.*

ALLEGORY. A figurative mode of speech or composition, which consists in selecting something analogous to a subject, instead of the subject itself. It may be compared to an emblematical painting, in which we are left to discover the intention of the artist by our own meditation, with this difference, that in the one, colours and forms are employed, in the other, words only. Both exercise the judgment as well as the imagination by pointing out some striking relation between objects which may nevertheless be very different in many respects; but which agree so well in the circumstances brought before us, that though the representative object is alone placed in our view, the resemblance leads us at once to apply all the particulars to the subject represented. Of this species of figure, Bishop Lowth (*Lect. on Hebrew Poetry*,) has three kinds, viz.:

1. The *Allegory* properly so called, and which he terms a continued metaphor;

2. The *Parable*, or similitude, and

3. The *Mystical Allegory*, in which a double meaning is couched under the same words, or when the same prediction, according as it is differently interpreted, relates to different events, distant in time, and distinct in their nature.

"In most allegories the immediate representation is made in the form of a narrative; and since it is the object of an allegory to convey a moral, not an historical truth, the narrative itself is commonly fictitious. The immediate representation is of no further value, than as it leads to the ultimate representation. It is the application or moral of the allegory which constitutes its worth." Bishop Marsh's *Lectures*.

The admirable allegorical delineation of old age by Solomon (Eccl. 12. 2-6) is perhaps one of the finest allegories of the Old Testament; the inconveniences of

increasing years, the debility of mind and body, the torpor of the senses, are expressed most forcibly and elegantly, but with some degree of obscurity, by different images derived from nature and common life. By this enigmatical composition, Solomon, after the manner of the Oriental sages, intended to put to trial the acuteness of his readers. It has on this account afforded much exercise to the ingenuity of the learned to explain the passage.

There is also in Isaiah 28. 23-29, an allegory, which, with no less elegance of imagery, is perhaps more simple and regular, as well as more just and complete in the colouring, than the one above cited. In the passage referred to, the prophet is examining the design and manner of the Divine judgments, and is inculcating the principle that God adopts different modes of acting in the chastisement of the wicked, but that the most perfect wisdom is conspicuous in all; that He will, as before noticed, "exact judgment by the line, and righteousness by the plummet;" that He ponders with the most minute attention, the distinctions of times, characters, and circumstances, as well as every motive to lenity or severity. All this is expressed in a continued allegory, the imagery of which is taken from the employments of agriculture and threshing, and is admirably adapted to the purpose. Bishop Lowth's *Prælect.*

The heathen philosophers and poets were also accustomed to explain things allegorically, believing it to be the most proper method of expounding religious doctrines; and the Christian writers of the early ages were excessively fond of allegories, upon which they reared a mystical theology, and turned even the historical passages of Scripture into such, where the literal sense is most clear and obvious.

ALLELUIAH or **HALLELU-JAH**, הללוייה *Praise or glorify God.* This expression of joy and praise occurs at the beginning or at the end of many Psalms, and was transferred from the Synagogue to the Church. At the funeral of Fabiola, says Jerome, "several Psalms were sung with loud alleluias."

Gregory the Great (*Epist.* lib. ix. ep. 12) affirms that it was used first by Christians in the church at Jerusalem, where it was appointed for Easter, and the interval succeeding until Whitsuntide. The custom of confining the use of this doxology in the Church to those stated times long prevailed. Since the eleventh century there has been a formal suppression of the Hallelujah during Lent in the Roman Church. Calmet; Riddle's *Christ. Antiq.*

ALLON, the son of Jedaiah, and father of Shiphi, of the tribe of Simeon. (1Chron. 4. 37.)

ALLON-BACHUTH, אלון בכותר *the oak of weeping*; the spot where Rebekah's nurse was buried. (Gen. 35. 8.) The tree here termed an oak is supposed to be the Terebinth tree, *Pistacia terebinthus*, Linn., a high tree common in Palestine, with evergreen leaves, and fruit growing like grapes; it attains a very great age, and the earliest historical accounts mention such trees, especially those standing singly by themselves, by particular names, for topographical determinations. (Gen. 35. 4; 35. 8; Judges 6. 11, 19.) Gesenius.

ALLOPHYLI, αλλοφυλοι; a Greek term which signifies properly, strangers; but the Hebrew term to which it corresponds, is generally taken in the Old Testament to signify the Philistines.

ALMAH, אלהמה *a virgin*; Syriac, *Pa* and *Ethpa*, to grow up. This word is to be understood of an unmarried, but marriageable young woman.

St. Jerome, in his commentary on the passage in Isaiah 7. 14, "Behold, a virgin shall conceive, and bear a son," observes, "that the prophet declined using the word בתולה which signifies any young woman." In Joel 1. 8, the latter word is used of a new married woman.

The Septuagint and the Chaldee paraphrast translate *Almah*, *a virgin*; also the quotation in Matthew 1. 23, is rendered παρθενος, a virgin. Rabbi Akiba, who lived in the second century, understands it in the same manner. The apostles and evangelists explained it in a similar sense, and understood it of a Messiah, born of a virgin.

The Jews, in order to obscure this plain text, and to weaken the testimony of the Christian religion, pretend that the Hebrew word signifies merely a young woman, and not a virgin. But this corrupt translation is easily confuted:

1st. Because this word uniformly denotes a virgin, in all other passages of Scripture in which it is used.

2nd. From the intent of the passage, which was to confirm their faith by a strange and wonderful sign.

In the primary, but lower sense of the prophecy, the sign given, was to assure Ahaz that the land of Judæa would speedily be delivered from the kings of Samaria and Damascus, by whom it was invaded. But the introduction of the prophecy, the singular stress laid upon it, and the exact sense of the terms in which it was expressed, make it evident that it had another and more important purpose; and the event has clearly proved, that the *sign given* had, secondarily and mystically, a respect to the miraculous birth of Christ, and to a deliverance much more momentous than that of Ahaz from his then present distressful situation. Randolph's *Prælectiones Theol.*; Horne; Jones; Gesenius.

ALMIGHTY, אלהי an epithet of Jehovah, sometimes combined with אל, as in Genesis 17. 1; 28. 3; Exod. 6. 3. Sometimes used alone, as in Job 5. 17.

The form אלהים is the plural, from the singular, אלהי mighty. The Septuagint mostly renders it Παντοκράτωρ; the Vulgate in the Pentateuch, *Omnipotens*.

Of the Omnipotence of God we have a most ample revelation in the Scriptures, expressed in the most sublime language, and nothing in the finest writings of antiquity, even were all their thoughts collected, as to the majesty and power of God, can bear any comparison with the views presented to us by Divine Revelation.

ALMODAD, אלמוד (Gen. 10. 26.) The son of Joktan, the ancestor of an Arab tribe, probably the *Αλλουμαιωται* of Ptolemy. (Bochart, *Phaleg.* 2. 16.) Arabic authors speak of a descendant of Kachtan, or Joktan, by the name of מודר *modar*. *Al* may be the Arabic article, and it may then be supposed, with the admission of an old orthographical error, (ד for ר) that the same is here meant. Gesenius; Winer, *Biblisches Realwörterbuch*; Michaëlis, *Spicel.*

ALMON, a sacerdotal city belonging to the tribe of Benjamin. (Josh. 21. 18.) See **ALEMETH**.

ALMON-DIBLATHAIM, or **BETH-DIBLATHAIM**, עִלְמֹן דְּבִלְתַּיִם The name of an encampment of the Israelites. (Numb. 33. 46.)

Beth-Diblathaim was a small town on the borders of the territory of the Moabites. It was destroyed by Nebuchadnezzar, king of Babylon. (Jer. 48. 22.)

Almon-Diblathaim is supposed to have stood near the Arnon. *Bib. Topog.*; Gesenius.

ALMOND TREE, אלון an almond tree, (Gen. 30. 37.) Arabic جوز Celsii *Hierobot.* Translated in the above passage *hazel*.

אֶשְׁכּוֹ an almond tree. (Eccles. 12. 5; Jer. 1. 11.)

Rendered *almond*. (Gen. 43. 11; Exod. 25. 33,34,37; Numb. 17. 8.)

The almond tree bears a general resemblance to the peach tree in the leaves and blossoms, but its fruit is longer and more compressed, the outer green coat is thin and drier when ripe, and the shell of the stone is not so rugged. This stone or nut contains a kernel which is the only esculent part. The whole arrives at maturity in September, when the outer tough cover splits open, and discharges the nut.

From the circumstance of its blossoming the earliest of any of the trees, and before it is in leaf, it has its Hebrew name *תָּשׁוּ* from a verb signifying to make haste, to be

in a hurry, to watch, or to awake early. Thus, in Jer. 1. 11, when the Prophet is shown the rod of an *almond tree*, (in the Vulgate, *virgam vigilanlem*, a waking rod,) God means to indicate to him by it, that as this tree makes haste to bud, so He would hasten his judgment upon the people.

"There is here," says Dr. Blayney, "at once an allusion to the property of the almond tree, and in the original a *paronomasia*, which makes it more striking there, than it can be in a translation."

It was a practice, in early times, to place an object for an idea, having the same sound. This was the mode adopted by the Egyptian priests, in communicating ideas. Upon this principle, it will appear that many of the hieroglyphics are the representations of words or syllables, having the same, or very nearly the same sounds as the objects intended to be represented. Thus, in the Pentateuch, the word for unleavened bread, is *מַצָּה* and *מַצֵּה* a word closely agreeing in sound, is a noun, signifying a going forth, or out of, derived from *מָצָה* to go forth.

In like manner, when Solomon, speaking of an old man, (Eccles. 12. 5,) says, *the almond tree shall flourish*, he intends to express by it, the quickness with which old age surprises us; while the snow-white blossoms upon the bare boughs of the tree, aptly illustrate the hoary head, and the defenceless state of age.

Aaron's rod which budded, and by this means secured to him the priesthood, was a branch of this tree. (Numb. 17. 8.) *Bible Nat. Hist.*

ALMUG TREE, אֶלְמֻג The name of a costly wood which Solomon received from the East, by way of Ophir. (1 Kings 10. 11, 12.)

It is to be explained most probably, as by several Rabbins, by *red sandal wood*, which in India and Persia is worked up into a variety of costly utensils. Others take it for corals, and *אֶלְמֻג* is certainly used in the Rabbinical writings for corals; this, however, may be considered as a more extended use of the word than its original sense seems to warrant. (See Celsii *Hierobot.*) Jerome and the Vulgate render it *ligna thyina*, and the Septuagint *ξύλα πελεκητα*, *wrought wood*. Several critics understand it *gummy wood*; (Hiller. *Hierophyt.*) but a wood abounding in resin must be very unfit for the uses to which this is said to be applied.

Josephus, (*Antiq.*) describes it particularly:—"The ships from Ophir," says he, "brought precious stones

and pine trees, which Solomon made use of for supporting the Temple and his palace, as also for making musical instruments: the harps and psalteries of the Levites."

Dr. Shaw supposes that the almug tree was the cypress; and he observes that the wood of this tree is still used in Italy and other places, for violins, harpsichords, and other stringed instruments.

ALOE, αλοη. Aloes or aloe, in the Linnæan system of botany, is a genus of the *Hexandria monogynia*.

The aloe is a plant with broad leaves, nearly two inches thick, prickly and chamfered; about two feet high. A very bitter gum is extracted from it, used for medicinal purposes, and anciently in embalming dead bodies. Nicodemus is said (John 19. 39.) to have brought one hundred pounds weight of myrrh and aloes, to embalm the body of Our Lord. The quantity has been exclaimed against by certain Jews, as being enough for fifty bodies, but, instead of *εκατον*, it might originally have been *δεκατον*, *ten* pounds weight. However, at the funeral of Herod, there were *five hundred αρωματοφορους*, spice-bearers, (Josephus *Antiq.*); and at that of Rabbi Gamaliel, eighty pounds of opobalsamum were used. Talmud.

The tree used by Moses to sweeten the waters of Marah, (Exod. 15. 25,) is supposed to have some relation to the aloe; and several interpreters are of opinion, that Moses used a bitter sort of wood, that the power of God might be more evidently displayed.

Bruce mentions a town or large village, by the name of El-vah. It is thickly planted with trees, and the last inhabited place to the west, under the jurisdiction of Egypt. He also observes, that the Arabs call a shrub or tree, not unlike our hawthorn, either in wood or flower, by the name of *El-vah*. "It was this," they say, "with which Moses sweetened the waters of Marah, and with this too, did Kalib Ibn el Walid sweeten those of El-vah, once bitter, and gave the place the name, from this circumstance."

It will not from hence follow, that Moses really used a bitter wood; but, as Providence usually works by the proper and fit means to accomplish its ends, it seems likely that the wood he made use of, was, in some degree at least, corrective of that quality which abounded in the water. This appears to have been the opinion of the author of Ecclesiasticus, (38. 5.) "*Arbor aquatica amarissimo flore magno roseo nomine* (Hirdophne)." Targum Jonath; Forskal.

There is a custom in Egypt, in respect to the water of the Nile, which, though somewhat muddy, is rendered pure and salutary, by being put into jars, the inside of which is rubbed with a paste made of bitter almonds. (Niebuhr's *Travels*.) This method might have been familiar to Moses, as it appears to be of great antiquity.

The first discoverers of the Floridas are said to have corrected the stagnant and fetid water they found there, by infusing in it branches of sassafras; and it is understood that the first inducement of the Chinese to the general use of tea, was to correct the waters of their ponds and rivers. *Bible Nat. Hist.*; Calmet; Harmer.

ALOE, אֶלְיָה The LIGN-ALOE, or AGAL-LOCHUM, *ξύλα αγαλλοχον* of the Greeks. *אֶלְיָה* (Numb. 24. 6; Psal. 45. 9; and Cantic. 4. 14.) An aromatic and much esteemed wood growing in India, bearing a red fruit, resembling the pepper-corn, *Ercæcaria Agallocha*, Linn. It is spoken of in several passages as a perfume. In Rumphius *Herbarium Amboinensis*, is a particular description and an engraving of the tree.

At the top of the aloe tree is a large bunch of leaves, which are thick, and indented; broad at the bottom, but growing narrower towards the point, and about four

feet in length. Its blossoms are red, intermixed with yellow, and double, like a pink; from the blossom comes the fruit, or pod, which is oblong and triangular, with three apartments filled with seed.

The Lign Aloe.

That the flower of this plant yields a fragrance, is assured to us, in the following extract from Swinburne's *Trav.*: "This morning, like many of the foregoing ones, was delicious. The sun rose gloriously out of the sea, and all the air around was perfumed with the effluvia of the aloe, as its rays sucked up the dew from its leaves."

This extremely bitter plant contains under the bark, three sorts of wood. The first is black, solid, and

weighty; the second is of a tawny colour, of a light spongy texture, very porous, and filled with a resin extremely fragrant and agreeable; the third kind of wood, which is the heart, has a strong aromatic odour, and is esteemed in the East, more precious than gold itself. It is used for perfuming garments and apartments, and is administered as a cordial, in fainting and epileptic fits. Pieces of this wood called *calumbac* and *goro*, are carefully preserved in pewter boxes, to prevent their drying. When they are used, they are ground upon a marble, with such liquids as are best suited to the purpose for which they are intended. Lady Montagu's *Letters*; Hasselquist.

This wood, mentioned in Cantic. 4. 14, in conjunction with several other odoriferous plants there referred to, was in high esteem among the Hebrews, for its exquisite exhalations.

The scented aloe, and each shrub that showers,
Gum from its veins, and odours from its flowers.

Thus, the son of Sirach (Eccles. 24. 15): "I gave a sweet smell like the cinnamon and aspalathus, and I yielded a pleasant odour like the best myrrh, as galbanum, and onyx, and sweet storax, and as the fume of frankincense in the tabernacle." *Bible Nat. Hist.*; Sprengel *Hist. rei Herbariæ*; Celsii *Hierobot.*; Gesenius.

ALPHA, the name of the first letter of the Greek alphabet, answering to our A. As a numeral, it stands for one, or the first of any thing. It is particularly used among ancient writers, to denote the chief, or first man of his class, or rank, and in this sense, the word stands contra-distinguished from *Beta*, which denotes the second person. Plato was called the Alpha of the wits; Eratosthenes, keeper of the Alexandrian library, whom some called a second Plato, is frequently named Beta.

Alpha is also used to denote the beginning of any thing; in which sense it stands opposed to *Omega*, which denotes the end; hence the title which Our Lord appropriates to himself. (Rev. 1. 8, 11; 21. 6; 22. 13.) These two letters were made the symbol of Christianity, and accordingly, were engraven on the tombs of the ancient Christians, to distinguish them from those of idolators. Moralez, a Spanish writer, imagined that this custom only commenced since the rise of Arianism; but

there are tombs prior to the age of Constantine, whereon the two letters were found.

ALPHABETICAL POEMS. There are, in the Old Testament, twelve of these poems in the acrostic form: three of them perfectly alphabetical, in which every line is marked by its initial letter; the other nine less perfectly alphabetical, in which every stanza only is so distinguished. Horne. See HEBREW POETRY.

ALPHEUS, the father of James the Less, (Matt. 10. 3; Mark 3. 18; Luke 6. 15; Acts 1. 13,) and the husband of Mary, the sister of the mother of Jesus. He is the same person who is called Cleophas, in John 19. 25; but not the same who in Mark 2. 14, is said to be the father of Levi, or Matthew.

ALTAR, denotes a place, or pile, upon which sacrifices were offered to the Deity, whether by the patriarchs and their seed, or by the idolatrous nations of antiquity.

Cain and Abel must have erected altars when they presented the first sacrifice after the Fall, and Noah built an altar after the deluge had subsided, the earliest of which we have any account. (Gen. 8. 20.) Altars, therefore, were used before temples were erected; they were built sometimes in groves, sometimes on the highways, and sometimes on the tops of mountains. Nothing was more ancient in the East, than altars surrounded by groves and trees, which made the place very shady and delightful, in those hot countries. The patriarchs generally built their altars near a grove of trees, which, if nature denied, were usually planted by the religious in those days. When Abraham dwelt at Beersheba, in the plains of Mamre, it is said, "he planted a grove there, and called on the name of the Lord, the everlasting God." (Gen. 21. 33.)

The idolators in the first ages of the world, who generally worshipped the sun, appear to have thought it improper to straiten and confine the supposed infinity of this imaginary deity within walls, and therefore they generally made choice of woods and mountains, as the most convenient places for their idolatry; and when, in later times, they had brought in the use of temples, yet for a long time they kept them open-roofed. With such a form of worship, notions of gloomy sublimity were associated, and so prevalent was the custom, that the phrase "worshipping on high places," is frequently used to signify idolatry in the Old Testament. The worshipping on high places was strictly forbidden to the Jews; not merely because the custom had a tendency to produce idolatry, but also because the customary form of that idolatry was the worst, the most cruel, and the most debasing. It was before these altars, in groves and mountains, that human sacrifices were most frequently offered, that parents whose natural affections were blighted and destroyed by dark superstitions, made their children to pass through the fire to Moloch; and it was in such places that licentiousness and depravity were systematically made a part of public worship. On this account, therefore, God expressly commanded the Israelites utterly to destroy all the places wherein the nations of Canaan, whose land they should possess, served their gods upon the high mountains and upon the hills; and to pay their devotions and bring their oblations to that place only which God should choose. (Deut. 2. 12-14.) In order to prevent every approach to the idolatrous customs of the heathen, they were forbidden to plant any trees near the altar of the Lord. (Deut. 16. 21.)

It does not appear from the monuments, that altars on high places were common in Egypt, though there are some traces of worship in groves.

Egyptian Altar. From the Monuments.

Altars on High Places. From Sir Robert Ker Porter's *Ternia*.

Greco-Egyptian Altar. From the Monuments.

The altars used by the patriarchs are generally supposed to have been of stone, and of rude construction; thus, the altar which Jacob set up at Bethel was the stone which had served him for a pillow, and the altar of Gideon, was a stone before his house. The first altars which Moses was commanded to raise, were of earth or rough stones—iron was forbidden to be used in constructing them. (Exod. 20. 24,25.) The altar which Moses enjoined Joshua to build on Mount Ebal, was to be of unpolished stones, (Deut. 27. 5; Josh. 8.30,31,) and it is probable that such also were those built by Samuel, Saul, and David.

The heathens at first made their altars only of turf, afterwards of stone, marble, wood, and other materials. They differed in form as well as material, some being round, some square, and others triangular. All their altars turned towards the East, and stood lower than the statue of the god, and were adorned with sculptures, representing the deity to whom erected, or the appropriate symbols, but the Jews were strictly forbidden carvings on the altar. These altars were of two kinds, the higher and the lower; the higher were intended for the celestial gods, and were called by the Romans, *altaria*; the lower were for the terrestrial and infernal gods, and were called *aræ*. Those dedicated to the heavenly gods were raised a great height above the ground; those of the terrestrial gods were almost even with the surface, and those for the infernal deities were only holes dug in the ground, called *scrobiculi*.

Most of the ancient Greek altars were of a cubical form; and hence, when the oracle of Apollo at Delphi commanded that a new altar should be prepared exactly double the size of that which already stood in the temple, a problem was given surpassing the powers of science in those days, which is well known to mathematicians under the name of *the duplication of the cube*.

The great temples of Rome generally contained three altars; the first, in the sanctuary at the foot of the statue, for incense and libations; the second, before the gate of the temple, for the sacrifice of victims; and the third, like the table of shew-bread, was a portable one for the offerings and vessels to lie upon.

Altars represented on Roman Coins.

In the place where public worship was held amongst the Jews, from the time of Moses till Solomon, viz. the Tabernacle, in the centre of the outer court was the ALTAR OF BURNT-OFFERING. (Exod. 40.29.) It was a kind of coffer, three cubits high, five long, and five broad, made of shittim wood, which is supposed to have been either the acacia or the cedar, both of which grow in Egypt and Syria. This wood united two great requisites, lightness and durability; it was probably the same as that of which the mummy-cases are composed, a species of wood, which has continued undecayed for nearly thirty centuries. The lower part rested on four short columns or feet, on the sides of which were grates of brass, through which the blood of the victim flowed out. The sides of the upper part of the altar were of wood covered with brass, and the interior space

was filled with earth, upon which the fire was kindled. The four corners of the altar projected upwards, so as to resemble horns, by which name they are frequently mentioned. (1Kings 1. 51; 2.28.) At the four corners were rings, through which poles were placed, for the purpose of transporting it from place to place. On the south side there was an ascent to it, made of earth heaped up.

The appurtenances of the altar, were the urns for carrying away the ashes, the shovels for collecting them together; the skins for receiving and sprinkling the blood of the victims; a sort of tongs for turning the parts of the victims in the fire; the censers for burning incense, and other instruments of brass. The fire on the altar of burnt-offering was considered sacred, and was therefore to be kept constantly burning. (Levit. 6. 13.)

Between the altar and the tabernacle, a little to the south, stood a circular laver, which, together with its base, was made of the brazen ornaments which the women had presented for the use of the tabernacle. (Exod. 30. 8; 40. 7.) The priests, when about to perform their duties, washed their hands in this laver.

TABLE OF SHEW-BREAD. In the first apartment of the tabernacle, on the north side, was a table made of acacia wood; two cubits long, one broad, and one and a-half high, and covered over with leaves of gold. The top of the leaf of this table was encircled with a border or rim of gold. The frame of the table, immediately below the leaf, was encircled with a piece of wood, of about four inches in breadth, around the edge of which there was a rim or border, the same as around the leaf. A little lower down, but at equal distances from the top of the table, there were four rings of gold, fastened to the legs of it, through which, staves, covered with gold, were placed for the purpose of carrying it. (Exod. 25. 23.)

Twelve unleavened loaves were placed upon this table, which were sprinkled over with frankincense, and, it is stated in the Septuagint, with salt likewise. They were placed in two piles, one above another, were changed every Sabbath day by the priests, and were called *the bread of the face*, because it was exhibited before the face or throne of Jehovah,—*the bread arranged in order*, and *the perpetual bread*. (Levit. 24. 5-9; 1Chron. 23. 29.)

Wine was placed upon the table in bowls, some larger and some smaller, also in a sort of vessel that was covered, and in cups, which were employed in pouring in and taking out the wine from the other vessels.

THE ALTAR OF INCENSE was situated between the table of shew-bread and the golden candlesticks, towards the veil, which enclosed the interior apartment of the tabernacle, or the *Holy of Holies*. It was constructed of shittim or acacia wood, one cubit long and broad, and two high. It was ornamented at the four corners, and overlaid throughout with leaves of gold; hence it was called the golden altar, also the interior altar, in contradistinction from the altar for the victims, which was in the large court. The upper surface of this altar was encircled by a border, and on each of the two sides were fastened, at equal distances, two rings for the admission of the rods of gold, by which it was carried. Incense was offered on this altar daily, morning and evening. (Exod. 30. 34-37.) Josephus, iii. 6. 8.

After the captivity, and the building of the second temple by Zerubbabel, the altars were, in some respects, different.

The Jews seem to have made the altar a privileged place, (Exod. 21. 14,) so that both in the wilderness and afterwards in Canaan, the altar continued a sanctuary for those who fled unto it; and very probably it was the

horns of this altar (then at Gibeon), that Adonijah and Joab took hold of, (1 Kings 1. 50; 2. 28,) for the Temple of Solomon was not then erected.

The heathen nations also recognised the right of sanctuary, and they used to swear upon the altar on solemn occasions, such as confirming alliances, and treaties of peace; and the Romans, in their veneration for altars, used the motto, *Pro aris et focis*, when engaged in defensive warfare.

Jerome supposes the altar at Athens, mentioned by the apostle Paul, was dedicated, not *To the unknown God*, but to the gods of Asia, Europe, and Africa, *unknown and strange gods*; and that the apostle has not quoted the inscription exactly, but dexterously applied it to his own purpose. Theophylact and Ecumenius, are also of opinion, that the inscription was to *gods*, in the plural number. Dr. Doddridge observes: "The express testimony of Lucian proves that there was such an inscription at Athens, and shows how unnecessary, as well as unwarrantable, it was in Jerome to suppose that, the apostle to serve his own purpose, should give this turn to an inscription, which bore on its front, to a plurality of deities. Whence this important phenomenon arose, or to what it particularly referred, it is more difficult to say. Witius, with Heinsius, understood it of Jehovah, whose name not being pronounced by the Jews themselves, might give occasion to this appellation."

Diogenes Laertius, in his *Life of Epimenides*, assures us, that in the time of that philosopher there was a terrible pestilence at Athens, in order to avert which, when none of the deities to whom they sacrificed appeared able or willing to help them, Epimenides advised them to bring some sheep to the Areopagus, and letting them loose from thence, to follow them till they lay down, and then to sacrifice them to the god near whose temple or altar they then were, and so occasioned, what the historians call, anonymous altars, each of which had the inscription, *To the unknown God*; meaning thereby the deity who had sent the plague.

The opinion of Kuinoël that there were several altars at Athens, on which the inscription was written,—*To the unknown God*,—in the plural number, seems, upon the whole, best founded, and in this, Bishop Pearce acquiesces, and remarks, that the case between St. Paul and Jerome, is this: Paul, who was on the spot, says, that he saw at Athens, an altar with this inscription, *To the unknown God*, and Jerome, who never was there, and who lived several hundred years after St. Paul, says that the inscription which St. Paul saw was not, *To the unknown God*, but, *To the unknown Gods*.

The early Christians scrupled to employ the words, *vaos*, temple, or *βωμος*, altar, with reference to their worship, on account of the use of those terms by the heathen. It was their boast, indeed, that they had neither temples nor altars. Minut. Fel. Octav. x. 32.

In the early church, there was a table set apart for the celebration of the eucharist, and placed in the middle of the chancel or choir, which in course of time was variously denominated, *the altar of the most holy place*; *the sacred, mysterious, or spiritual table*; *the sacred or awful table*. It stood in an open space, quite detached, so that there was a passage all round it; with reference, perhaps, to Psalm 26. 6.

On one side of the altar (usually on the right), stood the side table, sometimes called also, *paratorium oblationarium*, and sometimes *sacrarium*, or *secretarium*, on which the oblations were placed, after they had been collected by the deacons before the beginning of the eucharist. Calmet; Horne; Riddle's *Christ. Antiq.*

ALUSH, the name of an encampment of the Israelites in the wilderness of Shur, when they departed from Dophkah. (Numb. 33. 13.) Eusebius and Jerome fix it in Idumæa, about Gabala or Petra; Ptolemy places it among the Idumean cities. Some geographers are of opinion that *Alush* also signifies *a tongue*, which would therefore indicate a tongue of land, or a cape, or a bay (according to the Talmud, *Turba hominum*). (Josh. 15. 2, 5.) Gesenius.

Professor Robinson says, "that the stations where the Israelites rested are supposed to have been in the great valley El Sheikh and Feiran. Feiran is a continuation of the valley El Sheikh, according to Burckhardt, and was considered the first valley in the whole Arabian peninsula. From the upper extremity a row of gardens and date plantations extend downward for four miles. In almost every garden is a well, by means of which the gardens are irrigated the whole year round. This is the valley described by Niebuhr, under the name of Faran, through which the Israelites doubtless passed on their way to Sinai, after leaving the desert of Sin; but which they probably did not pass through on their way from Sinai to Kadesh, as some have ventured to suppose. Here they could not want for water; nor did they murmur on this account until they came to Rephidim, which was most probably higher up among the mountains, and near the western base of Sinai itself." *Bibliocal Repository*.

ALVAH, the name of the wood wherewith it is supposed Moses sweetened the waters of Marah. (Exod. 15. 25.) The name does not occur in Scripture; but the Mohammedans maintain, that Moses received a piece of this wood by succession from the patriarchs, Noah having kept it in the ark and delivered it to his posterity: (D'Herbelot, *Bibl. Orient.*) Josephus says, that Moses used the wood which he found lying next him. See ALOE.

ALVAN, one of the children of Shobal, the son of Seir. (Gen. 36. 23.)

AMAD, a town belonging to the tribe of Asher. (Josh. 19. 26.)

AMAL, one of the sons of Helem, of the tribe of Asher. (1 Chron. 7. 35.)

AMALEK, or THE AMALEKITES, MOUNT OF, in the territory of the tribe of Ephraim, on which the city of Pirathon was built. Abdon, Judge of Israel, was of this city, and was buried in it. (Judges 12. 13-15.) See PIRATHON.

AMALEK, the son of Eliphaz, by Timnah, his concubine, and the grandson of Esau. (Gen. 36. 12; and 1 Chron. 1. 36.) He is reputed the father of the Amalekites, but this probably is erroneous.

AMALEKITES, a powerful people who dwelt in Arabia Petrea, between the Dead Sea and the Red Sea, or between Havila and Shur (1 Sam. 15. 7); south of Idumæa, and east of the northern part of the Red Sea. Their mode of life was probably little different from that of the possessors of their country at the present day, for no city of theirs is mentioned by name; and they appear to have dwelt chiefly in small hamlets and in caves or in tents.

The Amalekites are generally supposed to have been the descendants of Amalek, the son of Eliphaz and grandson of Esau. But Moses speaks of the Amalekites long before this Amalek was born; i. e., in the days of Abraham, when Chedorlaomer, king of Elam, devastated their country (Gen. 14. 7); from which it may be

inferred that there was some other and more ancient Amalek from whom this people sprung. The Arabians have a tradition that this Amalek was a son of Ham; and when we consider that so early as the march from Egypt the Amalekites were powerful enough to attack the Israelites, it is far more probable they should derive their ancestry from Ham, than from the then recent stock of the grandson of Esau.

The Amalekites probably knew that the Israelites were advancing to take possession of the land of Canaan. Hence they did not wait for their near approach to that country, but came down from their settlements on its southern borders to attack them at Rephidim. Moses commanded Joshua with a chosen band to attack the Amalekites; while he, with Aaron and Hur, went up to the mount of Horeb. During the battle Moses held up his hands to heaven; and as long as they were maintained in this attitude, the Israelites prevailed, but when through weariness they fell, the Amalekites prevailed. Aaron and Hur seeing this, held up his hands till the latter were entirely defeated with great slaughter. (Exod. 17. 8-13.)

Under the Judges, we see the Amalekites united with the Midianites and Moabites, in a design to oppress Israel; but Ehud delivered the Israelites from Eglon, king of the Moabites, (Judges 3.) and Gideon (ch. 7 and 8.) delivered them from the Midianites and Amalekites.

Saul marched against the Amalekites, and put many to the sword, but spared Agag, their king, and the best of the cattle and the moveables, contrary to the divine command.

After this, the Amalekites scarcely appear any more in history. A troop of Amalekites, however, subsequently came and pillaged Ziklag, which belonged to David, (1Sam. 30.) where he had left his two wives, Ahinoam and Abigail; but he returned from an expedition which he had made in the company of Achish into the valley of Jezreel, pursued them, overtook and dispersed them, and recovered all the booty which they had carried off from Ziklag.

We meet again with the name of Amalek in the history of Esther, in the person of Haman.

The Arabians relate of the Amalek destroyed by Saul, that he was the father of an ancient tribe in Arabia, which contained only Arabians called pure, the remains of whom were mingled with the posterity of Joktan and Adnan. D'Herbelot, *Bibl. Orient.*; Relandi, *Palestine*; Michaëlis, *Spicel.*; *Encyc. Brit.*; Calmet.

AMAM, a town of Judea, in the southern part of the tribe of Judah. (Josh. 15. 26.)

AMANA, the name of a mountain in Palestine, in the half-tribe of Manasseh, beyond the Jordan, mentioned in Canticles 4. 8, and by some writers taken to be Mount Amanus, in Cilicia. Jerome and the Rabbins describe the land of Israel as extending northward to that mountain, whither they suppose the government of Solomon reached. It was most probably, however, a part of Mount Libanus, as Shenir and Hermon, which are mentioned in the same passage, were parts of the same mountainous range. Horne's *Introd.*

AMARANTHINE, *αμαραντινος*. From, *α*, negative, and *μαραινομαι*, to fade, wither. That cannot fade away, not capable of fading.

This word occurs in 1Peter 5. 4, in the term "that fadeth not away;" where the apostle seems to allude to those fading garlands of leaves which crowned the victors in the heathen games, and were consequently in high esteem among them. (1Cor. 9. 25; 1Peter 1. 4.)

Stephens, in his Greek Thesaurus, thinks it improba-

ble that Peter should use *αμαραντινος* for *αμαραντος*, since *αμαραντινος* is not formed from the adjective *αμαραντας*, as signifying unfading, but from the substantive *αμαραντος*, the name of a flower, Amaranth, so called from its not speedily fading. *Αμαραντινος* will, therefore, properly signify amaranthine, but will be equivalent to unfading.

AMARANTH.

Immortal amaranth! a flower which once
In Paradise, fast by the tree of life,
Began to bloom: but soon, for man's offence,
To heaven removed, where first it grew, there grows,
And flowers aloft, shading the fount of life;
And where the river of bliss, through midst heaven,
Rolls o'er Elysian flowers her amber stream:
With these, that never fade, the spirits elect
Bind their resplendent locks, inwreathed with beams.

MILTON.

I. AMARIAH, eldest son of Meraioth, and father of the high priest, Ahitub, was high priest in the time of the Judges; but it is difficult to fix the date of his pontificate. His name occurs 1Chron. 6. 7.

II. One who separated from his foreign wife, after the return from the Babylonish captivity. (Ezra 10. 42.)

III. The grandfather of the prophet Zephaniah, and father of Gedaliah. (Zeph. 1. 1.)

AMASA, a nephew of David, whom Absalom appointed general of his army. (2Sam. 17. 25.) After the defeat of that prince, David pardoned Amasa, and offered him the command-in-chief of his forces, in the room of Joab, by whom he was treacherously murdered. (2Sam. 20. 9.)

AMASAI, a chief of the captains who joined David with thirty brave men, while in the desert, flying from Saul. David went to meet them, and said, "If ye be come peaceably unto me to help me, mine heart shall be knit unto you: but if ye be come to betray me to mine enemies, seeing there is no wrong in mine hands, the God of our fathers look thereon, and rebuke it." Then said Amasai, "Thine are we, David, and on thy side, thou son of Jesse: peace be unto thee, and peace be to thine helpers." David, therefore, received them; and gave them commands. (1Chron. 12. 18.) Calmet.

AMASHAI, the son of Azareel, one of those chosen by lot to dwell at Jerusalem. (Nehem. 11. 13.)

AMASIS. This name does not occur in the Scriptures, yet he is supposed to be referred to in sacred history as a king of Egypt. He is probably the Pharaoh whose house in Tahpanhes is mentioned in Jerem. 43. 9, and who reigned about B.C. 588; he was the successor of Apries, or Pharaoh Hophra. Amasis, unlike his predecessors, courted the friendship of the Greeks; and, to secure their alliance, he married Laodice, the daughter of Battus, the king of the Grecian colony of Cyrene. He also contributed a large sum towards the rebuilding of the Temple of Delphi, and is said to have been visited by Solon.

AMATHI-DOR, or EMATH, or HAMMOTII-DOR, a town of Naphtali, belonging to the Levites, and given to the family of Gerson. (Josh. 21. 32.) *Encyc. G. A.*

AMATH or HAMATH, a city of Syria, and the capital of a province of the same name. (Numb. 13. 21.) Amath in Hebrew commences with an aspirate, and is therefore often written Chamat or Kamat; the word signifies heat, and enters into composition with certain local names, where hot-springs existed; whence many towns were called Amath. Eusebius; *Encyc. G. A.* See ΑΜΑΤΙΟΤΗ and ΗΑΜΑΤΗ.

K

AMATHA, a place in Judæa, which possessed hot-springs or baths; it was east of the Jordan, and was given to the half-tribe of Manasseh. It was situated to the S.E. of the lake of Tiberias or Gennesareth, having Gamala on the S.W. and Gadara on the N.E. St. Jerome says it was founded by a colony of Amathæans, or Hamathites, called in the Septuagint *Αμαθι*. (Gen. 10. 18.)

I. AMAZIAH, the eighth king of Judah, who succeeded Joash B.C. 839. The commencement of his reign was auspicious; but after he had subdued the Edomites, (2Kings 14,) he carried off their idol gods, and acknowledged them for his own, by making adoration and offering incense. (2Chron. 25. 14.) He then proclaimed war against Joash, king of Israel, who defeated his forces, and took him prisoner. He reigned ingloriously fifteen years after the event; and at length, hated by his subjects, and abandoned by the Almighty, he was assassinated by conspirators at Lachish, whither he had fled.

II. AMAZIAH, a priest to the golden calves in Bethel, who complained of the prophet Amos to Jeroboam, and procured his banishment. (Amos 7. 10.)

AMBASSADOR, a public minister sent from one sovereign prince, as a representative of his person, to another.

At Athens, ambassadors mounted the pulpit of the public orators, and there opened their commission, acquainting the people with their errand. At Rome they were introduced to the senate, and there delivered their commissions.

In the Old Testament, the word is sometimes used for *Interpreter*, (2Chron. 32. 31,) also for *Messenger*, (Isai. 18. 2.)

Ministers of the Gospel in the New Testament are called *Ambassadors*, because they are appointed by God to declare his will to men, and to promote a spiritual alliance with Him. (2Cor. 5. 20.)

AMBER, *חַשְׁמַל* A yellow-coloured inflammable mineral, divided by Werner into two sub-species, viz. white and yellow, which are distinguished from each other by colour, external surface, lustre, fracture, and transparency.

The word *חַשְׁמַל* in the Old Testament, though rendered by our translators *amber*, denotes a bright shining metal composed of gold and silver, (Plin. xxiii. 4.) which was much esteemed among the ancients. The usual etymology from *חַשְׁמַל* or *חַשְׁמַל* *brass* and *מַלְלָה* *gold*, has a similar import, hence gold ore, *aurichalcum*, (Plin. xxxiii. 4.) which by some authors is accounted more valuable than gold. The ancients were acquainted with several sorts of copper, to which the intermixture of gold, either natural or artificial, gave a peculiar lustre. Bochart, *Hieroz.*

From the manner in which the prophet Ezekiel speaks of *חַשְׁמַל* (1. 4, 27 and 8. 2,) it would appear that he did not intend the bituminous substance now so well known under this name. The Septuagint renders the Hebrew word, *Ηλεκτρον*, the Vulgate, *electrum*, a mixed metal of gold and silver. From our version of Ezekiel 1. 4, "Out of the midst thereof, (the whirlwind,) as the colour of amber, out of the midst of the fire," it appears that the translators by *Ηλεκτρον*, could not mean either amber or crystal; the former of which grows dim as soon as it feels the fire, and shortly dissolves into a resinous or pitchy substance; the latter is scarcely ever put into a fire, and if it were, could hardly contract anything from it but soot and dimness. It must be then, that they understood it as the mixed metal, which was much esteemed by the ancients for its beautiful lustre, and

which, when exposed to the fire, does, like other metals, grow more bright and shining. Hence they seem to have come very near the true meaning of the Hebrew word; for as Ezekiel prophesied among the Chaldeans after Jehoiachim's captivity, so here, as in other instances, he seems to have used a Chaldee word; and considered as such, *חַשְׁמַל* may be derived from *חַשְׁמַל* *copper*, dropping the initial *ח* and the Chaldee *מלל* *gold*, as it comes from the mine, and so denotes either a mixed metal of copper and gold, such as the *Æs pyropum*, mentioned in the ancient Greek and Roman writers, and thus called from its fiery colour, and the noted *Æs Corinthum*, or Corinthian brass; or else it may signify *χαλκος χρυσοειδης*, a fine kind of copper, such as Aristotle says was in colour and appearance not distinguishable from gold, and of which it is probable the cups of Darius, mentioned by the same author, and the two vessels of fine copper, (yellow or shining brass,) *precious as gold*, of which we read in Ezra 8. 27, were composed.

Scheuchzer, who, of the various interpretations of *חַשְׁמַל* prefers this last, adds, that this kind of fine copper is still known in the East Indies by the name of *Suasse*, that it is used for making rings, and cups for great men, and is composed of equal parts of gold, and of the reddest copper. *Bible Nat. Hist.*; Gesenius.

AMBIVIVUS, (MARCUS,) succeeded Caponius in the government of Judæa. Annus Rufus was his successor, A.D. 13. Josephus. *Antiq.*, lib. xviii. c. 3.

AMEN, *אָמֵן* occurs usually at the end of a sentence, where it serves to confirm the words which precede, and to invoke the fulfilment of them. *So be it; certainly; really*. In this sense it is used in 1 Kings 1. 36; Jer. 11. 5; 28. 6, also when an individual or a whole people ratified a covenant or oath administered to him or them, (Numb. 5. 22; Deut. 27. 15; Nehem. 5. 13,) and at the end of the doxology of a song or prayer. (Psal. 41. 13; 89. 52; Matt. 6. 13.)

It was also adopted in the public worship of the primitive churches, as appears from 1 Cor. 14. 16, and was continued in the Church in later times. St. Jerome says that in his time, at the conclusion of every public prayer, the united Amen of the people sounded like the *fall of water*, or the *noise of thunder*.

At the Lord's supper, after the officiating minister had pronounced the words of distribution, the communicants said Amen, in testimony that they believed themselves to be partakers of the body and blood of Christ. Pseudo-Ambros. *de Sacram.*; Augustin *contr. Faust.*

In the *Apostolical Constitutions*, the communicant is directed to say on each occasion of the delivery of the elements, Amen. This answer was universally given in the ancient Church, and was regarded as of considerable importance. (Tertull. *de Spectac.*) By degrees it was omitted by the people and pronounced by the clergy alone. Riddle's *Christ. Antiq.*; Gesenius.

AMETHYST, *אֶמֶתְסֵט* (Exod. 28. 19.) The name of a stone which the Septuagint renders by *αμεθυστος*. It was the ninth stone in the breast-plate of the High Priest. (Braunius, *de Vest. Sacerd. Hebr.*) It is also mentioned as the twelfth in the foundations of the New Jerusalem. (Rev. 21. 20.)

The Rabbins say that the amethyst has the power of producing dreams; its name is derived from *אֶמֶתְסֵט* *to dream*. It seems composed of a strong blue and deep red in colour, thus, according as either prevails, affording different tinges of purple, sometimes approaching to violet, and sometimes fading even to a rose colour. The gem called Amethyst by the ancients, was evidently the same

with that now generally known by this name; it was supposed to be an antidote against drunkenness.

The oriental amethyst possesses great brilliancy, and is said to be as hard as the ruby and sapphire. It comes from Persia, Arabia, Armenia, and the East Indies. Those that generally pass for amethysts are merely pieces of quartz tinged with a rosy or vinous colour. Calmet; Gesenius; *Bible Nat. Hist.*

AMI, the chief of a family which returned from Babylon. (Ezra 2. 57, 58.)

AMITTAI, father to the prophet Jonah. (2Kings 14. 25; Jonah 1. 1.)

I. AMMAH, the name of a hill opposite Giah, not far from Gibeon, where Asahel was slain by Abner. (2Sam. 2. 24.)

II. AMMAH or UMMAH, a city belonging to the tribe of Asher. (Josh. 19. 30.) See UMMAH.

AMMI, a name bestowed on the ten tribes after their rejection, which denoted their final restoration and prosperity. (Hosea 2. 1.)

I. AMMIEL, the son of Gemal, of the tribe of Dan, one of the twelve sent to examine the land of Canaan. (Numb. 13. 12.)

II. The father of Machir, and of Bathsheba, the mother of Solomon. (1Chron. 3. 5; 2Sam. 9. 4, 5.)

III. The son of Obadedom, the Levite. (1Chron. 26. 5.)

I. AMMIHUD, a son of Ephraim. (Numb. 1. 10; 1Chron. 7. 26.)

II. The father of Shemuel, of the tribe of Simeon. (Numb. 34. 20.)

III. The father of Pedahel, of Naphtali. (Numb. 34. 28.)

IV. The father of Talmai, king of Geshur. (2Sam. 13. 37.)

I. AMMINADAB, of the tribe of Judah, son of Aram, and father of Naasson and Elisheba, the wife of Aaron. (Exod. 6. 23; Numb. 1. 27.)

II. The son of Kohath, a brother of Korah. (1Chron. 6. 22.)

III. The chariots of Amminadib are mentioned (Cantic. 6. 12), as being extremely light; he was probably a celebrated charioteer.

AMMISHADDAI, the father of Ahiezer, of Dan. (Numb. 1. 12; 10. 25.)

AMMIZABAD, son of Benaiah, who was a principal officer in David's armies. Ammizabad held a command under him. (1Chron. 27. 6.)

I. AMMON or BEN-AMMI, the son of Lot, by his younger daughter. (Gen. 19. 38.) His abode was east of the Dead Sea and Jordan, in the mountains of Gilead. He was the father of the Ammonites, a people connected with the Moabites, and almost always at enmity with Israel.

II. Ammon. See NO-AMMON.

III. Ammon, anciently a city of Marmorica. (Ptolemy.) Arrian calls it a place, not a city, in which stood the temple of Jupiter Ammon, entirely surrounded by sandy wastes. Pliny states that the oracle of Ammon was twelve days' journey from Memphis; and, among the *Nomi* of Egypt, he reckons the *Nomos Ammoniacus*. Diodorus Siculus remarks that the district where the temple stood, though surrounded with deserts, was watered by dews which fell nowhere else but in that country; it was adorned with fruitful

trees and springs, and full of villages. In the middle stood the acropolis, or citadel, encompassed with a triple wall; the first and inmost of which contained the palace; the others, the apartments of the women, the relations, and children, as also the temple of the god, and the sacred fountains for lustrations.

IV. Ammon, or HAMMON, or JUPITER AMMON, a god of the Egyptians. Ammon had a celebrated temple in Africa, where he was worshipped under the symbolic figure of a ram, or of a man with a ram's head.

The figure of Ammon in the accompanying illustration, bears in the right hand the sacred *tau*, supposed to have been the symbol of vital energy, and in the left a rod or sceptre.

The Egyptian Idol, Ammon.

AMMON or RABBATH-AMMON, the chief city of the Ammonites, was one of the most ancient cities recorded in Jewish history. It was afterwards named Philadelphia, having been rebuilt by Ptolemy Philadelphus, but is now a heap of ruins. The principal ruins lie along the banks of a small river, called Moiet (*water*), running through a valley, bordered on both sides by barren hills of flint. This stream, after passing underground several times, empties itself into the river Zerka. Robinson's *Palestine*.

Situated as it was on the borders of a plentiful stream, encircled by a fruitful region, strong by nature and fortified by art, nothing could have justified the suspicion or warranted the conjecture, in the mind of an uninspired mortal, that the royal city of Ammon, whatever disasters might befall it in the fate of war or change of masters, would ever undergo so total a transmutation as to become a desolate heap. Its ancient name is still preserved by the Arabs; and its site is now "covered with the ruins of private buildings, nothing of them remaining, except the foundations and some of the doorposts. The buildings, exposed to the atmosphere, are all in decay; so that they may literally be said to form 'a desolate heap.'" Burckhardt's *Travels in Syria*.

"Yet these broken walls and ruined palaces, which

attest the ancient splendour of Ammon, can now be made subservient, by means of a single act of reflection, to a far nobler purpose than the most magnificent edifices on earth can be, when they are contemplated as the monuments on which the historic and prophetic truth of Scripture is blended in one bright inscription." Keith *on the Evidence of Prophecy*.

"The dreariness of its present aspect is quite indescribable; it looks like the abode of Death: the valley stinks with dead camels; one of them was rotting in the stream, and, though we saw none among the ruins, they were absolutely covered in every direction with their dung. That morning's ride would have convinced a sceptic: how runs the prophecy?—'I will make Rabbah a stable for camels, and the Ammonites a couching-place for flocks; and ye shall know that I am the Lord!'"

"There are many ruins in the valley of Ammon, but in such utter decay that it is difficult to say what they have been. Such is the state of ancient Ammon, or, rather, of Philadelphia, for no buildings there can boast of a prior date to that of the change of name. Let me again cite the prophecy; how runs it?—'Ammon shall be a desolation! Rabbah of the Ammonites shall be a desolate heap! I will make Rabbah a stable for camels, and the Ammonites a couching-place for flocks; and ye shall know that I am the Lord!'" Lord Lindsay's *Travels*.

AMMONITES, a people descended from Ammon, the son of Lot, who dwelt on the east side of Judæa, beyond Jordan, in a region which ran from south to north, not far from Lake Asphaltitis, forming a portion of Arabia Petræa. The Ammonites destroyed its original inhabitants, a gigantic race, called Zamzummims, (Deut. 2. 19-21,) and seized upon their country. God forbade Moses to attack the Ammonites, (Deut. 2. 19,) because their land was not to be possessed by the children of Israel, it having been bestowed on the children of Lot for a possession; but most of the country belonging both to the Ammonites and the Moabites was conquered by the Amorites during the journeyings of the Israelites in the Wilderness. The Ammonites and Moabites afterwards joined together against the Israelites, and held them in bondage for seven years, until delivered by Jephthah, who took twenty of their towns, and "subdued them before the children of Israel." (Judges 11. 33.)

In the reign of Saul, Nahash their king laid siege to the city of Jabesh, or Jabesh Gilead; but Saul defeated them and relieved the place. (1Sam. 11. 11.) David punished Hanan, the son and successor of Nahash, for a gross and wanton affront put on some ambassadors whom he sent; took Rabbah, their capital, and subjected them to his authority. They remained tributary to Solomon, but afterwards occupied the towns of Reuben and Gad, when abandoned by those tribes who were taken captive by Tiglath Pileser, King of Assyria. Before this period, when the Syrians were oppressing the kingdom of Israel, the Ammonites committed the most inhuman excesses in Gilead, putting to death pregnant women and little children, (Amos 1. 13,) and afterwards during the persecution by Antiochus Epiphanes, they manifested their hatred to the Jews, and exercised great cruelties against those who dwelt near them. (1Macc. 5. 6-45.)

We know little of their government and pursuits, except that they were ruled by kings, and were chiefly engaged in agriculture. Jeremiah styles them uncircumcised: and it seems that they had by degrees abandoned the religion of their forefathers, and fallen into idolatry. Moloch was worshipped by them—an idol whose rites were particularly cruel and bloody—and

they caused their children to pass through fire in his honour. They were excluded from the congregation of Israel to the tenth generation, because they did not come to the relief of the Israelites when attacked in the Wilderness by the Amalekites; and because they were involved in the transgression of Balaam.

As their chief city bears awful marks of the fulfilment of prophecy, so also does the fate of the people. Justin Martyr, in the second century of the Christian era, says, that there were still many Ammonites remaining; but Origen, in the fourth, assures us that, in his day, they were known only under the general name of Arabians. In this manner was the prediction of Ezekiel (25. 10) accomplished, that the Ammonites may not be remembered among the nations, "being given in possession" to "the men of the east." It is generally supposed that this occurred about five years after the destruction of Jerusalem by the Chaldæans, B. C. 583, when Nebuchadnezzar ravaged the whole country round Judæa, and burnt Rabbah, carrying its inhabitants captive to Babylon. Cyrus probably released them; for we see them afterwards in the lands of their former settlement. The country was still populous when the Romans became masters of Syria, and some of the ten allied cities, called Decapolis, stood within its boundaries. Robinson's *Palestine*; Horne's *Introd.*

AMNON, the son of David and Ahinoam. Having conceived a criminal passion for his father's daughter Tamar, he violated her; and, two years after, when he was intoxicated at a feast made by Absalom, the brother of Tamar, the servants of the latter assassinated him. (2Sam. 13.)

AMOK, a priest; one who returned from Babylon. (Nehem. 12. 7, 20.)

I. AMON, king of Judah, son of Manasseh and Meshullemeth, daughter of Haruz of Jotbah. He began to reign A.M. 3362, at the age of twenty-two, and reigned but two years. (2Kings 21. 19, 21.) He forsook Jehovah and worshipped idols. His servants conspired against him, and slew him in his own house, B.C. 640. Calmet.

II. The governor of Samaria, who kept the prophet Micaiah in custody, by King Ahab's order. (1Kings 22. 26.)

AMORITES, אֲמֹרִי A people descended from Amor, the fourth son of Canaan, who gave his name to the country. (Gen. 10. 16.) They first peopled the mountains west of the Dead Sea, and had likewise establishments to the east of the same sea, between the brooks of Jabbok and Arnon, from whence they forced the Ammonites and Moabites. (Josh. 5. 1; Judges 11. 19-22.) Moses conquered their kings, Sihon and Og, in the year B.C. 1452. (Numb. 21.)

The prophet Amos, in speaking of their gigantic stature and valour, compares them to cedars, and their strength to that of the oak. The name Amorite, is often taken in Scripture for Canaanites generally. The lands which the Amorites possessed on this side Jordan, were given to the tribe of Judah, and those which they had enjoyed beyond this river, were divided between the tribes of Reuben and Gad. Calmet; *Encyc. Brit.*

I. AMOS, the fourth of the lesser prophets, who in his youth, had been herdsman at Tekoa, a small town about four leagues southward of Jerusalem.

The prophet was sent to the "king of Bashan," that is, to the people of Samaria, or the kingdom of Israel, to call them to repentance; having returned to Tekoa, he continued to prophesy, and he complains of the violent

endeavours made to force him to silence. He boldly remonstrates against the prevailing sins of the Israelites—idolatry, oppression, wantonness, and obstinacy, and warns them that their sins will at last end in the ruin of Judah and Israel, which he illustrates by the visions of a plumb-line, and a basket of summer fruit.

Amos was called to the prophetic office in the time of Uzziah, king of Judah, and Jeroboam, the son of Joash, king of Israel, "two years before the earthquake," (Amos 1. 1,) which, according to the Rabbins, and most of the modern commentators, happened in the twenty-fourth or twenty-fifth year of Uzziah, or in the year of the world, 3219, when this prince usurped the priest's office, and attempted to offer incense to the Lord. The first of the prophecies of Amos, in the order of time, are those of the 7th chapter. He there foretells the misfortunes which should befall the kingdom of Israel after the death of Rehoboam II. who was then living: he likewise predicts the death of Zechariah; the invasion of Israel by Pul and Tiglath Pileser, kings of Assyria; and the captivity of the ten tribes. The time and manner of the prophet's death are unknown.

St. Jerome calls Amos, "rude in speech, but not in knowledge;" (*Pref. Com. in Amos.*) applying to him what St. Paul modestly professes of himself. (2Cor. 11. 6.) The matter, however, as Bishop Lowth remarks, is far otherwise:—"Let any person who has candour and perspicuity enough to judge, not from the man, but from his writings, open the volume of his predictions, and he will, I think, agree that our shepherd is not a whit behind the very chief of the prophets. (2Cor. 11. 5.) He will agree, that as, in sublimity and magnificence, he is almost equal to the greatest, so in splendour of diction, and elegance of expression, he is scarcely inferior to any. The same celestial Spirit, indeed, actuated Isaiah and David in the court, and Amos in the sheep-folds; constantly selecting such interpreters of the Divine will, as were best adapted to the occasion, and sometimes 'from the mouth of babes and sucklings perfecting praise,' constantly employing the natural eloquence of some, and occasionally making others eloquent." Bishop Lowth's *Lectures*.

II. AMOS or AMOZ, the father of the prophet Isaiah, was said to be the son of King Joash, and brother to Amaziah. The Rabbins assert, that the father of Isaiah was also a prophet, according to a rule among them, that when the father of a prophet is called in Scripture by his name, it is an indication that he also had the gift of prophecy. (Clem. Alex. lib. 1. *Stromat.*) St. Augustin conjectured, (*De Civit. Dei*, lib. 18. c. 27,) that the prophet Amos was the father of Isaiah; but the names of these two persons are written differently. Besides, the father of Isaiah, as well as Isaiah himself, was of Jerusalem.

III. AMOS, son of Naum, and father of Mattathias, in the genealogy of our Saviour. (Luke 3. 25.)

AMPHIPOLIS, a city of Thrace, called in the time of the Byzantine empire, Chrysopoli. It was nearly surrounded by the river Strymon, whence its name. (Thucyd. iv. 102.) It was built by Cimon, the Athenian, about 470 years before the Christian era, and peopled with a colony of Athenians, to the number of 10,000. (Plin. iv. 17.) This city was a source of great annoyance to Philip, king of Macedonia, who drove the Athenians from it, and allowed the citizens to form a republic. Paul and Silas passed through this city after their deliverance from the prison at Philippi, on their way to Thessalonica. (Acts 17. 1.) The spot on which the ruins of Amphipolis are still to be traced, is called Jenikevi. Colonel Leake observes, "The position of

Amphipolis is one of the most important in Greece. It stands in a pass which traverses the mountains bordering the Strymonic Gulf, and it commands the only easy communication from the coast of that gulf, into the great Macedonian plains, which extend for sixty miles from beyond Meleniko to Philippi." There is a miserable place near it called Emboli by the Turks. Winer, *Biblisches Realwörterbuch*; Horne's *Introd.*

Coin of Amphipolis, with the Head of Apollo.

AMPHORA, a liquid measure among the Greeks and Romans, is often taken in the Vulgate in an appellative sense, for a *pitcher*, or vessel, to hold wine or water. Thus the passage in Luke 22. 10, is rendered, "There shall a man meet you bearing a *pitcher* of water,"—(*κεραμειον*) *amphoram aquæ portans*. At other times it is taken for a certain measure. The Roman amphora contained forty-eight sextaries, equal to about seven gallons one pint, English wine measure; and the Grecian or Attic amphora contained one-third more. Amphora was also a dry measure used by the Romans, and contained about three bushels.

AMPLIAS, mentioned by St. Paul, as one whom he particularly loved. (Rom. 16. 8.) It is not known, with certainty, who Amplias was; but the Greeks say that he was ordained Bishop of Odypopolis, in Mœsia, by St. Andrew; and was an apostolical person, at least one of the seventy-two disciples, and a martyr. His festival, in the Greek Kalendar, is observed Oct. 31. Calmet.

I. AMRAM, the son of Kohath, the son of Levi, married Jochebed, "his father's sister," by whom he had Aaron, Miriam, and Moses. He died in Egypt. (Exod. 6. 20.) Before the giving of the Law, it was permitted to marry a father's sister, but this was afterwards forbidden. (Levit. 18. 12.)

II. A descendant of Bani, one who, after the return from Babylon, separated from his wife, as he had married contrary to the law. (Ezra 10. 34.)

AMRAPHEL, king of Shinar, confederated with Chedorlaomer, king of Elam, and two other kings, to make war against the kings of Pentapolis, (viz.) Sodom, Gomorrah, and the three neighbouring cities, which they plundered; among the captives whom they carried off, was Lot, Abraham's nephew; but Abraham pursued them, retook Lot, and recovered the spoil. (Gen. 14.)

AMULET, an appended remedy; a thing put about the neck for preventing or curing.

That amulets were known, even in patriarchal times, is manifest from the instance of the ear-rings, which being instruments of superstition, Jacob obliged his people to deliver up to him, and which he buried under the oak near Shechem. (Gen. 35. 2-4.) Moses also, it is now well understood, alluded to the previous use of talismans and amulets, when he commanded the Israelites to bind his words for a sign upon their hands, and that they should be as frontlets between their eyes. (Exod. 13. 9.)

The amulets of the Jews were sometimes certain small roots hung about the neck; but more generally certain words in writing,—being, in the simpler form, extracts from the law supposed to be applicable to the case; but often mysterious names and characters disposed according to the rules of cabalistic art, frequently within the well-known hexagonal figure called the *shield of David*

or the *seal of Solomon*. This, with some other Jewish practices, appears to have arisen from the misapprehension, or gross perversion, of the passage in the law, Deut. 6. 7, 8.

Amulets were considered efficacious in the prevention or cure of diseases, and, indeed, the medical practice of the Jews consisted of little else. Lightfoot says, "There were hardly any people in the whole world, that more used or were more fond of amulets, charms, mutterings, exorcisms, and all kinds of enchantments." Their only difficulties respected the use of them on the Sabbath day; and the decision was, according to the Mishna, that a man should not go abroad with his amulet on the Sabbath, unless it had been prescribed by an approved "physician,"—that is, by one who was known to have cured at least three persons previously by the same means.

The forms of amulets were as much diversified as their objects, among the Orientals. Almost every different kind of gem had its virtue as an amulet, and besides these, amulets among the Egyptians, Greeks, and Romans, often bore the form of an ornament, such as crowns of pearls, necklaces of shells, gems, coral, &c.; with the heads and figures of gods, heroes, lions, horses, dogs, rats, birds, fish, and various grotesque and obscure objects.

Among the early Christians, amulets, against disease, were formed of materials having an imaginary connexion with the distemper; thus red against all morbid affections of a fiery or febrile character, crystal or glass against those that were watery or dropsical, and so of others.

The images and figures of different materials are mentioned by Irenæus, and some of the mysterious words engraven on them, are described and explained by contemporary historians. (Irenæus *Hæres*, c. 24; Hieron. c. 3. 1.) They were called amulets from their supposed efficacy in allaying evil, *quod malum amolitur*. Some derive the word from *amula*, a small vessel of lustral water carried about by the Romans.

A leathern Amulet found in a mummy, stained red.

It is a term also used by Pliny.

See DIVINATION; TALISMAN; TERAPHIM. Also Selden *de Diis Syriis*; Carpozov *de Teraphimis*; Jahn, *Bibl. Archæol.*; Winer, *Bibl. Worterbuch*.

I. AMZI, an ancestor of Ethan, one of those set

over the service of song in the house of the Lord. (1 Chron. 6. 46.)

II. The ancestor of Adaiah, one of those chiefs who dwelt at Jerusalem. (Nehem. 11. 12.)

ANAB, a city in a chain of mountains of the tribe of Judah, near which Joshua put to death some Amorites of gigantic stature. (Josh. 11. 21; 15. 50.) It lay south of Jerusalem; four miles east of Diospolis.

ANAH, son of Zibeon the Hivite, and father of Aholibamah, the wife of Esau. (Gen. 36. 2, 20, 24.) While feeding asses in the desert he discovered *springs of warm water*, not mules, as the English translators, and several others, understand the Hebrew word. Professor Robinson remarks, "that five or six miles south-east of the Dead Sea, and consequently in the neighbourhood of Mount Seir, is a place celebrated among the Greeks and Romans for its *warm baths*." There is some difficulty in the representation in Gen. 36. v. 2, of Anah being the daughter of Zibeon, for afterwards in v. 24, Anah is spoken of as a son. Rosenmüller thinks that a son and daughter of the same name are given.

ANAHARATH, a city belonging to the tribe of Issachar. (Josh. 19. 19.)

ANANIAH, one of the scribes who stood beside Ezra when he expounded the law. (Nehem. 8. 4.) He was also one of those that sealed the covenant. (Nehem. 10. 22.)

ANAK, אֲנָק ANAKIM, אֲנָקִים sons of Anak. (Numb 13. 33; Deut. 9. 2.) The Anakim were an ancient gigantic people, who inhabited before the invasion of the Israelites the neighbourhood of Hebron and some of the adjacent regions (Josh. 11. 21), but were destroyed, with the exception of a few traces in the Philistine towns of Gaza, Gath, and Ashdod. The word appears to be originally an appellative; *אֲנָק* *homines principes*. Gesenius.

According to Bochart, the Beneanak, or Anakim, retired to the territories of Tyre and Zidon, and gave them the general name of Phœnicia.

ANAMIM אֲנָמִים (Gen. 10. 13,) a people of Egyptian origin. Bochart was of opinion that these Anamim dwelt in the countries around the temple of Jupiter Ammon, and in the *Nasamonitis*.

The Septuagint in Genesis has *Ενεμετιμ*, or *Ανεμετιμ*, but in the Chronicles *Αναμιμ*. From these it is conjectured were descended the Amians and Garamantes, or foreign and wandering Anams.

ANAMMELECH, אֲנָמֶלֶךְ an idol of the Sepharvites. (2Kings 17. 31.) It appears to be compounded from אֲנָם = *אָנָם* image, statue, and מֶלֶךְ king. The first part occurs also in *Ενεμεσσαρ*. (Tobit 1. 2, 13, 15, 16.) i. e. *אֲנָמֶסֶר*. It is supposed to have signified the moon. Gesenius; Winer, *Bibl. Worterbuch*. See ADAMMELECH.

ANAN, one of those who sealed the covenant. (Nehem. 10. 26.)

ANANI, one of the sons of Elioenai. (1Chron. 3. 24.)

I. ANANIAH, the ancestor of Azariah, one of those who rebuilt the walls of Jerusalem. (Nehem. 3. 23.)

II. A city of Palestine, where the Benjamites dwelt after the captivity. (Nehem. 11. 32.)

I. ANANIAS, the son of Nebedæus, who was high priest, A.D. 47. He was sent as a prisoner to Rome by

Quadratus, governor of Syria, and Jonathan was appointed in his place; but being discharged by Claudius, in consequence of the protection of Agrippa, he returned to Jerusalem, where, as Jonathan had been murdered through the treachery of Felix, the successor of Quadratus, Ananias appears to have performed the functions of the high priest, as Sagan or substitute, until Ismael, the son of Phabæus, was appointed to that office by Agrippa. Before this Ananias St. Paul was brought; and the Apostle's prediction that God "would smite him," (Acts 23. 3,) was subsequently accomplished, when he was murdered in the palace by a body of mutineers, at the head of whom was his own son.

II. A Jew of Jerusalem, the husband of Sapphira, who, on being convicted of falsehood by St. Peter, fell dead at the feet of the apostle. (Acts 5. 1-5.)

III. A Christian of Damascus, who restored the sight of St. Paul, after his vision. (Acts 9. 10-18; 22. 12, 13.)

ANANUS. See ANNAS.

ANATH, the father of Shamgar, judge of Israel. (Judges 3. 31.)

ANATHEMA, a Greek word which denotes an excommunication attended with curses, and is of two kinds, judiciary and abjuratory. By the judiciary anathema, the offender is not merely excommunicated, but is totally separated from all intercourse with the faithful, and is delivered over soul and body to Satan. The abjuratory anathema is prescribed to converts who are obliged to anathematize their former heresy. In the New Testament, and in the censures of the primitive Church, we meet with an extraordinary form of censure, "anathema maranatha," which signifies "the Lord is come," and the denunciation "Let him be, anathema maranatha," may be interpreted, "Let him be accursed at the coming of our Lord." This was the most dreadful imprecation among the Jews; and has been thus paraphrased, "May he be devoted to the greatest of evils, and to the utmost severity of the Divine judgment: may the Lord come quickly to take vengeance upon him."

1. Excommunication in the slightest degree was separation from the Synagogue, and the suspension of intercourse with all Jews whatever. This separation continued for thirty days. Buxtorf, *Lex Chald.*; *Talm. Rabb.*

2. The second degree was denominated *חרם* the curse. It was pronounced with imprecations in the presence of ten men, and so thoroughly excluded the guilty person from all communion whatever with his countrymen, that they were not allowed to sell him any thing, not even the necessities of life. Buxtorf, *Lex. Chald.*; *Talm. Rabb.*; comp. John 16. 1, 2; 1 Cor. 5. 2-9.

3. The third degree of excommunication, which was more severe in its consequences than either of the preceding, was denominated *שם אתה* *Shem-atha*, or *אתה מרן* *Maran-atha*. It was a solemn and absolute exclusion from all intercourse and communion with any other individuals of the nation; the criminal was left in the hands and to the justice of God.

Whether the word *שמותה* be the same with *שם אתה* the Name (i.e. God) comes, and with *אתה מרן* our Lord cometh, is a question on which there is a difference of opinion. The latter is a Syro-Chaldaic phrase, and occurs nowhere else in the Bible, nor in any of the Rabbinical writers. It is very probable that in the time of Christ, the second degree of excommunication was not distinguished from the third, and that both were expressed by the phraseology which is used in 1 Cor. 5. 5, and 1 Tim. 1. 20, viz.: "unto deliver to Satan for the destruction of the flesh."

What the Apostle demands of the Corinthians respecting the offender "who loves not the Lord Jesus Christ," is, that they should exclude him from their society, that he should cease to be regarded as a member of the Church; he does not pretend to pronounce any further judgment upon him, but expressly refers to the judgment of God. (1 Cor. 16. 22.) Riddle's *Christ. Antiq.*; Jahn, *Bibl. Archæol.*

ANATHOTH, a city in the tribe of Benjamin, supposed to have been so named from Anathoth, the son of Becher, and grandson of Benjamin. (1 Chron. 6. 69.) According to Eusebius and Jerome, it was situated about three miles north of Jerusalem; Josephus says it was twenty furlongs distant. It is memorable as being the birth-place of the prophet Jeremiah. It was one of those towns allotted to the priests, (1 Chron. 6. 60,) and was also a city of refuge; Abiathar, the deposed high-priest, was confined at Anathoth by the order of Solomon. It was severely harassed by the Assyrians under Sennacherib, and only one hundred and twenty-eight of the men of Anathoth returned from Babylon. (Nehem. 7. 27; Ezra 2. 23.) It was a mean village in the time of Jerome, and is now a mass of ruins. Horne's *Introd.*

ANDREW, the apostle, the son of Jonas, and brother of the apostle Peter, was an inhabitant of Bethsaida, a town situated on the shore of the lake of Genesareth; and was by occupation a fisherman. He was first a disciple of John the Baptist by whom he was directed to our Saviour, and carried the joyful tidings to his brother Simon, and conducted him to the Messiah. The two brothers, however, did not remain long with Jesus at this time, but returned to their own home, and continued their former occupation, till, about a year afterwards, our Lord passing through Galilee, found them fishing upon the sea of Tiberias, where he gave them a miraculous draught of fishes, and thus made them fully sensible of his Divine power. Availing himself of the conviction, which that event had produced in their minds, our Lord told them that he was to make them "fishers of men," by employing them in preaching and propagating the Gospel; and they immediately left their nets and followed him.

When the miraculous powers of the Holy Ghost had descended upon the apostles to qualify them for the duties of their sacred mission, Scythia and the neighbouring countries were assigned to the apostle Andrew. In his way he travelled through Cappadocia, Galatia, Bithynia, and along the banks of the Euxine sea, instructing the inhabitants in the Christian faith. (Euseb. lib. iii. c. 1.) He afterwards travelled over Thrace, Macedonia, Thessaly, and Achaia, preaching and propagating the Gospel, and confirming, by various miracles, the truth of the doctrines which he taught. It is supposed that he founded a Christian church in Constantinople; and that he ordained the person named by St. Paul, (Rom. 16. 9,) the beloved Stachys, the first bishop of that place.

At length he came to Patræ, a city of Achaia, where he gave his last and greatest testimony to the truth of the Gospel. Ægeas, the proconsul, enraged at his boldly persisting to preach the doctrine of a crucified Saviour, commanded him to join in offering sacrifices to the heathen gods; and upon the apostle's refusal, he ordered that he should be severely scourged, and then sentenced to death on the cross. That death he cheerfully endured; his cross was shaped like the letter X, which from that circumstance commonly bears the name of St. Andrew's cross. To make his death the more painful

and lingering, he was fastened to the cross, not with nails but with cords. Having hung two days, praising God for his martyrdom and exhorting the spectators to a faith in those doctrines for which he suffered, he is said to have expired on the 30th of November, but in what year is uncertain. The Emperor Constantine caused his body to be removed to Constantinople, and to be interred with much solemnity in a church which he had built in honour of the Apostles. Epiphanius mentions the *Acts of St. Andrew*, a spurious book, which was used by the Encratites and Origenians. Lipsius *de Cruce*; *Cave's Lives of the Apostles*; *Horne's Introd.*

ANDRONICUS, a Jewish Christian, a kinsman and fellow-prisoner of St. Paul, who says that he was of note or in reputation among the apostles; by which expression we are not to understand that he was one of the number of the apostles, but that he was one of those early converts who were highly esteemed before the dispersion occasioned by the death of Stephen. (Rom. 16. 7.)

I. ANEM. See ENGANNIM.

II. A Levitical city in the tribe of Issachar. (Josh. 19. 21; 21. 29.)

I. ANER. Aner, Eshcol, and Mamre, were three Canaanite chieftains, who joined their forces with those of Abraham in pursuit of Chedorlaomer, Amraphel, and their allies, who had pillaged Sodom, and carried off Lot, Abraham's nephew. (Gen. 14. 24.) Calmet.

II. Aner, a Levitical city of the tribe of Manasseh. (1Chron. 6. 70.) It is said by Eusebius to be the same place as Taanach.

ANGEL, a spiritual intelligent substance, the first in rank and dignity among created beings. The word Angel is Greek, and signifies a messenger. The Hebrew מַלְאָכִים (from מָלַךְ in Arabic and Ethiopic, to send,) signifies the same thing. The angels are in Daniel (4. 13, &c.) called "watchers," from their vigilance; for the same reason they are in the remains of the Prophecy of Enoch named Egregori, which word imports the same in the Greek.

The term angel, therefore, in the proper signification of the word, does not import the nature of any being, but only an office; in which sense Angels are called the ministers of God and ministering spirits. That there are such beings invisible and imperceptible to our senses, endued with understanding and power superior to those of human nature, created by God and subject to Him, ministering to his Divine providence in the government of the world, are truths fully attested by Scripture. Nay, the existence of such invisible beings was generally acknowledged by the heathen, though under different appellations; the Greeks called them *demons*, and the Romans *genii* or *lares*. Epicurus seems to have been the only one among the ancient philosophers, who absolutely rejected them.

2. The Fathers who believed angels had bodies, were Clemens Alexandrinus, Origen, Cæsarius, Tertullian, and several others. Athanasius, St. Basil, St. Gregory Nyssen, St. Cyril, and St. Chrysostom, held them to be spirits only. Ecclesiastical writers make an hierarchy of nine orders of angels; others have distributed angels into nine orders, according to the names by which they are called in Scripture, and reduced these orders into three hierarchies; to the first of which belong Seraphim, Cherubim, and thrones; to the second, dominions, virtues, and powers; and to the third, principalities, archangels, and angels. The Jews reckon four orders or companies of angels, each headed by an arch-

angel; the first order being that of Michael; the second, of Gabriel; the third, of Uriel; and the fourth, of Raphael.

3. Though the Jews in general believed the existence of angels, there was a sect among them who denied the existence of all spirits whatever, God only excepted. (Acts 23. 8.) Before the Babylonish captivity, the Hebrews seem not to have known the names of any angel; the Talmudists say they brought the names of angels from Babylon. Tobit, who is thought to have resided in Nineveh some time before the captivity, mentions the angel Raphael, (Tobit 3. 17; 11. 2, 7,) and Daniel, who lived at Babylon some time after Tobit, has taught us the names of Michael and Gabriel. (Dan. 8. 16; 9. 21; 10. 21.) In 2Esd. 4. 1, the angel Uriel is mentioned. In the New Testament we find only Gabriel and Michael. (Luke 1. 19; Rev. 12. 7.)

4. The notion which we ordinarily attach to the word Angel is that of a created spirit, of greater purity, understanding and power, than belong to human nature, subjected to the Supreme Governor of the Universe, and ministering to his Providence, by his appointment in the government of the world; yet invisible and imperceptible to our senses, unless assuming a corporeal form, for the manifestation of some particular act of power. That beings of such a nature exist, has been an article of faith in almost every religion of the world, and it is a belief extremely consistent with the natural dictates of reason. In the works of creation with which we are acquainted, we find a regular gradation pervading the whole, from the rudest specimen of brute matter up to man, the lord and ruler of the lower world. Minerals, vegetables, and animals, rise regularly in dignity one above the other; the lowest species of these kingdoms of nature, ascends but little above the highest in that immediately beneath it; and nowhere do we find wide transitions or gaps in the scale of existence. It can scarcely therefore be believed that the interval between man and the Supreme Being, which presents so wide a chasm, is totally unpeopled. It is more natural to suppose that the interval is filled up by numerous orders of intelligent creatures, to whom the blessing of existence has been imparted by the Creator, and who are in a variety of ways subservient to the accomplishment of the purposes of his Providence.

5. The doctrine of an evil as well as a good genius, influencing the fate of every member of the human race, seems to have been borrowed from the Persian school, and did not prevail among the earlier Greeks and Romans. We hear only of the evil genius of Brutus, which appeared to him before the battle of Philippi. The words of Our Saviour (Matt. 18. 10,) are supposed to give countenance to the belief in guardian angels. "Take heed," says he to his disciples, "that ye despise not one of these little ones; for I say unto you, That in heaven their angels do always behold the face of my Father which is in heaven." This seems to imply, that children at least are under the protection of these divine beings; and, with this limitation, the doctrine may be considered as by no means inconsistent with the dictates of reason.

6. On the question of guardian angels, Bishop Horley observes, "That the holy angels are often employed by God in his government of this sublunary world is indeed to be clearly proved by Holy Writ. That they have power over the matter of the universe analogous to the power over it which men possess, greater in extent but still limited, is a thing which might be reasonably supposed, if it were not declared. But it seems to be confirmed by many passages of Holy Writ. That the evil angels possessed before their fall the like powers,

which they are still occasionally permitted to exercise for the punishment of wicked nations, seems also evident. That they have a power over the human sensory, which they are occasionally permitted to exercise, and by means of which they may inflict diseases, suggest evil thoughts, and be the instruments of temptations, must also be admitted."

7. The word which our translators have rendered Lucifer after the Vulgate, is in the original לילי Sept. *εωσφορος*, and means *the shining, glittering star*; thus, by a remarkable allegory, a term which imports the harbinger of light, and which was in that sense applied to the beautiful planet that ushers in the morning, the *Eosphorus* and *Phosphorus* of the Greeks, became the appellation of the prince or leader of those apostate spirits who rebelled against their Maker. The term Satan, by which also he was distinguished, occurs first in the Book of Job, and seems to have been of Chaldean original. Beelzebub, another appellation of the prince of darkness, was of still later origin among the Jews.

On the subject of the fall of the angels, but slight information can be gleaned from Scripture. Yet this doctrine is so in unison with the fundamental tenets of the Sacred Writings and the leading principles both of the Mosaic and Gospel dispensations, that it has been almost universally admitted as an article of belief both by Jews and Christians; who have generally considered the serpent or tempter, by whom the sin of our first parents was accomplished, as the chief of this impious and rebellious host. A doctrine entirely analogous is preserved in the traditions of the ancient Persians, Babylonians, and Arabians. In the Shasta, one of the most ancient of the sacred writings of the Brahmins, the fall and punishment of certain of the angels is minutely detailed.

8. In the prophetic style, everything is called an angel that notifies a message from God, or executes the will of God. A prophetic dream is an angel. The pillar of fire that went before the Israelites, is called God's angel. The winds and flames of fire are angels to us, when used by God as a voice to teach us, or as rods to punish us. So that God is properly said to reveal by his angel, what He makes known either by voice, dream, or vision, or any other manner of revelation.

The angel of a nation denotes its king or ruler. Ecclesiastical officers are named angels; in the epistles to the Seven Churches, the chief pastor of each being addressed by that title. Simply taken, the name sometimes signifies any visible agent made use of by God in bringing about the designs of his Providence.

"Angel of the waters." (Rev. 16. 5.) Rivers and fountains of waters may not unaptly signify the original countries or seats of empires, in distinction from the provinces; and the angel here denotes the minister or instrument employed in executing the judgment of God upon the kingdom of the beast.

"Angel who had power over fire," (Rev. 14. 18.) signifies the minister of God's vengeance, fire being taken as the emblem of his wrath. So the priest in the Temple service, who had the charge of the fire on the altar, was called the priest over fire.

Rulers have the same name given them in Rev. 13. 6 as is given to angels in Heb. 1. 14, with the necessary exception of the term spirits. "The angel of the bottomless pit." (Rev. 9. 11.) These figurative locusts are represented as having a king, though the natural locusts as Agur observes (Prov. 30. 27) have none; and this king is that evil spirit, who, from the constant mischief he is doing in the world, is called the Destroyer.

"Michael and his angels fought against the dragon." (Rev. 12. 7.) This state of the Church is described under the form of a severe contest between faithful

Christians and the abettors of idolatry, wickedness, and error, which is to terminate in a complete victory over the enemies of true religion. Calmet; Buck; Watson; Robert Hall; Dwight.

ANGER. A painful emotion or passion excited in the human mind, on receiving any injury or affront, and which prompts us to repel the injury, and to avenge it on the offending person. When moderate in degree, anger is more commonly known by the name of resentment; and when it degenerates into excessive violence, and takes a firm and lasting hold of the mind, it is called revenge.

Anger is either instinctive or deliberative. The first is a rash and ungovernable emotion, which we have in common with the brutes; it is exercised without reflection, and seems implanted in us for the immediate purpose of self-preservation, and the repelling of injury, when reason might come too late to our assistance. It may be excited by the lower animals, and even by inanimate objects; for we not only feel resentment at the dog that bites, and the ox that gores, but at the stone that strikes us, or the knife that hurts us. But this is an emotion that soon gives way to reflection, and ceases immediately when the danger is removed. It is only a rational being, capable at once of inflicting an injury, and of wilfully purposing to do us harm, and who may be made sensible of the punishment we intend to inflict in return, that can become an object of permanent and deliberate resentment. St. Paul himself, as Bishop Butler remarks, has justified the moderate indulgence of resentment, in the well known precept, "Be ye angry, and sin not." (Eph. 4. 26.) "Which," says that author, "though it is by no means to be considered as an encouragement to indulge ourselves in anger, the sense being certainly this, Though ye be angry, sin not; yet here is evidently a distinction made between anger and sin; between the natural passion and sinful anger." Yet, certainly, resentment is but too liable to exceed its due limits, and to degenerate into the most violent and culpable malevolence.

Anger is often used for its effects, *i. e.* punishment, chastisement. The magistrate is "a revenger to execute wrath." (Rom. 13. 4; Numb. 16. 46.) "The weapons of his indignation," or anger, (Jer. 50. 25,) are the instruments God uses in punishment, such as war, famine, barrenness, diseases, &c., but particularly war, which is the conjunction of all misfortunes, and the fulness of the cup of God's wrath. Calmet; Paley's *Moral Philos.*; Bishop Butler's *Sermons*.

ANGLE. (Isai. 19. 8; Habak. 1. 15.) From the prophet Isaiah, we learn that the Egyptian fisheries were in his day reckoned among the most valuable possessions of the nation, and that they knew the art of catching fish, not only with the line, and by spearing, but also with the net. This is fully confirmed by the monuments, on which we find all these modes of fishing delineated. The severe denunciation of Isaiah of the Divine wrath, includes little more than a portion of the first plague actually inflicted by Moses.

In the Scripture account of the first plague, it is mentioned that "the fish that was in the river died;" (Exod. 7. 21;) this was a fearful aggravation of the plague, for fish was a favourite article of food in Egypt, and few employments are more frequently depicted on the monuments, than those connected with catching and curing fish on the river.

We are informed that the ancient Egyptians had a religious scruple against using any of the produce of the sea; hence, the fisheries of the Nile were peculiarly

valuable to them. There were numerous varieties of fish, so as to gratify every palate; and hence, when the Israelites began to murmur against Moses, in the wilderness, one of their chief complaints was, "We remember the fish, which we did eat in Egypt freely." (Numb. 11. 5.)

Some writers have rashly asserted, that fresh-water fish do not abound in Egypt, but their error has arisen from having visited the country when the waters of the Nile were at the lowest. Advantage has been taken of their authority, to impugn the Scripture narrative; but a reference to the work of M. Michaud will set the question at rest, where he gives an account of the present state of the fisheries on the lake Menzaleh.

ANI, a Levite, a musician, when David brought the ark from the house of Obadedom. (1Chron. 15. 18.)

ANIAM, the son of Shemidah, of Manasseh, mentioned in the genealogy of that tribe. (1Chron. 7. 19.)

ANIM, a town belonging to the tribe of Judah, mentioned as situated "in the mountains," but its site is unknown. (Josh. 15. 50.)

ANIMAL, an organized living body, endowed with sensation. The Hebrews distinguished animals into pure and impure, clean and unclean; or those which might be eaten and offered, and those whose use was prohibited. The sacrifices which they offered, were (1.) of the beeev kind: a cow, bull, or calf. The ox could not be offered, because it was mutilated. Where it is said in our version oxen were sacrificed, we are to understand *bulls*. (Exod. 20. 24.) (2.) Of the goat kind: a he-goat, a she-goat, or kid. (Levit. 22. 21.) (3.) Of the sheep kind: a ewe, ram, or lamb. When it is said sheep are offered, rams are chiefly meant, especially in burnt offerings, and sacrifices for sins. Besides these three sorts of animals used in sacrifices, many others might be eaten, wild or tame. All that have not cloven hoofs, and do not chew the cud, were esteemed impure, and could neither be offered nor eaten.

Commentators on the Scriptures are much divided with relation to the legal purity, or impurity of animals. It would appear that this distinction obtained before the Flood, since God commanded Noah, (Gen. 7. 2,) to carry seven couple of clean animals into the ark, and two of unclean. Some are of opinion that this distinction is symbolical, and that it denotes the moral purity which the Hebrews were to aim at, and the impurity which they were to avoid, according to the nature of these animals. Cyril; Origen.

Others believe, that God intended to preserve the Hebrews from the temptation of adoring animals, by permitting them to eat the generality of those which were regarded as gods in Egypt, and leading them to look with horror on others, to which likewise divine honours were paid. Tertullian (*cont. Marcion*) thought that God proposed by this method, to accustom the Jews to temperance; by enjoining them to deprive themselves of several sorts of food.

Nothing separates one people from another, more than that one should eat what the other considers unlawful, or rejects as improper. Those who cannot eat and drink together, are never likely to become intimate. We see an instance of this in the case of the Egyptians, who, from time immemorial, had been accustomed to consider certain animals as improper for food; and therefore, to avoid all intercourse with those who ate, or even touched, what they deemed defiling. (Gen. 43. 32.) Hence they and the Hebrews could not eat together. Accordingly, they assigned that people, when they had come down to

dwelt in their country, a separate district for their residence: for some of the animals which the Hebrews ate, were among them, not indeed unclean, but sacred, being so expressly consecrated to a deity, that they durst not slaughter them. *Bible Nat. Hist.*

The Vulgate has been consulted principally in the following enumeration of unclean animals; for more ample details, see Bochart, *Hieroz.*

UNCLEAN ANIMALS.

Quadrupeds.

The Camel.	The Hare.
The Porcupine, or Hedgehog.	The Hog.

Birds.

The Eagle.	The Screech Owl.
The Ossifraga.	The Cormorant.
The Sea eagle.	The Ibis.
The Kite.	The Swan.
The Vulture, and its species.	The Bittern.
The Raven, and its species.	The Porphyrio.
The Ostrich.	The Heron.
The Owl.	The Curlew.
The Moor hen.	The Lapwing.
The Sparrow-hawk.	

Creeping Quadrupeds.

The Weasel.	The Cameleon.
The Mouse.	The Eft.
The Shrew Mouse.	The Lizard.
The Mole.	The Crocodile.

"That in so early an age of the world we should find a systematic division of quadrupeds, so excellent, as never yet, after all the improvements in Natural History, to have become obsolete, but on the contrary, to be still considered useful by the greatest masters of the science, cannot but be looked upon as truly wonderful." Michaelis.

ANIMAL WORSHIP. The reasons of the choice of animals consecrated to receive worship among the Egyptians, the great practisers of this superstition, are now involved in much "obscurity; some, as an able writer states, are probably connected with the beasts themselves, some with astronomical allegories, and some perhaps with now lost historical facts. The ox, the sheep, and the ichneumon were held in almost general veneration; the cat and the asp had their distinguishing homage; and the Egyptian custom of selecting some in preference to others, as the objects of veneration by different cities, extended to other countries, and was adopted by the Lemnians and Thessalians. The bloody wars occasioned by the variety of homage paid to animals, such as that caused by the inhabitants of Cynopolis eating the oxyrinchus, and the Oxyrinchians the dog, prove how fiercely the superstition was cherished. Herodotus says, that the hippopotamus was sacred only in the Papremitic Nome, and he adds the *ερχελευς* and *ενυδρις* to the list of hallowed fishes, and the *χηναλαπης* to that of hallowed birds. Sacred serpents were kept at Thebes, and in the mysteries and many other pagan rites they were pre-eminently conspicuous. "The cats," Herodotus observes, "when dead are carried to sacred buildings, and after being embalmed, are buried in the city Bubastis. Dogs and ichneumons are buried wherever they happen to die. The shrew-mouse and the hawk are removed to Buto; the ibis to Hermonopolis; bears and wolves are buried in whatever place they die, but not like the dogs in consecrated chests."

The solar deities of the Egyptians are usually represented with the head of a hawk. In the procession at Dendera, several of these hawk-headed divinities appear with an ornament upon the head, composed of the circle,

Spearing.

Fishing with the Net.

and a serpent with an inflated neck, or, as it is usually termed, a basilisk. Burton's *Excerpt. Hieroz.*

The serpent or basilisk, in Coptic, is called ouro; and in Arabic, the words حريش *harish*, and اركش *arkash*, are applied to serpents, which words are evidently combinations of حر *har*, and ار *irr*, *fire, light*; Hebrew אור *Or*. It is, therefore, supposed that this serpent is the representative of that sound, and consequently, the hieroglyphical emblem of *Hor* or *Horus*, the deified personification of solar light and heat.

The worship of the serpent appears to have been at an early period, almost universal; which may be accounted for, by considering that reptile as the earliest type of the solar influence, which in later times gave place to other emblems, possibly on account of the venomous properties of the creature, which rendered it an unsuitable represen-

tation of that, from which it was supposed all good proceeded.

Hence the substitution of the bull as the solar emblem whose name in Hebrew is שׁוֹר *shoir*, Arabic ثور *tsawr*, or *sawr*, giving in accordance with the hieroglyphical emblem of Hor or Horus, the *Sheor* or *Sior*, "the prince of light," typified by an animal whose race has always been of the utmost benefit to mankind.

Lands were set apart for the support of the sacred animals; men and women were employed in feeding and maintaining them. If a person killed any of these creatures designedly, he was punished with death; if involuntarily, his punishment, in some cases, was referred to the priests: but if the animal killed were either a cat, a hawk, or an ibis, and that whether by design or not, the culprit was to die, without mercy, and the enraged multitude seldom waited even for the formalities of a trial. A Roman, in the time of one of the Ptolemies, who killed a cat accidentally, was torn in pieces by the populace on the spot, in spite of all the efforts of the king's guard to save him. When any of these animals died, great lamentation was made, and vast sums expended on their funeral. We are told that in the beginning of the reign of Ptolemy Philadelphus, the bull Apis dying, his keeper expended more than fifty talents of silver, or 13,000*l.*, on his interment.

The Israelites often debased themselves by an imitation of this demonolatry, for which they were severely punished by God, because it was one grand design of the Mosaic law to keep their theology free from these gross appendages. Wait's *Jewish Antiq.*; Young; Williams. See APIS; CAT; CROCODILE; IBIS; ICHNEUMON; SERPENT.

ANISE, an annual, umbelliferous plant, the seeds of which have an aromatic smell, a pleasant warm taste, and a carminative quality. By *Ανηθον*, translated anise, (Matt. 23. 23) the dill is meant, as in the margin. No other versions have fallen into the error. Our translators seem to have been first misled by a resemblance of the words; the Greek of anise, is *ανισον*; but of dill, *ανηθον*. *Bibl. Nat. Hist.*; Celsii *Hierobot.*

Animal Worship. From the Egyptian Monuments.

Anise.

ANKLETS. The "tinkling ornaments about their feet," mentioned by the Prophet Isaiah (3. 18,) speaking of the Jewish women, are supposed to be anklets, which are thus described by Mr. Lane in his *Modern Egyptians*.

"Anklets of solid gold or silver are worn by some ladies, but are more uncommon than they formerly were. They are of course very heavy, and knocking

together as the wearer walks, make a ringing noise; hence it is said in a song, 'The ringing of thy anklets has deprived me of reason.'

Mr. Roberts, in his *Oriental Illustrations*, has the following passage in reference to this subject.

"From the sixteenth to the twenty-fourth verses of this chapter (Isai. 3.) we have an accurate description of the ornaments and manners of a Hindoo dancing girl.

"'Walk with stretched-forth necks.' When the females dance, they stretch forth their necks, and hold them awry, as if their heads were about to fall off their shoulders. 'And wanton eyes;' the margin, 'deceiving with their eyes.' As the votaries glide along, they roll their eyes (which are painted), and cast wanton glances on those around. 'Walking and mincing;' margin, 'tripping away.' Some parts of the dance consist of a tripping or mincing step, which they call *tatte tatte*. The left foot is put first, and the inside of the right keeps following the heel of the former, 'making a tinkling with their feet.' This sound is made by the ornaments which are worn round their ankles. The first is a large silver curb, like that which is attached to a bridle; the second is of the same kind, but surrounded by a great number of small bells; the third resembles a bracelet; and the fourth is a convex hoop, about two inches deep."

ANNA, a prophetess, the daughter of Phanuel, of the tribe of Asher. This pious widow constantly attended the morning and evening service at the Temple; and, at the advanced age of eighty-four years, when the venerable Simeon was uttering his hymn of thanksgiving at the presentation of Christ in the Temple, likewise began to praise God, and to speak of the Messiah to all those who were waiting for the redemption of Israel. (Luke 2. 36-38.)

ANNAS, or, according to Josephus, ANANUS, was a high priest of the Jews. He obtained the pontificate under Quirinus, proconsul of Syria, but was deprived of it during the reign of Tiberius by Valerius Gratus, governor of Judæa. The dignity was transferred, first to Ismael, the son of Phabæus, and shortly after to Eleazar, who held the office one year, and was then succeeded by Simon; he, after another year, was followed by Joseph or Caiaphas, the son-in-law of Annas, A.D. 26. As Caiaphas continued in office until A.D. 35, Annas appears to have acted as his substitute, or sagan, and enjoyed great influence jointly with him; hence we read in Luke 3. 2, "Annas and Caiaphas being the high priests." (John 18. 13,24; Acts 4. 6.)

ANNUNCIATION, the tidings brought by the angel Gabriel to the Virgin Mary, of the incarnation of Christ. A festival called the Annunciation is kept by the Church on the 25th of March, in commemoration of these tidings. The festival is undoubtedly of great antiquity, as there is mention made of it in a sermon which goes under the name of Athanasius; others carry it up to the time of Gregory Thaumaturgus, because there is a sermon likewise attributed to him upon the same subject; but the best critics reject both these writings as spurious. There is no doubt that this festival was observed before the time of the Council of Trullo, A.D. 692, in which there is a canon forbidding the celebration of all festivals in Lent, except the Lord's-day and the feast of the Annunciation. In the Romish church on this feast, the pope performs the ceremony of marrying or christening a certain number of maidens, who are presented to him in the church, clothed in white serge, and muffled up from head to foot.

With regard to the mode of celebrating this festival

in early times, the records of antiquity furnish very scanty information; notwithstanding that Bernard, after Chrysostom, entitles it *radix omnium festorum*,—"the root of all festivals." We find, however, many homilies which were composed expressly for this day; and some hymns, in the works of John of Damascus, and of his contemporary, Cosmus of Jerusalem. Riddle's *Christ. Antiq.*

ANOINT. Anointing, or unction, was a ceremony in frequent use among the Hebrews, and to sanctify by unction was a practice observed by the ancient Egyptians. The Jews anointed from principles of health and cleanliness, as well as religion. They anointed the hair, head, and beard. (Psalm 133. 2.) At their feasts

Anointing.

and rejoicings, they anointed the whole body, but sometimes only the head or feet. (John 12. 3; Luke 7. 38; Matt. 6. 17.) The anointing of dead bodies was practised to preserve them from corruption, (Mark 14. 8.) and they also anointed kings and high priests at their inauguration. The private anointings which we learn to have been performed by the prophets, (2Kings 9. 3; 1Sam. 10. 1; 16. 13,) were only prophetic symbols or intimations that the persons, who were thus anointed, should eventually receive the kingdom. The sacred vessels of the tabernacle and temple were also anointed. (Exod. 30. 26,28.)

Anointing in general was emblematical of a particular sanctification, a designation to the service of God, to a holy and sacred use. God prescribed to Moses the manner of making the oil, or the perfumed ointment, with which the priests and the vessels of the tabernacle were to be anointed; it was composed of the most exquisite perfumes and balsams, and was prohibited for all other uses. Ezekiel upbraids the people for having made a like perfume for their own use, ch. 23. 41.

Under the law, persons and things set apart for sacred purposes, were anointed with the holy oil; which appears to have been a typical representation of the communication of the Holy Ghost to Christ and to his Church. Hence the Holy Spirit is called an unction or anointing (1John 2. 20,27); and Our Lord is called the Messiah, or the Anointed One, to denote his being called to the offices of mediator, prophet, priest, and king, to all of which he was consecrated in our nature by the anointing of the Holy Ghost. (Matt. 3. 16,17.)

ANOINTING OIL. The *holy anointing oil* to be used for the consecration of the priests and other religious purposes, (Exod. 30. 23-25,) was composed of the following ingredients:—

Pure myrrh	500 shekels.
Sweet cinnamon	250 —
Sweet calamus	250 —
Cassia	500 —
Olive oil	1 hin.

Dr. Adam Clarke makes the following computation:—

	lbs.	oz.	dwt.	gr.
500 shekels of the first and last, make .	48	4	12	21½
250 of the cinnamon and calamus .	24	2	6	10½

There is an allusion to the ingredients of this sacred perfume in Eccles. 24. 15. The use of aromatics in the East may be dated from the remotest antiquity. "Ointment and perfume," says Solomon, "rejoice the heart." (Prov. 27. 9.) They are still introduced, not only upon every religious and festive occasion, but as one essential expression of private hospitality and friendship. *Bible Nat. Hist.*

ANSWER. This word has other significations, besides the common one in the sense of reply. Moses having composed a thanksgiving after the passage of the Red Sea, Miriam, it is said, *answered*; meaning, that Moses with the men on one side, and Miriam with the women on the other side, sung the same song, as it were, in two choruses or divisions; of which one *answered* the other. (Exod. 15. 21.) So also 1Sam. 29. 5, where they sung in distinct choruses.

This word is likewise taken for, to *accuse*, or to *defend judicially*. (Gen. 30. 33.)

To *answer* is likewise taken in a bad sense; as when it is said that a son *answers* his father insolently, or a servant his master. (John 18. 22; Rom. 9. 20; 2Cor. 1. 9.)

To *answer*, is also used in Scripture for the commencement of a discourse, when no reply to any question or objection is intended. This mode of speaking is often used by the Evangelists; "And Jesus *answered* and said." It is a Hebrew idiom. Watson.

ANT, נמלה (Prov. 6. 6; 30. 25.) A small insect known in the earliest times for its social habits, its economy, unwearied industry, and prudent foresight. It has offered a pattern of commendable frugality to the profuse, and of unceasing diligence to the slothful. (Prov. 6. 6.)

Solomon calls the ants "exceeding wise," for though "a people not strong, yet they prepare their meat in the summer." He therefore sends the sluggard to these little creatures, to learn wisdom, foresight, care, and diligence. (Prov. 6. 6; 30. 25.)

That the ant hoarded up grains of corn against winter for its sustenance, was very generally believed by the ancients, (Plin., Ælian., Ovid *Metam.*) though modern naturalists seem to question the fact. Boerner, *Samm-lungen aus der Naturgeschichte*.

Bochart, in his *Hieroicozon*, has cited numerous passages from ancient naturalists, all concurring in opinion that ants cut off the heads of grain, to prevent their germinating; and it is observable that the Hebrew name of the insect is derived from נמל to cut off, and is the word used for cutting off ears of corn in Job 24. 24.

"Till the manners of exotic ants are more accurately explored, it would be rash to affirm that no ants have magazines of provisions; for although, during the cold of our winters in this country, they remain in a state of torpidity, and have no need of food, yet in warmer regions, during the rainy seasons, when they are probably confined to their nests, a store of provisions may be necessary for them. Even in Northern climates, against wet seasons, they may provide in this way for their sustenance, and that of the young brood, which, as Mr. Smeatham observes, are very voracious, and cannot bear to be long deprived of their food; else why do ants carry worms, living insects, and many other such things, into their nests? Solomon's lesson to the sluggard has been generally adduced as a strong confirmation

of the ancient opinion; it can, however, only relate to the species of a warm climate, the habits of which are probably different from those of a cold one; so that his words, as commonly interpreted, may be perfectly correct and consistent with nature, and yet be not at all applicable to the species that are indigenous to Europe. But I think if Solomon's words are properly considered, it will be found that this interpretation has been forced upon them, rather than fairly deduced from them. He does not affirm that the ant which he proposes to his sluggard as an example, laid up in her magazine stores of grain; but that, with considerable prudence and foresight, she makes use of the proper seasons to collect a supply of provisions sufficient for her purposes. There is not a word in them implying that she stores up grain or other provision. She prepares her bread, and gathers her food, namely, such food as is suited to her—in summer and harvest—that is, when it is most plentiful; and thus shows her wisdom and prudence by using the advantages offered to her. The words thus interpreted, which they may be without any violence, will apply to the species among us, as well as to those that are not indigenous." Kirby and Spence, *Introd. to Entomology*; Roget's *Bridgewater Treatise*. Huber on the *Ant*.

ANTEDILUVIANS. Little can be known of the mode of life, manners, and institutions of the primeval race of mankind. Scripture alone furnishes such authentic history, as Moses was inspired to record of the Antediluvians; of which geology affords a corroboration. Their stature and duration of life is only to be gathered from circumstantial evidence; and chronologists differ as to the length of days, weeks, years, recorded in Scripture, which bear upon the span of ancient man's existence. The life of Noah is an intermediate criterion; the greater portion of which was passed before the Deluge; and his wisdom handed down to his posterity, whatever of education, of religion, of science, the new race of man could have derived from their forefathers. It is not to be supposed that a native principle of virtue did not appertain to the social state of the Antediluvians, although their general depravity was punished by an overwhelming infliction of Almighty power. That men were strong and martial, perhaps gigantic and ferocious, as well as long-lived, before the Flood, is to be presumed. The vestiges of animal nature, in a fossil state in our national collections, are huge, as well as greatly various, in dimension, according to the nature of every object, and that some of the human genus consisted of giant tribes, may be presumed from the testimony of the Sacred History. This is also confirmed by the Greek and Latin poets, as well as the historians, particularly by Pausanias and Philostratus. That the great beasts of the waters, shores, and forests were of extreme dimensions, the names leviathan, behemoth, mammoth, sometimes of positive signification, and at others figuratively as types of the evil power, are sufficiently evident. The ivory in fossils, the vast skeleton remains uncrumbled on the shore, or dug up from excavations and mines, and to be viewed in modern collections, attest the fact. That beasts became predatory before the Deluge, was a consequence of the fall of man, and that man himself was in many cases little better than a savage, and a robber, is also to be presumed. His pursuits were probably nomade and agricultural, without great principalities, but under patriarchal authority, wherein the head of each hamlet governed his own family of children, and his descendants of several generations, the robust, scarcely-clothed sinews, and undaunted soul of the juvenile members of the petty society, keeping in check the

outrages of invidious colonies; and the wide expanse of a scantily peopled world, affording the barriers of desert and mountain and river to shield each community from surprise, the patriarch being, as it were, a petty king. The only thing we know of their religious rites is, that they offered sacrifices both of the fruits of the earth and of animals; but whether the blood and flesh of the animals, or only their milk and wool, were offered, is a disputed point.

The Antediluvians spent their time in luxury and wantonness, to which the abundant fertility of the first earth invited them, rather than in discoveries or improvements, which probably they stood much less in need of than their successors. Some authors have supposed astronomy to have been cultivated by the Antediluvians, though this is probably owing to a mistake of Josephus; but it is to be presumed that the progress they made therein, or in any other science, was not extraordinary, it being even very doubtful whether letters were so much as known before the Flood. As to their polity and civil constitutions, we have not any circumstances whereon to build conjecture. It is probable that the patriarchal form of government, which certainly was the first, was set aside much sooner among the race of Cain than among that of Seth, and that then their communities were but few, and consisted of vastly larger numbers of people than any formed since the Flood; or rather, it is a question whether, after the union of the two great families of Seth and Cain, there were any distinction of civil societies, or diversity of regular governments at all. It is more likely that all mankind then made but one great nation, though living in a kind of anarchy, divided into several disorderly associations; which, as it was almost the natural consequence of their having, in all probability, but one common language, so it was a circumstance which greatly contributed to that general corruption which otherwise perhaps could not have so universally overspread the Antediluvian world. And for this reason, chiefly, it seems, so soon as the posterity of Noah were sufficiently increased, a plurality of tongues was miraculously introduced, in order to divide them into distinct societies, and thereby prevent any such total depravation for the future.

Many reasons have been given for the Antediluvian longevity, and for the subsequent abridgment of human life; but they all fail in some point or other. How the Deluge may have produced such a change, is another question into which we need not enter.

ANTHEDON or **AGRIPPIAS**, a city on the sea-coast of Palestine, in the land of the Philistines, near Gaza. Herod gave it the name of Agrippias, in honour of the favourite of the Emperor Augustus. The name Carianthodon, in the *Chronicon Paschale*, means simply, the town of Anthedon. *Encyc. G. A.*

ANTHROPOPATHY. A metaphor, by which things belonging to creatures, and especially to man, are ascribed to God. Instances of this abound in the Scriptures, by which they adapt themselves to human modes of speaking, and to the limited capacities of men.

In the consideration of *anthropopathies*, the two following important rules must be constantly kept in mind.

1. That we understand them in a way and manner suitable to the nature and majesty of the Almighty, refining them from all that imperfection with which they are debased in the creatures, and so attribute them to the Deity.

2. When human affections are attributed to Jehovah,

we must be careful not to interpret them in a manner that shall imply the least imperfection in Him; but must thereby conceive (1) either, a pure act of his will, free from all perturbations to which men are liable, or else, (2) the effect of such human affections, the antecedent being put for the consequent,—that is, one thing being expressed while another thing is understood, which is usually its effect, or at least follows it,—a figure of very frequent occurrence in the sacred writings. Bishop Lowth; Jones; Horne's *Introd.*

ANTICHRIST, the name of that man of sin who is expected to precede the second coming of our Saviour; and who is represented in Scripture, and in the Fathers, as the epitome of everything impious, cruel, and abominable. Nebuchadnezzar, Cambyzes, Antiochus Epiphanes, and Nero, were so many antichrists or forerunners of antichrist. (Jerome in Dan. 11. 24.)

St. John informs us, that, in his time, there were many antichrists, (1 John 2. 18,) meaning heretics and persecutors. But the term is generally employed to denote a great power, that was to arise at a period subsequent to the days of the Apostles, and which, in an extraordinary degree, was to corrupt the doctrine, blaspheme the name, and persecute the followers of Christ. (2 Thess. 2. 3-10.) Bishop Hurd very justly observes, that the word signifies, "a person of power, actuated with a spirit opposite to that of Christ." For, to adopt the illustration of the same learned writer, "As the word Christ, is frequently used in the apostolic writings, for the doctrine of Christ, in which sense we are said 'to put on Christ,' to 'grow in Christ,' or, to 'learn Christ,' so antichrist, in the abstract, may be taken for a doctrine subversive of the Christian; and when applied to a particular man, or body of men, it denotes one who sets himself against the spirit of that doctrine." *Sermons.*

The Romanists imagine they view in the prophetic picture of antichrist, imperial Rome, elated by her victories, exulting in her sensuality and her spoils, polluted by idolatry, persecuting the people of God, and finally falling, like the first Babylon; whilst a new and holy city, represented by their own communion, filled with the spotless votaries of the Christian faith, rises out of its ruins, and the victory of the cross is completed over the temples of Paganism. This scheme has had its able advocates, at the head of whom may be placed, Bossuet, Grotius, and Hammond. Irenæus intimates, (but rather obscurely,) his own opinion, that by antichrist was meant the Roman empire, and especially one particular emperor who would fill the throne. But he observes, very wisely, that it is far better and safer to wait for the accomplishment of the prophecies contained in that book, (the Revelations,) than to frame conjectures respecting their meaning and application.

With respect to the commonly received opinion that the Church of Rome is antichrist, Mede and Newton, Daubuz and Clarke, Lowman and Hurd, Jurieu, Vitrings, and many other eminent Protestants, who have written upon the subject, concur in maintaining that the prophecies of Daniel, St. Paul, and St. John, point directly to this church. This was likewise the opinion of the first Reformers; and it was the prevalent opinion of Christians in the earliest ages, that antichrist would appear soon after the fall of the Roman empire. Gregory the Great, in the sixth century, applied the prophecies concerning the beast, in the Revelations, the man of sin, and the apostasy from the faith, mentioned by St. Paul, to him who should presume to claim the title of universal priest, or universal bishop in the Christian church; and yet, his immediate successor, Boniface III.,

received from the tyrant Phocas, the precise title which Gregory had thus censured. At the synod of Rheims, held in the tenth century, Arnulphus, bishop of Orleans, appealed to the whole council, whether the Bishop of Rome was not the antichrist of St. Paul, "sitting in the temple of God," and perfectly corresponding with the description of him given by St. Paul. In the eleventh century, all the characters of antichrist seemed to be so united in the person of Pope Hildebrand, who took the name of Gregory VII., that Johannes Aventinus, a Romish historian, speaks of it as a subject in which the generality of fair, candid, and ingenuous writers agreed, that at that time was the reign of antichrist. The Albigenses and Waldenses, who may be called the Protestants of the twelfth and thirteenth centuries, expressly asserted in their declarations of faith, that the Church of Rome was antichrist. Keith on the *Evidence of Prophecy*; Bishop Hurd on the *Prophecies*; Riddle's *Manual Christ. Antiq.*

Lightfoot thinks that antichrist consists of three branches, and that this term may be justly applied to Judaism, Pagan Rome, and Popery. (*Opera*, tom. ii.) Kett is of opinion, that the three great forms of antichrist which were to continue steadfastly in great power, are Popery, Mohammedanism, and Infidelity. (*Hist. Interp. Proph.*) Faber maintains, that revolutionary France is antichrist, and that this formidable power was revealed in all its terrors in 1792. *Dissert. on Proph.*

ANTIGONUS SOCCHÆUS, the father and instructor of Sadoc, who founded the sect of the Sadducees; the Jews say he was himself the originator of that sect. Antigonus was a great master and teacher of the Jewish law, and as such succeeded Simon the Just, who was high-priest B.C. 293. Calmet.

ANTI-LIBANUS, a chain of mountains in Cælo-Syria, among which the river Jordan has its source, running parallel to another chain called Libanus. Each of these chains, or ridges of mountains, extends from North to South. Anti-Libanus, is towards the East, and commences to the North of Upper Galilee, from which it is separated by Mount Hermon. The name has been received from the Greeks, but is unknown to the natives, and being employed somewhat arbitrarily by historians and topographers, has occasioned considerable obscurity in their writings. The natives call the chain Djebel Es-Sharke, or the Eastern mountains.

The general elevation of Anti-Libanus is inferior to that of the western range; but about its southward termination, where it divides, in order to send its branches east and west of the Jordan, the ridge rises loftily, and overtops all the other summits of Lebanon. Our information concerning Anti-Libanus generally, is less complete than that which we possess respecting the parallel range. We know, however, that it has fewer inhabitants, and is scarcely anywhere cultivated. Indeed, it is not equally cultivable; for it would appear from a comparison of the dispersed notices in Burckhardt, that its western declivities, towards the great valley of Baalbec, are completely barren, without trees or pasture.

The highest mountain of the region, bears the distinct name of Jebel Essheikh, and is, unquestionably, Mount Hermon; the supposed height of which is about 12,000 feet, and its summit is clad with perpetual snow. In ancient times, the snow was carried to the neighbouring towns for the purpose of cooling liquors (Prov. 25. 13, and perhaps Jer. 18. 14); a practice common in the East at the present day. It is composed of primitive calcareous rock, of a fine grain, with a sandy slate upon the

higher parts. Like all limestone strata, they present a great number of caverns, to which, as places of retreat, frequent allusion is made in the Books of Samuel and of the Kings.

The mountain of Amana, mentioned in Cantic. 4. 8, is the southern part or summit of Anti-Libanus, probably so called because the river Amana descended from it, which waters the territories of Damascus. (Gesenius.) In Deut. 4. 48, this mountain is called Sion, which has been supposed to be either a contraction, or a faulty reading for Sirion; but Bishop Pococke thinks it probable, that Hermon was the name of the highest summit of this mountain, and that a lower part of it had the name of Sion. This obviates the geographical difficulty which some interpreters have imagined to exist in Psalm 133. 3, where the Mount Sion mentioned in connexion with Hermon, is generally understood to be Mount Sion, in Jerusalem, more than thirty miles distant. According to the bishop's supposition, the dew falling from the top of Hermon to the lower parts, might well be compared in every respect to the "precious ointment upon the head, that ran down unto the beard, even upon Aaron's beard, that went down to the skirts of his garments," and that both of these, in this sense, are very proper emblems of the blessings of unity and friendship, which diffuse themselves throughout the whole society. Bishop Pococke's explanation is approved by Mr. Buckingham. Horne's *Introd.*; Robinson's *Palestine*.

ANTIOCH, the name of a celebrated city of antiquity, formerly the capital of Syria, now called *Antakia*, by the Arabs. Antioch is situated on the side of the river Orontes*, the Nahr el Aassy, a stream of no great importance, although described by Ovid in the second book of his *Metamorphoses* to be the largest river then known. It is about twenty miles distant from the Mediterranean, into which the Orontes empties itself. It is about 700 miles distant from Alexandria and about the same distance from Constantinople.

There were no less than sixteen cities called Antioch, in Western Asia, all founded by Seleucus Nicanor, the first Syro-Grecian monarch after Alexander the Great, to perpetuate the name of his father, Antiochus. But the Scripture mentions only two, (1) Antioch, the capital of Syria, and (2) Antioch, the capital of Pisidia, a small province of Asia Minor.

For power and dignity Antioch in Syria was little inferior to Seleucia and Alexandria, and the inhabitants were celebrated for their luxury, effeminacy, and licentiousness. Josephus says, that it was the third great city of all that belonged to the Roman provinces; it was called *Antiochia apud Daphnem*, or Antioch near Daphne, on account of a celebrated grove near it of cypress and laurel (*δαφνων*), in which were splendid temples to Apollo and Diana. It was well known among the Jews, for the *jus civitatis* which Seleucus Nicanor had given to them, with the Grecians and Macedonians; and for the wars of the Maccabæans with its kings.

Antioch is one of the most celebrated cities in the annals of the Christian Church. Here, on a memorable occasion, recorded in the Acts of the Apostles, the "disciples," as they were termed, or the converts to Christianity, were first termed *Christians*, a few years after Our Saviour's ascension—a distinction which has since continued, and will ever continue in the world. Antioch was the birth place of St. Luke the Evangelist; St. Paul and St. Barnabas remained in it a considerable time,

* Pliny says that Antioch was divided by the river, from which we may conclude that there was a suburb here to the north; of which, however, there are no traces left. Robinson's *Palestine*.

Antioch.

preaching the Gospel; St. Paul was baptized in the river Orontes, which waters it; and to this day, a gate of the modern city, in the north-eastern quarter leading to Aleppo, is invariably called *Bab-Boulous*, or the gate of St. Paul. St. Ignatius, the friend and disciple of St. John the Apostle, and a martyr for the Christian cause, was, if not the first, among one of the first of its bishops; here, too, at the end of the fourth century of the Christian era, the illustrious St. John Chrysostom, its bishop, flourished, and preached, and the city continued for centuries the seat of the chief patriarch of Asia.

Antioch has suffered more severely than almost any other city from fire, famine, and earthquake, and has endured all the evils that a frequent change of masters could inflict. In B. C. 65, on the breaking up of the kingdom of Syria, it was captured by Pompey, and in A. D. 115 it was almost utterly destroyed by an earthquake, and in 155 by a fire. In 260 it was surprised by Sapor, and its inhabitants massacred; and in the reigns of Constantine the Great, Julian, and Theodosius, it suffered severely from famine and pestilence. In 524 and 526, it was almost entirely ruined by successive shocks of earthquake, and in 540, and again in 574, it was captured by Chosroes. In 638, it fell into the hands of the Saracens, and remained in their possession till 966, when it was recovered by the Greek emperor; but it was in 970 again taken by the Saracens, and remained with them till 1098, when it was captured by the Crusaders, who established there a principality, which long survived their kingdom of Jerusalem. In 1268 it was wrested from them by Bibars, the Mamaluke sultan of Egypt, when 40,000 Christians were put to the sword, and twice that number made captives. Since that period it has remained in the hands of the Mohammedans, though frequently changing masters among them, and has now nothing left but its ruins to bear witness to its ancient prosperity.

Modern Antioch is situated thirty miles south of Scanderoon, and fifty-three west of Aleppo, in long. $36^{\circ} 45' E$, and lat. $35^{\circ} 17' N$. Kinneir says, "The houses are in the Turkish fashion, small, but neatly built of hewn stone. But though this be the case with some of them, the majority are constructed of slight materials; and unlike the houses of other Syrian or rather Eastern towns, have sloping roofs, covered with thin tiles. There

are ten or twelve mean and unimportant mosques, with low minarets; but there is not at present a single Christian church!"

The earthquake of the 13th of August, 1822, laid Antioch in ruins. The Jewish missionary, Wolfe, who was present at the awful scene, transmitted to his friends a most vivid description of this catastrophe. Pliny Fisk, an American missionary, who visited the place two years after, says, that "walls, mosques, and houses are seen lying prostrate in every direction, filling the streets with ruins." He did not estimate the population at more than four or five thousand, which is explained by his fellow-traveller, Mr. Madox, who states that four or five thousand perished by the earthquake. Mr. Buckingham says the Jews assemble for worship in the house of their chief, but the Christians meet in a cave.

The country in the neighbourhood of Antioch is described by Captains Irby and Mangley, as particularly rich and fertile, even in its present neglected state.

Great numbers of medals and gems have been found in the neighbourhood of Antioch, especially during the winter season, when the ground has been laid bare by heavy rains. Many Phœnician coins have been thus discovered, as well as those of several of the Seleucidæ, the founders and beautifiers of the ancient city; and others of the period of Julius Cæsar and Augustus. Brewster's *Edin. Encyc.*; Horne.

Antioch in Syria. Head of Augustus.

ANTIOCH OF PISIDIA, a city mentioned in Acts 13. 14, was situated in Asia Minor, and, as above stated, built originally by Seleucus Nicanor, in honour of his father, Antiochus. Hitherto, on the authority of D'Anville, and subsequent geographers, this Antioch has been considered to occupy the site of the modern town of Aksher. There was a synagogue of Jews in this town. St. Paul and St. Barnabas, in their journey

M

from Perga, visited it, and St. Paul preached an eloquent discourse, which the Gentiles who heard it wished him to deliver again to them on the ensuing Sabbath. This request irritated the Jews, who perceived that some of the citizens were inclined to embrace Christianity, and they raised seditious reports against St. Paul and his companion, by which they were compelled to leave the city. (Acts 13. 14-51.) Mr. Arundel, in his *Visit to the Seven Churches of Asia*, observes that Antioch in Pisidia, was the capital of the province, and the metropolitan see; it is so named in the *Notitia*. The chief men of the city persecuted and expelled the Apostles, who "shook off the dust of their feet against them." In a signal manner has their rejection of the Gospel been visited: their city has been destroyed, and even the site of it has nearly disappeared. (Horne's *Introd.*) "Not a Christian now resides in it, except a single Greek in the khan. Not a church, nor any priest to officiate where Paul and Barnabas, and their successors, converted thousands of idolaters to the true faith."

Antioch in Pisidia.

ANTIOCHIS, the concubine of Antiochus Epiphanes, who gave her the cities of Tarsus and Mallo, that she might receive their revenues for her own benefit. This was regarded by the inhabitants as an insupportable mark of contempt, and they took up arms against the king, who was obliged to march in person to reduce them. (2Macc. 4. 30.) Calmet.

ANTIOCHUS, a common name of the Syro-Grecian kings. The actions of many of these princes are foretold by the prophets, and several of them are intimately connected with Jewish history, as we find related in the books of the Maccabees.

I. ANTIOCHUS SOTER was the son of Seleucus Nicanor, and obtained the surname of Soter, or Saviour, from having hindered the invasion of Asia by the Gauls. He began to reign B.C. 276, and conferred many immunities upon the Jews of Asia.

II. ANTIOCHUS THEOS, or the God, was the son and successor of Antiochus Soter. He married Berenice, daughter of Ptolemy Philadelphus, king of Egypt. Laodice, his first wife, seeing herself despised, poisoned Antiochus, Berenice, and their son, who was intended to succeed to the kingdom. After this, Laodice procured Seleucus Callinicus, her son by Antiochus, to be acknowledged king of Syria. These events were foretold by the prophet Daniel. (11. 6.)

III. ANTIOCHUS THE GREAT, son of Seleucus Callinicus, began to reign B.C. 219. He made war

Antiochus III.

against Ptolemy Philopator, king of Egypt, but was defeated near Raphia. Thirteen years after, on the death of Ptolemy Philopator, Antiochus resolved to become master of Egypt. He immediately seized Cœlo-Syria, Phœnicia, and Judea; but Scopas, general of the Egyptian army, entered Judæa, while Antiochus was occupied by the war against Attalus, and was at first successful; he was, however, soon overcome by Antiochus. In consequence of the Jews readily submitting to him, Antiochus permitted them throughout his dominions to live according to their own laws. He left two sons, Seleucus Philopator and Antiochus Epiphanes, who both became kings of Syria.

IV. ANTIOCHUS EPIPHANES, son of Antiochus the Great, was one of the most sanguinary persecutors of the Jewish nation that ever lived. He is the subject of the predictions of the prophet Daniel. (Ch. 11. 21-29.) Though his Syrian flatterers gave him the appellation of Epiphanes (*illustrious*), the epithet of *vile* or *despicable*, given him by the prophet (v. 21), agrees better with his true character; for he disgraced himself by such profligate conduct that the historian Polybius, his contemporary, and others after him, instead of Epiphanes, more correctly called him Epimanes, or the madman. This prince designed nothing less than the utter extirpation of Judaism: he commanded the statue of Jupiter Olympus to be placed upon the altar of the Temple at Jerusalem, and a sow to be offered in sacrifice. These profanations, and his other oppressions, aroused the family of the Maccabees, who bravely resisted his forces. Antiochus, filled with indignation, was hastening into Judæa to make Jerusalem (as he threatened) a grave for all the Jews, but Divine vengeance pursued him, and, falling from his chariot, he bruised his limbs, and died in the most excruciating tortures, B.C. 160. He was succeeded by his son Antiochus Eupator.

Antiochus IV.

V. ANTIOCHUS EUPATOR, son of Antiochus Epiphanes, was only nine years old when his father died. Lysias, who had usurped the government of the kingdom in the name of the young prince, led against Judæa an army of one hundred thousand foot, twenty thousand horse, and thirty-two elephants. (1Macc. 6; 2Macc. 13.) He besieged and took the fortress of Bethsura, and thence marched against Jerusalem. The city was ready to fall into his hands, when Lysias received the news that Philip, whom Antiochus Epiphanes had intrusted with the regency, had come to Antioch to take the government. He therefore proposed an accommodation with the Jews, and after concluding a peace, immediately retired into Syria, with the young king and his army.

In the mean time, Demetrius Soter, son of Seleucus Philopator, and nephew to Antiochus Epiphanes, to whom of right the kingdom belonged, having escaped from Rome, where he had been detained as a hostage, came into Syria. Finding the people disposed for revolt, Demetrius headed an army, and marched directly to Antioch, against Antiochus and Lysias. The inhabitants opened their gates, and delivered to him

Lysias and the young king, whom he to be put to death, without suffering them to appear in his presence. Antiochus Eupator reigned only two years.

Antiochus V.

VI. ANTIOCHUS THEOS, son of Alexander Balas, an impostor who personated Antiochus Eupator and killed in battle Demetrius Soter, was treacherously put to death by Tryphon, his minister, after a short reign, B.C. 139.

Antiochus VI.

VII. ANTIOCHUS PIUS, SOTER, or SIDETES, the son of Demetrius Soter, reigned from B.C. 139 to B.C. 131. He confirmed the privileges which the kings of Syria had granted to the Jews, permitted Simon, the high-priest, to coin money with his own stamp, declared Jerusalem and the Temple exempt from royal jurisdiction, and promised other favours, as soon as he obtained peaceable possession of the kingdom which had belonged to his ancestors. Simon, being treacherously murdered by Ptolemy, his son-in-law, in the castle of Docus, near Jericho, the murderer immediately sent to Antiochus Sidetes to demand troops, that he might recover for him the country and cities of the Jews. Antiochus came in person, with an army, and besieged Jerusalem, which was bravely defended by John Hyrcanus. The siege was a protracted one, but at length the king entered the city, beat down the breastwork above the walls, and returned to Syria. Three years after, he marched against the Persians or Parthians, and was accompanied in the expedition by John Hyrcanus, high-priest of the Jews, who, it is supposed, obtained the surname of Hyrcanus, from some gallant action which he performed. Antiochus waged war with the Parthians, and is believed to have been murdered during the campaign. Appian and Ælian, however, state that he committed suicide. Justin; Diod. Sic.; Josephus, *Ant.*

Antiochus VII.

I. ANTIPAS, ANTIPAS HEROD, or ANTIPATER, was one of the sons of Herod the Great, by his wife Cleopatra, who was a native of Jerusalem. His father Herod, in his first will, had appointed him his successor; but altered this afterwards, in favour of Archelaus. On Herod's death, Antipas, advised by

the orator Irendus, (who had been intimately acquainted with all the secrets of Herod's court,) assisted by Salome the sister of his father, accompanied by his mother Cleopatra, supported by numerous relations and friends, and favoured by many who had at first been the partisans of Archelaus, went to Rome to dispute the validity of his father's last will. Augustus, however, adopted a middle course; and, instead of bestowing the whole of Herod's dominions upon any one of his sons, assigned a portion to each. Antipas received for his share the greater part of Galilee, with the country beyond Jordan, and the yearly amount of his revenue is estimated by Josephus at two hundred talents. He began his government by strongly fortifying the city Sephoris. He also built a very fine city on the banks of the lake Gennesareth, and gave it the name of Tiberias, in honour of the Roman emperor, Tiberius Cæsar.

Antipas at first married the daughter of Aretas, king of Arabia, and lived with her a long time; but, having stopped at the house of his brother Philip on his way to Rome, he became enamoured of his wife Herodias, who was also niece of the brothers. As she discovered in him an ambitious mind, congenial to her own, she was easily persuaded to prefer him to her husband; and it was agreed between them that, after he should have returned from Rome and divorced his wife, she would be ready to join him in Galilee. The daughter of Aretas having been informed of this agreement found means to withdraw to the Arabian court, and acquainted her father of the intrigue and intention of her husband. Antipas, in the mean time, married Herodias; and was thus involved in a war with Aretas, which lasted four years, and in which he was very unsuccessful. His new marriage was considered by the whole nation of the Jews as an unlawful connexion, and he was personally reproved for his conduct by John the Baptist. Enraged at this freedom, and instigated by Herodias, he cast John into prison, (pretending, according to Josephus, that the assembling of such multitudes to hear the instructions of the Baptist was dangerous to the security of his government,) and afterwards, though with apparent reluctance, caused him to be beheaded. (Mark 6; Luke 13. 32.)

Antipas was so hard pressed by the king of Arabia that he was reduced to beg assistance from Tiberius, who immediately commanded his general, Vitellius, to secure Aretas as his captive, or to send his head to Rome. While Herod and Vitellius were concerting their measures at Jerusalem, they received intelligence of the death of Tiberius; and Artabanus, in the mean time, succeeded Aretas in his kingdom. Antipas, accompanied by Vitellius, had an interview with the new king near the Euphrates; and, having concluded a peace, he gave a splendid entertainment on the banks of that river.

About six years after this event, Agrippa Herod (the brother of Herodias and the nephew of Antipas), having received from Caligula very extensive dominions, with the title of king, the ambitious Herodias, envious of this distinction, persuaded her husband to solicit from the emperor the same regal dignity; and, in the hope of aiding his cause by her arts and her presents, she accompanied him to Rome. The emperor, however, not only refused his request, but, having been rendered suspicious of his fidelity by the representations of Agrippa, deprived him of his dominions, and banished him to Lyons, in Gaul. Understanding, however, that Herodias was the sister of his friend Agrippa, he offered her a pardon, and promised also to repay the sum which she had lent to her brother, but she refused to avail herself of his generosity; and, as she had been the cause of her husband's

disgrace, she determined to share his fate. Antipas, at the time of his banishment, had enjoyed his tetrarchy forty-three years. The time and manner of his death are not known; but it appears from Josephus that he spent his last days in Spain.

It was this Herod Antipas who treated Our Lord with such indignity when he was sent to him by Pontius Pilate. (Luke 23.) He had before laid snares for Our Saviour; who, detecting his insidious intentions, termed him a *fox*. (Luke 13. 32.) Josephus; *Univ. Hist.*; Brewster's *Edinb. Encyc.*

II. ANTIPAS, a "faithful martyr," mentioned in Rev. 2. 13. He is said to have been one of our Saviour's first disciples, and to have been put to death in a tumult at Pergamos by the priests of Æsculapius, who had a celebrated temple in that city. His Acts, as the records of martyrs were styled in the primitive Church, relate that he was burnt in a brazen bull.

I. ANTIPATER, an Idumæan, father to Herod the Great. He was, both for antiquity of family and for riches, the principal person of Idumæa. Eusebius, *Hist. Eccles.*

Antipater was strongly attached to the party of Hyrcanus against Aristobulus, who disputed with him the sovereign authority. In the civil war which ensued, Antipater paid his court so effectually to the dominant faction as to obtain for the weak-minded Hyrcanus the protection of Cæsar, and, for himself, the procuratorship of Judæa. Raised to this commanding eminence, he named Phasael, his eldest son, governor of Jerusalem, and confided to the younger, the artful and unscrupulous Herod, the charge of Galilee. Antipater was at length poisoned at the instigation of Malichus, who, after his death, took possession of the government of Jerusalem. Josephus, *Antiq.*

II. ANTIPATER, son of Herod the Great and Doris, his first wife. His father caused him to marry the daughter of Antigonos, who had been beheaded at Antioch by order of Antony. After attempting to poison his father, Antipater was sent to prison and loaded with irons, where he was at length put to death by order of Herod, who died himself a few days after. Josephus, *Antiq.*

ANTIPATRIS, a town of Palestine, in Samaria, situated on the road from Jerusalem to Cæsarea, in the beautiful and fertile plain of Sharon, anciently called, according to Josephus, Caphir-Saba, or Capharsalama. It was rebuilt and enlarged by Herod the Great, who called it Antipatris, in honour of his father Antipater. It was about seventeen miles from Joppa, forty-two from Jerusalem, and twenty-six from Cæsarea. St. Paul was brought here, after his apprehension at Jerusalem, on his way to the Roman governor at Cæsarea. (Acts 23. 31.) Its site is generally supposed to be that on which a miserable village, called El Mukhalid, now stands, consisting of about fifteen dwellings, constructed in the form of Egyptian huts.

Antipatris, during the Roman era, appears, from the facts mentioned by Josephus, to have been a place of considerable military importance. Vespasian, while engaged in prosecuting the Jewish war, halted at Antipatris two days, before he resumed his career of desolation by burning, destroying, and laying waste the cities and villages in his way. This city is supposed to have been the same with Capharsalama, mentioned in the first book of Maccabees, where a battle was fought, in the reign of Demetrius, between Nicanor, a man who was an implacable enemy of the Jews, and Judas Maccabæus, when five thousand of Nicanor's army were slain, and the rest

saved themselves by flight. (1 Macc. 7. 26-32.) Winer, *Biblisches Realwörterbuch*.

ANTITYPE; that which answers to a type or figure. A type is a model, mould, or pattern; that which is formed according to it, is an antitype.

The word *αντιτυπος* occurs twice in the New Testament;—first, in the Epistle to the Hebrews, 9. 24; secondly, in 1 Peter 3. 21, where its genuine import has been much controverted. A type, in its primary and literal meaning, simply denotes a rough draught, or less accurate model, from which a more perfect image is made; but in the sacred and theological sense of the term, a type may be defined to be a symbol of something future and distant, or an example prepared and evidently designed by God to prefigure that future thing. What is thus prefigured, is called the antitype. Outram *de Sacrificiis*.

"It is essential," observes Bishop Van Mildert, "to a type, in the scriptural acceptation of the term, that there should be a competent evidence of the Divine intention in the correspondence between it and the antitype—a matter not left to the imagination of the expositor to discover, but resting on some solid proof from Scripture itself that this was really the case." *Bampton Lectures*.

ANTOTHIJAH, the son of Shashak, one of the chief men of Benjamin. (1 Chron. 8. 24.)

ANTOTHITE. Abiezer, one of David's mighty men, is mentioned by this name in 1 Chron. 11. 28.

ANTONIA, a strong tower or fortress of Jerusalem, which stood on a steep rock adjoining the north-west corner of the Temple, on the site of a citadel that had been erected by Antiochus Epiphanes, in order to annoy the Jews, and which, after being destroyed by them, was rebuilt by the Maccabæan prince, John Hyrcanus, B.C. 135. (Josephus, *Ant.* xv. 11.) Herod the Great repaired it with considerable splendour, uniting in its interior all the conveniences of a magnificent palace, with ample accommodations for soldiers. This citadel (in which a Roman legion was always quartered) overlooked the two outer courts of the Temple, and communicated with its cloisters by means of secret passages, through which the military could descend and quell any tumult that might arise during the great festivals. This was the guard or "watch" to which Pilate alluded. (Matt. 27. 65.) The tower of Antonia was so named by Herod in honour of his friend Mark Antony; and this citadel is the "castle" into which St. Paul was conducted (Acts 21. 34, 35), and of which mention is made in Acts 22. 24. As the Temple was a fortress that guarded the whole city of Jerusalem, so the tower of Antonia was a fortress that entirely commanded the Temple. It was taken by Titus at the memorable siege of Jerusalem, who then soon became master of the Temple and the city. Horne.

ANUB, the son of Coz, of the tribe of Judah. (1 Chron. 4. 8.)

ANUBIS, the name of an Egyptian deity, who was represented by a figure with a dog's head; but his name is also inscribed on a number of different figures which have no apparent connexion with a dog.

Some have supposed that this name is derived from *נבנ* to prophesy, or *נבנ* to bark. Hence the divinity, who was supposed to warn the Egyptians of the approach of the inundation of the Nile, was represented with the head of a dog, in accordance with the principles upon which they formed their hieroglyphics.

Anubis was the keeper of the temples, and the guar-

dian of the great principles of heat, humidity, and fecundity. He was sometimes designated by the symbol of Capricornus, whose goat's horns represented the rays of heat, and whose fishy tail implied moisture. In an ancient sculpture given by Montfaucon, he is depicted with his foot on a crocodile, surmounted with a star; intimating his connexion with the Nile, and with the constellation Sirius. He was considered as the symbol of the fertility of the Nile, which begins to swell when the dog-star rises, and was also supposed to keep guard at the tropics, and to prevent the sun from passing beyond them. His worship was so celebrated, that a city was built in Egypt, and called after him Cynopolis. He was considered by the Greeks and Romans the same as Mercury, and is therefore called by Plutarch, Hermanubis. He is for this reason represented with the symbols, and as performing the functions, of Mercury, holding a caduceus, and leading souls to the shades. (Apul. *Metam.* lib. ix.) All these circumstances are recognised and exhibited in various gems of the Gnostics. In the representation from a gem here given, he stands without any symbol of Mercury, and is purely the Egyptian god. The inscription is scarcely legible, but the words appear to be a corruption of Hebrew and Greek, which signifies *the sun or star has shone*, alluding, probably, to his identity with Sirius.

𐤀𐤍 was an idol of the Chaldeans. (Isaiah 46. 1.) Among the Zabians the planet Mercury is so named. It occurs, also, in many Chaldee names of persons. The names of the Babylonian kings are mostly compounded with 𐤀𐤍 and other names of deities.

Under the name 𐤀𐤍𐤍 there is mentioned an idol of the Avites. (2Kings 17. 31.) The Hebrew commentators render it *latrator*, a *barker*, from 𐤀𐤍𐤍 and they assert that this idol was made in the form of a dog. Traces of the ancient worship of an idol in the form of a dog have been discovered in Syria, even in modern times. Ikenii, *Dissert. de Nibchas*.

A Gnostic Gem—basalt—in the collection of Viscount Strangford.

I. APAMEA, a city of Syria, on the Orontes, built, it is supposed, by Seleucus I., king of Syria, or by his son Antiochus Soter, in honour of Queen Apamea, the wife of Seleucus, and mother of Antiochus. It was probably the same with Shepham, a city of Syria. (Numb. 34. 10, 11.) Calmet.

II. APAMEA, a city in Phrygia, built by Antiochus Soter, on the ruins of Kibotus, which signifies *Ark*.

"The Mosaic account of the Deluge is confirmed by a coin struck at Apamea, in the reign of Philip the Elder. On the reverse of the medal is represented a kind of square chest, floating upon the water, and a man and woman are advancing out of it to the dry land, while two other persons remain within. Above it floats a dove, bearing an olive branch; and another bird, possibly a raven, is perched upon its roof. In one of the

front panels of the chest, is the word *Nwe*, in ancient Greek character." Horne.

Apamean Medal.

APE, 𐤀𐤍 Koph; Gr. *κηφος*. (1Kings 10. 22; 2Chron. 9. 21.) This animal appears to be the same with the *ceph* of the Ethiopians, of which Pliny speaks. (viii. 19.) Solinus, speaking of Ethiopia, says that Cæsar the Dictator, at the games of the circus, had shown the monsters of that country, *cephs*, whose hands and feet resembled those of mankind.

The fleet of Solomon is said to have brought apes from Ophir, or rather monkeys, as the word denotes several species.

Lichtenstein attributes the 𐤀𐤍 of the Hebrew to the class of monkeys called *Diana*, in the system of Linnæus.

The Egyptians are said to have worshipped apes, and they are still adored in many places in India. In some parts of that country apes are held sacred, though not resident in temples. *Bible Nat. Hist.*; Gesenius.

From the Egyptian Monuments.

APELLES, mentioned by St. Paul, (Rom. 16. 10.) who calls him "approved in Christ," or an honest man. The Greeks believe that Apelles was one of the seventy-two disciples, and bishop of Heraclea. They observe his festival on October 31. Calmet.

APHARSACHITES or APHARSATHCHITES, a people sent by the kings of Assyria, to inhabit the country of Samaria in the room of those Israelites who had been removed beyond the Euphrates. They greatly opposed the rebuilding of Jerusalem. (Ezra 4. 9; 5. 6.)

I. APHEK, in the tribe of Judah. Here the Philistines encamped when the ark was brought from Shiloh, which was taken in battle by them. (1Sam. 4.) Probably this is the Aphekah mentioned in Josh. 15. 53.

II. Aphek, in the valley of Jezreel. Here the Philistines encamped while Saul and his army lay near Jezreel, on the mountains of Gilboa. (1Sam. 29. 1.)

III. Aphek, a city belonging to the tribe of Asher,

near the country of the Sidonians. (Josh. 13. 4; 19. 30.) Perhaps this was—

IV. Aphek, a city of Syria, one of the principal in Ben-Hadad's kingdom, in the vicinity of which the battle was fought between Ahab and Ben-Hadad, when the Syrians were beaten, (1Kings 20. 26,) and as they retreated with precipitation into the city, the city-wall fell upon them and crushed 27,000. Probably in this city, Aphek or Aphaca, situated in Libanus, on the river Adonis, stood the famous temple of Venus the Aphacite, between Heliopolis and Byblos.

APHEREMA, one of the three toparchies added to Judæa by the kings of Syria. (1Macc. 11. 34.) Perhaps the Ephraim or Ephræm, mentioned John 11. 54. Calmet.

APHES DAMMIM or EPHES DAMMIM, a place belonging to the tribe of Judah, where the Philistines encamped when Goliath insulted the host of Israel. (1Sam. 17. 1.)

APHIAH, the father of Bechorath, a Benjamite, the ancestor of Saul. (1Sam. 9. 1.)

APHRAH, the name of a place in or near Jerusalem. (Micah 1. 10.)

APHSES, the head of the eighteenth sacerdotal family of the twenty-four which David chose for the service of the Temple. (1Chron. 24. 15.)

APIS, a symbolical deity worshipped by the Egyptians. The bull was one of the forms under which the god Osiris received universal adoration in Egypt. At Memphis the great bull Apis was set up as an object of worship.

Apis was consecrated both to the sun and moon. This animal, when having certain peculiar marks, according to Strabo, was supposed to contain the soul of Osiris. He consequently received great honour from the Egyptians. The characters of the sacred bull were that he should be of a black colour, having a square white mark upon his forehead, the figure of an eagle upon his back, a lump under his tongue resembling a beetle, and a white spot in the form of a crescent on his right side. To these it was added, that the hairs of his tail should be double or cleft. His black colour was symbolical of the sun, the action of which would render bodies black; the square white spot on the forehead belonged to the moon, so also the crescent on the right side. Apis was called by the Greeks *Epaphus*; but the Egyptians affirm that Apis was prior to *Epaphus* by some hundreds of centuries. (Ælian. *Hist. Nat.*) When, after a diligent search, a calf was found with these marks upon it, it was taken with great joy to the Temple of Osiris, where it was fed, and worshipped as a representation of this god, as long as it lived.

The worship offered to Apis was very pompous; oxen were sacrificed to him. Yellowish or red bulls were permitted to be immolated, these being the colours of Typhon, who killed Osiris, and whose members were said to have been placed in the body of a cow by Isis. The city of Busiris took its name from this circumstance, and there was the tomb of Osiris.

Two kinds of images are mentioned in the Bible, those of Jehovah and those of the false deities; which, especially in the history of the kingdom of Israel, are carefully distinguished from each other. (2Kings 10. 29; 13. 2, 11; 14. 24.) Both were interdicted to the Hebrews; for they were considered as being in danger of attributing some inherent efficacy to those of Jehovah, as well as of the other deities. (Exod. 32. 4; Deut. 4. 16-18; 13. 23.)

The images of Jehovah were the calf mentioned in Exod. 32. 4, 5, and the two golden calves erected by Jeroboam in the cities of Dan and Bethel. They were made in imitation of the two sacred living bulls in Egypt, viz.: *Apis* at Memphis and *Mnevis* at Heliopolis; these calves are said to be golden in the same sense that the table and altar are said to be so, i. e. covered with gold. Jahn, *Bibl. Archæol.*

It would appear that the crime of the Hebrews, mentioned in Exod. 32. 4, 5, consisted not in an utter apostasy from Jehovah to the gods of Egypt; but in an unauthorized and interdicted intrusion of Egyptian ideas and practices into His worship. If they had wholly forsaken the Lord, what interest had they in His feast to be held on the morrow? It would appear that they purposed to worship Jehovah through the same sensible symbol as the Egyptians worshipped Osiris, through *Apis*; this may be gathered from Psalm 106. 20: "They changed their glory [the invisible Jehovah] into the similitude of an ox that eateth grass."

Apis was no doubt considered by the Egyptians as a type of the sun, and to this may be traced the origin of the veneration paid to animals of this kind in various parts of the world. In India, the cow to this day is a sacred animal, and is designated as "the daughter of Surabhi, sprung from the sun." An early voyager informs us "that there existed in a temple in Japan, the representation of an egg of brass, resting upon certain rocky substances, which egg a bull was endeavouring to break with his horns; the whole appearing to be supported by water. The legend of the Japanese respecting this, is stated thus: The world was formerly inclosed in a brazen egg, floating upon the waters, and the moon by its influence drew up some of the bottom, which growing together became mud and stones, on which the egg rested. The bull finding it, attacked the egg with his horns and broke it, when all created things came forth." This is supposed to be a figurative or hieroglyphical representation of the sun's rays, typified by the horns of the bull, (קֶרֶן *a horn*, in Hebrew, whence קֶרֶן *to shine, emit rays*,) striking upon the earth and by their influence producing all animated beings. In the Grecian and Roman mythology the bull was a personification of the influence of the sun as well as the emblem of Dionysius or Bacchus.

The following is the Hieroglyphical name of Apis. See AARON.

APOCALYPSE, *Ἀποκάλυψις*, *discovery, unfolding*. The Greek title of the Revelation of St. John the Divine.

Sir Isaac Newton considers there is no book of the New Testament so strongly attested, or commented upon so early, as the Apocalypse. Some of the ancient writers assert that this book was written in the reign of Domitian, others in those of Claudius and Nero. The most probable and received opinion is, that St. John was banished into Patmos towards the end of Domitian's reign by virtue of his edicts for persecuting the Christians, and that he had the Revelation contained in the Apocalypse during his exile; this view is supported by many of the Fathers. The death of Domitian occurred A.D.

96; the Christian exiles were then liberated, and St. John was permitted to return to Ephesus. It mentions no heresy as flourishing at that time except the sect of the Nicolaitans, which Irenæus asserts subsisted before that of Cerinthus. Many eminent scholars of modern times assign it to the year 96 or 97.

No book has given rise to a greater variety of interpretations than the Apocalypse, which has ever been accounted the most difficult portion of the New Testament. The figurative language in which the visions are delivered; the variety of symbols under which the events are presignified; the extent of the prophetic information which appears to pervade all ages of the Christian church, afford little hope of its perfect elucidation, till a further process of time shall have ripened more of the events foretold in it, and have given safer scope to investigation. (Rosenmüller, *Scholia*.) "To explain this book perfectly," says Bishop Newton, "is not the work of one man, or of one age; but probably it never will be clearly understood till it is all fulfilled." It is graciously designed that the gradual accomplishment of these predictions should afford in every succeeding period of time additional testimony to the divine origin of our holy religion.

Those who are disposed to study this sublime and mysterious book are referred to the works of Mede, Daubuz, Sir Isaac Newton, Bishops Newton and Hurd, Lowman, Faber, Dr. Hales, and many other excellent commentators, especially to the pious and learned labours of Dr. Woodhouse.

The views of Eichhorn, Hug, and other German writers, as presented in Professor Robinson's edition of Calmet, and apparently approved by him, are at utter variance not only with those of the distinguished writers mentioned above, but with all internal evidence and probability. The prophecies themselves afford a series of proofs fatal to the extravagant German hypothesis of interpretation; for proofs of this, consult Hug's *Introduction*.

APOCRYPHA. Besides the Scriptures of the Old Testament, which are universally acknowledged to be genuine and inspired writings, both by the Jewish and Christian churches, there are several other writings, partly historical, partly ethical, and partly poetical, which are usually printed at the end of the Old Testament in the larger editions of the English Bible, under the appellation of the *Apocrypha*, that is, books not admitted into the sacred canon, being either spurious or at least not acknowledged to be divine. The word "Apocrypha" is of Greek origin, and is either derived from the words *απο της κρυπτης*, because the books in question were removed from the crypt, chest, ark, or other receptacle, in which the sacred books were deposited, whose authority was never doubted; or more probably from the verb *αποκρυπτω*, to hide or conceal, because they were concealed from the generality of readers, their authority not being recognised by the Church, and because they are books which are destitute of proper testimonials, their original being obscure, the authors unknown, and their character either heretical or suspected. The advocates of the church of Rome, indeed, affirm that even these are divinely inspired; the Protestant churches, however, on the contrary affirm these books to be Apocryphal and merely human compositions. They are unanimously rejected by them for the following reasons.

1. They possess no authority whatever, either external or internal, to procure their admission into the sacred canon. None of them are extant in the Hebrew; all of them are in the Greek language, except the fourth book of Esdras, which is only extant in Latin. They were

written for the most part by Alexandrian Jews, subsequently to the cessation of the prophetic spirit, though before the promulgation of the Gospel. Not one of the writers in direct terms advances a claim to inspiration; nor were they ever received into the sacred canon by the Jewish church, and therefore they were not sanctioned by Our Saviour. No part of the Apocrypha is quoted, or even alluded to by him, or by any of his apostles; and both Philo and Josephus, who flourished in the first century of the Christian era, are totally silent concerning them.

2. The apocryphal books were not admitted into the canon of Scripture during the first four centuries of the Christian church. They are not mentioned in the list of inspired writings made by Melito, bishop of Sardis, who flourished in the second century; nor in those of Origen in the third century, of Athanasius, Hilary, Cyril of Jerusalem, Epiphanius, Gregory Nazienzen, Amphilochius, Jerome, Rufinus, and others in the fourth century; nor in the list of canonical books recognised by the council of Laodicea, held in the same century, whose canons were received by the Catholic church; so that, as Bishop Burnet well observes, "we have the concurring sense of the whole Church of God in this matter." (Sixth Article of the Anglican church.)

To this decisive evidence against the canonical authority of the apocryphal books, we may add, that they were never read in the Christian church until the fourth century; when, as Jerome informs us, they were read "for example of life and instruction of manners; but were not applied to establish any doctrine." (*Pref. in lib. Salomonis*.) As a proof that they were not regarded as canonical in the fifth century, Augustin relates, that when the Book of Wisdom was publicly read in the church, it was given to the readers or inferior ecclesiastical officers, who read it in a lower place, than those books which were universally acknowledged to be canonical. Notwithstanding the veneration in which these books were held by the Western Church, it is evident that the same authority was never ascribed to them as to the Old and New Testament; until the last council of Trent, at its fourth session, presumed to place them all, (except the prayer of Manasseh and the third and fourth books of Esdras,) in the same rank with the inspired writings of Moses and the Prophets. Rev. G. C. Gorham's Statement to the Bible Society, 1826.

The Anglican church does not read all the books of the *Apocrypha*. It reads, as lessons, no part of either book of Esdras, or of the Maccabees, or of the additions to the book of Esther; nor does it read the prayer of Manasseh. Bishop Tomline's *Elements*.

Although the apocryphal books cannot be applied to establish any doctrine, yet they are highly valuable as ancient writings, which throw much light on the phraseology of Scripture, and upon the history and manners of the East; and as they contain many noble sentiments and useful precepts, the Anglican church reads them as above stated for "example of life and instruction of manners." Pfeiffer *Critica Sacra*; Moldenhawer, *Int. ad Vet. Test.*; Heidegger, *Enchirid. Bib.*; Bishop Marsh's *Comparative View*; Horne's *Introd.*

APOCRYPHAL. There are some small parts of Scripture which are at this time contested, and which are received by some as canonical, by others are considered as *apocryphal*; such as the titles to the Psalms, the preface to Jeremiah, Ecclesiasticus, the additions to Esther and Daniel. Calmet.

APOCRYPHAL BOOKS OF THE NEW TESTAMENT. In the ages following the Apostles, the

apocryphal writings, which were published under the names of Jesus Christ and his Apostles, their companions, &c., (and which are mentioned by the writers of the first four centuries, under the names of Gospels, Epistles, Acts, Revelations, &c.) greatly increased. Most of them have long since perished, though some few are still extant, which have been collected and published by Fabricius, in his *Codex Pseudipigraphus Novi Testamenti*. Of this work, the Rev. Mr. Jones made great use, and, in fact, translated the greater part of it, in his *New and Full Method of settling the Canonical Authority of the New Testament*.

Dr. Lardner, in different parts of his works, has collected much curious information respecting the Apocryphal books. The passages being too numerous to be cited at length, the reader will find them indicated in the fifth index to his works, article, "Apocryphal books." The late Rev. Thomas Rennell also produced an able and learned tract, entitled, *Proofs of Inspiration, or the grounds of distinction between the New Testament and the Apocryphal volume; occasioned by the publication of the Apocryphal New Testament*.

"Revelation has sustained already every species of assault which cunning could contrive, or power direct. It has had its enemies among the ignorant and among the learned, among the base and among the noble. Polite irony and vulgar ribaldry, have been the weapons of its assailants. It has had its Celsus, and its Porphyry, and its Julian. And what were the effects of their opposition? The same as when the 'rulers and elders of the scribes' united against it,—its purification and increase. It has had its Bolingbokes and its Woolstons, its Humes and its Gibbons, and what disadvantages has it sustained; what injuries has it received? Has it lost any of its pretensions, or been deprived of any portion of its majesty and grace, by their hatred and their hostility? All facts connected with the history of the Christian religion are confirmations of a Christian's faith, that the doctrine which he believes will resist every attack, and be victorious through all opposition. No new weapons can be forged by its enemies; and the temper and potency of those which they have so often tried, they will ever try in vain. They may march to battle; but they will never raise their trophies in the field." *Eclectic Rev.*

APOLLONIA, a city of Macedonia Prima, situated between Amphipolis and Thessalonica. It received its name from the heathen deity, Apollo, to whom a splendid temple was erected. St. Paul passed through this city on his way to Thessalonica. (Acts 17. 1.) It is at present called *Erisso*. Classical geographers enumerate seventeen cities styled Apollonia.

APOLLONIUS, an officer under Antiochus Epiphanes, whom Grotius believes to have been governor of Mysia. He captured Jerusalem on the Sabbath, and "slew great multitudes," the Jews, at that time, thinking it sinful even to defend themselves against an attack upon that day; but they afterwards altered their practice in this respect, though they would never act offensively. He is called Misarches in the Greek. (2Macc. 5. 24.) Calmet.

APOLLOS, a Jew of Alexandria, who came to Ephesus, A. D. 54, during the absence of St. Paul, who had gone to Jerusalem. (Acts 18. 24.) He was "an eloquent man, and mighty in the Scriptures." At Ephesus, he began to speak boldly in the synagogue, and demonstrated by the Scriptures, that Jesus was the Christ. Aquila and Priscilla having heard him there, "took him unto them, and expounded unto him the way

of God more perfectly." Some time after he was inclined to go into Achaia, and the brethren wrote to the disciples there, desiring them to receive him. He was very useful at Corinth, where he watered what St. Paul had planted. (1Cor. 3. 6.) It has been supposed that the great admiration of his disciples for him tended to produce a schism. Some said, "I am of Paul,"—some, "I am of Apollos,"—and others, "I am of Cephas." But this division which St. Paul mentions and reproves, in his first Epistle to the Corinthians, did not prevent Paul and Apollos personally from being closely united in the bonds of Christian charity and affection. Apollos hearing that the Apostle was at Ephesus, went to meet him, and was there when St. Paul wrote the first Epistle to the Corinthians; in which he observes, that he had earnestly entreated Apollos to return to Corinth; but though he had not prevailed with him, Apollos gave him room to hope that he would visit that city at a favourable opportunity. Some have supposed that the Apostle names Apollos and Cephas, not as the real persons in whose names parties had been formed at Corinth, but that in order to avoid provoking a temper which he wished to subside, he transfers, by "a figure," to Apollos and himself, what was really meant of other parties; whom, from prudence, he declines to mention. However this might be, the reluctance of Apollos to return to Corinth seems to countenance the general opinion. St. Jerome says, that Apollos was so dissatisfied with the division that had happened on his account at Corinth, that he retired into Crete with Zeno, a doctor of the law; but that the evil having been corrected by the letter of St. Paul to the Corinthians, Apollos returned to that city, of which he afterwards became bishop. The Greeks say that he was bishop of Duras; some, that he was bishop of Iconium, in Phrygia; and others, of Cæsarea. Calmet; Watson.

APOLLYON. See **ABADDON**.

APOLOGIES, in Ecclesiastical history, Defences of Christianity, presented to the heathen emperors by the Christian Fathers, who were therefore called, *Apolo-gists*. The first was presented by Quadratus to the Emperor Adrian, A. D. 126, a fragment of which is preserved by Eusebius.

The Apologies are curious and valuable remains of antiquity, as showing what were the objections of the heathens, and the manner in which they were refuted by the early Christians. Watson.

APOSTASY; a forsaking or renouncing of religion, either by an open declaration in words, or a virtual declaration of it by our actions. The primitive Christian church distinguished several kinds of apostasy; the first, of those who went entirely from Christianity to Judaism; the second, of those who complied so far with the Jews, as to communicate with them in many of their unlawful practices, without making a formal profession of their religion; thirdly, of those who mingled Judaism and Christianity together; and, fourthly, of those who voluntarily relapsed into paganism. Apostasy may be further considered as,—1. Original, in which we have all participated. (Rom. 3. 23.) 2. National, when a kingdom relinquishes the profession of Christianity. 3. Personal, when an individual backslides from God. (Heb. 10. 38.) 4. Final, when men are given up to judicial hardness of heart, as Judas. The warnings of Our Lord against apostasy are frequent, and, beyond conception, fearful. (Matt. 10. 25-39.) It is hard to tell whether they were most needed in times of sanguinary persecution, or now in times of tranquillity and peace. Buck.

APOSTLES. The word *αποστολος* signifies properly an *ambassador*, or *messenger*; and the name was applied primarily to the twelve disciples, whom Our Lord selected as the first preachers of his Gospel, (Matt. 10. 2; Luke 6. 13,) then to Matthias, who was chosen in the place of Judas Iscariot, (Acts 1. 15,) and subsequently to St. Paul, but with especial reference to his mission to the Gentiles. (Rom. 11. 13.) The Apostles of the circumcision were called *the twelve*, this number containing a reference to that of the tribes of Israel; while St. Paul was peculiarly designated as *the Apostle of the Gentiles*. But this name was given also to other preachers of the Gospel, who assisted the Apostles properly so called, in establishing or confirming churches. Barnabas, the assistant of St. Paul, is so entitled in Acts 14. 4, 14. In 2Cor. 8. 23, we read of *Αποστολοι εκκλησιων*, messenger (or apostle) of the churches. And Epaphroditus is termed *υμων Αποστολον* in Phil. 2. 25. In Rom. 16. 7, it is said, that Andronicus and Junia (or probably Junias), were “of note among the Apostles,” by which it does not seem necessary, or even right, to understand St. Paul as ranking them in the number of Apostles, but merely as affirming that they were well known to the Apostles as Christians of long standing, and highly esteemed on account of their personal character. The definite article in the original appears to point to this interpretation; the words are, *επισημοι εν τοις Αποστολοις*. But some interpreters suppose that Andronicus and Junia are here called Apostles, in the same sense as Barnabas. (Acts 14. 4, 14.) In the *Apostolical Constitutions*, book vi. c. 7, Philip, who is mentioned Acts 8. 26, is entitled *συναποστολος*, a fellow-apostle, because he co-operated with the Apostles in the execution of their office.

It was the office of the Apostles to plant Churches by preaching the Gospel from place to place, and afterwards to visit and superintend the churches which they had founded. We are not to consider each or any of them as locally attached to some particular town. It is true, that all of them planted several churches, and these churches continually looked upon some particular Apostle as their first founder. There are cases in which the Apostles are spoken of as the first bishops of these churches; but there is no evidence that they bore this title in their own life-time, nor could the founder of several churches be called with propriety the bishop of all of them, or of any one in particular.

Their first care seems to have been to establish an elder, or elders, who were resident in the place; but they themselves travelled about from city to city, and from village to village, first within the confines of Judæa, and at no great distance from Jerusalem; but afterwards, in more extensive circuits, from one end of the empire to the other. Burton's *Hist. Christ. Church*; Riddle's *Christ. Antiq.*

APOSTLES' CREED. See CREED.

APOSTOLIC; Apostolical; something that relates to the Apostles, or descends from them. Thus we say, the *apostolic* age, *apostolic* doctrine, *apostolic* character, constitutions, traditions, &c.

APOSTOLICAL CONSTITUTIONS AND CANONS. Two collections of ecclesiastical rules and formularies, entitled *Apostolical Constitutions* (*Διαταγαι*, or *Διαταξεις, των Αποστολων*; *Constitutiones Apostolicæ*), and *Apostolical Canons* (*Κανονες Αποστολοκοι*, *Canones Apostolorum*), were attributed in early ages of the Church to Clement of Rome, who was supposed to have committed them to writing from the mouths of the Apostles, whose words they pretend to record. The

authority thus claimed for these writings has, however, been entirely disproved; and it is generally supposed by critics that they were chiefly compiled during the second and third centuries, or that, at least, the greater part must be assigned to a period before the first Nicene council. We find references to them in Eusebius, Epiphanius, and Athanasius, writers of the third and fourth centuries. A modern critic (Rosenmüller) supposes them not to have attained their present form until the fifth century.

The *Constitutions* are comprised in eight books. In these the Apostles are frequently introduced as speakers. They contain rules and regulations concerning the duties of Christians in general, the *Constitutions* of the Church, the offices and duties of ministers, and the celebration of divine worship. The tone of morality which runs through them is severe and ascetic. The general style in which the *Constitutions* are written is such as had become prevalent during the third century.

On the whole, it appears probable, from internal evidence, that the *Apostolical Constitutions* were compiled during the reigns of the heathen emperors, towards the end of the third century, or at the beginning of the fourth: and that the compilation was the work of some one writer (probably a bishop) of the Eastern Church.

The *Canons* relate chiefly to various particulars of ecclesiastical polity and Christian worship; the regulations which they contain being for the most part sanctioned with the threatening of deposition and excommunication against offenders. The first allusion to this work by name is found in the Acts of the Council which assembled at Constantinople in the year 394, under the presidency of Nectarius, bishop of that see. But there are expressions in earlier councils and writers of the same century which appear to refer to the *Canons*, although not named. The rules and regulations contained in the *Canons* are such as were gradually introduced and established during the second and third centuries. In the canon or list of sacred books of the New Testament, given in this work, the Revelation of St. John is omitted, but the two Epistles of Clement, and the *Apostolical Constitutions*, are inserted. Riddle's *Christ. Antiq.*

APOSTOLIC CHURCH. In the primitive Church this was an appellation given to all such Churches as were founded by the Apostles; and even to the bishops of those Churches, as being the reputed successors of the Apostles. These were confined to four, viz., Rome, Alexandria, Antioch, and Jerusalem. In after times, the other Churches assumed the title, on account principally of the conformity of their doctrine with that of the Churches which were apostolical by foundation. Buck.

APOSTOLIC FATHERS, an appellation usually given to the Christian writers of the first century, Barnabas, Hermas, Clement, Ignatius, and Polycarp. Of these writers, Cotelierius, and, after him, Le Clerc, have given a collection in two volumes, accompanied both with their own annotations, and the remarks of other learned men. Buck.

APOSTACTITES (*Renouncers*), the first and purest sect of the apostolical age, who stand charged with no heresy, but with imitating the manners of the first age in austerity. They receive their name from the circumstance of their renouncing the possession of all property. They were of the second century, and were found chiefly in Cilicia and Pamphylia. Riddle's *Christ. Antiq.*

APOTHECARY, רִקָּח (Exod. 30. 25), which is correctly rendered in the margin of our version “perfumer;” the word means also any thing spiced; hence, ointment, confection. The holy oils and ointments were probably prepared by one of the priests who had properly qualified himself. Mr. Roberts, in his *Oriental Illustrations*, states that, in the Hindoo temples, there is a man whose chief business it is to distil sweet waters from flowers and to extract oils from wood, flowers, and other

Servant perfuming a Guest. From the Egyptian Monuments.

substances. From our version having rendered the word apothecary, it would seem indicate that the business of a perfumer was not distinguished from that of an apothecary in the time of the translators. Thus Shakespeare, a contemporary writer, says—

An ounce of civet, good apothecary,
To sweeten mine imagination.

Sacred oil appears to have been as copiously used by the heathen nations as it was in the Jewish tabernacle and temple, and during the patriarchal economy; the Sanscrit writers prove its retention in the present religious services of India, and that it was adopted in the more ancient, we have the authority of Strabo (lib. xv.) where he refers to a ceremony which calls to mind the words of the Psalmist, that it ran down upon Aaron's beard that went down to the skirts of his garments. Sir William Ouseley also mentions the statue of a man at Shapur, which, according to the *Nozhat alcolub*, princes went on pilgrimages to visit and anoint with oil.

APPAIM, the son of Nadab, a descendant of Hezron. (1Chron. 2. 30.)

APPAREL. Our first parents, in the earliest period, protected themselves with the leaves of the fig-tree; afterwards, with the skins of animals. Subsequently some method, as we may suppose, was discovered for matting together the hair of animals and making a sort of felt cloth. Later still, the art of weaving was introduced, and a web was formed by combining the hair of animals with threads drawn from wool, cotton, or flax. The art of manufacturing cloths by spinning and weaving is of very great antiquity. (Gen. 14. 23; 31. 19; 37. 3; Job 7. 6.) The Egyptians were skilful in such manufactures, as may be seen from numerous paintings recently discovered in the tombs. The Israelites, while living among them, learnt the art, (1Chron. 4. 21,) and while wandering in the wilderness, they prepared the materials for covering the tabernacle, and wrought some of them with embroidery. Cotton cloth was esteemed most valuable; next to that, woollen and linen. That which was manufactured from the hair of animals, was esteemed of least value. Of silk there is no mention made at a very early period, unless perchance it be in Ezek. 16. 10, 13, where the word שֵׁשׁ from the verb signifying *to draw*, may denote threads drawn from silk stuff, according to the assertion of Pliny, that the silk came from the east of Asia in half silk stuffs, which in Greece was first unravalled and then used for weaving cloth wholly of silk. Alexander found silks in Persia, and it is probable, that the Median dress, adopted by the Persians under Cyrus, was silk. Silk was not introduced among the nations of Europe till a late period.

What the nature of that garment was, which is interdicted in Levit. 19. 19, and Deut. 22. 11, is uncertain. It is said to be a mixed garment of wool and linen. Josephus says that the garments in question were embroidered ones, which belonged to the priests; but the fact is, the law was universal, and interdicted them to priests as well as to all others. Perhaps the warp was of wool, and the woof of linen, a common mode of manufacturing in the East even to this day. Maimonides thinks that the law was principally intended as a preservative from idolatry; for the heathen priests of those times wore such mixed garments of woollen and linen, in the superstitious hope of having the beneficial influence of some lucky conjunction of the planets or stars, to bring down a blessing upon their sheep and their flax. Jahn. See **CLOTHS; GARMENTS; HABITS**.

Weaving. From the Egyptian Monuments.

APPEAL, a legal term denoting a request for the transfer of a cause from one judge to another, or from an inferior to a superior tribunal. Among the Jews, appeals lay to a higher court in cases of importance. (Deut. 17. 8,12.) In Jerusalem, it is not improbable that there were superior courts in which David's sons presided; Psalm 122. 5, seems to allude to them; though we do not find that a supreme tribunal was established at Jerusalem earlier than in the reign of Jehoshaphat. (2Chron. 19. 8-11.) The more difficult cases and appeals were brought either before the ruler of the state, or before the high-priest; until in the age of the Maccabees, a supreme judicial tribunal was instituted, which is first mentioned under Hyrcanus II. Josephus *Antiq.*

The Sempronian law secured the privilege to all Roman citizens, that they could not be capitally convicted, but by the suffrage of the people; and in whatever provinces they happened to reside, if the governor showed a disposition to condemn them to death, to scourge, or deprive them of their property, they had liberty to appeal from his jurisdiction, to the judgment of the people. This law which was enacted under the republican form of government, continued in force under the emperors; so that if any freeman of Rome thought himself ill-used and aggrieved by the presidents, in any of the provinces, he could by appeal remove his cause to Rome, to the determination of the Emperor. A number of persons, all of consular rank, we are told, were delegated by Augustus, to receive the appeals of the people in the provinces. Thus St. Paul, (Acts 25. 11,12,) when he found that Festus was too much inclined to favour his accusers, to do full justice to his cause, stood upon his rights as a Roman citizen, and said, "I appeal unto Cæsar."

APPHIA, the wife of Philemon, the friend of St. Paul. It is supposed she suffered martyrdom with her husband. (Philem. 2.)

APPHUS, a surname given to Jonathan Maccabæus. (1Macc. 2. 5.)

APPI FORUM, a place about fifty miles from Rome, near the modern town of Piperno, on the road to Naples. It was so called from Appius Claudius, whose statue was erected there: the same who gave his name to the Appian Way. St. Paul in his journey to Rome from Puteoli, was met here by several devout Christians. (Acts 28. 15.) On the ruins of this ancient little village, there is now erected an abbey called Fossa Nuova.

The Appian Way, sometimes termed, "Queen of the Roman Ways," on account of its length and the difficulties necessary to be surmounted in its construction, was commenced at Rome, and was first laid down as far as Capua, a distance of about 1000 stadia, or 125 miles. From Capua it was subsequently extended by Augustus to Beneventum, and thence to Brundisium, now called Brindisi, a celebrated city on the coast of Apulia, in the territory of the Calabris, when that port became the usual place of disembarkation for those who passed between Asia, Greece, and Italy; and hence in St. Paul's time it was the chief road to the city of Rome. Eustace, in his *Classical Tour through Italy*, says, "that the average breadth of the Appian Way is from eighteen to twenty-two feet, and that such parts of it as have escaped destruction, as at Fondi and Mola, exhibit few traces of wear and decay after a duration of two thousand years."

APPLE TREE, תפוח. In our version rendered *apple*. (Prov. 25. 11; Cantic. 2. 5; Joel 1. 12.) Arabic تفاح which is also applied to lemons, peaches, apricots. ح

The reference is generally thought to be the citron tree, (*Citrus medica*.) It is described as the noblest of the trees of the woods, and its fruit as very sweet or pleasant, (Cantic. 2. 3,) of the colour of gold, (Prov. 25. 11,) extremely fragrant, (Cantic. 7. 8,) and proper for those to smell that were ready to faint. (Cantic. 2. 5.) All this is true of the citron, but not of the apple. Citron trees are very noble and large, their leaves beautiful, ever continuing on the trees, of an exquisite smell, and affording a most delightful shade. The root of the word in Hebrew, would seem to strengthen this impression, it being נפח to breathe, to emit fragrance.

Citron Tree.

The apple does not attain much delicacy or perfection in Western Asia. The fruit of the citron tree is much used by the Oriental ladies to smell to, for which purpose they often have it in their hands, or within reach, and as its fragrance is considered most reviving, it is employed for much the same purposes as a scent-bottle in this country. In due season, the snow-white blossoms and golden fruit may be observed at the same time upon the same tree. The foliage is studded with minute glands, which are the depositories of the odorous juices to which the tree owes its fragrance. It might well therefore be said, "As the citron tree among the trees of the wood, so is my beloved among the sons."

Solomon seems to refer to the manner of serving up these citrons in his court, when he says, "A word fitly spoken is like golden citrons in silver baskets;" whether, as Maimonides supposes, in baskets wrought with open work or in salvers curiously chased, cannot now be determined; the meaning is, that an excellent saying, suitably expressed, is as the most acceptable gift in the fairest conveyance; and the Rabbins say that the tribute of the first ripe fruits was carried to the Temple in silver baskets.

APPLES OF SODOM. Associated with the Dead Sea, most persons have heard of the Apples of Sodom, a species of fruit, which, extremely beautiful to the eye, is bitter to the taste and full of dust. Tacitus, in the fifth book of his *History*, alludes to this singular fact, but in language so brief and ambiguous, that no

light can be derived from his description: "atra et inania velut in cinerem vanescunt." Some travellers, unable to discover this singular production, have considered it merely as a figure of speech, depicting the deceitful nature of all vicious enjoyments; but Hasselquist regards it as the production of a small plant called *Solanum melangena*, a species of nightshade, found abundantly in the neighbourhood of Jericho. He states that the apples are sometimes full of dust, but only when the fruit has been attacked by a certain insect, which converts the whole of the inside into a kind of powder, leaving the rind entire, and in possession of its beautiful colour.

M. Seetzen, on the other hand, holds the novel opinion, that this mysterious apple contains a sort of fibres resembling silk; and, having no pulp or flesh in the inside, might naturally enough, when sought for as food, be denounced by the hungry Bedouin as pleasing to the eye, and deceitful to the palate.

Chateaubriand has fixed on a shrub different from the others. It grows two or three leagues from the mouth of the Jordan, and is of a thorny appearance with small tapering leaves, and its fruit is exactly like the Egyptian lemon, both in size and colour. Before it is ripe it is filled with a corrosive and saline juice; when dried, it yields a blackish seed that may be compared to ashes, and which in taste resembles bitter pepper. There can be little doubt that this is the true apple of Sodom, which flatters the sight while it mocks the appetite. Maundrell; Russell's *Palestine*.

APRIES, a king of Egypt, called Pharaoh-hophra in the Scriptures. (Jerem. 44. 30.)

Apries was the son of Psammis, and the grandson of Necho, who waged war against Josiah, king of Judah; he reigned thirty years, (B.C. 600—570,) but his tyrannical disposition raised discontents among the people. He equipped a fleet for the reduction of the Cyrenians, but lost in that expedition almost the whole of his army, and the Egyptians, irritated at his ill success, revolted, asserting that he undertook the war only to get rid of part of his subjects, in order that he might govern the remainder more absolutely. The king sent Amasis to pacify the revolters; but while he was haranguing them, one of the multitude placed a diadem about his helmet, and proclaimed him king. The rest applauded, and Amasis having accepted their offer, in the neighbourhood of Memphis, with an army of native Egyptians, defeated a body of 30,000 foreign mercenaries, in the pay of Apries. The king himself being taken by the conquerors, Amasis wished to spare his life; but the people were implacable in their vengeance, and he was obliged to give him up "into the hands of those who sought his life," by whom he was strangled.

That Nebuchadnezzar appeared in Egypt during these troubles, is very evident; but the precise state of the contest when he came, and the part which Apries and Amasis took with respect to this foreign enemy, or the manner in which Nebuchadnezzar acted towards them, are points involved in uncertainty. From the fact that Amasis was left on the throne, as compared with dates, and other circumstances, it seems probable that the Babylonians advanced towards Egypt soon after the outbreak of the revolt; and that Apries, not being able, in the state of his affairs, to make a stand against them, withdrew into Upper Egypt. It would also appear that Nebuchadnezzar, when he withdrew after having ravaged the country left Amasis in possession of the kingdom, according to the plan which he had before pursued in Judæa; and that Apries then returned to Lower Egypt, to make a grand effort

for the recovery of his kingly power, with the result as above stated. Ezekiel reproaches Egypt, and says that it had been a staff of reed to the house of Israel, and an occasion of falling; for when they took hold of it by the hand, it broke and rent all their shoulder. He therefore prophesies, that Egypt should be reduced to a solitude, and that God would send against it the sword which would destroy in it man and beast. (Ezek. 29.) This was afterwards accomplished; first, in the time of Apries, and secondly, in the conquest of Egypt by the Persians. Watson.

I. AQUILA, a native of Pontus, in Asia Minor, was a Jew by birth, and a tent-maker by occupation; he, with his wife Priscilla, was converted by St. Paul to the Christian faith. When the Jews were banished from Rome by the Emperor Claudius (the Christian and Jewish religions being confounded by the Romans), Aquila and his wife retired to Corinth, and afterwards became the companions of St. Paul in his labours, by whom they are mentioned with much commendation. (Acts 18. 2, 18, 26; Rom. 16. 3; 1 Cor. 16. 19.) The most cordial friendship appears to have subsisted between them; Aquila and Priscilla had even saved St. Paul's life at the risk of their own, which instance of devotedness to the Apostle has been variously referred to the time of the accusation preferred against the Apostle before Gallio at Corinth, or of the tumult excited by Demetrius at Ephesus. (Acts ch. 18 and 19.)

II. AQUILA, the author of a translation of the Old Testament from Hebrew into Greek. He was a native of Sinope, in Pontus, and flourished in the second century of the Christian æra; he was of Jewish descent; and having renounced Christianity, he undertook his version with the intention of exhibiting to the Hellenistic Jews an accurate representation of the Hebrew text for their assistance in their disputes with the Christians. Yet he did not, on this account, pervert passages which relate to Christ by unfaithful translations, as some of the ancient Christian writers thought; for the instances of designed want of fidelity which they produce, are nothing more than etymological renderings, or expressions of the same things in other words, or various readings, or else his own mistakes. Professor Jahn fixes the date of this version to the interval between the years 90 and 130. It is certain that Aquila lived during the reign of the emperor Adrian, and that his translation was executed before the year 160, as it is cited both by Justin Martyr, who wrote about that time, and by Irenæus, between the years 170 and 176. His version has been most highly approved by the Jews, by whom it has been called the *Hebrew verity*. Horne.

AR, also named Areopolis, Ariel of Moab and Rabbath-Moab, was the capital city of the Moabites, and was situated upon the river Arnon, which divided it into two parts, opposite to Aroer, in Arabia Petræa. (Numb. 21. 28; Deut. 2. 9, 18.) Sibon, king of the Amorites, burnt it; and it was afterwards pillaged and ravaged by the Assyrians under Shalmanezzer. (Isaiah 15. 1.) Like all the other cities of Moab, it is now a heap of ruins. On ancient coins, it is denominated Rabbath Monia, and Eusebius says it was called Areopolis in his time. Winer. See MOABITES.

ARA, the son of Jether, of the tribe of Asher. (1 Chron. 7. 38.)

ARAB, a city belonging to the tribe of Judah. (Josh. 15. 52.)

ARABAH, a city belonging to the tribe of Benjamin. (Josh. 18. 22.)

ARABIA, the name of a large region of Asia, including the peninsula which lies between Syria, Palestine, the Arabian and Persian Gulfs, and the Indian Ocean or Sea of Arabia. Its inhabitants are supposed to be principally descended from Ishmael, and in the earlier books of the Scripture they are termed בְּנֵי קֵדָר or *children of the East*, (Judges 6. 3; 1 Kings 4. 30,) and in the later books, אַרְבִּיִּם or *Arabians*. (2Chron. 21. 16; Isai. 13. 20.) The Greek geographers divided this country into three parts—Arabia *Εὐδαιμων*, or *Felix*; *Πετρωδης*, or *Petræa*; and *Σκηνιτις*, or *Ερημος*, *Deserta*. But these divisions were not anciently known to the inhabitants of the East, nor are they recognised in any part of the Old or New Testament.

2. Arabia is distinguished both in sacred and profane history as the scene of numerous events which have exercised a lasting influence upon the human race.

"With its deserts and mountains," says Mr. Crichton, "are entwined some of our most ancient and hallowed recollections, as places memorable in Scripture history, and consecrated in the eyes of all civilized nations by having witnessed the visible descent of the Divine Being, and some of the sublimest manifestations of his power. It was in Arabia that those wonderful transactions took place which immediately followed the Exode of the Israelites from Egypt. Its waters were remarkably divided for their passage; it was through its rocky defiles and barren sands that they journeyed for thirty-eight years, doing penance for their murmurings and rebellions, before they could be admitted into the Promised Land. The fleets of Solomon and Hiram frequented its seas, and traded in its markets; importing thence the gold and the ivory of which we read in the chronicles of the times. Its traffic and its merchandize are renowned both in sacred and profane history, and for many ages it continued to be the only connecting link of commercial intercourse between the nations of the East and the West. The terrible denunciations of the prophets, and the sublime compositions of the Hebrew poets, are greatly indebted to the same source for many of their most pointed and impressive similitudes. No one, in short, can be ignorant how many valuable illustrations the inspired penmen have derived from Arabia, and how much light may be thrown on different parts of the sacred Scriptures, by an attentive observation of the customs and institutions of this and the neighbouring countries." Burckhardt also observes, that "the sacred historians will never be thoroughly understood so long as we are not minutely acquainted with everything relating to the Arab Bedouins, and the countries in which they move and pasture."

Arabia also was the cradle of that wonderful revolution of religion, under the influence of which the Arabs, in the spirit of proselytism, carried their arms into the finest countries and most powerful empires of the earth; and effected a change of manners, customs, and opinions, of which the influence is felt even in the present day by the nations of Europe, while their creed is that of hundreds of millions in other quarters of the globe.

Of late years a sect termed Wahabees, professing to restore the religion of Mohammed to its original purity, has appeared in its native country, and though now checked, chiefly by the exertions of the present Pacha of Egypt, threatens, at no distant period, to overturn the present institutions of Islam.

3. It is generally admitted that the Arabians derive their descent from Joktan, the son of Heber, of the family of Shem, as well as from Ishmael, the son of Abraham, by Hagar. The Arabs themselves, however, preserve a distinction as to their origin. The descendants of Joktan are denominated *pure Arabs*, while those

of Ishmael are called *naturalized Arabs*. The former, therefore, are reckoned the aboriginal Arabians, although the Ishmaelites, the Cushites, and the descendants of Abraham by Keturah, of Lot, Esau, Nahor, and others, have been for many ages established in the country.

The Sabæi are mentioned by Pliny as a powerful people, extending almost from sea to sea, that is, from the Red Sea to the Persian Gulf in the Indian Ocean. Saba was the eighth in descent from Noah, and the great-grandson of Joktan. The sun, moon, and stars were the objects of Arabian adoration, but this species of idolatry did not long continue, as every tribe, family, or even individual, was at liberty to change the object of his worship; the adoration of the celestial bodies was, in the course of time, incorporated with other deities, the creatures of a fanciful superstition.

4. Recent discoveries have brought to light the miraculous preservation and existence, as a distinct people, of "a plant which grew up under the mighty cedar of Israel, but was destined to flourish when that proud tree was levelled to the earth." "Thus saith the Lord of Hosts, the God of Israel; Jonadab the son of Rechab shall not want a man to stand before me for ever." (Jerem. 35. 19.) The Beni-Rechab, sons of Rechab, or Beni-Khebir, still exist a "distinct and easily distinguishable" people. Their number is stated to be 60,000. They boast of their descent from Rechab, profess pure Judaism, and they all understand Hebrew. Yet they live in the neighbourhood of Mecca, the chief seat of Mohammedanism. The account given of them by Benjamin of Tudela, in the twelfth century, has been very recently confirmed by Mr. Wolff.

It is not known when or how Judaism spread into Arabia. But as there was a constant intercourse kept up, for purposes of traffic, between Arabia and Ethiopia, it was probably introduced from the latter country. This conjecture is confirmed by the circumstance that a body of men called Homerites, who were for the most part Jews, and were ruled by a Jewish king, inhabited the Arabian side of the Red Sea. They probably migrated from Ethiopia; for when the Jews were pursued by the Romans, either under Titus or Adrian, and forced to take refuge in unexplored countries, those of that nation who were in Ethiopia, might easily have crossed the Red Sea, (as the Arabs had previously done to people Ethiopia,) and thus escape the vengeance of their enemies. They established themselves in Arabia, and fortified their cities, and when Mohammed appeared, they sent an army into the field to oppose the spread of his religion and the extension of his conquests.

5. The length of Arabia from the Cape of Babel-Mandeb to the extreme angle of the Euphrates, is 1800 miles, and its mean breadth about 800, or, from the port of Judda to the Cape of Raz ul Gad, not less than 1200. On the south a base of 1200 miles is washed by the Indian Ocean. Arabia, taken in its full extent, lies between North lat. 12° 50' and 31° 30'; and East long. 34° 14' and 59° 14'.

ARABIA FELIX lies between the ocean on the south-east, and the Arabian and the Persian Gulfs. It is a fertile region, especially in the interior, producing various species of odoriferous shrubs and fragrant gums, as frankincense, myrrh, cassia, &c. The queen of Sheba is supposed to have reigned over part of this region.

ARABIA PETRÆA received its name from the city Petra; it lies on the south and south-east of Palestine, extending to Egypt, and including the peninsula of Mount Sinai. It is remarkable for its mountains and sandy plains. In it was also the land of Uz, the scene of the wealth and the calamities of Job, of the trial of his patience, and the triumph of his piety.

ARABIA DESERTA lies between the other two, and extends northward along the confines of Palestine, Syria, Babylonia, and Mesopotamia, including the vast deserts between these limits, which are thinly inhabited by wandering tribes of Arabs.

6. Some writers divide the whole of Arabia into two grand provinces, Yemen and Hedjaz; and others, again, maintain that there are five grand divisions, Yemen, Hedjaz, Tehama, Nedjed, Yehama. Niebuhr adopts eight divisions, in which he follows the Arabians, who enumerate eight provinces entirely independent of each other. The following are, however, the admitted, or modern divisions. Arabia Petræa, the Hedjaz, Tehama, and Yemen, comprehend the western portion of the peninsula, including the range of mountains that extends from the Mediterranean along the coast of the Red Sea, as far as the Indian Ocean. The province of Yemen lies along the southern coast of this ocean. To the east are the provinces of Hadramaut and Oman, which last is at the entrance of the Persian Gulf, and is washed by it; while, on the north-east, the province of Lahsa, or Hajar, is on its western shore. These provinces encircle the central deserts, which are partly included in the extensive province of Nedjed.

The following account of the modern provinces of Arabia is derived from the most authentic sources.—Hedjaz, so called because it divides Nedjed from Tehama, is bounded on the north by the deserts of Syria, on the east by the province of Nedjed, on the south by Yemen and Tehama, and, on the west by the sea called Al Kolzom. It has been styled the holy land of the Mohammedans, because it contains among its chief towns Medina and Mecca, famous in the history of the impostor Mohammed, and held in peculiar veneration by the Moslems; thousands of whom, from the most distant regions, traverse its deserts every year to fulfil the injunction of their prophet, that once in their lives they should, if possible, visit his shrine, under the penalty of being excluded from paradise for their neglect.

7. The Scriptures frequently mention the Arabians (meaning those adjoining Judæa,) as a powerful people, who valued themselves on their wisdom. Their riches consisted principally in their flocks and herds, and at one time they paid King Jehoshaphat, an annual tribute of 7,700 sheep, and as many goats. (2Chron. 17. 11.) The kings of Arabia furnished Solomon with a great quantity of gold and silver. (2Chron. 9. 14.) They loved war, but made it rather like thieves and plunderers, than like soldiers. They lived at liberty in the field or the desert, concerned themselves little about cultivating the earth, and were not very obedient to established governments. This is the idea which the Scripture gives of them in Isaiah, and the same is their character to the present day.

8. Some authors have asserted that the Arabs were strangers both to writing and books before the time of Mohammed, but the style of the Koran is so elaborate and elegant, that it is impossible to suppose it the first specimen of an Arabic book.

The Arabians must doubtless have brought their language to great perfection, by numerous writings before that time. Besides, this pretence would needlessly contradict the whole of the Arabic history; for the Arabians, before the time of Mohammed, are known to have applied themselves much to the study of eloquence and poetry. They held an annual assembly, in which their poets were rivals for a prize; and the poem which obtained it was deposited in their archives, and sometimes written upon silk in golden letters; this assembly ceased in the time of Mohammed. At the same period there was also a poem written by one Labid, which, in honour of its author, was affixed to the gate of

the temple of Mecca; but Labid himself preferred to it the second chapter of the Koran. Pococke; Sale.

9. St. Paul preached the Gospel in Arabia, as we learn from Gal. 1. 17. Christian churches were subsequently founded, and many of the Arab tribes embraced Christianity prior to the fifth century, but most of them appear to have been tinctured with the Nestorian heresy.

Speaking of Caviglia, a learned antiquary whom his Lordship met in Egypt, Lord Lindsay says: "He loves the Arabs, and looks forward to their conversion and civilization as the accomplishment of the prophecies, that 'there shall be a highway out of Egypt to Assyria,' in that day when 'Israel shall be a third with Egypt and Assyria, even a blessing in the midst of the land,'—when the Lord shall have 'set his hand the second time to recover the remnant of his people from Assyria, from Pathros, from Cush, &c.,' and shall bless the assembled myriads, saying, 'Blessed be Egypt, my people, and Assyria, the work of my hands, and Israel mine inheritance.'"

10. Sir Robert Ker Porter gives a very lively and graphic sketch of an Arab sheikh, whom he encountered in the neighbourhood of the Euphrates. "As soon as we arrived in sight of his camp, we were met by crowds of its inhabitants, who, with a wild and hurrying delight, led us towards the tent of their chief. The venerable old man came forth to the door, attended by his subjects, of all sizes and descriptions, and greeted us with a countenance beaming with kindness, while his words, which our interpreter explained, were demonstrative of patriarchal welcome. Having entered, I sat down by my host; and the whole of the persons present, to far beyond the boundaries of the tent, (the sides of which were open,) seated themselves also, without any regard to

Modern Arabs: from Laborde.

those more civilized ceremonies of subjection. These persons, in rows beyond rows, appeared just as he had described, the offspring of his house, the descendants of his fathers from age to age; and, like brethren, whether holding the highest or the lowest rank, they seemed to gather round their common parent. But perhaps this sense of perfect equality in the mind of their chief, could not be more forcibly shown, than in the share they took in the objects which appeared to interest his feelings; and as I looked from the elders or leaders of the people, seated immediately around him, to the circles beyond circles of brilliant faces, bending eagerly towards him and his guest, I thought I had never before seen so complete an assemblage of fine and animated counten-

ances, both old and young: nor could I suppose a better specimen of the still existing state of the true Arab; nor a more lively picture of the scene which must have presented itself ages ago, in the fields of Haran, when Terah sat in his tent door, surrounded by his sons, and his sons' sons, and the people born in his house. The venerable Arabian sheikh was also seated on the ground, with a piece of carpet spread under him; and, like his Chaldæan ancestor, turned to the one side and the other, graciously answering or questioning the groups around him, with an interest in them all, which clearly showed the abiding simplicity of his government, and their obedience. On the smallest computation such must have been the manners of these people for more than three thousand years; thus, in all things, verifying the prediction given of Ishmael at his birth, that he, in his posterity, should 'be a wild man,' and always continue to be so, though 'he shall dwell for ever in the presence of his brethren.'"

That an acute and active people, surrounded for ages by polished and luxurious nations, should, from their earliest to their latest times, be still found "a wild people dwelling in the presence of all their brethren," unsubdued and unchangeable, is indeed, a standing miracle: one of those mysterious facts which establish the truth of prophecy. Horne; Watson; Pococke; D'Herbelot; Burckhardt; Josephus.

ARABIC LANGUAGE. The Arabic language is, in external appearance, very different from the Hebrew; it abounds much more in consonants, and has on that account, a very different pronunciation, besides which it has more inflexions, an almost incredible number of nouns, and other parts of speech, which are not to be found in Hebrew, and many peculiarities by which it is distinguished from that language; but if the essentials be separated from the non-essentials of the language, and new words, which denote arts, sciences, warlike transactions, and such objects, be divided from the more ancient words which the Arabic language may have originally possessed, its agreement with the Hebrew is such, that it has hitherto been, as the result has shown, and still remains, an excellent help to the removing of exegetical difficulties, and to the elucidation of many important but obscure passages. Seiler, *Hermeneutik*.

I. ARAD, a Canaanitish city in the southern part of Palestine. Its king having opposed the passage of the Israelites, they afterwards took it with its dependencies, and utterly destroyed them. (Numb. 21. 1-3.) Arad was rebuilt, and is placed by Eusebius in the vicinity of the desert of Kades, at the distance of twenty Roman miles from Hebron.

II. ARAD or ARADUS, a city and island in the Mediterranean, on the coast of Phœnicia, to which the Romans sent injunctions of friendly conduct towards the Jews in the time of the Maccabees. (1 Macc. 15. 23.) The island Aradus, the Arpad of the Scriptures, and the seat of the Arvadites, or Aradites, is at present called *Rou-Wadde*; and this island, and that of El-Hammel, the ancient Hamath, the seat of the Hamathites, lying opposite to it (Ezek. 47. 20) ten leagues to the eastward, were the most northern settlements of the sons of Canaan.

ARAM, אֲרָם The fifth son of Shem, was father of the people of Syria, who from him are called *Aramæans*. This name, which in a more extensive sense includes Mesopotamia, was also known to the Greeks,

at least as the name of a people, *Αριμοι, Αραμαιοι*. (Strabo.) The region denominated Aram is a vast tract extending from Mount Taurus as far as Damascus, and from the Mediterranean Sea in an easterly direction beyond the Tigris into Assyria. Different parts of this region are called by different names, as

1. **אֲרָם נְהָרַיִם** *Syria of the two rivers*, the land or country between the Tigris and Euphrates, Mesopotamia, (Gen. 24. 10,) whereto corresponds **אֲרָם פְּדָן** (Gen. 25. 20,) *Padan-aram, the plain of Syria*.

2. **אֲרָם צוֹבָה** *Aram-Zobah*, (superscription Ps. 60,) *Zoba*, (2 Sam. 10. 8.) An empire on the north-east side of Damascus, frequently involved in wars with Israel.

3. **אֲרָם דַּמָּשֶׁק** *Syria, belonging to Damascus*. (Gen. 14. 15; 15. 2.)

4. **אֲרָם בֵּית־רְחוֹב** *Aram Beth-rehob*. (2 Sam. 10. 6.)

5. **רְחוֹבֹת דְּנָהָר** *Rehoboth on the river*, with the town on a branch of the *Euphrates*.

The prophet *Amos* (9. 7) seems to say that the first *Aramæans* dwelt in the country of Kir or Iberia, and that God brought them from thence, as He did the Hebrews out of Egypt; but at what time this happened is not known. Moses always calls the Syrians, and inhabitants of Mesopotamia, *Aramites*. They often warred against the Hebrews; David subdued them, and obliged them to pay him tribute, and Solomon preserved the same authority; but after the division of the tribes, the Syrians were generally independent. Gesenius; Winer; Horne.

ARAMÆAN LANGUAGE; the vernacular tongue of the Jews of Palestine in the days of our Saviour, which maintained itself along with the Greek. The Semitic languages, Professor Robinson observes, may be properly reduced to three great branches, viz.:

1. The *Aramæan*, which originally prevailed in Syria, Babylonia, and Mesopotamia; and may therefore be subdivided into the Syrian or West-Aramæan, and the Chaldee or East-Aramæan, called also the Babylonish Aramæan. To this general branch belong also the dialects of the Samaritans, Zabrians, and Palmyrenes.

2. The Hebrew, with which the fragments of the Phœnician coincide.

3. The Arabic, to which also belongs the Ethiopic as a dialect.

The Aramæan introduced and spoken in Palestine, has also been, and is still, often called the Syro-Chaldaic, because it was probably in some degree a mixture of both the eastern and western dialects; or perhaps the distinction between the two had not yet arisen in the age of Our Lord and his Apostles. So long as the Jewish nation maintained its political independence in Palestine, Hebrew continued to be the common language of the country; and so far as we can judge from the remains of it which are still extant, although not entirely pure, it was yet free from any important changes in those elements and forms by which it was distinguished from other languages. But at the period when the Assyrian and Chaldæan rulers of Babylon subdued Palestine, everything assumed another shape. The Jews of Palestine lost with their political independence, the independence of their language also, which they had till then asserted. The Babylonish Aramæan dialect supplanted the Hebrew, and became by degrees the prevailing language of the people, until this in its turn was in some measure, though not entirely, supplanted by the Greek. Josephus and the New Testament call it the Hebrew. Old as this appellation is, however, it has one important defect, namely that it is too indefinite, and may mislead those who are unacquainted with the subject to confound the ancient Hebrew and the Aramæan, which took the

Mount Ararat.

place of the Hebrew after the Babylonish captivity. It will probably be most appropriate to bestow on the language of Palestine, in order to distinguish it from other dialects, the simple names of Palestine-Aramæan or the Palestine-Syriac; for the terms Aramæan and Syriac are fully identical.

The character and condition of the language called Hebrew in the time of Our Saviour and his Apostles, is a point of great importance to an interpreter of the New Testament, and will come under our notice in a future article, but the following remarks are of interest to the general reader.

1. The proper names of persons which are given in the New Testament and in Josephus are mostly Aramæan. We need only refer to the frequent names compounded with the Aramæan Bar (*son*), as Bar-Talmi, Bar-Jesu, Bar-Timei, Bar-Abba, &c., all of which sufficiently betray their Aramæan origin.

2. The significant surnames, also, which certain persons bore on account of their moral or corporeal character; as Boanerges (*Son of Thunder*), Barabbas (*Son of Abbas*), Cephas (*a stone*), all which are Aramæan.

3. The same is also the case with most of the significant geographical names; among which the most frequent are those compounded with Beth (*a house*), and En (*a fountain*).

ARARAT, אֲרָרַט (Isai. 37. 38; Jer. 51. 27.) A province in Armenia between the river Araxes and the lakes Van and Orenias, which has the same name among the Armenians. In Gen. 8. 4, it is said, "the ark rested upon the mountains of Ararat." The particular mountain to which people of different nations and religion, concur in awarding this distinction, is situated in lat. 39° 30' N. and long. 44° 30' E., in the vast chain of Taurus, at about equal distances between the southern extremities of the Black and the Caspian Seas. Its summit is elevated 17,700 feet above the level of the sea, and is, of course, always covered with snow. It is a very grand object, being not merely a high summit in a chain of elevated mountains, but stands as it were apart and alone, the minor mountains which branch out from it, and decline away in the distance, being so perfectly insignificant in comparison, that the sublime effect of this most magnificent mountain is not at all impaired or its proportions hidden by them. Professor Parrot, employed on a scientific expedition by the Russian govern-

ment, after repeated failures, at length reached the summit in October, 1829. He describes it as being a slightly convex, but almost circular platform, about 220 feet in diameter, which at the extremity declines pretty steeply on all sides. He subsequently ascended the Little Ararat, which is about 13,100 feet above the level of the sea.

Agri Dagh, or the Great Mountain, is the name given to Mount Ararat by the Turks; the Armenians call it Macis, or the Mother of the World; and the Persians in the neighbourhood, Kuhl-Nuach, or the Mountain of Noah; but all unite in venerating it as the haven of the great ship, which preserved the remnant of creation from the waters of the Deluge. So great is the reverence of the Armenians for this mountain that, as soon as they can see it, (and from its great height it is visible at the distance of ten days' journey,) they kiss the earth and repeat certain prayers, making the sign of the cross. Gesenius; Winer; Sir Robert Ker Porter.

ARAUNAH, or Ornan, as the same person is called in 1Chron. 21. 18, was an inhabitant of Jerusalem at or soon after the time that it was called Jebus. His threshing-floor was situated on Mount Zion, and occupied the spot on which the Temple of Jerusalem was afterwards built. David purchased it, in order to erect thereon an altar to the Lord on occasion of the plague which followed his numbering of the people. (2Sam. 24.)

ARBA, a name given to the ancient city of Hebron situated in the territory of the tribe of Judah. The Jewish Rabbins say that Hebron received its appellation of Arba, (signifying *four*), because Abraham, Sarah, Isaac, and Rebekah were buried there. Joshua merely mentions Arba as the same with Hebron. See HEBRON.

ARBACES, a general of the Medes and governor of Media, under Sardanapalus, king of Assyria, whose empire he subverted. Dr. Prideaux is of opinion that Tiglath-pileser and Arbaces are the same person denoted under two distinct names; this is contrary to the opinion of Archbishop Usher, who supposes one to have possessed Media, the other Assyria.

ARBATTIS, a city of Galilee taken and destroyed by Simon Maccabæus. (1 Macc. 5. 23.)

ARBELA. There were three towns or places of this name in Palestine. The first, according to Eusebius, was a village on the other side of the Jordan, dependant on Pella. The second, according to Josephus, was a place in the province of Galilee, in the vicinity of Sephoris. The third, a village in Upper Galilee, noted for its caverns, which served as the refuge of banditti with which the country was frequently infested. Calmet.

ARBITE, a native of Arba. It occurs in 2Sam. 23. 35, as the title of Paarai, one of David's captains.

ARBONAI, a river mentioned in the apocryphal book of Judith, (2. 24,) on the banks of which several "high cities" were destroyed by Holofernes.

ARCA, a city of Phœnicia, situated between Arad and Tripolis. It was allotted to the tribe of Asher. Calmet.

ARCE, otherwise called Rekem by change of pronunciation, or Petra, the capital of Arabia Petræa. Calmet. See **PETRA**.

ARCHAD, an ancient city, alleged by the Septuagint to have been built by Nimrod. See **ACCAD**.

ARCHANGEL. Those angels are so styled who occupy the highest rank in the celestial order or hierarchy, which consists, according to the Apostles, of thrones, dominions, principalities, and powers. (Ephes. 1. 21; Col. 1. 16; 1Thess. 4. 16; 1Peter 3. 22; Jude 9.)

The Fathers are not agreed on the number and order of the celestial hierarchy. Dionysius the Areopagite admits but three hierarchies, and three orders of angels in each hierarchy. In the first are Seraphim, Cherubim, and thrones; in the second, dominions, mights, and powers; in the third, principalities, archangels, and angels. These titles of rank are probably allusions to the customary order of the courts of the Assyrian, Chaldean, and Persian kings; hence Michael the archangel, tells Daniel that he is one of the chief princes in the court of the Almighty.

A late eloquent writer observes: "The utmost distances of the material universe are finite; but the disparity of nature which separates man from his Maker is infinite; nor can the interval be filled up or brought under any process of measurement. Nevertheless, in the view of our feeble conceptions, an apparent measurement, or filling up of the infinite void, would take place, and so the idea of immense separation would be painfully enhanced, if distinct vision were obtained of the towering hierarchies of intelligences, at the base of which the human system is founded. Were it indeed permitted to man to gaze upward, from step to step, and from range to range of the vast edifice of rational existences, and could his eye attain the summit, and there perceive, at an infinite height beyond that platform of created beings, the lowest steps of the Eternal throne—what liberty of heart would afterwards be left to him in drawing near to the Father of Spirits? How, after such a revelation of the Upper World, could the affectionate cheerfulness of earthly worship again take place? Or how, while contemplating the vastness of the interval between heaven and earth, could the dwellers thereon come familiarly as before, to the throne of prayer, bringing with them the small requests of their petty interests of the present life? If introduction were had to the society of those beings whose wisdom has accumulated during ages which time forgets to number, and who have lived to see once and again, the mystery of the providence of God complete its cycle, would not the impression of created superiority oppress the spirit and obstruct its access to

the Being whose excellencies are absolute and infinite? Or what would be the feelings of the infirm child of earth, if, when about to present his supplications, he found himself standing in the theatre of Heaven, and saw, ranged in a circle under the skies, the congregation of immortals? These spectacles of greatness, if laid open to perception, would present such an interminable perspective of glory, and so set out the immeasurable distance between ourselves and the Supreme Being, that we should henceforward feel as if thrust down to an extreme remoteness from the Divine notice; and it would be impossible to retain with any comfortable conviction, the belief in the nearness of Him who is revealed as a very present help in every time of trouble. But that our feeble spirits may not thus be overborne, or our faith and confidence baffled and perplexed, the Most High hides from our sight the ministries of his court, and dismissing his train, visits, with infinite condescension, the lowly abodes of those who fear Him, and dwells as a father in the homes of earth."

Extraordinary powers and functions were conferred on angels by the different Gnostic sects. They all held that angels were the fabricators or architects of the universe, and Cerinthus affirmed they were superior to Christ himself. These opinions were early entertained, and the Apostle Paul thought it necessary to warn the Colossians against such errors. "Let no man beguile you of your reward in a voluntary humility and *worshipping of angels*, intruding into those things which he hath not seen, vainly puffed up by his fleshly mind." (Col. 2. 18.) They also affirmed, according to Theodoret, that the law was given by angels, and that no one had access to God except through them. Hence we find on the Gnostic gems, the names of numbers of their angels; on one are those of Michael, Gabriel, Uriel, Raphael, Ananias, Prochorus, and Chabriel. But the chief and most highly venerated was Michael, insomuch that oratories were erected in Asia Minor, where divine honours were paid to him.

The Egyptian deity Osiris is often represented with the head of a hawk, and among the Gnostics, this emblem was placed over a variety of figures. In the gem represented below, it is set on a man with wings, who from the inscription appears to be intended for an angel; and that angel Michael, he having the legend *MIXAHA* over his head. He holds in his hand two implements, which have the form of triangles, similar to one held in the hand of Isis in the Egyptian planetarium, where she is represented as the earth. On the opposite face are the words *ATNAMIS MIXAHA*, the *might or power of Michael*.

Size of the Gem.

ARCHBISHOP. This title was given in the fourth and fifth centuries to the bishops of the chief cities, such as Rome, Alexandria, Antioch, and Constantinople; which bishops presided amongst the other metropolitans and bishops in the districts or divisions of the empire attached to those places. The title occurs, perhaps, for the first time, in Athanasius's *Second Apology against Arius*, where it is applied to the Bishop of Alexandria. It was officially given by the Councils of Ephesus and Chalcedon. It afterwards yielded to the more favourite title of patriarch, in regard to the cities above named, and Jerusalem. Riddle's *Christ. Antiq.*

ARCHDEACON. Some writers, especially certain of the Romish church, (Baronius, *Annals*,) trace the origin of the archidiaconate to the New Testament, regarding Stephen as the first who held this office. The real origin appears to be the following. During the celebration of divine worship it was usual for one of the deacons to stand by the side of the bishop at the altar, whilst the other deacons belonging to the church discharged their several offices in the assembly. (*Constit. Apost.* lib. ii. c. 57.) This deacon was called, *primus, primicerius diaconorum*, the first or chief deacon. Hence the rank and office of archdeacon, which was in high repute as early as the fourth century.

Athanasius, at Alexandria, appears to have been made archdeacon while he was a young man; although in general the oldest man among the deacons held the office.

While the archdeacon was appointed to his office in some places by election, it is probable that in others the choice rested entirely with the bishop.

The offices of the archdeacon, as enumerated by Bingham, were:—

To attend the bishop at the altar, and to assist him in managing the revenues of the church, in preaching, and in ordaining the inferior clergy.

The archdeacon had power to censure deacons and the inferior clergy, but not presbyters. Riddle's *Christ. Antiq.*

ARCHPRESBYTER, the title of the senior presbyters of the primitive church. From the fifth to the seventh centuries, these archpresbyters possessed great influence, and shared in the administration of the bishop's office, as suffragans and general vicars. When the see was vacant, they discharged all the episcopal duties, and one of their number usually succeeded to the bishopric. Some parts of the episcopal administration were committed exclusively to their care. Hence misunderstandings often arose between them and the bishops; and the latter were in the habit of favouring and supporting the archdeacons, as a check upon the power of the archpresbyters. The first trace of this is to be found in the canons of the fourth council of Carthage. Riddle's *Christ. Antiq.* See **PRESBYTER**.

ARCHELAIS, a city of Judæa, to the north-west of Jericho, built by Archelaus, son of Herod the Great. Near it was a valley planted with palm-trees by the same prince. Josephus.

ARCHELAUS, a son of Herod the Great. Herod, by his will, appointed Archelaus his successor in the kingdom; Herod Antipas tetrarch of Peræa and Galilee, and Philip tetrarch of Batanea, Gaulonitis, Trachonitis, and Paneas, subject, however, to the approbation of Augustus, who ratified his will, as it respected the territorial division; but conferred on Archelaus the title only of ethnarch, or chief of the nation, with a promise of the regal dignity at some future period, if he should prove himself worthy of it. Archelaus entered upon his office, and his subjects considered him as a

king; hence the Evangelist, in conformity with the Jewish idiom, says that he reigned. (Matt. 2. 22.) His reign, however, had commenced very inauspiciously; for, after the death of Herod, and before Archelaus could go to Rome to obtain the confirmation of his father's will, the Jews having become very tumultuous at the Temple, in consequence of his refusing some demands, Archelaus ordered his soldiers to attack them; on which occasion upwards of three thousand were slain. On Archelaus going to Rome to solicit the royal dignity, (agreeably to the practice of the tributary kings of that age, who received their crowns from the Roman emperor,) the Jews sent an embassy, consisting of fifty of their principal men, with a petition to Augustus that they might be permitted to live according to their own laws, under a Roman governor. To this circumstance Our Lord evidently alludes in the parable related by St. Luke. (19. 12-27.) "A certain nobleman (*εὐγενής, a man of birth or rank, the son of Herod*), went into a far country (*Italy*), to receive for himself a kingdom (*Judæa*), and to return. But his citizens (*the Jews*) hated him, and sent a message (or *embassy*) after him (*to Augustus Cæsar*), saying, 'We will not have this man to reign over us.' The Jews, however, failed in their request, and Archelaus, "having received the kingdom," (or *ethnarchy*), on his return wreaked his vengeance on those "who would not that he should reign over them." Josephus *Antiq.*

The application of this parable is to Jesus Christ, who foretels, that, on his ascension, He would go into a distant country, to receive the kingdom from his Father; and that He would return at the destruction of Jerusalem, to take vengeance on those who rejected him. The subsequent reign of Archelaus was disturbed by the insurrections of the Jews against the Romans, and also by banditti and pretenders to the crown; at length, after repeated complaints against his tyranny and mal-administration, made to Augustus by the principal Jews and Samaritans, who were joined by his own brothers, Archelaus was deposed, and banished to Vienne, in Gaul, in the tenth year of his reign; and his territories were annexed to the Roman province of Syria. Josephus, lib. xvii.; Jones, *Lectures on the Figurative Language of Scripture*; Horne.

Archelaus.

ARCHERY. From the frequent appearance of combatants armed with bows and arrows on the Egyptian monuments and Babylonish sculptures, we may conclude that this art is of very high antiquity. In Gen. 21. 20, Ishmael is spoken of as an archer, and again in Gen. 27. 3, but with reference to hunting rather than to war; and this appears to have been long the case with the Israelites, though the neighbouring nations employed it for military purposes. Saul, we read (1Sam. 31. 3,) was wounded by the Philistine archers, and it has been conjectured that it was the unskilfulness of the Israelites with this weapon which led David, while lamenting the death of the king and his sons, to give directions for "teaching the children of Judah the use of the bow." (2Sam. 1. 18.) If such were the case, his efforts were successful, for, after this period, from its frequent mention in the Holy Scriptures, archery would appear to have been considered as of great importance, so much so, that "breaking the bow" is a phrase often employed by

the prophets to denote the utter destruction of the power of a nation. (Jer. 49. 35; Ezek. 39. 3; Hos. 1. 5.)

From Job 20. 24, and from Psal. 18. 34, it appears that the bow was sometimes made of metal, and consequently was very stiff and hard to bend, on which account the archers used their foot in bending their bows; and therefore when the prophets speak of "treading the bow," and of "bows trodden," they are to be understood of "bows bent," as our translators rightly render it; (Jer. 50. 14; Isai. 5. 28; 21. 15;) where the Hebrew word which is used signifies to tread upon. Jahn; Horne. See ARMS.

Archer. From the Egyptian Monuments.

ARCHES, אֲרָמֹת (Ezek. 40. 16.) The marginal reading gives galleries or porches, as understood of a covered walk with pillars, and is that which most interpreters seem to prefer. One reason adduced in support of it is this, that the arch is a comparatively late invention, and could not have been known to the Hebrews. Now as this reason involves the conclusion that no arches appeared in the public or private constructions of the Hebrews, though they abound in modern Oriental architecture, a question of some interest is suggested without its being necessary to show that the word in Ezekiel has been properly rendered.

One of the arguments against the antiquity of the arch was its alleged absence from the more ancient architecture of the Egyptians; but this proves to be a mistake. Belzoni discovered Egyptian arches which he considered of very remote antiquity, but his evidence is less conclusive than that which has since been supplied by Sir J. G. Wilkinson in a work printed by him a few years since at Malta, containing much curious information not superseded by that contained in his more recent publication, the *Topography of Thebes*. He notices a curious imitation of an arch which he found in a fine edifice with an avenue of Sphinxes, under the mountain of Quoorneh on the Libyan side of Thebes. This discovery carries the ascertained antiquity of the arch up to 1540 B.C., 526 years prior to the commencement of Solomon's Temple. The unascertained antiquity may have been, and probably was, much higher. At the ascertained date, the Hebrews were bondsmen in Egypt,

and are supposed by many to have been employed in the construction of those very pyramids of crude brick to which Sir J. G. Wilkinson alludes. *Saturday Magazine*.

Flooding over an Arched Room at Thebes.

The above wood-cut gives a specimen of the crude brick in connexion with the arch, which may be traced of this material as early as the reign of Amunoph I. B.C. 980.

Stone Arch at Saqqara.

The stone arch may be traced to 600 B.C. The above is a tomb of two large vaulted chambers at Saqqara, of the time of Psamaticus II., B.C. 400, whose name occurs on the roof to the left. The arch presents a small and graceful segment of a circle, having a span of seven feet ten inches, and a height of two feet eight inches and a half.

ARCHI, a city belonging to the half-tribe of Manassch, beyond the Jordan. (Josh. 16. 2.)

ARCHIPPUS, a teacher or a deacon of the church at Colosse, to whom the Apostle Paul at the close of his Epistle gave an important exhortation, to "take heed to the ministry which he had received of the Lord, that he fulfilled it." (Col. 4. 17.)

ARCHI-SYNAGOGUS, Ἀρχισυναγωγός, or Ruler of the Synagogue, (Luke 13. 14; Mark 5. 22.) It appears from Acts 13. 15, collated with Mark 5. 22 and John 6. 59, that there were several of these rulers

in a synagogue. They regulated all its concerns, and gave permission to persons to preach. They were always men advanced in age, and respectable for their learning and probity. The Jews termed them *Hacamim*, *sages*, or *wise men*, and they possessed considerable influence and authority. See *RULER OF THE SYNAGOGUE*.

ARCHITRICLINUS. In the time of Our Saviour the Persian custom of reclining at table prevailed in Judæa. Three sat on one mat or cushion, which was large enough to hold that number only; hence the origin of the word *αρχιτρικλινος*, *the master of the feast*. The guests reclined upon the left side with their faces towards the table, so that the head of the second approached the breast of the first, and the head of the third approached the breast of the second. In John 2. 8, in the account of the miracle wrought by Our Lord at Cana of Galilee, the word is rendered, "the governor of the feast." This officer was called the *symposiarch* by the Greeks. He was one of the guests most distinguished for his agreeable manners and pleasant address, and who could bear drink without becoming intoxicated. His duty was to preside over the feast, to prevent disorder, and while he promoted hilarity to discourage intemperance. He gave particular attention to the drinking, and noted how the several guests were affected by their wine; and when he had observed that some were more liable to be disordered by it than others, he mixed more water with their wine to keep them equally sober with the rest of the company. Thus the symposiarch took care that none should be forced to drink against his will; and also that although there was a general liberty of drinking, none should even by his own choice become intoxicated. In accordance with this we observe in the above mentioned passage in John, that the wine was taken to him to taste before it was presented to the guests.

Theophylact remarks, "That no one might suspect that their taste was so vitiated by excess as to imagine water to be wine, Our Saviour directs it to be tasted by the governor of the feast, who certainly was sober; for those who on such occasions are intrusted with this office, observe the strictest sobriety, that everything may by their orders be conducted with regularity and propriety."

The author of the apocryphal book of Ecclesiasticus (32. 1, 2), says, "If thou be made the master of a feast, lift not thyself up, but be among them as one of the rest; take diligent care of them, and so sit down. And when thou hast done all thy office, take thy place, that thou mayest be merry with them, and receive a crown for thy well ordering of the feast." Calmet; Jahn's *Bibl. Archæol.*

ARCTURUS. In two places in the Book of Job our translators speak of Arcturus, but the etymology of the original is obscure, and there are two opinions concerning what it denotes; one, that *ψυ* (9. 9,) is Arcturus, the principal star in the constellation Boötes; and the other, that *ψυ* (38. 32,) is the constellation Ursa Major or the Great Bear. "His sons," in the latter passage, are supposed to be the three stars in the tail of the Bear. The two explanations will be easily reconciled, if we suppose that Arcturus standing for the constellation Boötes, represented also the Bear as associated therewith; Boötes from its position and proximity to the Bear, being often called *Arcto-phylax*, or the Bear-keeper, by the Greeks, and similar names being bestowed upon it by other nations. At any rate, that Ursa Major is intended, may well be believed. Aben Ezra, in his commentary on Job, says, "Aish is a northern constellation composed of seven stars." Further on he observes, "The number of the

northern constellations is twenty one," and afterwards "Aish and his sons are the stars of the Great Bear."

The opinion of the ancients, that the course of the stars influenced the seasons, is well-known, whence Pliny says (lib. ii. c. 39,) "Arcturus seldom rises without bringing hail and tempests."

Arcturus signum sum omnium quam acerrimum.

Vehemens sum, cum exorior, cum occido vehementior.

Plaut. in *Rudenti Prolog.*; compare Niebuhr; Bochart, *Hieroz.*; Michaëlis, *Suppl.*; *Pict. Bible*; Gesenius.

I. ARD, the youngest son of Benjamin. (Gen. 46. 21.)

II. The son of Bela, of the tribe of Benjamin. (Numb. 26. 40.) In 1Chron. 8. 3, he is called Addar.

ARDON, a son of Caleb and Azubah. (1Chron. 2. 18.)

ARELI, the youngest son of Gad. (Gen. 46. 16.)

AREOPAGUS. The tribunal of the Areopagus at Athens is said to have been instituted by Cecrops, the founder of that city, and was celebrated for the strict equity of its decisions. Among the various causes of which it took cognizance were matters of religion, the consecration of new gods, erection of temples and altars, and the introduction of new ceremonies into public worship. On this account St. Paul was brought before the tribunal of Areopagus as "a setter forth of strange gods," because he preached unto the Athenians, Jesus and *Αναστασις*, or the Resurrection. (Acts 17. 18.) Its sittings were held on the *Αρειος Παγος*, or *Hill of Mars*, whence its name was derived, signifying properly a high situation. This was an isolated rock broken and precipitous towards the south, but on the north side sloping gently down to the temple of Theseus. It stood nearly in the centre of Athens, between the Acropolis and the Pnyx, where the general assemblies of the people were held.

"It is not possible," says Dr. Edward Daniel Clarke, "to conceive a situation of greater peril, or one more calculated to prove the sincerity of a preacher, than that in which the Apostle was here placed; and the truth of this will perhaps never be better felt than by a spectator, who from this eminence actually beholds the monuments of pagan pomp and superstition by which he, whom the Athenians considered as the 'setter forth of strange gods,' was then surrounded; representing to the imagination the disciples of Socrates and Plato, the dogmatist of the Porch, and the sceptic of the Academy, addressed by a poor and lowly man, who 'rude in speech,' without 'the enticing words of man's wisdom,' enjoined precepts contrary to their taste, and very hostile to their prejudices. One of the peculiar privileges of the Areopagites seems to have been set at defiance by the zeal of St. Paul on this occasion; namely, that of inflicting extreme and exemplary punishment upon any person who should slight the celebration of the holy mysteries or blaspheme the gods of Greece. We ascended to the summit by means of steps cut in the natural stone. The sublime scene here exhibited, is so striking that a brief description of it may prove how truly it offers to us a commentary upon the Apostle's words, as they were delivered upon the spot. He stood upon the top of the rock, and beneath the canopy of heaven. Before him there was spread a glorious prospect of mountains, islands, seas, and skies, behind him towered the lofty Acropolis, crowned with all its marble temples. Thus every object, whether in the face of nature or among the works of art, conspired to elevate the mind, and to fill it with reve-

The Areopagus.

rence towards that Being who made and governs the world, (Acts 17. 24-28,) who sitteth in that light which no mortal eye can approach, and yet is nigh unto the meanest of His creatures; in whom we live and move and have our being."

The Areopagitæ, or judges, held three meetings every month in the Areopagus. They sat in the open air, as was usual among the Greeks in courts that tried cases of murder, because it was held unlawful for the accused and accuser to be under the same roof, and it was feared that the judges might contract pollution by conversing with persons so profane. On the top of the hill the foundations of the court may still be seen. They are built with squared stones of a prodigious size in the form of a semicircle, and support a terrace or platform which was the court where this assembly was held. Dodwell's *Greece*; Horne.

AREOPOLIS, a city of Arabia Petræa, situated in the river Arnon, called also Ar and Rabbath-Moab. See **AR**.

ARETAS. There were many princes of Arabia of this name, but the one mentioned in Scripture was the father-in-law of Herod Antipas, against whom he declared war in revenge for his ill-treatment of his daughter; Antipas besought the assistance of the Romans, but some delay in the marching of their forces, and the death of the Emperor Tiberius, put an end to the expedition, and saved Aretas. It is supposed that he availed himself of this favourable opportunity to make an incursion into Syria, and obtain possession of Damascus, where he appointed an ethnarch whose jurisdiction probably extended only over the Jews who dwelt there. It appears from coins that the Romans were again masters of the city, in the time of Nero. Calmet; Horne.

Aretas.

ARGOB. I. A district of Palestine in the ancient territory of Bashan, belonging to the half-tribe of Manasseh beyond Jordan, a very fertile and fruitful country. It contained no less than sixty cities, one of which called Havoth-Jair was a strong place surrounded by thick walls and having well defended gates.

II. In 2Kings 15. 25, we read that Pekah conspired against Pekahiah, king of Israel, "and smote him in Samaria, in the palace of the king's house, with Argob and Arieih." In giving this version our translators have mistaken the sense of the original, which, literally rendered, would be, "smote him in the harem of the palace of the king of Argob and Arieih," the name, probably, of two cities in Samaria.

ARIDAI and **ARIDATHA**, two of the sons of Haman, who with their brethren were hanged on a gibbet. (Esth. 9. 9.)

ARIEH. See **ARGOB** II.

I. **ARIEL**, אֲרִיאֵל One of the names of the city of Moab called Ar or Rabbath-Moab. But Ariel, in its proper signification of *Lion of God*, is a name given to Jerusalem, either on account of its strong military force, or because when besieged it devoured and consumed its inhabitants by its intestine seditions and divisions. It was perhaps for a similar reason that the Persians call one of their cities Shiraz, which signifies the *devouring lion*.

II. **Ariel** also signifies the altar of burnt-offerings in the Temple of Jerusalem, and sometimes the Temple itself. (Isai. 29. 1,2.)

Lowth and Gesenius, with others, derive the first part of the word from אֵל when it would of course signify not the *Lion of God*, but the *fire* or *fire-hearth of God*, meaning the sacred fire on the altar of burnt offering or the altar itself, and so Jerusalem, as containing that altar. See also Ezek. 43. 15,16.

ARIMANON, a city of refuge beyond the river Jordan, supposed to be the celebrated Ramoth in Gilead. (Josh. 21. 38.)

ARIMATHEA, a city of Palestine, situated between Lydda and Joppa on the way to Jerusalem. On its site now stands a wretched village called Ramla. It is supposed to have been the same as Ramah where Samuel the prophet dwelt, (1Sam. 25. 1;) Pococke, however, doubted of this. Adrichomius (*Theat. Terr. Sanct.*) traces its various names through all their changes from Ramathaim and Ramah, as it is called in the Old Testament, to Ramatha or Armatha the residence of Samuel, as Josephus has it, and to the Arimathea of the New Testament and the Ramla of the present day.

Besides Mohammedans, the population of Arimathea comprises Maronites, Greeks, and Armenians. The Greeks have a church dedicated to St. George, and ornamented with some marble columns, and the Mohammedans have five principal mosques, with high towers, some of which were originally Christian churches.

The best building in the town is the hospital of the Latin monks of the Holy Trinity, which has many good apartments, several courts, cisterns for water, a garden, large terraces, and a neat church, built, as the inmates say, on the spot where stood the house of Nicodemus. Christian pilgrims on arriving at Ramla are generally obliged to remain there till notice has been sent to the superior of one of the monasteries at Jerusalem, and till leave has been obtained of the Cadi of that city for them to proceed thither.

At present Arimathea does not contain more than a hundred families. The houses are only so many huts, sometimes detached, and sometimes ranged in the form of cells round a court, enclosed by a mud wall. In winter the inhabitants and their cattle may be said to live together; the part of the building allotted to themselves being raised only two feet above that in which they lodge their beasts. By this means the peasants are

kept warm without burning wood, a species of economy absolutely indispensable in a district almost totally destitute of fuel.

"In its present state, Ramla is about the size of Jaffa. The style of building is that of high square houses with flattened domes covering them. On the large mosque we noticed a square tower with pointed arched windows like many of our country church steeples in England.

"The principal occupation of the people is husbandry, for which the surrounding country is highly favourable; and the staple commodities produced by them are corn, olives, oil and cotton, with some soap and coarse cloth made in the town." Buckingham's *Palestine*.

The author of *Three Weeks in Palestine*, states that between Jaffa and Ramla there is an extensive grove of very large and aged olive-trees which are said to have been planted by the Crusaders, in whose time Ramla was a place of some importance.

At a little distance from the town is a magnificent arched cistern, raised upon two rows of columns, twenty-four in all, forming a handsome arcade; parts of the walls were once decorated with paintings; but time has so effaced them, that the subjects cannot now be deciphered; it seems formerly to have supplied the inhabitants with water. On the opposite side of the town is a large reservoir, lined with stone, the rendezvous of Mussulman pilgrims from Jaffa or Joppa, while waiting to join the caravan for Mecca.

Ramla is surrounded with ruins of various dates, among which is a large square tower, much like a steeple, said to have been originally twice its present height, and to have been erected in honour of forty martyrs who suffered death in Armenia. It joins to a church, of which it was probably once the belfry; and close by are the remains of an ancient monastery.

Arimathea

I. ARIOCH, the king of Ellasar, one of those who formed the league with Chedorlaomer against the kings of Sodom and Gomorrah. (Gen. 14. 1.)

II. A place mentioned in the apocryphal book of Judith, 1. 6.

ARISAJ, the seventh son of Haman, hanged with his father and his brethren. (Esth. 9. 9.)

ARISTARCHUS, a native of Thessalonica, a city of Macedonia, who embraced Christianity and accom-

panied St. Paul in several of his journeys. He was with St. Paul at Ephesus, and continued with him during the two years of his abode in that place, sharing with him in all the dangers and labours of the ministry. (Acts 19. 29.) He nearly lost his life in a tumult raised by the Ephesian silversmiths. He left Ephesus with the Apostle and went with him into Greece, from thence he attended him into Asia, from Asia into Judæa, and from Judæa to Rome. (Acts 20. 4; 27. 2; Col. 4. 20; Philem. 24.) According to a tradition in the Greek

church, he was beheaded at Rome with St. Paul in the reign of Nero.

ARISTEAS, an officer under Ptolemy Philadelphus, sent by that prince to the high priest Eleazar, to request some learned men to translate the Scriptures into Greek. Seventy-two persons were sent, whose version is termed the Septuagint. See SEPTUAGINT.

I. ARISTOBULUS I., the son of John Hyrcanus, the high priest, made himself king of Judæa, but died in the first year of his reign, B.C. 102, and was succeeded by his brother Alexander Jannæus.

II. Aristobulus II., the second son of Alexander Jannæus, deposed his brother Hyrcanus, and made himself king of Judæa. The Romans, however, interfered in the quarrel, Jerusalem was stormed by Pompey, and Aristobulus sent prisoner to Rome, where he was shortly after poisoned.

III. The grandson of Aristobulus II., was made high priest by Herod, but soon after murdered by him.

IV. The brother of Mariamne, the wife of Herod.

V. A son of Herod, strangled together with his brother Alexander by order of their father. Josephus.

VI. The brother of Barnabas, mentioned by St. Paul. (Rom. 16. 10.) According to the modern Greeks he was one of the seventy disciples, and was ordained a bishop by Barnabas or St. Paul.

VII. A Jew of Alexandria, was a peripatetic philosopher, and wrote in Greek a commentary on the Pentateuch, which he dedicated to Ptolemy Philometor. His object was to prove that the early Grecian poets and philosophers had borrowed from the books of Moses, and that the Greeks were acquainted with the Jewish history. With this view he forged a number of passages, attributing them to poets and philosophers, and did this so artfully as to deceive some of the Fathers and some profane writers. Valckenaër, *Diatrise de Aristobulo Judæo*.

ARK, אֲרֹכָה Arabic, تَابُوت Sept. κιβωτος; Vulgate, *arca*; properly means a box or chest; hence the term has been applied to the vessel in the shape of a chest, אֲרֹכָה which was made by Noah, (Gen. 6. 14,) and also to the little boat in which Moses was placed. (Exod. 2.)

2. Much difference of opinion exists about the form of the ark built by Noah. The common figures are given under an impression that it was intended for progressive motion; whereas we have no ground for supposing that any other object was sought than to construct a vessel, which should float for a given period upon the water. For this purpose it was not necessary to place the ark in a sort of boat, as in the usual figures; and we may therefore be satisfied with the simple idea which the text gives, of an enormous oblong box, or wooden house, divided into three stories, with various apartments, and apparently with a sloping roof.

3. This structure, which was to contain the remnant of creation, must have been of vast dimensions and great strength. Accordingly the patriarch was directed to "make it of Gopher wood;" a term used in no other place in the Bible, and which has been supposed to signify cypress, a wood of extreme durability. The length of it was prescribed at 300 cubits, the breadth 50, and the height 30. The common cubit, originally imagined to be 18 inches, is now allowed to have contained 22. According to this measurement the ark was $547\frac{1}{2}$ English feet long, $91\frac{1}{2}$ broad, $54\frac{1}{2}$ high; and its solid contents amount to $2,730,781\frac{1}{2}$. It was in shape an oblong square, with a roof raised in the middle a cubit; and

each of the stories must have been about 18 feet high. It had windows and one door; and seems to have had covering which might be removed, probably made of skins drawn over the roof, and adapted to defend the apertures called windows.

Dr. Hales proves the ark to have been of the burthen of 42,413 tons. "A first-rate man-of-war is between 2,200 and 2,300 tons; and consequently the ark had the capacity or stowage of 18 of such ships, and might carry 20,000 men, with provisions for six months, beside the weight of 1800 cannons, and all the requisite military stores." "Can we doubt of its being sufficient to contain eight persons, and about two hundred or two hundred and fifty pair of four-footed animals; a number to which, according to M. Buffon, all the various distinct species may be reduced, together with all the subsistence necessary for a twelvemonth? To these may be added all the fowls of the air, and such reptiles and insects as cannot live under water." Hales, *Chron*.

4. Almost every circumstance connected with the ark has given rise to an immense variety of opinions, most of which have no better foundation than mere conjecture; we shall briefly allude to a few of them.

(1.) *Time of construction.* The ark is generally understood to have been completed in the 1656th year of the world, at the time when the Deluge commenced; but how long Noah was employed in preparing it, is not so apparent. According to Muhammedan writers, it was begun in A.M. 1654, which allows only two years for its construction. According to Rabbinical writers, it was begun A.M. 1604, which allows fifty-two years; according to Berosus, in A.M. 1578, which allows seventy-eight; according to others, in A.M. 1556, which allows one hundred; and, according to most authors, in A.M. 1536, which allows one hundred and twenty.

The two last are the most probable suppositions, and receive some support from the testimony of sacred Scripture.

In favour of the first of these, it is alleged, that Noah is stated to have been five hundred years old immediately before the ark is mentioned, and six hundred when the Deluge took place; (Gen. 5. 32; 7. 6;) while it is urged on the other hand, that from 1Pet. 3. 20, compared with Gen. 6. 3, the ark appears to have been preparing during the whole period of the Divine forbearance; viz. one hundred and twenty years.

(2.) *Place where built.* On this point, also, there are many different opinions. One writer fixes upon the plains of Sodom, in Palestine; another, upon Mount Caucasus, on the confines of India; a third upon some part of China; and others upon the territory of Babylon, in Chaldæa. In order to determine the question, several considerations have been proposed, such as that Noah cannot be supposed to have removed far from Eden; that as the ark was not fitted for moving to a great distance, it must have been constructed near the place where it rested, viz. Mount Ararat; that as much timber would be required for so large a vessel, it must have been built where the particular wood of which it was made abounded; this last consideration has much weight, and would seem to point out Babylonia, as the cypress is found there abundantly in the present day.

5. The destruction of all mankind, with the exception of a single family, has naturally left profound and durable traces in the traditions of all people on the face of the globe, with the circumstances more or less changed, according to the Scripture narrative. A Hindoo tradition is thus given in the *Mahabharata*, a Sanscrit poem. The gods having resolved to destroy the human race by a general deluge, the god Brahma appeared to the king Satyavrata, called also Menou, a servant of the "Spirit

who moves upon the waters;" he announced to him that after seven days, heaven, earth, and hell would be plunged in the ocean of death, but that he would send him a large vessel for his preservation, and also for the seven holy Brahmins, and two of every kind of beast. Everything came to pass as the god had predicted, and under the form of a horned fish he himself conducted the vessel upon the waves; after Satyavrata, as the god had commanded him, had attached it to his horn.

Another Hindoo legend states, that the earth rested during this deluge upon an enormous tortoise, into which Vishnool had transformed himself. The waters having subsided, Vishnool took the form of a boar, and raised up with his tusks the submerged earth.

6. The traces of traditions respecting the general Deluge which are to be found on the Egyptian monuments, also bear strong testimony to that awful event. The most ancient of these records are deeply carved and destitute of colour, as if to save them from the destructive agency of water: they are literally "graven with an iron pen in the rocks for ever." But more direct references are found on the monuments; we see a sacred ship or ark borne in religious processions, accompanied by several symbols of life and preservation, especially the winged globe, which gives so lively an image of providential protection, that it seems to have been derived from the maternal care of the female bird hiding the callow young under "the shadow of her wings."

Bryant, in his *Ancient Mythology*, has collected a variety of ancient historical relations, which show that some records concerning the ark had been preserved among most nations of the world, and in the general system of pagan mythology. Abydenus, with whom all the Eastern writers concur, informs us that the place of descent from the ark was Armenia, and that its remains had been preserved for a long time. Plutarch mentions the dove, and its being sent out of the ark. Lucian speaks of Deucalion's going forth from the ark, and raising an altar to God. Bishop Pococke has preserved three specimens of ancient sculpture, in which the ceremony of carrying an ark in procession is displayed. They were very ancient, and found by him in Upper Egypt. The ship of Isis referred to the ark, and its name Baris was that of the mountain corresponding to Ararat, in Armenia. There is also a reference to the ark in the temples of the Serpent worship, called Dracontia; and also in that of Sesostriis, fashioned after the model of the ark, in commemoration of which it was built, and consecrated to Osiris, at Thebes. Bryant conjectures that the city, said to be one of the most ancient in Egypt, as well as the province, was denominated from it, Theba being the appellation of the ark.

7. There is a medal in the cabinet of the king of the French, which was carefully examined by the Abbé Barthélemy, at the desire of Dr. Combe, and pronounced by him to be authentic. It bears on one side the head of Severus; on the other, a history in two parts, representing first, two figures enclosed in an ark or chest, sustained by stout posts at the corners, and well timbered throughout. On the side are letters; on the top is a dove; in front, the same two figures which are seen in the Ark, are represented as come out of, and departing from, their late residence. Hovering over them is a dove, with a sprig in its bill. The situation of these figures implies the situation of the door; and clearly commemorates an escape from the dangers of water by means of a floating vessel. See *APAMEA*.

8. From these various circumstances it is clear that the heathens were well acquainted with all the leading circumstances of the Deluge; that their traditions, though largely blended with fable, bear a striking resemblance to

the narrative of Moses. Instead, therefore, of asserting (as it has been recently asserted, contrary to all the evidence furnished by natural and civil history,) that we have no sufficient grounds to induce us to believe that the Deluge ever took place; let the ingenuity of unbelief first account satisfactorily for this universal agreement of the pagan world, and she may then, with a greater degree of plausibility, impeach the truth of the Scriptural narrative of the Deluge. Faber; Gesenius; Winer; Horne. See *DELUGE*; *NOAH*.

ARK OF BULRUSHES. In Exod. 2.3, we read that Moses was exposed in an ark (or boat of bulrushes) *אֲרֹן* daubed with slime and with pitch. "Vessels of bulrushes" are also mentioned by Isaiah, 18. 2.

The word *אֲרֹן* signifies *to imbibe, to soak up water*. "Can the rush grow up without mire?" (Job 8. 11.) From the bass or integument of the plant, the ancients made mattresses, ropes, and canoes. (Plin. xiii. 21, 26.) The words in Exod. 2.3, may be rendered little canoes of papyrus or "paper reeds," *עֲרֹת* according to the Septuagint and Syriac. (Isai. 19. 7.)

Papyrus boats are frequently noticed by ancient writers. Plutarch describes Isis going in search of the body of Osiris, "through the fenny country, in a bark made of the papyrus," (Plut. *de Is.* s. 18,) *Εὐβαρίδι παπυρίῳ*, whence it was supposed that persons using boats of this description were never attacked by crocodiles, out of fear and respect to the goddess.

The body of such boats were composed of rushes, which were bound together with the papyrus; and the mode of rendering them impervious to water is satisfactorily pointed out by the coating of pitch with which they were covered. The Hebrew word *אֲרֹן* is precisely the same as that used for pitch by the Arabs to the present day,

زنت

From a passage in Theophrastus, when describing the papyrus, *παπυρος*, we at once perceive that the *Cyperus papyrus* and the *אֲרֹן* are identical; *Καὶ γὰρ πλοῖα ποιοῦσιν ἐξ αὐτοῦ*,—"They make boats and ships of it." The cyperus is distinguished by its cluster of elegant little spikes, which consist of a single row of scales, ranged in a straight line on each side. The coat is about the thickness of a man's wrist, and more than fifteen feet in length, so hard, that all kinds of utensils were made of it. The stem is about four cubits or six feet long, it was eaten raw, roasted, or boiled, and was employed in the manufacture of boats, sails, mats, clothes, beds, &c. Its Greek name *παπυρος*, has imparted its derivative to our word *paper*; while its Egyptian designation appears in the venerable name of Bible. Wilkinson's *Dom. Manners of the Egyptians*; Gesenius; Winer.

ARK OF THE COVENANT, אֲרֹן (Numb. 10. 33; Deut. 31. 26.) This was a small chest or coffer made of shittim wood, overlaid within and without with gold, into which were put the two tables of the law; not only the entire one, say the Jews, but also those that were broken. There were laid up beside it also the pot of manna and Aaron's rod that budded, and a copy of the books of Moses.

The Ark of the Covenant was a box of an oblong shape, a cubit and a half broad and high, and two cubits long, or three feet nine inches in length, by two feet three inches in breadth and depth, according to the common cubit of eighteen inches. It was ornamented on its upper surface with a border or rim of gold, called by the sacred historian "a crown," and on each of the two sides, at equal distances from the top, were two gold

Ark borne in procession by Egyptian Priests.

ings, in which were placed staves of shittim wood covered with gold, with which it was transported from place to place; these staves always remained in the rings even when the ark was at rest.

The lid or cover of the ark, *כפרת* *πλαστηριον*, was of the same length and breadth as the ark itself, and was made of the purest gold; over it, at the two extremities, were placed the Cherubim, and it formed the mercy seat, which was regarded as the throne of God, where his presence, *Shechinah*, in the form of a cloud, (Levit. 16. 2,) rested, and from whence his will was made known when consulted by the high priest, according to his promise: "I will commune with thee from above the mercy seat." (Exod. 25. 22.) The Cherubim were figures "of beaten work," looking inwards towards each other, with wings expanded, which, embracing the whole circumference of the mercy seat, met on each side in the middle. Hence God is said "to dwell between the Cherubims," (Psal. 80. 1,) and "to sit between the Cherubims;" (Psal. 99. 1;) hence also it is that the ark is called the "footstool of God." (Psal. 99. 5.) The ark was so situated in the Holy of Holies that the ends of the rods touched the veil which separated the two apartments of the tabernacle. This was the most holy of all the sacred furniture. None but the priests were allowed to touch it; and only one family of them, the Kohathites, were permitted to carry it. Hence Uzzah, the Levite, was punished with death for touching it. (2Sam. 6. 7.)

The identity of name with the Ark of Noah does not exist in the original. The former is called *אֲרוֹן* the latter *קֶבֶד*. The Septuagint renders both terms by *κιβωτος*, which has been followed in most modern versions.

In the twenty-fifth chapter of Exodus we have a minute description of the ark and its appendages, but differences of opinion have existed among Biblical scholars as to details, which the recent researches in Egypt are likely to remove in some measure. They have brought to light many representations of arks borne in processions by the priesthood, and although we are fully aware of the expurgatory process which such as these must have undergone to fit them for the use of God's chosen people, we may fairly conclude that the annexed engraving gives the best general idea now attainable of the subject before us.

The shrine in the middle of the boat or ark in the above figure may be taken to represent the Ark of the Covenant, the expanded wings, the *Shechinah*, and the heads at either end the Cherubim, only that they do not face each other. The idols and the kneeling figure are of course superfluous, as is also the boat. We may observe also that the Egyptian shrine appears always to have been removed on the shoulders of the priests as the ark was by the Levites. Jahn; Horne.

ARKITE, *Ἀρκι* *Arke*, an inhabitant of the city Arke, in Syria, some miles to the north of Tripolis, called also Cæsarea Libani. (Gen. 10. 17; 1Chron. 1. 15.) Gesenius.

ARM. The symbol of strength or power. "Break thou the arm of the wicked," (Psal. 10. 15,) *i. e.* diminish or destroy his power.

Arm is sometimes put to denote the infinite power of God, as in Psal. 89. 13; 98. 1; Isai. 53. 1.

It would seem to have been a custom with ancient warriors when aiming to strike an effectual blow to make bare the arm. So in allusion to this when some extraordinary and decisive exertion of Divine power is adverted to, it is not unusual for the sacred writers to describe it as *making bare, revealing, or stretching out the arm*. (Isai. 52. 10.)

ARMAGEDDON, a place mentioned in the Apocalypse c. 16. v. 16, where the sixth vial is to be poured out. It signifies, literally, the mountain of Megiddo, a city situated in the great plain at the foot of Mount Carmel, where King Josiah received his mortal wound in the battle with Pharaoh Necho, king of Egypt. (2Kings 23. 29, 30.) Here likewise Barak overcame Sisera with his great army. (Judges 5. 19.)

Poole, in his *Annotations*, conceives that Armageddon is merely another name for the city of Megiddo; the names of places and persons being changed in other instances; and thus the place of the great slaughter has its name from the place of the memorable battle where Josiah was slain.

ARMENIA, a province of Asia, comprising the modern Turcomania, and part of Persia; having Georgia on the north, Koordistan (the ancient Assyria,) on the south, and Asia Minor (Natolia,) on the west. This province includes the sources of the Tigris and the Euphrates, the Araxes and Phasis; and here also many Rabbins and some others place the garden of Eden. It was anciently divided into Armenia Major and Armenia Minor. Armenia Major is the province above spoken of, and belongs partly to Persia; Armenia Minor, a part of the ancient Cappadocia, is wholly Turkish.

2. Armenia according to the Greek historians derived its name from Armenus, one of the Argonauts who settled in the country. Bochart is of opinion that the name is a contraction of the Hebrew word *Har-mini*, denoting the mountain of Minni, the name of a province of this country, mentioned in Jer. 51. 27, placed by the prophet between Ararat and Ashchenaz, and probably referred to by Amos by the name of Harman, or Mountain of the Moon. Others assert that it received its name from Aram, the son of Shem, the ancestor of the Syrians.

3. Armenia Major was bordered on the north by Iberia and Albania; on the west by the river Euphrates; on the south by Mesopotamia; and on the east by Media; and thus had nearly the same boundaries it now has under its modern name of Turcomania, the western division of which belongs to Turkey, and the eastern to Persia.

4. The early history of this country is involved in much obscurity. The Armenian writers assert that their first chief or prince was called Haij. He was the son of Togloth, who, according to their accounts, was the same with Thogarma, grandson of Japheth. He left Babylon, his native city, twenty-two centuries before the Christian era, and established himself with all his family and dependants in the southern mountains of Armenia, to escape the tyranny of Belus, king of Assyria. The Armenians at a subsequent period were subdued by the Medes, to whom they were rendered tributary by Astyages, although they were allowed to be governed by their own kings; but on the dissolution of the empire of the Medes by Cyrus, Armenia was annexed to the Persian empire, its ancient race of kings became extinct, and it was governed by Persian lieutenants. After the death of Alexander the Great, it became part of the Syrian monarchy founded by Antigonos, who succeeded to one of the divisions of that conqueror's empire, with which it remained till the overthrow of Antiochus the Great, when it was divided into Armenia Major and Armenia Minor, and was under the sway of different rulers, being often the object of fierce contests between the Roman empire and the Parthians and Persians.

5. The Armenians were of old, as they are at the present day, remarkable for their industry and commercial enterprise. In the flourishing times of Tyre, as we learn from Ezekiel, (27. 14,) they brought horses and mules to the markets of that city, and according to Herodotus they had a considerable trade in wine, which they sent down the Euphrates to Babylon. At present their merchants are found dispersed throughout Europe; in Persia, they are the only commercial class, and they are the principal traders all over the East; they were at one time in possession of nearly the whole trade of the Levant.

The Armenians are distinguished by superior cultivation, manners and honesty, from the barbarians under whose yoke they live, and even from the Greeks and Jews, although they have many Jewish observances mingled with their habits. The cause is to be found in their creed, and their religious union; but particularly to the free distribution of the Bible among the people in translations that are esteemed valuable in theolo-

gical literature. The written language owes its cultivation to the translation of the Bible, begun A.D. 411, and finished in 511. With the biblical literature of the Armenians is connected their theological, historical, and mathematical literature, which has recently found many assiduous students in Paris.

6. The country of Armenia is beautifully diversified with lakes, (one of which, the Van, is about 170 miles in circumference,) rivers, mountains, plains, valleys, and woods; having a temperate and healthy climate, and a rich and fertile soil which for the most part is assiduously cultivated. It yields every species of grain and all kinds of delicious fruits, such as grapes, olives, oranges, peaches, apricots, nectarines, mulberries, walnuts, melons, apples, pears. It also produces tobacco, cotton, flax, wax and honey, raw silk, and hemp, which are exported to Constantinople and Russia.

Mr. Morier says, "The Armenian women do not wear so entire a veil as the Mahometan. It leaves the eyes at full liberty, and just incloses the nose, by which some general idea may be formed of the features and expression of the face. Their features are broad and coarse, their complexions are fair and ruddy, and their eyes black; but their countenances in general excite little interest. When they go from home, they cover themselves with a large white veil from head to foot. Their dress consists of a silk shift, a pair of silk trousers, which reach to the ancles, a close garment which fastens at the throat with silver clasps, and an outer garment generally made of padded chintz, and open all the way in front. They wear a silver girdle which rests on the hips, and is generally curiously wrought. Their feet are naked, and some of them wear silver rings round their ankles. No hair is seen except a long plaited tail that hangs over the back to the ground. On their heads they wear a species of cushion which expands at the top."

The total number of the Armenian nation is estimated by Mr. Conder at about two millions, two-thirds of whom are found within the Ottoman dominions, but with the exception of the Jews, no people is so much scattered. It is supposed there are about two hundred thousand in Constantinople and the adjacent villages; about forty thousand in India, ten thousand in Hungary and the contiguous countries; and they are met with in Africa, and even in America.

7. The Armenian church was formerly considered a branch of the Greek church, and it certainly professed the same faith, and acknowledged its subjection to the see of Constantinople, until in the seventh century the heresy of a sect called the Monophysites, who maintained that there is only one nature in Christ, or that he is both God and man without mixture, spread throughout Asia and Africa, and numbered the Armenians among its followers. But although the Armenians still hold that tenet, they differ from the Monophysites in many points of faith, worship, and discipline, and hold no communion with that branch of the Monophysites who are peculiarly termed Jacobites, nor with the Copts or Abyssinians. When they withdrew from the communion of the Greek church, they did not change the episcopal form of government, but only claimed the privilege of electing their own bishops. The church is governed by three patriarchs, the chief of whom resides in a monastery near Erivan, the ecclesiastical capital of Armenia. He exercises jurisdiction over Turcomania or Armenia Major. He has under him forty-seven archbishops and about two hundred bishops, but his mode of life is extremely simple and his revenue very limited. The second, subject to the first, governs the church in Cappadocia, Cilicia, Cyprus, Syria, and has under his

jurisdiction twelve archbishops. The third has no more than eight or nine suffragans. Besides these patriarchs, the Armenians have others in various countries, who are so styled although they have no particular jurisdiction. DuPin alleges that the Armenians were reconciled to the church of Rome about the middle of the fifteenth century, at the council of Florence; but Mosheim has proved that the scheme of comprehension projected in that Council completely failed, not only with the Greek, but with all the Oriental churches. The rites and ceremonies of the Armenian church greatly resemble those of the Greek. They steep the bread in the wine, and the communicant receives both kinds together. Their liturgies are nearly the same with the Greek church. The inferior clergy are allowed to marry once, but the patriarchs and bishops must remain in a state of celibacy.

The Armenians acknowledge the Nicene Creed, and daily use that termed the Apostles'. They agree with the universal church in acknowledging three persons in the Divine nature, but they hold that the Holy Ghost proceeds only from the Father. They believe that Our Saviour descended into hell, and liberated the spirits in prison by the grace and favour of his glorious presence; this liberation, however, was not for ever, nor by a plenary pardon or remission, but only till the end of the world, when they will return to their former place of torment. They hold that neither the souls nor bodies of any saints or prophets are in heaven, except those of the Virgin Mary, and the prophet Elijah, and that they will not be admitted into heaven until the day of judgment; yet they imitate the saint-worship of the Greek and Roman churches, and they agree with the latter in their number of sacraments. When they first enter the church they uncover and cross themselves three times, after which they cover their heads, and sit cross-legged on carpets. They are strictly attentive to the vigils of the church festivals; and on Saturday evenings they all resort to the churches, and perfume their houses with incense when they return home. In their monasteries, the whole Psalter of David is read every twenty-four hours; but in the cities and churches it is divided into eight portions, and each portion into eight parts, at the end of each of which the Gloria Patria is said.

The Armenians administer baptism and the eucharist in a peculiar manner. They practise immersion, which they consider most essential to the sacrament. After baptism, the chrism is applied, and the forehead, eyes, ears, breast, palms of the hand, and soles of the feet, are anointed with consecrated oil in the form of a cross. They also administer the eucharist to the child, with which they only rub its lips. The child is then carried home by the godfather, accompanied by the music of drums and trumpets.

8. The ancient language of Armenian literature is harsh and overloaded with consonants. Besides a great many Indo-Germanic roots, it exhibits numerous relations with the Finnish idioms of Siberia and other languages of Northern Asia, and its grammar is exceedingly complex. It exists only in books, and is so different from the modern, that it is not understood except by those by whom it is studied. The modern language is largely made up of Persian and Turkish words; and its grammar and the construction of its phrases are totally distinct from those of the ancient language. The alphabet consists of thirty-eight letters, of which thirty are consonants, and eight vowels. The Armenians have printing presses at Constantinople, Venice, Moscow, Calcutta, and other places.

9. Unfortunately we know yet but very little of the literature of the Armenians; it is, however, probable that the monasteries of their country contain many valu-

able manuscripts, which, if rendered available to the learned of Europe, would throw much light on the early history of Asia. Russia now possesses some of the provinces which formerly belonged to this kingdom, and she would render an important service to historical learning by a thorough search for these documents, and by placing them in the hands of learned men duly qualified for the task, who were animated by a spirit of sound critical inquiry.

ARMENIAN VERSION. Christianity was introduced into Armenia in the third century after Christ, but as the nation then possessed no alphabetic characters, the Scriptures used were the Peschito or old Syriac version, and the services of the church were performed in a foreign tongue. But in this, as in other cases, learning followed in the path of Christianity, and about the beginning of the fifth century Miesrob, a priest, invented the Armenian alphabet for the purpose of rendering the Sacred Writings into his native language. The version followed by Miesrob was the Septuagint, but two other translations were speedily made from the Syriac, on the second of which Moses Chorenensis, the historian, a scholar of Miesrob, assisted.

Michaëlis speaks highly of Miesrob's version, and it undoubtedly would have been exceedingly valuable had it come down to us uncorrupted. But this has not been the case. It was early altered to accommodate it to the Syriac, but sustained more serious injury in the thirteenth century, when Haiha, a ruler of Armenia Minor, and a zealous partisan of the church of Rome, introduced numerous corruptions from the Vulgate, and added Jerome's prefaces; these, with other alterations from the same source, were adopted by Usan, bishop of Erivan, who was sent by the Armenian church to Amsterdam to superintend the printing of the Bible in 1666.

The Armenian New Testament has been twice printed separately from the Bible, at Amsterdam, in 1668 and 1698. Michaëlis; Jahn.

ARMHOLES, אֶצֶל יָדַי "Woe to the women that sew pillows to all armholes." (Ezek. 13. 18.) This term is in the margin of our Bibles rendered *elbows*, and has also been taken for the wrist, or for the knuckles of the hand. The true meaning is doubtful, for it evidently refers to some custom with which we are unacquainted. The women spoken of are no doubt the priestesses of Ashtoreth, and the object of the prophet is to denounce the arts they employed to allure God's chosen people to a participation in their idolatrous worship.

In illustration of the subject we may remark, that the Orientals, when they wish to be at their ease, recline on or against various kinds of rich pillows or cushions. The evil woman in the Proverbs alludes to the costliness and richness of those that belonged to her divan or "bed" among the circumstances by which she sought to seduce "the young man void of understanding;" it is therefore not unreasonable to suppose that something of the same kind may be here intended.

Roberts says, "Rich people have a great variety of pillows and bolsters to support themselves in various positions. Some are long and round and are stuffed till they are quite hard; whilst others are short and soft to suit their convenience in taking repose."

The term also occurs in Jeremiah 38. 12, in describing the release of the prophet from the dungeon of Malchiah. Gesenius; Winer.

ARMONI, אֲרָמֹנִי the son of Saul and Rizpah, who was hanged with his brethren by the Gibeonites. (2Sam. 21. 8,9.)

ARMS, ARMOUR, ARMY.

Egyptian Weapons, Standards and Armour. From the Monuments.

WE propose in the following article to bring into one view all that can be gathered relative to a variety of subjects closely connected in their nature, and to which the references in Scripture are very frequent; and we shall consider them under the general heads of WEAPONS, ARMOUR, MILITARY ORGANIZATION AND TACTICS, and FORTIFICATION, of the Jews; for although beyond the brief allusions of Scripture we have little direct information concerning the military art among them, yet we fortunately possess in the monuments and sculptures of the nations with which they were closely connected, and with whom they were frequently at war, as for instance the Egyptians and Assyrians, a fund of detail on such matters, and from the strong resemblance the Orientals have ever borne to each other in their general habits and usages, we may safely apply to the Israelites, the information that can be gathered from such sources, as it is never found to be contradictory to the representations given in the Sacred writings.

I. WEAPONS.

THE BOW, ARROW AND QUIVER.

The bow, termed קשתות *keshtoth* and קשת *keseth*, and arrows חיצים *hhilzim*, חץ *hhilz*, are weapons of very ancient origin. (Gen. 48. 22; 49. 24.) They were at first, no doubt, merely implements of hunting, (Gen. 27. 3-5,) and when employed in war, they belonged to the light-armed troops, who are on many occasions represented in Scripture as being furnished with the sword, the buckler, and the bow.

The Israelites on their departure from Egypt carried with them the practice of the bow, for Joshua mentions that weapon when he shows that it was by Divine aid they triumphed over their enemies. (Josh. 24. 12.) But the practice seems to have declined during the period of the Judges, when regular government was so often interrupted by anarchy; for among the improvements effected by David, we read, "Also he bade them teach the children of Judah the use of the bow: behold, it is written in the book of Jasher." (2Sam. 1. 18.) This was successful; as archers were afterwards very numerous among the Hebrews, especially in the tribes of Ephraim and Benjamin. (1Chron. 8. 40; 2Chron. 14. 8; Psal. 78. 9.) See ARCHERY.

The archers appear to have been, next to the chariots, the most efficient corps in the Egyptian army. They used a bow somewhat like that of the English yeomen in the age of chivalry, about six feet in length, tipped at the extremities with horn; the bows of their allies were of similar make, as the prophet Jeremiah expressly mentions.

Stringing a bow of large dimensions of course demanded a considerable effort, and it seems to have

Egyptians stringing their bows.

been a piece of pride with the ancient warrior to use a bow that no one but himself was able to bend. Thus, according to Homer, the suitors of Penelope were unable to bend the bow of Ulysses, but the hero himself, though ridiculed by the traitors, performed the task with ease, (*Odyss.* 21,) and in comparatively modern times, instances of a similar nature are to be met with in English history.

Military bows were generally made of wood; but in some instances they were of brass, rendered in our version, steel. (Job 20. 24; Psal. 18. 34.) Those of wood were, however, so strong, that the soldiers sometimes challenged one another to bend their bows. In bending the bow, one end of it was pressed upon the ground by the foot, the other end was borne down by

the left hand and the weight of the body, and the string was adjusted by the right.

This accounts for the use of the word *דָּרַךְ* (literally *to tread upon*;) in reference to the bending of the bow. (1 Chron. 5. 18; 8. 40; Isai. 5. 28; 21. 15.) A bow which was too slack, and which, in consequence, injured the person who used it, was termed a deceitful bow. (Psal. 78. 57; Hosea 7. 16.)

Treading the bow.

Archers among the Israelites and the Egyptians, as well as most other nations, fought on foot, but those of Elam or Persia, frequently mentioned in the Scriptures, and by the prophets Isaiah and Jeremiah especially, were mounted. In later times, under the name of Parthians, they are well known to the Greeks and Romans. They were good horsemen; and their dexterity in archery rendered them so exceedingly formidable, that some of the most severe defeats that the latter people ever experienced were received from them. The figures of mounted archers are frequently met with among the Persian sculptures, particularly those of the mountain Tackt-i-Bostan, from whence the following illustrations are copied. The first figure, from its splendid

From the Persian Monuments.

dress, the rich furniture of the horse, and presence of the attendant, is supposed by Sir Robert Ker Porter to represent the renowned Khosru Parviz, by whose order the sculptures are said to have been executed. The second figure, Sir Robert imagines to be intended for the same monarch when engaged in the chase.

The bow, in order to prevent its being injured, was carried in a case made for that purpose. The strings for bows were made of thongs of leather, of horse-hair, and of the sinews of oxen. Soldiers carried the bow on the left arm or shoulder. While shooting, the Egyptians frequently wore a guard on the left arm, to prevent its receiving an injury from the string; and this was not only fastened round the wrist, but was secured by a thong tied above the elbow.

Arrows. The arrows of the Hebrews were at first made of a sharp reed; afterwards they employed a light sort of wood, surmounted with an iron point. Whether they were sometimes dipped in poison cannot be determined with certainty, though there appears some ground for the belief, in Job 6. 4. The arrows of the Egyptians varied from twenty-two to thirty-four inches in length, some were of wood, others of reed; they were frequently tipped with stone, but had sometimes a metal head, and were winged with three feathers glued longitudinally, and at equal distances, upon the other end of the shaft, as on our own arrows. Stone-tipped arrows were not confined to an ancient era, nor were they peculiar to the Egyptians alone; the Persians and other Eastern people frequently used them even in war.

Quivers were pyramidal in form, and were termed by the Hebrews *לֵלֶה* *tele*. They were suspended upon the back; so that the soldier, by extending his right hand over his shoulder, could draw out the arrows, the small part of the quiver being downward. The lid and the quiver were generally decorated with extraordinary care; it was capacious, and each soldier was bound to keep it well supplied with arrows; hence the Psalmist describing the advantages of a numerous family, says, "As arrows are in the hand of a mighty man; so are children of the youth. Happy is the man that hath his quiver full of them; they shall not be ashamed, but they shall speak with the enemies in the gate." (Psal. 127. 4, 5.)

THE SLING.

This may be reckoned among the most ancient instruments of warfare, and was called by the Hebrews *קֶלַע* *kala*. (Job 41. 28.) The slingers were enrolled among the light-armed troops, and such were accounted worthy of especial notice, who like the Benjamites were able in slinging to use equally the right hand or the left.

(Judges 20. 16; 1Chron. 12. 2.) The Egyptian sling was a thong of leather, or string plaited broad in the middle, and having a loop at one end, by which it was fixed upon and firmly held with the hand; the other extremity terminating in a lash, which escaped from the finger as the stone was thrown; and when used the slinger whirled it two or three times over his head, to steady it, and to increase the impetus. The sling, though occasionally used by the Egyptian light troops, was considered as rather a despicable weapon; but among the Israelites it was more highly valued.

CLUBS, MACES, AND AXES.

The arms used in fighting hand to hand appear to have been originally a heavy club and a kind of hammer, but these weapons were rarely made use of by the Hebrews. The expression שֶׁבֶט בַּרְזֶל *shevet barzel*, ("rod of iron," Psal. 2. 9,) is supposed to mean an iron club, and מַפְּזֵץ *mapheetz*, ("maul," Prov. 25. 18,) a battle-mallet or hammer.

Egyptian Clubs.

The curved stick or club was used among the Egyptians by both heavy and light-armed troops, as well as by the archers.

Maces or Battle-Mallets.

These were formidable weapons against combatants clad in armour.

Axes. The Egyptian soldiers were sometimes armed with the battle-axe and the pole-axe, and also with the mace, which was loaded with metal. These weapons were also employed by the Jews, for we find Jeremiah thus addressing the king of the Medes: "Thou art my battle-axe and weapons of war: for with thee will I break in pieces the nations, and with thee will I destroy kingdoms." (Jer. 51. 20.)

Egyptian Battle-Axes.

THE SWORD.

The sword חֶרֶב *cherev*, among the Hebrews was fastened round the body by a girdle. (1Sam. 17. 39; 2Sam. 20. 8.) Hence the phrase "to gird oneself" with a sword, signifies to commence war, and "to loose the sword" to finish it. (1Kings 20. 11.)

An Egyptian Sword with Girdle.

Some swords were made in the form of large knives, and were very heavy and formidable weapons, but they required to be wielded by a very powerful hand, and were therefore not so much used as the falchion and thrust-sword.

The swords in use among the Hebrews appear in general to have been short; though one of a cubit's length is mentioned in Judges 3. 16, and some were two-edged. (Psal. 149. 6.) The sword was kept in a sheath, and it was highly polished, and in reference to this circumstance the word is used figuratively for lightning, or the sword is spoken of as flaming. (Gen. 3. 24.) Wicked persons are represented as the sword of God, which he wields for the punishment of others. (Psal. 17. 13; Jer. 12. 12; 47. 6.)

THE SPEAR.

This weapon רֹמֶחַ *romach*, was a wooden staff surmounted with an iron point, double-edged, and was carried by the heavy-armed men. Great care was taken to polish the handle. Warriors of gigantic strength seem to have prided themselves on the length and weight of their spears, as we read that the staff of Goliath's spear was like a weaver's beam, (1Sam. 17. 7,) and his spear's head weighed six hundred shekels of iron.

Egyptian Javelin and Spear heads.

Among the Jews and the Greeks, the butt of the spear was shod with iron, for the convenience of sticking it in the earth, and this explains the circumstance of Asahel's slaughter by Abner. "And Abner said again to Asahel, Turn thee aside from following me: wherefore should I smite thee to the ground? how then should I hold up my face to Joab thy brother? Howbeit he refused to turn

aside: wherefore Abner with the hinder end of the spear smote him under the fifth rib, that the spear came out behind him; and he fell down there, and died in the same place: and it came to pass, that as many as came to the place where Asahel fell down and died stood still." (2Sam. 2. 22,23.)

The usual length of the Egyptian spear was under six feet, head and shaft included. In the representations of Egyptian battles, we find that the spearmen ranked next to the archers in importance, and from the accompanying engraving it appears that the weapon was made so light, that it could be wielded with one hand. In later ages

Egyptian Spear:

they used the heavy lance, which required to be held by both hands, and was almost useless except when the troops were in close column. The painting from which we have copied, represents a skirmish rather than a general action, and the light troops only are engaged. It is not easy to determine whether the Egyptians made a distinction between the light and heavy spearmen, as the Greeks did in the Peloponnesian wars.

THE JAVELIN.

Javelins among the Hebrews appear to have been of two kinds; one, which bears the name of *חנית* *chanit*, is always mentioned in connexion with the weapons of light-armed troops. (1Sam. 13. 22; Psal. 57. 4.) In 1Chron. 12. 34, it is joined with *צננה* *tsenna*, the larger sort of buckler, but it is evident from 1Sam. 18. 11, that this weapon, whatever might have been its shape, and although it may have been sometimes used as a spear, was nevertheless thrown, and is accordingly to be ranked among missile weapons. Another kind of javelin is termed *כידון* *kedon*. (Job 39. 23; comp. 41. 29.) The difference between these two sorts of javelins cannot now be known, further than that *כידון* *kedon*, may with probability be supposed to be the largest in size of the two. (Josh. 8. 18; 1Sam. 17. 7.)

Heads of small Egyptian Javelins.

II. ARMOUR.

Sir Samuel Rush Meyrick, in his *History of Ancient Armour*, remarks that "All European armour, except the plate, which was not introduced till the fourteenth century, was borrowed from the Asiatics." This fact is of importance, since the ancient armour being borrowed from the East, its form and character there may be more distinctly illustrated by the information we possess concerning the derived armour of the ancient European nations.

The earliest account of what may be termed a complete suit of defensive armour is given in 1Sam. 17. 5,6, in reference to that worn by Goliath of Gath. Saul also had armour probably composed of nearly the same articles as those of the giant Philistine, the use of which he offered to David, who being from his youth and mode of life unaccustomed to such warlike trappings preferred to act without them.

Of the various portions of armour it seems probable that the shield was the first employed, then the helmet, the breast plate, and at length the coat of mail, and in this order we shall speak of them.

THE SHIELD.

The shield, *מגן* *magin*, is first mentioned in Gen. 15. 1. The word, rendered "buckler" in 2Sam. 22. 31, frequently occurs in other parts of Scripture, where it is employed by a figure of speech, for defence or protection. (Psal. 47. 9; Prov. 30. 5.) There is another sort of shield called *צננה* *tsenna*, and a third called *סוהרה* *sohira*. This last occurs in Psal. 91. 4, in connexion with *מגן* *magin*.

The difference between the shields *צננה* *tsenna* and *מגן* *magin* consisted in this: the latter was smaller in size than the former, which was so large as to cover the whole body. (1Kings 10. 16,17; 2Chron. 9. 16.)

Various kinds of Shields. From the Monuments.

צננה *tsenna* is always joined with a spear, but *מגן* *magin* with a sword and arrows. (1Chron. 12. 8,24; 2Chron. 14. 8; 26. 14.) The word *סוהרה* *sohira* probably signifies a round shield or buckler. The form of two other kinds of shields, called *שלטים* *shelitim* and *שלי* *sheli*, is not distinctly known.

Shields were manufactured sometimes of a light sort of wood, sometimes of osiers woven together and covered with bull's hide, and sometimes merely consisted of two or three thicknesses of the hide. The hide was anointed to render it smooth and slippery, and to prevent its being injured by the wet. (Isai. 21. 5.) Shields entirely

of brass were not very common, but shields covered with thin plates of brass, and even of silver and gold, are often mentioned. (1Kings 10. 16,17; 2Chron. 9. 14, 15.) There was a boss in the centre of the shield; and the edge was guarded by a thin plate of iron to prevent its being injured by the moisture when placed upon the ground. The handle of the shield was sometimes of metal, but more frequently of leather. In time of peace shields were hung up in armouries, (Cantic. 4. 4,) and they were sometimes suspended on the walls of towers as an ornament. (Ezek. 27. 10,11.)

The shields borne by the Hebrew soldiers appear to have been supported by a thong, which went round the left arm and the neck. (1Chron. 5. 18; 12. 8,24; 2Chron. 14. 8.) When about to attack an enemy in a body, they held their shields by the handle in the left hand, and joining them, opposed, as it were, a wall against the weapons of their foes. When about to scale the walls of a city, they placed them one against another over their heads, and in this way formed for themselves a defence against the missiles of the besieged. To lose a shield in battle was ignominious, and on the contrary, to take one from an enemy, was esteemed an honour, (2Sam. 1. 21; 1Kings 14. 26,) and this feeling may be traced through the classic nations of antiquity down to the present day.

The Egyptian shield was of an oblong form, rounded at the top, and square at the base; its length was about three feet, and its breadth about two; there was an in-

The Egyptian Shield.

dentation on the upper part instead of a boss, and it was suspended from the shoulder by a belt when it was not held by the hand.

So important was the shield deemed in the operations of a siege, that a single figure with a shield, advancing against a fortress, is frequently represented on the Egyptian

monuments, to indicate that the place was taken by assault. Isaiah particularly alludes to this implement in his prophecy of the defeat of Sennacherib's efforts to take Jerusalem. (Isai. 37. 33.)

THE HELMET.

Of all the various kinds of armour, a strong defence for the head was undoubtedly the most common. When men began to feel the need of a defence for the head in war, they seem at first merely to have used stronger caps than they usually wore. Such caps were at first quilted or padded with wool, were afterwards formed of hard leather, and ultimately of metal, in which state they gradually acquired various additions and ornaments, such as embossed figures, ridges, crests of animal figures, &c. When the war dress consisted of skins, as it anciently did among all nations, it was a frequent custom for the wearer to cover his head with the head-skin of an animal, and this was afterwards retained as a crest to the war cap, when metallic armour was employed; so much so, that Homer commonly employs the term *kuven*, or dog's skin, for the helmet. The head-skins of lions, wolves, horses, and other animals were employed for this purpose; and the terrible effect of this defensive head-dress was increased by the teeth being exposed. Subsequently they affixed a representation merely to the top of the war cap. The royal helmet in Egypt had a crest; those of Asia Minor were also sometimes crested; and it is therefore not improbable that the crest was used by the Hebrews, although we have no mention of it in the Scriptures.

Egyptian Helmets worn by Chieftains.

In Egypt, the kings and nobles only wore helmets of metal; the common soldiers had caps of woollen or linen

Caps of Egyptian Soldiers.

strongly quilted. The Assyrians wore helmets of brass, and the Syrians seem to have adopted, with some modification, the cylindrical helmet or cap of the Persians,

Persian Helmets.

which became greatly diffused by their conquests, and must have been well known to the Jews during the captivity and whilst Palestine was a Persian province.

Syrian Helmets.

Anciently, the spearmen alone appear to have worn the helmet in the Hebrew armies, but all the soldiers of the Chaldeans seem to have been furnished with it. (Ezek. 23. 24; Jerem. 46. 4.)

Xenophon speaks of brazen helmets with white crests among the Persians, but no crests appear in the sculptures of the country.

The helmets of the Greeks and Romans were of course well known to the Jews in the latter part of their history, but do not appear to have been adopted by them.

BODY ARMOUR.

Coat of Mail. When the use of skins of animals as armour was abandoned, a long garment fitting closely to the neck, and composed sometimes of leather, sometimes of thickly padded linen or woollen, was substituted. To this, in course of time, was added a solid plate of metal, or cuirass, placed over and separate from the under garments, which then only served to protect the wearer from being galled by his harness, as armour is styled in several places. (1Kings 20. 11; 2Chron. 18. 33.) In Exod. 28. 32, the word *techera* occurs, which our translators have rendered habergeon, a term employed to denote a garment fitting close to the neck, and resembling a jacket without sleeves, and closed in front. This probably was the garment which Saul put upon David before investing him with his breastplate and girdle, for although the word *shereyon* is employed, a multiplicity of names for one object is very common in Hebrew and other Oriental tongues.

But as either solid plates of metal or linen so thickly quilted as to afford protection was found too heavy and inconvenient, various contrivances were resorted to in order to obtain the security which metal gives, without its rigidity. For this purpose, the leather or linen was sometimes covered with square pieces of metal rivetted on, and sometimes hoops or rings, which slid over each other, and thus afforded freedom of motion, were employed; sometimes, too, the pieces of metal were in the form of the scales of fish, lapping over each other, and of this kind it appears was the coat of mail which Goliath wore, and which is the most ancient specimen of scaled armour on record. It is not fully described in our version, as our translators have omitted the epithet *kaskashim*, "scales." This word is found in the feminine plural in Levit. 11. 9; Deut. 14. 9, 10; and Ezek. 29. 4; where it is used to denote the scales of fish. The passage in 1Sam. 17. 5, should therefore read, "a coat of mail of scales."

Scale armour had grown into extensive use long before it was adopted by the Romans, who regarded it as characteristic of barbarians, and it appears to have been employed by the Sarmatians, as we see upon Trajan's column at Rome.

With such armour as that of scales, or indeed of rings,

any part of the body might be covered; and, accordingly, we see figures covered with a dress of scale, ring, or chain armour from head to foot, and mounted on horseback, with the animal covered to the very hoofs in the same manner.

The *Breastplate*, the *Cuirass*, and the *Corselet*, seem chiefly to have differed in size. The breastplate appears to have covered the whole trunk before and behind, and is hence styled by our translators, habergeon, and coat of mail; the cuirass consisted of two solid plates clasped or buttoned together, but not reaching so low as the breastplate; and the corselet is sometimes taken for a covering equal in size to the breastplate, and sometimes for one much smaller, the use of which was generally confined to the pikemen.

Sir Samuel Rush Meyrick considers that the breastplate probably originated with the Egyptians, among whom it was their only body armour. It was worn over the breast and shoulders in the manner of a tippet; and was made of linen several times folded and quilted, so as to resist the point of a weapon. These linen breastplates came into extensive use among the neighbouring nations; and such as were of Egyptian manufacture were greatly valued. It is supposed that the Persians were the first who gave a metallic character to the breastplate.

The *techera*, mentioned in Exod. 28. 32, and 39. 23, was, according to Gesenius, a closely woven linen garment, furnished with rings of mail in the upper part about the neck. Strutt conjectures that this was the tunic upon which the mail was put, and that it bore the same relation to it that the ephod did to the breastplate of the high priest.

This piece of armour was very common among the Hebrews after the reign of David, and we find that it had a place in the armoury of King Uzziah. (2Chron. 26. 14.) As it was an efficient means of protection to the body, it occurs figuratively for defence. (Isai. 59. 17.)

Breastplates were often enriched with embossed figures, and the Romans in particular adopted the Gorgon's head on the breast as an amulet.

Besides their body armour the ancients often wore a kind of kilt which descended to the knees; this formed a piece of armour, and consisted of rows of leathern straps, sometimes plated with metal and richly bordered or fringed. Thus the arms, the lower part of the thighs, and the face were the only parts left unprotected, and not always the face, as some of the ancient helmets had visors, or cross bars.

The *Girdle* *izor*, is frequently mentioned in Scripture, and appears to have been used not merely for suspending a weapon, but also as a piece of armour. It was of leather, studded with metal bosses, or plated, and when worn with the cuirass defended the lower part of the body. It was often richly ornamented, and the gift of his girdle by one warrior to another was a testimony of the highest regard. Thus it is stated that Jonathan gave his girdle to David; and we read in the Iliad that when Hector and Ajax exchanged gifts in testimony of friendship, after a hard combat, the latter presented the former with his girdle.

Greaves were a sort of boots without feet, for the defence of the legs, made either of stout leather or metal; the greaves of Goliath were of brass. They usually terminated at the ankle, and rose in front nearly to the top of the knee, and were open behind, but the opposite edges, at the open part, nearly met when the greave was buckled or tied to the leg. In other instances a sort of half greaves were worn, denominated *soin*, in Isai. 9. 5, which literally translated, reads, "Every greave of him that weareth greaves," instead of, as in our version, "Every battle of the warrior."

This piece of armour was useful, not only in combat, but for the purpose of guarding the leg against any impediments, such as iron spikes and other things, which the enemy sometimes strewed in the way. It appears from ancient sculptures, that greaves with the open part in front, defending the calf rather than the shin, were also used. The practice of defending the feet and legs in this way, however, does not seem to have been very common among the Hebrews.

THE ARMOURBEARER.

This was a person appointed to attend upon a warrior to carry his weapons. (Judges 9. 54.) Both kings and generals, it appears, had their armourbearers, and we read also that Goliath had a "man that bare the shield," who went before him. They were chosen from the bravest of the soldiery, and not only bore the armour of their masters, but were employed to communicate their orders to the subordinate captains, and were present at their side in the hour of battle. (1Sam. 14. 6.) The Jews think that the armourbearer of Saul (1Sam. 31. 4, 5) was Doeg the Edomite, and that he was appointed to that office for his alacrity in obeying the king when commanded to slay the priests at Nob. (1Sam. 22. 9 et seq.)

III. MILITARY ORGANIZATION AND TACTICS.

MILITARY SERVICE.

A kind of conscription appears to have prevailed among the Hebrews from the time of their departure from Egypt, whence they probably borrowed it. In the second year after the Exodus there was a general enrolment of all who were able to bear arms, that is, of all who were between the ages of twenty and fifty, and there was also an enrolment of the Levites separately from the rest of the people. (Numb. 1. 1-54.) There was a second enrolment made in the plains of Moab, in the fortieth year after the Exodus. (Numb. 26. 2.) The enrolment was doubtless made by the genealogists, under the direction of the princes.

In case of war, those who were called into actual service were selected in some manner by the genealogists from those on the roll, the whole body not being expected to take the field except on extraordinary occasions. (Numb. 31. 3-5; Judges 20. 8-11; 1Sam. 11. 7.) In the time of the Kings there was a head or ruler of the persons that made the levy, denominated *חֹשֶׁבֶת הַלְּוִיִּם* *hashoter*, who kept an account of the number of the soldiers, but who must be distinguished from his superior officer, "the scribe," *הַסּוֹפֵר* *hasopher*. (2Chron. 26. 11.)

After the levy was fully made out, the genealogists gave public notice that the following persons might be excused from military service. (Deut. 20. 5, 8.)

1. Those who had built a house and had not yet inhabited it.

2. Those who had planted an olive or vine garden and had not as yet tasted the fruit of it (an exemption which extended through the first five years after such planting).

3. Those who were betrothed to a wife but had not celebrated the nuptials; also those who had not lived with a wife for a year.

4. The faint-hearted, who would be likely to discourage others, and who, if they had gone into battle, where, in those early times, every thing depended on personal prowess, would only have fallen victims.

After the levies were made, the soldiers were regularly drilled, (1Chron. 12. 38,) and taught to march with steps measured by the sound of the trumpet. See *Engraving*.

The design of the enrolment or numbering taken by David seems to have been to reduce the people to per-

petual military servitude. It was accordingly done, not by the genealogists, but by military prefects, *שָׂרֵי הַחַיִּל* *sari hachael*, and it is further worthy of remark, that instead of the usual word *מָנוּחַ* *manoh* the word *סָפָר* *saphar* was employed in this instance. (2Sam. 24. 9.) The sin of this proceeding may have been some plan of extensive conquest devised by David, which God punished by blighting the source of the monarch's ambition.

It seems probable that the Egyptian armies were levied by conscription, for we find that an accurate census was taken of the inhabitants of the country, and that the persons brought up to be registered by the scribes marched to the enrolment in military order, as in the annexed engraving.

DIVISIONS AND STRENGTH OF THE ARMY.

Among the Hebrews, the three great branches of the military service were the infantry, the cavalry, and the chariots. The army collectively was called the Host, and was commanded by a generalissimo, styled the captain of the host; he had under him three lieutenants, who led the three bands, probably the centre, and the right and left wings, or perhaps the main body, and the advanced and rear guards. There was a great number of subordinate officers, who each commanded bodies varying from twenty-four thousand to fifty men. The chief of these, it seems probable, were appointed either by the king or by the captain of the host, but the others, like the Arab sheiks of the present day, appear to have commanded persons of their own clan only, and among them probably the office was hereditary.

The armies occasionally raised by the Kings were very large. That of David consisted of two hundred and eighty-eight thousand men, in twelve divisions of twenty-four thousand each, which performed military duty a month at a time in succession. (1Chron. 27. 1-15.)

The number of the army of Solomon is not stated, but as we read that he had fourteen hundred chariots and twelve thousand horsemen, we may reasonably conclude, when we consider that a hilly country like Palestine is much more suitable to footmen than any other description of force, that this implies that his infantry was very numerous.

After the division of the tribes, their situation naturally led each state to make great military exertions, and accordingly the army of Jehoshaphat, king of Judah, is stated at one million one hundred and sixty thousand men, arranged in five divisions of unequal strength, "besides those whom the king put in the fenced cities throughout all Judah;" (2Chron. 17. 19;) and at a later period, we read that Amaziah, king of Judah, raised in his own territories, three hundred thousand men, and hired one hundred thousand Israelites, for an expedition against the Edomites. (2Chron. 25. 6, 7.) In 2Chron. 13. 3, we are informed that Jeroboam raised an army of eight hundred thousand men, which was defeated by Abijah; except this, we know little on the point, regarding the kingdom of Israel, but there appears no reason for supposing that, comprising as it did ten of the twelve tribes, it was not at least equal in military force to its rival.

The books of the Apocrypha narrate the struggle of the Maccabees against the Syrian kings, one of whom invaded Judæa with an army of one hundred and twenty thousand men, and as this and other armies were defeated, we may conclude that the military force of the country was then very considerable, although we have no definite statements on the subject. When the enemy was expelled, Jerusalem and many other cities were strongly fortified, and the Maccabean princes were engaged in such a succession of wars with their neighbours, as com-

pelled them to maintain a very numerous army, which, it appears, was almost wholly of infantry.

In the time of Josephus, the troops, in imitation of the Romans, were arranged in cohorts, of about one thousand foot and one hundred and twenty horse. These were heavy-armed men, but there were also light troops, called *δεξιολαβοι*, or spearmen. (Acts 23. 23.)

THE VARIOUS CORPS OF THE ARMY.

INFANTRY. Among the Hebrews, as with most other nations, the infantry formed the bulk of the army, and seems to have been divided only into light-armed troops and spearmen. (Gen. 49. 19; 1Sam. 30. 8; 2Sam. 3. 22.) The first, who were commonly taken from the tribes of Ephraim and Benjamin, (2Chron. 17. 17,) and had little armour, were furnished with a bow, arrows, and quiver, a javelin, and a sling, and in later times with a small buckler; they usually engaged the enemy at a distance. The spearmen, on the contrary, were clad in mail, fought hand to hand, and were armed with spears, swords, and shields. (1Chron. 12. 24-34; 2Chron. 14. 8.)

It does not appear that the Jews in the early part of their history, had any infantry resembling the targeteers of the Greeks, who occupied an intermediate station between the heavy-armed and the light troops, but such are mentioned by Josephus as employed in his time.

CAVALRY. We have no means of ascertaining with what nation the use of cavalry originated, and it is somewhat remarkable that there is but one representation of a warrior on horseback in Rosellini's collection of Egyptian Antiquities, and that probably of a Roman era; however there can be no doubt that the Egyptians had some troops of cavalry as early as the days of Moses, for we read, "The horse of Pharaoh went in with his chariots and with his horsemen into the sea, and the Lord brought again the waters of the sea upon them." (Exod. 15. 19.) In after times their cavalry was certainly an important part of their strength, for Isaiah records the speech of Rabshakeh, the ambassador of Sennacherib, to Hezekiah, "How then wilt thou turn away the face of one captain of the least of my master's servants, and put thy trust on Egypt for chariots and for horsemen?" (Isai. 36. 9.)

The Israelites were strictly forbidden to "multiply horses" or to purchase them from Egypt, (Deut. 17. 16,) but Solomon disregarded this injunction and maintained a considerable force of cavalry, the horses for which he procured from Egypt, where great attention was then paid to the breeding and training of horses, and so superior were the Egyptians in this art that they supplied war steeds to all the neighbouring nations. The nature of the country, however, prevented their being of any great service, and Solomon's successors probably did not attempt to imitate him in this, for we find Rabshakeh, on the occasion above mentioned, scornfully offering two thousand horses to King Hezekiah if he should be able to set riders upon them.

CHARIOTS. It appears probable that war chariots were first employed by the Egyptians, of whose armies they always formed a principal part. Their use speedily passed to the surrounding nations, and they appeared so formidable to the Israelites, that they at one time almost despaired of driving the Canaanites out of the land, because they had chariots of iron. (Josh. 17. 16.)

Solomon, as we have seen, was possessed of chariots, and his successors also employed them, though they were few in number compared with those of the Egyptians or the Assyrians, because the country was ill adapted for their use.

Representations of the war chariot abound on the

Egyptian monuments, from which we learn that it had two wheels, and was of a very light construction, though portions of the framework were generally of metal. It was quite open at the back and partially so at the sides, and was hung so low that the warrior could easily step into it from the ground; the body was thrown more forward on the pole than is usual in modern carriages, and though this threw the weight on the horses, it rendered the motion less fatiguing to the rider. The chariot was drawn by two horses, and generally carried one combatant and a driver, who was furnished with a whip which had sometimes one and sometimes two leather thongs. When, as was sometimes the case, only one person occupied the chariot, the whip was suspended from the arm by a loop. We have in the account of the deaths of Ahab, (1Kings 22. 34,) and of Joram and Ahaziah, (2Kings 9,) proof that both of these modes prevailed among the Hebrews. The warrior, as in the latter instance, was generally armed with a bow and arrows, and his quiver and bow case are seen on the sides of the chariot. It was customary to have a reserve of chariots to take the place of any that might be injured in battle, and this usage was adopted by the Hebrews, for we read that when King Josiah was wounded in his chariot at the battle of Megiddo, "his servants took him out of that chariot, and put him in the second chariot that he had, and brought him to Jerusalem." (2Chron. 35. 24.)

In the battle scenes of the Egyptian temples the king is represented in his car, unattended by any charioteer, the reins being fastened round his body, while engaged in bending his bow against the enemy; but the driver may probably have been omitted in order not to interfere with the principal figure of the picture, which, with a similar notion of exclusiveness, is always represented of colossal size.

The harness and housings of the horses of the chariots of the kings and principal leaders were richly decorated, being stained with a great variety of colours, and studded with gold and silver. Hence Solomon says to the daughter of Pharaoh, "I have compared thee, O my love, to a company of horses in Pharaoh's chariots." (Cantic. 1. 9.) And this appears to explain a difficult passage in the same poem, (6. 12,) where Solomon describing excessive joy, says, according to our version, "Or ever I was aware, my soul made me like the chariots of Ammi-nadib," but the more correct rendering is, "My soul sat me on the chariots of a noble or princely people," that is, of the Egyptians, and the passage is thus a compliment to the country of his wife.

Some of the nations that employed chariots fixed scythes to their wheels and axle-trees, set a row of sharp spikes at the hinder part, and affixed lance-heads to the pole, and to the breast-plates of the horses. This continued to a late period, as along with the army with which Lysias invaded Judæa were "three hundred chariots with hooks." (2Macc. 13. 2.)

The use of chariots seems to have been almost exclusively confined to the Eastern nations. The Greeks in the heroic ages fought occasionally in chariots, but their use never became general, and was abandoned by them as they advanced in military science; and the Romans, against whom they were brought by Mithridates, soon rendered them useless, either by wounding the horses or drivers with missiles, or by opening their ranks to let them pass through. After this period they are not met with in history, except among the Britons.

It appears that when the chariots charged, it was the practice of the drivers to crack their whips loudly in order to increase the terror of the enemy; there is an allusion to this custom in the prophet Nahum's vision of the destruction of Nineveh: "The noise of a whip, and

the noise of the rattling of the wheels, and of the prancing horses, and of the jumping chariots. The horseman lifteth up both the bright sword and the glittering spear; and there is a multitude of slain, and a great number of carcases; and there is none end of their corpses; they stumble upon their corpses." (Nahum 3. 2,3.)

OFFICERS.

We find that the Hebrews, when they departed from Egypt, marched in military order by "their armies," or hosts, (Numb. 33. 1,) and we may infer from this expression, and the word חַמּוֹשִׁים *chamoshim*, in Exod. 13. 18, that they followed each other in ranks of fifty, and that, at the head of each rank of fifty, was the captain of fifty. (1Sam. 8. 12.) Other divisions consisted of a hundred, a thousand, and ten thousand men, each headed by its appropriate commander. (Numb. 31. 48; Deut. 1. 15.) These divisions ranked in respect to each other according to their families, and were subject to the authority of the heads of those families. (2Chron. 25. 5.) The captains of thousands were admitted into the councils of war (1Chron. 13. 1-3), and make their appearance, as it would seem, in Josh. 10. 24, under the name of קֶצִינִים *ketsinim*.

The genealogists, rendered in our version, officers, had the right, according to a law in Deut. 20. 9, of appointing persons who were to act as officers in the army, and they undoubtedly made it a point in their selections, to choose those who are called heads of families. The mode of appointing military officers was materially changed under the Kings. Some great offices were rendered hereditary, but the rest were filled on each vacancy by persons of the king's selection, except the very subordinate ones, which appear to have been still continued on their former footing.

The leader of the army was denominated the captain of the host, שַׂר עַל הַצֵּבָא *sar al hatsaba*; such were Abner, Joab, Benaiah, and Omri, under the Kings, who appear to have stood very high in civil rank also. Next to him were the commanders of the three divisions of the army, or centre, right and left wing, which we find mentioned on many occasions. (2Sam. 18. 2.) Another officer among those of high rank, was one called חֲסוֹפֶר *hasopher*, who had the care of the muster-roll; and another, called the numberer of the towers, appears to have been a kind of engineer. (Isai. 33. 18.)

ENCAMPMENTS, MARCHES, STANDARDS, AND MUSIC.

Encampments. In the second chapter of the Book of Numbers, we have the directions given by Jehovah for the encampment of the Hebrews during their sojourn in the desert, and in the tenth chapter we find an account of their order of march, and of its regulation by the sound of the trumpet. From these statements we learn that the camp of the Hebrews was of a square form, with the tabernacle, guarded by the Levites, in the centre; the tribes of Judah, Issachar, and Zebulun occupying the east side; those of Reuben, Simeon, and Gad, the south; Ephraim, Manasseh, and Benjamin, lying on the west; and Dan, Asher, and Naphtali on the north. The tribes of Judah, Reuben, Ephraim, and Dan, seem to have been reckoned the most considerable, for each quarter of the camp is spoken of as the camp of Judah, &c., and it appears probable that their chiefs exercised authority over the chiefs of the other tribes associated with them. This quadrangular form of encampment was imitated both by the Greeks and Romans, and is highly estimated by military writers.

From the marginal reading of 1Sam. 17. 20, and 26. 5, it appears that, in the time of the Kings, the Jews encamped within a line of defence formed by the car-

riages which accompanied the army, a mode which, in after ages, prevailed among the Scythians and their descendants who overran the Roman empire, and which is in use amongst the Tartars of the present day.

The March. When the order to march was given, the tribes of Judah, Issachar, and Zebulun, led the way, and were accompanied by the sacerdotal families of Gershon and Merari, who had charge of the tabernacle. Reuben, Simeon, and Gad followed, with the Kohathites bearing the sanctuary; Ephraim, Manasseh, and Benjamin came next, and Dan, Asher, and Naphtali brought up the rear, accompanied by all persons unfit to bear arms.

Carriages and Baggage. From the marginal reading of 1Sam. 17. 20, and 26. 5, we learn that carriages, probably for provisions and baggage, accompanied the Jewish armies, which were also provided with tents; (2Sam. 11. 11;) but as their campaigns were not in general of any great duration, we may thus account for the want of other references to the subject in the Scriptures.

Banners and Standards. In the directions for the encampment of the Israelites, we find them ordered to pitch each man by "the standard, with the ensign of his father's house," so that each family might be distinct as well as each tribe.

Each of the four camps was distinguished by a standard of large dimensions, and ornamented with embroidery; and the Jewish rabbins assert, on doubtful authority, that that of Judah bore the figure of a lion, that of Reuben of a man, that of Ephraim of a bull, and that of Dan the representation of Cherubim. Some modern commentators think that they only bore the name of the tribe; and that each tribe had its peculiar standard, but that those above-mentioned were larger than the rest. These flags were displayed on the march, but whether those of each house were, does not appear.

There was also a standard, properly so called, which was fixed in the earth on an elevation, and served as a point for the assembling of troops. (Isai. 13. 2; Jer. 51. 27.) It consisted of a pole or spear, with a flag fastened to it, but we have no information concerning its form, colour, or devices, except what we may infer from what we know of the standard of the Maccabees, which bore, instead of a device, the first letters of a passage in the song of Moses. (Exod. 15. 21.)

Each battalion of the Egyptian army had its particular standard, which generally bore some symbol or object connected with the religion of the country.

Music. Trumpets appear to have been the only instruments of martial music among the Hebrews, and very particular directions for their use for various purposes are given in the tenth chapter of the Book of Numbers. These, however, are the sacred trumpets, which were only to be sounded by the priests, but it appears from the story of Gideon, that other trumpets were employed in his time. It would seem that there were but few trumpeters in general with an army, and hence, when that chief attacked the camp of the Midianites, in order to mislead the enemy as to the number of his forces, he gave a trumpet to each of his soldiers, and said, "When I blow with a trumpet, I and all that are with me, then blow ye the trumpets also on every side of all the camp, and say, The sword of the Lord and of Gideon." (Judges 7. 18.) The sentinels on the walls of cities and watch-towers were also furnished with trumpets, to give warning of the approach of an enemy (Ezek. 33. 2,9); and on this account the trumpet is figuratively used in a great number of passages in Holy Writ to signify invasion and war.

Enrolment of Soldiers.

March by sound of Trumpet.

Trampling of Captives.

Tribute of Hands.

THE BATTLE.

By the Jews, as among other nations, immediately before battle, the various kinds of arms were put in the best order; the shields were anointed, and the soldiers refreshed themselves by taking food. (Isai. 21. 5; Jerem. 46. 3, 4.) The kings and generals, except where they wished to remain unknown, as in the instance of King Josiah, at Megiddo, (2Chron. 35. 22,) were clothed in splendid habiliments, which are denominated *הַדְרֵי קֶדֶשׁ* *hadri kadesh, the sacred dress*, rendered in our version *the beauties of holiness*. The army was then probably arranged, as is usual at present, with a centre and two wings; and previously to the time of the Kings, immediately before the attack, the priests exhorted the soldiers to behave valiantly, in the form of words given in Deut. 20. 3, 4.

In after times, the soldiers were harangued by the generals and kings. (2Chron. 13. 4.) In some cases sacrifices were offered, either by a prophet, or by some person while he was present; and the last ceremony previous to the engagement, was the sounding of the sacred trumpets by the priests. (Numb. 10. 2; 2Chron. 13. 12, 14.)

The Jews in general seem to have merely uttered loud shouts as they advanced upon the foe, (1Sam. 17. 20,) for we find that it was only after taking counsel upon the subject, that Jehoshaphat, when about to engage the Moabites and others, ordered "singers unto the Lord," to chant a kind of war song before his troops as they marched to battle. (2Chron. 20. 21.) It is very probable, however, that in this case also, the cry was raised when they closed with the enemy, as we know that it was the custom of the Greeks to march in order of battle singing, sometimes to the sound of flutes, and only to raise the shout of war at the moment of the charge.

When the armies were sufficiently near, the archers and slingers, uttering loud cries, extended themselves on the flanks, and discharged their missiles, while the centre, composed of the heavy-armed, with levelled spears, rushed forward at full speed; and hence swiftness of foot, in a soldier, is mentioned as a quality of high importance. (2Sam. 2. 18; Psal. 18. 33.) The contest now was one of hand to hand, and as the victory then depended much on personal strength and prowess, the ferocity of the combatants was greatly excited, and the slaughter, in proportion to the whole number engaged, was immense. Thus we read, that in the battle in which Jeroboam, king of Israel, was defeated by Abijah, king of Judah, five hundred thousand of his forces were slain, out of eight hundred thousand. (2Chron. 13. 3, 17.)

When about to attack an enemy, the Jews deemed it a good reason for rejoicing, if they saw a storm arising, from the hope which they indulged in that they should receive Divine aid. (Judges 5. 20, 21; 1Sam. 7. 10; Habak. 3. 11.)

A common stratagem of war was that of dividing the army, and placing one part of it in ambush. (Gen. 14. 14, 16; Josh. 8. 12; Judges 20. 38; 2Chron. 13. 13.)

Except in the instance of Goliath, we have no direct evidence that the Jews mutilated the bodies of those slain in battle, a practice almost universal with other nations till a comparatively recent date, and which certainly prevailed among the Egyptians, as the monuments furnish many representations of such barbarities perpetrated by them. In some special cases, mutilation of those not slain in battle was practised by the Jews, as we see that when the murderers of Ishbosheth presented

themselves to David, in the hope of receiving a large reward, "David commanded his young men, and they slew them, and cut off their hands and feet, and hanged them up over the pond in Hebron;" (2Sam. 6. 12;) and when Ahab's seventy sons had been slain in Samaria, their heads were brought in baskets to Jehu, who directed them to be piled up in two heaps at the gate of the city. (2Kings 10. 8.)

The return of the victors was hailed with loud acclamations, the inhabitants of the cities going out to meet them, the women bearing musical instruments, and singing and dancing before them. (1Sam. 18. 6, 7.) Elegies were composed for the dead, as by David, monuments in honour of the victory were sometimes erected, and the arms of the enemy were preserved as trophies in the tabernacle or temple. (1Sam. 21. 9.) The soldiers who had behaved most valiantly were honoured with presents, and in some cases received the daughter of the general or king in marriage. (Judges 1. 12; 1Sam. 17. 25; 18. 17.)

LAWS OF WAR, CAPTIVES, SPOIL.

Laws of War—Captives. The 20th chapter of Deuteronomy gives the Divine directions concerning the rules to be observed towards cities captured by the Israelites. If the city belonged to the idolatrous nations of Canaan, it was the Divine command that nothing should be saved alive that had breath; and we see how severely a disregard of this injunction, in the case of Agag, was visited upon Saul. (1Sam. 15. 23.) The severities and indignities inflicted upon the captive kings and nobles before they were put to death (Josh. 20. 24) appear to have been no other than were customary among the Egyptians at the same period, as we meet with many representations of captives trampled on and mutilated, on the monuments. See *Engraving*.

If, however, the city against which the army advanced was one of those "very far off," it was first to be summoned to surrender, on condition of the inhabitants being made tributaries; but if they rejected these terms, the siege was to be formed, and when the place was taken, the men were to be put to the sword, and the women and children carried into captivity; several regulations for their humane treatment in that condition being given in other parts of Scripture.

It was held by the Jews to be unlawful to keep their brethren in bondage when taken in war, for we find that when Ahab's army had been defeated, and the Israelites had carried away two hundred thousand captives, Oded the prophet remonstrated with the soldiers, and being joined by several of the heads of the people, prevailed upon them not only to release their prisoners, and take proper measures for their safe return to their homes, but also to surrender all the spoil they had obtained. (2Chron. 28.)

Among the Egyptians, the captives taken in war were usually dragged to the market, bound and fettered, and sold as slaves. Sometimes the victors, with a refinement of cruelty, tied them in the most painful postures. Women and children shared the fate of their husbands and fathers; melancholy processions of these unhappy beings frequently occur on the monuments; and the artists have sometimes depicted the joyous and thoughtless ignorance of infancy contrasted with the anguish of the unhappy mother, while in other pictures, the children appear faint, and pining for food, realizing the fearful description of the prophet Jeremiah: "The tongue of the sucking child cleaveth to the roof of his mouth for thirst; the young children ask bread, and no man breaketh it unto them. They that did feed delicately are desolate in the streets; they that were

brought up in scarlet embrace dunghills." (Lament. 4. 4,5.)

Spoil. In the case of the Canaanites, all the spoil, of whatever kind, as well as the city itself, was to be destroyed by fire, (Deut. 13. 16,) and it was for transgressing this command that Achan was punished with death. (Josh. 7.) The spoil taken from any other people was to be enjoyed by the victors; the warriors, however, were to give one-half to their brethren at home, and each party was to present a given portion (a five-hundredth in the one case, and a fiftieth in the other) to the Levites; and it seems to have been customary for the military to add a portion of the jewels and most precious effects as an oblation to the Lord, to make atonement for any breach of the Divine commands of which they might have been guilty during the campaign. (Numb. 31. 50.)

IV. FORTIFICATION.

FENCED CITIES.

It appears to have been the custom in the earliest ages for each community, especially if their dwellings were situated on a hill, to dig a trench around them, the earth from which was thrown up into a mound; and so generally was this the case, that to build a city and to fortify it, are synonymous terms in many of the Oriental languages.

The next step was to raise a kind of scaffolding upon the mound from which missiles might be directed with most effect upon any assailant; and at length walls arose within the deepened trench, which, if lofty enough to render scaling impracticable, fully answered their purpose, that being the only mode of attack from which, at that time, any danger could arise; for the gates were always made very strong, and were in general vigilantly guarded, watch-towers being built over them for that purpose, long before they were erected on the walls. These walls were of very much greater extent than cities of similar population would require at the present day, as they generally included large tracts of land, both arable and pasture, so that the inhabitants might be secured as much as possible against the danger of famine in the event of a siege. This fact renders the circumference assigned to Babylon and Nineveh less incredible than it would otherwise be. These cities, whatever may have been their splendour in after days, were in reality in the early part of their history, merely large tracts of country, studded with scattered villages, and surrounded by a lofty wall and a broad ditch.

This mode of defence must have reached considerable perfection at an early period; for in the time of Moses and Joshua we find that the Canaanites dwelt in cities "fenced up to heaven," (Deut. 9. 1,) and so little were the Jews provided with means to attack them, that most of the places they took were gained by stratagem, and in the instance of Jericho, the defences were levelled with the ground by the direct interposition of the Almighty. (Josh. 6. 20.)

We see from the monuments that the Egyptians at a date prior to this, were much more advanced in the art of fortification, and as the Israelites had during their bondage been employed in the construction of some of their "treasure-cities," (Exod. 1. 11,) which of course were rendered as defensible as possible, it is reasonable to conclude that they carried with them into Palestine knowledge which soon enabled them to surpass the nations around them.

Of their proficiency in the art of fortification we have an instance in 2Sam. 20. Sheba, who had joined in the rebellion of Absalom, having escaped from the field, David directed him to be pursued without loss

of time, "lest he should get him fenced cities" and set their efforts to reduce him at defiance. Sheba threw himself into Abel Beth-maachah, and though "the people that were with Joab battered the wall, to throw it down," the success of the enterprise seems to have been so doubtful, that Joab gladly acquiesced in the proposition of "a wise woman out of the city," to retire without offering further molestation, on the head of Sheba being thrown over the wall to him; and that it was the strength of the city rather than his reluctance to destroy it that operated with him, may fairly be inferred from the character of the man, who had just before treacherously murdered Amasa, and who had been guilty of great cruelty on many other occasions.

That their neighbours' means of defence were far inferior to their own, seems fairly deducible from the numerous instances recorded of their cities being captured by the Israelites, who were very seldom repulsed from before them.

The situation of Jerusalem, strong by nature, was diligently improved by art, and almost every successive ruler from David to Herod the Great, seems to have exerted himself either to restore or to strengthen its defences; and we learn from Tacitus that at the time of its capture by Titus, the fortifications of the city were esteemed so admirable that the Roman general ordered a small portion to be left standing, as a monument of the difficulty with which the rest had been destroyed. Of these defences at an earlier period we have a tolerably full account in the Scriptures, and we may conclude that those of the other cities of the country resembled them as closely as circumstances would allow.

From these sources it appears that the principal parts of a fortification were:—

1. *The Wall*, חֹמָה *choma*, which in some instances was double or triple, (2Chron. 32. 5,) and was commonly made lofty and broad, so as to be neither readily passed over nor broken through. (Jerem. 51. 58.) The main wall terminated at the top in a parapet, which opened at intervals in a sort of embrasure, through which the garrison engaged the enemy with missile weapons.

2. *Towers* מִגְדָּל *migdol*, מִגְדָּלוֹת *migdaloth*, of considerable height were erected at certain distances along the walls, and over the gates. They had a flat roof surrounded with a parapet with openings similar to those along the walls, and had "engines to shoot great stones and arrows." (2Chron. 26. 15.) In these towers guards were kept constantly stationed, whose business it was to make known anything that they discovered at a distance, and to blow the trumpet on the approach of the enemy. (2Sam. 13. 34; 18. 26,27; 2Kings 9. 17-19.) On this account prophets are frequently compared to the watchmen in towers. (Ezek. 3.17; 27. 11; 33. 1-9.)

Towers of larger size, or detached forts, were erected in different parts of the country, particularly on elevated spots, and were guarded by a military force. (Judges 8. 9-17; 9. 47; Isai. 21. 6; Habak. 2. 1.) The term for structures of this kind is צִירֵיח *tsareach*, and to this day circular edifices of this description which are erected in the solitudes of Arabia Felix, bear their ancient name of castles or towers. The watch-towers of the shepherds, מִצְדָּה *terach*, מִצְדָּוֹת *teroth*, are to be distinguished from the former, although it was not unfrequently the case that they were converted into military towers, and were eventually enlarged into fortified cities. (2Chron. 26. 10; 27. 4.)

3. *Bulwarks*. At certain distances along the wall, probably at its angles, were projections which occupied the position and served the purposes of the modern bastion, as upon them were placed the military engines. (2Chron. 26. 15.) The wall between the bulwarks,

instead of running in a straight line like the modern curtain, curved inwards; thus giving the greatest possible extent of flanking fire. This mode of construction is said to have been introduced by King Uzziah, B.C. 810.

4. The walls were surrounded by a *Fosse* or ditch, חל חל *hal*, or *hhal*, which was kept full of water, whenever circumstances allowed. The fosse was usually outside the wall, but in some cases, as we learn from Isaiah 22. 11, a second ditch between the outer and inner wall was added.

5. The Gates שער *shaer*, שערים *shaerim*, of cities were at first made of wood, and were small in size. They were constructed in the manner of valve doors דלתים *dalethaim*, and were secured by means of wooden bars. Subsequently they were made larger and stronger; and in order to prevent their being burnt by a besieger, were covered with plates of brass or iron דלתי נחושת *dalti nichosheth*. The bars were covered in the same manner in order to prevent their being cut asunder; they were sometimes made wholly of iron, and were secured by a sort of lock. (Psal. 107. 16; Isai. 45. 2.)

ARMOURIES AND ARSENALS.

From Canticles 4. 4, and 2Chron. 9. 16, we learn that it was the custom of the Jewish monarchs to have collections of splendid armour in their palaces. In the tower of David, which is mentioned by name as an armoury, were a thousand "shields of mighty men" suspended, and in the House of the Forest of Lebanon were placed three hundred golden shields by Solomon.

These collections were of course for mere pomp, but from the frequent mention of store-cities and store-houses it appears that large quantities of arms and military stores were provided by the rulers of Israel, among whom Solomon, Jehoshaphat, and Uzziah, are particularly to be mentioned. The first-named monarch had also a naval arsenal at Ezion-geber, on the Red Sea, where his fleet that traded to Ophir was built; and Jehoshaphat afterwards equipped a fleet there, in conjunction with Amaziah, king of Israel.

OPERATIONS OF A SIEGE.

When the approach of an enemy was expected, the walls of the city were repaired and strengthened, fountains beyond the walls filled up with stones, (Isai. 22. 9-11,) strong guards posted at the gates, ambuscades laid in the surrounding country, (Jerem. 51. 12,) and watchmen stationed on eminences, who by signals gave information of all that was passing around.

Capitulation. The enemy having arrived, usually summoned the city to surrender. If the inhabitants were inclined so to do, they sent some of their principal men out of the city to the camp to arrange the conditions, and hence the phrase "to come out," implies a surrender by capitulation. The people were generally in this case reduced to bondage, and the walls of their city levelled with the ground.

Assault and Ravage. If the inhabitants refused them admission, the enemy frequently, if there appeared any probability of success, attempted to carry the city at once, their light troops assailing the garrison with missiles, while the "men of war," holding their shields above their heads, rushed forward and endeavoured to scale the walls.

In cases where the assailants were beaten back, they generally ravaged the surrounding country in the most cruel manner, cut down trees, obstructed the fountains, filled the cultivated fields with stones, and reduced the ground to a state of barrenness for many years. This was particularly the case in the earlier periods of history

before the invention of military engines, when the means of defence were so superior to those of attack, that sieges endured for a great length of time, and cities were generally taken rather by surprise, treachery, or the famine eventually produced by blockade, than by force of arms. The Hebrews, however, were strictly enjoined to abstain from such barbarities. (Deut. 20. 19, 20.)

The Bank or Mound. If, however, the assault either failed or was deemed impracticable, and the siege seemed likely to be of long duration, the besiegers drew a trench round the spot they occupied, and with the earth thrown out, raised a bank or mound, which they gradually advanced in an oblique direction towards the city walls, whose height it often equalled or sometimes surpassed. This is styled, "casting up a bank against the city." (2Sam. 20. 15.) From this position they poured showers of arrows and stones into the place, and the garrison exerted themselves first to prevent the construction of the bank, and afterwards to drive the assailants from it.

Any of the chief men who were captured by the garrison were usually scourged or put to death on the walls in the sight of their friends, who retaliated these cruelties on such of the besieged as fell into their hands.

Military Engines. King Uzziah is mentioned in 2Chron. 26, as having placed upon the walls of Jerusalem, "engines invented by cunning men, to shoot arrows and great stones." These probably were similar to the catapults and balistæ afterwards employed by the Greeks and Romans, but something of the nature of the battering-ram certainly was in use among the Jews long before, as in the account of the siege of Abel Beth-maachah before noticed, we read that "the people that were with Joab battered the wall, to throw it down."

The catapults were immense bows which were bent by means of a machine, and which threw with great force large arrows, javelins, and even beams of wood. The balistæ on the other hand may be denominated large slings, which were also discharged by machines, and threw stones and balls of lead. These were principally means of defence, but the battering-ram and movable towers and penthouses were only employed by the assailants.

The Assault. When the mound has been pushed forward nearly to the walls, so that the archers and slingers, supported by some catapults and balistæ, might occupy the attention of the garrison, bodies of heavy-armed men advanced covered by a movable penthouse, on the top of which bowmen were frequently placed, and dragged with them the battering-ram. This engine is first mentioned by Ezekiel, as being an instrument of war in use among the Chaldeans. (4. 1, 2.) It was composed of long and stout beams, commonly of oak, strongly bound together, the ends of which were formed of brass or iron, shaped like the head of a ram. It was at first carried on the arms of the soldiers, and by them driven forcibly against the wall, but was afterwards suspended by means of chains, and was then an exceedingly formidable weapon, some rams among the Romans being of such size as to require the labour of one hundred men to work them.

Capture. When a breach in the wall was effected, the garrison frequently erected another wall inside the first, in doing which they tore down the contiguous houses and employed their timbers in its erection. (Isai. 22. 10.) This being usually weaker than the first wall was generally overthrown, and the besiegers entered the city, when the most horrible scenes followed. In 2Chron. 36, we have a most powerful description of the atrocities perpetrated at the capture of Jerusalem by Nebuchadnezzar, but which were, if possible, exceeded

when the devoted city fell into the hand of the Romans nearly seven hundred years afterwards.

"They mocked the messengers of God, and despised his words and misused his prophets, until the wrath of the Lord arose against his people, till there was no remedy.

"Therefore he brought upon them the king of the Chaldees, who slew their young men with the sword in the house of their sanctuary, and had no compassion upon young man or maiden, old man or him that stooped for age: he gave them into his hand.

"And all the vessels of the house of God, great and small, and the treasures of the house of the Lord, and the treasures of the king, and of his princes; all these he brought to Babylon.

"And they burnt the house of God, and brake down the wall of Jerusalem, and burnt all the palaces thereof with fire, and destroyed all the goodly vessels thereof.

"And them that had escaped from the sword carried he away to Babylon; where they were servants to him and his sons until the reign of the kingdom of Persia:

"To fulfil the word of the Lord by the mouth of Jeremiah, until the land had enjoyed her sabbaths: for as long as she lay desolate she kept sabbath, to fulfil threescore and ten years."

The allusions in the New Testament to military affairs are very numerous; and the sacred writers have derived from them metaphors and expressions of singular propriety, elegance and energy, for animating Christians to fortitude against temptations, and to constancy in the profession of their holy faith under all persecutions, and also for stimulating them to persevere unto the end, that they may receive those final honours, and that immortal crown which await victorious piety.

Captives bound. From the Egyptian Monuments.

ARNAN, a descendant of Jeconiah, mentioned in 1 Chron. 3. 21.

ARNON אֶרְנוֹן a river or brook of Palestine, which rises among the mountains in Gilead. Josephus, describing the boundaries of the land of the Amorites, says, "This is a country situated between three rivers, and naturally resembling an island; the river Arnon being its southern limit, the river Jabbok determining its northern side." (*Ant. Jud.*) Balak met Balaam on the borders of the river Arnon. (Numb. 22. 36.) Near this river was fought the great battle between the Israelites under Moses, and the Amorites under Sihon their king, when the latter were defeated, and all of them slain. Seetzen conjectures the Arnon to be the stream now called Mudscheb. Buckingham's *Palestine*.

AROD or **ARODI**, the sixth son of Gad; (Gen. 46. 16;) his descendants are called Arodites. (Numb. 26. 17.)

AROER אֶרְוֶר a city in the territory of the tribe of Gad, on the brook Arnon. (Numb. 32. 34; Deut. 2. 36; 3. 12.) It originally belonged to the Moabites, but was taken from them by Sihon, king of the Amorites. Moses took it from that prince and gave it to the tribe of Gad, who rebuilt it.

Eusebius says, that in his time Aroer was situated upon a mountain, which probably refers to another place of the same name, a city in the tribe of Judah, to the inhabitants of which David sent a part of the spoils he

had taken from the Amalekites. (1 Sam. 30. 28.) Several places called Aroer, are spoken of in Scripture, and "the cities of Aroer," mentioned in Isai. 17. 2, are supposed to be the cities on the other side of the Jordan generally.

ARPAD or **ARPHAD**, a city and district in Syria, near Hamath, with which it is often joined, and which for a time, had its own kings. (2 Kings 18. 34; 19. 13.) Sennacherib, king of Assyria, boasts of having reduced Arpad and Hamath, or of having destroyed the idols of those places. (Isai. 10. 9; Jer. 49. 23.) It was destroyed by the Chaldeans, but was soon rebuilt.

II. A town of Phœnicia, situated in Arad, a small island to the south of Tyre. It is now called Rou-Wadde by the Turks, and lies directly opposite to the land of Hamath.

ARPHAXAD, אֶרְפַּחְצָד the name of a descendant of Shem, respecting which it is not clear from the Hebrew whether it is used at the same time like many of these proper names, for the name of a country or only for the progenitor of a people. (Gen. 10. 22-24; 11. 12, 13.) If it signify the former, it would be best explained with Josephus as a designation of Chaldaea, as compounded from אֶרֶץ Arabic *boundary, district*, and צָד the root of כְּשָׁד *Chaldean*. (Gen. 22. 22.) Gesenius.

ARROW. The arrow was the symbol of calamities or diseases inflicted by God. Thus the passage in Job 34. 6, which our translators have rendered, "My

R

wound is incurable without transgression," should be, "I am desperately pierced through by arrows." It is also applied figuratively to lightnings, which are styled God's arrows. (Psal. 18. 14; Psal. 144. 6.) Sometimes arrow denotes a sudden and inevitable danger as in Psal. 91. 5, "The arrow that flieth by day." Also anything injurious, as a deceitful tongue, (Jer. 9. 8,) a bitter word, (Psal. 64. 3,) a false testimony, (Prov. 25. 18.) On the other hand it is used to signify children. (Psal. 127. 4, 5.) The term arrow is also specially applied to the word of God in the hands of the Messiah. (Psal. 45. 5; Isai. 49. 2.) Michaëlis; Gesenius. See ARMS; DIVINATION.

ARSACES, otherwise Mithridates, king of the Parthians, is mentioned in the books of the Apocrypha. He took prisoner Demetrius, the king of Syria, and friend of Simon, the first Maccabean sovereign, (1 Macc. 14. 2,) and enlarged considerably the kingdom of Parthia by his good conduct and his valour. Josephus.

ARSAUF, a town of Palestine, in which, according to Josephus, Asa, king of Israel, was buried.

ARSENAL. See ARMS.

ARSUF, a sea-port town of Palestine, on the Mediterranean, six miles north-east of Joppa. In its vicinity there is a small island called Arsuffo.

ARTABA, a measure used by the Babylonians, mentioned in one of the apocryphal chapters of Daniel, (14. 3,) in the Vulgate. According to Epiphanius, an artaba contained seventy-two sextarii, or one bushel one gallon and one pint. Arbuthnot's *Tables*.

ARTAXERXES, אַרְתַּחשֶׁשְׁתָּר (Ezra 4. 8.) This name originates from the old Persian word Artalschetr, אַרְתַּחשֶׁשְׁתָּר and is found in that form in the inscriptions of Nakshi-Roustam. The last part of this word is the Zendic Khshethro, also Sherao, *king*; the syllable Art, (which is met with in several Persian names, as Artabanus, Artaphernes, Artabagus,) appears to have signified *great, mighty*. It is at least so rendered by the Greeks, and upon this is founded the explanation of Ἀρταξερξης by μέγας ἀρχιος in Herodotus, (vi. 98,) but this may not be the true signification.

From Artalschetr, the Hebrews formed Artachshashter, the Greeks Artaxerxes, the Armenians Artaschir, and the modern Persians Ardeschir, which name was borne by three kings of the Sassanid dynasty. (De Sacy, *Mem. de la Perse*.) Dr. Hales observes that the confusion of names is embarrassing, and it must be borne in mind that the word Ahasuerus is a royal title, and not a proper name.

Two Persian sovereigns who bore the appellation of Artaxerxes are mentioned in the Old Testament.

I. Artaxerxes, who at the instigation of the enemies of the Jews, issued an edict prohibiting them from rebuilding Jerusalem. (Ezra 4. 7-22.) This Artaxerxes is generally supposed to be the pseudo-Smerdis, one of the Persian Magi, who assumed that name, and, pretending to be the son of Cyrus, occupied the throne between the reigns of Cambyses and Darius the son of Hystaspes, but this view is objected to by Dr. Hales.

II. Artaxerxes, who issued a decree extremely favourable to the Jews, which was carried by Ezra to Jerusalem. (Ezra 7. 1; 8. 1.) He was surnamed Longimanus, or the long-handed, from a trifling deformity. Nehemiah was his cup-bearer, and was permitted by him to return to Jerusalem, with a commission to rebuild its walls, and to be the governor of Judæa.

ARTEMAS, a disciple of St. Paul, sent by that apostle into Crete, in the place of Titus, whom he wished to join him at Nicopolis, where he passed the winter.

(Titus 3. 12.) We know nothing further of the life or death of Artemas; but the employment to which he was appointed by the apostle is a proof of his great merit.

ARTS AND ARTIFICERS. The rudiments of the arts, which are now among civilised nations brought to such an admirable state of perfection, exist also among the rudest nations, whence we infer, that they must have originated partly in necessity and partly in accident. At first their processes were doubtless very imperfect and very limited; but the inquisitive and active mind of man, impelled by his wants, soon enlarged and improved them. Accordingly, in the fourth generation from Adam, we find mention made of "Tubal-Cain, an instructor of every artificer in brass and iron;" and also of Jubal, as "the father of all such as handle the harp and organ;" but in the fragments of antediluvian history preserved by Moses, there is nothing more explicit on this subject, as the book of Genesis appears to be designed chiefly as an introduction to the history of the Mosaic legislation.

The first man undoubtedly kept his children and other descendants about him as long as possible, and exercised paternal authority over them. Cain was the first who separated from his father's society, and he was impelled to this step through fear of punishment for the murder of his brother. In the course of time, various motives, such as a desire to obtain land for cultivation or pasturage for cattle, might induce others to follow his example. Thus there arose separate families, which were governed by their own patriarchs. When families had increased to tribes and nations, we find that men were engaged in agriculture, and in the improvement of the arts.

The family of Noah preserved the knowledge of the first principles of civil society and of the infant arts which had existed before the Deluge, and as early as the time of Jacob, it appears that the labouring class comprehended husbandmen, mechanics, artists, and merchants.

Egypt in the early ages of the world excelled all other nations in a knowledge of the arts, as may be sufficiently proved by the extraordinary magnitude and permanency of the Egyptian monuments, the magnificent temples dedicated to their gods, and the splendid obelisks erected in honour of their kings. The learning of the Egyptians has been made known to us by the sacred historian. By this record we have been taught to believe in the wisdom of this ancient people, and to feel astonishment at the nature of their institutions, the extent of their learning, and the perfection they had attained in the arts at so early a period. Moses, it is true, did not enact any special laws in favour of the arts among the Hebrews, nor did he interdict or endeavour to lessen them in the estimation of the people, but on the contrary, speaks in praise of artificers. (Exod. 35. 30, 35.) The descendants of Jacob having lived on terms of amity with their neighbours of Mizraim, "until another king arose who knew not Joseph," they undoubtedly borrowed from them many of their instruments of agriculture, of commerce, and of luxury, and as the artists of Egypt descended to depict the minutest particulars of their household arrangements, and every circumstance connected with their national habits and observances was faithfully represented, we have the means of forming a judgment respecting the arts and usages which prevailed amongst the Hebrews. No one can pretend to doubt that the Scriptural narrative is singularly illustrated and confirmed by the monuments. A cirrh vein of illustration is thus opened by comparing the various processes depicted on those monuments, with the statements scattered throughout the inspired records, more especially the numerous metaphors employed by the Prophets in relation to many of these arts and manu-

factures; and we shall, therefore, in the order of the alphabetical series, give descriptive particulars of the various arts as practised among the Egyptians, presuming those subsequently practised by the Hebrews differed but little from them.

Soon after the death of Joshua, a place was expressly allotted by Joab to artificers; it was called the valley of craftsmen **נֵיָא דְרָשִׁים** (1Chron. 4. 14; comp. Nehem. 11. 35.) About this time mention is also made of artificers in gold and silver. (Judges 17. 3,5.) Some of the less complicated instruments used in agriculture, every one made for himself. The women spun, wove, and embroidered; they made clothing, not only for their families, but for sale. (Exod. 35. 25.)

Artificers among the Hebrews were not, as among the Greeks and Romans, servants and slaves, but men of some rank; and as luxury increased, they became very numerous. (Jerem. 24. 1; 29. 2.)

In the time of David and Solomon there were Israelites who understood the construction of temples and palaces, but they were still inferior to the Tyrians, from whom they were willing to receive instruction. (1Chron. 14. 1; 22. 15.)

During the captivity, many of the Hebrews applied themselves to the arts and merchandize; and subsequently, when they were scattered abroad among different nations, a knowledge of the arts became so popular, that the Talmudists taught, that all parents should have their children instructed in some art or handicraft. They mention many learned men of their nation who practised some kind of manual labour, or, as we should term it, followed some trade; and we find the circumstance frequently alluded to in the New Testament.

The Jews, like other nations of their time, reckoned certain trades infamous; among these the Rabbins classed the drivers of asses and camels, barbers, sailors, shepherds, and inn-keepers, placing them on a level with robbers. The more eminent Greek tradesmen in the apostolic age were united, it appears, in a sort of corporation or society, (Acts 19. 25,) and such was probably the case with the Jews also.

ARUBOTH, a city and district of the tribe of Judah. (1Kings 4. 10.) Its exact site and locality are now unknown.

ARUD. See **ARAD**.

ARUMAH, **אֲרֻמָּה** a city near Sichem, where Abimelech resided. (Judges 9. 41.) Some commentators identify it with Rumah, **רֻמָּה** (2Kings 23. 36.)

ARVAD, **אֲרָד** or **ARADUS**, a Phœnician town, on a small island at the mouth of the river Eleutherus, on the coast opposite to Tyre. (Ezek. 27. 8,11.) It is now called **Road**, and is quite deserted. The Arvadites, mentioned in Genesis, (10. 18,) were employed as mariners by the Tyrians, and also formed the garrison of their city.

ARZA, a steward over the house of Elah, king of Israel. Zimri, the captain of the half of the chariots, conspired against Elah, and killed him as he was drinking in the house of Arza. (1Kings 16. 9.)

ASA, king of Judah, succeeded his father Abijam, B.C. 955, and reigned forty-one years. He was distinguished for his success in war, and his zeal for the worship of the true God. He purged Jerusalem from the infamous practices attending the worship of idols; and he deprived his mother of her office and dignity of queen, because she erected an idol to Astarte, which he burnt by the brook Kedron. In the latter part of his reign, the prophet Hanani having reproved him for his distrust

in God, in forming an alliance with Ben-Hadad, king of Syria, he was so exasperated that he put the prophet in chains, and at the same time gave orders for the execution of many of his friends. The Scripture reproaches him because, in his last sickness, he had recourse to physicians rather than to the Lord. (1Kings 15. 8, et seq.)

ASAHIEL, the son of Zeruiah, and brother to Joab, was killed by Abner, while he obstinately persisted in the pursuit of that general after the battle of Gibeon. (2Sam. 2. 18,19.) To revenge his death, his brother Joab, some years after, treacherously killed Abner, who had come to wait on David at Hebron. (2Sam. 3. 26,27.) See **ABNER**.

ASAI AH, a servant of King Josiah who was sent with others to consult Huldah the prophetess, concerning the book of the Law found in the Temple, B.C. 624. (2Chron. 34. 20.)

I. ASAPH, a celebrated musician in the time of David, was the son of Barachiah, of the tribe of Levi. (1Chron. 6. 39.) Asaph and also his descendants presided over the musical band in the service of the Temple. He is termed a seer, (2Chron. 29. 30,) which appellation is supposed to refer rather to his genius as a sacred poet and musician, than to his possessing the spirit of prophecy. Several of the Psalms, as the fiftieth, the seventy-third to the eighty-third, have the name of Asaph prefixed; but it is not certain whether the words or the music were composed by him. With regard to those written during the Babylonish captivity, they cannot of course be ascribed to him. Perhaps they were written or set to music by his descendants, who bore his name, or by some of that class of musicians of which the family of Asaph was the head. (1Chron. 6. 39; 2Chron. 35. 15.)

The psalms which bear the name of Asaph, are doctrinal or preceptive; their style, though less sweet than that of David, is more vehement, and little inferior to the grandeur of Isaiah.

II. The father of Joah, the secretary or recorder to King Hezekiah. (2Kings 18. 18.)

III. The principal forester of Lebanon to Artaxerxes, in the time of Nehemiah. (2. 8.)

ASCALON. See **ASKELON**.

ASCENSION OF CHRIST; or, in other words, his visible elevation to heaven. Our Saviour having repeatedly conversed with his apostles after his resurrection, and afforded them many infallible proofs of its reality, led them from Jerusalem to Bethany, and was raised up to heaven in their sight; there to continue till He shall descend at the last day to judge the quick and the dead.

On this subject we may remark briefly,

1. The evidences of this fact were numerous; for the disciples saw him ascend. (Acts 1. 9.) Two angels testified that he did ascend. (Acts 1. 10,11.) St. Stephen, St. Paul, and St. John saw him in his ascended state. (Acts 7. 55,56; 9. 3-5; Rev. 1. 9-18.) The ascension was demonstrated by the descent of the Holy Ghost; (John 16. 7-14; Acts 2. 33;) and had been prophesied by Our Lord himself. (Matt. 26. 64; John 8. 21.)

2. The time of Christ's ascension was forty days after his resurrection. He continued that number of days upon earth, in order that he might give repeated proofs of the fact of his resurrection, (Acts 1. 3,) and instruct his apostles in everything of importance respecting their office and ministry, opening to them the Scriptures concerning himself. (Mark 16. 15; Acts 1. 5-8.)

3. As to the manner of his ascension, it was from Mount Olivet, not in appearance only, but in reality,

R 2

and that visibly and locally. It was sudden, swift, glorious, and in a triumphant manner. He was parted from his disciples while He was solemnly blessing them; and multitudes of angels attended him with shouts of praise. (Psal. 24. 7-10; 47. 5,6; 68. 18.)

4. The effects or ends of his ascension were, to fulfil the types and prophecies concerning it; to "appear" as a priest "in the presence of God for us:" to take upon him more openly the exercise of his kingly office; to receive gifts for men, both ordinary and extraordinary; (Psal. 68. 18;) to open the way to heaven for his people; (Heb. 10. 19,20;) to assure the saints of their ascension to heaven after their resurrection from the dead. (John 14. 1,2.)

ASCENSION DAY, a festival of the Church held on the second Thursday before Pentecost, in commemoration of Our Lord's visible elevation to heaven.

No mention of the celebration of this day is made in the writings of the earliest fathers. The first notice of its celebration is found in the *Apostolical Constitutions*, where it is ordered that slaves should rest from their labours on the day of the Ascension. It is not improbable, therefore, that this festival was established during the latter half of the third century. The fact of its observance in the course of the fourth century, is evident. Chrysostom refers to this festival in one of his Homilies, Ambrose also alludes to it; and Augustin considers it to have been of apostolic institution, or to have been established by a general council.

The title of this day which we find in ancient writers is *Επισωζομένη ήμερα επισωζομένης*. This appellation is usually supposed to intimate, that on the day of Our Lord's ascension, the work of human redemption was completed. Riddle's *Christ. Antiq.*

ASENATH, *Ἀσνα* the daughter of Potipherah, and wife of Joseph; she was the mother of Ephraim and Manasseh. (Gen. 41. 45; 46. 20.)

"The etymology," Gesenius observes, "is unquestionably Egyptian, but obscure;" and Coquerel says, that the name of a woman absolutely analogous to this of Asenath has been discovered on the Egyptian monuments, which is composed of the monosyllables *As* and *Neith*, the name of the Egyptian Minerva. In the *Panth. Egypt.* p. 56, the name is written in Coptic *CΣXENEIT*, which the Greeks render *Ἀθενοσεβης*, *Minervæ cultrix*.

In order to secure Joseph the countenance and support of the priestly order, Pharaoh had him married to the daughter of the chief priest of On, a city known by its later Greek name of Heliopolis, the city of the sun. In Egypt, the rank of the priests was proportioned to that of the gods to whom they ministered, and there is no doubt this priest of On was one of the most eminent and influential of his order. Many writers have been anxious, in support of various theories, to explain away the apparent impropriety of this marriage of Joseph with the daughter of an idolatrous priest; and Mr. Sharon Turner, in his *Sacred History of the World*, offers the following hypothesis. "In ancient days we learn from Juba, the African prince and historian, that the Arabs peopled a part of Egypt from Meroe to Syene, and built the City of the Sun. Pliny has preserved this remarkable, but little noticed fact: 'Juba says, that the City of the Sun, which was not far from Memphis, in Egypt, has had the Arabs for its founders; and that the inhabitants of the Nile, from Syene up to Meroe, are not Ethiopian people, but Arabs.' He says of this Juba, as noting his good authority, 'In this part it pleases us to follow the Roman arms and King Juba, in his

volumes written to Caius Cæsar, of the same Arabian expedition.' This important passage of Juba bears, I think, upon the history of Joseph, and explains why he married the daughter of a priest at Heliopolis, or On. Being an Arabian colony, it would not then have in it the base superstitions of Egypt, but would have, at that period, retained enough of the Abrahamic or patriarchal religion to make a female there more near to his own faith and feelings than any other part of Egypt."

ASHAN, a city of the tribe of Judah, (Josh. 15. 42,) but afterwards transferred to the Simeonites. (19. 7.)

Eusebius says, that a city called Beth-Ashan in his time was situated sixteen miles west from Jerusalem, which may probably be the same.

ASH TREE. The word *אֶשׁ* which only occurs in Isaiah 14. 14, is in our version rendered *ash*, but in the Septuagint and Vulgate, *larch*.

Gesenius observes, "The word has been usually taken to mean the mountain ash, according to Celsius, *Hierobot.*, *ارلان* a thorny tree of Arabia Petrea, with berries formed like grapes, first green and bitter, and afterwards dark red; it is used medicinally. But the same names sometimes signify differently in the different dialects."

The larch, or *Pinus larix*, has its delicate leaves in bundles, after the manner of the cedar of Lebanon, the cones are of an elegant form, while every feature has something light about it, though the tree attains a considerable size. It is a native of warm climates, and produces a kind of Venice turpentine.

ASHDOD, *אֲשְׁדּוֹד* Vulgate, Azotus, one of the five capitals of Philistia, and the Azotus of the New Testament, now represented by a village called Edzoud.

Ashdod was a strong city on the south-east coast of the Mediterranean, about twenty-five miles north of Gaza, thirteen or fourteen south of Ekron, and thirty-four west of Jerusalem. The city was part of the lot of the tribe of Judah; (Josh. 15. 47;) but it remained for a long period in the possession of its ancient owners. When the Philistines took the ark of God from the Israelites, they carried it to Ashdod, and placed it in the temple of their god Dagon, for which they were smitten with a pestilence. Uzziah demolished the walls of this place, and built some adjacent forts to command it. (2Chron. 26. 6.) Tartan, the Assyrian general, afterwards took it and put a strong garrison into it, (Isai. 20. 1.) which, according to Herodotus, held out for twenty-nine years, when besieged by Psameticus, king of Egypt. It was also taken and ravaged by the troops of Nebuchadnezzar.

After the return of the Jews from the Babylonish captivity, they made alliances with the women of Ashdod, which introduced the worship of false gods into their families. For this crime against the law of God, Nehemiah contended with them, and made them swear that they would contract no more such idolatrous unions. (Nehem. 13. 23.) Both the city and the temple were burnt by Jonathan, the brother of Judas Maccabæus, but they were rebuilt by the Romans. Philip, the deacon, preached here, (Acts 8. 40,) and a Christian church continued in this city for many ages.

Robinson says, "The route to Ashdod lies over an undulating surface partially cultivated with grain. The town stands on the summit of a grassy hill, with luxuriant pasture around it; but there are no ruins now to be seen." It may be remarked, that the whole coast of the Mediterranean about Ashdod is daily accumulating sand, and many places known as seaports in ancient times have now, like it, become inland towns.

ASHDOTH, a city in a district which was divided between the tribes of Reuben, Gad, and Manasseh, called Ashdodh-Pisgah, (Josh. 12. 3,) situated in a fertile plain at the foot of Mount Pisgah, near to some springs.

I. ASHER, the son of Jacob and Zilpah, the servant of Leah, who gave the name to one of the tribes of Israel. (Gen. 30. 13; 1Chron. 2. 2.) Of Asher himself we have no particulars; we are merely informed, that he had four sons and one daughter.

At the Exodus, the fighting men of the tribe of Asher amounted to forty-one thousand five hundred. The territory assigned them was very fruitful, and was also rich in mines, but it was never fully occupied by them. It lay north of the half tribe of Manasseh, and west of Issachar, its northern boundry being Mount Lebanon, and its southern, Mount Carmel. It was a maritime country, whence it is said in Judges 5. 17, that on occasion of the invasion of Israel by Sisera, "Asher continued on the sea-shore, and abode in his breaches," or creeks. In this district, the cities of Tyre, Accho, and Achzib, were situated.

II. Asher was likewise the name of two towns, the one between Scythopolis and Shechem; and the other, according to Eusebius, between Ashdod and Askelon.

ASHES. Ashes are very frequently mentioned in the Scriptures, either as the symbol of human frailty, (Gen. 18. 27.) or of deep humiliation. (Esth. 4. 1; Jonah 3. 6; Matt. 11. 21.)

"And he sat down among the ashes." (Job. 2. 8.) So Ulysses, (*Odyss.* b. 7. l. 153.)

Then to the genial earth he bowed his face,
And humbled in the ashes took his place.

"I have eaten ashes like bread, and mingled my drink with weeping." (Psal. 102. 9.) I have eaten the bread of humiliation, and drank the water of affliction; ashes being the emblem of the one, and tears the consequence of the other.

"He feedeth on ashes," (Isai. 44. 20,) is a proverbial expression for using ineffectual means and bestowing labour to no purpose. In the same sense, Hosea says that "Ephraim feedeth on wind." (Ch. 12. 1.)

"Beauty for ashes," (Isai. 61. 3,) or, according to Bishop Lowth, "a beautiful crown instead of ashes." A chaplet, crown, or other ornament of the head, instead of dust and ashes, which before covered it; and the costly ointments, used on occasions of festivity, instead of the ensigns of sorrow. (2Sam. 14. 2.)

In Ezek. 27. 30, we find the mourning of the Tyrians described as wallowing in ashes. The Egyptians were accustomed to sprinkle ashes on their heads, in token of grief, as may be seen on the monuments; and the Greeks had a similar custom. Thus Homer describes Achilles bewailing the death of Patroclus:

Cast on the ground, with furious hands he spread
The scorching ashes o'er his graceful head;
His purple garments and his golden hairs,
These he deforms with dust, and those he tears.—*Iliad.*

Under the law, ashes were used for the purpose of ceremonial purification. (Numb. 19. 17; Heb. 9. 13.)

ASHIMA, אֲשִׁימָה the name of a deity adored by the Hamathites, who were settled in Samaria. (2Kings 17. 30.) Some of the Rabbins say that it had the form of an ape, others that of a lamb, a goat, a satyr, and a bald ram. Professor Jahn thinks nothing whatever is correctly known of this idol. *Archæol. Bibl.*

ASHKENAZ, אֲשַׁכְנַז the eldest son of Gomer, (Gen. 10. 3; Jerem. 51. 27,) and the father or head of a nation.

The ancient fathers were of opinion that the distribution of mankind was not left to be settled at random, or according to the exigencies of the moment, but that a formal division of the earth was made by Noah. Dr. Hales adduces an Armenian tradition, quoted by Abulfaraji, which states that Noah distributed the habitable globe, from north to south, between his sons, giving to Ham the region of the blacks; to Shem the region of the tawny; and to Japheth the region of the ruddy. "To the sons of Japheth also Garbia, (the north,) Spain, France, the countries of the Greeks, Slavonians, Bulgarians, Turks, and Armenians."

In this geographical chart, Armenia was allotted to Japheth by right of primogeniture; but some writers maintain that Ashkenaz was also a tribe and province of Armenia, or at least situated not far from it, near the Caucasus, or towards the Black Sea. The Jews understood by it Germany, and use the word in that signification. Bochart; Hales; Gesenius.

ASHNAH, a city belonging to the tribe of Judah. (Josh. 15. 33.)

ASIIPENAZ, master of the eunuchs, or, rather, one of the principal chamberlains of Nebuchadnezzar, who was commanded to select certain Jewish captives to be instructed in the literature and science of the Chaldeans. In this number he included Daniel and his three companions, whose Hebrew names he changed into Chaldean appellations. Their refusal to partake of the provisions sent from the monarch's table filled Ashpenaz with apprehension, as at that time, as in our days, the Asiatic despots frequently punished with death the least infraction of their will. He had, however, the generosity not to use constraint towards them. In acceding to the request of Daniel, Ashpenaz had everything to apprehend; and the grateful prophet specially records, that God had disposed Ashpenaz to treat him with kindness. (Dan. 1. 3-16.)

ASHTEROTH, or **ASHTAROTH**, or **ASTAROTH**, אֲשֶׁת־רִת a town of Palestine, which belonged to the half-tribe of Manasseh, eastward of the Jordan, about six miles from Edrei. Here Chedorlaomer, one of the five confederated kings, smote the gigantic race of the Rephaim, (Gen. 14. 5,) and here was the residence of Og, king of Bashan. (Deut. 1. 4.) A village called Adreat-Bitinea is believed to occupy its site.

Some writers explain the addition קַרְנַיִם *Karnaim*, (Gen. 14. 5,) by the two summits of mountains between which the city was situated; others by the form of the idol Astarte or Astaroth, worshipped there, the head of which is said to have resembled that of a horned bull.

Sidonian Medal of the Goddess Astarte.

ASHTAROTH, **ASHTORETH**, or **ASTARTE**, אֲשֶׁת־רִת *Ashtaroth*, the name of a Phœnician goddess, whose worship was introduced among the Israelites. (1Kings 11. 5, 33; 2Kings 23. 13.) The word is mostly combined with בעל and appears to indicate the male and female powers of nature. (Gesenius.) The Greeks and

Romans worshipped this goddess under the name of Astarte, and sometimes in their representations made her the same with Juno, and at other times the same with Diana or Venus; but Lucian considers her to be the moon. Under the name of Ashtaroth, she is particularly mentioned as "the abomination of the Sidonians;" the Phœnicians were, in fact, particularly addicted to her worship. She was adored by the Syrians under the name of Astarte, which the Septuagint gives as equivalent to the Hebrew Ashtaroth, and resembled in many points the Isis of the Egyptians, the two being merely different versions of the same original. Astarte was not only the moon, but, as such, the "Queen of Heaven," by which title she is mentioned in Jerem. 7. 18; 44. 17, 18; whereas, among the Greeks, Diana was the moon, but Juno was the Queen of Heaven. So, likewise, the Orientals made their Baal not only the sun, but, in that character, the King of Heaven, whilst the Greeks made two gods out of him—Jupiter being the King of Heaven, and Apollo the sun. Astarte was properly a grove-idol, and the sacred plantation which subdued the blaze of day to the mildness of lunar light, was deemed her proper sanctuary. Her rites were not bloody; for while to her associate Baal, even human sacrifices were offered, only bread, liquors, and perfumes were presented to Astarte. Hence the apostate Hebrews are reproached with the idolatrous act of "making cakes for the Queen of Heaven." (Jerem. 7. 18.)

Sanchoniatho, or, if it be preferred, Philo Biblius, remarks, that Astarte was the Venus of the Phœnicians, and that the effigy of the goddess was the head of an ox with horns, probably in resemblance of the crescent. Porphyry says that "she was sometimes represented with a cow's head, the horns of which served at the same time as the usual symbol of sovereign power, and as a representation of the crescent moon."

Astarte was usually represented like the Egyptian Isis, with the cow's horns on her head, probably for the same reason, to exhibit the moon's increase and decrease; but her votaries in different nations gave her a variety of forms as well as attributes.

"Astarte was precisely the same as Cybele," observes a writer in the *Classical Journal*, "or the Universal Mother, of the Phrygians. She was held to be Nature, or the cause which produced the beginning and the seeds of things from humidity, so that she comprehended in one personification both of those goddesses, who were accordingly sometimes blended in one symbolical figure by the ancient Greek artists. Her statue at Hieropolis, (in Syria, where she had a magnificent temple, served by more than three hundred priests,) was variously composed, to signify many attributes, like those of the Ephesian Diana, Berecynthian Mother, and others of the kind. It was placed in the interior part of the temple, accessible only to priests of the highest order, and near it was the statue of the corresponding male personification, called by the Greeks Jupiter."

Solomon introduced the worship of Ashtoreth in Israel, and built a temple to her on the Mount of Olives. (1 Kings 11. 4, 8.) Milton, in his *Paradise Lost*, b. 1. l. 437, thus refers to this object of idolatrous worship:—

With these in troops
Came Astoreth, whom the Phœnicians called
Astarte, Queen of Heaven, with crescent horns;
To whose bright image nightly by the moon
Sidonian virgins paid their vows and songs,
In Sion also not unsung, where stood
Her temple on th' offensive mountain, built
By that uxorious king, whose heart, though large,
Beguiled by fair idolatresses, fell
To idols foul.

ASHUR or ASSHUR, אַשּׁוּר the son of Shem, and builder of Nineveh, according to Gen. 10. 11, 22. It seems from the text that Asshur, being driven out of the land of Shinar by Nimrod, went and settled in Assyria; but the marginal reading makes it appear that Nimrod extended his original encroachments on the Shemites by appropriating Assyria also; or else, that he relinquished his kingdom in Shinar for some unknown reason, and founded another in Assyria.

Ashur is the proper name for Assyria, but in an extended sense, includes also Babylonia, on account of the strict alliance in which these countries often stood; even the Persian empire is so designated in Ezra, 6. 22, where Darius is called king of Assyria. Gesenius.

ASHURIM, אֲשׁוּרִים "the sons of Dedan." (Gen. 25. 3.) a people of Arabia. Gesenius.

ASIA, the largest of the three divisions of the ancient world. The origin of the name is involved in obscurity, and the word never occurs in any Hebrew book. Bochart attempts to derive it from a Hebrew or Phœnician word signifying the middle; (*Phal.* 4. 33;) but the ancient Hebrews were unacquainted with our division of the earth into parts or quarters. The only countries they were well acquainted with were parts either of Asia or Africa, and the rest of the world, even occasionally Asia Minor, was comprised by the ancient sacred writers under the general designation of "the Isles of the Gentiles." (Gen. 10. 5.) The term Asia occurs only in the books of the Maccabees, and in the New Testament.

2. Asia is bounded on the north by the Arctic Sea, which separates it from the Arctic countries of America; on the south by the Indian Ocean, which lies between it and Australia; on the west it is conterminous with Africa and Europe. The boundary-line between Asia and Africa is formed by the Gulf of Aden, the Straits of Babelmandeb, (where the two continents are only about sixteen miles apart,) the Red Sea, and the isthmus of Suez, where they unite for about seventy miles. Asia is separated from Europe by the Mediterranean Sea, the Aegean Sea or Archipelago, the Straits of the Dardanelles, the Sea of Marmara, the Channel of Constantinople, and the Black Sea. From the eastern shores of the latter sea the boundary-line runs along the crest of Mount Caucasus to the Caspian Sea, which constitutes the boundary as far as the mouth of the river Oural. Thence it follows the course of that river up to its source in the Ouraltan range, which latter forms the remainder of the boundary-line to the Gulf of Kara, east of the island of Novaia Zemlia. With regard to the number of inhabitants of Asia, we have no accurate estimate, for the Asiatics possess no statistical knowledge. The estimates of the population of China vary from about 150 to 370 millions; and the differences in the estimates of the population of other countries, though much less in amount, are quite as great in degree. There are, also, great discrepancies in the estimates that have been formed of the area of the different states, originating partly in the want of correct measurements, and partly in the fluctuating and ill-defined nature of their boundaries.

The estimated extent is 18,975,000 square miles, and the total population 480,000,000; these last have been thus divided:

Christians of all denominations	17,000,000
Jews	650,000
Mohammedans	70,000,000
The sect of Budho, or Fo	295,000,000
Brahmins	80,000,000
Shamans	8,550,000
Sikhs	4,500,000

Sect of Confucius and Suoknin . . .	3,000,000
—— Sinto, in Japan . . .	1,000,000
Guebres, or Fire-worshippers . . .	300,000

This estimate, however, must be received as extremely fanciful, and probably very inaccurate.

3. Asia is considered superior to Europe in the general salubrity, serenity, and mildness of its climate, and in the rich fertility of its soil. Every diversity of temperature is to be found in Asia, from the frozen coasts of the Arctic Ocean and the ungenial sky of Siberia, to the burning sands of the Arabian deserts, and the fertile plains of Hindostan. It forms, like Europe and Africa, a mass of solid continent, entirely different from the irregular appearance of the American division of the earth. The length of this continent, taken from the isthmus of Suez to Behring's Straits, in the Arctic Sea, is nearly 7,370 miles, and its breadth, from Cape Comorin, in India, to Cape Taimura, in Siberia, is about 4,230 miles. It is washed by the Arabian Sea, the Indian Ocean, the Chinese Sea, and the Sea of Japan, in the North Pacific, the surfaces of which are studded with innumerable islands, some of great extent and value for their productions.

4. From this great continent must undoubtedly have issued that extraordinary emigration which peopled America. "It cannot be doubted," observes a modern writer, "that the inhabitants of the north-eastern parts of Asia, little attached to the soil, and subsisting chiefly by hunting and fishing, might pass either in their canoes in summer, or upon the ice in winter, from their own country to the American shore. Or a passage of this kind may not be necessary, for it is by no means unlikely that the straits of Behring were formerly occupied by the land, and that the isthmus which joined the old world to the new, was subverted and overwhelmed by one of those great revolutions of nature which shake whole continents, and extend the dominion of the sea to places where its waters are unknown." Dr. Prichard in his *Researches into the Physical History of Man*, is decidedly of opinion that America was peopled by an Asiatic migration; and in the examples he gives of the coincidences of words, he has fully established the fact of an intercourse between the nations of Northern Asia and those of America, long before the very existence of the latter continent was known to modern Europe.

5. The Scriptures make no mention of many of the empires and nations of Asia, such as the Chinese empire, the Hindoos, and the numerous tribes inhabiting the extensive region of Siberia or Asiatic Russia. India is mentioned in the Book of Esther, but only in reference to the extensive dominions of Ahasuerus.

The Medo-Persian branch of the Indo-European nations who inhabited Asia, of whom were the Medes and ancient Persians, Parthians, and Armenians, are, however, mentioned in sacred history; and among the nations of Asia Minor we have the Phrygians, the Mysians, and the Bithynians. Of the ancient western Asiatic nations, those connected with sacred history are the Elamites, or descendants of Elam; the Assyrians, or descendants of Ashur; the Hebrews and Idumæans, or Edomites; Beni-Yaktan, or Arabs; the Chasdim, or Chaldeans; the Arameans, who inhabited Syria and Cappadocia; the Phœnicians, or descendants of Canaan; the Mitzraim, or the Egyptians; the Cushites, or Ethiopians; and the Philistines.

6. The whole of this continent is sometimes divided into Asia Major and Asia Minor; but the term Asia Minor was not in use among the ancients, with whom the general name for Upper and Lower Asia was simply Asia. Asia Major is the more extensive of the two divisions, and comprehends all the eastern parts of this

great continent; while Asia Minor includes several countries in the western division, from the Bay of Issus in Cilicia, in a northern direction to the Euxine Sea, its more western parts having been the receptacle of all the ancient emigrations from Greece, and being thickly peopled by Grecian colonies.

7. Of the ancient empires mentioned in the Scriptures, the Assyrian is the earliest, so called from Asshur, the son of Shem. Out of the empire founded by Nimrod at Babylon, sprung the Babylonian or Chaldean, the capital of which was Babylon, whilst that of Assyria was Nineveh. The empire of the Medes also sprung from the Assyrian, and was at length united by Cyrus with Persia, a country which, previous to the reign of that great prince, did not contain more than a single province of the present extensive kingdom, and which continued to rule over Asia upwards of two centuries, until its power was overthrown by Alexander the Great. Elam, which originally denoted the country of the Elymæi in the modern Khusistan, afterwards became the Hebrew term for Persia and the Persians, who were allied to the Madai or Medes. The other nations of Asia mentioned in the Scriptures have each their appropriate designations, such as the Arphaxad, or Arph-Chesad, supposed to be the Chaldeans; the Lud or Ludim, alleged by Josephus and Bochart to be the Lydians; and the Aramites or the Syrians.

8. The Asiatic countries more especially mentioned as the scenes of great events and important transactions are; Arabia, Armenia, Assyria, Babylonia, Syria and Judæa or Palestine, Phœnicia and Persia.

9. ARABIA. While the Arabians were undisputed occupants of their own peninsula, the coast of the Gulf of Persia was lined for ages with the petty sovereignties of Arab sheikhs, who, while they occupied the shores of Persia, yielded a very uncertain obedience to its monarchs. Those Arabs who were located exactly opposite to their own country, had no particular towns or cities of importance, but lived in communities among themselves, and were generally well armed, and noted as a bold and warlike race. They were often serviceable in cases of disputed successions to the Persian crown; but the Persians appear never to have obtained any kind of control over them. In intellectual power and energy the Arabian family stands undoubtedly next to the European. The history, institutions, and literature of the Jews, the early civilization of the Assyrians, the commerce and colonies of the Phœnicians, and the conquests, settlements, and literature of the Arabs, attest the truth of this assertion. The influence of the Hebrew institutions has pervaded the whole civilized world; while the language, literature, and religion of the Arabs may be traced from the western confines of Africa to the Philippine Islands, over one hundred and thirty degrees of longitude, and from the tropic of Capricorn to Tartary, over seventy degrees of latitude. Among a race so energetic, civilization made a very early progress, and it is not improbable but that four thousand years ago, the Phœnicians, Hebrews, Assyrians, and Arabs, had already domesticated many of the useful animals, cultivated many valuable plants, and were acquainted with the useful, and even precious metals. Several of the nations of this family had invented alphabetic writing in times beyond the memory of history.

The Bedouin Arabs at the present day differ but little from their ancestors in the days of the patriarchs. "In summer," says Burckhardt, "they encamp close to rivulets and springs, which abound near the Syrian desert, but they seldom remain above three or four days in the same spot; as soon as their cattle have consumed the herbage near a watering place, the tribe removes in

search of pasture, and the grass again springing up, serves for a succeeding camp. The encampments vary in number of tents from eight to ten hundred. The furniture of these tents consists of various kinds of saddles for riding the camels, and other articles of harness, tanned camel-skin bags, in which water is kept for the horses, goat-skins, in which the camel's milk is kept, wheat sacks, leather buckets for drawing water from the deep wells, large and small copper pans for cooking, mortars, in which the women beat or pound wheat, and various utensils of a similar description. Such is the mode of life to which so many allusions are made in the Scriptures, when the patriarchs and their families lived in tents, and when the children of Israel, in their progress through the Arabian wilderness, were thus domiciled."

10. A powerful obstacle to the advancement in civilization of this people exists in the unsuitableness of much of the country which they inhabit for any other than the pastoral state of society, owing to its heat, drought, and sterility. Hence the people are necessarily divided into two opposite and hostile classes, a roving and predatory, and a settled and industrious one; the first incapable of advancing itself, and sure to oppose the advancement of the last. It is somewhat remarkable that in modern times many of the Arabians, especially those employed in the service of the Pasha of Egypt, have become expert sailors; and the Arab soldiers in the Egyptian army, we are assured by a recent traveller, who are trained by European instructors, had become, to the astonishment of all, an orderly, tractable, and well-disciplined army.

"They evince," says Mrs. Colonel Elwood, in her narrative of a tour in Egypt, "the most intense interest in all our European novelties, and one day, as we were opening a box of books in their presence, an Arabic Testament caught their attention. They examined it most inquisitively, and appeared highly pleased with its contents, at once comprehending that it related to Allah, God. They asked its price, where it could be procured, and seemed quite anxious to obtain a supply. They requested permission to take it home with them to peruse, but, alas! while we were indulging in most pleasing speculations, and fancying we might perchance be the humble instruments in the hand of Providence to introduce the Bible and the knowledge of the Christian religion into this region, scarcely had an hour elapsed ere our Testament was returned to us, evidently from no dislike or disapprobation of its contents, but probably because some of their moollahs or priests had prohibited their reading it. They, however, accepted with thankfulness and pleasure some of Mr. Jowett's Arabic spelling books, of which he had furnished us with a supply when at Malta."

11. Many of the Bedouin Arab tribes belong to the recent and powerful sect of the Wahabees, founded towards the end of the eighteenth century, by a learned Arab, named Abd-el-Wahab, of the tribe of Temyem. He visited many of the principal cities of the East, and being convinced that Mohammedanism had become totally corrupt, he resolved to commence a reformation and restore the doctrine and ritual of the Koran to what he conceived their original simplicity. He reprobated the worship of saints, the use of ardent spirits and intoxicating drugs, and the opinion which the Mohammedans entertained in general respecting the eternity of the Koran; but he insisted on the authority of Mohammed as the prophet of God, and held that the Koran was the grand depository of those laws which the faithful were to obey. When the holy city of Mecca fell into the hands of his followers, they destroyed the cupola of every canonized Arab; and even those were broken down which covered the birth place of Mohammed himself, of his wife

Khadija, and his grandsons Hassan and Hussein, and his uncle Abu Taleb, the assailants exclaiming, "God have mercy upon those who destroyed, but none upon those who built them." The large dome which covers the tomb of the prophet at Medina, was destined to share the same fate, but its solid structure resisted the efforts of the assailants, and after several of them were killed by falling from the top, the attempt was relinquished.

12. The Wahabees carried their victorious arms through the greater part of Arabia, and the countries on its frontiers, and forced the Bedouin Arabs, who had before acknowledged no rule but their own will, to obey the ancient Mussulman laws; they completely succeeded in all their measures, and their power seemed permanently established, until the gold of Mehemet Ali weakened their influence, and reduced the nation to nearly its ancient state. Burckhardt observes, "It cannot be denied that Abd-el-Wahab conferred on them a great blessing, nor was the form of government that ensued unfavourable to the interests and prosperity of the whole of the Arabian nation. Whether the commonly received doctrines considered as orthodox, or that of the Wahabees, should be pronounced the true Mohammedan religion, is after all a matter of little consequence; but it became important to suppress that infidel indifference which had pervaded all Arabia, and a great part of Turkey, and which has a more baneful effect on the morals of a nation than the decided acknowledgment even of a false religion."

13. Although the Christian religion was preached in Arabia as well as in other countries of the East at an early period, yet it never was the established religion of the country, as in Syria and Egypt; for even the temple at Mecca was a heathen temple till the time of Mohammed. Historical evidence therefore concerning the Arabic versions of the Old Testament does not extend beyond the tenth century, when Rabbi Saadias Gaon, a celebrated Jewish teacher at Babylon, translated or rather paraphrased, the Old Testament into Arabic. Of this version the Pentateuch was printed at Constantinople, in folio, in the year 1546, in Hebrew characters; and in the Paris and London Polyglotts in Arabic letters. The prophecy of Isaiah was published by Paulus, in octavo, at Jena in 1790-1791; Jahn observes that its style is not pure. Saadias is also said to have translated the Book of Job and the Psalms; a manuscript containing Job is preserved in the Bodleian Library. The remaining books of this translation have not hitherto been discovered.

Besides this there are several other Arabic versions extant, made immediately from the Hebrew, either by Jews, Samaritans, or Christians, of which the following are the principal.

The Arabic version of the Pentateuch, published in 1622, in quarto, by Erpenius, a native of Holland who wrote a number of works on Arabian literature. This version appears to have been executed in the thirteenth century by some African Jew, who has very closely adhered to the Hebrew.

The Arabic version of the Book of Joshua, printed in the Paris and London Polyglotts is, in the opinion of Bauer, made directly from the Hebrew. Its author and date are not known.

The Pentateuch, Psalms, and Prophecy of Daniel, were translated by Saadi Ben Levi Asnekat, who lived in the early part of the seventeenth century; they are extant only in manuscript in the British Museum, and are of very little value.

Besides these versions, the Arab Christians have a translation of the book of Job, (printed in the Paris and London Polyglotts,) and two versions of the Psalms, still

in manuscript, which were respectively made from the Peschito or old Syriac version. All the Arabic books of the Old Testament, with the exception of the Pentateuch and Job, which are printed in those Polyglotts, were executed from Hesychius's recension of the Septuagint. The Psalms inserted in Justinian's Polyglott Psalter and Gabriel Sionitus' Arabic Psalter, were made from Lucian's recension of that version; and the Arabic Psalter printed at Aleppo in 1706, quarto, follows the Melchitic recension of the Septuagint.

There are many Arabic translations of the New Testament in addition to those which have appeared in print; for since the Arabic language supplanted the Syriac and Egyptian, the inhabitants of the countries where these had been spoken, have been obliged to annex Arabic translations to the ancient versions, which are no longer understood. These Arabic translations are supposed to have been made at different times between the seventh and the eleventh centuries; in general they were not executed from the original text, but from the versions they were intended to accompany. Thus some which are placed together with the Greek text have been made from the Greek, while others are derived from the Syriac, the Coptic, and even from the Latin Vulgate.

15. ARMENIA. The monastery of Etchmiatzin in the now Russian province of Erivan, is the residence of the patriarch or primate of the Armenian church. The vicinity is described as being studded with churches and monasteries of different sizes built of stone. These are placed on conspicuous heights. Many of them, however, are neglected and in ruins, some of them having been erected seven or eight hundred years ago. Sir Robert Ker Porter says, "The monastery of Etchmiatzin was founded by St. Gregory in A.D. 304, who also founded the other churches in its vicinity. It is now the sole habitable remains of a large city, called Valarsapat, which in ancient times surrounded this great ecclesiastical establishment; and vestiges of its magnitude may yet be traced in various places at a considerable distance."

16. The monks preserve a veritable fragment of Noah's ark in the monastery, and they thus account for the manner in which they obtained it. Many hundred years ago a certain pious brother of the order undertook the task of ascending to the top of the mountain Ararat to bring away some part of the ark, to be preserved in a shrine in the church at the foot. But ere he had gone far over the snows of the last terrible region of ice and cold he fell asleep, and an angel appearing to him in a vision, told him that beyond such a point no mortal was permitted to pass since the descent of Noah; but that to reward the singular piety of the convent, the heavenly messenger had been commanded to bring this, its devout brother, a plank of the holy ship, which at his awaking, he would find at his side. When the monk arose, he found all as the angel had said, and bore the precious relic in triumph to the monastery.

17. The late Bishop Heber admitted to Bishop's College, Calcutta, a deacon of the Armenian church, named Messap David, who had come from Mount Ararat to India in attendance upon one of the bishops of his church, as a foreign theological student. "This young ecclesiastic," observes the Report of the Society for Promoting Christian Knowledge, "pursued his studies with diligence and success, and obtained both from Bishop Heber and Principal Mill strong testimonies of approbation. Before he left the college, he completed a translation of the English Liturgy into the Armenian language. After leaving India he went into Persia, and established a flourishing school at Julpha, near Ispahan, but being annoyed by the Persians he removed into Armenia, and settled at the celebrated monastery of Etchmiatzin."

18. An expedition for scaling the hitherto inaccessible summit of Mount Ararat was in 1829 projected by Professor Parrot, of the University of Dorpat. The party consisted of the Professor, who undertook to defray the expenses out of his private funds, and four students of the university. An imperial courier was attached to the expedition by order of the Russian government to accelerate its operations and promote its objects, and General Count Paskevitch, governor of the Russian Armenian province of Erivan, was directed to give it every facility.

The travellers left Dorpat about the middle of March, 1829, crossed the river Don at Tcherkask, and traversed the steppes of the Cossacks, taking their elevations by the barometer as far as the salt lakes in the neighbourhood of the Manich river. In May they reached Mozdak on the Terek, and arrived at Tiflis in the beginning of June, where they halted for some time on account of receiving intelligence that the plague was raging in Erivan. Professor Parrot and his assistants employed their time there in making repeated experiments with the pendulum and needle; the latter were repeated four times every twenty-four hours. They made an excursion to a mountain in the Caucasian Kakhethi, the valleys and mountains of which swarmed with banditti to such a degree, that the party were obliged to be accompanied by a well-armed force.

19. They left Tiflis on the 1st of September, and reached the monastery of Etchmiatzin on the 8th, where they were hospitably received by the Armenian patriarch. On the 10th they set out on their formidable undertaking, crossed the Araxes, and arrived on the night of the 11th at the convent of St. Gregory, on the lower slope of the mountain. Their first attempt was to scale the mountain on the east, but after reaching the height of two thousand one hundred and sixty-six toises above the level of the sea, it was evidently impossible to reach the summit on that side by reason of the steepness of the icy surface.

After this failure, by the advice of a peasant of Argure or Agri, a neighbouring village, they determined a few days after to try the north-west side. The first day they reached the limit of perpetual snow, where they bivouacked for the night. At break of day they started for the summit, trusting to reach it before noon; but by that time they had ascended only five hundred toises of perpendicular height, making an altitude altogether of two thousand six hundred toises. There was a further ascent of three hundred toises or eighteen hundred English feet to the summit, and perceiving fogs and clouds collecting about the mountain, which towards night would discharge their burden of snow, the travellers thought it prudent to descend, after having planted in the snow a large wooden cross. "Ararat," says M. Parrot in a letter written immediately after the failure of his second attempt, "appears to be an immense mass of lava. From twenty versts or thereabouts to the perpetual snow, we saw in both our ascents nothing but lava. We have discovered no crater of ordinary shape, if we do not consider an enormous chasm on the north-west side to be one."

20. On the 25th of September, they made a third attempt, which was successful. "The difficulties," says M. Parrot, "were numerous, and I owe much, perhaps the entire success, to the zeal of the two soldiers, and one of the peasants, the other four being unable to follow us. From the first step we set upon the frozen snow to the summit, we were obliged to cut holes step by step with a hatchet for our feet to rest in, which were more necessary to us in descending than in our ascent; for the coup-d'œil extending from this height over an immense tract scarfed with ice, broken by deep and dark

precipices, presented something really startling, even to me, accustomed to such undertakings. Upon this occasion, as upon our second attempt, the weather was as favourable as could be. We passed the night amidst this region of frost in an atmosphere so calm and serene, that I scarcely felt the cold which in other circumstances is so severe at such an altitude. The moon kindly guided our doubtful steps on the cone of ice, when after sunset we found ourselves still very far above the region of perpetual snow."

This further acquaintance with Ararat furnished M. Parrot with nothing but lava; no other volcanic productions occurred. "We may regard it," he remarks, "as one of the greatest volcanoes, and possessing this remarkable peculiarity that it is situated equi-distant about eighty leagues from the Black and Caspian Seas; it should consequently be considered as a Mediterranean volcano. It is astonishing to see numerous rocks of lava raised above the rest, like masses that have been liquefied, and then hardened and fixed in the air." M. Parrot planted a cross five feet high upon the very summit, "as a signal," he says, "of the Christian religion which will shortly enlighten all these countries."

21. **PERSIA.** The Elamites or Persians formed in the time of Abraham a very powerful state, and the name of Persia conjoined with Media is repeatedly mentioned in the sacred records; the Persian monarchs being often the chosen instruments of the Almighty for punishing the Jews when they relapsed into idolatry, and it is perhaps owing to their repeatedly invading Palestine and carrying away numerous Jewish captives, that we find many illustrations of the customs of the Jews still existing among the modern Persians.

The Persians were among the earliest civilised nations of mankind, but their progress has not been commensurate with their precocity. That they had at an early period a written language and that it was national, is attested by the existence of the undeciphered and peculiar characters, of unquestionable antiquity, found at Persepolis and other places. When the Arabs conquered and converted the Persians about the middle of the seventh century, they found three spoken languages: the Parsee, Pehlvi, and Deri, besides the Zend, a language dedicated to religion. The first of these has superseded the rest, which are now known only by name. The extant literature of the Persians dates since the Arabian conquest, when the language received a large accession of Arabic words, easily discovered by their exotic sounds. The earliest portion of their literature is little more than one thousand years old, while the great bulk belongs to the fifteenth and sixteenth century.

Much of the country like Arabia is from drought and sterility unfit for agriculture, and suitable only for occasional pasture; and hence at all times the roving and predatory habits of a large portion of its population; while the same character belonging also, and even to a greater degree, to the countries which surround it, the progress of industry and civilization has been obstructed not only by internal but also by foreign enemies. The Persian race has never been distinguished for the spirit of enterprise or capacity for social improvement which has characterised the Arabians.

22. **MEDIA.** This was an extensive country in Asia, now a part of the Persian empire. At one time this kingdom was independent, but afterwards the Medians, the Assyrians, and the Babylonians, formed one great empire, subject to the kings of Persia on a tenure nearly resembling the feudal system. The chief seat of these dependant principalities appears to have been Babylon. The Medes are frequently mentioned in Scripture in conjunction with the Persians, and the inviolability of

any decree of the "Medes and Persians" is well-known. (Dan. 6. 8.)

"Into this country," observes Dr. Hales, "the ten tribes who comprised the kingdom of Israel were transplanted in the Assyrian captivity by Tiglath-pileser and Shalmaneser. The former prince carried away the tribes of Reuben and Gad, and one-half of the tribe of Manasseh, on the east side of Jordan, to Halah and Habor and Hara, and to the river Gozan. His successor carried away the remaining seven tribes and a half to the same places, which are said to be cities of the Medes by the river of Gozan. (2Kings 17. 6; 1Chron. 5. 26.) The geographical position of Media was wisely chosen for the distribution of the great body of the captives; for first, it was so remote and so impeded and intersected with great mountains and numerous and deep rivers, that it would be extremely difficult for them to escape from this natural prison, and to return to their own country; second, they would also be opposed in their passage through Kir, not only by the native Assyrians, but also by their inveterate enemies the Syrians, transplanted thither before them; third, the superior civilization of the Israelites and their skill in agriculture and the arts, would tend to civilize and improve those wild and barbarous regions; and fourth, they could safely be allowed more liberty, and have their minds more at ease, than if they were subject to a more rigorous confinement nearer to their native country."

23. **BABYLONIA.** This country was an extensive province of Assyria, of which the celebrated city of Babylon was the capital. Herodotus thus describes it: "All the country round about Babylon is, like Egypt, divided by frequent canals, of which the largest is navigable, and beginning at the Euphrates, has a south-eastern direction, and falls into the river Tigris, on which the city of Nineveh formerly stood. No part of the known world produces so good wheat, but the vine, olive, and fig-tree they do not even attempt to cultivate. Yet in recompense, it abounds so much in corn, as to yield at all times two-hundred and even three-hundred fold when it is most fruitful. Wheat and barley carry a blade full four digits in length; and though I well know to what a surprising height millet and sesame will grow in those parts, I shall be silent on that particular, because I am well assured that what has already been related concerning other fruits is far more credible to those who have never been at Babylon. The palm tree grows all over the plains and the greater part bears fruit, with which they make bread, wine, and honey." Some writers have alleged that the Babylonians and the Chaldeans were the same people, while others maintain that they were distinct nations, and place Chaldæa to the south of Babylonia. See **BABYLONIA**; **CHALDEA**; **MESOPOTAMIA**.

24. **ASSYRIA** was a powerful kingdom, so called by some authorities from Ashur, the second son of Shem, who dreading the tyranny of Nimrod, migrated with all his family from the land of Shinar, and took possession of that region. See **ASSYRIA**.

25. **SYRIA.** This country is now partly under the dominion of the Turks, and partly under the Pacha of Egypt, and is divided into five Pachalics, Aleppo, Tripoli, Damascus, Acre, and Palestine or Jerusalem. The ancient kingdom of Syria comprehended that part of Asia which is bounded by the Mediterranean Sea on the west, by Mount Taurus on the north, and by the Euphrates and Arabia on the east and south. See **SYRIA**.

26. **INDIA** is only mentioned incidentally, by the writer of the Book of Esther, as being the boundary of the Persian empire in the reign of that monarch called Ahasuerus who married Esther.

ASIA MINOR, in which Christianity had early many converts, (Acts 19. 10,) is the most western part of the great continent of Asia, and is bounded by the Black Sea on the north, the river Euphrates on the east, and on the west and south by the Mediterranean and part of Syria. It is of an irregularly oblong figure, about 1000 miles in length from east to west, and between 400 and 500 miles in breadth from north to south. The whole country is a part of the Turkish empire and is divided into provinces; the inhabitants of which are Christians of various communions and Mohammedans.

The chief divisions of Asia Minor in ancient times were, Lydia, Mysia, Lycia, Caria, Pamphylia, Pisidia, Galatia, Phrygia, Bithynia, Paphlagonia, Pontus, Cappadocia, Cilicia, and the islands of Rhodes and Cyprus.

When Asia is mentioned in the apocryphal books and in the New Testament, Asia Minor alone is meant. Paul and Silas were "forbidden of the Holy Ghost to preach the word in Asia," at that time, "because," says Dr. Whitby, "it was the will of the Lord to employ them in a new work which they had not yet begun, namely to preach to a Roman colony." The sacred historian proceeds, "After they were come to Mysia, they assayed to go into Bithynia, but the Spirit suffered them not." (Acts 16. 6, 7.) They were not, as Dr. Hales observes, "to waste their time in Asia Minor, the Holy Spirit intending that they should pass over to Europe, in order that they might sow the seed of a more abundant spiritual harvest."

2. St. Paul appears to have been the chief instrument in propagating Christianity in Asia. It must be observed, however, that Asia, throughout the Acts of the Apostles, does not mean the whole of Asia Minor nor even the whole of Proconsular Asia, "but a district," says Archdeacon Paley, "in the interior part of the country called Lydian Asia, divided from the rest, much as Portugal is from Spain." St. Paul sends to the Corinthians the salutations of the "Churches in Asia." (1 Cor. 16. 19,) meaning the Lydian district, of which Ephesus was the capital when he wrote that Epistle. In the second Epistle to the Corinthians, the same Apostle speaks of "our trouble which came to us in Asia, that we were pressed out of measure, above strength, insomuch that we despaired even of life." (1. 8.) Some commentators have supposed that St. Paul here refers to the commotion excited by Demetrius at Ephesus. (Acts 19.) Such may possibly have been the Apostle's meaning, but in the account given of that disturbance it is not said that hands were laid on St. Paul. It has therefore been inferred that he rather alluded to the danger which he encountered of being torn in pieces by the wild beasts with which he fought at Ephesus on another occasion. (1 Cor. 15. 32.) The two Epistles of St. Peter are addressed "to the strangers scattered throughout Pontus, Galatia, Cappadocia, Asia, and Bithynia."

3. Ruins of cities, towns, temples, and other memorials of antiquity everywhere abound in Asia Minor. Some interesting discoveries respecting its antiquities have been published by Mr. Arundell, which afford valuable illustrations of the Scriptures, particularly in determining the site of Antioch of Pisidia, rendered memorable by the discourses and persecutions of St. Paul.

Mr. Arundell thus relates the great object of his journey. "Leaving the town of Yalabatz and going to the north-side of it in the direction of the aqueduct, we were soon upon an elevated plateau, accurately described by Strabo, by the name of *λοφος*. The quantity of ancient pottery, independently of the ruins, told us at once that we were upon the emplacement of the city of Antioch. The superb members of a temple, which from the thyrsus on many of them evidently belonged to

Bacchus, was the first thing we saw. Passing on, a long and immense building constructed with prodigious stones and standing east and west, made one entertain a hope that it might be a church,—a church of Antioch! It was so: the ground plan, with the circular end for the bema (chancel), all remaining. Willingly would I have remained hours in the midst of a temple, perhaps one of the earliest consecrated to the Saviour, but we were obliged to hasten on."

"The view of the remains of this ancient city," he observes, "was quite enchanting, and well entitled Antioch to its rank of capital of the province of Pisidia. In the valley on the left, groves of poplars and weeping willows seemed to sing the song of the Psalmist, 'We hanged our harps upon the willows,' &c., mourning, as at Babylon, for the melancholy fate of this once great Christian city. Behind this valley, in the east, rises a rugged mountain, part of the Paroreia, and in front of the place where I sat is the emplacement of the city, where once stood the synagogue and the mansions of those that hospitably received the Apostles, and those of their persecutors who drove them from the city—all now levelled to the ground. Behind the city, in the middle distance, is seen the modern town of Yalabatz, the houses intermixed with poplars and other trees, in autumnal colouring, and so numerous as to resemble a grove rather than a city. Beyond is a plain bounded by the heights of Taurus, under which appeared a lake, probably of Eyerdır. On the right, in the middle distance also, the plain was bounded by mountains, and these over-tipped by the rugged alpine peaks of Mount Taurus, covered with snow."

ASIA, SEVEN CHURCHES OF. These, celebrated in the Apocalypse, in the apostolic times, and in ecclesiastical history, were, as they are classified by St. John, Ephesus, Smyrna, Pergamos, Thyatira, Sardis, Philadelphia, and Laodicea, which see under the respective names.

ASIARCH, the official designation of the pagan pontiffs of Asia Minor. They were persons appointed to preside over the worship of the gods and the sacred games. (Tertull. *de Spec.*) The asiarchs united several of the functions of the magistrate with those of the priesthood; they were entrusted with the care of the temples and sacred edifices; they had the charge of all religious solemnities, and were obliged to celebrate at their own charges the public games in honour of the gods. They were selected from the principal provinces and cities of Asia, at the commencement of the Asiatic year, or about the autumnal equinox. They wore a crown of gold, and a toga ornamented with gold and purple, and were continued under the Christian emperors, notwithstanding the games were abolished, and the temples supplanted by churches.

Mr. Arundell says, "The dignities of high priest and prætor, and asiarch, were sometimes united in the same individual. When St. Polycarp was seized at Smyrna, during the celebration of the public games, the people tumultuously demanded of Philip the asiarch, that he would let loose a lion to devour the Christian. Philip excused himself on the ground that the spectacles at the amphitheatre were at an end. This Philip was of Tralles, and united the offices of asiarch and high priest. The etymology of the name would lead to the belief that the asiarch was the governor in chief of the province of Asia; and, perhaps, in the earlier period of history, he might have been so; but latterly he was only a public officer, invested with a dignity partly magisterial and partly sacerdotal, who presided over the games of a

particular province. The asiarchate was an honourable title, but as expensive as it was honourable. The province contributed towards the expenses of the public games, but the asiarch unavoidably expended large sums to render the solemnities more imposing, as well as to make himself conspicuous in his temporary office. Accordingly, the most opulent persons were chosen to fill the office. Strabo says, that in his time, the asiarchs were elected principally from the citizens of Tralles, then the most wealthy in Asia; by the Roman laws, a father of a family, having five children living, was excused from this office. The asiarchate was an annual dignity, but the same individual might be selected several times. It has always been contended that the asiarchate was filled by one person only, unlike the office of archons, prætors, &c., but this seems contradicted by the inscription found between Smyrna and Sedikeny, which has the name of Tunon, *ΑΣΙΑΡΧΟΤ ΝΕΝΤΟΡΟΤ*."

ASKELON or ASHKELON, an ancient sea-port town on the coast of the Mediterranean, between Azotus and Gaza, forty-five miles E.S.E. from Jerusalem. After the death of Joshua, the tribe of Judah took Askelon, which subsequently became one of the five governments of the Philistines. (Judges 1. 18.) It was called by the Greeks Ascalon, and was celebrated for a temple dedicated to Derceto, the mother of Semiramis, who was here worshipped in the form of a mermaid. There was here also a temple dedicated to Apollo, at which Herod, the father of Antipater, and grandfather of Herod the Great, officiated as priest. It was anciently famed for its wines, and the cypress tree, a shrub in great esteem in those times.

During the crusades, Ascalon was a station of considerable importance, but Salah'din, on gaining possession of the town, destroyed its fortifications.

"On quitting Ashdod, the traveller passes through the ruined village of Tookrair, situated on the top of a hill, fixed upon by some as occupying the site of Ekron, once a powerful city; but it was prophesied, 'Ekron shall be rooted up,' and therefore it is explained why a diversity of opinion should exist with respect to its site. The very name is missing. Its territory was the border of the land of Judæa. Crossing the bed of the river by a broad stone bridge, he reaches in one hour and a half the ruins of Askelon, to the westward of the road to Gaza, and near the sea; another of the proud satrapies of the lords of the Philistines, but at the present day without a single inhabitant within its walls. The prophecy of Ezekiel concerning this city is thus literally fulfilled,—'It shall be a desolation.' And what Zechariah said of it is equally come true,—'Askelon shall not be inhabited.'" Robinson's *Palestine*.

ASMODEUS, the Jewish name of an evil spirit mentioned in the Book of Tobit.

ASMONEAN, a title given to the Maccabean princes, in consequence of their descent from Asmon. This dynasty endured one hundred and twenty-six years, from the time of the treaty between Antiochus Eupator and Judas Maccabeus, B.C. 162, to the death of Antigonus, B.C. 37. See MACCABEES.

ASNAPPER, the name of an Assyrian king or general, mentioned in Ezra 4. 10. Some writers think that this was Shalmaneser; others, Esarhaddon; and Bishop Patrick believes that he was some great commander, entrusted by one or other of the above monarchs with the task of settling the Jews again in their own land after the captivity.

ASP, אֲסָפִית *pethen*, Arab. بطن according to Forskal, *Coluber baelaen*. The word *pethen* is variously translated in our version; but it is generally supposed to denote the famous aspic of antiquity. The early writers speak of the aspic in so loose and indefinite a manner, that it is not very easy to determine the species with precision. Dioscorides has more particularly described the effect of its bite. He says, "The sight became dim immediately; a swelling followed, and pain was felt in the stomach, which terminated in convulsions and death." The bite was generally allowed to be incurable, or at least to admit of no other cure than the immediate excision of the wounded part. The common people of Cyprus called it κωφή, *deaf*, and in Psal. 58. 4, deafness is ascribed to the *pethen*. The *Coluber baelaen* is about a foot in length, as described by Forskal, and two inches in circumference, spotted with black and white, oviparous, and the bite poisonous in the highest degree. Death ensues in about twenty-four hours after the person has been bitten. The whole body immediately becomes of a blackish colour, and mortification, as if from gangrene, speedily follows.

M. Geoffroy Saint-Hilaire supposes the *vipère haje*, which is very common in Egypt, to be the same as the ancient aspic.

Mr. Merrick, in reference to the passage in Psal. 91. 13, says, "Bochart observes that the most ancient interpreters, the Septuagint, the Vulgate, St. Jerome, Apollinaris, the Syriac, Arabic and Ethiopic versions render the Hebrew word, which our translators have rendered 'lion,' the *asp*; and this learned critic himself thinks it probable that the Psalmist throughout this verse speaks of serpents only. He also observes, that Nicander has mentioned a sort of serpent by the name of *λεων αιολος*, the *spotted lion*; and that the word translated 'young lion,' is, in other parts of Scripture, rendered by the Septuagint, *a dragon*. (Job 4. 10.) The prophet Isaiah, predicting the conversion of the Gentiles to the faith of Christ, and the glorious reign of peace and truth, declares that, 'The sucking child shall play on the hole of the asp, and the weaned child shall put his hand on the cockatrice's den. They shall not hurt nor destroy in all my holy mountain; for the earth shall be full of the knowledge of the Lord, as the waters cover the sea.' (Isai. 11. 8,9)." See ADDER.

The Asp.

ASPHALTITES, LAKE. See DEAD SEA; SODOM and GOMORRAH.

ASPHALTUS, אֲסָפִית a kind of bitumen which rises from the lake of Sodom.

"We picked up on the shores of the Dead Sea," says Professor Robinson, "several pieces of a black substance resembling hardened pitch. The hills bordering on the lake are said to abound with it. Being held in the flame

of a candle, it soon burns and yields an intolerable stench. It has the property of losing only a part of its weight, but none of its bulk, in burning. I did not meet with any of the bitumen for which this lake was so famous; my observations being confined almost to one spot, the northern end. In ancient times it was a valuable article of commerce. In Egypt it was used in large quantities for embalming the dead."

Naphtha, petroleum, mineral tar, &c., seem to be, in fact, but one substance in different conditions. They are all remarkable for their inflammable character. Neither the inventions of art nor the researches of science have discovered any other substance so well adapted to exclude water, and to repel the injuries of worms, as the mineral pitch or bitumen. The ancients used it instead of mortar, and the walls of Babylon were cemented by it. See BITUMEN.

ASPHAR, the name of a pool mentioned in 1 Macc. 9. 33, whither Jonathan and his brother Simon fled. Calmet supposes it to be connected with the Lake Asphaltites.

ASRIEL, a son of Gilead, and head of a family of the tribe of Manasseh. (Numb. 26. 31; Josh. 17. 2.)

ASS חמור *hhamor*. An animal well known for domestic uses, and frequently mentioned in Scripture.

There are several Hebrew words which are referred by our translators to the ass.

1. חמור *hhamor*, the usual appellation, denoting the ordinary kind; such as is employed in labour, carriage, and domestic services.

2. פרא *para*, the wild ass, or onager, at present found mostly in Tartary, where it is known by the name of *kulan*.

3. אתון *athon*, rendered a "she ass." (Numb. 22. 23.)

4. ערוד *orad*, (Job 39. 5,) the more Aramaic name for פרא the onager.

The She Ass used as a beast of burden by the Egyptians.

The ass was considered unclean by the law, because it did not chew the cud. To draw with an ox and an ass together was prohibited. (Levit. 11. 26.)

Le Clerc observes that the Israelites not being allowed to keep horses, the ass was not only made a beast of burden, but used on journeys, and that even the most honourable of the nation rode on asses. Jair of Gilead had thirty sons who rode on as many asses, and commanded in thirty cities. (Judges 10. 4.) We also find that David rode on a mule, and ordered Solomon to use it at his coronation, (1 Kings 1. 33, 34,) that afterwards, when Solomon and succeeding princes multiplied horses, they were rebuked for it, (Isai. 2. 7; 31. 1; Hosea 14. 3,) that the removal of horses is promised in the days of the Messiah. (Hosea 1. 7; Micah 5. 10.) From these facts we may infer that the action of Our Lord in riding into Jerusalem upon an ass, is to be viewed, not only as the accomplishment of a prophecy, but also as a revival

of an ancient and venerable Hebrew custom. Dr. Doddridge observes, that asses in the East are larger and much finer than ours, and that our Lord's triumphant entry was not degraded by indignity; though humble, it was not mean.

A modern traveller states, that "the white ass mentioned in the song of Deborah and Barak, is by no means uncommon in Western Arabia. They are usually in most respects the finest of their species and sell at a much higher price; those who make a livelihood by hiring out these animals, always expect better pay for the white ass than for any of the others. The superior estimation in which they are held is indicated by the superior style of their furniture and decorations; and in passing through the streets, the traveller will not fail to notice the conspicuous appearance which they make in the line of asses which stand waiting to be hired. The worsted trappings are of gayer colours, the beads and small shells are more abundant and fine, and the ornaments of metal more bright. But above all, their white hides are fantastically streaked and spotted with the red stains of the henna plant."

Niebuhr says, "Christians cannot repine at being forbidden to ride on horseback in the streets of Cairo, for the asses are there very handsome, and are used for riding by the greater part of the Mahometans, and by the most distinguished men of the country."

The Jews were accused by the pagans of worshipping the head of an ass; but from this calumny they have been thus vindicated by M. Schumacher.

"Apion, the grammarian, seems to be the author of this slander. He affirmed that the Jews kept the head of an ass in the Sanctuary; that it was discovered there when Antiochus Epiphanes took the Temple and entered into the most holy place. He added that one Zabidus, having secretly got into the Temple, carried off the ass's head, and conveyed it to Dora. Suidas says, that Damocritus or Democritus, the historian, averred that the Jews adored the head of an ass, made of gold. Plutarch and Tacitus were imposed upon by this calumny. They believed that the Hebrews adored an ass out of gratitude for the discovery of a fountain by one of these creatures in the wilderness, at a time when the army of their nation was parched with thirst and extremely fatigued. Numerous conjectures have been offered in explanation of the origin of this accusation, but their explanations, though ingenious, are not solid. M. Le Moine says, that in all probability, the golden urn, containing the manna, which was preserved in the Sanctuary, was taken for the head of an ass; and that the word *omer* of manna might have been confounded with the Hebrew word *hhamor*, which signifies an ass. Another suggestion has been offered, that as the Jews worshipped Jehovah under the name of 'O ων, *I am that I am*, (Exod. 3. 14,) their enemies might have changed this into *o ovos*, an ass."

ASS, WILD, ערוד *orad*. This animal, mentioned in the Book of Job, and by the prophets Jeremiah and Hosea, is a much handsomer and more dignified animal than the common ass. Martial gives the epithet "handsome," to the wild ass, ("Pulcher est onager," lib. xiii. Epig. 100,) and Oppian describes it as "handsome, large, vigorous, of stately gait, and his coat of a silvery colour, having a black band along the spine of his back; and on his flanks patches as white as snow;" but in a figure given by Sir Robert Ker Porter, the colour is a bright bay.

The wild ass was termed onager by the Greeks, and was sometimes employed in war, as appears from a passage in Herodotus, where that writer says, "The Indian

horse were well-armed like their foot: but beside led horses, they had chariots of war drawn by horses and wild asses."

The Wild Ass.

The chase of this animal is thus described by Xenophon, in detailing the march of Cyrus through the Arabian desert: "Of wild creatures, the most numerous were wild asses, and not a few ostriches, besides bustards and roe-deer, which our horsemen sometimes chased. The asses, when they were pursued, having gained ground of the horses, stood still, (for they exceeded them much in speed,) and when these came up with them, they did the same thing again; so that our horsemen could take them by no other means but by dividing themselves into relays, and succeeding one another in the chase. The flesh of those that were taken was like that of red deer, but more tender."

Mr. Morier says, "We gave chase to two wild asses, which had so much the advantage of speed of our horses, that when they had got at some distance, they stood still and looked behind at us, snorting with their noses in the air as if in contempt of our endeavours to catch them." Sir Robert Ker Porter, in his *Travels in Persia*, also describes the wild ass, and informs us that the mode of hunting it is the same as it was in the days of Xenophon.

ASS OF BALAAM. See BALAAM.

ASS'S HEAD. It is stated in the second Book of Kings, 6. 25, that "there was a great famine in Samaria: and, behold, they besieged it, until an ass's head was sold for fourscore pieces of silver." This price, if shekels be allowed in the estimate according to the Targum, would be equivalent to nearly ten pounds of our money.

Much ingenious speculation has been advanced to prove that the corn measure called *homer*, and not the head of an ass, *hhamor*, is here intended. But there are many difficulties in such an interpretation, for what necessity could there be for reference to the head of a corn measure? The unclean character of the animal could be no objection, when parents were reduced to such dreadful extremities as to eat their own children. (2Kings 6. 26-29.)

ASSARON, or properly **אמר** **OMER**, a measure used for dry articles. (Exod. 16. 16; 18. 36.) This was the portion of manna assigned to each individual in the wilderness for his daily food.

Josephus calls the measure issaron; and Jahn says it corresponded to the *χοινιξ* of the Greeks, and held five pints and one tenth English corn measure. See **OMER**.

ASSEMBLY, *ἐκκλησία*, a term used in the New Testament to denote a convocation or congregation of persons legally called out or summoned. (Acts 19. 39.)

Asia Minor, in the time of the Apostles, was divided into several districts, each of which had its own legal

assembly. Some of these are referred to by Cicero, and others by Pliny, particularly the one at Ephesus. The regular periods of such assemblies, it appears, were three or four times a month; although they were convoked extraordinarily for the dispatch of any urgent business.

In the Jewish sense, the word implies a congregation, or an assembly of the people; (Matt. 18. 17;) and in the Christian sense, an assembly of Christians; (1Cor. 11. 18;) hence a church, the Christian church, and is used of any particular church, as that at Jerusalem, (Acts 8. 1,) and Antioch. (Acts 11. 26.)

ASSEMON. See AZMON.

ASSIDEANS, by some writers termed Chasideans, from *חסידים* *chasidim*, "merciful, pious," were a kind of religious society among the Jews, whose chief and distinguishing character it was to maintain the honour of the Temple, and observe punctually the traditions of the elders. They therefore not only paid the usual tribute for the maintenance of the house of God, but charged themselves with extraordinary expenses on that account; for, on every day except that of the great expiation, in addition to the daily oblation, they sacrificed a lamb, which was called the sin-offering of the Assideans. They practised great austerities, and their common oath was, "By the Temple;" for which our Saviour reproves the Pharisees, who had sprung from them, and had adopted that oath. (Matt. 23. 16.)

The Assideans are represented as being numerous, and distinguished for their valour, as well as zeal for the law. (1Macc. 2. 42.) A company of them resorted to Mattathias to fight for the law of God and the liberties of their country. This sect arose either during the captivity, or soon after the restoration of the Jews; and were, probably, in the commencement, a truly pious part of the nation; they at length became superstitious. Watson.

ASSOS, a sea-port town in Asia Minor, situated on a bay of the Ægean Sea, south of Troas, and near the isle of Lesbos. Strabo describes it as well fortified both by nature and art. St. Luke went by sea from Troas to Assos; but St. Paul went by land thither, and meeting at Assos, they went together to Mitylene. (Acts 20. 13, 14.) It occupied a commanding situation, being built on a hill. A theatre, and the remains of several temples and other edifices, still attest its ancient splendour. Cramer's *Asia Minor*.

ASSUMPTION. A festival of the Romish church in honour of the pretended miraculous ascent of the Virgin Mary into heaven. It was established in the seventh century, and is celebrated on the 15th of August. The Greek church also keep this festival on the same day.

There were two apocryphal books, which were received by some of the early heretics, entitled the Assumption of Moses, and the Assumption of the Virgin.

ASSYRIA, *אַשּׁוּר* an ancient kingdom or empire of Asia, which derived its name from Assur or Ashur, the second son of Shem, (Gen. 10. 22,) or from a tribe designated after him.

2. The kingdom and the empire of Assyria had widely different limits, and from the want of a proper distinction between them great confusion has arisen. Strabo and other geographers include under the name of Assyria or Aturia, all the Asiatic countries south of Taurus, except Ariana or Persia, Arabia Proper, and Palestine; while, on the other hand, Ptolemy describes

Assyria as being bounded on the north by part of Armenia from Mount Niphates to Lake Van, on the west by the Tigris, on the south by Susiana, and on the east by part of Media and the mountains Choatras and Zagros; and Rosenmüller states that it nearly corresponded with the modern Koordistan. The first, probably, is a correct view of the great Assyrian empire under Nebuchadnezzar; the second may represent the kingdom founded by Asshur or Nimrod.

The generally received account of the origin of the Assyrian empire, founded on the text of the Mosaic narrative, (Gen. 10. 11,) is, that Asshur or Assur, the second son of Shem, driven out by the tyranny of Nimrod, the son of Cush, from the land of Shinar, migrated from that region with a body of adventurers, to the country to which he gave his name, and founded Nineveh, not long after Nimrod had established the Chaldean monarchy at Babylon, and fixed his residence in that city.

Bochart adopts, however, the marginal translation of Gen. 10. 11, which implies that Nimrod invaded and conquered the new monarchy of Assyria, and built the city of Nineveh, which he called after his son Ninus. This view is supported by the Targums of Onkelos and Jerusalem, Theophilus of Antioch, and Jerome, among the ancients; the writers of the *Universal History*, Hyde, Marsham, Wells, Lowth, and Faber, among the moderns: the converse being supported by Michaëlis and Bryant. It is, however, of little importance, whether Asshur or Nimrod founded Nineveh; for it is evident that the former gave his name to the country, and it appears probable that Ninus united the kingdoms of Assyria and Babylon.

3. The chronology of the Assyrian empire is at least as doubtful as its boundaries, and many learned men have endeavoured in vain to reconcile the loose and probably fabulous histories of Ctesias and Berosus with the Sacred Narrative. Dr. Prideaux, Stackhouse, and others attribute high antiquity to the empire, while Sir Isaac Newton conceives that it arose only in the days of Pul. Probably this question, like the former, is in reality one of time only, and the two statements may be reconciled by the supposition that the kingdom of Asshur or Nimrod, although not mentioned in Scripture for twelve hundred years, subsisted during that time, and that Pul, who first pushed the arms of Assyria beyond the Euphrates, and thus brought them in contact with the Jews, was in reality the founder of the empire in its extended sense.

This latter view seems to derive considerable support from Scripture, where we read that, during the reign of Jeroboam, nearly twenty years before the reign of Pul, the Lord instructed the prophet Amos to threaten Israel that He would "raise up against them a nation," which would afflict them "from the entering in of Hamath unto the river of the wilderness," (Amos 6. 14,) Hamath being the northern border of their country, and the "river," or valley, as it is in the margin, being the same with the "river of Egypt," the boundary of Judæa on the south. (Gen. 15. 18.) Events have proved that the Assyrians were the nation which God was to raise up, and as Pul reigned immediately after this prophecy of Amos, Sir Isaac Newton alleges that he may be justly reckoned the first conqueror and founder of the empire; and agreeably to this view he understands the words in Nehem. 9. 32, "since the time of the kings of Assyria," to mean, since the time of Pul, observing, "Pul and his successors afflicted Israel, and conquered the nations round about them, and upon the ruin of many small and ancient kingdoms, erected their empire, conquering the Medes as well as other nations."

The comparatively recent date of the Assyrian empire

is also ably supported by the Rev. Charles Crosthwaite, who, in his recently published *Synchronology*, asserts that Belus and Ninus, its first two monarchs according to profane history, were kings of Lydia, by whom Assyria was wrested from the Egyptians in the ninth century before the Christian era.

The satisfactory identification of such of the Assyrian monarchs as are mentioned in Scripture, is perhaps hopeless, as no two writers are agreed upon the names, the length of reign, or the order of succession of those recorded in profane history; but in the following summary we shall give the views entertained by the usually received authorities.

4. The commencement of the reign of Ninus is fixed by Archbishop Usher to B.C. 1267, and he reigned, according to Diodorus Siculus, seventeen years, but according to others, 122 years. He was succeeded by his queen Semiramis, who reigned forty-two years. She enlarged the empire, which she left in a flourishing state to her son Ninyas, A.M. 2831, B.C. 1173.

The Scriptures are totally silent concerning the subsequent history of this celebrated monarchy, and the successors of Ninyas, until the time of the prophet Jonah, B.C. 825, and even then it is not stated who was the monarch that filled the Assyrian throne. It is evident, however, that Nineveh was at that time a city of immense extent. Upon this point, which may be supposed to militate against his theory, Mr. Crosthwaite remarks: "It may be asked, upon the supposition that the Assyrian greatness began about 840 to 860 years before the Christian era, how Nineveh could be so great and extensive in the time of Jonah? The answer is to be found in the state of society, and the nature of an Eastern government. A monarch like Belus, or Ninus, or Nebuchadnezzar, or Sesostris, returned from the conquest of several kingdoms, with a mountain of spoil and a host of captives, was not long in erecting a city of whatever size he pleased, on a navigable river, to facilitate the carriage of materials from places however distant."

5. About fifty years after the time of Jonah, the Scriptures mention a king of Assyria, named Phul or Pul, who is supposed by Dr. Prideaux to have been the father of Sardanapalus. He greatly enlarged the boundaries of his kingdom, which existed from his time until the Babylonians and Medes destroyed Nineveh.

Some writers assert that Pul conquered Babylon, the sovereignty of which he gave to his youngest son Nabonassar, while his eldest son, Tiglath-pileser, succeeded him in his kingdom of Assyria. Dr. Prideaux asserts that Arbaces, governor of Media, under Sardanapalus, the last of the ancient Assyrian kings, is the Tiglath-pileser of Scripture; and that Belesis, the viceroy of Babylon at that period, is the same with Nabonassar, who is called in Scripture, Baladan, (Isai. 39. 1,) being the father of Merodach, who sent an embassy to King Hezekiah, to congratulate him on his recovery from his sickness.

7. The empire of Tiglath-pileser, the successor of Pul, (2Kings 15. 29; 16. 7-9; 2Chron. 28. 20,) appears to have been the ruling power in the East about B.C. 750. Ahaz, king of Judah, sent to request his assistance against Rezin, king of Damascus, and Pekah, king of Israel. Accordingly, Tiglath-pileser advanced with a numerous army, defeated Rezin, captured Damascus, and put an end to the kingdom erected there by the Syrians, thus fulfilling the predictions of Isaiah (8. 4,) and Amos (1. 5.) He also entered the kingdom of Israel, conquered Pekah, and carried away part of the ten tribes beyond the river Euphrates. But Ahaz had soon cause to regret this unhallowed alliance; for Tiglath-pileser exacted from him such immense sums of money, that he was obliged

not only to exhaust his own treasures, but also to take all the gold and silver out of the Temple. (2Chron. 28. 20,21,24.) Ahaz at length became tributary to the Assyrian monarch, whose successors found abundance of pretexts for entering the kingdom of Judah, which they ultimately subverted.

6. In the midst of his career of victory Tiglath-pileser died, and was succeeded by his son Shalmaneser or Salmanassar, who, according to Stackhouse, is the monarch called Enemessar in the apocryphal book of Tobit, 1. 2. This prince prosecuted the conquests which his father had begun; he invaded the kingdom of Israel in the reign of Hoshea, the successor of Pekah, about the year B.C. 729, and imposed an annual tribute upon Hoshea, who, "became his servant," (2Kings 17. 3,) and he next desolated the country of the Moabites, as foretold by Isaiah. (16. 1.) Hoshea, after a while, withheld his tribute, and applied to Egypt for assistance, upon which Shalmaneser attacked and reduced Samaria. Hoshea was taken captive, loaded with chains, and thrown into prison; the inhabitants of the city, as also the seven tribes west of the Jordan, were carried into Media, whither his predecessor Tiglath-pileser had previously transferred the tribes east of Jordan; and thus, in the course of nineteen years, were those prophecies uttered by Amos and other prophets literally fulfilled, and the captivity of the revolted ten tribes completed.

Shalmaneser after subduing the king of Israel overran all Syria and Phœnicia, and many cities in the latter country belonging to the Tyrians submitted to his authority, and claimed his protection. He next engaged in a war with the king of Tyre, whom the ancient historians call Eluleus, and besieged the city of Tyre. The siege continued five years, during which the inhabitants were reduced to the greatest extremities, particularly from the want of water; and they were only at last relieved by the death of Shalmaneser.

7. Sennacherib, called Sargon by Isaiah, ascended the throne of Assyria, A.M. 3287, B.C. 717, and was immediately involved in war both in Asia and in Egypt. While he was thus engaged, Hezekiah shook off the yoke of the Assyrians, and refused any longer to pay the tribute which his father Ahaz had agreed to do. Sennacherib immediately invaded Judæa with a mighty army, and captured the principal cities, when Hezekiah gave him three hundred talents of silver and thirty talents of gold, to induce him to withdraw. The Assyrian monarch accepted the money, but refused to grant peace, being resolved to subvert the kingdom of Judah, as soon as he had overcome the Egyptians, who were advancing to succour Hezekiah. Isaiah, however, encouraged the king by promises of Divine interposition and deliverance, and announced that the enemy would soon be obliged to return into his own country. (2Kings 19. 20,34.) Accordingly, when Sennacherib, after having defeated the allied forces of the king of Egypt, and of Tirhakah, king of Ethiopia, had returned into Judæa and renewed the siege of Jerusalem, the Divine vengeance overtook him. "The angel of the Lord went out and smote in the camp of the Assyrians, one hundred four-score and five thousand (185,000); and when they arose, (that is, those who survived this dreadful mortality, for they were not *all* slain, a small number being preserved, among whom was Sennacherib himself,) early in the morning, behold, they were all dead corpses." (2Kings 19. 35.) Sennacherib returned to Nineveh with the wreck of his army, where two of his sons, Adrammelech and Sherezer or Seraser, assassinated him in the temple of Nisroch. (2Kings 19. 37.)

8. Esar-haddon, his third son, who succeeded him in the kingdom of Assyria, B.C. 710, is called by various

writers, Asseraddon, Asordan, Assaraddon, or Sarchedon. He ravaged the territories of the captive Ten Tribes and the kingdom of Syria, and transplanted the remainder of the Israelites into Assyria, and then marched against Judah, now governed by Manasseh, the son of Hezekiah, whom he sent in chains to Babylon. He died after a reign, it is alleged, of thirty-nine years, and was succeeded by his son Saosduchinus, who was moved by God to restore Manasseh to his kingdom, that prince having, while at Babylon, bitterly repented of his imprudence and idolatry. (2Chron. 33. 12,13.) After a reign of twenty years, according to Ptolemy, he died, B.C. 648, and was succeeded by his son Chyniladon, also called Saracus.

9. The Nabuchodonosor mentioned in the apocryphal Book of Judith, as "reigning in Nineveh the great city," (1. 15,) is by some writers supposed to be Saosduchinus, but Sir Isaac Newton believes him to have been Chyniladon, in whose time the Ninevite empire was overthrown; and to account for his conduct at various periods, he supposes him to have been an active conqueror in the early part of his life and afterwards to have sunk into sloth and inactivity.

Following up the successes of his predecessors, Chyniladon reduced many of the cities in Media, and levelled Ecbatana with the ground, after which he returned in triumph to Nineveh. No sooner were the rejoicings for this victory ended, than he resolved to punish the nations of "the west country" who had refused to assist him in his war against the Medes; and for that purpose sent Holofernes, the general of his army, to destroy by fire and sword all that should oppose him, whilst those that submitted were to be made captives. The command was executed with cruelty, and the march of Holofernes was marked by desolation and blood. The brave inhabitants of Bethulia first dared to oppose his progress. Fired with indignation, he invested the city, cut off the supply of water, and reduced the place to the utmost distress. The beauty and the intrepidity of Judith, if we may give credit to the book which bears her name, saved her city and country from impending destruction. Approaching the hostile camp, she ingratiated herself into the affections of Holofernes; and in the dead of the night, when her watchful eye observed him buried in sleep and overcome by wine, severed his head from his body with his own sword, and escaped to her friends. The death of the leader struck the army with consternation, and in their sudden flight they lost their baggage, and were pursued with great slaughter.

Chyniladon appears not long to have survived the destruction of his army, for having rendered himself obnoxious to his subjects by his effeminacy, and the little care he took of his dominions, Nabopolassar, satrap of Babylon, and Cyaxares, the son of Astyages, king of Media, leagued together against him. He was besieged in Nineveh, and his dominions were partitioned amongst his enemies; Nabopolassar becoming master of Nineveh and Babylon, and Cyaxares obtaining Media and the adjacent provinces.

The predictions of the prophets Isaiah, Nahum, and Zephaniah, were thus fulfilled, and the Assyrian kingdom was subverted. With the fall of Nineveh commenced the successes of Nebuchadnezzar and Cyaxares, who laid the foundations of the collateral empires of the Babylonians and Medes, previously included in the Assyrian. Sir Isaac Newton refers the destruction of Nineveh and the fall of the Assyrian empire, to about the third year of Jehoiakim, king of Judah, B.C. 607.

10. The empire of Assyria being thus subverted, the province from which it had derived its name has since in succession formed a part of the Persian empire, the

empire of Alexander, the Grecian kingdom of Syria, has been often the battle-field of the Romans and Parthians, the Greeks and the Sassanides, and now, under the name of Kourdistan, belongs to the modern kingdom of Persia, and is remarkable for little except the robberies of the Kurds, who have infested its mountainous parts for centuries. These tribes pursue a nomade life and the rearing of cattle, of which there are vast flocks, the owners living in tents like the Arabs. There are a few towns and villages, but the houses are dispersed at some distance from each other.

Mr. Ainsworth, in his recent *Researches in Babylonia, Assyria, and Chaldaea*, speaking of its physical features, says, "Assyria including Taurus is distinguished by its structure, its configuration, and its natural productions, into three zones or districts. By structure, into a district of plutonic or metamorphic rocks; a district of sedimentary formations, and a district of alluvial deposits. By configuration, into a district of mountains, a district of stony or sandy plains, and a district of low watery plains. By natural productions, into a country of forests and fruit-trees, of olives, wine, corn, and pasturage, or of barren rocks; a country of mulberry, cotton, maize, sesame, tobacco, or of hardy labiate and composite plants, or barren clay, sand, pebbly or rocky plains; and into a country of date trees, rice and pasturage, or a land of saline plants, liquorice, reeds, sedges, and rushes."

19. Of the government, laws, religion, learning, customs, &c., of the ancient Assyrians, nothing absolutely certain is recorded, but we learn from Strabo, that the people were distributed into a certain number of tribes whose occupations or professions were hereditary; and that they had several distinct councils and tribunals for the regulation of public affairs.

In the earliest ages of Christianity there were some Christians in Assyria, but none are known in modern times. Assyria is the subject of a prophecy by Isaiah, (19: 23,24,25,) which some writers consider as yet to be fulfilled. Usher; Prideaux; Rollin; Calmet; Horne.

ASTAROTH, ASTARTE. See ASHTAROTH.

ASTROLOGY, ASTRONOMY. "Astronomy," says an able writer of the present day, "considered as a science, was only in its infancy among the ancients. The stupendously sublime principles by which the heavenly bodies are moved and regulated in such exquisite harmony, were utterly unknown to them; for they were ignorant of the most simple fact belonging to the science, the diurnal motion of the earth on its own axis." But although thus ignorant of the theory, their practical knowledge of astronomy, the mere result of constant and diligent observation, was by no means contemptible or inefficient. It was an inestimable addition to their security at sea, and contributed many advantages on land, before the introduction of calendars and other regular tables; and we also find that an attempt was made, at a very early period, to regulate the year by the annual revolution of the sun, in the fact that the Jewish months consisted of thirty days each. (Gen. 7. 11; 8. 4.)

2. The great longevity of the Antediluvian patriarchs was doubtless exceedingly favourable to astronomical observations and discoveries; and Josephus goes so far as to say that "God afforded them a longer time of life on account of their virtue, and the good use they made of it in astronomical and geometrical discoveries, which would not have afforded the time of foretelling the periods of the stars, unless they had lived six hundred years; for the great year is completed in that interval." On this passage, a writer observes, "By this

remarkable expression is probably meant the period in which the sun and moon came again into the same situation in which they were at the beginning of it, with regard to the nodes, apogee of the moon, &c."

"This period," says Cassini, "of which we find no intimation in any monument of any other nation, is the finest period that ever was invented; for it brings out the solar year more exactly than that of Hipparchus and Ptolemy, and the lunar months within about one minute of what is determined by modern astronomers. If the Antediluvians had such a period of six hundred years, they must have known the motions of the sun and moon more exactly than their descendants knew them for many ages after the flood."

Josephus also mentions pillars with astronomical inscriptions existing in his time, which, he says, were the work of the Antediluvians; a notion that hardly deserves a serious refutation; they might, however, be some of those set up by Sesostris to mark his Indian expedition, or, as Montucla conjectures, erected by the Chaldaean priests in an early age.

3. Astronomy is connected with the earliest departure of men from the worship of the true God. In their painful wanderings after the Dispersion, men were forcibly struck by the beauty, the splendour of the heavenly bodies, the harmony of their movements, the influence which they had on universal nature, and above all by the benefit which their light conferred on them in their journeyings from the plains of Shinar to their distant abodes, and paying to the creature the homage they owed to the Creator, they soon fell into the first and most widely-spread form of idolatry, called originally Sabaism, or the worship of the planetary system, to the existence of which all antiquity testifies. In the Book of Job we have allusions to the prevalence of this worship. (31. 26,27,28.)

4. As to the astronomical knowledge of the Jews, the Scriptures are silent, except that some of the constellations are mentioned in the Book of Job, (9. 9; 38. 31,32,) for we are not informed that our great progenitor received any scientific information from the Almighty. See CONSTELLATION; STAR.

5. It was a happy circumstance for the ancients that, with regard to the phenomena of the sun and fixed stars, the practical application was not at all affected by the gross fundamental error under which their theory laboured. As the diameter of the earth's orbit is a quantity comparatively evanescent, in regard to our distance from the fixed stars, the celestial sphere, and every thing connected with it, bears to us precisely the same appearances and notions, whether the earth be considered as the permanent centre of the universe, and all the heavenly bodies making their daily circuit round us, or if we consider the earth as a little planet whose revolutions cause the same changes of phenomena to its inhabitants.

With respect to the planets and comets the case was far otherwise. A system so opposite to truth involved these bodies and their motions in great and unaccountable confusion. They considered them as *Astra errantia*, *πλανηται*, wanderers, whose irregular motions and changing aspects were beyond the reach of philosophical inquiry, but had a fearful influence upon the destinies of nations and individuals.

The shipmasters, the shepherds, the philosophers, and the priests, were all, in their own various ways, practical astronomers; and this last class, by the addition of judicial astrology, contrived to make the heavenly bodies efficient auxiliaries, both as to power and emolument. The invention of asterisms, or constellations, those mnemonics of the sky, was an important advantage to

T

the ancients in their astronomical practice, for it enabled them to teach it to their children, and even to render it an amusement in the refreshing coolness of the night. To the pilot, this knowledge was of vital importance before the discovery of the magnetic needle. It was not only in the clear and cloudless night that his astronomical skill availed him in shaping his course with more or less certainty; if he could only discern a part of a constellation, or a single well-known star, if not too near the zenith, he could tell in what quarter it lay at that time of night, and of course the azimuth of his situation.

7. Landseer, in his *Sabean Researches*, remarks "that the ancients determined the seasons by the rising and setting of certain constellations. Before the colure of the vernal equinox passed into the Ram, and after it had quitted Aldebaran and the Hyades, the Pleiades were for about seven or eight centuries, or perhaps longer, esteemed to be the leading stars of the Sabean year. It is not meant that the vernal colure continued to pass exactly through this cluster of stars for the above space of time, but that there were no other stars of the zodiac between the Hyades and the first degree of Aries, sufficiently near to supersede them by becoming an astronomical mark."

8. Whether the Egyptians or Chaldeans were the originators of astronomy, or astrology, is a question into which we need not enter. The nature and circumstances of both countries would lead a civilized people to turn their attention both to geometry and astronomy. Moses informs us that there were, in his time, magicians or enchanters in Egypt, (Exod. 7. 11,) who are denominated מְכַשְׁפִּים *mekashphim*, "because," says Professor Jahn, "they computed eclipses of the sun and moon, and pretended to the people that they produced them by the efficacy of their own enchantments." "It is by no means surprising," continues the same writer, "that the Hebrews did not devote greater attention to astronomy, since the study of astrology was intimately connected with it, and very highly estimated among the neighbouring nations. This, however, was interdicted to the Hebrews, as we learn from Deut. 18. 10. Daniel, indeed, studied the art of astrology at Babylon, but he did not practise it. (Dan. 1. 20; 2. 2.) They divided the heavens into apartments or habitations; to each one of these apartments they assigned a ruler or president."

9. It is evident that the astrological arts were practised by the Egyptians and Chaldeans in very early times. In this respect the present race of Orientals do not yield to their ancestors, there being scarcely any contingency or circumstance of life concerning which astrologers, or astrological tables, are not consulted.

Cicero says that "the Chaldeans inhabiting vast plains, whence they had a full view of the heavens on every side, were the first to observe the course of the stars, and the first who taught mankind the effects which were thought to be owing to them. Of their observations they made a science, whereby they pretended to be able to foretell to every one what was to befall him, and what fate was ordained him from his birth."

Diodorus Siculus mentions the Chaldeans, as so called by the Babylonians themselves, and intimates the distinction by describing them as "the more ancient Babylonians." They appear to have formed the learned caste, occupying the same station as the priests did in Egypt. They were greatly given to divination, the foretelling of future events, and the interpretation of dreams. They were of opinion that all things were ordained by a Divine Providence, and that the motions of the heavenly bodies were not performed by chance or of their own

accord, but by the determined will and appointment of the gods. From long and continued observations of the stars, they professed to foretell things that should come to pass. The sun, moon, and planets, they called Interpreters, as being principally concerned in making known to man the will of the gods; their rising, setting, colour, &c., were held to presage hurricanes, tempestuous rains, droughts, earthquakes, and all other circumstances which were thought to forebode good or evil, not only to nations in general, but to kings and private persons in particular. The planets, in their courses through the twelve signs, into which they divided the visible heavens, were considered to have a great influence, either good or bad, on men's nativities, so that, from a consideration of their several natures and respective positions, it might be foretold what should befall people in after-life. Diodorus adds, "As they foretold things to come to other kings formerly, so they did to Alexander, who conquered Darius, and to his successors Antigonus and Seleucus Nicator; and accordingly things fell out as they declared. They also tell private men their fortunes so certainly, that those who have found the thing true by experience, have esteemed it a miracle, and beyond the art of man to perform. This we may justly and truly say, that the Chaldeans excel all men in astrology, having studied it more than any other art or science. But the number of years during which the Chaldeans allege that their predecessors have been devoted to the study, is incredible; for when Alexander was in Asia, they reckoned up four hundred and seventy thousand years, since they first began to observe the motions of the stars."

10. Cicero also ridicules this pretension, though there can be no doubt that they did make and record astronomical observations from very ancient times, since Callisthenes, the philosopher who accompanied Alexander, found at Babylon such observations, extending backwards for 1903 years. The above extravagant statement will be within this account, if we understand that the number (as corrected) of 473,040, was, as Dr. Hales concludes, produced by the multiplication of two factors, the square of the Chaldean Saros, (a period of lunar inequalities) $18 \times 18 = 324$, and the Nabonassar or Sothiacal period of 1460 years. Whether the statement of the result as "years" arose from a misconception or from an intention to deceive is not very clear; but it does appear that the later Chaldeans were in the habit of turning days into years to give themselves an antiquity commensurate with their belief that the world had no beginning.

11. Among the rude and simple observations made by those who first cultivated the science of astronomy, the heliacal rising of the stars held a very principal rank. A phenomenon of so much practical utility in its daily application to the affairs of life, of which they could make so much use in marking the seasons of the year, and regulating their public observances, and at the same time one which required a degree of accuracy so very moderate, either in the instrument or in the observer, was well suited to the infancy of astronomy. To ascertain on what day a certain star rose heliacally, was all that was required; for this purpose, the observation ought to be accurate within about one degree of space; and, moreover, the operation could be checked and corrected by the observation of one, two, or three other nights.

With this view of the subject, we need not be surprised at finding the frequent reference to heliacal risings in the earlier periods of the history of astronomy. Newton, for the purpose of confirming the testimony of Herodotus, as to the time when Hesiod flourished, gives the result of a calculation based on the rising of Arc-

turns at sunset, as observed in Hesiod's time, sixty days after the winter solstice, which Newton therefore dates about one hundred years after the death of Solomon, or B.C. 875. Against all this some respectable modern commentators object that the ancient notices of the heliacal rising of stars are of no sort of value, on account of the great refraction of light near the horizon in those countries.

If this specious objection was supported either by the modern improvements in astronomy or by authentic historical facts, it would well deserve our serious attention; but the very reverse is the case, even in the circumstance selected for animadversion. The broad fact is that the ancients were enabled by some means or other, whether simple or complex, to ascertain the heliacal rising, with a degree of accuracy abundantly sufficient for their own purposes; and the most accurate modern observations prove that the refraction could not be an obstacle. Hesiod testifies that the large bright star Arcturus rose heliacally sixty days before the winter solstice in his time; and Newton found by retrospective calculation, that this was the case at the time assigned to Hesiod by the most authentic history. We need not therefore seek better evidence of any fact, and seldom indeed find any fact so well authenticated.

12. The Pleiades are well known to be a cluster of stars in the constellation Taurus, and Dr. Hales has given us an example of the application of astronomy to biblical chronology in two calculations made to ascertain the era of that patriarch. The first was made by M. Descoutant, a French mathematician in 1765. This writer followed the LXX. and other versions in making *Chimah*, signify the Pleiades, and he calculates Job to have lived B.C. 2136.

Dr. Hales gives another calculation for the same purpose, made upon an hypothesis of his own, that *Chimah* means Taurus, or rather Aldebaran, the principal star in that constellation; the calculation made from these premises by Dr. Brinkley, the late bishop of Cloyne, makes the date of Job B.C. 2337, a result which seems much in favour of the long system of biblical chronology.

See Crosthwaite's *Synchronology*, to which learned and accurate work we are chiefly indebted for the substance of this article.

I. ASTYAGES, otherwise called Cyaxares, king of the Medes, and successor of Phraortes, reigned forty years, and died A.M. 3409. He had a son called Astyages or Darius, mentioned in the Book of Daniel; and two daughters, Mandane and Amyit; the latter married Nebuchadnezzar, son of Nabopolassar, king of Chaldæa, and was mother of Evil-Merodach. Mandane married Cambyzes the Persian, and was the mother of Cyrus.

II. Astyages, son of the above, otherwise Ahasuerus, (Dan. 9. 1,) or Artaxerxes, (Dan. 6. 1,) or Darius the Mede, (Dan. 5. 31,) or Cyaxares, was by his father appointed governor of Media, and sent with Nabopolassar, king of Babylon, against Sarac, king of Assyria. Astyages was with Cyrus at the conquest of Babylon, and succeeded Belshazzar, king of Babylon. (Dan. 5. 30, 31.) Calmet.

ASYLUM, or, as in the Hebrew, *ערי המקלט*, "cities of refuge." (Josh. 20. 2.) Six cities of refuge, equally distributed over the land, were appointed "that the slayer that had killed any person unawares and unwittingly, might flee thither" from the *goel*, or avenger of blood.

The roads to the cities of refuge were kept in constant repair, and directions were placed where an intersection

of ways took place, and the Mishna informs us that two or three elders were appointed to be on the watch for the *goel* to dissuade him from his pursuit, until the case could be investigated. Besides these cities, the altar of burnt-offering and the Temple of Jerusalem were sanctuaries, but not for wilful murderers, (Exod. 21. 14,) and we see that when Joab took refuge there and refused to quit the altar, he was slain on the spot.

The practice of sanctuary has prevailed among most heathen nations, as we read of it among the early Persians, the Arabians, the Greeks, and the Romans. In the early ages, the Christian churches and altars also possessed the privilege of asylum. The custom was not introduced into the Church before the time of Constantine, and it was first regulated by law under the emperors Theodosius the Great, Arcadius, Honorius, Theodosius the Younger, and Justinian. The multiplication of these privileged places soon became exceedingly inconvenient, being found to present a serious impediment to the administration of justice; and hence it was found necessary from time to time to circumscribe the ecclesiastical right of sanctuary by various restrictions and limitations.

The evils of the practice at length became so enormous that even popes and councils were obliged to set limits to the privileges thus claimed. Since the sixteenth century the right of asylum has been gradually abolished, and even in Roman Catholic countries it has become extinct, or at least very extensively reformed. Wait's *Jewish and Oriental Antiq.*; Riddle's *Christ. Antiq.* See AVENGER OF BLOOD; CITIES OF REFUGE.

ASYNCRITUS, a person mentioned in Rom. 16. 14. The Greeks say that he was bishop of Hyrcania, and observe a festival in his honour on April 8. Calmet.

ATAD, THRESHING-FLOOR OF, the name of a place where the sons of Jacob and the Egyptians who accompanied them mourned for Jacob, which was called after that event Abel-Mizraim, or the mourning of the Egyptians. (Gen. 50. 11.) St. Jerome says that this place was situated between the river Jordan and Jericho, two miles from the river, and three from the city. Dr. Wells places it on the west of the Jordan, and not far from Hebron, and says that it is uncertain whether Atad is the name of a place or of a man.

A modern writer observes, "After the Egyptians had passed the Jordan, and had marched three miles beyond it, into the plain of Jericho, they came to the large open threshing-ground of Atad, which being level, and enclosed by a low wall, offered a convenient situation for a halt, and for the commencement of those funeral solemnities which they had made so long a journey to celebrate." See ABEL-MIZRAIM.

I. ATAROTH, *עטרוח* a city in the tribe of Gad. (Numb. 32. 34.)

II. Another in the tribe of Ephraim, (Josh. 16. 7,) also called Addar. (16. 5; 18. 13.)

III. Another in the tribe of Judah. (1Chron. 2. 54.)

ATHACH, a city of Judah, one of those to which David sent a portion of the spoil taken from the Amalekites. (1Sam. 30. 30.)

ATHALIAH, the daughter of Omri, king of Samaria, was wife to Jehoram, king of Judah. Jehu having slain her son, Ahaziah, she seized the kingdom and destroyed all the sons of Jehoram, (whom he had by other wives,) except Jehoash, who was providentially saved by his father's sister, Jehosheba. Athaliah was slain after an usurpation of six years, and Jehoash

succeeded to the throne. Her history is given in the eleventh chapter of the second Book of Kings, and is fearfully monitory.

ATHANASIAN CREED, a declaration of the catholic doctrine of the Trinity in Unity, commonly ascribed to St. Athanasius, the celebrated bishop of Alexandria, and directed by our Church to be read at stated seasons in her public services.

It is now generally agreed that the creed once ascribed to Athanasius, and which some even of our old divines believed to be his, is the production of some later writer. It is assigned for the most part to either the fifth or the sixth century; but it was not generally admitted into the offices of the Roman Church until the year 930. As a composition, therefore, this creed does not on any account claim a place in a list of ancient confessions; but as its presence in the Liturgy of our own Church makes this

creed an object of interest, it appears necessary to take some notice of it here; of course it must be understood in a purely historical or critical point of view. A confession of faith really composed by Athanasius is prefixed to the Benedictine edition of his works; and has been inserted by Dr. Routh at the end of his *Scriptorum Ecclesiasticorum Opuscula*.

The true author of this creed it is likely will always remain unknown. All that we can state concerning it amounts to this: that the creed is not the work of Athanasius, although published, and for a long time received under his name; but that it proceeded from the pen of some writer of the Western Church, who flourished probably about the fifth or sixth century, but whose name cannot now be ascertained. *Riddle's Christ. Antiq.*

ATHAR. See ETHER.

General View of Athens.

ATHENS, the capital of the ancient kingdom of Attica, renowned for the learning, eloquence, and science of its citizens, and also for having produced some of the most illustrious warriors of antiquity, but claiming a place here as one of the scenes of the labours of St. Paul. The city is situated on the west side of Attica, about five miles from the Gulf of Egina, in lat. $37^{\circ} 58' 1''$ N., long. $23^{\circ} 46' 14''$ E., and is built on the west-side of an abrupt and rocky eminence rising out of an extensive plain, terminated by Mounts Pentelicus and Parnes on the north, by Mount Anchesmus north-east, by Mount Hymettus on the east, by the Hill Museum on the south-west, and by Lycabettus on the west. According to the generally received accounts, Athens was founded by Cecrops about the year 1550 or 1556 before the Christian era, and was styled Cecropia. It afterwards received the name of Athens from Minerva, denominated by the Greeks *Αθηνη*, who was considered the tutelary goddess of the city.

2. In the early history of Greece, the kings and archons of Athens occupy a conspicuous place, but it was not till the time of Pericles that the city attained the summit of its splendour and prosperity, both with respect to the power of the republic, and the extent of the architectu-

ral decorations with which the city was adorned. Xenophon says, that in his time, Athens contained upwards of 10,000 houses which were for the most part small and mean, and according to Dicaearchus, it was to the public edifices alone that it owed its attractions. The inhabitants were comprised under three classes, citizens, sojourners, and slaves; of these the slaves greatly preponderated, though it is difficult to make any accurate computation of their numbers. Boeckh has estimated the population of the city and its parts at 180,000; and Colonel Leake, at 116,000. "All the finest products," says Xenophon, "of Sicily, of Italy, Cyprus, Lydia, Pontus, and the Peloponnesus, Athens, by her empire of the sea, is able to collect into one spot." The native products of Athens were also of great importance; they consisted chiefly of olives, figs, and honey, and have been celebrated in all ages. The wealth of the city was augmented by the silver mines of Laurion, and "those sumptuous edifices which constituted the pride of the Athenians, and the admiration of succeeding generations, owed their origin to the marble quarries of Pentelicus."

Thucydides informs us, that previously to the Peloponnesian war, the treasury contained 9,700 talents, besides a great quantity of gold and silver deposited in

the temples of the gods and in other public edifices. The city was defended by 1200 cavalry, 1600 bowmen, and 13,000 heavy-armed troops; 16,000 men were stationed in the fortifications, and the coast was guarded by 300 well-manned ships.

3. When Attica became at length only part of a Roman province, Athens still maintained its celebrity in the republic of letters, as the seat of learning, science, and philosophy; and thither all proceeded who were desirous to learn the true principles of eloquence, or who wished to estimate with accuracy the works of genius and art. Cicero repaired to Athens to benefit by the instructions of the great masters of oratory, and thither he sent his son to hear the lectures of Cratippus. Horace was also sent to Athens, and indeed every Roman of rank held an educational residence in the city to be indispensable. Plutarch informs us that in his time Greek learning was judged so necessary, that a Roman who did not understand that language never attained any degree of estimation.

4. The most striking object among the monuments of antiquity which still exist is the Acropolis, or Cecropian fortress, rising abruptly out of the Attic plain, and covered with relics of Athenian grandeur. At its west end, by which alone it was accessible, stood the Propylæa, the gate as well as the defence of the Acropolis. Through this gate the periodical processions of the Panathenaic jubilee were wont to move; and the marks of chariot-wheels are still visible on the stone floor of its entrance. It was of the Doric order, and its central pediment was supported by six fluted marble columns each five feet in diameter and twenty-nine in height. On the right wing stood the Temple of Victory, and on the left was a building decorated with paintings. In a part of the wall still remaining there are fragments of designs in basso relievo, representing the combat of the Athenians with the Amazons. Near the Propylæa stood the celebrated colossal statue of Minerva, executed by Phidias, after the battle of Marathon, the height of which, including the pedestal, was sixty feet.

The Parthenon or Temple of Minerva was of the Doric order, with 17 columns on the sides each six feet two inches in diameter and 34 feet in height, elevated on three steps. Its height from the base of the pediments was 65 feet, and the dimensions of the area 233 feet by

102. The eastern pediment was adorned by two groups of statues, one of which represented the birth of Minerva, the other, the contest of Minerva with Neptune for the government of Athens. On the metopes was sculptured the battle of the Centaurs with the Lapithæ; and the frieze contained a representation of the Panathenaic festivals.

Ictinus, Callicrates, and Carpion, were the architects of this temple; Phidias was the artist; and its entire cost has been estimated at one million and a half sterling. Of this building eight columns of the eastern front and several of the lateral colonnades are still standing. Of that portion which represented the contest of Neptune and Minerva, nothing remains but the head of a sea-horse and the figures of two women without heads. The combat of the Centaurs and the Lapithæ is in better preservation. Of the numerous statues with which this temple was enriched, that of Adrian alone remains. The Parthenon, notwithstanding its dilapidated condition, still retains an air of inexpressible grandeur and sublimity; it forms at once the highest point in Athens, and the centre of the Acropolis.

On the north-east side of the Parthenon stood the Erechtheum, a temple dedicated to the joint worship of Neptune and Minerva. There are still considerable remains of this building, particularly those beautiful female figures called Caryatides, which support, instead of columns, three of the porticos, as may be seen in the annexed engraving. The rest of the roof of this graceful portico fell during the siege of Athens in 1827. Such were some of the principal buildings of the Acropolis, the glory and the pride of art, and the wonder and the envy of the world.

5. In the city of Athens itself there yet remain some monuments of antiquity. Of these the principal are, three exquisite Corinthian columns crowned by architraves; the Temple of the Winds built by Cyrrhestes, of an octagonal figure, with a representation of the different winds on each of its sides; and the choragic monument of Lysicrates, called by the modern Greeks, the Lantern of Demosthenes. This building consists of a pedestal surrounded by a colonnade, and is surmounted by a dome of Corinthian architecture; it was long supposed to be the spot which Demosthenes used as his study, a supposition which has since been proved to be groundless.

Remains of the Temple of Minerva, at Athens.

6. Beneath the southern wall of the Acropolis, near its extremity, was situated the Athenian or Dionysiac theatre. Its seats, rising one above another, were cut out of the sloping rock; of these only the two highest rows are now visible, the rest being concealed by an accumulation of soil. Plato affirms that it was capable of containing thirty thousand persons. Statues of all the great tragic and comic poets were placed in it, the most conspicuous of which were those of Æschylus, Sophocles, and Euripides among the former, and those of Aristophanes and Menander among the latter. On the south-west side of the Acropolis is the site of the Odeium, or musical theatre of Herodes Atticus, named by him the Theatre of Regilla, in honour of his wife. On the north-east side of the Acropolis stood the Prytaneum, where those citizens who had rendered services to the state were maintained at the public expense. Extending southward from the site of the Prytaneum, ran the street to which Pausanias gave the name of Tripods, from its containing a number of small temples or edifices crowned with tripods, to commemorate the triumphs gained by the Choragi in the Theatre of Bacchus.

7. Opposite to the west end of the Acropolis is the Areopagus, or Hill of Mars, on the eastern extremity of which was situated the celebrated court of the Areopagus. This point is reached by means of sixteen stone steps cut in the rock, immediately above which is a bench of stone, forming three sides of a quadrangle, like a triclinium, generally supposed to have been the tribunal. The ruins of a small chapel, consecrated to St. Dionysius the Areopagite, and commemorating his conversion by St. Paul, (Acts 17. 34.) are here visible. About a quarter of a mile south-west from the centre of the Areopagus stands Pnyx, the place provided for the public assemblies at Athens in its most flourishing period. The steps by which the speaker mounted the rostrum, and a tier of three seats hewn in the solid rock for the audience, are still to be seen. This is perhaps the most interesting spot in Athens to the lovers of Grecian genius, being associated with the fame of Demosthenes and other Athenian orators.

Without the city are the ruins of the temple of Jupiter Olympus, begun by Pisistratus, but not finished till the time of the Roman Emperor Adrian, seven hundred years afterwards; of the one hundred and twenty columns which supported it, only sixteen now remain. There is also the Temple of Theseus, built by Cimon shortly after the battle of Salamis, and the most perfect, if not the most beautiful existing specimen of Grecian architecture. It is built of Pentelic marble; the roof, friezes, and cornices still remain; and so gently has the hand of time pressed upon this venerable edifice, that the first impression of the mind on beholding it, is a doubt as to its antiquity.

8. St. Paul visited Athens A.D. 54, and shrunk not from a controversy with its most distinguished philosophers. The apostle had found it necessary to leave Berea; but Timothy and Silas remained behind, and, accompanied by some friends, he proceeded to Athens, whence he despatched them with an injunction to Timothy and Silas to join him with all convenient speed. It does not appear by the evangelical historian what was the apostle's intention in repairing to this city; but while he was waiting for the arrival of Silas and Timothy he took a survey of the place, and "his spirit was stirred in him when he saw the city wholly given up to idolatry," or, as it is expressed in the margin, "full of idols." Their most distinguished philosophers were occupied in inquiring and reporting news, curious to know everything, and divided in opinion concerning religion and happiness. (Acts 17.)

There was at this time a synagogue of the Jews at Athens, and St. Paul, as was his usual custom in such cases, repaired thither, and disputed with them; and also discoursed "in the market," the place of public resort for business and discussion, "daily with them that met him," a practice common in Eastern countries. From an altar erected to the "Unknown God," the great Apostle of the Gentiles taking the opportunity here to preach Jesus Christ, was carried before the judges of the tribunal called Areopagus. A learned divine, Rev. R. Biscoe, in his *History of the Acts of the Apostles*, is of opinion that by the Unknown God, the Athenians meant the God of the Jews. It is well-known that the Greeks always evinced great facility in admitting the objects of worship of other nations into the catalogue of their deities; and, as subsequently to the time of Alexander the Great, considerable intercourse had taken place between the Greeks and the Jews, it is highly probable that the former should have obtained some knowledge of the religion of the latter. Nor is it difficult to explain why the Athenians should have given the name of "Unknown" to the God of the Jews; for the Jews invariably abstained from uttering the name of God, and always referred to the Deity as incomprehensible; no foreigner could ever learn to distinguish Him by any peculiar name, and hence the Athenians might naturally resort to the appellation of the "Unknown God." See ALTAR.

The charge they brought against the Apostle was a serious one and affected his life, it being a capital offence with the Athenians either to speak disrespectfully of the gods, or to set forth "strange gods" as objects of adoration. But the Apostle appeared before his audience in the most undaunted and yet most respectful manner. The discourse which he delivered on that occasion has always been admired as a fine specimen of manly and learned eloquence, well adapted to the capacity of his hearers. He stood in the midst of Areopagus, and began the energetic address, "Ye men of Athens."

"A deceiver," says Lord Lyttleton, "would on such an occasion as this, have retracted his doctrine to save his life; an enthusiast would have lost his life without trying to save it by innocent means. St. Paul did neither the one nor the other; he availed himself of an altar inscribed to the 'Unknown God,' and pleaded that he did not propose the worship of any new god, but only explained to the people the nature and attributes of that unknown Divinity whom their government had already received. Thus he eluded condemnation without departing in the least from the truth of the Gospel, or violating the honour of his God—an admirable proof of the good sense with which he acted, and of there being no mixture of fanaticism in his religion."

The philosophers allowed St. Paul to depart, but his discourse was not altogether fruitless. The inspired historian informs us that certain persons "clave unto him," among whom were one of the judges of the Areopagus named Dionysius, and a woman named Damaris. The Apostle left the city immediately after the trial, and proceeded to Corinth.

9. In the third century of the Christian era, Athens had not lost much of its unrivalled works of art. The gradual decay of its buildings, as Colonel Leake conjectures, must be attributed to the decline of Paganism, and to the slow but sure progress of Christianity. In A.D. 258, the walls of the city were repaired by Valerian. The Goths entered Athens in A.D. 267, but they were repelled by a citizen named Dexippus. In A.D. 398, Alaric took Athens, but there is no evidence to show that he treated it with great severity. The general overthrow of Paganism throughout Greece occurred in A.D. 420, during the reign of Theodosius the Younger. About

this time, or perhaps earlier, the Parthenon, the temple of the goddess Minerva, was converted into a church dedicated to the Virgin Mary, and the temple of Theseus was appropriated to the warrior St. George. In A.D. 1204, Athens became a duchy, conferred on one of his followers by Boniface, marquis of Montferrat, who assumed the title of King of Thessalonica. It continued, with many changes, in the possession of the Christians till 1456, when it fell into the hands of the Turks, during the reign of Mohammed II. The Venetians besieged and took the Acropolis in 1687, when the Parthenon and other buildings suffered great injury, and, on that occasion, the former is said to have sustained more damage than it had previously done during the two thousand years of its existence. The explosion of some powder, which had been placed in it by the Turks, reduced it from its then almost perfect state to a ruin. After a short interval Athens again fell into the hands of the Turks, under whose jurisdiction it remained until the treaty of Adrianople in 1829, following up the provisions and stipulations of the treaty of London in 1827, established the new kingdom of Greece, of which Athens is now the capital.

During the prolonged conflicts of the revolutionary war, (1821-7,) the town was laid in ruins; and when the seat of government was transferred to Athens, in 1834, it was with much difficulty that buildings could be fitted up for the members of the regency, the diplomatic body, and their officers. It is, however, again rising rapidly into importance, but in general is meanly built, consisting for the most part of mud houses. The population of Athens amounts to 17,000, and is perhaps more heterogeneous in its composition than that of any other city of its size. The mixture of its population bears a striking analogy to the extraordinary contrasts presented by the city itself. "The same half acre of ground," says a recent traveller, "often contains two or three remaining columns of an ancient portico, a small Christian chapel of the middle ages, a Venetian watch-tower, a Turkish mosque with its accompanying cypresses and palm-trees, and a modern, fashionable-looking residence." Great efforts have been made to secure the health of the city, by cleansing and repairing the ancient sewers, and by draining the marshes formed by the overflowings of the Cephissus, the exhalations of which were extremely noxious. There are thirteen churches, twelve belonging to the Eastern and one to the Western Church. Athens is an archbishopric of the Greek Church, and the see is reckoned one of the richest, the revenue exceeding a thousand pounds sterling annually. "The archbishop," says Sir John Cam Hobhouse, "exercises an absolute authority over the whole of the clergy of his see, and has a prison near his house for the confinement of offenders, whom he may punish with the bastinado, or in any degree short of death."

ATONEMENT, THE DAY OF, among the Jews, was the fifth day before the feast of tabernacles, or the tenth day of the seventh month, called Tisri. (Levit. 16. 29-34; Numb. 29. 1-11.)

On this day only in the course of the year, was the high priest permitted to enter the sanctuary, and not even then without due preparation, under pain of death; all others being excluded from the tabernacle during the whole ceremony. Previously to his entrance he was to wash himself in water, and to put on the holy linen garments, with the mitre; and to bring a young bullock into the outer sanctuary, and present it before the Lord, to be a sin offering for himself and his household, including the priests and Levites, and a ram also for a burnt offering. Next he was to take two young goats,

and present them before the Lord, at the door of the tabernacle, to be a sin offering for the whole congregation of Israel, and a ram also for a burnt offering. He was then to cast lots upon the two goats, which of them should be sacrificed as a sin offering to the Lord, and which should be let go for a scape-goat into the wilderness.

After this, he was first to sacrifice the bullock as a sin offering for himself and his household, and to take some of the blood into the inner sanctuary, bearing in his hand a censer with incense burning, kindled at the sacred fire on the altar, and to sprinkle the blood with his finger on the mercy seat, and before it, seven times, to purify it from the pollution it might be supposed to have contracted from his sins and transgressions during the preceding year. He was then to sacrifice the allotted goat for the sins of the whole nation, and to enter the inner sanctuary a second time, to sprinkle it with blood as before, to purify it from the pollution of the people's sins and transgressions of the foregoing year. After which he was to purify in like manner the tabernacle and the altar.

He was next to bring the live goat and lay both his hands upon its head, and confess over it all the iniquities, transgressions, and sins of the children of Israel, putting them upon the head of the goat, and then to send it away by the hand of a fit person into the wilderness, to bear away upon it all their iniquities to a land of separation, where they could be remembered no more. After this atonement he was to put off his linen garments, and leave them in the sanctuary, and to wash himself in water, and put on his usual garments; and then to offer burnt offerings for himself and for the people, at the evening sacrifice.

The whole of this process seems to be typical of the great atonement to be made for the sins of the whole world by Jesus Christ, "the Apostle and High Priest of our profession," (Heb. 3. 1,) and a remarkable analogy thereto may be traced in the course of Our Lord's ministry. He began it with personal purification at his baptism, "to fulfil all" legal "righteousness," (Matt. 3. 13-15.) Immediately after his baptism, he was led by the impulse of the Holy Spirit into the wilderness, as the true scape-goat, who "bore our griefs and carried our sorrows." (Isai. 53. 4; Matt. 8. 17.) Immediately before his crucifixion, "he was afflicted," and his "soul was exceeding sorrowful, even unto death," when he was to be made a sin offering like the allotted goat, (Isai. 53. 7; Matt. 26. 38; 2Cor. 5. 21; Heb. 1. 3;) and "his sweat as it were great drops of blood, falling down to the ground," (Luke 22. 44,) corresponded to the sprinkling of the mercy seat; to prepare for the sacrifice of himself, he consecrated himself in prayer to God; (Matt. 26. 39-46; John 17. 1-5;) and then prayed for his household, his apostles and disciples, (John 17. 6-9,) and for all future believers on him by their preaching. (John 17. 20-26.) His garments were parted at his crucifixion, when he became the sin offering; (Psalm 22. 18; John 19. 23, 24;) and, as our spiritual high priest, he entered once for all into the Most Holy Place, heaven, to make intercession with God for his faithful followers, (Heb. 7. 24-28; 9. 7-15,) "who was delivered for our offences, and was raised again for our justification." (Rom. 4. 25.) Dr. Hales, *Analysis*. Horne. See AZAZEL; SCAPE-GOAT.

ATONEMENT. Wherever this word occurs, something that has given serious offence, and produced a permanent state of variance between two parties is supposed; and then, in relation to the party offended, it signifies to appease or render propitious, as Gen. 32. 20;

Ezek. 16. 63. When applied to sin, it signifies to cover or to expiate it, to atone or make satisfaction for it. (Psal. 32. 1.)

The Atonement is the satisfaction offered to the divine justice for the sins of mankind by the obedience and death of Christ. (Rom. 5. 1-11.) Its virtue extends to the first transgressor; and secures to all true penitents believing in Christ personal reconciliation with God. This doctrine, as thus stated, is the leading truth of Christianity, (1 Cor. 15. 3,) and is styled by St. Paul the doctrine of the "Cross," and the doctrine of "Christ crucified." (1 Cor. 1. 17, 24; Gal. 5. 11; 6. 12, 24.) This doctrine, therefore, is that grand peculiarity of the Gospel which was a stumbling-block to the Jew and foolishness to the Greek.

"How sin may be forgiven," says a modern divine, (Watson,) "without leading to such misconceptions of the Divine character as would encourage disobedience, and thereby weaken the influence of the Divine government, must be considered as a problem of very difficult solution. A government which admitted no forgiveness, would sink the guilty to despair; a government which never punishes offences, is a contradiction, it cannot exist. Not to punish the guilty, is to dissolve authority; to punish without mercy, is to destroy, and where all are guilty, to make the destruction universal.

"That we cannot sin with impunity is a matter determined. The Ruler of the world is not careless of the conduct of his creatures; for that penal consequences are attached to the offence, is not a subject of argument, but is matter of fact, evident by daily observation of the wants and circumstances of the present life. It is a principle, therefore, already laid down, that the authority of God must be preserved; but it ought to be remarked that in that kind of administration which restrains evil by penalty, and encourages obedience by favour and hope, we and all moral creatures are the interested parties, and not the Divine Governor himself, whom because of his independent and all-sufficient nature, our transgression cannot injure. The reasons, therefore, which compel Him to maintain his authority, do not terminate in Himself. If He treats offenders with severity it is for our sake, and for the sake of the moral order of the universe, to which sin, if encouraged by a negligent administration, or by entire or frequent impunity, would be the source of endless disorder and misery; and if the granting of pardon to offence be strongly and even severely guarded, so that no less a satisfaction could be accepted than the death of God's own Son, we are to refer this to the moral necessity of the case, as arising out of the general welfare of accountable creatures, liable to the deep evil of sin, and not to any reluctance on the part of our Maker to forgive, much less to anything vindictive in His nature, charges which have been inconsiderately and unfairly said to be implied in the doctrine of the vicarious sufferings of Christ.

"If it then be true, that the release of offending man from future punishment, and his restoration to the Divine favour, ought, for the interests of mankind themselves, and for the instruction and caution of other beings, to be so bestowed, that no license shall be given to offence; that God himself, whilst He manifests his compassion, should not appear less just, less holy, than He really is; that his authority should be felt to be as compelling, and that disobedience should as truly, though not unconditionally, subject us to the deserved penalty, as though no hope of forgiveness had been exhibited; we ask, On what scheme save that which is developed in the New Testament, are these necessary conditions provided for? Necessary they are, unless we contend for a license and

an impunity which shall annul all good government in the universe, a point for which no reasonable man will contend; and if so, then we must allow that there is strong internal evidence of the truth of the doctrine of Scripture, when it makes the offer of pardon consequent only upon the securities we have before mentioned.

"If it be said that sin may be pardoned in the exercise of the Divine prerogative, the reply is, That if this prerogative were exercised towards a part of mankind only, the passing by of the rest would be with difficulty reconciled to the Divine character; and if the benefit were extended to all, government would be at an end. This scheme, then, of bringing men within the exercise of a merciful prerogative, does not, therefore, meet the obvious difficulty of the case; nor is it improved by confining the act of grace only to repentant criminals. For, if repentance imply a 'renewal in the spirit of the mind,' no criminal would of himself thus repent. But if, by repentance, be meant merely remorse and terror, in the immediate view of danger, what offender, surrounded with the wreck of former enjoyments, feeling the vanity of guilty pleasures, now past for ever, and beholding the approach of the delayed penal visitation, but would repent? Were the principle of granting pardon to repentance to regulate human governments, every criminal would escape, and judicial forms would become a subject for ridicule. Nor is it recognised by the Divine Being in his conduct to man in the present state, although in this world punishments are not final and absolute. Repentance does not restore health injured by intemperance; property wasted by profusion, or character, once stained by dishonourable practices. If repentance alone could secure pardon, then all must be pardoned, and government dissolved, as in the case of forgiveness by the exercise of mere prerogative; but if a merely arbitrary selection be made, then different and discordant principles of government are introduced into the Divine administration, which is a derogatory supposition.

"The question proposed abstractedly, How may mercy be extended to offending creatures, the subjects of the Divine government, without encouraging vice, by lowering the righteous and holy character of God, and the authority of his government, in the maintenance of which the whole universe of beings are interested? is, therefore, at once one of the most important and most difficult that can employ the human mind. None of the theories which have been opposed to Christianity afford a satisfactory solution of the problem. They assume principles either destructive of moral government, or which cannot, in the circumstances of man, be acted upon. The only answer is found in the Holy Scriptures. They alone show, and, indeed, they alone profess to show, how God may be 'just,' and yet the 'justifier,' of the ungodly. Other schemes show how He may be merciful; but the difficulty does not lie there. The Gospel meets it, by declaring 'the righteousness of God' at the same time that it proclaims his mercy. The voluntary sufferings of the Son of God 'for us,' 'the just for the unjust,' magnify the justice of God, display his hatred to sin, proclaim 'the exceeding sinfulness' of transgression, by the deep and painful manner in which they were inflicted upon the substitute; warn the persevering offender of the terribleness, as well as the certainty, of his punishment; and open the gates of salvation to every penitent. It is a part of the same Divine plan, also, to engage the influence of the Holy Spirit, to awaken penitence in man, and to lead the wanderer back to himself; to renew our fallen nature in righteousness when we are justified through faith, and to place us in circumstances in which we may

henceforth 'walk not after the flesh, but after the Spirit.' All the ends of government are here answered,—no licence is given to offence,—the moral law is unrepealed,—a day of judgment is still appointed,—future and eternal punishments still display their awful sanctions,—a new and singular display of the Divine character is afforded, yet pardon is offered to all who seek it.

"With such evidence of its suitableness to the case of mankind, under such lofty views of connexion with the principles and ends of moral government, does the doctrine of atonement present itself. But other important considerations are not wanting to mark the united wisdom and goodness of that method of extending mercy to the guilty, which Christianity teaches us to have been actually and exclusively adopted. It is rendered indeed 'worthy of all acceptance,' by the circumstance of its meeting the difficulties we have just dwelt upon, difficulties which could not have failed otherwise to make a gloomy impression upon every offender awakened to a sense of his spiritual danger; but it must be very inattentively considered, if it does not further commend itself to us, by not only removing the apprehensions we might feel as to the severity of the Divine lawgiver, but as exalting Him in our esteem as 'the righteous Lord, who loveth righteousness,' who surrendered his beloved Son to suffering and death, that the influence of moral goodness might not be weakened in the hearts of his creatures; and as a God of love, affording in this instance a view of the tenderness and benignity of his nature infinitely more impressive and affecting than any abstract description could convey, or than any act of creating and providential power and grace could exhibit; and therefore most suitable to subdue that enmity which had unnaturally grown up in the hearts of his creatures, and which, when corrupt, they so easily transfer from a law which restrains their inclination, to the Lawgiver himself.

"If it be important to us to know the extent and reality of our danger, by the death of Christ, it is displayed not in description, but in the most impressive action; if it be important that we should have an assurance of the Divine placability towards us, it here receives a demonstration incapable of being heightened; if gratitude be the most powerful motive of future obedience, and one which renders command on the one part, and active service on the other, 'not grievous, but joyous,' the recollection of such obligations as those which the 'love of Christ' has laid us under, is a perpetual spring to this energetic affection, and will be the means of raising it to higher and more delightful activity for ever.

"All that can most powerfully illustrate the united tenderness and awful majesty of God, and the odiousness of sin; all that can win back the heart of man to his Maker and Lord, and render future obedience a matter of affection and delight, as well as duty; all that can extinguish the angry and malignant passions of man; all that can inspire a mutual benevolence, and dispose to a self-denying charity for the benefit of others; all that can arouse by hope, or tranquillize by faith; is to be found in the vicarious death of Christ, and the principles and purposes for which it was endured."

ATTALIA, a maritime city of Pamphylia, in Asia Minor, situated on a bay of a gulf called the Gulf of Sattalia, about thirty miles south-west of Perga. It was built or enlarged by Attalus Philadelphus, king of Pergamus, from whom it received its name, and under the Romans was the chief residence of the Prefect of Asia. St. Paul proceeded from Perga to this city and preached the Gospel, A.D. 46. (Acts 14. 25.) It is now called Sattalia or Adalia.

Some geographers have alleged that a place called Laara is the ancient Attalia, but the opinion of Colonel Leake on this conjecture is quite conclusive: "Adalia possesses all the natural advantages likely to have made it the chief settlement of the adjacent country, when the power of Asia became embodied under the successors of Alexander. The walls and other fortifications, the magnificent gate or triumphal arch, bearing an inscription in honour of Hadrian, the aqueduct, the numerous fragments of sculpture and architecture, the inscribed marbles found in many parts of the town, the episcopal church now converted into a mosque, the European coats of arms seen upon this church and upon the city walls, and lastly, the bishopric of Attalia, of which Adalia is still the see, appear to me incontrovertible evidences of identity. In regard to the names Adalia and Sattalia, applied to the place by the Turks and Italians respectively, it may not be unworthy of observation that they are both taken immediately from the Greek."

ATTITUDE AT TABLE. We learn from the entertainment given by Joseph to his brethren, recorded in Gen. 43. 32-34, the usages which prevailed at a very early period in the mode of eating among the Egyptians, with their attitude at table, and there is no doubt that many of their customs were adopted by the Hebrews. It seems the guests usually sat on the ground, or on stools or chairs. The table was a small stool supporting a round tray composed of leather, on which the dishes were placed, together with loaves of bread. Occasionally each guest had a table to himself, as appears to have been the case in the entertainment alluded to. They sat in a circle round the piece of leather, with the right side towards the table. The food was conveyed from the dish to the mouth by the right hand. (Prov. 26. 15.) Neither knife, fork, nor spoon was used, but a cloth was spread round the circular leather to prevent the mats upon the floor from being soiled.

A great part of the process of Egyptian cookery consisted in baking, and the viands were generally brought to table in a canister or basket, which a slave carried on his head. (Gen. 40. 16, 17.) A separate portion seems to have been assigned to each guest, and he was considered as much honoured, who received two or more portions. (Gen. 43. 34; 1Sam. 9. 22-24.)

The Hebrews were not so particular about the position which their guests occupied at table as were the ancient Egyptians, but from the account of the entertainment given by Samuel to Saul, we see that a ceremonious distinction was sometimes observed. (1Sam. 9. 22.)

Homer informs us that the Greeks sat at table in the heroic ages; but the Persian custom of reclining was afterwards adopted both by them and by the Romans. This likewise prevailed among the Jews in the time of Our Saviour, and the arrangement may be thus described. Three couches being set in the form of the Greek letter Π, within which the table was placed, one end was left open to give access to servants for setting and removing the dishes, and serving the guests, and the other three sides were inclosed by the couches, whence it was termed the triclinium. The middle couch, at the upper end of the table, was accounted the most honourable place, and these were the seats which the Pharisees were most desirous to secure at the feasts. (Matt. 23. 6; Luke 14. 8.) At the end of each clinium or couch was a footstool for the convenience of mounting up to it. Each guest reclined on his left elbow, using principally his right hand. The feet of the person reclining being towards the external edge of the bed, were more easily reached by any one passing than any other part, which explains the passage relating to Our Lord and Mary

Magdalene, in Luke 7. 38: "A woman in the city, a sinner . . . stood at his feet behind him, weeping, and began to wash his feet with tears."

ATTRIBUTES OF GOD are the several qualities and perfections of the Divine nature. Some writers distinguish them into the negative and positive. But the commonly received distinction is into communicable and incommunicable. The communicable are those of which there is some faint resemblance in men, as goodness, holiness, wisdom; the incommunicable are such as there is no appearance or shadow of in men, as independence, immutability, immensity, eternity. A later distribution still, for the sake of clearness, is into the natural and moral attributes of God. See Saurin *on the Divine Perfections*.

AUGUSTUS, the usual designation of the emperors of Rome, first bestowed upon Octavius, the nephew and adopted son of Julius Cæsar.

Augustus was in Epirus when Cæsar was assassinated; he immediately hastened to Rome, and for a while shared the government with Antony and Lepidus, but quarrels and war broke out between them, and Octavius at length became emperor, with the title of Augustus, and he is mentioned under this name in the New Testament, as having ordered the enrolment which compelled Joseph and the Virgin Mary to go to Bethlehem, the place where the Messiah was to be born.

Herod espoused the party of Augustus during the war, and was in return loaded with honours and riches; and the emperor undertook the education of his sons Alexander and Aristobulus, to whom he gave apartments in his palace. Augustus subsequently disapproved of the cruelty exercised by Herod towards his sons, Alexander, Aristobulus, and Antipater; and when they were executed, he is said to have observed "that it were better to be Herod's hog than his son."

In the twenty-seventh year of the reign of this emperor our blessed Lord was born. At this time the Roman empire, or "the world," as it was commonly styled, enjoyed profound peace, and in accordance with ancient custom the temple of Janus at Rome was closed, for the first time since the end of the first Punic war.

Augustus expired at Nola, in the year 14 of the Christian era, after a reign of forty-four years from the battle of Actium. See **HEROD**; **MESSIAH**.

AVA, אַוָּא a city or district of Assyria, from which Shalmanezar brought a colony called Avites to inhabit Samaria after he had carried the ten tribes into captivity. (2Kings 17. 24-31.) Josephus says that the names Cuthah, Ava, Hamath, and Sepharvaim, are those of tribes, not of countries, but it is probable that their countries and principalities bore similar names, and hence Ava is, by some writers, supposed to be the same as Ahwaz, the only probable place of similar name in Khuisistan. This town is situated upon the river Karoon, which discharges its waters into the head of the Persian Gulf. It was a city of some note in the time of the Caliphs of Bagdad, and appears to have occupied the site of one more ancient; its extensive ruins still attest its ancient importance. There is a notice of it given in Kinnear's *Geographical Memoir*, and another more full in an appendix to Captain Mignan's *Travels in Chaldaea*, and also in the second volume of the *Transactions of the Royal Asiatic Society*. See **AHAVA**.

I. AVEN, אֵינ the name of a beautiful valley in Syria, near Damascus, between Libanus and Anti-Libanus. (Amos 1. 5.) It was supposed to have been remarkable for its idolatry, as was Bethel, which is called Beth-Aven for the same reason. (Hosea 5. 8.) It is con-
 jec-

tured to be the same with Baalbec, or valley of Baal, where there was a magnificent temple dedicated to the sun, and is called the valley of Lebanon in Josh. 11. 17.

Aven signifies in Hebrew *nothingness* or *vanity*; hence it is used by the Prophets in reference to idolatry, and therefore they call Bethel the House of Vanity, instead of the House of God. St. Paul, in the same sense, says, "For an idol is *nothing*."

II. AVEN, אֵינ אֵן, **BETHSHEMESH**, (or **HELIOPOLIS**, according to the Septuagint and Vulgate, and our marginal reading, Ezek. 30. 17,) a city of Egypt, situated on the Nile, south-east of the Delta, and east of Memphis, celebrated for its Temple of the Sun, and a famous seat of Egyptian science and learning. The inhabitants are said by Herodotus to have been the wisest of the Egyptians; and it is affirmed that Moses spent his youth there, and received that education which rendered him "learned in all the wisdom of the Egyptians." The destruction of the city, the temple, and the people, which Jeremiah and Ezekiel foretold, was probably accomplished by Nebuchadnezzar. Jablonski, *Panth. Egypt.*; Cellarii *Geograph. Antiq.* See **HELIOPOLIS**; **ON**.

AVENGER OF BLOOD, גּוֹעַל *goël*. The infliction of the punishment which, in Gen. 9. 6, was decreed against homicide, devolved, by the usage of all nations in primitive times, on the brother or other nearest male relation of the person whose life had been taken away. The right also of repurchasing and redeeming property or persons, as well as that of avenging blood, according to the Hebrew laws, appertained only to the next relation; hence the term גּוֹעַל *goël*, is used for the next relation in Levit. 25. 25, so also *an avenger of blood*. The blood-avenger often underwent incalculable difficulties, and spent an incredible time in hunting down his victim, but a commutation or compensation for murder was not unfrequently adjusted between the parties.

When the fine for blood was accepted, or the purification perfected, it is supposed some visible token of security, like the *וֶחַס* *oth*, or "mark" set upon Cain, was granted to the offender; and at the present day, when the injury is compromised among the Arabs, a mantle of security is given to the delinquent by the reconciled party.

The office of the *Goël* appears to have been connected with the religion of the patriarchal ages, and many instances of implacable revenge in the discharge of such a duty have survived to this time. If the *Goël* should neglect to wipe off the dishonour conceived to be attached to his tribe or family until he had avenged the homicide or premeditated murder, the onus of responsibility was supposed to devolve on the nearest relation after himself, who was entitled *גּוֹעַל מֵגוֹעַל* *me-goël*, or *the nearest relation but one*.

This institution, which has been investigated with great care by Michaëlis, passed from the East to the other regions of the earth, and was recognised alike by the Greeks in the heroic ages*, and the Scythians and Teutonic tribes. Among our Saxon ancestors the right of revenging homicide was transferred to the state, but the murder of any individual, even the king, was to be atoned for by a stipulated payment, in proportion to his rank, and there are traces of this among the native Irish even in the sixteenth century.

But we must now speak of this practice as prevailing

*Æschylus in his *Agamemnon* mentions the *Goël* in plain and unequivocal terms, and also in Electra's Address to the Chorus, at the tomb of her father. (*Choëph.* 117.) In conformity with the Jewish and Eastern opinions on the subject, if the crime of blood lay on any member of a family, he or she was said to have begotten or brought forth an *Erinnys* to the house. (*Soph.*)

at the present day among the Arabs, and also in a part of Europe, the population of which is in great measure of Arabian descent.

The interest of the common safety has for ages established a law among the Arabians which decrees that the blood of every man who is slain must be avenged by that of his murderer. Burckhardt supplies some interesting notices respecting the thár or blood-revenge of this people; and he alleges that this institution has been one of the principal means of preventing the warlike tribes of Arabia from exterminating each other. Without it, he observes, their wars in the Desert would be as sanguinary as those of the Mamelukes in Egypt; but the terrible blood-revenge renders the most inveterate wars nearly bloodless.

"It is a received law among the Arabs that whoever sheds the blood of a man, owes blood on that account to the family of the slain person. This law is sanctioned by the Koran, which says, 'O true believers! the law of retaliation is ordained to you for the slain, the free shall die for the free,' (lib. ii. 173.) The Arabs claim the blood not only from the actual homicide, but from all his relations, and it is those claims that constitute the right of thár, or the 'blood-revenge.' This rests with the *khomse*, or fifth generation, those only having a right to avenge a slain parent, whose fourth lineal ascendant is, at the same time, the fourth lineal ascendant of the person slain; and, on the other side, only those male kindred of the homicide are liable to pay with their own for the bloodshed, whose fourth lineal ascendant is at the same time the fourth lineal ascendant of the homicide. If the family of the man killed should, in revenge, kill two of the homicide's family, the latter retaliate by the death of one. If one only be killed, the affair rests there, and all is quiet; but the quarrel is soon revived by hatred and revenge."

It appears, however, that a commutation of this thár may be effected by the homicide or his friends offering a certain sum fixed by their ancient laws, which is generally accepted. The price varies in different tribes, and according to the affinity and rank of the person slain. If no such commutation takes place, the unfortunate homicide and all his relations comprised within the *khomse* take refuge among another tribe, where they imagine the arm of vengeance cannot reach them. The fugitives are also allowed three full days, and a few hours of the fourth, during which time there is no pursuit, and they remain in exile until their friends arrange the matter for them. Families of such fugitives are sometimes known to be in exile for more than fifty years, when it happens that during the life of the son and grandson of the person killed no compromise is made. Every expedient is reckoned lawful to avenge the blood of a slain relation; but the homicide cannot be killed if he is a guest in the tent of a third party, or if he has taken refuge even among his most inveterate enemies.

The mountainous parts of the island of Sardinia are chiefly inhabited by a wild and savage race, who are supposed to be descended from the former possessors of the island, the Saracens. Among these people, as we are assured by a recent traveller, the practice of "blood for blood" is most rigidly enforced at the present day, in spite of all the efforts of the government for its suppression; more rigidly, indeed, than among the Arabs, for it does not seem that any pecuniary compensation for murder is ever offered, or would be accepted.

When a murder has been committed, which, from the universal custom of going armed, is far from unfrequent, the body of the deceased is carried to his house, and there exposed to view in the clothes in which he met his death; and on the day appointed for the funeral, as

many persons as possible being assembled, the women of the family act over the scene of the assassination; employing the most frantic cries and gestures, till the spectators are worked up to a pitch of frenzy. Then the mother, wife, or sister of the deceased, solemnly addressing herself to the nearest relative, exhorts him to avenge his kinsman upon any one of the kindred of the murderer, invoking the vengeance of heaven upon his head, should he fail in what is by them considered the most sacred of all duties. This it seems is very seldom the case, as, owing to the general feeling on the subject, his own life would be thereby endangered.

I. AVIM, אִימ a people in Canaan descended from Hevæus, one of the sons of Canaan, expelled by the Philistines from Caphtor. (Deut. 2. 23.) Some of the Avim or Hivites dwelt afterwards at Gibeon, (Josh. 11. 19; 18. 23,) and there were also some at the foot of Mount Hermon, beyond the Jordan.

II. A city in the territory of the tribe of Benjamin, (Josh. 18. 23,) now unknown.

AVITH, a city of the ancient kings of Edom in Idumæa. (Gen. 36. 35.)

AWL, a well-known instrument. In the passage in Exodus 21. 6, this word is employed in reference to piercing the ear as a sign of perpetual servitude, which it seems was a custom among other Oriental nations, (Petronius Arbiter,) and it was the practice in India and Persia to perforate the ears of boys dedicated to the service of the gods. (Plutarch, *Sympos.*)

AXE, אֵלֶּךְ an implement chiefly used for cutting down trees. (Deut. 19. 5; 20. 19; Matt. 3. 10; Luke 3. 9.) The word is frequently used symbolically in the Scriptures, especially by the prophets where they represent the kingdoms, nations, and individuals, whose ruin they predict under the figures of forests and trees doomed to be cut down. (Isai. 10. 33; Jer. 46. 22, 23; Ezek. 31. 3; 11. 12.)

The axe was also used as the instrument of decollation, to which there is an allusion in Rev. 20. 4: "The souls of them that were beheaded for the witness of Jesus;" literally, "cut with an axe."

The employment of the axe in war is noticed in the article ARMS, which see.

Egyptian Axe.

AXLE-TREE. The Hebrew word אֵלֶּךְ is used in the plural for the axle of a wheel in 1 Kings 7. 32, 33; and also for the tenons in boards in Exod. 26. 17, 19; 36. 22, 24.

AZAL, אֶזַל mentioned in Zech. 14. 5, appears to be the proper name of a place. The signification is supposed to be, *at the foot of the hill*.

AZAZEL. The rendering of the Hebrew word אֶזַזִּיץ *Azazel* by "scape-goat," (Levit. 16. 8, 10, 26,) in our version, is at variance with those of many preceding translators, and its accuracy has been disputed by several learned men. The Septuagint, the versions of Symmachus, Theodotion, and the Vulgate, take it for the name of a ram; Bochart understands it as a rough deserted

mountain; while others think it the name of an evil spirit, to whom the ram or goat (for these various readings render it doubtful which animal is intended,) when driven into the desert was devoted as an expiatory sacrifice.

The Rabbins inform us, that after the lot had been taken, the high-priest fastened a long fillet or narrow piece of scarlet to the head of the scape-goat; and that after he had confessed his own sins and those of the people on his head, or when the goat was finally dismissed, this fillet changed colour to white, if the atonement were accepted by God; but if otherwise it retained its natural colour. It is in reference to this that they understand Isaiah (1. 18,) "Though your sins be as scarlet, they shall be white as snow; though they be red like crimson, they shall be as wool." After the confession had been made over its head, the scape-goat was committed to the charge of some person or persons, previously chosen for the purpose, and carried away into the wilderness; where, as might be understood from Levit. 16. 22, it was set at liberty; but the Rabbins give a somewhat different account. They say (speaking with a particular reference to Jerusalem and the Temple service,) that the goat was taken to a place about twelve miles from Jerusalem where there was a formidable rocky precipice; and they add, that for this occasion a sort of causeway was made between Jerusalem and this place, and that ten tents with relays were stationed at equal distances between them. On arriving at the precipice the goat was thrown down the summit, and by knocking against the projections, was generally dashed to pieces before it had half reached the bottom. It is added, that the result of this execution was promptly communicated, by signals raised at proper distances, to the people at the Temple, who were anxiously awaiting the event.

Several Oriental nations at the present day observe ceremonies founded no doubt upon some corrupted tradition relating to this subject. Roberts, in his *Oriental Illustrations*, says, "When a person is sick, he vows on his recovery to set a goat at liberty, in honour of his deity. Having selected a suitable one from his flocks, he makes a slit in the ear, or ties a yellow string

round its neck, and lets it go whithersoever it pleases. Whoever sees the animal knows it to be a *Nate-kadi*, the vowed goat, and no person will molest it. Sometimes two goats are thus made sacred; but one of them will be offered soon, and the other kept for a future sacrifice. But it is not merely in time of sickness that they have recourse to this practice: for, does a man wish to procure a situation, he makes a similar vow. Has a person heard that there are treasures concealed in any place, he vows to Virava (should he find the prize,) to set a goat at liberty, in honour of his name. When a person has committed what he considers a great sin, he does the same thing; but in addition to other ceremonies, he sprinkles the animal with water, puts his hands upon it, and prays to be forgiven." Gesenius; Winer; Rosenmüller; Jennings, *Jewish Antiq.* See **SCAPE-GOAT**.

AZEKAH, a town belonging to the tribe of Judah, about twelve miles distant in a southerly direction from Jerusalem, and five east of Bethlehem. The confederated Amoritish kings of Jerusalem, Hebron, Jarmuth, Lachish, and Eglon, were here defeated and slain by Joshua, and their army totally destroyed by an extraordinary shower of hailstones from heaven. (Josh. 10. 10, 11.) Eusebius and Jerome state that there was in their time a town in this quarter called Ezeca, which was probably the same as that mentioned by Joshua. Reland, *Paläst.*

AZEM, a town belonging to the tribe of Simeon. (Josh. 19. 3.)

AZMON, אֶזְמוֹן a city on the southern confines of Palestine, probably belonging to the tribe of Judah. (Numb. 34. 4, 5; Josh. 15. 4.)

AZNOTH, or **AZANOTH**, or **AZNOTH-TABOR**, one of the boundaries of the tribe of Naphtali, (Josh. 19. 34,) a city which Eusebius places in a plain not far from Cæsarea Philippi.

AZOTUS, the name by which **Ashdod** is designated in the New Testament. See **ASHDOD**.

BAAL, בעל (*Lord or Master*), the name under which the sun, considered as the supreme governor of the universe, was adored by the Phœnicians and other nations, from whom his worship subsequently passed to the Hebrews. That the term was sometimes employed to designate the Deity, at least by the Jews, appears from Hosca 2. 16.

Head of Baal.

The sun, as an object of worship, הַשֶּׁמֶשׁ *hoshemesh*, is mentioned by Moses in connexion with the moon and stars, to all of which effigies or images were erected.

(Exod. 20. 4; Deut. 4. 19; 17. 3.) In the time of Joseph, a city was consecrated to the sun in Egypt, and men of distinguished rank were set apart to this idolatrous service. (Gen. 41. 45-50; 46. 20.) Indeed, the worship of Baal and Astarte, the sun and moon, as typical of the active and passive powers of nature, seems to have been the earliest form of idolatry, as well as the most widely diffused. Traces of the worship are even to be found in these islands; for Baal, Bal, or Beal, was the name of the principal deity of the ancient Irish, which is adduced by General Vallancey as a proof of their Phœnician origin; and on the tops of many hills in Scotland, there are heaps of stones, called by the common people *Bel's Cairns*, where it is supposed sacrifices were offered by our pagan ancestors.

Macrobius (*Saturnal.*) states that the sun in his character of deity, was represented in the cities named Heliopolis, both in Syria and Egypt, by the image of an unbearded youth. His right hand, like that of a charioteer, was in an elevated posture, and sustained a whip; his left hand grasped the thunderbolt. The figure was covered throughout with gold.

The Mehestani or ancient fire worshippers considered the sun to be the eye of Ormuz, and next to the *Amschespendat*, the greatest of all the divinities; they supposed

it to be the body or residence of one of them. (*Zend-Avesta*.) They described the chariot of the sun as being of a white colour, and wreathed with garlands of flowers. The sacred horses were white also, of the Nisean breed, and four in number. The tongue of the chariot to which they were fastened, was covered with gold. Xenoph.

Amon and Manasses, the predecessors of King Josiah, who lived between 690—642 B.C., and consequently before the time of Zoroaster, placed a chariot of this kind before the gate of the Temple at Jerusalem; which was burnt by the order of Josiah their successor. (2Kings 23. 11.) Such was the religious veneration of the Mehestani for the sun, that they did not pray without turning their faces towards him. They saluted his rising beams with songs of praise, holding in their hands a bundle of branches taken from the pomegranate tree, the tamarisk, and the palm. (Comp. Ezek. 8. 16, 17.)

High places were always chosen for the temples and altars of Baal, in which was preserved a perpetual fire. His priests and prophets were extremely numerous; and the manner in which they conducted the worship of their god, was at once frantic and ferocious. We read that Jezebel, the idolatrous queen of Israel, supported no fewer than four hundred and fifty of these impostors at her own table. While the victims smoked on the altar, they danced round it with the most violent gesticulations, and cut their bodies with knives and lancets. This custom of cutting the body with knives and lancets was common among barbarous nations in their idolatrous rites, according to Plutarch. Herodotus says, the Persian magi pretended to appease tempests and allay winds by making incisions in their bodies; and those who carried about the Syrian goddess Astarte, cut and slashed themselves with knives after the manner of the priests of Baal.

Though Baal was adored by many other nations, he was peculiarly the god of the Phœnicians, as is sufficiently evident from the frequent occurrence of his name among the widely spread people of Punic descent. The names both of cities and of individuals were often compounded of Baal, as Hasdrubal (*help of Baal*), Hannibal (*grace of Baal*), Jerubbaal (*Baal will behold it*), and Baal-Hazor, Baal-Hermon, Baal-Tamar, each of these cities having probably a local deity, though the differences between them cannot now be ascertained. These, perhaps, are some of the Baalim mentioned in various places in Scripture. (Judges 2. 11; 1Sam. 7. 4.)

Others of this class of divinities, concerning which we possess more information, are the following.

בַּעַל בְּרִית *Baal-Berith*, (*Baal of the covenant*.) It appears from Judges 8. 33; 9. 4, that the Shechemites had a temple to this god. He was the tutelary god of covenants, thus answering in a certain sense to the Jupiter Fidius of the Romans, or the *Zeus ὁρκίος* of the Greeks. Bochart, *Canaan*.

בַּעַל פֶּעֶר *Baal-Peor*. This was a god of the Moabites, whose licentious rites are alluded to in Numbers 24. 1-9. It has been supposed that this deity was the same with כִּמּוֹש *Chamosh* or *Chemosh*, mentioned in Numb. 21. 29, and Jer. 48. 7. Creuzer, *Symbol*.

בַּעַל זְבוּב *Baal-Zebub*. This god had a temple of some note in the city of Ekron. (2Kings 1. 2.) He was the tutelary deity that protected the people from being infested with gnats, a superstition adopted by the Greeks, who worshipped deities to protect them from mice and locusts.

This god was sometimes represented under the form of a large fly, at others under the form of a man with a fly on his head or in his hand. The oracle of Beelzebub was much consulted by those who wished to pry into futurity. Elijah reproved the messengers of Ahaziah,

king of Israel, for applying to the oracle to inquire the event of his illness.

Baal-Zebub must not, however, be confounded with Beel-Zeboul, *Βεελζεβούλ*, the lord of the dwelling or of the region of the air.

The deity styled *Baal*, whose worship was introduced into Israel by Jezebel, was evidently the god from whom the Greeks derived their Hercules. His Phœnician appellation was Melkart or Melkereth, (*king of the city*, i. e., Tyre,) or Harokel, (*merchant*, he being supposed to be a great navigator,) which the Greeks corrupted into *Ηρακλής*, and under the name of the Tyrian Hercules, he was much celebrated. When Herodotus was in Egypt, he learned that Hercules was there regarded as one of the primæval gods of that country, and being anxious to obtain more explicit information on the subject, he undertook a voyage to Tyre. The priests there informed him that the foundation of the temple was coeval with that of the city, which they said was founded 2300 years before that time. It was in honour of this god that the Carthaginians for a long time annually sent the tenth of their income to Tyre. The account of the Baal of Jezebel and Athaliah agrees with this Hercules, since the representation of Scripture (1Kings 19. 18,) is the same with that of Diodorus Siculus, that no human sacrifices were offered to him, the fire was always burning on his altar, the priests officiated barefooted, and kissing was amongst the acts of worship. Cicero in *Verrem*.

Many representations of the Tyrian Hercules are extant on coins, of which there are two specimens in the British Museum. The first was found in the island of Cossyra, (now Pantellaria,) which belonged to the Tyrians; the other is a Tyrian coin of silver, weighing 214½ grains, and exhibits a very striking head of the same idol in a more modern and perfect style of art. One of the figures of the date is obliterated; but it is thought that the complete date may have given 84 B.C.

בַּל *Bel*. This word appears to be contracted from *בעל* and the deity signified by it is probably the heathen god called by Cicero the Indian Hercules. (Cicero, *Nat. Deor.*; Herodotus.) The idol Rimmon of the Syrians is also not without probability considered to have been the same with Baal or the sun. Gesenius; Winer.

Coins with effigies of Baal.

BAALAH, a city allotted to the tribe of Judah. (Josh. 15. 29.) This name was applied sometimes to Kirjath-jearim. (Josh. 15. 9.) See *KIRJATH-JEARIM*.

BAALATH, a town of the tribe of Dan, (Josh. 19. 44,) supposed to have been situated about twelve miles north-west of Jerusalem. Solomon is said to have built in Lebanon a city bearing this name, (1Kings 9. 18,) which according to tradition is the same as Baalbec. See *BAALBEC*.

BAALATH-BEER, a place mentioned as the boundary of the tribe of Simeon on the south, may probably be the same as the preceding town. (Josh. 19. 8; 1Chron. 4. 33.)

General View of the Ruins of Baalbec.

BAALBEC, a city of Syria, situated in the great valley between the mountain chains of Libanus and Anti-Libanus, celebrated for its ruins of a temple of the sun, which are believed to occupy the site of the "House of the Forest of Lebanon," erected by Solomon.

Major Rennell fixes its position in lat. $34^{\circ} 1' 30''$ N., and long. $36^{\circ} 11'$ E., distant 36 miles N.N.W. from Damascus, 41 miles S.E. from Tripoli and Beyrout, and 130 W. by S. from Palmyra. It received its Syrian name from the worship of Baal, or the sun, the chief idol of the country, and Bec or Beit, a *dwelling*, together signifying the *House* or *City of the Sun*, which rendered by its Greek equivalent became Heliopolis.

The traditions of the inhabitants of the country, whether Jews, Christians, or Mohammedans, all affirm that this city was founded by Solomon, and there is every reason to suppose that that monarch's dominions did include this vale. Among the cities enumerated in the eighth chapter of the Second Book of Chronicles, v. 6, as being built by Solomon, is Baalath in Lebanon. The similarity of name and situation identifies it at once with Baalbec.

Baalath is also mentioned by Josephus as one of the places of pleasure erected by that king in Syria, on account of the mild temperature of the climate, the delicacy of the fruits, and the excellence of the water.

It may be inferred from 2Chron. 16. 4, that Benhadad subdued this city with the adjacent country; and that on the overthrow of the Syrian kingdom of Damascus, it passed under the sway of the Assyrians, (2Kings 16. 9,) and from them in succession to the Persians, Greeks, and Romans. In the time of Augustus, it was the station of a garrison, but was then more famed for its wealth and splendour than for its military importance. The city was surrendered to the Arab arms A.D. 635, after a brave resistance; it was also sacked and plundered in 748, during the wars of the Ommiyade and Abbasside Caliphs, and from this blow it never revived.

During the Crusades it frequently changed masters, and in 1400 it was plundered by the Tartars under Tamerlane or Timur, since which period it has been of no importance except to the antiquary and historian. In 1759 it was much shaken by an earthquake.

No ancient authors seem to refer to the structures at Baalbec. John of Antioch, a Christian writer of the seventh century, ascribes in an incidental manner the erection of a temple to Antoninus Pius; and this is the only account with any pretensions to authority of the origin of these extraordinary ruins.

Though the remains of the temple are of Corinthian architecture, and cannot be referred to a remoter period than that of the Roman emperors, a massive wall by which they are inclosed is evidently of a far more ancient date, and corresponds with the description of the "House of the Forest of Lebanon," built for the daughter of Pharaoh.

"The great temple of the sun," observes the intelligent author of *Three Weeks in Palestine*, "is wonderfully perfect; the architecture is of the Corinthian order, and belongs to the most classical age of Roman art. I have seen nothing in Italy that surpasses, indeed, I may say nothing that equals it. It is built of a compact primitive limestone; the pillars, of which there are fourteen on each side, and eight at the extremities, I computed to be rather above sixty feet in height, composed of three pieces joined together by a square piece of iron fitted in sockets in the centre. One or two of these had slipped from their pedestals, and reclined unbroken against the wall of the temple. They were crowned by a noble architrave and beautifully carved cornice. The peristyle was covered by an arched roof of stone, cut in patterns, with medallions in high-relief of mythological subjects admirably executed. The portico, which once displayed a double row of columns, is destroyed; the pronaos is also much dilapidated, and the pillars that supported the roof are gone. The doorway leading from thence into

the body of the temple is twenty-one feet in width; the moulding and other ornaments are the richest I ever beheld. The lintel is composed of three huge blocks, two on either side entering far into the wall, the third of the form of a wedge. Upon this is carved a splendid relief of an eagle grasping a caduceus in his talons, and surrounded by a wreath, the two ends of which he holds in his beak. On each side a spiral staircase ascended to the top; the roof, however, has fallen in. The interior walls of the temple are surrounded by a double row of pilasters, having niches for statues between them, and at the upper end is the recess that once contained the image of the idol to which it was dedicated. The dimensions are 192 feet in length by 96 in breadth. The interior is much encumbered by fragments and rubbish; and without are seen lying in every direction broken shafts, capitals, and other architectural remains, which would supply a rich treat both to the architect and the painter.

"But beautiful as are these buildings, and replete with interest and delight to every person of taste, they yield as objects of wonder to the wall which encircles them. Maundrell, writing in an age when these were little known, seems almost afraid to hazard the delineation. 'Here,' says he, 'is another curiosity of this place, which a man had need to be well assured of his credit before he ventures to relate, lest he should be thought to strain the privilege of a traveller too far; that which I mean is a large piece of old wall which encompassed these structures, last described.' The whole is composed of blocks of stone of such magnitude that the smallest of them would excite astonishment, if seen elsewhere; but here, being eclipsed by three enormous masses, placed contiguously in the same course of the building, about twenty-five feet from the ground, they are overlooked as comparatively insignificant. They are at too great a height to admit of being accurately measured; but in the quarry whence they were hewn, about a mile distant, at the foot of Anti-Libanus, there yet remains a similar block, apparently of the same dimensions, and which was found to be sixty-eight feet in length, fourteen in height, and sixteen and a half in breadth. If, then, as there seemed to be best reason to conclude, the three stones in the wall be of the same size, they must occupy a space of sixty-eight yards in length: and by what mechanical powers they were conveyed to the distance of a mile, and then raised to their present position, no one can now conjecture. It cannot therefore be surprising that such an achievement should be referred by the people of the country to diabolical agency. The height of the wall is in proportion to the bulky nature of its materials, and is evidently not the work of those who erected the temples, but belongs to some remoter age."

Dr. Richardson observes, that "the soil of ages with which these stones are covered, compared with other parts of the building, which are decidedly Roman, would warrant our referring them to the era of Solomon, king of Israel, who built Hamath and Tadmor in the desert. The second builders of this pile have built upon the foundations of the former building: and in order that the appearance of the whole might seem to be of one date, they have cut a new surface upon the old stones. This operation has not been completely finished, and some of the stones remain half cut, exhibiting part of the old surface, and part of the new; so that the different eras of the building are exemplified in the same stones."

"The sun was fast sinking behind Lebanon, for here hours flew like moments, and the shadows of the mountain were gradually encroaching on the silent and desert plain, when a sort of consciousness of danger bade me either return into the inclosure, which is seldom visited by the natives, even by day, or retire to my

quarters in the inhabited part of the town. I adopted the former course, the more so, as at that very moment, a beautiful moon, so favourable to the contemplation of works of art, was just appearing over the hills to the eastward, and promised to assist me in the project. I was not disappointed. As I entered the grand court, in which are contained the principal ruins, a general silence prevailed throughout; even the shepherd's pipe, which but a few minutes before had caught my ear in the plain, had now ceased to be heard. But it was the silence of death, and of widowed greatness; for here, man once dwelt—here, space, material and art, were all made subservient to his views of grandeur and magnificence. From hence I directed my steps to the more perfect temple, standing in the area below; but the masses of prostrate columns, and chiselled marbles, which obstructed its entrance, seemed almost to interdict an approach. After slipping and falling repeatedly, I gained the interior. Here my presence occasioned a panic amongst a host of birds, apparently wild pigeons, which had taken up their abode in the temple; and I was not a little startled myself by the fluttering and bustle that ensued, in consequence of my intrusion.

"One half of the building, which is roofless, lay buried in gloomy shadow; whilst the moonlight rested with complacency upon the upper story of the remainder, and gave a fanciful embellishment to the elaborate sculptures with which it is adorned. Viewed by day, these beautiful structures, though replete with interest and delight, carry with them a mingled feeling of humiliation and regret; humiliation at the reflection of the transitory greatness of all human conceptions, and regret, that such proud relics of man's genius should be held by a people incapable of appreciating their merits, and consequently heedless of their further and complete destruction; whereas, by the uncertain light which reigns at this hour, the greater part of the deficiencies are supplied by fancy, and the mind is irresistibly carried back to the period of its perfect state, when incense burnt on its altars, and the walls resounded with the chants of a people sacrificing to the great luminary which enlightens the world. Emerging from the dark recesses of the sanctuary, my attention was suddenly called to the six noble detached columns, standing upon the upper platform, and shooting high up into the air; the effect of which, at this moment, was heightened to sublimity by the moonbeams reflecting on their shafts, and the solemn stillness that reigned around them. Seated upon a fallen fragment of this august pile, and riveted to the spot by a melancholy, yet pleasurable feeling, I remained, I dare not say how long, absorbed in reflection, which the place, the hour, and the serenity of the night were all so well calculated to inspire." Robinson's *Palestine and Syria*.

The modern town consists of a few mean huts and some half-ruined mosques, and the day appears not far distant when, like many other Eastern cities, it will cease to be inhabited. In 1751 the population amounted to five thousand, in 1785 it had diminished to twelve hundred, in 1818 it did not exceed five hundred, and in 1835 it barely amounted to two hundred. Pococke; Burckhardt; Irby and Mangles; Richardson; Lord Lindsay.

BAALE. See KIRJATH-JEARIM.

BAAL-GAD, a city of the Canaanites, situated in the valley of Lebanon at the foot of Mount Hermon. (Josh. 11. 17; 12. 7.) It was one of the places that remained unconquered by the Israelites at the death of Joshua. (13. 5.)

Some writers have supposed it to be the same as Baal-

Hamon mentioned in Solomon's Song, (8. 11;) while others identify it with Baalbec. See BAALBEC.

BAAL-HAMON, the name of a vineyard which belonged to Solomon. (Cantic. 8. 11.) The estate was rented by a number of tenants, each of whom paid the Egyptian bride of Solomon, in rental, one thousand shekels of silver, equivalent to about one hundred and twenty-two pounds sterling, the vineyard being her marriage portion. Bishop Patrick places this vineyard near Jerusalem, "where abundance of people had vineyards," but as nothing certain is known concerning this place, some writers have supposed it to be situated not far from Baalbec.

BAAL-HERMON, a town north of the territorial possessions of the tribe of Issachar, in the district occupied by the half tribe of Manasseh, near to which is Mount Hermon. The mountain is also called Mount Baal Hermon. (Judges 3. 3; 1Chron. 5. 23.)

BAAL-MEON or BETH BAAL-MEON בעל מעון a city of the Canaanites, east of the river Jordan, which the tribe of Reuben repaired. (Numb. 32. 38; 1Chron. 5. 8.) It was afterwards taken by the Moabites, and was possessed by them in the time of Ezekiel, who denounces its inhabitants. (Ezek. 25. 9.) It was one of the frontier towns of Moab, and consequently much exposed to hostile aggressions. Jerome says, that in his time it was a large village, and places it about nine miles from Esebon or Heshbon. Burckhardt speaks of some ruins near this place, which the Arabs call Myoun.

BAAL-PERAZIM, a place not far from Jerusalem, situated in the valley of Rephaim, where David routed the Philistines. (1Sam. 5. 20; 1Chron. 14. 11.)

BAAL-SHALISHA, a place situated according to Jerome and Eusebius fifteen miles north from Diospolis. In 1Sam. 9. 4, the land of Shalisha is spoken of, and the man who brought provisions to the prophet Elijah when he went to Gilgal is said to have come from Baal-Shalisha. (2Kings 4. 42.)

BAAL-TAMAR, a place near Gibeah, where was a grove sacred to Baal. Here the Benjamites were almost entirely destroyed by the other tribes. (Judges 20. 33.)

BAALTIS, a Phœnician goddess, supposed to have been the same as Astarte or Ashtaroth. See ASHTAROTH.

BAAL-ZEPHON, a station of the Hebrews on their march from Egypt, (Exod. 14. 29,) supposed by some writers to have been a town opposite Pi-hahiroth, distinguished either by its northern situation or by a watch-tower, and an idol temple. "Instead of proceeding from Etham," says Dr. Hales, "round the head of the Red Sea, and coasting along its eastern shore, the Lord made the Israelites turn southward along its western shore, and after a stage of twenty or thirty miles, (which cannot be exactly ascertained, because the Red Sea anciently extended a good way northward of Suez,) to encamp in the valley of Bedac, where there was an opening in the great chain of mountains which line the western coast called Pi-hahiroth, (*the mountain of the ridge*,) between Migdol (*the castle or garrison*,) westward, and the sea eastward over against Baal-zephon on the eastern coast, to tempt Pharaoh whose heart He hardened to pursue them, when they were entangled in the land, and shut in by the wilderness, on their rear and flanks, and by the sea in their front."

"Baal-zephon," says Bruce, "was probably an idol's temple, which served for a signal-house upon the cape which forms the north entrance of the bay, opposite to Jibbel Attaka, where there is still a mosque, or saint's

tomb. It was probably a light-house for the direction of ships going to the bottom of the gulf to prevent mistaking it for another foul bay under the high land, where there is also the tomb of a saint called Abu Desage." See PI-HAHIROTH and RED SEA.

BAASHA, son of Abijah, and commander of the armies of Nadab, king of Israel. He treacherously killed his master at the siege of Gibbethon, and usurped the kingdom, which he possessed twenty-four years. He exterminated the whole race of Jeroboam, as God had commanded, but by his bad conduct and his idolatry incurred the indignation of the Most High. (1Kings 15. 27; 16. 7.)

I. BABEL, בבל rendered in the margin of our version, *confusion*, the name bestowed upon the tower which "the whole earth," the descendants of Noah, had begun to erect in the plain of Shinar, but the completion of which was prevented by the interposition of the Almighty. (Gen. 11. 1-9.) This event is usually ascribed to the year 101 after the Flood, (2247 A.M.,) but the Samaritan chronology places it in the year 401, and the Septuagint in 501.

2. It is needless to indulge in conjectures, as some writers have done, as to the end proposed in building this lofty tower, when the reason is stated in the page of inspiration: "Let us build us a city, and a tower whose top may reach unto heaven; and let us make us a name lest we be scattered abroad upon the face of the whole earth." (Gen. 11. 4.) "Such a notion," says Mr. Ainsworth, the most recent traveller in this quarter, "is applicable in the most remarkable manner to the wide and level plains of Babylonia, where scarcely one object exists different to another to guide the stranger in his journeying, and which in those days, as in the present, were a sea of land. The effect of those high places, characteristic almost everywhere of some Babylonian or Chaldean site, remains as striking as ever.

"Those beacons over the dreary sand may be seen rising from the horizon's verge like giant pillars, deceiving the weary traveller in their distance, and contorted by a lake of light (*shrab*,) into a hundred fantastic forms; yet still faithfully guiding him to one point in his destination. Such is the pile of Aker-kuf, such the memorable Birs, and the still more colossal mounds of Urchoe, of Teredon, and of Irak.

"How limited is the criticism of man, when he supposes the Deity to have regarded with jealousy these impotent attempts, although so fair in our eyes, to rival the mountains which He has reared upon the earth's surface. It was evidently not the building, but the object, which was not agreeable in the eyes of the Almighty; and hence the families of future nations were hurried by a new dispensation to their several destinations."

The expression employed by the sacred historian in reference to this tower, that its top was to "reach unto heaven," is to be understood as a strong Hebrew phrase denoting a very lofty tower, for we observe the walls of the cities of Canaan described in a similar manner. The spies sent out by him to view the land, on their return reported that the "cities were great, and walled up to heaven," (Deut. 1. 28; 9. 1,) which only means that the people of those countries raised the walls of their cities to a great height to prevent their being scaled by hostile assailants.

3. The sacred historian does not intimate that what had been erected of the tower sustained any damage at the confusion and subsequent dispersion; he simply states that the building was discontinued. He gives no information as to its dimensions, but the imagination of

Oriental and ancient writers has not been wanting to supply this deficiency by fabulous traditions. Some of them pretend that the tower was no less than 10,000 fathoms or twelve miles high, and St. Jerome affirms, from the testimony of persons who said they had seen and examined the building, that it was in his time four miles high. Others again make it range from a furlong to five miles in height.

4. The earliest authentic information concerning this tower is derived from Herodotus, who, however, did not see it till thirty years after the Persian king Xerxes had done as much damage to it as its solid mass allowed him to effect. Herodotus describes the spot as a sacred inclosure dedicated to Jupiter Belus, consisting of a regular square of two stadia (1000 feet,) on each side, and adorned with gates of brass. In the midst of this area rose a massive tower, whose length and breadth was one stadium; upon this tower arose seven others. He does not mention their height; but Strabo, who concurs with him in the dimensions of the basement, adds that the whole was a stadium in height. Taking these proportions, of 500 feet high with a base of 500 feet on each side, we have a structure as high as the greatest of the Egyptian pyramids, but standing on a much narrower base; as the dimensions of the pyramid may, on an approximation of the various statements, be reckoned at 480 feet in height on a base of 750 feet each way. Herodotus goes on to say, that on the outside, steps were formed, winding up to each tower; and that in the middle of every flight there was a resting place provided with seats. In the highest tower was a magnificent chamber sacred to Belus, and furnished with a splendid couch, near to which was a table of gold. There was, however, no statue, the god being supposed to inhabit it at will; this statement is contradicted by other writers, who mention a statue of gold forty feet high. About two centuries after the devastations committed by Xerxes, Alexander, among his mighty projects, conceived the idea of restoring the tower to its former condition; and as a preparatory step employed 10,000 men for two months in removing the rubbish which had fallen from the superstructure in consequence of the dilapidations of the Persian king; but his death put an end to the work.

5. On the western side of the river Euphrates stands a large artificial mound called the Birs Nimrood, which has been generally supposed to be the remains of this celebrated structure, but some recent travellers entertain doubts on the subject, considering it more probable that this is the site of one of the quarters of the Babylon of Herodotus, called Borsippa, and they place the tower of Babel on the other bank of the river, where is found a hill crowned by a heap of ruins, called by the Arabs Majalibah, or House of Captivity.

Niebuhr saw the ruins of the Birs Nimrood at a distance, but he was prevented from an examination of them by his apprehensions of the wild tribes of the desert, and none attempted their exploration until Mr. Rich, Sir Robert Ker Porter, Mr. Buckingham, and Captain Mignan, successfully prosecuted this arduous undertaking.

"The tower-like ruin on the extremity of the summit," says Sir Robert Ker Porter, "is a solid mass, twenty-eight feet broad, constructed of the most beautiful brick masonry, and presenting the apparent angle of some structure originally of a square shape, the remains of which stand on the east to a height of thirty-five feet, and to the south twenty-two feet."

Captain Mignan says, "It is 190 feet from the foundation of the tower to the base of the pile, and from the basement of the tower to its uneven summit, thirty-five. This measurement is taken at the western face, where the tower assumes a pyramidal form towards the top,

whence it is rifted or split down its centre. The southern face of the mound is the most perfect, and the western the least, perhaps from the effects of the violent winds which prevail from that point. On digging into the base of this edifice, I found it composed of coarse sun-dried bricks, fastened together by layers of mortar and reeds. At the depth of fourteen feet bitumen was observable. The whole summit and sides of this mountainous ruin are furrowed by the weather and by human violence, into deep hollows and channels, completely strewn with broken bricks, stamped with three, four, six, and seven, lines of writing, stones, glass, tiles, large cakes of bitumen, and petrified and vitrified substances."

6. The indications that fire at one time struck the pile are not a little remarkable, and from the general appearance of the cleft in the wall, and the vitrified masses, it seems not improbable that this fire was lightning from heaven. This agrees not only with the account given by the Sacred historian; but with the traditions of several ancient and distant nations, which allege that the original tower was not only stopped in its progress, but partially overturned by the Almighty, accompanied with thunders and lightnings and a mighty wind, and that the rebellious men who were its builders fled in horror and confusion before the awful storm. Bochart thinks this probable, and Faber conjectures that "fiery globes similar to those which checked the mad enterprise of Julian at Jerusalem, might have burst from the pile itself, and by that miracle overthrow the impious builders, who had undertaken the erection for the special purpose of concentrating their idolatrous superstitions, and of resisting the Divine command that they should further spread themselves over the earth."

"Leaving out of the question," says Mr. Rich, "any conjecture relative to the original destination of this ruin, the first impression made by the sight of it is, that it was a solid pile composed in the interior of sun-burnt bricks, and perhaps earth or rubbish; that it was constructed in stages, and faced with fine bricks, having inscriptions on them, laid in a very thin layer of cement; and that it was reduced by violence to its present ruinous condition. The upper stories have been forcibly broken down, and fire has been employed as an instrument of destruction, though it is not easy to say how. The facing of fine bricks has been partly removed, and partly covered by the falling down of the mass which it supported and kept together. The Birs Nimrood is in all likelihood at present pretty nearly in the same state in which Alexander saw it, if we give any credit to the report that 10,000 men could only remove the rubbish, preparatory to repairing it, in two months. If indeed it required one-half of that number to disencumber it, the state of dilapidation must have been complete. The immense masses of vitrified brick which are seen on the top of the mound appear to have marked its summit since the time of its destruction. The rubbish about its base was probably in much greater quantities, the weather having dissipated most of it in the course of so many revolving ages, and possibly portions of the exterior facing of fine brick may have disappeared at different periods."

7. Mr. Buckingham's more recent observations fully confirm the views of Mr. Rich. After a very minute examination he discovered traces of four stages or towers in the pile, and admitting that the original height was a stadium, which, according to Herodotus, amounts to 500 feet, and the stages or towers to have been equal in height, it follows that vestiges of four towers are in existence within the acknowledged elevation of 235 feet. The earth about the base of this enormous mass of vitrified building is now clear, but is at some distance sur-

rounded by the ruins of walls which form an oblong square, inclosing numerous heaps of rubbish, probably at one time the fanes of the inferior deities, or the dwellings of the priests and officers of the temple.

Thus has prophecy been literally fulfilled respecting this celebrated tower and its idolatrous worship. "Bel boweth down, Nebo stoopeth." (Isai. 46. 1.) "Babylon is taken, Bel is confounded, Merodach is broken to pieces; her idols are confounded, her images are broken in pieces; for out of the north there cometh a nation against her, which shall make her land desolate, and none shall dwell therein; they shall remove, they shall depart, both man and beast." (Jerem. 50. 2,3.) "I will stretch out mine hand upon thee, and roll thee down from the rocks, and will make thee a *burnt mountain*; and they shall not take of thee a stone for a corner, nor a stone for foundations, but thou shalt be desolate for ever, saith the Lord. I will punish Bel in Babylon, and I will bring forth out of his mouth that which he hath swallowed up, and the nations shall not flow together any more unto him." (Jerem. 51. 25,26,44.)

The appearance of the tower of Nimrod is described by various travellers as sublime even in its ruins. Clouds play around its summit; its recesses are inhabited by lions, and three majestic ones were seen by Sir Robert Ker Porter, "quietly taking the air upon the height of the pyramid;" and, scarcely intimidated by the cries of his Arabs, they slowly descended into the plain, leaving the broad prints of their feet in the clayey soil.

"While thus," says Sir Robert Ker Porter, "actually contemplating these savage tenants wandering amidst the towers of Babylon, and bedding themselves within the deep cavities of her once magnificent temple, I could not help reflecting on how faithfully the various prophecies had been fulfilled which relate in the Scriptures to the utter fall of Babylon, and abandonment of the place, verifying in fact the words of Isaiah: 'Wild beasts shall be there, owls shall dwell there, and dragons shall cry in the pleasant places.'"

II. BABEL was also the original name of the city afterwards so celebrated as Babylon, and is derived by Eichhorn and some others from בַּבְּלַיִם *the gate or court of the City of Bel*, in allusion to the deity to whose worship the original tower was then devoted.

BABYLON, the capital of the ancient kingdom of Babylonia, is supposed to have been situated in north latitude 32° 28' 30", and in east longitude 44° 9' 45". It is usually considered to have been founded by the descendants of Noah, 2234 B.C., enlarged by Nimrod*, and, in a manner, completely rebuilt about 1200 B.C., by the Assyrian queen, Semiramis. It was greatly enlarged, strengthened, and beautified by succeeding sovereigns; but it was brought by Nebuchadnezzar and his daughter Nitocris to such a degree of magnificence and splendour, as rendered it one of the wonders of the world. The works ascribed to Nebuchadnezzar were the embankments of the river, the artificial canals, and the completion of an artificial lake of vast dimensions begun by Semiramis; but Herodotus says some of these were the works of Nitocris, who probably finished what her father had begun.

2. "Like other great cities in the East—as Ctesiphon and Seleucia became Coche and Al Madayn, and Nineveh, Ninus, Mespila, and Atúr—the city of Nimrod was in the lapse of time known by different names, and ultimately subdivided into various parts. The first quarter that appears to have been separated from the mother city, if indeed it was not originally distinct, was that on the west side of the river, and which contains the Birs Nimrod. The word Birs, as applied to this mound or ruin, cannot be satisfactorily explained in Arabic, as a derivative of that language; and it would appear that all attempts to deduce it from the Hebrew or Chaldaic tongues have failed, as they are founded on a change of the radical letters. The Kamus gives Birs as the name of a town or district between Hillah and Kúfah. In the Chaldaic Sidra Rubla of the Sabæans, it is mentioned under the name of Bursif, whence the Borsippa of Strabo, and other old writers. Strabo describes the city as being fifteen miles below Babylon, and a famous manufacturing town. Josephus (in *Apion*), relates that Nabonnedus, fleeing from Cyrus, shut himself up in the town of Borsippa, which Heeren reads, was imprisoned there by Cyrus. Ptolemy notices the town under the name of Borsita. Cellarius considers the Hippareum of Pliny as Borsippa.

"It was from Birs, or Bursif, that the produce of the Birsæan looms, the cloth of Birs, derived its name. The almost only remnant of Borsippa, probably the temple of a national worship performed in high places,—one of which belonged to each Babylonian city, and to each of the quarters of Babylon itself,—still preserves its ancient name, Birs, to which a superstitious tradition has coupled that of Nimrod." (Ainsworth.)

The quarter of Babel itself appears to have, at one period, changed its name, and to have received that of Nil. The mounds of Babel and the Mujalibah are nearly surrounded by two canals, which bear that name in the present day. Abú-el-Fédah describes the main stream of the Frat as flowing to the city of Nil, after which it is called Nahr Sirát. D'Anville also notices a town called Nilus, without having a definite idea of its position.

3. On account of its greatness and celebrity, and its giving a name to a very large and powerful empire, Babylon is denominated by a variety of just and appropriate terms in the sacred writings. It was situated in a vast plain, and surrounded by water, and hence it is termed in prophetic language, "the desert of the sea," or rather, the "plain of the sea," (Isai. 21. 1,) and the propriety of this designation, as Bishop Newton observes, consists in this, that not only is any large collection of waters termed in the Oriental style a sea, but also the plain about Babylon is said from the beginning to have overflowed with waters, and to have been called the sea. It was originally an immense morass; it became such after the capture of the city by Cyrus; and such it continues to the present day.

4. Herodotus says, "The city stood on a plain, it was a perfect square, of which each side measured one hundred and twenty stadia: the area four hundred and eighty stadia, or nearly sixty miles in circumference, an extent so immense as to stagger belief. It was surrounded by a wide fosse full of water; within which arose the city wall, two hundred royal cubits high, or about three hundred feet, and fifty in thickness, or seventy-five feet. The royal cubit exceeds the common by three digits. The cement of the walls was of bitumen, mixed with the tops of reeds; placed at every thirtieth course of the bricks; this was also used in the trench or ditch; the walls were built in the same manner, and on the summit were small towers of one story; between the towers a chariot could be driven or could turn." Upon this Mr. Buckingham remarks, "A wall three hundred feet high is credible after the contemplation of the Egyptian temples and pyramids, and the vestiges of Babylon."

The city was traversed each way by twenty-five principal streets, which intersected each other, and farther

* Josephus expressly says that Nimrod, the grandson of Ham, was the founder of the city, and to this day the inhabitants of the neighbouring plains are as fond of attributing every great work to this mighty hunter, as those of Egypt are of referring similar works to Pharaoh.

divided the city into a number of small squares, amounting to six hundred and twenty-six. These principal streets were terminated at each end by gates of brass, of prodigious thickness and strength, with smaller ones opening towards the Euphrates. A branch of the Euphrates intersected the city from north to south, and across the river, in the central part, was a magnificent bridge, according to some writers, a furlong in length, and thirty feet broad, which was supposed to be very ingeniously constructed to supply a defect in the sandy bed of the river. At each end of this bridge stood a palace.

The palaces are said to have been connected with each other by a passage running under the bed of the river. The old palace stood on the east end of the bridge, near which was the celebrated temple of Belus, which enclosed the tower of Babel. The new palace, which stood on the west side of the river, was seven and a-half miles in circumference, and surrounded by a lofty triple wall. The walls of both these edifices were embellished with an infinite variety of sculptured devices, representing all kinds of animals, and amongst the rest was a curious hunting scene, in which Semiramis, on horseback, was represented in the act of throwing a javelin at a leopard, and Ninus was seen piercing a lion. The new palace was built by Nebuchadnezzar, and in it Alexander the Great expired.

5. Near to this palace were the Hanging Gardens, so celebrated among the Greeks. They were raised by Nebuchadnezzar in order to give his wife Amytis (daughter of Astyages, king of Media,) some representation of the mountainous and woody scenery of her native country; they contained a square of four hundred feet on each side, and consisted of terraces one above another, on substantial arches; the ascent to each terrace was by steps ten feet wide. A wall twenty-two feet thick, surrounded the whole garden. Above each tier of arches was a superstratum of stones sixteen feet long and four broad, then reeds combined with asphaltum, over which were surfaces of brick-bond covered with sheets of lead, on which, finally, the mould for horticultural purposes was laid to a sufficient depth for the growth of large trees, which adorned every terrace of the garden. In the upper terrace was an engine or pump, by which water was drawn up out of the river, to supply a reservoir, whence it was conveyed by channels for purposes of irrigation to all the parterres. In the spaces between the several arches on which the structure rested, were large and magnificent apartments for pleasure and recreation. Very reasonable doubts have been, however, expressed as to the existence of these hanging gardens and of the tunnel under the Euphrates, from the silence of Herodotus, who had visited the city, while most of the relations of these wonders had not, respecting them.

6. The extent of Babylon seems a subject upon which it is impossible to attain any correct knowledge. No two of the ancient writers agree upon the point, and our ignorance of the precise value of the measures they speak of, prevents our arriving at even their view of the truth. Major Rennell, however, from a careful consideration of the subject, is of opinion that Babylon might probably have been about three times as large as London at the present day, but this vast space was certainly never covered with one continuous mass of buildings, and, indeed, Quintus Curtius says, "pasture and arable land was contained within the walls sufficient to supply the wants of all the inhabitants." This, no doubt, is an exaggeration, but it may serve to show that any attempt to estimate the population by the European standard must be utterly fallacious.

7. The banks of the waters of Babylon were planted

with willows which are mentioned in Scripture. Thus Isaiah, (15. 7,) describing, in prophetic language, the captivity of the Moabites by Nebuchadnezzar, says, that "they shall be carried away to the brook of the willows;" and the river banks are still hoary with reeds, and covered with the grey osier willows, on which the captives of Israel suspended their harps, and refused to be comforted, while their conquerors tauntingly commanded them to sing the songs of Zion. (Psal. 137. 1-4.)

8. Babylon was very advantageously situated, both in respect to commerce and as a naval power. It was open to the Persian Gulf by the Euphrates, which was navigable by large vessels, and being joined to the Tigris above Babylon, by the canal called Nahr Malikah, or the royal river, also supplied the city with the produce of the whole country to the north of it as far as the Euxine and Caspian seas. Semiramis improved the navigation of the Euphrates, and is said to have had a fleet of three thousand galleys. The prophet Ezekiel (17. 4,) calls Babylon a land of traffic, and a city of merchants, and Isaiah (43. 14,) speaks of "the Chaldeans whose cry is in their ships," or according to Bishop Lowth's version, "exulting in their ships." It is not to be wondered that, in later times we hear little of the commerce and naval power of Babylon; for after the capture of the city by Cyrus, the Euphrates was not only rendered less fit for navigation by being diverted from its course, and left to spread over the plain, but the Persian monarchs residing in their own country, in order to prevent any invasion by sea on that part of their empire, purposely obstructed the navigation of both rivers by making cataracts in them; that is, by raising dams across the channel, and making artificial falls in them, so that no vessel of any size or force could possibly come up. Alexander begun to restore the navigation of the rivers by demolishing the cataracts upon the Tigris, as far up as Seleucia, but he did not live to complete his great designs; those upon the Euphrates still continued, and Ammianus Marcellinus mentions them as subsisting in his time.

Such was Babylon according to the ancient historians, of whose description a very brief outline is here attempted; and though, as Goguet remarks, these statements are probably greatly exaggerated, yet the Scriptures describe its natural as well as acquired supremacy in terms that point it out as the most illustrious city of its time. Besides the other prophets, many of whom speak admiringly of its power and splendour, Isaiah, whilst denouncing against it the fearful judgment of the Almighty, emphatically styles it "the glory of kingdoms, the beauty of the Chaldees' excellency" . . . "the Lady of kingdoms, given to pleasure, that dwellest carelessly, and sayest in her heart, I am, and none else beside me."

9. The ultimate fate of the city, the circumstances attending it, and the agency by which it was to be accomplished, were predicted while Babylon was in the zenith of its glory, when the spoil of Nineveh, Jerusalem, and Egypt, had enriched it, after its armies had swept like a torrent over the finest provinces of the East, and when the arts and sciences, driven from Egypt and Phœnicia, were centred in the "virgin daughter of Chaldea," who sat on her lofty throne, the mistress of nations, and "the praise of the whole earth."

More than a hundred years before the accomplishment of the prediction, Isaiah recorded the doom that was pronounced against Babylon, naming the prince who was to fulfil this prophecy, before he was born, and Jeremiah described the minutest circumstances relating to the siege and the taking of the city, and painted the desolation of the once flourishing capital, which should remain to every succeeding age. (Isai. ch. 13. and 45; Jer. ch. 51.)

At the precise period appointed this prediction was fulfilled. The great city, the glory of kingdoms, whose beauty, strength, and magnificence made it the wonder of the world, was "swept with the besom of destruction."

10. For the space of twenty-six years after the death of Nebuchadnezzar, it continued to retain its glory, and was at once the seat of an imperial court, the station of a numerous garrison, and the scene of a most extensive commerce. It was at length invested about 540 years B.C. by the victorious armies of Cyrus the Great.

Crowded as the city was with troops for their defence, surrounded with such lofty walls, and furnished with provisions for twenty years, the Babylonians derided the efforts of their besiegers, and boasted of their impregnable situation. On the other hand, the conqueror of Asia, determined to subdue his only remaining rival in the empire of the eastern world, left no expedient untried for the reduction of the city. By means of the palm-tree, which then abounded in the plains, he erected a number of towers, higher than the walls, and made many desperate attempts to carry the place by assault. These failing, he drew a line of circumvallation around the city; divided his army into twelve parts; appointed each of these to guard the trenches for a month, and resolved to starve his enemy to a surrender.

After spending two years in this blockade, an opportunity presented itself of effecting his purpose by stratagem. Having learned that a great festival was to be celebrated in the city, and that it was customary with the Babylonians on that occasion, to spend the night in drunkenness and debauchery, he posted a part of his troops close by the spot where the river Euphrates entered the city, and another at the place where it went out, with orders to march along the channel, whenever they should find it fordable. He then detached a third party to open the head of the canal, which led to the great lake already mentioned; and at the same time, to admit the river into the trenches, which he had drawn around the city. By these means the river was so completely drained by midnight, that his troops easily found their way along its bed; and the gates upon its banks having been left open in consequence of the general disorder, they encountered no obstacle in their progress. "If the besieged," says Herodotus, "had either been aware of the designs of Cyrus, or had discovered the project before its actual accomplishment, they might have effected the total destruction of his troops. They had only to secure the little gates which led to the river, and to man the embankment on either side, and they might have enclosed the Persians as in a net, from which they could never have escaped." Having thus penetrated into the heart of the city, and met, according to agreement, at the gates of the palace, they easily overpowered the guard, and cut to pieces all who opposed them.

11. While all this was passing without, a scene of a very different description, and, if possible, one more remarkable, was going on within the fortified palace. Notwithstanding the rigorous blockade which Babylon had sustained for two years, and although the martial spirit of its citizens had degenerated into cowardice or apathy, their profligacy appears to have continued unabated, and on this night in particular, Babylon was the scene of universal revelry. The celebrated feast, which has been emphatically termed "impious," was held by Belshazzar, at which a thousand of his lords were present, besides his princes, his wives, concubines, and all the officers of the royal harem. In the midst of his drunken debauchery, he ordered the holy vessels of gold and silver, which had been brought by his grandfather Nebuchadnezzar from the Temple of Jerusalem, to be pro-

duced, which he filled with copious libations of wine, and thus daringly polluted those sacred vessels, by drinking out of them, with "his princes, wives, and concubines." Nor was this the extent of their impiety: we are further told that in the midst of this wanton and sacrilegious revelry, they "praised the gods of gold, and of silver, of brass, of iron, of wood, and of stone;" that as they drank their wine, and polluted the hallowed vessels, they blasphemously exulted over that God to whose service exclusively they had been consecrated. At that very hour, when they were offering this insult to the Omnipotent Jehovah, a sudden and appalling manifestation paralysed every individual at the feast. The mysterious fingers of a man's hand were seen writing some no less mysterious characters on the wall opposite the king. The eye of Belshazzar at once caught the movements of those ominous fingers; the king "saw the part of the hand that wrote;" the consciousness of guilt at once harrowed his soul, while his wives and concubines beheld, horror-struck, the sight, and his princes were lost in astonishment and trepidation. "The king's countenance was changed, and his thoughts troubled him, so that the joints of his loins were loosed, and his knees smote one against the other."

"In that night was Belshazzar the king of the Chaldeans slain." Such is the brief but emphatic record in the Prophet Daniel. The race of Nebuchadnezzar became extinct, "Babylon was taken, Bel confounded, Merodach broken in pieces."

"How wonderful," observes Bishop Newton, "are such predictions compared with events, and what a convincing argument of the truth and divinity of the Holy Scriptures! Where can you find a similar instance, but in Scripture, from the beginning of the world to this day?"

12. From this time the history of Babylon is one succession of calamities. Impatient of the Persian yoke, it revolted against Darius Hystaspes, the successor of Cyrus, and that monarch, when the city had been captured by stratagem, took away its gates, ruined its walls, and massacred great numbers of its inhabitants. Xerxes, also, after his return from his Grecian expedition, seized upon the treasure in the temple of Bel, and used his utmost efforts to ruin the edifice. For the next century and a half little mention is made of Babylon, until the time of Alexander, who proposed to restore its ancient prosperity, and to make it the capital of his empire. This scheme was frustrated by his death, and Seleucus, who succeeded to this portion of his dominions, founded the rival city of Seleucia on the Tigris, and removed thither 500,000 of the Babylonians. This was the final blow to its importance: in the relations of Diodorus Siculus, Strabo, Pliny, and Curtius, we trace its rapid decay, till at length it resumed something of its primeval condition, the greater part of the ground within its walls being in a state of tillage; and still later St. Jerome, in the fourth century of the Christian era, informs us that even tillage had disappeared, and the site of the proud city served for a hunting ground for the Persian kings, its walls having been repaired by them for the purpose of inclosing the game. Finally, even these walls have disappeared, or only exist as confused and widely scattered heaps of rubbish; and at the present time we may say, in the impressive language of Scripture, "She sits as a widow on the lonely ground; there is no more a throne for thee, O daughter of the Chaldeans!" (Isai. 47. 8;) her swarming population has been swept away, the naturally fertile soil "sorrowed" in the absence of the husbandman, and all that the eye can now perceive beyond the piles of ruins is a mournful waste of barren sand and marsh. The prophet Jeremiah was commissioned

Birs Nimrod.

Kasr, or Palace.

Mound of Babel.

Plain of Babylon.

to declare that the Lord would "make the land of Babylon a desolation," and most literally has the prediction been fulfilled.

"Where labourers shaded by palm-trees a hundred feet high, irrigated the fields till all was plentifully watered from numerous canals, the wanderer, without an object on which to fix his eye but stunted and short-lived shrubs, can scarcely set his foot without pain, after the noon-day heat, on the arid and parched ground, in plodding his weary way through a 'desert,' a 'dry land,' and a wilderness. Where there were crowded thoroughfares from city to city there are now silence and solitude, for the ancient cities of Chaldæa are 'desolations.'" (Keith.)

13. The most remarkable of the mounds and ruins which point out the site of this famous city are the Mound of Babel, the Kasr or Palace, the Amram, the Mugalibah, Al Heima, and the Birs Nimrood.

The Mound of Babel, in the opinion of Mr. Ainsworth, indicates the site of the original city of Nimrod, though this is inconsistent with the theory which assumes the Birs Nimrood to be the remains of the Tower of Babel. Its square superficies is 49,000 feet; its elevation at the south-east corner, 64 feet.

To the south of the Mound is the Mugalibah, having a square superficies of 120,000 feet, and a height of only 28; beyond this again, the Amram Ibn Ali, perhaps the Western Palace, having an area of 104,000 feet, and an elevation of 23. The name Mugalibah has been understood as if it were derived from Mukallib, from Kilba, "the overturned or overthrown;" but Mr. Ainsworth considers that a much nearer affinity exists to Mugalibah, plural of Jalib, a slave or captive; "the House of the Captives," and that it was not improbably the residence of the Israelites who remained in Babylon. Considerably to the north is the Mound of Al Heima, an isolated eminence, having a superficies of 16,000 square feet, and an elevation of 44, with a ruin on the summit, eight feet high, from the red colour of which its modern name is derived. The Birs Nimrood has been already described under BABEL.

14. Between the Kasr and the Amram, there is every probability the river Euphrates once flowed, where the subaquatic tunnel of Semiramis may have also existed, and where quays lined the banks, at the time Alexander was carried over during his last illness. Heeren has, almost alone, endeavoured to identify the western palace of Diodorus, with existing mounds on the west side of the actual bed of the Euphrates.

The Kasr, or Palace, is a mound of about 700 yards in length and breadth. Its moulded bricks ornamented with inscriptions, and its glazed and coloured tiles, added to the sculptures that have been found there, speak of its importance, and have led to its being generally looked upon as the eastern, and the largest of the palaces of the Babylonian monarchs, renowned for its sloping gardens.

15. On the summit of the Mugalibah there are considerable traces of an erect building, and at the west end there is a mass of solid brick-work sloping towards the top and rising from a confused heap of rubbish. The chief materials of which this fabric is composed seem to be a mixture of chopped straw with slime used as a cement, and regular layers of unbroken reeds between the horizontal courses of the bricks. The base is considerably injured by time, especially towards the south-east, where it is cleft from top to bottom into a deep furrow. "The sides of the ruins," says Captain Mignan, "exhibit hollows worn partly by the weather, but more generally by the Arabs, who are incessantly digging for bricks, and hunting for antiquities. Several of the exca-

vations I entered, and have no reason to suppose that they are inhabited by such ferocious animals as the generality of travellers assert. There certainly was an offensive smell, and the caves were strewn with bones of sheep and goats, devoured most probably by the jackals that resort thither in great numbers, and thousands of bats and owls have filled many of these cavities. The natives are very reluctant to follow the visitor into these dens, and dislike remaining near the ruins after sunset, rather from the fear of demons and evil spirits, than from any attack of lions or other wild beasts. Indeed, by their account, there are not half a dozen lions within thirty miles round Babel, though about sixty miles below Hillah on the banks of the river, in a considerable patch of brushwood, those animals are very numerous. It appears that the only risk attendant on entering the recesses in all the mounds is the liability of being stung by venomous reptiles."

16. Mr. Rich, in his *Visit to Babylon*, says, that he discovered a wooden coffin containing a skeleton in high preservation near the summit of the northern part of the Mugalibah, and a little further the skeleton of a child was found. The question then is, what the immense pile, the Mugalibah, or the *overturned*, could have been? for it may be observed that the ground dimensions of both the Birs and the Mugalibah correspond with that of the tower of Belus. Mr. Rich thinks that in some respects the Mugalibah would answer sufficiently well to the accounts of the celebrated hanging gardens, which, according to Strabo, formed a square of four hundred feet on each face and stood upon the river, from which they were supplied with water.

17. "It is not surprising," observes Mr. Buckingham, "that so few, but that so many, vestiges of the edifices of Babylon should be in existence; most of the buildings are supposed to have been of unburnt bricks." Major Rennell says, that "the ancient walls and ruins would of course be the quarry above ground for all subsequent structures during the more recent centuries; the bricks united by so powerless a cement were always easy to be removed for new speculations. The vast circuit of the walls always caused them to be the readiest materials for any new habitations within the city, as it was needless to pass beyond the components for building first to be met with; thus the materials of the walls were a resource for thirty centuries." Thus Bagdad, Hillah, and other places also, have been indebted to ancient Babylon for building materials.

18. The population of Hillah, the site of part of these immense ruins, at present amounts to between 6000 and 7000, consisting chiefly of Arabs and Jews. It is surrounded by mud walls and a deep ditch, and has four gates. The Euphrates annually overflows its banks, inundating the country for many miles round, and even rendering the district between the Euphrates and Tigris navigable in many places for flat-bottomed boats. This annual flood fills the canals and facilitates agriculture in a surprising degree. The air is salubrious, and the soil extremely fruitful, but in consequence of the exactions of the Pachas and the insecurity of property, the inhabitants exert no sort of industry; the numerous canals are left dry and neglected, except when filled spontaneously by the river; and the small quantity of land that is cultivated does not yield one-half of what might be procured from it. See HILLAH.

BABYLONIA, a country of Asia, the "land of Shinar" of the Scriptures, bordering the Tigris and the Euphrates, having Mesopotamia to the north, and the Persian Gulf to the south, on the west a part of Arabia Deserta, and on the east the Persian province of Susiana.

On the N.E. was an entrenchment called the wall of Semiramis, its erection being attributed to that queen. It is one vast plain, watered by the river Tigris and Euphrates, and the most ancient record that refers to the country, represents its inhabitants as a nation possessing fixed abodes and political institutions.

2. High and extensive mounds, monuments of a laborious and aspiring people of former times, present themselves on the eastern and western banks of the Euphrates on various parts of the great plain of Chaldæa. About thirty miles from the head of the plain a deep artificial channel, called by the natives Grayino, takes its departure from the river Euphrates, bearing its waters to several distinct mounds, amidst which one towers in superior magnitude and height. The site itself preserves the name of Irkáh, Senkerah, and Irák, and is also called Asayiyah, or *the place of pebbles*.

The gigantic mound designated as the Mogeiyer, (*place built of bitumen*), rises upwards of 200 feet above the level plain which bounds the horizon to the west of the Euphrates, accompanied by other mounds of less dimensions, and less precipitous acclivities, but over which are everywhere strewn the remains of bricks cemented by bitumen, and of antique pottery and constructions. The appearance of the Mogeiyer surpasses in boldness the ruins of the Birs Nimrood. It is situated in the plain about twelve miles west of the river Euphrates upon the ancient bed of the Pallacopas.

3. No monuments in Babylonia and Chaldæa appear to be more valid regarding the antiquity and Assyrian origin of sites, than the lofty artificial mounds, of which the present degenerate hordes of the tent and the spear narrate so many fabulous tales; but which almost everywhere present themselves where there are also other strong grounds of presumption of an Assyrian or Chaldæo-Babylonian origin. These colossal piles are found domineering over the dreary waste, to the uniformity of which they offer a striking contrast; being visible at great distances, and although thrown by the *shráb* or mirage into strange and contorted shapes, yet they always appear, when seen upon the verge of the horizon, as if possessing colossal dimensions, and produce an effect in point of grandeur and magnificence which cannot be imagined in any other situation.

The absence of these mounds is an equally strong objection to the determination of sites as Assyrian or Chaldæo-Babylonian, more particularly where the other sources of identification do not rest upon grounds of an unexceptionable character. Such, for example, are the scholastic dreams of St. Jerome, and the positioning by Abú-el-Faráj, of Erech, Accad, and Chalue, at Urfáh, Nisibin, and Márdin.

4. The river Tigris entered Babylonia at the wall of Semiramis, where was the town of Opis; it flowed thence S.E., and received the canal on which stood Sitace; thence it passed betwixt the city Ctesiphon on the east and Seleucia on the west, to a place called Coche, and after washing the walls of Akula, Aracca, Apamea, and Charax, under the name of Pasitigris fell into the sea.

The Euphrates entered Babylon near Cunaxa, celebrated by Xenophon. It flowed N.E. to Macepracta, whence it took a bend to the S.E., and followed nearly a parallel course to that of the Tigris. In its course it divided Babylon into the east and west quarters, passed Urchoe and Teredon, and fell into the Persian Gulf to the west of the Tigris, though the streams are now united.

5. The Euphrates has a much higher bed than the Tigris. "Its level banks," says Professor Heeren, "are generally filled to the brink with the mighty mass of

waters which roll between them, so that the least increase causes an overflow. The Tigris, on the contrary, has a much deeper channel, with hollow shores, over which it seldom or never passes, although its current is much more rapid than that of the Euphrates. At a certain period of the year, however, from the snow melting on the mountains of Armenia, this latter river, like the Nile, constantly inundates the surrounding country. To set bounds to the frequent inundations of so large a stream, in a completely level country, was certainly not an easy, though an indispensable, undertaking. Like the people dwelling on the banks of the Egyptian river, the Babylonians had to wrest their country from the invasions of the flood, and the efforts this required seem to have developed their genius, and to have given an impulse to the progress of civilization and the arts among them, for which they were scarcely less celebrated than the Egyptians. In the warm and dry climate of Babylon it was not sufficient merely to restrain the floods; there was likewise the proper irrigation of the soil to be cared for. The whole of Babylonia was intersected by a variety of large and small canals, some running across the country from one river to the other, and answering the double purpose of communication and irrigation, while others were formed solely for the latter object." Numerous traces of these canals were still to be seen.

6. Herodotus compares Babylon with Egypt, and says that, with regard to the production of the former in corn, it was reckoned equal to a third part of the Persian empire, and that it generally yielded two hundred and sometimes three hundred fold. "The great extent of the plain of Babylonia," observes Mr. Ainsworth, "is everywhere altered by artificial works; mounds rise upon the otherwise uniform level; walls and mud ramps and dykes intersect each other; elevated masses of friable soil and pottery are succeeded by low plains, inundated during the greater part of the year; and the antique beds of canals are visible in every direction. There is still some cultivation and some irrigation. Flocks pasture in meadows of the coarse grasses (*sedges* and *cyperacæ*); the Arab's dusky encampments are met with here and there, but, except on Euphrates' banks, there are few remains of the date-groves, the vineyards, and the gardens which adorned the same land in the days of Artaxerxes; and still less of the population and labour which must have made a garden of such a soil in the times of Nebuchadnezzar."

"If nature," says Professor Heeren, "on one side had done much towards assisting the labours of the inhabitants, she had, on the other, thrown incredible obstacles in their way. The perception of the first urged them to overcome the latter. Yet all this, perhaps, would have been in vain, without the still greater advantage derived from the favourable position of the country. In consequence of this, Babylon became the principal state of Western Asia, nature herself seeming to have formed it for the seat of the great international commerce of Asia."

7. The soil of the marshes of Lemlum, the southern boundary of the plains of Babylonia, "consists, for the most part, of a soft alluvial clay and mud, containing only river and lacustrine shells. The greater part of the basin is, however, occupied by water or by vegetation, in which the preponderance of *cyperacæ* and *typhacæ*, and a large *graminææ*, announce, as in the temperate zone, the aquatic character of the country, and a comparatively cold and humid climate. These marshes feed large herds of buffaloes, and the mud that is not covered by vegetation, or which is dried by the summer heat, becomes, during the season, clothed with luxuriant crops of rice. The wild and robber inhabitants of these dis-

tricks, celebrated for their fine forms, appear, like wading-birds, to have, from constant living in mud and water, long and graceful limbs. They belong to the tribe of Khezail, and are descendants of a Persian race. They live in reed huts, temporarily erected on isolated dry spots, like islets in a wilderness of waters; but these are very frequently flooded, and it is no uncommon thing to see the children swing in cradles attached to the roof, while the waters are flowing through the arched cottage, in an uninterrupted stream.

"It is a common practice," continues Mr. Ainsworth, "during the few months that the marshy districts are dry, to fire the desiccated and earth-brown vegetation; when, if there is the slightest breeze, the flames spread with fearful rapidity. On these occasions numerous birds of prey, kites, vultures, and large grey crows, are seen hovering in the air, and sweeping through the dense piles of smoke which curl above the region of devastation like clouds; in the train of which they are ever and anon seen to alight, where an abundant destruction of animal life attends the progress of the fire. Small quadrupeds, such as the jerboa and shrew mice, hurried out of their holes, fall victims to the kites and falcons, while an abundant harvest of half-broiled snakes and lizards, await the vultures and the crows."

8. The vegetation of these tracts is characterized by the usual saline plants, the river banks being fringed by shrubberies of tamarisk and acacia, and occasional groves of a poplar (*gharab*), with lanceolate and cordate leaves in separate parts of the same branch, and which has been mistaken for a willow. The weeping-willow (*Salix Babylonica*) is not met with in Babylonia. The common tamarisk of the country, the athleh, or alte of Sonnini, is the *Tamarix Orientalis* of Forsk. The solitary tree "of a species altogether strange to this country," (Heeren, *Asiatic Nations*.) found growing upon the ruins of the Kasr at Babylon, and which Rich calls *lignum-vitæ*, has been supposed to be a last remnant or offspring of the hanging gardens, that appeared to Quintus Curtius like a forest, is also a tamarisk, but it differs from the athleh in its size, being a tree, in having scaly branches and long slender petioles, which are less burdened with leaves, both of which may have been produced by a scanty supply of water and great age. A tamarisk exactly resembling the Babylonian tree, is, however, frequently observed overshadowing the walls of Farsistan, and is common in the country of the queen, for whose solace the hanging gardens are said to have been erected.

BABYLONIAN ANTIQUITIES. That a people whose city was for ages an object of wonder and admiration to the most polished and intellectual nations of antiquity, were themselves no mean proficient in the fine arts, would appear a perfectly fair conclusion; yet it is a remarkable fact, that the research of modern travellers has brought to light nothing tending to confirm this view. All that they have been able to collect, beside the engraved bricks so largely employed in the construction of the various buildings whose ruins are now scattered over the plain, have been two or three rude specimens of sculpture, a few worthless and inelegant trinkets, and some engraved cylinders, about which there is great difference of opinion, some writers looking upon them as signets, while others think that they were worn round the neck as amulets. Of all these remains, the bricks are unquestionably the most important, and we shall therefore describe them first, then notice the sculptures, the trinkets, and lastly, the signets or amulets.

BRICKS These are of two kinds, one dried in the sun, the other burnt by fire. The size of the latter is

generally thirteen inches square by three thick; there are some which do not exceed half these dimensions, and a few with shapes adapted to particular purposes, such as for rounding corners, &c. They are of various colours, white approaching more or less to a yellowish cast, like our Stourbridge, or fire-brick, which is the finest sort; red, like our ordinary brick, which is the coarsest sort; and some that have a blackish cast, and are very hard. The sun-dried brick is much larger than the other, and looks like a clod of earth, in which are seen portions of broken reed and chopped straw, intended to give compactness to the mass.

When any degree of thickness was required, the practice with the Babylonian builders seems to have been to form the mass with sun-dried bricks, and then to cover it with a facing of burnt bricks; and Mr. Rich observes that bitumen was by no means so generally used in the structures of Babylon as is commonly supposed. This is demonstrated by the fact that bitumen is only found in the ruins as a cement in a few situations, generally towards the basement, where its power of resisting wet rendered it valuable.

The inscriptions which are seen on the bricks of Babylon and the walls of Persepolis, are formed of similar characters but differ in some fundamental points. Those on the bricks appear to have been stamped, while the mass was in a soft state, by a block of wood, and consist of a series of arrow-headed characters; those of Persepolis are composed of three different forms, but present, in general, the figure of a nail or wedge, whence they have been termed cuneiform. These characters are clear, distinct, and separate. Those inscribed on the walls of Babylon present much the same elements of nails and angles, but are much less distinct and less separated, and are generally united and grouped together. At first sight, the Persepolitan writing appears to be alphabetic, and that of Babylon hieroglyphic. M. de Sacy is of opinion that the Babylonian is a true hieroglyphic writing, while others consider it alphabetic. M. de Paravey, who has long studied the subject, thinks that it resembles the ancient writing of China; and he is of opinion that these bricks, as well as the hieroglyphics of Egypt, can only be understood by careful comparison with the ancient symbolic characters of the Chinese, and that success would infallibly attend well-directed researches in that quarter.

Y

A modern English writer gives us the following opinion:—"The language may safely be pronounced to be Chaldee; the system of letters is alphabetical, and not symbolical, and each figure on the bricks a simple letter, and not a word, or a compound character; the number of different characters, with their variations, may be therefore easily ascertained. Any one, however, who ventures on this task, should have a thorough knowledge of the Chaldean language, as well as indefatigable application; aided by these qualifications, and furnished with a sufficient quantity of specimens, he might undertake the labour with some prospect of success. Could such a task be accomplished, some very interesting memorials of the most ancient

monuments of human art and knowledge would be brought to light."

Several of these bricks may be seen in the British Museum, and also in that of the East India Company. We give a couple of specimens from Sir Robert Ker Porter.

Another specimen, engraved below, contains, according to a writer in the *Archæologia*, an inscription which

literally signifies, "A brick baked in the sun." It measures thirteen inches in length and seven in width.

Beside the written bricks, as they are termed, there are found numerous others which bear the figure of an animal, by some writers supposed to represent a dog, by others a lion, surmounted by some characters equally indefinite. The supporters of the first hypothesis look upon the frequent occurrence of the animal as a confirmation of the statements of Herodotus and other writers, of the partiality of the Babylonians and Persians for the dog*, while their opponents consider the figure of the lion to prove that the bricks

in question are records of those astronomical observations for which the Babylonian priests were so famous, and which they are known to have commemorated in this manner. Many bricks are also found bearing the figures of the sun and moon.

In addition to the various forms of bricks as described by Mr. Rich and Sir Robert Ker Porter, numerous

* It appears that they imported Indian dogs, which are described as having been very large and fierce, well suited for hunting wild-beasts, and even lions. The ancient Persian noblemen kept great numbers of these animals for the purposes of the chase, and were generally accompanied by them in their military expeditions.

masses of baked clay in a cylindrical form have also been found written very thickly all over with arrow-headed characters.

SCULPTURE. The figure of a lion standing over a prostrate human figure extended on a pedestal nine feet in length by three in breadth, was discovered in the Kasr, the presumed Palace of Nebuchadnezzar. Captain Mignan says, "The whole is composed of a block of stone of the ingredient and texture of granite, and the sculpture in a very barbarous style, much inferior to the Persepolitan specimens of this art."

Beside this specimen, Mr. Rich saw a large fragment of a figure lying in the desert about midway between Hillah and the site of Seleucia. It consisted of the lower half of a man in a sitting posture, the legs were close together in the Egyptian style, and the hands rested on the thigh; it was cut in a bluish basalt.

TRINKETS. Small figures, some of bronze and some of clay, are often picked up among the ruins; of which we give a few specimens. Our information is very vague regarding them, but it appears probable that they were trinkets for the person, and perhaps idols likewise, as was the case among the Egyptians.

At the Kasr, Captain Mignan discovered an ornamental flat fragment of calcareous sandstone, glazed with brown enamel on the superior surface, and bearing the raised figure in good relief, which proves that the Babylonians were also acquainted with the art of enamelling.

SIGNETS AND AMULETS. Engraved cylinders from Babylon are to be found in most of the great European

collections; they are generally of cornelian, opal, jasper, agate, and other hard and precious stones. Their size is various, some being ten times as large as others; but in general they are from three-fourths of an inch to more than two inches in length, and of a proportionate circumference. They are bored longitudinally, and the rounded surface is engraved over with a variety of figures, apparently mythological subjects expressing astronomical facts by impersonation. Sir Robert Ker Porter considers they were worn suspended from the neck as protections from the supposed malign influences of the stars. It appears, however, highly probable that many of them served as signets; the longitudinal perforation being intended for the reception of an axis on which the cylinder was made to revolve. The axis and

handle represented in our cut is not found with any such cylinders, but was added by Sir William Hamilton to one in the British Museum, for the purpose of showing the manner in which it is presumed they were employed. The conclusion that the cylinders were seals has been

much strengthened by the curious and elaborate researches of Mr. John Landseer, in his volume entitled *Sabæan Researches*; and we learn from Ctesias and other writers that seal rings were very common among the Babylonians, while the kinds of stones mentioned by them as being employed are the same as those of the cylinders.

These cylinders may be considered as furnishing curious examples of very ancient engraving, to which there is frequent reference made in the Scriptures.

The above cuts exhibit a specimen of engraving on a signet or cylinder, in which their wild astrological superstitions in the deification of the planets are made apparent; for they worshipped all those various symbols as separate Intelligences, ruling the universe by fatal influences. The principal hieroglyphics appear to be the sun and the moon, and the anhaspand, or seven balls, indicative of the seven celestial powers or intelligences, which were always attendant on the principal Chaldean deity.

Amongst others a cylinder has been found of medium size, inscribed with Hebrew characters, expressing the name and style of the "Prince of the Captivity;" a title which has been borne by the chief person among those who remained there, from the time the Jews resided as captives in Babylon. The manner in which the name and title are exhibited, together with the date,

clearly denote its character as an official seal. The Jews while at Babylon, undoubtedly became acquainted with the use of seals, and probably had such inscriptions of name and style as were in accordance with the law, the hieroglyphical inscriptions used by other nations being strictly forbidden by the interdict with respect to graven images.

Figures of men in combat with the lion and the bull frequently occur on the signets, and probably had a symbolical signification connected with astronomy.

BABYLON THE GREAT, an appellation given to the false church or antichristian apostasy by the writer of the Apocalypse, ch. 14 and 18.

To perceive the force and propriety of denominating the apostate church of Rome by the name of this renowned city, it is only necessary to consider that the kings of Babylon were in former times the most formidable enemies of God's ancient people, the Jews. For not only as a nation did they suffer more from the Babylonians, by the invasion of their country, and their being carried into captivity, but much also of that corruption of their worship, which brought down the judgments of heaven upon them, seems to have been derived from that country. Hence the prophet Jeremiah describing ancient Babylon, says, "It is the land of graven images, and they are mad upon their idols." (50. 38.) And again, "Babylon hath been a golden cup in the Lord's hand, that made all the earth drunken: the nations have drunken of her wine; therefore the nations are mad." (51. 7.) Thus, "as Babylon of old was the first of all idolatrous cities, she is taken as the fittest emblem to set forth the enormous guilt, and to exhibit in full light the extensive influence of idolatrous Rome; the former corrupting the heathen world, and the latter the Christian." Bishop Hurd's *Sermons*.

The paraphrase of Bossuet, bishop of Meaux, on Rev. 17. 5, is remarkable as admitting Rome to be the city intended by St. John. "Babylon," says he, "is meant by the name of the whore, and Rome by Babylon. This is the most natural sense. We see then why St. John represents Rome under the name of Babylon, as she had all the characters of Babylon, an empire full of idols and divinations, and a persecutor of the saints as she was." The bishop no doubt refers this to Rome Pagan, but Protestant interpreters infer that this vision not only represents the persecutions of Rome Heathen, but of Rome Antichristian.

BACA, נְצַל This word occurs in 2Sam. 5. 23 and 1Chron. 14. 14,15, where it is by our version rendered mulberry-trees, but in Psalm 84. 6 it is used as a proper name; the Rabbins consider it to denote the mulberry-tree, but the Septuagint and Vulgate have pear-tree. By some commentators the word used as a proper name is supposed to denote that the valley abounded with a shrub resembling the balm-shrub (*Amyris Gileadensis*), and called baka. "After many uncertain conjectures," says Bishop Horne, "offered by commentators on the construction of these two verses, (Psalm 84. 6,7), it seems impossible for us to attain to any other than a

general idea of their true import, which is this, that the Israelites, or some of them, passed in their way to Jerusalem through a valley that had the name of *Baca*, a noun derived from a verb which signifies to *weep*; that in this valley they were refreshed with plenty of water—and that with renewed vigour they proceeded from stage to stage, until they presented themselves before God in Zion." In the Fragments to Calmet it is alleged that this valley lay among the mountains of Lebanon, that some rivulets ran through it, and that it was one of the most northern districts whence travellers were supposed to journey to Jerusalem. De la Roque (*Voyage de Syrie*), states that the province or rather the whole territory of Baalbec towards the mountains is named in Arabic *Al-Bkaa*, which we express by *Bekaa*. It is watered by a river and many other streams. Winer; Gesenius; Rosenmüller; Forskal.

BACHOR or BACHUR. See BAHURIM.

BADGERS' SKINS. In the directions given by the Most High for the building and the removal of the tabernacle, in Exodus ch. 24 and 25, and Numbers ch. 4, among the materials to be used occurs *תַּחַשׁ tachash*, in combination with *עֹר oir*, (*skin or leather*), and in Ezek. 16. 10, the substance is spoken of as fit for making shoes. Our translators have considered *tachash* as an animal, and in accordance with the Chaldee version have rendered the phrase, "badgers' skins."

This, however, is a point upon which great diversity of opinion exists. The Talmudists suppose that an animal is intended, but differ greatly as to the kind. One conceives that it was a beast of many colours, not now existing, while others name the badger, the weasel, the marten, or the calf. On the other hand, many of the ancient versions take *tachash* to be a colour, which the Septuagint and Coptic, and the versions of Aquila and Symmachus, style violet; the Syriac, azure; and the Arabic, black.

Among modern commentators equal differences prevail, though they generally incline to the opinion that *tachash* is an animal. Several agree with our translators, while Hasaüs, Michaëlis and others have laboured to prove that it must be the sea-cow, but this can hardly be the case, as the skin of this creature is not at all fitted for the purposes intended; and a similar objection applies to the badger also. Upon the whole, although Bochart argues strongly in favour of a colour, the best-founded opinion appears to be that of Rau, which has been adopted by Faber, Rosenmüller and others, that *tachash* signifies the seal; for besides that seals-skin was formerly used for covering tents and making shoes, there is a striking resemblance between *tachash* and the Arabic name of the dolphin, (*تَحْش tachash*, or *زَحْش zachash*), with which the seal is frequently confounded by ancient writers.

BAG, *כֶּסֶף* rendered purse in Prov. 1. 14, and used in the same sense in Isai. 46. 6, but in Deut. 25. 13, and Micah 6. 11, used for the pouch at the girdle, in which of old as at the present day in the East, weights were carried by the travelling merchants. The money collected together in the treasuries of Eastern princes is told up in certain sums, put into bags and sealed, a practice apparently as old as the time of the patriarch Job. (Job 14. 17.) The Turkish custom of reckoning large sums of money by purses is also very ancient; for the money collected in the Temple for its reparation, in the time of Joash, seems, in like manner, to have been told up in bags of equal value to each other, which were probably delivered sealed to those who paid the workmen. (2Kings 12. 10.)

"As in former times, so now, much of the business of the East is transacted by travelling merchants. Hence all kinds of spices and other articles are taken from one village to another by the Moors, who are in those regions what the Jews are in the West. The pedlar comes to your door, and vociferates the names of his wares; and so soon as he catches your eye begins to exhibit his very cheap and valuable articles. Have you agreed as to the price, he then produces the bag of 'divers weights,' and after fumbling some time in it, he draws forth the weight by which he has to sell, but should he have to purchase anything of you, he will select a heavier weight. The man who is not cheated by this trader and his 'bag of divers weights,' must be blessed with more keenness than many of his fellows." Roberts's *Oriental Illustrations*. See SCRIP.

BAHURIM, *בְּחֻרִים* a village near Jerusalem in the way to Jordan, belonging to the tribe of Benjamin, where Shimei cursed David. (2Sam. 16. 5.) It is alleged by some geographers to be the same as Almon. Josephus calls it Bachoures.

BAITHLYIA, a word derived from *בֵּית אל Bethel*, and denoting the "standing images," or consecrated stones, adored by the early Phœnicians, which probably originated in Jacob's setting up and anointing with oil the stone which he had used for a pillow as a memorial of the heavenly vision with which he had been favoured, (Gen. 28. 18,) and also to serve as a token to point out to him the place when God should bring him back again. This form of idolatry apparently prevailed to a great extent in the time of Moses, who therefore prohibited the Israelites from erecting them. (Levit. 26. 1.) In Morier's *Second Journey* we find the following interesting observations upon the subject.

"Every here and there I remarked that my old guide placed a stone on a conspicuous bit of rock, or two stones one upon another, at the same time uttering some words which I learnt were prayers for our safe return. This explained to me what I had frequently seen before in the East, and particularly on a high road leading to a great town, whence the town is first seen, and where the Eastern traveller sets up his stone, accompanied by a devout exclamation, as it were, in token of his safe arrival. The action of our guide appears to illustrate the vow which Jacob made when he travelled to Padan-Aram. (Gen. 28. 18-22.) In seeing a stone on the road placed in this position, or one stone upon another, it implies that some traveller has made there a vow or a thanksgiving. Nothing is so natural in a journey over a dreary country, as for a solitary traveller to sit down fatigued, and to make the vow that Jacob did:—'If God will be with me, and keep me in the way that I go, and will give me bread to eat and raiment to put on, so that I reach my father's house in peace,' &c., then will I give so much in charity: or again, that on first seeing the place which he has so long toiled to reach, the traveller should sit down and make a thanksgiving; in both cases setting up a stone as a memorial." See PILLAR-STONE.

BAJITH, a city in Moab, where there was a celebrated idol temple, thought to be the same as Baal-Meon. The name occurs in the prophecy against Moab in Isaiah 15. 2: "He is gone up to Bajith and to Dibon, the high places, to weep," which passage is thus interpreted by Bishop Lowth: "He is used for the people of Moab. Bajith and Dibon are in the Chaldee and Syriac versions made into the name of one place, Beth-Dibon. Beth may signify the house or temple of an idol."

BAKE, BAKER. The instructions given by Abraham to Sarah upon the occasion of the visit of the angels to his tent, (Gen. 18. 6,) show that in this as in so many other cases the customs of the East have undergone little change from the earliest period to the present day. It is only in large towns that there are bakers by trade. In villages and camps every family bakes its own bread; the labour being performed by the women; such was the custom among the Jews, as Tamar, the daughter of a king, seems to have acquired distinction as a good baker of bread. (2Sam. 13. 5-10.)

"In the cities and villages of Barbary," says Paxton, "where public ovens are established, the bread is usually leavened; but among the Bedouins and Kabyles, as soon as the dough is kneaded, it is made into thin cakes, either to be baked immediately upon the coals, or else in a shallow earthen vessel like a frying-pan, called *tajen*. Such were the unleavened cakes which we so often read of in Scripture, and those which Sarah made quickly upon the hearth."

Brocquiere, who travelled in Palestine in the fifteenth

century, says, "I saw women make those thin cakes I spoke of. This is their manner of making them: they have a small round table, very smooth, on which they throw some flour, and mix it with water to a paste, softer than that for bread. This paste they divide into round pieces, which they flatten as much as possible with a wooden roller of a smaller diameter than an egg, until they make them as thin as I have mentioned; during this operation, they have a convex plate of iron placed upon a tripod, and heated by a gentle fire underneath, on which they spread the cake, and instantly turn it, so that they make two of their cakes sooner than a wafer-man can make a wafer."

In the engraving below (from a tomb at Thebes) will be seen the process of baking as conducted among the Egyptians. The two figures with staves in their hands are treading or kneading the dough, in a large trough; the kneeling figures are making cakes of bread probably sprinkled with seeds; which are then conveyed on the head of a man to the oven, where two others are standing ready to receive them. See CONFECTIONER.

Baking Bread. From the Monuments.

BALAAM, בלעם, a prophet or diviner, who was sent for by Balak, king of the Moabites, to curse the Israelites. He dwelt at Pethor on the Euphrates, and on his journey to Balak, he was encountered by an angel, when the miracle of the power of speech being bestowed upon the animal on which he rode, occurred. Balaam humbled himself before the angel, and would have retraced his steps, but he was commanded to proceed, being first charged to "speak only the word that should be spoken unto him." He did so, and when he came in sight of their camp, he uttered blessings upon the Israelites instead of curses. He then "went to his place," but was shortly afterwards slain, having joined himself to the Midianites, and perishing in the battle in which the five kings of that nation were killed. (Numb. 31. 8.)

2. It is a question much debated among divines whether Balaam was or was not a true prophet of the Lord. St. Peter designates him a prophet, (2Peter 2. 15,16,) and this by some has been considered decisive of the point; although it is expressly stated that he "loved the wages of unrighteousness."

Origen and others say that all his power consisted in magic, and Theodoret, Cyril of Alexandria, and Ambrose, believe that he prophesied without being aware of the import of what he said. When the arguments are fully considered they appear to lead to the conclusion that he was a Chaldean priest, magician and astrologer by profession, and a prophet by accident. He dwelt in a country which from the earliest times was celebrated for the observation of the stars, and the astronomy of antiquity was almost always mixed up with astrology and imposture.

The terms employed by the sacred historian are so express as to leave no doubt that Balaam, at least occasionally, received the gift of prophecy, though that gift did not always sanctify the heart. (Matt. 7. 22.) If then

we refer to the circumstances, we shall find reasons for the employment of this person worthy of the Divine wisdom. The Hebrews had arrived on the borders of Canaan, which country they were about to enter; they knew that Moses would not enter it; and in order to encourage the people to effect the conquest of the promised land, even without Moses, God caused one who was hostile to them to utter predictions of their victory. This circumstance must have been most encouraging to the Hebrews, at the same time that it would prove to them how vain and useless would be the superstition of those idolatrous nations in opposition to the Divine will.

3. The history of Balaam presents the last trace of the knowledge of the true God which may be found among the idolatrous nations of Canaan. If the rites celebrated by him were not devoid of superstition; if it be difficult to put a favourable construction upon the enchantments which Moses seems to attribute to him, it only follows that, like Laban, he blended error with truth. The mixed religion thus professed by him, furnishes a key to his mysterious history. Sacerdotal maledictions were at that time considered as most potent instruments of evil, and the people of Moab and Midian thought that they should find in Balaam an adversary who was capable of effectually opposing Moses. In the judgment of these nations, Moses was a formidable magician; and, as Pharaoh had done forty years before, they sought out on their part a magician to defend them; they wished to curse the Israelites in the name of Jehovah, whom they supposed to be a more powerful deity than their own god.

4. The notion extensively prevailed among the ancient idolatrous nations of the East that there were individuals who had the means, through the performance of certain rites, or by the exertion of some occult influence, to devote an enemy to destruction. The Romans, also, in later times, had a peculiar form of evoking or calling out the

god under whose protection a besieged city was supposed to be, and also of devoting the people to the infernal deities, as described by Macrobius and by Plutarch. "At the present day," says Mr. Roberts, "the Orientals have always their magicians with them to curse their enemies, and to mutter incantations for their destruction. Sometimes they secretly convey a potent charm among the opposing troops, to cause their destruction. In the war with the Burmese, their generals had several magicians, who were much engaged in cursing the British troops, but as they did not succeed, a number of witches were brought for the same purpose. Many of the Hindoo Puranas speak of kings employing sages to curse their enemies."

5. The same author observes, in reference to the direction of Balaam to have seven altars built, with seven oxen and seven rams prepared for sacrifice, "The number seven is generally attended to by the Hindoos in their offerings. The poorer sort will offer seven areka nuts, or limes, or plantains, or betel leaves, or seven measures of rice; and if they cannot go so high, will at least take care to present an odd number."

6. St. Augustine, with the greater number of commentators, considers the statement of the ass of Balaam speaking, to be a literal fact; but most of the Jewish writers receive it not as a circumstance which actually took place, but as having occurred in a vision or some similar manner. Bishop Newton, in his *Dissertations on the Prophecies*, says, "The speaking ass, from that time to this, hath been the standing jest of every infidel. Maimonides and others have conceived that the matter was transacted in a vision; but it appears rather more probable from the whole tenor of the narrative that this was no visionary, but a real transaction. The words of St. Peter show that it is to be understood, as he himself understood it, literally. (2Peter 2. 14-16.) The ass was enabled to utter such and such sounds, probably as parrots do, without understanding them: and say what you will of the construction of the ass's mouth, of the formation of the tongue and jaws being unfit for speaking, yet an adequate cause is assigned for this wonderful effect; for it is said expressly, that 'the Lord opened the mouth of the ass,' and no one who believes in a God can doubt of His power of doing this and much more. The miracle was by no means needless or superfluous; it was very proper to convince Balaam that the mouth and tongue were under God's direction, and that the same Divine power which caused the dumb ass to speak, contrary to its nature, could make him in like manner utter blessings contrary to his inclination."

I. BALADAN, the Belesis and Nabonassar of profane historians, was the founder of the Babylonian empire. He was originally only governor of Babylon, but having entered into a successful conspiracy with Arbaces, governor of Media, against Sardanapalus, king of Assyria, he received Babylon for his share of the dominions of his master. Dr. Hales places the era of Nabonassar, 747 B.C. See ASSYRIA.

II. Berodach Baladan, son of the above, is called Merodach Baladan in Isaiah 39. 1; it appears that he cultivated the friendship of King Hezekiah, having sent to congratulate him on his recovery from sickness. (2Kings 20. 12.)

Jeremiah, in prophesying the fall of Babylon, uses Merodach as the name of an idol, from which we may perhaps infer that one of these princes received divine honours after death. (Jerem. 50. 2.)

BALAK, the son of Zippor, king of Moab, (Numb. 22. 2,) is known in the Scriptures only by the circumstance of his having invited Balaam to his assistance against the Israelites. Balaam having advised Balak to induce the Israelites to sin, Balak, politically as he thought, followed his counsel; but this, in the event, proved equally pernicious to him who gave it, to those who followed it, and to those against whom it was intended.

BALANCE, BALANCES, מִזְנֵי *moznayim*. A balance, an ancient instrument for weighing. (Levit. 19. 36.) In Oriental countries, in the time of Abraham, the value of goods was estimated by a certain quantity of silver, the purity of which was taken into account by the merchant. It was commonly weighed out in balances, though its weight was sometimes ascertained by means of an instrument for weighing, corresponding to the modern steelyard. Merchants were accordingly in the habit of carrying about with them balances and weights in a sort of pouch or bag. The weights were stones.

The woodcut from the Egyptian sculpture, shows the ancient form of the scales used by that people; and is interesting, as exhibiting a general resemblance to those now in use. These instruments are depicted on the ancient monuments in several varieties of form, as with us, according to the sort of goods intended to be weighed. The scale-board, for example, is sometimes flat, and sometimes suspended from the beam by chains. There is no reason to suppose that the weighing instruments among the Jews differed in principle from those of the Egyptians.

2. The idea involved in the passage, "Thou art weighed in the balances, and art found wanting," (Dan. 5. 27,) is

Egyptian Balances. From the Monuments.

Balance of Good and Evil. From the Monuments.

sufficiently obvious in itself, but it is by no means impossible that the allusion received more force and meaning than we give to it, from a reference to some opinion or custom among the Babylonians. What that was we cannot say precisely; but probabilities may be suggested by analogies derived from other sources. Thus, the Egyptians entertained the belief that the actions of the dead were solemnly weighed in balances before Osiris, and that the condition of the departed was determined according to the preponderance of good or evil. Such judgment scenes are very frequently represented in the paintings and papyri of ancient Egypt. One of these scenes, as represented on the walls of a small temple at Dayr-el-Medeeneh, has been so well explained by Sir J. Gardner Wilkinson, that we avail ourselves of his description. "Osiris seated on his throne, awaits the arrival of those souls that are ushered into Amenti. Thoth, the god of letters, arrives in the presence of Osiris, bearing in his hand a tablet, on which the actions of the deceased are noted down, while Horus and Anubis are employed in weighing the good deeds of the judged against the ostrich feather, the symbol of truth and justice. A cynocephalus, the emblem of truth, is seated on the top of the balance. At length arrives the deceased, who appears between two figures of the goddess, and bears in his hand the symbol of truth, indicating his meritorious actions, and his fitness for admission to the presence of Osiris."

If the Babylonians entertained a similar notion, the declaration of the prophet, "Thou art weighed in the balances, and art found wanting," must have appeared exceedingly awful to them. But there may also be an allusion in this declaration to some such custom of literally weighing the royal person, as is described in the following passage in the account of Sir Thomas Roe's embassy to the Great Mogul:—"The first of September, (which was the late Mogul's birthday,) he, retaining an ancient yearly custom, was, in the presence of his chief grandees, weighed in a balance; the ceremony was performed within his house or tent, in a fair spacious room, whereinto none were admitted but by special leave. The scales in which he was thus weighed, were plated with gold, and so was the beam, on which they hung by great chains, made likewise of that most precious metal. The king sitting in one of them, was weighed first against silver coin, which immediately afterwards was distributed among the poor; then was he weighed against gold; after that against jewels, (as they say,) but I observed, (being there present with my lord ambassador,) that he was weighed against three several things laid in silken bags in the contrary scale. When I saw him in the balance, I thought on Belshazzar, who was found too light. By his weight, (of which his physicians yearly kept an exact account,) they presume to guess of the present state of his body, of which they speak flatteringly, however they think it to be."

Traces of the balance of destiny may be found amongst the classical writers; thus Homer says, "None

can avoid death and his destiny," and in another place, he represents Jupiter in the assembly of the gods, weighing in his balance the destinies of Achilles and Hector.

The Mohammedans, whose Koran has preserved some striking remains of the primitive manners of patriarchal times, believe that two angels receive every human being at his birth, and are charged to watch continually over him, and to keep a register of every one of his actions. At the day of judgment, the good and bad actions are weighed, and his fate determined accordingly; thus, in one of their prayers, it is said, "the balances are true," signifying that they are correctly adjusted for this important purpose.

Roberts says, "A striking form of speech, in reference to this subject, is much used in the East at this day. Thus, should two men be disputing respecting the moral character of a third person, one will say, 'I know the fellow well; I have weighed him, and he is found wanting.' 'He found wanting! you are much lighter than he.' 'What, miscreant, do you wish to weigh against me?' 'Thou art but as one part in a thousand.' 'Begone, fellow, or I will soon weigh thee.' 'Yes, yes, there is no doubt about it; you have weighed me; I am much lighter than you.' 'What kind of times are these? The slaves are weighing their masters.' 'Yes, the low castes have become very clever, they are weighing their superiors.' 'What, woman, do you call in question the authority of your husband? are you qualified to weigh him?' 'The judge has been weighing the prisoners, and they are all wanting.'"

The balance is also a well-known metaphor for a strict observance of justice and fair dealing, and as such, occurs in Job 31. 6; Psal. 62. 9; Prov. 11. 1; but in Rev. 6. 5, it is employed in its literal sense: "I beheld, and lo a black horse; and he that sat upon him had a pair of balances in his hand." Here the balance is used to weigh corn and the necessities of life, in order to signify great want and scarcity, and to threaten the world with famine.

BALD, BALDNESS. Baldness, among the Hebrews, was a source of contempt; (2Kings 2. 23;) but a fine head of hair was esteemed a great ornament. (2Sam. 14. 26; Cantic. 5. 11.) The hair was combed and set in order, (Isai. 3. 24,) and anointed, especially on festive occasions. (Psal. 23. 5.)

"In a country where leprosy is not prevalent, it may well occasion surprise that the law on that subject should be careful to provide that bald-headed persons should not be causelessly subjected to the charge and consequent hardships of leprosy. No man in this country would be suspected of leprosy, even if his head became bald in his youth. But in the East, the falling off of the hair is known to be sometimes (and, in connexion with other symptoms) a strong criterion of leprosy; and as there actually is a particular kind of leprosy, limited either to the fore or hind part of the head, it became

necessary to provide that, if no other symptom of leprosy than mere baldness occurred, the person was not to be suspected of being a leper." Baldness on the hind part of the head is considered ignominious by the Orientals, while baldness in front is not.

Shaving the head was a custom of mourning of patriarchal antiquity, as in the case of Job, who, when he heard of the desolation of his house, "arose and rent his mantle, and shaved his head." It was also a custom of the ancient Greeks to tear, cut off, or shave the hair, in token of mourning. Upon the death of men of eminence and valour, it was not unusual for whole cities and countries to be shaved.

In reference to the passage in 2Kings 2. 23, "Go up, thou bald head," Roberts says, "Some suppose this alludes to the head being uncovered. I was not a little astonished, in the East, when I first heard a man called a bald-head, who had a large quantity of hair on his head; and I found, upon inquiry, it was an epithet of contempt. A man who has killed himself is called 'a bald-headed suicide;' a stupid fellow, 'a bald-headed dunce.' Of those who are powerless, 'What can those bald-heads do?' Is a man told his wife does not manage domestic matters well, he replies, as if in contempt of himself, 'What can a bald-head do? must he not have a wife of the same kind?' Let a merchant, or any person who is going on business, meet a man who is really bald, and he will assuredly refuse to attend to the business; and pronounce, if he dare, some imprecations on the object of his hatred. Sometimes he will repeat the proverb, 'Go, thou bald-head, pilferer of a small fish, and sucker of bones cast away by the goldsmith.' Call a man a mottian, i.e. bald-headed, (which you may do though he have much hair,) and abuse, or sticks or stones, will be sure to be your portion. Thus, the epithet implies great scorn, and is given to those who are weak or mean. To tell a man you will shave him, is as much as to say you will ruin him—entirely overthrow him."

BALL, *דור dur*, well known as being used in various sports and games from the earliest times. The word occurs in this sense in Isai. 22. 18, but in a subsequent chapter, (29. 3,) it is employed of a ring or circle, and translated, "round about," in the prophecy of the siege of Jerusalem.

BALM OF GILEAD, *צֶרֶךְ tsere*; Sept. *πητυνη*; balm, a production more particularly ascribed to Gilead. (Gen. 37. 25; Jerem. 8. 22.)

Balm, or balsam, is used as a common name for many of those oily resinous substances, which flow spontaneously, or by incision, from certain trees or plants, and are of considerable use in medicine and surgery. Kimchi and some of the modern interpreters understand *tsere* to be that particular species called opobalsamum, or balm of Gilead, so much celebrated by Pliny, Strabo, Diodorus Siculus, Tacitus, Justin, and others, for its costliness, its medicinal virtues, and for being the product of Judæa only; and which Josephus says grew in the neighbourhood of Jericho, the tree, according to tradition, having been originally brought by the Queen of Sheba as a present to King Solomon. On the other hand, Bochart strongly contends that the balm mentioned Jerem. 8. 22, could not possibly be that of Gilead, and considers it as no other than the resin drawn from the terebinth, or turpentine-tree.

Pliny says, "The trees of the opobalsamum have a resemblance to fir-trees, but they are lower, and are planted and husbanded after the manner of vines. On a particular

season of the year, they sweat balsam. The darkness of the place is, besides, as wonderful as the fruitfulness of it; for though the sun shines nowhere hotter in the world, there is naturally a moderate and perpetual gloominess of the air." Mr. Buckingham observes, upon this passage, that "the situation, boundaries, and local features of the valley of Jericho, are accurately given in these details, though darkness, in the sense in which it is commonly understood, would be an improper term to apply to the gloom. At the present time, there is not a tree of any description, either of palm or balsam, and scarcely any verdure or bushes to be seen, but the complete desolation is undoubtedly rather to be attributed to the cessation of the usual agricultural labours, and to the want of a proper distribution of water over it by the aqueducts, the remains of which evince that they were constructed chiefly for that purpose, rather than to any radical change in the climate or the soil."

The balsam, carried originally, says Arab tradition, from Yemen by the Queen of Sheba, as a gift to Solomon, and planted by him in the gardens of Jericho, was brought to Egypt by Cleopatra, and planted at Ain-Shemesh, now Matara, in a garden which all the old travellers, Arab and Christian, mention with deep interest. The balsam of Jericho, or balm of Gilead, has long been lost. De Sacy.

Balsam, at present, is procured in some cases from the fruit of a shrub which is indigenous in the mountains between Mecca and Medina. This shrub was cultivated in gardens in Egypt in the sixteenth and seventeenth centuries, and that this was also the case in Palestine, in very early times, appears from the original text in Gen. 43. 11, and Jerem. 46. 11.

The balsam of Mecca has always been deemed a substance of the greatest value; though it is not the only one possessing medicinal properties, yet it is, perhaps, more eminently distinguished for them than other balsamic plants of the same genus, of which sixteen are enumerated by botanists, each exhibiting some peculiarity. There are three species of this balsam, two of which are shrubs, and the other a tree. In June, July, and August, they yield their sap, which is received into an earthen vessel. The fruit, also, when pierced with an instrument, emits a juice of the same kind, and in greater abundance, but less rich. The sap extracted from the body of the tree or shrub is called the opobalsamum; the juice of the balsam fruit is denominated carpobalsamum, and the liquid extracted from the branches when cut off, the xylobalsamum. Jahn, *Bibl. Archæol.*

According to Bruce, "The balsam is an evergreen shrub or tree, which grows to about fourteen feet high, spontaneously and without culture, in its native country, Azab, and all along the coast to Babelmandel. The trunk is about eight or ten inches in diameter; the wood light and open, gummy, and outwardly of a reddish colour, incapable of receiving a polish, and covered with a smooth bark, like that of a young cherry-tree. It is remarkable for a penury of leaves. The flowers are like those of the acacia, small and white, only that three hang upon three filaments, or stalks, where the acacia has but one. Two of these flowers fall off, and leave a single fruit. After the blossoms follow yellow fine-scented seed, inclosed in a reddish-black pulpy nut, very sweet, and containing a yellowish liquor, like honey."

A traveller, who assumed the name of Ali Bey, says that "there is no balsam made at Mecca; that, on the contrary, it is very scarce, and is obtained principally in the territory of Medina. As the repute of the balsam of Mecca rose, the balm of Gilead disappeared; though

in the era of Galen, who flourished in the second century, and travelled into Palestine and Syria purposely to obtain a knowledge of this substance, it grew in Jericho, and many other parts of the Holy Land. The cause of its total decay has been ascribed, not without reason, to the royal attention being withdrawn from it by the distractions of the country. In more recent times, its naturalization seems to have been attempted in Egypt; for Prosper Alpinus relates, that forty plants were brought by a governor of Cairo to the garden there, and ten remained when Belon travelled in Egypt, nearly two hundred and fifty years ago; but whether from not agreeing with the African soil or otherwise, only one existed in the last century, and now there appears to be none." Prosper Alpinus; Celsius, *Hierobot.*; Forskal; Winer.

BAMAH, מִצֵּד an eminence or high place, where the Jews worshipped their idols, occurs Ezek. 20. 29. In other passages it is usually translated "high place;" and in Ezek. 36. 2, they are termed "ancient high places," or ancient heights. On such high places the Hebrews made oblations to idols, and also to the Lord himself, before the idea obtained, that unity of place for the divine worship was indispensable. The Jewish historians, therefore, for the most part, describe this as an unlawful worship, in consequence of its being so generally associated with idolatrous rites. Gesenius; Michaëlis in *Supplem.*

BAMOTH, a station of the Israelites on the borders of Moab; (Numb. 21. 19, 20;) but whether, according to Eusebius, it was a city near the river Arnon, is not certain. The forty-second encampment of the Hebrews, when coming from Egypt, was made here, and perhaps the word may import nothing more than some high grounds in the plains of Moab.

BAMOTH-BAAL, or as the margin of our version reads, "the high places of Baal;" a place given to the tribe of Reuben, and situated on the river Arnon, or in the plain through which that stream flows, east of the Jordan. (Josh. 13. 17.)

BAND, a word which frequently occurs in Scripture, chiefly in a metaphorical sense. Besides its literal meaning as a connecting ligature; a cord or chain; (2Kings 23. 33; Luke 8. 29;) it is used for a company of men; because bound and linked together as it were for the accomplishment of an object. (2Sam. 4. 2; 1Chron. 12. 21.) A band of Roman soldiers consisted of about a thousand. (Acts 21. 31; 27. 1.) Government and laws are bands that restrain from sin, and draw into the paths of righteousness. (Psal. 2. 3; Jer. 5. 5.) Slavery, distress, fears, and perplexity, are called bands, because they restrain liberty and create irritation. (Levit. 26. 13; Ezek. 34. 27.) Sinful customs or meretricious allurements are bands; they enslave, weaken, and degrade; they are fetters that may at first seem soft, but are found at last to be stronger than iron. (Isai. 58. 6.) The wicked often "have no bands in their death;" that is, they fre-

quently die without any peculiar distress, fear or perplexity. (Psal. 73. 4; Eccles. 7. 15; 9. 2.) Faith and love are bands, which unite and fasten every believer to Christ and to the whole body of his people. (Coloss. 2. 19.)

BANISHMENT; exile; judicial exclusion from one's kindred and country, or from the presence of a king. (Ezra 7. 26.)

Banishment was not a punishment enjoined by the Mosaic law; but after the captivity, both exile and forfeiture of property were introduced among the Jews; and it also existed under the Romans, by whom it was called *diminutio capitis*, because the person banished lost the rights of a citizen, and the city of Rome thereby lost a head. But there was another description of exile termed *disportatio*, which was a punishment of greater severity. The party banished forfeited his estate; and being bound was put on board ship, and transported to some island specified by the emperor, there to be confined in perpetual banishment. In this manner the Apostle John was exiled to the little island of Patmos. (Rev. 1. 9.) Adam's *Rom. Antiq.*; Horne.

BANK. In Luke 19. 23, the Greek word *τραπέζα* *table*, is rendered bank, which is used in the modern sense of the term. In Matt. 21. 12, and John 2. 15, it is employed literally, and denotes the table of the money-changer, at which he sat in the market-place, as is still the custom in the East, and also in the outer court of the Temple.

The term bank סוּלְלָה *sollah*, also occurs in several places in the Old Testament, as the name of the mound raised against a besieged city. See **ARMS** and **ARMOUR**.

BANNER, an ensign or standard used by armies, or by caravans on their journeys in Eastern countries. In reference to the difficult passage in Psal. 68. 13, 14, an old writer remarks, "It was the custom for the Hebrew armies, as well as the Syrians and Assyrians, to have a dove for their standard, alluding to which, the Psalmist says, 'If you shall abide by your standard, the silver-coloured dove, whose wings are gilt with gold, when the Almighty by its means has scattered the kings, the mark of victory shall be displayed in your ensign, and your dove appear as white as snow.'"

A Persian custom respecting the delivery of a banner, is thus alluded to by Richardson. "The khalifs, along with the alcab or titles, used generally to send to their feudatory princes a banner, which, whilst they preserved their allegiance, was always carried before them. It was thus that the Khalif Vathek invested Taher-ben Abdallah, about the year 873, in the principality of Khorassan." The delivery of a banner seems also to have involved an obligation on the part of the giver to protect those to whom it was given.

Roberts also observes, "In some places in India it is a custom with the governor to ascend a neighbouring hill every month, when he sets up a white flag, and performs

Egyptian, Persian, and Roman Banners.

some religious ceremonies, to conciliate the favour of a dewta, or invisible being, the genius of the place, who is said to hover about the summit, dispensing at his will good and evil to everything around him."

"In all religious, as well as warlike processions, the people carry banners. Hence, on the pinnacles of their sacred cars, on the domes or gateways of their temples, and on the roof of a new house, may be seen the banner of the caste or sect floating in the air. Siva, the supreme, is also described as having a banner in the celestial world.

"When a person makes a solemn vow to go on a pilgrimage, to perform a penance, or to bathe in holy water; or when a man has a dispute in a court of law, or in any other way; or when a disobedient son has resolved to act as he pleases; it is said, 'Why try to move him from his purpose? He has tied up, and stands by his banner:' which implies, he must and will abide by his purpose."

In the engraving, the four banners to the left are Egyptian, the two next Persian, all from the sculptures of their respective countries, and the three to the right Roman, from the column of Trajan. See ARMS and ARMOUR.

BANQUET. Feasts are mentioned at an early period in the Scriptures. (Gen. 21. 8; 29. 22; 40. 20.) Moses enacted that at the festival of the second sort of first fruits, servants and widows, orphans and Levites, should be made free partakers. (Deut. 16. 11-14.) Our Saviour alludes to this festival, which was designed for the poor, and to those who make it He promises a blessing. (Luke 14. 13.) The patriarchs, like the modern inhabitants of the East, were accustomed to take their meals

under the shade of trees: thus "Abraham stood by the angels under the tree, and they did eat." (Gen. 18. 8.)

From the frequent representations of entertainments on the monuments, it is manifest that the Egyptians were a very social people; they seem to have neglected nothing which could tend to promote festivity: music, song, dancing, feats of agility, and games of chance, appear to have filled up the interval between the coming of the guests and the serving of the feast. Visitors of high rank arrived in palanquins or chariots, escorted by numerous attendants, some of whom acted the part of running footmen. Necklaces of the lotus flower were hung round the necks of the guests, and bouquets of this favourite flower were constantly renewed by the servants as those in the room faded from heat or handling. Splendid vases of flowers were also ranged round the apartments. Wine was served at the beginning of the entertainment, and in general the guests sat erect on chairs, but couches also were provided.

In some entertainments we find the ladies and gentlemen of a party in different rooms; but in others, we find them in the same apartment, mingling together with all the social freedom of modern European customs. The children were allowed the same liberty as the women; they were introduced into company, and permitted to sit by the mother or on the father's knee. Indeed, few ancient nations paid such attention to the comforts and pleasures of childhood as the Egyptians, as may be inferred from the abundance of toys which they provided for their amusement.

In the time of Joseph, the Hebrews neither ate with the Egyptians nor the Egyptians with them. (Gen. 43. 32.) At their meals each had his separate table. When

Joseph entertained his brethren, he seated each of them at his particular table, and he himself sat down separately from the Egyptians who ate with him: but he sent to his brethren out of the provisions which were before him. (Gen. 43. 31-34.) Joseph sent his brother Benjamin a portion five times larger than his other brethren, or rather a greater variety; and Herodotus says, that in the public banquets and entertainments of the Egyptians, twice as much was set before the king as any one else.

The course of proceeding at a modern Persian feast will illustrate many particulars in this Egyptian entertainment. The plan of setting a tray between every two persons there pursued, forms them into distinct groups

in the act of eating, as will be understood by recollecting that the Orientals make no use of plates, but transfer their food immediately from the dishes or bowls to their mouths, unless they may occasionally find it convenient intermediately to rest the morsel they have detached upon the cake of bread which is spread out before them. Hence there is a concentration of each group upon the tray which is set before it. The separation so distinctly marked in Joseph's feast may have been effected much in the same way, Joseph having a tray wholly to himself, while, in the distribution into groups, care was taken that no Egyptian should be obliged to eat out of the same tray with a Hebrew.

It was, and still is, customary in the East to send a deputation to meet the guests: this deputation they called *openers of the way*; and the more distinguished the persons sent, and the greater the distance they went, so much the greater honour. The names of the persons to be invited were inscribed upon tablets, and the gate was set open to receive those who had obtained them; but to prevent any person getting in that had no ticket, only one leaf of the door was left open, and that was strictly guarded by the servants of the family. Those who were admitted had usually to go along a narrow passage to the room; and after all who had received tickets of admission were assembled, the master of the house rose and shut to the door, and then the entertainment began. The first ceremony after the guests arrived at the place of entertainment, was the salutation performed by the master of the house, or one appointed in his place. Among the Greeks, this was sometimes done by embracing with arms around; but the most common salutation was the conjunction of the right hand, the right hand being reckoned a pledge of fidelity and friendship. Sometimes they kissed the lips, hands, knees, or feet, as the person deserved more or less respect. The Jews welcomed a stranger to their house in the same way; for Our Lord complains to Simon, that he had given him no kiss.

The guests were generally arrayed in white robes, and were anointed with precious oil. (Psalm 23. 5; 45. 7; Eccl. 9. 8.) Before the Greeks went to an entertainment, they washed and anointed themselves, but they who came off a journey were washed and clothed with suitable apparel in the house of the entertainer, before they were admitted to the feast. When Telemachus and Pisistratus arrived at the palace of Menelaus, they were immediately supplied with water to wash, and with oil to anoint themselves before they took their seats by the side of the king. The oil used on such occasions, in the palace of nobles and princes, was perfumed with roses and other odoriferous herbs. They also washed their hands before they sat down to meat. To these customary marks of respect to which a guest was entitled, Our Saviour alludes in his defence of Mary. (Luke 7. 44-46.) Our Saviour was in the circumstances of a traveller; he had no opportunity to wash and anoint himself before he went to the house of Simon, and therefore had a right to complain that his entertainer had failed in the respect that was due to him as a stranger.

Flesh and wine were the principal articles; hence a feast is sometimes called the season of drinking (Isai. 22. 13); and those who made the feast testified their respect to their guests by the exhibition of large quantities of provisions of the same kind, (Gen. 18. 6; 27. 9; Job 36. 16,) and also by a diversity in the kinds. (Esth. 1. 5-8; Amos 5. 6; 6. 4.) As the entertainments were always given in the evening, the room or rooms where they were held were lighted up, and the fact, that in the climate of Palestine, the night, at least as it approached towards the morning, was cold, will afford an explanation of Matt. 8. 12; 22. 13; 25. 30. Jests, music, and riddles were not excluded; feasts, therefore, were symbolic of a state of prosperity, and exclusion from them was a symbol of sorrow and misery. (Prov. 9. 2 *et seq*; Isai. 5. 12; Amos 6. 4.)

At the splendid feast which Ahasuerus made for the nobles of his kingdom, beds of silver and gold were placed round the tables; it being a custom in the East to name a thing from its principal ornament, these were probably couches profusely ornamented with the precious metals. When they ate, they raised themselves on their elbow and made use of the right hand; which is the reason why Our Lord mentions the hand of Judas in the

singular number: "He that dippeth his hand with me in the dish, the same shall betray me." (Matt. 26. 23.)

The persons invited were perfumed, before their departure, especially upon the beard.

The hospitality of the present day in the East, exactly resembles that of the remotest antiquity, and in many particulars coincides with that of the Greeks and Romans. The parable of the great supper is in those countries literally realized. The day when the entertainment is to be given, is fixed some considerable time before; and in the evening of the day appointed, a messenger comes to bid the guests to the feast. They are not now, as referred to in St. Luke, asked for the first time, but have already accepted the invitation, when the day was appointed, and are therefore already pledged to attend at the hour when they may be summoned; they cannot now decline, without violating their word and insulting the master of the feast. The terms of the parable exactly accord with the established customs.

Mr. Morier says, "When a Persian enters a *mejlis* or assembly, he makes the usual salutation, 'Peace be unto you,' which is addressed to the whole assembly, as it were, saluting the house (Matt. 10. 12); and then, measuring with his eye the degree of rank to which he holds himself entitled, he straightway wedges himself into the line of guests, without offering any apology for the general disturbance which he produces. It may be conceived that, among a vain people, the disputes that arise on matters of precedence are numerous; and it was easy to observe, by the countenances of those present, when any one had taken a higher seat than that to which he was entitled. The Persian scribes are remarkable for their arrogance in this respect; and will bring to mind the caution that Our Saviour gave to the Jews against their scribes, whom, among other things, he characterizes as loving the uppermost places at feasts. The master of the entertainment has, however, the privilege of placing any one as high in the ranks of *mejlis* as he may choose; and we saw an instance of it on this occasion; for when the assembly was nearly full, the governor of Kashan, a man of humble mien, although of considerable rank, came in, and had seated himself at the lowest place, when the Ameer-ad-Dowlah, after having testified his particular attentions to him, by numerous expressions of welcome, pointed out with his hand to an upper seat in the assembly, to which he desired him to move, and which he did accordingly."

In Hindostan, feasts are given in the open halls and gardens, when a variety of strangers are admitted and much familiarity is allowed. This may account for a circumstance in the history of Our Lord, where the penitent Mary is represented coming into the apartment and anointing his feet with ointment, and wiping them with the hair of her head. This familiarity is not only common, but is far from being considered either disrespectful or unpleasing. To screen the company from the burning sun-beams, a large canopy is spread upon lofty pillars, and attached by cords of various colours. "Some of these awnings," says Forbes, in his *Oriental Memoirs*, "belonging to the Indian Emperors, were very costly, and distinguished by various names. That which belonged to the Emperor Akber was of such magnitude as to contain ten thousand persons; and the erecting of it employed one thousand men for a week; one of these awnings, without any ornaments, cost ten thousand rupees." Similar to these were the splendid hangings under which Ahasuerus, the king of Persia, entertained his court. They were white, green, and blue, fastened with cords of fine linen and purple, to silver rings and pillars of marble. See ARCHITRICLINUS; ATTITUDE AT TABLE.

BAPTISM. The initiatory rite of baptism, or washing, was familiar to the Jews, being practised as well on the admission of converts from heathenism into the church of the tabernacle, as by prophets and other teachers of righteousness among their followers. The origin of baptism, as observed by the Jews to their proselytes, is a matter of dispute and uncertainty. The Rabbins assert that it is of very ancient date, and carry the observance of it up to the time of Moses; and St. Paul seems to have been of this opinion, as he says, the Israelites were baptized unto Moses. It is manifest from the Gospels, that it was usual for the Jews to admit men to the profession of a doctrine by baptism; for the Pharisees do not find fault with John's baptism, but only blame him for baptizing when he was neither "the Messiah, nor Elias, nor that prophet." The inquiry was not, "What *new rite* is this?" but, "Why do *you* administer it?"

2. "Of the ancient names of baptism," says Bingham, "some were taken from the internal and spiritual effects of it; others from the nature and substance of the action; others from the conditions required in the receivers; others from the external circumstances and rites observed in the administration."

The customary appellation, baptism, is drawn from the nature of the action. According to its etymology, it denotes immersion under water; and the choice of this term was doubtless made at a period when the modern practice of sprinkling had not been introduced. In the Old Testament, the words βαπτω, and βαπτίζω, are used in translating the Hebrew טָבַל *tingo, immergo*; (Exod. 12. 22; 2Kings 5. 14;) and טָבַע *submergor*; (Psal. 19. 16; 69. 3; Jerem. 38. 6;) צָבַע *Chald. tingo*, to steep in dye, (Dan. 4. 30,) and other such words which contain the idea of submersion. In the New Testament, βαπτω is used three times, and βαπτίζω about thirty times, in the same signification.

3. Christian baptism originated in the express command of Christ: "Go ye and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost." Origen says, "Christ himself was baptized by John, not with that baptism which is in Christ, but with that which is in the law." (*Comment. in Rom. 6.*) Chrysostom says, "It (the baptism of John) was, as it were, a bridge, which, from the baptism of the Jews, made a way to that of the Saviour. It was superior to the first, but inferior to the second." (*Homil. 24.*)

4. Many terms were applied to baptism in description of its end or efficacy by the Fathers. Gregory of Nyssa, Epiphanius, and other writers, gave to this sacrament the name of circumcision, or the great circumcision, as having succeeded to circumcision properly so called, or having been prefigured by the Jewish ordinance, and the supposed analogy between these two ordinances was frequently referred to by the Apostolical Fathers.

5. The general adoption of the practice of infant baptism has so far affected the regulations of the church concerning the qualifications and admission of candidates for this sacred ordinance, that what was formerly the rule in these respects, has become the exception. The institutions of the church during the five first centuries, concerning the preparations for baptism, and all the laws and rules which existed during that period relating to the acceptance or rejection of candidates, necessarily fell into disuse when the baptism of infants was not only permitted, but enjoined as a duty, and almost universally observed. The old rule, which prescribed caution in the admission of candidates, and a careful preparation for the rite, was applicable for the most part only to Jewish, heathen, and other proselytes, after the sixth century. In modern practice, all the discipline which was for-

merly connected with baptism, belongs to the rite of confirmation.

6. It appears, by the testimony of the earliest Christian writers, that the church at first regarded all persons, without any restriction as to nation, sex, or age, as capable of baptism. And it is evident that children were not excluded from a participation in this rite, from a celebrated passage of Irenæus, (*Adv. Hæres. lib. 2. 22.*) as well as from allusions to the prevailing practice of the church in the writings of Tertullian, (who disapproved of infant baptism,) and Cyprian, as well as from the controversy which arose in the African church. But, although from a very early period high notions were entertained respecting the supernatural powers and efficacy of baptism, and this sacrament was supposed to imprint an indelible character upon the soul, the church did not lose sight of its moral tendency and virtue, nor cease to regard it as an important branch of discipline. And accordingly, the standing rule of baptizing all applicants was subject to certain limitations and exceptions. Such were the following:—

It was enacted, that none but the living should be baptized; a law which intimates that a practice of baptizing the dead must have been more or less extensively introduced. Such a practice, indeed, existed in the African church in the fourth century, as appears from a prohibition of the third council of Carthage, (can. 5,) A.D. 397. Philastrius (*de Hæres. c. 2*) says, that the Cataphrygians, or Montanists, were in the habit of baptizing the dead; but if this be true, it must relate only to the Hyper-Montanists, for we know that it would not have been tolerated by Tertullian. It appears from Gregory Nazianzen, that this superstitious practice was not unknown in other countries.

To this practice may be referred also the vicarious baptism of the living for the dead, which obtained among various sects, especially the Marcionites, and was severely reprov'd by many of the Fathers. It is thus represented by Chrysostom: (*Hom. 40, in 1 Cor.*) "When a catechumen dies, they conceal a living person under the bed of the departed. Then they stand before the dead, and ask the dead person whether or not he is willing to be baptized? Instead of the dead, who is unable to answer, the person under the bed replies in the affirmative. Hereupon they baptize him instead of the deceased."

Compulsory baptism was not countenanced by the early church, although it was afterwards practised to a considerable extent during the middle ages. The emperor Constantine did indeed compel his soldiers to receive baptism; and this transaction is mentioned by Theodoret (*Hist. Eccl. lib. iii.*) with some degree of approbation. But the practice does not appear to have become by any means prevalent before the sixth or seventh century. Augustin speaks with approbation of the custom of baptizing the children of heathen parents, whenever opportunity might occur, and in what manner soever, by divine providence, the means of conferring this benefit may have been given to believers.

In general, the early church was so far averse from anything like compulsion in the administration of baptism, that the free will and consent, or rather the request or petition, of the recipients was required as a condition on their parts. Hence, the name *Competentes* was applied to catechumens and candidates for baptism. In the case of infants, the consent and request of their parents or relatives was regarded as their own, until they arrived at years of discretion, when an opportunity was afforded them of confirming their covenant by a voluntary act.

7. Notwithstanding the importance which has always been attached to baptism as the rite of admission to the

Christian church, the performance of this rite has not been made the peculiar office of any minister in the church.

Our Lord received baptism at the hands of John, declaring that it became him thus to fulfil all righteousness. He afterwards appointed the same rite as the mode of admission into the Christian church; but we are expressly told, that he "himself baptized not, but his disciples." (John 4. 2.)

In some cases of baptism recorded in the New Testament, we find that the rite was performed under the sanction, and by the immediate order, of the Apostles. But it is remarkable that we have no account of the administration of baptism by an Apostle. Even on the occasion of the baptism of nearly three thousand converts at once, recorded in the second chapter of the Acts, no intimation is given that the Apostle who was present officiated; while, on the contrary, it is highly improbable that the ceremony was performed by any one individual. And in the history of the baptism of Cornelius and his family, it is observable that St. Peter did not himself baptize the new converts, but only gave orders for the performance of the rite. He "commanded them to be baptized in the name of the Lord." (Acts 10. 48.)

On the whole, we learn from the New Testament the following particulars:—1. That our Lord did not himself baptize, but that he intrusted his Apostles and disciples with the administration of this rite. 2. That the Apostles, although they administered baptism sometimes, did not, however, do this always, or regularly, but committed the office to others. 3. It cannot be determined whether other persons, either ministers or laymen, were allowed to baptize without a special commission. 4. Philip the deacon baptized in Samaria men and women, and also Simon Magus, and the Ethiopian eunuch, (Acts 8. 12, 13, 38,) without having received any special commission, so far, at least, as appears in the history. He seems, therefore, to have received his authority to baptize at the ordination recorded in Acts 6. 3, 7.

In the *Apostolical Constitutions*, the right of administering baptism is denied to readers, singers, and other inferior officers of the church, and is accorded "only to bishops and presbyters, the deacons assisting them."

8. The prevalence of infant baptism was instrumental in effecting a great change in the regulations of the church respecting the times of administering the rite. But it would not be correct to ascribe the whole of this change to that one cause. In the apostolic age the majority of candidates for baptism were adults, although children appear not to have been excluded from participation in the rite; but the administration of baptism was not then limited to any particular times or seasons. During the second and third centuries, certain periods were appointed (chiefly) for the baptism of adults; and these periods continued to be observed after the practice of infant baptism had become general in the course of the fifth and sixth centuries. Only the number of those periods was increased, especially in the West; a regulation against which some bishops zealously contended, as an innovation upon the ancient practice of the church. With regard to the place in which baptism was administered it will be convenient to make reference to the following three distinct periods in the history of this rite.

(i.) We find no account in the New Testament of any place having been set apart for the administration of baptism. John baptized in the river Jordan, and so did the disciples of Christ. (John 3. 22.) But baptism could be administered at any other river or piece of water, as appears from Acts 7. 36, 37; 16. 13-16, and other passages. Examples also of baptism in private houses occur in Acts 9. 18; 10. 47, 48; 16. 30-34. A public

baptism of three thousand converts in one day is recorded in Acts 2. 41, but no account is given of its performance.

(ii.) The first mention of a baptistery, or a place appropriated to the purposes of baptism, occurs in the *Gesta S. Marcelli* in Suri. *Vil.*; and this baptistery was in a private house.

Baptisteries are mentioned by Cyril of Jerusalem, in whose time they were divided into two parts, outer and inner, in the former of which the preparations for baptism were made, and in the latter the sacrament itself was administered.

In the fifth and sixth centuries, baptisteries, or baptismal churches, (*ecclesiæ baptismales*), were general, and sometimes so spacious that ecclesiastical councils were held in them. We may form an idea of the size of some of these edifices, when we remember that in some places as Antioch, no less than three thousand persons sometimes received baptism at one time.

(iii.) Although it is impossible to determine the precise period at which baptisteries were multiplied, and at length united to, or rather changed into, parish churches, yet it appears in general that this alteration took place when stated seasons of baptism had ceased, and the right of administering the ordinance was ceded to simple presbyters, and, under certain restrictions, to deacons.

9. MODE AND FORM OF BAPTISM. Under this head we reckon (i.) the manner in which the baptized person received the appointed element, water, and (ii.) the forms or ceremonies observed by the officiating minister, or the person who administered the sacrament. In both these respects varieties of opinion and practice existed from a very early period; and even to the present day a difference exists between the Eastern and Western churches in this matter; a difference, however, which is wisely judged by the latter not to be of an essential or fundamental nature.

(i.) *Immersion or Dipping*. There is no doubt that the usual mode of administering baptism in the early church was by immersion, or plunging the whole body of the person baptized under water. An appeal to the numerous authorities by which this fact is attested would be superfluous.

The supposition that the practice of immersion was abandoned as soon as infant-baptism became prevalent, is founded on a mistake. Infant-baptism had become general in the sixth century; but the practice of immersion continued until the thirteenth or fourteenth, and in fact has never been formally abandoned or entirely renounced.

(ii.) *Aspersio or Sprinkling*. In the Western churches although immersion was never renounced by any statute or canon, yet, in practice, aspersio or sprinkling was generally substituted for it, after the lapse of several centuries; and it is agreed by all parties in those communions that this particular in the administration of baptism does not affect the validity of the sacrament. This point, however, is strongly contested by the Greek church, which not only retains the primitive practice of immersion, but maintains that it is essential to the nature of true and effectual baptism; nor will it consent to receive into its communion any persons who have been otherwise baptized, unless they submit to a second baptism by immersion.

Aspersio did not become general in the West until the thirteenth century; although it appears to have been introduced some time before that period. Thomas Aquinas says, (*Summa*), "It is safer to baptize by immersion, because this is the general practice."

10. From the time of Justin Martyr and the author of the *Apostolical Constitutions*, down to the eighteenth

century, all the liturgical books of all sects and parties in the church contained only one form of words to be pronounced in the act of administering baptism; namely "I baptize thee in the name of the Father, the Son, and the Holy Ghost."

The Greek church baptizes in the third person instead of the first; that is to say, their form, instead of "I baptize thee," &c., runs thus, "He, or she, is baptized in the name of," &c.; a practice in support of which an appeal is made to the writings of Basil and Chrysostom.

The ancients attached great importance, and ascribed a very powerful efficacy to the signature of the cross in baptism. According to Dionys. Areop. (*de Hierarch. Eccl.*) this signature was made thrice; but in the ancient rituals of the Latin church in Mabillon and Muratori, mention is made of only one signature, in connexion with a triple afflation; and the same may be observed concerning an old Gallican Sacramentary preserved in Assemani, *Cod. Liturg.*

11. SPONSORS. At an early period of the church certain persons were required to be present at the baptism of its members, who should serve as witnesses of the due performance and reception of the rite, and should also be sureties for the fulfilment of the engagements and promises then made. These persons were at first called *sponsores*, sponsors. This term is applied to them by Tertullian; but it is worthy of remark that he uses the word only with reference to infant-baptism, and that he considers it to allude not only to an answer (*responsum*), given on behalf of the infant who was unable to speak for itself, but also to a promise and obligation, or the undertaking on behalf of the infant, of a duty as the sponsor's own. But Augustin seems to restrict the allusion to the response or answer.

No trace of sponsors or witnesses is to be found in any of the narratives of baptism recorded in the New Testament; nor do the sacred writers ever appear to draw a parallel between baptism and circumcision. And therefore, on the whole it would be difficult to prove any connexion between the Jewish and Christian customs with respect to the office of sponsors.

Perhaps, from a careful view of the question, it must be concluded that the custom of requiring the presence of sponsors or sureties at baptism, arose naturally from the practice of infant-baptism, in order that the interrogatories of the church might not be without some answer, and in fact, the best that could be obtained under the circumstances of the case; or that it originated in the want of some security in addition to a personal confession, in the times of persecution; men who had made their baptismal promises in the presence of witnesses being supposed less likely to deny their connexion with the church than they might be if no proof of their profession could be adduced, or at least being supposed to have received an additional fortification against the danger of apostasy. We learn from Dionys. Areop. (*de Hierarch. Eccl.*) that it was usual to enter in a baptismal register the name of the sponsor or sponsors as well as that of the person baptized. Parents were allowed to stand as sponsors to their own children during the earlier centuries; and the first prohibition on record by which they were disqualified for this office, is contained in a canon of the council of Mentz, A.D. 813.

12. The naming of a child has been deemed a matter of importance among all people, and under various systems of religion; and the customs connected with it possess at once an historical and a theological interest.

It appears highly probable that the modern practice of giving a name at baptism may have originated with infant-baptism itself, or may even be referred to the customs of Jewish circumcision. But no mention is

made of this practice in the New Testament, or in any of the earliest ecclesiastical writers, for instance, Justin Martyr, Tertullian, Origen, Cyprian. Riddle's *Christ. Antiq.*

For a more extended discussion of this subject see Wall's *History of Infant-Baptism* and Robinson's *History of Baptism*.

The last event of the life of Constantine the Great was a circumstance as remarkable as it was interesting in the early history of Christianity. He had, as was frequently the case with converts, deferred his baptism till the warnings of sickness and debility reminded him of its necessity. He had been in a declining state of health, and proceeded to the warm baths of Helenopolis, a town in the Gulf of Nicomedia, which he had called after his mother, in the hope that they would restore him. After passing some time there in vain trials of their efficacy, he caused himself to be removed to the pleasant suburbs of Nicomedia; and as the feast of Pentecost was now at hand, he expressed a strong desire to have the ceremony performed. He therefore called the bishops around him, and made to them an affecting address. "The time now demands," said he, "that I should partake in this seal of salvation. It had been my intention to have proceeded to Bethabara, and receive this solemn rite in the waters of the Jordan, in public imitation of my Lord, but God best knows what is expedient, and let His will be done." Every preparation was therefore made for the ceremony, and it was performed by the Bishop of Nicomedia. It appears from Eusebius and other authorities, that it was the usual practice for those who could command the opportunity, to proceed to Palestine, and be immersed in the waters of the Jordan, as Constantine had intended; it is probable, therefore, that it was done at Nicomedia, as it would have been at Bethabara, by immersion. He appeared deeply impressed with the ceremony, and caused himself to be clad in a white robe, as emblematic of the purity it conferred, which he never laid aside to resume the purple, and in this robe he died; this event occurred soon after the ceremony, in the year A.D. 337, at the hour of midnight, after a reign of thirty years, having been, as Eusebius remarks, the first Christian sovereign who had ever received the "regeneration of baptism."

A circumstance in the life of the emperor so very remarkable, is not likely to have been passed over unnoticed on the coins of the empire, when so many events of less importance have been commemorated; and, accordingly, we find that a coin was struck, probably after Constantine's death, alluding to the circumstance.

This coin represents on the obverse the emperor in his robes, crowned with a wreath of laurel, having the legend IMPERATOR CONSTANTINVS PIVS FELIX AVGVSTVS. On the reverse is a full-length figure of the emperor cloaked, holding in his outstretched right hand a globe, on which the cross had not yet been placed, and in his left a rod or wand;—the legend is CONSTANTINO PIO AVGVSTO BAPTISMATE NATA, "To Constantine the Pius, August, born, or regenerate, in Baptism." In the exergue, PCONVNA LONONVM CUSA; "Money coined at London."

Coin commemorating the Baptism of Constantine the Great.

Dr. Walsh, in his *Essay on Ancient Coins*, says, "I have given this highly interesting coin on the respectable authorities of Occho, Bergerus, Mediobarbus, and Du Cange, who all concur in the above reading and interpretation. It has, however, been disputed by Harduin and Jobert on grounds which appear to be frivolous. Jobert reads P.L. wherever it occurs PECUNIA LUGDUNI, 'the money of Lyons,' but his commentator PECUNIA LONDINI, 'the money of London,' and adds very justly, 'il n'est pas douteux que dans le Bas Empire on n'ait battu dans la Grande Bretagne, des monnoyes au coin des Empereurs.'"

BAPTIST. See JOHN THE BAPTIST.

BAR. This word chiefly occurs in the Scriptures in the following senses:—That whereby a door is bolted and made fast (Nehem. 3. 3); a narrow cross-board or rafter wherewith to fasten other boards (Exod. 26. 26); a rock in the sea (Jonah 2. 6); the bank or shore of the sea, which as a bar shuts up its waves in their own place (Job 38. 10); strong fortifications and powerful impediments are called bars, or bars of iron. (Isai. 45. 2; Amos 1. 5.)

BARABBAS, בַּר אֲבָס *Barabbas*, the name of a notorious robber found guilty of sedition and murder, (Acts 3. 14,) whose release the Jews demanded of Pilate. (John 18. 40.)

BARAK, בָּרַק the son of Abinoam, was chosen by God to deliver the Hebrews from the bondage in which they were held by Jabin, king of the Canaanites. (Judges 4. 6; Heb. 11. 32.) Barak refused to obey the commands signified to him by Deborah the prophetess unless she consented to go with him. Deborah, therefore, accompanied him towards Kedesh of Naphtali; when having assembled ten thousand men, they advanced to Mount Tabor. Sisera, the general of Jabin, marched against them with nine hundred chariots of war, and encamped near the river Kishon; but Barak rapidly descended from Mount Tabor, and the Lord having spread terror through Sisera's army, a complete victory was easily obtained. Sisera was killed by Jael, and Barak and Deborah composed a hymn of thanksgiving for the deliverance of their country.

BARBARIAN, *Βαρβαρος*. The Greeks and the Romans used this word as equivalent to a foreigner, one who speaks a different language, and from them its use passed to the Jews of the time of the Apostles. (1 Cor. 14. 11.) Thus the inhabitants of Melita (Malta) are termed "barbarians" by the inspired writer, as speaking a dialect of the Phœnician language. (Acts 28. 2-4.)

BARBER, גַּלַּב *galav*. "Son of man, take thee a sharp knife, take thee a barber's razor, and cause it to pass upon thine head and upon thy beard." (Ezek. 5. 1.) Shaving the head was customary among the Jews as an act of mourning. Sometimes for the same reason the hair of the beard was also shaven, or plucked off, as was done by Ezra on his arrival at Jerusalem on finding that the Hebrews had intermixed with the nations around them, and plunged into all their idolatries. (Ezra 9. 3.) The operation of shaving the head was probably performed much in the same manner as is now usual in the East. The operator rubs the head gently and comfortably with his hand moistened with water. This he does for a considerable time; and he afterwards applies the razor, shaving from the top of the head downward. See RAZOR.

BARCOCHAB, כִּרְפָּא (son of the Star), an appellation assumed by Coziba, a Jew who headed a rebellion against the Romans in the time of Hadrian.

During the reign of Trajan a formidable revolt broke out among the Jews in Africa, and irritated by other tumults which followed, Hadrian, his successor, when he visited Judæa in the early part of his reign treated the nation with great severity, and offered the grossest possible insult to their feelings by erecting a temple to Jupiter on the site of that of Solomon. The force, however, by which the emperor was accompanied rendered opposition hopeless, but after he and his troops had retired, the people prepared to avenge themselves. Coziba appeared at this juncture, and having previously established an understanding with Akiba, a rabbi in high repute for his wisdom and his profound acquaintance with the Sacred writings, was by him hailed as the Messiah, who was prophesied of by Balaam as the Star, and who was divinely commissioned to deliver the chosen people from the iron rule of the Gentiles. Pretended miracles were not wanting to authenticate his claims, and the example and authority of Akiba soon induced two hundred thousand men to join his standard. The Romans, however, speedily advanced against him, and abandoning Jerusalem Coziba retired to the strong mountain fortress of Bither or Bethtar, twelve miles off, which he defended with desperate valour for three years. But the contest was most unequal; the fortress was at length taken, Coziba and Akiba put to death, and such multitudes of their followers slain, that, while some of the Rabbins relate that stones weighing four pounds were carried four miles into the sea by the torrents of blood that flowed, others estimate that a greater number of their nation perished at Bither than came up out of Egypt. The Jews have inserted in their form of worship a hymn referring to this massacre, and intended for children. The date of this event is variously given between A.D. 135 and 138. Burton.

BAREFOOT. To go barefoot was an indication of great distress, (Isai. 20. 2,) for in ancient times the shoes of great and wealthy persons were made of very rich materials, and ornamented with jewels, gold, and silver. When any great calamity befel them, either public or private, they not only stripped themselves of these ornaments, but of their very shoes, and walked barefoot.

Thus did David conduct himself in his sorrow when Absalom had rebelled against him, and a custom little different still prevails in India; "he went up by the ascent of Mount Olivet, and wept as he went up, and had his head covered, and he went barefoot." (2 Sam. 15. 30.) In his remarks upon this passage, Roberts says, "In time of mourning the Hindoos do not cover the head; they take a part of their robe and cover the face. In going to a funeral, the turban is generally taken off, and a part of the garment is held over the face. Nor is this common merely at funerals; for on all occasions of deep sorrow they observe the same thing. At such times also they always go barefoot."

BAR-JESUS or **ELYMAS** (*the Sorcerer*), a Jewish magician in the island of Crete, who opposed Paul and Barnabas, and endeavoured to prevent Sergius Paulus from embracing Christianity, for which he was struck blind, "not seeing the sun for a season." (Acts 13. 6-11.) This affliction is denominated in the Greek *αχλὺς*, being rather an obscuration, or a mist before the eyes, than a total loss of sight. The same miracle which punished the impostor converted the proconsul. Origen and Chrysostom think that Elymas was converted, and that St. Paul speedily restored his sight.

BARIS, the name of a tower, said by Josephus (*Antiq.*) to have been built by the prophet Daniel, at Ecbatana. He describes it as "a most elegant building and wonderfully made," and as remaining in his time, where "they bury the kings of Media, Persia, and Parthia to this day." A Jewish priest is said to have been entrusted with the care of it.

BARLEY, שַׁעֲרָה *sorah*, a well-known species of grain, which derives its Hebrew name from the roughness of its ears.

The Rabbins sometimes call barley the food of beasts, because cattle were commonly fed with it. (1 Kings 4. 28.) The Hebrews, however, frequently used barley bread. (2 Sam. 17. 28.) Solomon sent wheat, barley, oil, and wine to the labourers that King Hiram had furnished him, (2 Chron. 2. 15,) Elijah received a present of twenty barley loaves and corn "in the husk," (2 Kings 4. 42,) and it was by miraculously increasing the five barley loaves that Our Saviour fed a multitude of five thousand. (John 6. 8-10.)

Sometimes barley is put for a low contemptible reward or price. Thus the false prophets are charged with seducing the people for handfuls of barley and pieces of bread. (Ezek. 13. 19.) In a similar spirit, the jealousy offering in the Levitical institutions was directed to be barley meal. (Numb. 5. 15.) The common mincha, or offering, was of fine wheaten flour, (Levit. 2. 1;) but the former was of barley, probably to denote the vile condition of the person regarding whom it was offered, for which reason also there was no oil or frankincense permitted to be offered with it.

In Palestine, barley was sown about October and reaped at the end of March, just after the Passover. In Egypt the barley harvest was later; for when the hail fell there, (Exod. 9. 31,) a few days before the Passover, we read that the flax and barley were bruised and destroyed; for the flax was at its full growth, and the barley began to form its green ears; but the wheat and more backward grain were not damaged, because they were only in the blade.

Dr. Richardson, whose observation applies to the early part of March, says, in his *Travels in Egypt*, "The barley and flax are now far advanced; the former is in the ear, and the latter is bolled, and it seems to be about this season of the year that God brought the plague of thunder and hail upon the Egyptians, to punish the guilty Pharaoh, who had hardened his presumptuous heart against the miracles of Omnipotence."

BARN, בֶּרֶךְ *asam*, a store house, or magazine, which among the Orientals was frequently a place underground. (Deut. 28. 8; Prov. 3. 10.) The phraseology in Luke 12. 18 shows that the Jews at that time had granaries above-ground, but it does not follow that they had altogether relinquished the older and still common custom of depositing grain in subterranean storehouses, in which it was more secure, and, as some think, preserved in better condition, than in the other. Those who are exposed to danger and alarm would naturally prefer the subterraneous granary, which may, on occasions of emergency, be abandoned by the proprietor, with tolerable confidence that when he is enabled to return, he shall find his treasured grain untouched, the entrance being so carefully concealed that it is sometimes discovered with difficulty, even by the owner himself. This plan may in general be said to be resorted to by the peasantry throughout the East, granaries above-ground being confined to towns and their vicinities, a distinction which may also have prevailed among the Jews.

The following is a description, by a modern traveller, of those now used by the Moors:—"After the harvest, they put their corn in subterraneous granaries, which are pits dug in the earth, where the corn is preserved for a considerable time. To secure the corn from moisture, they line these pits with straw, in proportion as they fill them, and then cover them with the same; when the granary is filled, they cover it with a stone, upon which they put some earth in a pyramidal form, to disperse the water in case of rain. Among the wealthier part, the fathers commonly fill a granary at the birth of each child, and empty it at their marriage. I have seen corn preserved in this manner during five-and-twenty years. It had, however, lost its whiteness. When, from motives of convenience, or by an imperial order, the Moors are obliged to change their habitations, not being able to carry their grain with them, they leave over these granaries a mark of stones heaped together; they have, however, much trouble in finding them again. In order to accomplish this, it is the custom to observe the earth at the rising of the sun, when a thick vapour ascends from the pits. They thus discover the granary, upon which the sun has a marked effect, on account of the fermentation of the corn which is shut up." See *AGRICULTURE; STOREHOUSES*.

BARNABAS, a disciple of Our Lord, and a companion of St. Paul in his labours for propagating the Gospel. He was a Levite, born in the island of Cyprus. His proper name was Joses, but he received the name of Barnabas, which signifies "Son of Consolation," after his conversion, having sold his land and laid the price at the Apostles' feet. (Acts 4. 36.) He is generally considered to have been one of the seventy disciples chosen by Our Saviour. He was brought up with St. Paul at the feet of Gamaliel, and when St. Paul came to Jerusalem, Barnabas introduced him to the other Apostles. (Acts 9. 26, 27.)

Paul and Barnabas laboured together for two years at Antioch, and converted great numbers. They thence departed into Cyprus, whence they converted Sergius Paulus, the proconsul. Having revisited the cities through which they had passed, and where they had preached the Gospel, they returned to Antioch.

In A.D. 51 Barnabas was sent with St. Paul from Antioch to Jerusalem, on occasion of certain disputes concerning the observance of legal rites to which the Jewish converts desired to subject the Gentiles. Paul and Barnabas were present at the council at Jerusalem, and returned immediately to Antioch. Peter, arriving there soon afterwards, was led to countenance in some measure, by his conduct, the observance of the Mosaic distinctions; Barnabas, too, who, being by descent a Levite, might retain some of his former notions, was led to dissemble; for which St. Paul reproved them both with much freedom.

Shortly after this, Barnabas was to have accompanied St. Paul on another visit to Cyprus and Asia Minor, but a difference occurred between them respecting St. Mark, and St. Paul proceeded alone to Asia Minor, while Barnabas and Mark went to Cyprus. Here the authentic history of Barnabas terminates, but tradition affirms that he visited Italy, and founded a church at Milan, and afterwards suffered martyrdom at Salamis, by being stoned to death by some Jews, with whom he had held a disputation in the synagogue of that place.

Barnabas is considered to be the author of an epistle which was held in great esteem by the early church, and is still extant. This epistle contains the exact words of several texts in the New Testament, and many phrases and reasonings used by the Apostle Paul, whom Barnabas

resembled, as his fellow-labourer, without copying him. Barnabas cites, or alludes to, many more passages out of the Old Testament than from the New, which may be attributed to the time and character of the writer, who was a Jew, and who argued chiefly with Jews. Dr. Lardner observes, "It might not be reckoned strange, that a man who was contemporary with the Apostles, and had the same spirit and like gifts with them, if he was not an Apostle himself, should often reason and argue like them, without quoting their writings or referring to them."

There was also an apocryphal work entitled the Gospel of Barnabas, wherein the history of Jesus Christ is related in a manner very different from the account given us by the four Evangelists. The Mohammedans have this Gospel in Arabic, and it corresponds very well with those traditions which Mohammed followed in his Koran. It was probably a forgery of some nominal Christians, and afterwards altered and interpolated by the Mohammedans, in order to serve their own purposes. Fabric. *Cod. Apoc.*; Buck.

BARREL, כַּד *kad*; *καδος*, *cadus*, *pitcher*; a vessel used for the keeping of flour, translated "barrel," in our version. (1 Kings 17. 12, 14, 16.) The same word is, in other places, rendered pitcher, as the same vessel appears to have been also used for carrying water. (Gen. 24. 14; Eccl. 12. 6.) It was borne on the shoulders, as is the custom in the East at the present day.

BARRENNESS. This was a condition looked upon as reproachful among the Greeks and Romans, but more particularly so among the Jews; which may be accounted for by an expectation of the coming of the Messiah, and the hope that every Jewish woman cherished that she might be the mother of the promised seed. This constant hope serves to account for many circumstances in the Old Testament history, which might otherwise appear extraordinary or exceptionable. "With this consideration," says the Rev. J. J. Blunt, "I see the scheme of revelation, like the physical scheme, proceeding with beautiful uniformity and unity of plan, 'connecting,' as it has been well said by Paley, 'the chicken roosting upon its perch with the spheres revolving in the firmament,' and connecting, in like manner, the meanest accidents of a household with the most illustrious visions of a prophet. Abstracted from this consideration, I see in the history of Moses details of actions, some trifling, some even offensive, pursued at a length (when compared with the whole) singularly disproportionate; while things, which the angels would desire to look into, are passed over and forgotten. But this principle once admitted, all is consecrated; all assumes a new aspect; trifles at first that seem not bigger than a man's hand, occupy the heavens; and wherefore Sarah laughed, for instance, at the prospect of a son, and wherefore that laugh was rendered immortal in his name; and wherefore the sacred historian dwells on a matter so trivial, whilst the world and its vast concerns were lying at his feet, I can fully understand. I see that nothing is great or little before Him who can bend to his purposes whatever He willeth, and convert the light-hearted and thoughtless mockery of an aged woman into an instrument of his glory, effectual as the tongue of the seer which He touched with living coals from the altar.

"Bearing this master-key in my hand, I can interpret the scenes of domestic mirth, of domestic stratagem, or of domestic wickedness, with which the history of Moses abounds. The seed of the woman, that was to bruise the serpent's head, (Gen. 3. 15,) however indistinctly understood, (and probably it was understood very indis-

tinctly,) was the one thing longed for in the families of old. It was 'the desire of all nations,' as the prophet Haggai expressly calls it (2. 7); and provided they could accomplish this desire, they (like others when urged by an overpowering motive) were often reckless of the means, and rushed upon deeds which they could not defend.

"It is upon this principle of interpretation, and I know not upon what other so well, that we may put to silence the ignorance of foolish men, who have made those parts of the Mosaic history a stumbling block to many, which, if rightly understood, are the very testimony of the covenant; and a principle that is thus extensive in its application, and successful in its results, and that explains so much that is difficult, and answers so much that is objected against, has, from this circumstance alone, strong presumption in its favour, strong claims upon our sober regard."

BARSABAS, *Βαρσαβας*, the Greek form of the Hebrew appellation of two persons mentioned in the Acts of the Apostles. The original is variously given, either as *בן סבא* *son of Seba*, or *בן שבועה* *son of Sever*.

One, styled "Joseph called Barsabas, who was surnamed Justus," (Acts 1. 23,) was one of the first disciples of Our Lord, and probably one of the seventy. When St. Peter proposed to fill up the place of Judas Iscariot, Barnabas was nominated along with Matthias; but the lot did not fall upon him.

The second, who bore also the surname of Judas, mentioned Acts ch. 15, was sent with Paul and Barnabas to Antioch, and is supposed by some to have been the brother of Joseph Barsabas. Winer.

BARTHOLOMEW, *Βαρθολομαίος*, one of the twelve apostles of Our Lord, mentioned by the Evangelists Matthew, Mark and Luke, and also in the Acts of the Apostles. He is supposed to have been the same as Nathanael, one of the first disciples. (John 1. 45.) This opinion is founded on the circumstance, that as the Evangelist John never mentions Bartholomew among the number of the apostles, so the other evangelists never mention Nathanael. And as in John 1. 45, Philip and Nathanael are mentioned together as coming to Jesus, so in the other evangelists Philip and Bartholomew are constantly associated together.

It is an early tradition that St. Bartholomew preached the Gospel as far as India, and also in the more northern and western parts of Asia, and that he suffered martyrdom at Albanopolis, in the region of Caucasus.

BARTIMEUS, or the son of Timeus, a blind beggar of Jericho, to whom Our Lord miraculously imparted the gift of sight. (Mark 10. 46-52.)

BARUCH, the son of Neriah, descended from an illustrious family of the tribe of Judah; he was the scribe and faithful friend of the prophet Jeremiah, (Jer. 32. 12,) whom he accompanied into Egypt. (43. 6.) He appears to have acted as secretary as the prophet during a great part of his life, and never left him until they were parted by death, on which Baruch retired to Babylon, where he also died.

The Book of Baruch is justly placed among the apocryphal writings, and Grotius thinks it a fiction written by some Hellenistic Jew. It is not extant in Hebrew, but only in Greek and Syriac; and in what language it was originally written, it is now impossible to ascertain. It is equally uncertain by whom this book was composed, and whether it contains any matters historically true. In the Vulgate version it is placed after the Lamentations of Jeremiah; but it was never considered as a canonical

book by the Jews, though in the earliest ages of Christianity it was cited and read as a production entitled to credit. The principal portion of the book is an epistle, pretended to be sent by Jehoiaikim and the captive Jews in Babylon, to their brethren in Judah and Jerusalem; the last chapter contains an epistle which falsely bears the name of Jeremiah. The Latin translation in the Vulgate was made prior to the time of Jerome. Eichhorn; Horne.

I. BARZILLAI, a Gileadite of Rogelim, who assisted David when he was expelled from Jerusalem by Absalom. (2Sam. 17. 27.) On David's return to Jerusalem, Barzillai attended him to the banks of the Jordan, but on account of his great age declined David's intended kindness. (2Sam. 19. 33-39.)

II. A native of Meholath, father of Adriel, who married Michal, the daughter of Saul. (2Sam. 21. 8.)

III. A priest who married a daughter of Barzillai the Gileadite. After the return from the captivity, his descendants, with others, "sought their register among those that were reckoned by genealogy, but it was not found: therefore were they, as polluted, put from the priesthood." (Nehem. 7. 63, 64.)

BASHAN or BATANEA, בָּשָׁן Sept. *Basar*; called *Baravaia* by Josephus, and *Basavitis* by Eusebius; the name of a country on the east side of the Jordan, in the half tribe of Manasseh, between the rivers Jabbok and Arnon. It was one of the most fertile districts of the Canaanites, and famous for pasturage; (Numb. 21. 33; 32. 33; Deut. 3. 1; Psal. 22. 12; Amos 4. 1;) the oaks of Bashan are mentioned in Isai. 2. 13; Zech. 11. 2, and we may judge of the high estimation in which these oaks were held from an incidental expression of the Prophet Ezekiel; who, speaking of the power and wealth of ancient Tyre, says, "Of the oaks of Bashan they have made thine oars." (Ezek. 27. 6.)

Josephus, in describing the geographical boundaries of the land of the Amorites, says, "This is a country situate between three rivers, and naturally resembling an island; the river Arnon being its southern limit, the river Jabbok determining its northern side, which running into the Jordan, loses its own name, and takes the other, while the Jordan itself runs along by it on its western coast." "This," Mr. Buckingham observes, "is in perfect unison with the boundaries so frequently mentioned in Holy Writ, and more particularly in Jephthah's recapitulation of the wars of the Israelites, when he sends messages to the king of the children of Ammon, wherein he says of the former, 'And they possessed all the coasts of the Amorites, from Arnon even unto Jabbok, and from the wilderness even unto Jordan.'" (Judges 11. 22.)

After Sihon, king of the Amorites, (whose metropolis was Heshbon,) had fallen before the victorious Israelites in their passage through the wilderness, Og, the king of Bashan, encountered Moses at Edrei, where he fell "with his sons, and all his people, until there was none left him alive, and they (the Israelites) possessed the land." (Numb. 21. 33-35.) See Og.

Mr. Buckingham, in his *Travels in Palestine*, says, "We had now quitted the land of Sihon, king of the Amorites, and entered into that of Og, the king of Bashan, both of them well known to all the readers of the early Scriptures. We had quitted, too, the districts apportioned to the tribes of Reuben and of Gad, and entered that part which had been allotted to the half tribe of Manasseh, beyond Jordan eastward, leaving the land of the children of Ammon on our right or to the east of the Jabbok, which divided Ammon or Philadelphia from Gerasa. (Reland.) The mountains here, are called the land of

Gilead, in the Scriptures and in Josephus; and according to the Roman division, this was the country of the Decapolis, so often spoken of in the New Testament, (Matt. 4. 25,) or the province of Gaulonitis, from the city of Gaulon, its early capital. (Reland.)

"We continued our way over this elevated tract, continuing to behold, with surprise and admiration, a beautiful country on all sides of us; its plains covered with a fertile soil, its hills clothed with forests, at every new turn presenting the most magnificent landscapes that could be imagined. Among the trees, the oak was frequently seen, and we know that this territory produced them of old. In enumerating the sources from which the supplies of Tyre were drawn in the time of her great wealth and naval splendour, the Prophet Ezekiel mentions the oaks of Bashan. Some learned commentators, indeed, believing that no oaks grew in these supposed desert regions, have translated the word by alders, to prevent the appearance of inaccuracy in the inspired writer. The expression of the fat bulls of Bashan, which occurs more than once in the Scriptures, seemed to us equally inconsistent, as applied to the beasts of a country generally thought to be a desert, in common with the whole tract which is laid down in our modern maps as such, between the Jordan and the Euphrates, but we could now fully comprehend, not only that the bulls of this luxuriant country might be proverbially fat, but that its possessors, too, might be a race renowned for strength and comeliness of person.

"As we continued to advance, going on a general course of north-east, with trifling variations on the right and the left, we came into cultivated land, sown with corn, the young blades of which were already appearing above the earth, from their having had gentle showers on the mountains, while all the country west of the Jordan was parched with drought. The general face of this region improved as we advanced further in it, and every new direction of our path opened upon us views which surprised and charmed us by their grandeur and their beauty. Lofty mountains gave an outline of the most magnificent character; flowing beds of secondary hills softened the romantic wildness of the picture; gentle slopes, clothed with wood, gave a rich variety of tints, hardly to be imitated by the pencil; deep valleys, filled with murmuring streams and verdant meadows, offered all the luxuriance of cultivation; and herds and flocks gave life and animation to scenes as grand, as beautiful, and as highly picturesque as the genius or taste of a Claude could either invent or desire."

BASILIDES was a follower of Simon, the sorcerer, mentioned Acts 8. 9, who eclipsed all his predecessors by the extravagance of his tenets, and the success with which he spread them. He was a native of Alexandria, and died there, but visited many places in order to diffuse his doctrines during the reign of the emperor Hadrian, or about one hundred and twenty years after the birth of Our Saviour.

He formed a new race of angels, and invented extraordinary names for them. He enjoined the doctrine of silence like Pythagoras, and prescribed it to his disciples for the space of five years. (Eusebius, *Hist. Eccl.*) He taught that God had sent his first-born into the world, who was called Christ; that he appeared as a man, and accomplished all virtue, but did not suffer death as was supposed; for Simon, the Cyrenean, was substituted in his place, and the Jews in error crucified him, while Christ assumed the form of Simon, and stood by uninjured; and ascended into heaven invisible to them all. (Irenæus, lib. 1.) He declared, therefore, that he who believed that Christ was really crucified was still a slave,

and under the power of those who made the body; but he who denied it was free. His maxim was, "Know all, but let none know you;" and hence his followers never performed their mysteries openly, or divulged them to the uninitiated. They denied the resurrection of the flesh strenuously, and insisted that no promise was made about the salvation of the body. They affirmed that all sins were not forgiven; but only such as were involuntary and done in ignorance. The opinion they entertained of themselves was most extravagant, founded on the supposed superiority of their knowledge and attainments; they esteemed themselves only, and the members of their sect, as men; and all the rest of the world, including other sects of Christians, as dogs and swine; and it was constantly inculcated by Basilides, that his followers should hold no communication with others, and so not cast their pearls before swine. In order to give greater weight and authority to his doctrines, Basilides, according to the testimony of Origen and Ambrose, composed a gospel, which he inscribed with his own name. In several of his discourses he affirmed, that it was an indifferent thing whether his disciples acknowledged or denied Christ before men, or sacrificed to other deities; and, finally, that there was no punishment for offences committed in this life, but a transmigration of souls after death. He seems to have been the most extraordinary and notorious of all those who deformed Christianity with their own impurities. He left behind him a son, named Isidorus, who inherited all his father's impious follies. He wrote what he termed a Treatise on Morality, which the ancient Fathers represent as a sink of impurity. Walsh. See Gnostics.

BASKET, כַּד *kapinos*. The white baskets mentioned in Genesis 40. 16, were probably wicker baskets of open work, or as the margin renders it, "full of holes." The Jews appear to have used wicker baskets, which were probably of a certain measure, for carrying about with them their daily provision, which explains why Joseph, in interpreting the chief baker's dream, treats the three baskets as equal to three days. They were baskets also, which were filled with the fragments remaining after the five loaves and two small fishes had been blessed and increased by a miracle to the supply of five thousand persons (Matt. 14. 20); and it is probable from the number of these baskets, that they were those belonging to the twelve disciples, and used by them for the purposes of containing their daily food; thus rendering the miracle, if possible, more impressive. For not only were the wants of the multitude supplied, but also the disciples themselves obtained their next day's provision from the five barley-loaves and two small fishes.

Baskets formed a necessary article of furniture to the Jews, who, when travelling either among the Gentiles or the Samaritans, were accustomed to carry their provisions with them in baskets, in order to avoid defilement by eating with strangers.

We give a couple of specimens of common Egyptian baskets, which afford an illustration of two passages of Scripture. The first represents, among others, a man,

like Pharaoh's chief baker, bearing a basket upon his head, (Gen. 40. 16,) while the second gives a lively image of the "basket of summer fruit," employed as a type by the prophet Amos. (8. 1,2.)

Ancient and modern Fruit Basket of Egypt.

BASON, סַף *saph*. This word, which in Exodus 12. 22, is translated *bason*, in Judges 5. 25, *dish*, and 6. 38, *bowl*, is in the Targum of Jonathan called סַפֵּל *sephel*, an earthen vase.

The basons for the service of the Tabernacle were of brass, (Exod. 27. 3,) but those of the Temple were of gold. (2Chron. 4. 8.)

BASTARD. The word מַמְזִיר *mamsir*, which occurs in Deut. 23. 2, and Zech. 9. 6, is in both cases in our version rendered "bastard." It probably, however, denotes an illegitimate child in the first passage only; in the opinion of Dr. Blayney, Michaëlis, &c., in the second instance it merely means a *stranger* or *foreigner*. Thus they understand the passage in Zechariah, "A bastard shall dwell in Ashdod," as a prophecy of the conquest of that place by the Jews, an event which occurred under the Maccabees.

Natural children among the Jews seem to have received little parental attention, as is evidently implied in the words of the Apostle. (Heb. 12. 8.) The father neither checked their passions, nor corrected their faults, nor stored their minds with useful knowledge. The portion that was given to the sons of concubines depended altogether upon the will of the father. Thus Abraham gave presents to Ishmael, and to the sons whom he had by Keturah, and sent them away before his death, but Jacob made the sons whom he had by his concubines heirs, as well as the others. (Gen. 21. 8-21; 25. 1-6; 49. 1-27.) The conduct of Abraham was probably most in accordance with the general usage, for at the present day in Persia, the son of a concubine is never placed on a footing with the legitimate offspring; and any attempt made by parental fondness to do so would be resented by the relations of the legitimate wife. Rosenmüller; Jahn.

BASTINADO, שֹׁבֵט *a rod of correction*, (Job 9. 34.) The punishment of beating with sticks or rods, termed "scourging," (Levit. 19. 20,) and "chastising," (Deut. 22. 18,) was very common among the Jews, and is ordained in the law for a variety of offences. Thus, stripes, the rod, &c. frequently occur for punishment of any kind. (Prov. 10. 13; 26. 3.)

The dignity or high-standing of the person who had rendered himself liable to this punishment could not excuse him from its being inflicted. He was extended upon the ground, and blows not exceeding forty were applied upon his back in the presence of the judge. (Deut. 25. 2,3.) This punishment is very frequently practised in the East at the present day, with this difference, however, that the blows were formerly inflicted on the back, but now on the soles of the feet.

China has aptly been said to be governed by the stick. In Persia also the stick is in continual action. "Men of all ranks and ages are continually liable to be beaten, and it is by no means a rare occurrence for the highest and most confidential persons in the state, in a moment of displeasure or caprice in their royal master, to be handed over to the beaters of carpets, who thrash them with their sticks as if they were dogs."

The punishment of the *τυμπανισμος*, or beating upon the tympanum, was practised by Antiochus towards the Jews, and is referred to by St. Paul. (Heb. 11. 35.) The tympanum was a wooden frame, probably so called from resembling a drum or timbrel, on which the sufferer was fastened, and then beaten to death with sticks.

BAT, *הלילי* *allif*. This word, the primary meaning of which appears to be, to *fly in darkness*, is by all the ancient versions except the Syriac, taken to denote the bat, which bore among the Greeks and the Romans the similar names of *νυκτερις* and *vespertilio*. The Syriac reads peacock.

In the Mosaic enumeration of unclean animals the bat is reckoned among the birds, and such is the most obvious classification; but modern naturalists have shown that it has no real affinity with birds, and it is now included in the class Mammalia and order Cheiropteron, or hand-winged.

Seven distinct species of bats are found in this country, and in warm climates the species are much more numerous. The body of the great English bat (*Vespertilio noctula*), is about the size of that of a mouse, but the wings have a spread of fifteen inches; its fur is soft and thick, and of a bright chesnut colour; in the East Indies, however, bats are found of very much larger size and loathsome appearance, particularly the one called the vampire or Ternate bat. It does not appear that the bats in Palestine are of very large dimensions, but they are incredibly numerous.

The well-known habits of the bat afford a forcible illustration of a portion of the fearful picture drawn by Isaiah, of the day when the Lord shall arise "to shake terribly the earth." "A man shall cast his idols of silver and his idols of gold to the moles and to the bats," or in other words, carry his idols into the dark caverns, old ruins, or desolate places, to which he himself shall flee for refuge; and so shall give them up, and relinquish them to the filthy animals that frequent such places, and have taken possession of them as their proper habitation.

Roberts, in his *Oriental Illustrations*, remarks, "The larger species of the bat are eaten by the Hindoos, and were also used as an article of food by the Assyrians. The East may be termed the country of bats; they hang by hundreds and thousands in caves, ruins, and under the roofs of large buildings. To enter such places, especially after rain, is most offensive. I have lived in rooms where it was sickening to remain on account of the smell produced by those creatures, and whence it was almost impossible to expel them. What from the appearance of the creature, its sunken diminutive eye, its short legs, with which it cannot walk, its leather-like wings, its half-hairy oily skin, its offensive ordure ever and anon dropping on the ground, its time for food and sport,—darkness, 'when evil spirits also range abroad,' makes it one of the most disgusting creatures to the people of the East. No wonder, then, that its name is used by the Hindoos, as by the prophet, for an epithet of contempt. When a house ceases to please the inhabitants, on account of being haunted, they say and also do, 'Give it to the bats; my buildings are all given to the bats;' 'The bats are now the possessors of the once splendid mansions of royalty.' People ask when passing a tenantless house, 'Why is this habitation given to the bats?' 'Go, miscreant, go, or I will give thee to the bats.' 'The old magician has been swearing that we shall all be given to the bats.'

The great or Ternate bat belongs to the East, and was not altogether unknown to the ancients. It is noted for its cruelty, voracity, and filthiness. It is more mischievous than any other species of bat; but it carries on

the work of destruction by open force. It kills poultry and small birds, attacks men, and often wounds them in the face. "This unsightly animal," says Forbes, "fixes its dwelling among owls and noxious reptiles in the desolate tower, or lonely unfrequented mausoleum, which it seldom leaves, except in the dusk of the evening."

BATANÆA. See BASHAN.

BATH, *בא* a Jewish measure for liquids, equivalent to the ephah for dry goods. Most modern writers consider it as containing seven gallons and a half English, but Josephus says it was equal to seventy-two *ξέσται*, an Attic measure holding a pint. If this be correct, it was the same in capacity with the *μυτρητης*, or firkin, mentioned in John 2. 6, an Attic measure holding about nine English gallons.

BATH, BATHING. Bathing, so pleasant and so essential to cleanliness in a hot climate, no doubt was first practised in the open air, for we read that the Egyptians, even of the highest rank, were accustomed to bathe in the river Nile, (Exod. 2. 5,) but in after times, extensive buildings were fitted up for the purpose.

It was one of the civil laws of the Hebrews, that the bath should be used. The object of the law, without doubt, was to secure proper cleanliness, (Levit. 14. 2; 15. 1-8; Numb. 19. 7,) and, for its more easy observance, we may, with a German writer, Wichelhausen, *On the Baths of the Ancients*, consider it as probable, that public baths were erected in Palestine of a construction similar to those which are now so frequently seen in the East. Public baths also existed among the Greeks and the Romans, and were by the latter people decorated with great splendour.

The words in the New Testament, translated *washed*, and *washing*, literally denote bathing. (John 13. 10; Acts 9. 37; 2 Peter 2. 22.)

Sir Robert Ker Porter remarks, "The place of greatest attraction to an Oriental taste was certainly the summer bath. It seemed to comprise everything of seclusion, elegance, and that luxurious enjoyment which has too often been the chief occupation of some Asiatic princes. This bath, saloon, or court, is circular, with a vast basin in its centre of pure white marble, of the same shape, and about sixty or seventy feet in diameter. This is filled with the clearest water, sparkling in the sun; for its only canopy is the vault of heaven; but rose-trees, with other pendent shrubs, bearing flowers, cluster near it; and, at times, their waving branches throw a beautifully quivering shade over the excessive brightness of the water. Round the sides of the court are two ranges, one above the other, of little chambers, looking towards the bath, and furnished with every refinement of the harem. These are for the accommodation of the ladies who accompany the Shah during his occasional sojourns at the Negouristan. They undress or repose in these before or after bathing; for so fond are they of this luxury, that they remain in the water for hours; and sometimes, when the heat is very relaxing, come out more dead than alive. The waters flow through the basin by a constant spring; thus renewing the vigour of the body by their bracing coolness, and refreshing the air, which the sun's influence, and the thousand flowers breathing around, might otherwise render oppressive. The master of the palace frequently takes his noon-day repose in one of the upper chambers which encircle the saloons of the bath. In such a bath-court, it is probable that Bathsheba was seen by David. As he was walking at even-tide on the roof of his palace, he might undesignedly have strolled far enough to overlook the *auderoon* of his women, where the beautiful wife of Uriah, visiting the royal wives,

might have joined them, as was often the custom in those countries, in the delights of the bath."

Roberts says, "The Hindoos do not, in general, as in England, plunge into a stream or river, but go near a well or tank; and then, with a little vessel, pour water on their heads and bodies. See the man who is weary; he calls for his neighbour, or servant, or wife, to accompany him to the well; he then takes off his clothes, except a small strip round his loins, sits on his hams, and the individual who assists begins to 'pour water' upon him, till he is refreshed, and exclaims 'sufficient.' In this way his body is invigorated, his thirst quenched, and he is made ready for his food."

"The number of public baths in Cairo is between sixty and seventy, some of which are for men only, others for women and children, and a few for both sexes. In the latter case males are allowed access to them in the morning, but during the after part of the day, they are devoted to females. The building consists of many apartments, and is supplied with water by means of wheels turned by an ox, which throw it into the boilers from a well.

"The women make a visit to the public bath a kind of holiday, and display the richest dress and jewels they can command; strangers enter into familiar gossip with each other, and it not unfrequently happens that a mother chooses a wife for her son from amongst the bathers. In the case of a family festival—such as marriage, or the circumcision of a child—the whole bath is hired for one party, when no one else is admitted; a feast of sweetmeats and coffee is provided, and female singers are engaged to amuse the company." Lane.

BATH-KOL, בַּת־קוֹל (*the daughter of the voice*), a fancied oracle of the Jews, of which the Talmud makes mention, which was resorted to when the oral communications of Jehovah had ceased to be promulgated by the prophets. They considered it as the appointed successor of the spirit of prophecy, and therefore styled it "the daughter of the voice" (from heaven).

When the Bath-Kol was to be consulted, the person repaired to the synagogue, and sometimes the first words from any of the sacred writings uttered by any person were considered as the answer of heaven; at other times the rolls of the Law or the Prophets were opened, and the first passage that caught the eye was so taken.

The following is an instance of its use, from the Talmud:

Rabbi Acher, having committed many crimes, was led into thirteen synagogues, and in each synagogue a disciple was interrogated, and the verse he read was examined. In the first school, they read the words, "There is no peace, saith the Lord, unto the wicked." (Isai. 48. 22.) Another school read, "Unto the wicked God saith, What hast thou to do to declare my statutes, or that thou shouldest take my covenant in thy mouth?" (Psal. 50. 16;) and in all the synagogues something of this nature was heard, from whence it was concluded that Acher was hated of God.

Some expositors, such as Vitringa, have imagined that the Bath-Kol is alluded to in John 12. 28; but there appears to be no foundation for such a conjecture. Dr. Prideaux has shown that the Bath-Kol was no such celestial voice as the Talmudists pretend, but only a fantastical way of divination of their own invention.

The early Christians resorted to a like practice as a revelation of the Divine will; and, after a lapse of ten centuries, vestiges of this superstition might be traced in the Western church; for the Scriptures were opened at hazard, and the first passage that happened to be read was considered to point to the will of heaven on any subject brought in question, so as to afford a prediction;

for instance, of the future conduct of a bishop receiving consecration, or an animadversion on his past life. In the reign of William II., upon the consecration of Herbert de Lozingre, the Bible was opened at the address to Judas Iscariot: "Friend, wherefore art thou come?" and Monkish historians relate that this rebuke to the new prelate, for the mercenary practices he had countenanced in the affairs of the church, caused him to make expiation by founding the magnificent church of Norwich, A.D. 1096, as the cathedral of his see. The usage was imported from France, where it had long been in vogue.

This unhallowed mode of perverting the direct sense of Scripture to the vilest purposes of divination and deceit, was not the only instance of superstitions analogous to the Jewish Bath-Kol. The Sortes Virgilianæ, wherein the later Romans sought prognostications of the future by opening the rolls of the *Æneid*, and extracting the first verse that presented itself, closely resembled it; as do also the mystical names of the Deity used by Eastern or Jewish diviners and exorcists. See CABBALA; GNOSTICISM.

BATHSHEBA, the daughter of Eliam or Ammiel, and the wife of Uriah the Hittite. She was subsequently the mother of Solomon. (2Sam. 11. 3.) See BATH; DAVID.

BATH-RABBIM, the name of one of the gates of Heshbon, once the capital of Sihon, king of the Amorites. (Cantic. 7. 4.) It was probably the one nearest the fish-pools; and as the gates of Oriental cities often take their names from towns the road to which opens from them, it may be conjectured that this gate took its name from Rabbath Ammon, the capital of the Ammonites, situated about sixteen miles from Heshbon.

BATH-ZACHARIAS, a place near Bethsura. (1Macc. 6. 32, 33.) Epiphanius, in his *Lives of the Prophets*, says, the prophet Habakkuk was born in the territories of Bath-Zacharias. Calmet.

Some writers have imagined that this town, the name of which signifies "the house of Zachariah," is intended in Luke 1. 40; but the probability is very strong, that Hebron was the town where Zacharias dwelt, and that the passage in St. Luke is properly rendered as signifying merely his abode or residence. Wells.

BATTLE. See ARMS, ARMOUR, ARMY.

BATTLEMENT מַעְקָה *maakah*, a balustrade round the flat roofs of Oriental houses. (Deut. 22. 8.) The word is also used in the modern sense of a part of a fortification, in Jeremiah 5. 10.

From the earliest times Oriental houses have been flat-roofed, and unless surrounded with a parapet, there would be danger in walking upon them; this is usually about breast-high, and forms the partition with the contiguous houses. Instead of the parapet wall, some terraces are secured with balustrades only, or latticed work. This probably was the "lattice in his upper chamber," through which Ahaziah, the king of Samaria, fell down into the court, though some commentators suppose it to have been a kind of sky-light. (2Kings 1. 2.)

BATTERING RAM. See ARMS, ARMOUR, ARMY.

BAY-TREE, אֲזָרַח *azrach*. This word occurs in Psal. 37. 35, and signifies a tree which still remains in its native ground, not yet transplanted, or, as in our margin, "a green tree which groweth in his own soil."

The Septuagint and the Vulgate read אֲרָז *arazh*, instead of אֲזָרַח *azrach*, and therefore speak of a cedar; Luther, the Old Saxon, the French, the Spanish, the Italian of Diodati and Ainsworth, also employing אֲרָז render it the *lawrel*; but the marginal reading of

our version appears to express the true sense of the passage.

In illustration of the text of our version, Roberts informs us that the comparison of the wicked to various kinds of trees is exceedingly common in India. "A truly wicked man," he says, "is compared to a tamarind tree, whose wood is exceedingly hard, and whose fruit is sour. Thus they say, 'That fiend is like the maruthamarram' (its native name). This tree resists the most powerful storms; it never loses its leaves, and is sacred to Vyrava, the prince of devils. I have seen some that would measure from thirty to forty feet in circumference. The tamarind-tree at Point Pedro, under which Baldeus preached, measures thirty feet."

BDELLIUM, בִּדְלוּחַ *bedolach*. (Gen. 2. 12; Numb. 11. 7.) Differences of opinion prevail among commentators as to the nature of the substance here intended, some conceiving it to be a precious stone, others a gum, the latter of which appears the most probable.

Bdellium is mentioned in Genesis 2. 12, as the produce of the land of Havilah, and as that region is generally taken to lie at the head of the Persian Gulf, one of whose most remarkable productions has ever been pearls. Bochart supposes that pearls are here intended. This interpretation is disputed by most modern commentators, and is also opposed to the view of many ancient versions; indeed, is only supported by the Arabic, and some of the Rabbins. Other of the Rabbins and the Septuagint consider it as a gem, naming the crystal, lapis lazuli, and carbuncle, while Josephus, the versions of Aquila, Symmachus, Theodotion, and the Vulgate, understand an odoriferous resin, somewhat resembling myrrh, and supposed to be produced by a species of palm, (*Borassus flabelliformis* of Linnæus,) which grows in Arabia and Judæa. This, also, is the conclusion at which most modern writers have arrived.

BEACON. The word תֹּרֵן *toran*, translated beacon in Isaiah 30. 17, is in the margin in that place and in the text in Ezek. 27. 5 rendered mast. It probably implies the same thing as *nes*, a standard or "ensign," which was set up on the tops of mountains as a signal for the assembling of the people, sometimes on the invasion of an enemy, and sometimes after a defeat. (Isai. 5. 26; 11. 12; 18. 3; 62. 10.)

BEAM, δοκος, a beam or joist. (Matt. 7. 3.) Dr. Lightfoot shows that the expressions of Our Lord in this passage, were a common proverb among the Jews, having reference to the greater sins of one prone to censure the small faults of another. The mote, *καρφος*, may be understood as any very small dry particle, which by lodging in the eye causes distress and pain, and is here given as the emblem of lesser faults in opposition to a beam for the greater, as also in the parallel proverb, "Strain at a gnat and swallow a camel." (Matt. 23. 24.)

BEAN, פֶּלֶא *pol*; Sept. *κυαμος*; a well-known esculent vegetable, the varieties of which are very numerous.

Beans are natives of the East, and as they are mentioned among the provisions brought by Barzillai to King David, no doubt they were an article of food among the Jews. To typify the hardships attendant on a siege, the prophet Ezekiel is directed to make bread of coarse and inferior productions, such as barley, beans, lentils, millet, and fitches mixed with wheat. (Ezek. 4. 9.)

Pliny says beans were much esteemed among other vegetables, because bread was also made of them. Wheat

was likewise mixed with beans by many people, who thought that they rendered the bread more solid and agreeable.

The paintings on the monuments of Egypt show that the bean was cultivated in that country in very early times; although Herodotus states that beans were held in abhorrence by the Egyptian priesthood, and that they were never eaten by the people; but as they were cultivated, it is probable that they formed an article of diet with the poorer classes; and beans with rice, and dhourra bread, are the chief articles of food at this day among the Fellah population. "I have seen them," says Dr. Hume, "sit down to a hearty meal of horse-beans steeped in oil." Those now cultivated in Syria and Palestine are the white horse-bean and the kidney-bean, called by the natives *masch*.

BEAR, דֹּרִי *dor*, the name of a well-known beast of prey.

There are three kinds of bears known to naturalists; the white, the black, and the brown. Of the two former the Scriptures do not speak; the latter kind being the only one known in Eastern regions, and to which almost every climate is congenial from the shores of the Frozen Ocean to the torrid zone. The bear was rather common in Palestine and particularly dangerous to the flocks, (1Sam. 17. 34;) it was also by bears that the children who mocked the prophet were torn to pieces. (2Kings 2. 24.)

"The brown bear," says Buffon, "is not only savage, but solitary; he takes refuge in the most unfrequented parts, and the most dangerous precipices and uninhabited mountains. He chooses his den in the most gloomy parts of the forest, in the deep recesses of a cavern, or in the hollow of some old enormous tree. The disposition of this animal is surly and rapacious, and his mischievousness has passed into a proverb. His appearance corresponds with his temper, his coat is rugged, his limbs strong and thick, and his countenance covered with a dark and sullen scowl, indicates the settled moroseness of his disposition."

The sacred writers frequently associate this formidable animal with the king of the forest, as being equally dangerous and destructive, and it is thus that the prophet Amos sets before his countrymen the succession of calamities, which under the just judgment of God was about to befall them, declaring that the removal of one would but leave another equally grievous. (Amos 5. 18, 19.) And Solomon, who had closely studied the character of the several individuals of the animal kingdom, compares an unprincipled and wicked ruler to these creatures. (Prov. 28. 15.)

"The she bear is said to be even more fierce and terrible than the male, especially after she has cubbed, and her furious passions are never more fiercely exhibited than when she is deprived of her young. When she returns to her den and misses the object of her love and care, she becomes almost frantic with rage. Disregarding every consideration of danger to herself, she attacks with great ferocity every animal that comes in her way; and in the bitterness of her heart will dare to attack even a band of armed men. The Russians of Kamtschatka never venture to fire on a young bear when the mother is near; for if the cub drop, she becomes enraged to a degree little short of madness, and if she get sight of the enemy will only quit her revenge with her life. A more desperate attempt can scarcely be performed than to carry off her young in her absence. Her scent enables her to track the plunderer; and unless he has reached some place of safety before the infuriated animal overtake him, his only safety is in dropping one of the cubs, and continuing his flight; for the mother, attentive to its safety,

carries it home to her den before she renews the pursuit." Cook's *Voyages*.

To the fury of the female bear when robbed of her young, there are several striking allusions in Scripture. The Divine threatening in consequence of the numerous and aggravated iniquities of the kingdom of Israel, as uttered by the prophet Hosea, is thus forcibly expressed: "I will meet them as a bear bereaved of her whelps," (13. 8,) which was fulfilled by the invasion of the Assyrians and the complete subversion of the kingdom of Israel.

There is a variety of the bear recently discovered in Syria, which is probably the animal referred to in the Scriptures, and which has been termed by naturalists the Syrian bear. This creature is sometimes of a yellowish brown colour and sometimes of a yellowish white, variegated with spots; the fur is woolly beneath, with long straight, or but slightly curled, hair externally; and between the shoulders there is a stiff mane of erected hairs, about four inches long. It is said to inhabit the higher parts of Mount Lebanon near the region of snow, in summer; but in winter wanders to the neighbourhood of villages lower down the mountain. It may be probably merely a variety of the brown bear (*Ursus Arctos*) produced by climate.

In the vision of Daniel, where the four great monarchies of antiquity are symbolized by different beasts of prey, whose qualities resembled the character of these several states, the Medo-Persian empire is represented by a bear, which raised itself up on one side, and had between its teeth three ribs, and they said thus unto it: "Arise, devour much flesh." (7. 5.) All the four monarchies agreed in their fierceness and rapacity; but there were several striking differences in the subordinate features of their character, and their mode of operation, which is clearly intimated by the different character of their symbolical representatives. The Persian monarchy is represented by a bear to denote its cruelty and greediness after blood. And Bochart has enumerated several points of resemblance between the character of the Medo-Persians and the disposition of the bear.

The beast with seven heads and ten horns, (Rev. 13. 2,) is described as having the feet of a bear. The bear's feet are his best weapons, with which he fights, either striking or embracing his antagonist in order to squeeze him to death, or to trample him under foot.

Daubuz refers this prophecy to the invasion of the Roman empire by the barbarians, of whom the Scythians and Germans in particular were very ignorant and cruel; while Bishop Newton considers the reference to be to the Persian empire typified as a bear by Daniel.

"The Hindoos are as much afraid of bears as any animal in the forest; hence, when the letter-carriers and others have to travel through districts infested by them, they are always armed with a crooked knife, in the shape of a sickle; thus, when the bear is preparing to give them a hug, one cut from the instrument will send it off. When the female is robbed of her whelps, she is said to be more fierce than any other animal; hence many sayings refer to her rage, and are applied to the fury of violent men. 'I will tear thee to pieces as a bear which has cubbed;' 'Begone, or I will jump upon thee as a bear.' When a termagant goes with her children to scold, it is said, 'There goes the she bear and her whelps.' Roberts.

The voice or growl of the bear is a particularly harsh, disagreeable, and mournful sound, whence the prophet Isaiah, describing the lamentable state of the Jews under the consciousness of their sins, says, "We roar all like bears," (59. 11,) and a similar figure is employed for poignant sorrow by the Hindoos. "Heard you not the

widow's cry last night? the noise was like that of a she bear."

BEARD, *ḥāṣan*. The customs of nations in respect to this part of the human countenance have differed and still continue to differ so widely that it is not easy with us, who treat the beard as an incumbrance, to conceive properly the importance which is attached to it in the East.

"The first care of an Ottoman prince, when he comes to the throne, is to let his beard grow, to which Sultan Mustapha added the dyeing of it black, in order that it might be more apparent on the day of his first appearance, when he was to gird on the sabre; a ceremony by which he takes possession of the throne." Baron de Tott.

The shaving off half their beards by Hanun is mentioned as an equally gross affront with the other indignities offered to the ambassadors of David, and only to be answered by an appeal to arms, and in the same spirit, in the year 1764, a Persian emir having cut off the beard of an officer sent to demand his tribute, Kerim Khan marched against him with a large army, and conquered all his country. Niebuhr.

The dishonour done by David to his beard of letting his spittle fall on it, 1 Sam. 21. 13, seems at once to have convinced Achish of his being insane, as no man in health of body and mind would thus defile what was esteemed so honourable; we may hence also perceive the import of Mephibosheth's neglect, in his not trimming it. (2 Sam. 19. 24.) It was customary for men to kiss one another's beards when they saluted, for the original of 2 Sam. 20. 9 literally translated would read, "And Joab held in his right hand the beard of Amasa, that he might give it a kiss;" indeed, in the East it is generally considered an insult to touch the beard except to kiss it. Among the Arabs, kissing the beard is an act of respect; D'Arvieux observes, that "The women kiss their husband's beards, and the children their father's, when they go to salute them."

The Jews wore their beards very long, and probably valued them as highly as do the Orientals of the present day. "Among the Arabs and Turks the beard is even now reckoned the greatest ornament of a man, and is not trimmed or shaved, except in cases of extreme grief; so with the Jews, the cutting off the beard is mentioned as a token of mourning. (Isai. 15. 2; Jerem. 41. 5.) They admire and envy those who have a fine beard; 'Pray do but see,' they cry, 'that beard; the very sight of it would persuade any one, that he, to whom it belongs, is an honest man.' If they would correct any one's mistakes, they would tell him, 'For shame of your beard! Does not the confusion that follows light on your beard?' If they intreat any one, or use oaths in affirming or denying anything, they say, 'I conjure you by your beard,—by the life of your beard,—to grant me this,—or by your beard, this is, or is not so.' They say further, in the way of acknowledgment, 'May God preserve your blessed beard! May God pour out his blessings on your beard.'

"They almost universally in Persia dye the beard black, by an operation not very pleasant, and which requires to be repeated once a fortnight. It is always performed in the hot-bath, where the hair being well saturated, takes the colour better. A thick paste of khenna is first made, which is largely plastered over the beard, and which, after remaining an hour, is all completely washed off, and leaves the hair of a very strong orange colour, bordering upon that of brick-dust. After this as thick a paste is made of the leaf of the indigo, which previously has been pounded to a fine powder, and of this also a deep layer is put upon the beard; but

this second process, to be taken well, requires full two hours. During all this operation the patient lies quietly flat upon his back; while the dye, (more particularly the indigo, which is a great astringent,) contracts the features of his face in a very mournful manner, and causes all the lower parts of his visage to smart and burn. When the indigo is at last washed off, the beard is of a very dark bottle-green, and becomes a jet-black only when it has met the air for twenty-four hours. Some, indeed, are content with the khenna or orange-colour; others, more fastidious, prefer a beard quite blue. The people of Bokhara are famous for their blue beards." Morier.

BEAST. This word occurs in a variety of significations in the Scriptures; sometimes it is used literally for an animal, at other times figuratively for wicked men, oppressors, and also for Antichrist.

We find that Moses throughout his laws, manifests, even towards animals, a spirit of justice and kindness, and inculcates the avoidance, not only of actual cruelty, but even of its appearance. A code of civil law does not, indeed, necessarily provide for the rights of animals, because they are not citizens; but still the way in which animals are treated, so strongly influences the manners and sentiments of a people even towards their fellow creatures, (for he who habitually acts with cruelty and want of feeling towards beasts, will soon become cruel and hard-hearted to men,) that a legislator will sometimes find it necessary to attend to this in order to prevent the people from becoming savage. Michaëlis.

When the word beast is used in opposition to man, as Psal. 36. 6, any brute creature is signified. When St. Paul (1Cor. 15. 32,) speaks of having "after the manner of men fought with beasts," we are not to understand his having been exposed in the amphitheatre to fight as a gladiator, as some have conjectured; but that he had to contend, at Ephesus, with the fierce uproar of Demetrius and his associates. Ignatius uses the same figure, in his epistle to the Romans: "From Syria even unto Rome, I fight with wild beasts, both by sea and land, both night and day, being bound to ten leopards,"—that is, to a band of soldiers. So Lucian in like manner says, "For I am not to fight with ordinary wild beasts, but with men, insolent and hard to be convinced."

A wild beast is the symbol of a tyrannical, usurping power or monarchy, that destroys its neighbours or subjects, and preys upon all about it. The four beasts in Dan. 7. 3, are explained in verse 17, of four kings, or kingdoms, as the word king is interpreted, verse 23.

In several other places of Scripture, wild beasts are the symbol of tyrannical powers, as in Ezek. 34. 28, and Jerem. 12. 9, where the beasts of the field are explained by the Targum as the kings of the heathen and their armies.

Amongst profane authors the comparison of cruel governors to savage beasts is frequent; and Horace calls the Roman people a many-headed beast. (Lib. 1. Ep. 1. v. 76.)

Wild beasts are generally in the Scriptures to be understood as the symbols of enemies, whose malice and power are to be judged of in proportion to the nature and magnitude of the wild beasts they are represented by.

The seven heads of the beast in Rev. 17. 9, 10, have a two-fold signification:—1st. They are seven mountains or hills, on which the metropolis of the beast is situated. 2nd. They are seven successive orders or kinds of government, which history informs us existed:—kings, consuls, tribunes, decemvirs, dictators, emperors, the kingdom of the Goths in Italy. These particulars of situation and government are only to be found in Rome, which is thus identified as the place intended. After

these powers became extinct, the popedom appeared in all its vigour, and has continued ever since as the eighth head of the beast; but it is said, verse 11, "he goeth into perdition."

The rising of a beast signifies the rise of some new dominion or government; the rising of a wild beast, the rise of a tyrannical government; and the rising out of the sea, that it should owe its origin to the commotions of the people. So waters are interpreted by the angel. (Rev. 17. 15.) In the visions of Daniel the four great beasts, the symbols of the four great monarchies, are represented rising out of the sea in a storm. "I saw in my vision by night, and behold, the four winds of the heaven strove upon the great sea, and four great beasts came up from the sea." (Dan. 7. 2, 3.) Campanella suggests that the founders of the four monarchies are called beasts, on account of the savage and cruel measures they pursued.

BEAT. The words *υποπιαζω με* translated in St. Luke 18. 15 "weary," may also signify, according to Macknight, "'to beat on the face,' or 'to strike under the eyes.'" In the above passage the phrase has a metaphorical meaning, and signifies to give great pain, such as arises from severe beating. The meaning, therefore, is, that the uneasy feelings which the widow raised in the breast of the judge by the moving representation which she gave of her distress, affected him to such a degree that he could bear it no longer, and resolved to do her justice." It may also be rendered to stan with importunity, to oppress.

The same word *υποπιαζω* in 1Cor. 9. 27, is rendered in our version "I keep under," meaning to subject to hardship, to mortify. The Apostle in saying (v. 26,) that he does not fight "as one that beateth the air," probably alludes to the preliminary exercises of those who intended to engage in the pugilistic contests. In order to acquire a suitable dexterity and firmness of muscle, it was customary for them to exercise themselves with the gauntlet, and to fling their arms about as if they were engaged with an actual combatant. This was called beating the air; and came to be a proverbial expression applied to those who missed their aim in the conflict.

BEATITUDES, MOUNT OF. This is a hill of an oblong shape, on one of the roads from Tiberias to Nazareth, having two projecting summits at one of its extremities, whence it has obtained, from the Mohammedans, the name of Keroun Hottein, "the Horns of Hottein," but the Christians call it the Mount of Beatitudes, from the expression at the commencement of our Lord's discourse, Matthew, ch. 5. It consists entirely of limestone, the prevailing constituent of the mountains, not only in Palestine, but also in Syria, Asia Minor, and Greece. The mount has an elevation of from two to three hundred feet. Dr. Edward Daniel Clarke ascended to the summit, and gives the following account:—

"We left our route to visit the elevated mount, where it is believed that Christ preached to his disciples that memorable sermon, concentrating the sum and substance of every Christian virtue. Having attained the highest point of it, a view was presented which, for its grandeur, independently of the interest excited by the different objects contained in it, has no parallel in the Holy Land.

"From this situation we perceived that the plain over which we had been so long riding, was itself very elevated. Far beneath appeared other plains, one lower than the other, in regular gradation, extending to the surface of the Lake or Sea of Tiberias, or Sea of Galilee. This immense lake, almost equal in the gran-

dear of its appearance to that of Geneva, spreads its waters over all the lower territory, extending from the north-east towards the south-west, and then bearing east of us. Its eastern shore presents a sublime scene of mountains, extending towards the north and south, and seeming to close in at either extremity, both towards Chorazin, where the Jordan enters, and the Aulon or Campus Magnus, through which it flows to the Dead Sea. The cultivated plains reaching to its borders, which we beheld at an amazing depth below our view, resembled, by the various hues their different produce exhibited, the motley pattern of a vast carpet. To the north appeared snowy summits, towering beyond a series of intervening mountains, with unspeakable greatness. We considered them as the summits of Libanus; but the Arabs belonging to our caravan called the principal eminence Jebel-el-Sieh, saying it was near Damascus; probably, therefore, a part of the chain of Libanus. This summit was so lofty, that the snow entirely covered the upper part of it; not lying in patches as I have seen it during summer upon the tops of very elevated mountains, but investing all the higher part with that perfect white and smooth velvet-like appearance which snow only exhibits when it is very deep; a striking spectacle in such a climate, where the beholder, seeking protection from a burning sun, almost considers the firmament to be on fire. The elevated plains upon the mountainous territory beyond the northern extremity of the lake, are called by a name in Arabic which signifies 'the Wilderness.' To the south-west, at the distance of only twelve miles, we beheld Mount Tabor, having a conical form, and standing quite insular upon the northern side of the plain of Esdraelon."

Mr. Carne, in his *Letters from the East*, says, "Near to Tiberias is shown the field where the disciples plucked the ears of corn and ate; and within three miles of the town, turning out of the path for a short distance on the left, we came to the Mount of Beatitudes, where Christ preached his sermon. It is a verdant hill, rising gradually on every side towards the summit, on which small masses of rock are scattered. It is admirably calculated for the purpose, as a multitude of people might stand on the gently-sloping sides of the mount, even to the bottom, and hear distinctly every word of the speaker. The prospect of the lake beneath, of the mountains of Gilboa, and that of Bethulia, to the north, is extremely beautiful."

A monastery is said to have been built on this mountain in the middle ages; but no remains can now be found, except the ruins of a chapel, with an ancient reservoir in front. *Bible Topog.*

BEAUTY. The Song of Solomon, particularly the sixth and seventh chapters, gives us some idea of what were then the notions of beauty in an Eastern bride, and by comparing these statements with modern Oriental opinions, we may perceive many points of agreement. Roberts says, "A handsome Hindoo female is compared to the sacred city of Seedambaram. Her skin is of the colour of gold; her hands, nails, and soles of the feet are of a reddish hue; her limbs must be smooth, and her gait like the stately swan. Her feet are small, like the beautiful lotus; her waist as slender as the lightning; her arms are short, and her fingers resemble the five petals of the kantha flower; her breasts are like the young cocoa nut, and her neck is as the trunk of the areca tree. Her mouth is like the ambal flower, and her lips as coral; her teeth are like beautiful pearls; her nose is high and lifted up, like that of the cameleon, (when raised to snuff the wind;) her eyes are like the sting of a wasp, and the Karungu-valley flower; her brows are

like the bow, and nicely separated; and her hair is as the black cloud."

Corpulency and stateliness of manner are qualities which the Orientals admire in their women; particularly corpulency, which is well known to be one of the most distinguishing marks of beauty in the East. Niebuhr says that plumpness is thought so desirable in the East, that the women, in order to become so, swallow, every morning and every evening, three insects of a species of *tenebriones*, fried in butter. Upon this principle is founded the compliment of Solomon, (Cantic. 1. 9,) and Theocritus, in his epithalamium for the celebrated Queen Helen, describes her as plump and large, and compares her to the horse in the chariots of Thessaly.

The Arab women whom Mr. Wood saw among the ruins of Palmyra were well-shaped, and, although very swarthy, yet had good features. Zenobia, the celebrated queen of that renowned city, was reckoned eminently beautiful; and the description we have of her person answers to that character; her complexion was of a dark-brown, her eyes black and sparkling, and of an uncommon fire; her countenance animated and sprightly in a very high degree; her person graceful and stately, her teeth white as pearl; her voice clear and strong.

Females of distinction in Palestine and even further East are not only beautiful and well-shaped, but in consequence of being kept from the rays of the sun, are very fair, and the Scripture bears the same testimony of Sarah, of Rebekah, and of Rachel; that they were "beautiful and well-favoured." The women of the poorer classes, however, are extremely brown and swarthy in their complexions, from being much exposed to the heat of the sun. It is on this account that the prophet Jeremiah, when he would describe a beautiful woman, represents her as one that keeps at home; because those who are desirous to preserve their beauty go very little abroad.

Stateliness of the body has always been held in great estimation in Eastern courts, nor do they think any one capable of great services or actions to whom nature has not vouchsafed to give a beautiful form and aspect. It still is and has always been the custom of the Eastern nations to choose such for their principal officers, or to wait on princes and great personages. (Dan. 1. 4.)

Sir Paul Rycout observes, "that the youths that are designed for the great offices of the Turkish empire, must be of admirable features and looks, well-shaped in their bodies, and without any defects of nature: for it is conceived that a corrupt and sordid soul can scarce inhabit in a serene and ingenuous aspect; and I have observed not only in the seraglio, but also in the courts of great men, their personal attendants have been of comely lusty youths, well habited, deporting themselves with singular modesty and respect in the presence of their masters; so that when a pacha aga spahi travels, he is always attended with a comely equipage, followed by flourishing youths, well clothed and mounted, in great numbers."

BED. The Hebrews appear to have had a sort of bed, which occurs sometimes under the names of ערש *ares*, מטה *metah*, מושב *meshkav*, and are said to have been adorned with ivory. These beds resembled the Persian settees or sofas, having a back and sides, six feet long, three broad, and like the divans about nine inches high. They were also furnished with bolsters. The sofas were sometimes ornamented with ivory on the sides and back, and also on the legs by which they were supported, and they were of such a length as to answer all the purposes of beds. (Psal. 41. 3; 132. 3; Amos 6. 4.) Sometimes they had a veil, מכביר *machbir*, which when disposed to sleep, they spread over the face in order to

keep off the gnats. (2Kings 8. 15.) Gesenius terms it a fly-net.

Mattresses, or thick cotton quilts folded, were used for sleeping upon. These were laid upon the divan, a part of the room elevated above the level of the rest, covered with a carpet in winter, and a fine mat in summer.

At present in the East a divan cushion serves for a pillow and bolster. They do not keep their beds made; the mattresses are rolled up, carried away, and placed in a large cupboard or box next to the wall till they are wanted at night. And hence the propriety of our Lord's address to the paralytic, "Arise, take up thy bed," or mattress, "and walk." (Matt. 9. 6.) They were usually stuffed with wool or some soft substance, but the poorer class made use of skins merely.

Shaw says, "At one end of each chamber there is a little gallery raised three, four, or five feet above the floor, with a balustrade in front of it, with a few steps likewise leading up to it. Here they place their beds; a situation frequently alluded to in the Holy Scriptures, which may likewise illustrate the circumstance of Hezekiah turning his face, when he prayed, towards the wall." (2Kings 20. 2.)

An Oriental bedstead usually consists of a platform raised on posts or beams two or three feet above the ground. The platform for supporting the bedding is not of sacking, but of wood or whatever else may be the material; and it is boarded up at the sides, head and foot, to retain the bedding as in a trough.

A modern traveller gives the following description of a bed in Turkey. "The time for taking our repose was now come, and we were conducted into another large room, in the middle of which was a kind of bed without bedstead or curtains. Though the coverlet and pillows exceeded in magnificence the richness of the sofa, which likewise ornamented the apartment, I foresaw that I could expect but little rest on this bed, and had the curiosity to examine its make in a more particular manner. Fifteen mattresses of quilted cotton, about three inches thick, placed one upon another, formed the groundwork, and were covered by a sheet of Indian linen, sewed on the last mattress. A coverlet of green satin adorned with gold, embroidered in embossed work, was in like manner fastened to the sheets, the ends of which, turned in, were sewed down alternately. Two large pillows of crimson satin, covered with the like embroidery, in which there was no want of gold or spangles, rested on two cushions of the sofa, brought near to serve for a back, and extended to support our heads. The taking of the pillows entirely away would have been a good resource, if we had had any bolster; and the expedient of turning the other side upward having only served to show they were embroidered in the same manner on the bottom, we at last determined to lay our handkerchiefs over them, which, however, did not prevent our being very sensible of the embossed ornaments underneath." (Comp. Prov. 7. 16.)

When a person is cast into a bed by way of punishment, it is said to be a bed of languishing, and therefore a symbol of great tribulation and anguish of body and mind. For to be tormented in bed, where men seek rest, is an emblem of the severest of griefs. (Job 33. 19; Psal. 41. 3; Isai. 28. 20.)

BED-CHAMBER. A bed-chamber does not, according to the usage of the East, mean a sleeping-room, but a repository for beds, and hence it appears that it was in a chamber of beds that Joash, the son of Ahaziah, was concealed, and thus preserved from the murderous fury of Athaliah. (2Kings 11. 2.)

BEDAN is mentioned in 1Sam. 12. 11, as one of those sent by the Lord to deliver Israel; but the name of Bedan does not occur among the Judges. There are various explanations offered, and that perhaps is the best which follows the Septuagint, Syriac, and Arabic versions, in reading Barak, instead of Bedan. Others think Bedan to be Jair of Manasseh. (Judges 10. 3.) The Chaldee, the Rabbins, and some Jewish commentators, conclude that Bedan was Samson of Dan. The Syriac and Arabic have also the name of Samson instead of Samuel in the above passage, and the names of Samson and Barak appear in many Latin copies.

BEE, דבורה *devorah*, μέλισσα. The bee is by Cuvier reckoned in the genus *Apis*, of the order Hymenoptera. The species of this genus are very numerous, and one of them, the honey-bee, is of essential service to man. These insects are furnished with four wings, the two foremost covering the hinder ones when at rest, a pair of mandibles, and a proboscis in a double sheath; and a portion of them are also provided with a formidable sting.

2. Bees are in their nature gregarious, and in Europe are in a manner domesticated, being collected by man in hives, which each contain one queen or female bee, several hundred males, called drones, and some thousands of workers, usually considered as sexless, but which the researches of modern naturalists have shown are in reality females. The queen is much larger than any of the rest, and the workers are considerably smaller than the drones.

The Honey-Bee.

The interior of the hive, which is the workmanship of the bees, contains, besides receptacles for honey, a vast number of hexagonal cells, in each of which the queen deposits an egg. In the course of two or three days a small worm is produced, which is carefully fed by the workers, and in from sixteen to twenty-four days, according to its sex, the perfect insect makes its appearance, the females occupying the shortest, and the males the longest period.

3. There is but one queen in each hive at a time, as we have said, but it appears that the workers have the power, by adopting a different mode of treatment, of producing a new queen from what would otherwise be only a worker, if an occasion should arise for so doing.

The queen-bee and the drones take no part in the labours of the hive, these, including the collection of the materials for honey and wax, and the rearing of the young, being performed by the workers exclusively, whose indefatigable industry has in almost every country passed into a proverb.

4. Many writers, especially those of early times, struck by the order apparent in all their proceedings, have not hesitated to ascribe almost reasoning powers to bees, and to assert that each hive formed a regular government.

The discussion of such questions, of course, does not fall within the scope of this work, any more than the economical details of the management of a hive as a source of profit, but we may quote from a recent and interesting work, a brief summary of the proceedings of the working bees, as it is these alone which can be interesting to the general reader.

"5. The proceedings of the workers, both in the hive and out of it, are numerous and multifarious. In their excursions to collect the various substances of which they have need, the principal object of the bees is to furnish themselves with three different materials—the nectar of flowers, from which they elaborate honey and wax; the pollen or fertilizing dust of the anthers, of which they make what is called bee-bread, serving as food both to the old and young; and the resinous substance called by the ancients propolis, pissoceros, &c., used in various ways in rendering the hive secure and giving the finish to the combs. The first of these substances is the pure fluid secreted in the nectaries of flowers, which the length of their tongue enables them to reach in most blossoms. The tongue of a bee, you are to observe, though so long and sometimes so inflated, is not a tube through which the honey passes, nor a pump acting by suction, but a real tongue which laps or licks the honey, and passes it down on its upper surface, as we do, to the mouth, which is at its base concealed by the mandibles. It is conveyed by this orifice through the œsophagus into the first stomach, which we call the honey-bag, and which, from being very small, is swelled when full of it to a considerable size. Honey is never found in the second stomach, (which is surrounded with muscular rings, and resembles a cask covered with hoops from one end to the other,) but only in the first: in the latter, and the intestines, the bee-bread only is discovered. How the wax is secreted, or what vessels are appropriated to that purpose, is not yet ascertained. If you wish to see the wax pockets in the hive-bee, you must press the abdomen so as to cause it to extend itself; you will then find on each of the four intermediate ventral segments, separated by the carina or elevated central part, two trapeziform whitish pockets, of a soft membranaceous texture: on these the laminæ of wax are formed, and they are found upon them in different states, so as to be more or less perceptible.

"6. Observe a bee that has alighted on an open flower. The hum produced by the motion of her wings ceases, and her employment begins. In an instant she unfolds her tongue, which before was rolled up under her head. With what rapidity does she dart this organ between the petals and the stamina! At one time she extends it to its full length, then she contracts it; she moves it about in all directions, so that it may be applied both to the concave and convex surface of a petal, and wipe them both; and thus by a virtuous theft robs it of all its nectar. All the while this is going on, she keeps herself in a constant vibratory motion. The object of the industrious animal is not, like the more selfish butterfly, to appropriate this treasure to herself. It goes into the honey-bag as into a laboratory, where it is transformed into pure honey; and when she returns to the hive, she regurgitates it in this form into one of the cells appropriated to that purpose; in order that, after tribute is paid from it to the queen, it may constitute a supply of food for the rest of the community.

"Though the great mass of the food of bees is collected from flowers, they do not wholly confine themselves to a vegetable diet; for, besides the honeyed secretion of the *Aphides*, the possession of which they will sometimes dispute with the ants, they are very fond also of the fluid that oozes from the cells of the pupæ, and will suck

eagerly all that is fluid in the abdomen after they are destroyed by their rivals. Several flowers that produce much honey they pass by; in some instances from inability to get at it. In other cases, it appears to be the poisonous quality of their honey that induces bees to neglect certain flowers.

"When the stomach of a bee is filled with nectar, it next, by means of the feathered hairs with which its body is covered, pilfers from the flowers the fertilizing dust of the anthers, the pollen; which is equally necessary to the society with the honey, and may be named the ambrosia of the hive, since from it the bee-bread is made. Sometimes a bee is so discoloured with this powder as to look like a different insect, becoming white, yellow, or orange, according to the flowers in which it has been busy. Reaumur was urged to visit the hives of a gentleman, who on this account thought his bees were different from the common kind. He suspected, and it proved, that the circumstance just mentioned occasioned the mistaken notion. When the body of the bee is covered with farina, with the brushes of its legs, especially of the hind ones, it wipes it off; not, as we do with our dusty clothes, to dissipate and disperse it in the air, but to collect every particle of it, and then to knead it and form it into two little masses, which she places, one in each, in the baskets formed by hairs on her hind legs.

"7. In the months of April and May the bees collect pollen from morning to evening; but in the warmer months the great gathering of it is from the time of their first leaving the hive (which is sometimes so early as four in the morning) to about ten o'clock A.M. About that hour all that enter the hive may be seen with their pellets in their baskets; but during the rest of the day the number of those so furnished is small in comparison with those that are not. In a hive, however, when a swarm is recently established, it is generally brought in at all parts of the day. He supposes, in order for its being formed into pellets, that it requires some moisture, which the heat evaporates after the above hour; but in the case of recently colonized hives, that the bees go a great way to seek it in moist and shady places.

"When a bee has completed her lading, she returns to the hive to dispose of it. The honey is disgorged into the honey-pots or cells destined to receive it, and is discharged from the honey-bag by its alternate contraction and dilatation. A cell will contain the contents of many honey-bags.

"The pollen is employed as circumstances direct. When the bee laden with it arrives at the hive, she sometimes stops at the entrance, and leisurely detaching it by piecemeal, devours one or both the pellets on her legs, chewing them with her jaws, and passing them then down the little orifice before noticed. Sometimes she enters the hive, and walks upon the combs; and whether she walks or stands, still keeps beating her wings. By the noise thus produced, which seems a call to some of her fellow-citizens, three or four go to her, and placing themselves around her, begin to lighten her of her load, each taking and devouring a small portion of her ambrosia: this they repeat, if more do not arrive to assist them, three or four times, till the whole is disposed of. When more pollen is collected than the bees have immediate occasion for, they store it up in some of the empty cells.

"Huber was a long time uncertain from whence the bees procured the gummy resin, called propolis; but it at last occurred to him to plant some cuttings of a species of poplar (before their leaves were developed, when their leaf-buds were swelling, and besmeared and filled with viscid juice) in some pots, which he placed in the way of

the bees that went from his hives. Almost immediately a bee alighted upon a twig, and soon with its mandibles opened a bud, and drew from it a thread of viscid matter which it contained; with one of its second pair of legs it took it from the mouth, and placed it in the basket: thus it proceeded till it had given them both their load.

"Mr. Knight mentions an instance of bees using an artificial kind of propolis. He had caused the decorticated part of some tree to be covered with a cement composed of bees'-wax and turpentine: finding this to their purpose, they attacked it, detaching it from the tree by their mandibles, and then, as usual, passing it from the first leg to the second, and so to the third.

"Bees, in their excursions, do not confine themselves to the spot immediately contiguous to their dwellings, but, when led by the scent of honey, will go a mile from it.

"8. These insects, especially when laden and returning to their nest, fly in a direct line, which saves both time and labour. How they are enabled to do this with such certainty as to make for their own abode without deviation, I must leave to others to explain. Connected with this circumstance, and the acuteness of their smell, is the following curious account, given in the *Philosophical Transactions* for 1721, of the method practised in New England for discovering where the wild hive-bees live in the woods, in order to get their honey. The honey-hunters set a plate containing honey or sugar upon the ground in a clear day. The bees soon discover and attack it: having secured two or three of them that have filled themselves, the hunter lets one go, which, rising into the air, flies straight to the nest: he then strikes off at right angles with its course a few hundred yards, and letting a second fly, observes its course by his pocket-compass, and the point where the two courses intersect is that where the nest is situated.

"Water is a thing of the first necessity to these insects; but they are not very delicate as to its quality, but rather the reverse; often preferring what is stagnant and putrescent, to that of a running stream.

"A new-born bee, as soon as it is able to loose its wings, seems perfectly aware, without any previous instruction, what are to be its duties and employments for the rest of its life. It appears to know that it is born for society, and not for selfish pursuits; and therefore it invariably devotes itself and its labours to the benefit of the community to which it belongs. Walking upon the combs, it seeks for the door of the hive, that it may sally forth and be useful. Full of life and activity, it then takes its first flight; and, uncondacted but by its instinct, visits like the rest the subjects of Flora, absorbs their nectar, covers itself with their ambrosial dust, which it kneads into a mass and packs upon its hind legs; and if need be, gathers propolis, and returns unembarrassed to its own hive.

"Bees are extremely neat in their persons and habitations, and remove all nuisances with great assiduity, at least as far as their powers enable them. Sometimes slugs or snails will creep into a hive, which with all their address they cannot readily expel or carry out. But here their instinct is at no loss; for they kill them, and afterwards embalm them with propolis, so as to prevent any offensive odours from incommoding them. An unhappy snail, that had travelled up the sides of a glazed hive, and which they could not come at with their stings, they fixed, a monument of their vengeance and dexterity, by laying this substance all around the mouth of its shell. When a bee is disclosed from the pupa, and has left its cell, a worker comes, and taking out its envelope, carries it from the hive; another removes the exuvium of the

larva, and a third any filth or odour that may remain, or any pieces of wax that may have fallen in when the nascent image broke from its confinement. But they never attempt to remove the internal lining or silk that covers the walls, spun by the larva previous to its metamorphosis, because, instead of being a nuisance, it renders the cell more solid.

"After all, there are mysteries, as to the *primum mobile*, amongst these social tribes, that with all our boasted reason we cannot fathom, nor develop satisfactorily the motives that urge them to fulfil in so remarkable though diversified a way their different destinies. One thing is clear to demonstration, that by these creatures and their instincts, the power, wisdom, and goodness of the Great Father of the universe are loudly proclaimed; the atheist and infidel confuted; the believer confirmed in his faith and trust in Providence, which he thus beholds watching, with incessant care, over the welfare of the meanest of his creatures; and from which he may conclude that he, the prince of the creation, will never be overlooked or forsaken: and, from them, what lessons may be learned of patriotism and self-devotion to the public good; of loyalty, of prudence, temperance, diligence, and self-denial!" Kirby and Spence on *Bees*.

10. The allusions of Scripture to the bee and its produce are numerous. The insect is commonly considered as fierce and revengeful, if in any way molested; and thus Moses, alluding to the hostility of the Amorites, says, "They chased you as bees do," (Deut. 1. 44,) and David employs the same simile. The land of Canaan is described by the Lord himself as "a land flowing with milk and honey," (Exod. 3. 8,) and bees were of course very numerous then, as they are at the present day. They were generally wild, as we may infer from the circumstance of the honey-comb found by Samson in the lion's carcass, (Judges 14. 8,) and from the honey dropping from the trees; (1Sam. 14. 25;) but there were most probably others that were tended by man, and were obedient to his voice, as Isaiah seems to intimate. (Isai. 7. 18.)

The honey of Palestine was probably particularly fine, for Jacob directs his sons to take it, along with other things, as a present to his son Joseph, when in the height of his power in Egypt, (Gen. 43. 11,) and more than a thousand years after we find it an article of commerce with the Tyrians. (Ezek. 27. 17.) In the song of Moses, (Deut. 32. 13,) he says the Lord, in his care for his chosen people, made them suck honey out of the rock; and this phrase is thus explained by a recent traveller in Africa, (Light, an American.) "Trees in this country being scarce, the honey in most parts is found upon the front of rocks or cliffs, plastered on the outside, having a covering of wax to protect it from intruders. This outside coating, after a short exposure to the weather, assumes nearly the same colour as the rock, which at a little distance cannot easily be distinguished; so that a man, making an incision with a knife, and putting his mouth to it to suck it, were a person a little way off to notice some of the honey dripping from his chin, he would suppose that he saw a man sucking honey from a rock." See HONEY.

In the Septuagint, after Proverbs 6. 6, where the ant is mentioned as a pattern of foresight, that version also refers to the bee in these words:—

Or go to the bee and learn what a worker she is,
And how neatly she makes her comb:
Of whose labours both kings and subjects partake for
their health.
She is loved and praised by all,
And, though of a weak body, she is valued as regarding
wisdom.

Whether this passage, which is not in the Hebrew nor

in the Vulgate, was interpolated by some transcriber who was disposed to add another similitude, it is difficult to say. It is, however, in all the editions of the Septuagint, except the Complutensian.

BEELZEBUB. This word, in the original, is, in every instance, Beelzeboul; (Matt. 10. 25; 12. 24; Mark 3. 22; Luke 11. 15, 18, 19, 27;) and, from his being styled "master of the house," and "prince of devils," Jahn and others consider that our translators have fallen into error in identifying him with Beelzebub, the god of Ekron and that he is in reality the "prince of the power of the air," (Eph. 2. 2,) which, according to Jewish notions, was filled with companies of evil spirits. (See **BAAL**.)

On the other hand, Burder says that it is the god of Ekron, to whom the passages in the Evangelists apply, and that the name in the original was merely a contemptuous corruption, which changed the idol from the god of flies to the god of a dunghill.

BEER, בֵּאֵר BEEROTH, בְּאֵרוֹת well, or wells. These words, either alone or in conjunction with others, occur frequently in the Scriptures as names of places. Instances of the first kind are found in Beer, where the chief men among the Israelites, by the direction of Moses, dug a well in the wilderness with their staves, (Numb. 21. 16-18,) supposed to be the same as Beer Elim, (*the well of firs*), mentioned in Isaiah 15. 8, and in Beeroth, a town belonging to the tribe of Benjamin, four miles from Jerusalem. (2Sam. 4. 2.)

The principal compound names are the following:

BEEROTH BENE-JAAKAN, (wells of the sons of Jaakan,) an encampment of the Israelites in the wilderness, (Numb. 33. 31; Deut. 10. 6,) which Eusebius places about ten miles from Petra.

BEER LAHAI-ROI, (the well of life, of sight, or where one sees (God) and yet lives,) the name of a well in the wilderness between Palestine and Egypt. (Gen. 24. 62; 25. 11.) "The above etymological signification is given in Genesis 16. 14; but, perhaps it would be more proper to read it with other vowels, *Lekhe Raee*, the well of the conspicuous or far-seen rock." Gesenius.

BEER-SHEBA, (well of the oath,) a place on the southern frontier of Palestine, where Abraham made an alliance with Abimelech, king of Gerar. (Gen. 21. 3.) A town was founded here in after times, which was given by Joshua to the tribe of Judah; afterwards it was transferred to Simeon. (Josh. 15. 28.) It was twenty miles south of Hebron. The town was the station of a Roman garrison in the time of Eusebius and Jerome; and it was fortified by the Crusaders, its vicinity to the sea coast and to Egypt rendering it a place of considerable importance.

Seetzen says the town is still in existence under the name of Birszabea, under which designation it is given in several maps, and that it is a poor village adjoining an extensive desert, which has scarcely an inhabitant except near the sea-coast.

Professor Robinson observes, "We had the gratification of discovering the site of ancient Beersheba, the celebrated border city of Palestine, still bearing in Arabic the name of Bir Seba. Near the water-course are two circular wells of excellent water more than forty feet deep. They are both surrounded with drinking troughs of stone for the use of camels and flocks; such as doubtless were used of old for the flocks which then fed on the adjacent hills. Ascending the low hills north of the wells, we found them strewn with the ruins of former habitations, the foundations of which are distinctly to be

traced. These ruins extend over a space of half a mile long by a quarter of a mile broad. Here then is the place; where Abraham and Isaac and Jacob often lived! Here Samuel made his sons Judges; and from here Elijah wandered out into the southern desert, and sat down under the rethem, or shrub of broom, just as our Arabs sat down under it every day and every night! Over these swelling hills the flocks of the patriarch roved by thousands;—we now found only a few camels, asses, and goats."

BEETLE. Among the creatures which are allowed to the Israelites as food (Levit. 11. 22) is found **חֲרָגֹל** *hhargol*, which our translators have rendered "beetle," but which Gesenius thinks was a species of locust. On the other hand the word **עֶרֶב** *arob*, rendered conjecturally "flies," (Exod. 8. 21,) is thought to denote the beetle, and probably that kind called by Linnaeus *Blatta Aegyptiaca*.

Beetles are by naturalists styled coleopterous insects, from their horny upper wings, or shard; the species are exceedingly numerous, differing greatly in size and colour, and being found in almost every country. The order of Coleoptera is divided into many families, of which the Scarabæidæ and Blattæ, or common beetles and cock-chaffers, are known to every one. These creatures, like many others in the insect world, deposit their eggs in the ground, where they are hatched, and the appearance of their progeny rising from the earth, is by some writers supposed to have suggested to the Egyptian priesthood the doctrine of the resurrection of the dead. Certain it is that beetles were very common in Egypt, and one of them, thence styled by naturalists *Scarabæus sacer*, was an object of worship; and this fact gives strength to the conjecture that this creature is meant in Exodus ch. 8, as the sacred character of the object would naturally render its employment as a plague doubly terrible.

Egyptian Beetle.

There is a great general similarity in the habits of the various kinds of beetles, and the following description of the sacred beetle will afford a sufficiently just idea of the rest.

"The singular habits of this beetle," says a modern writer, "induced the ancient Egyptians to place it amongst those creatures on which they bestowed divine honours: it is found represented in many of their hieroglyphic paintings and sculptures, and appears to have been a symbol of the creative powers; it was also particularly sacred to one of their deities, called Phthah, the lord of truth, and signified the world, or all creation. It was likewise the emblem of the sun, 'from having thirty fingers, equal to the number of days in a month.'

"The carved figures and the pictorial representations of this insect are very numerous among the antiquities of ancient Egypt. There is at present in the British Museum, a colossal figure of the *Scarabæus sacer*, which

was, perhaps, once the object of veneration to numerous human beings, on whom the light of revelation had not yet shone; it also occurs without end as an ornament on signet-rings, and forming the upper portion of official and other seals.

"Many of the papyri which are found on the breasts of the mummies, declaring their virtues, or other great qualities of the deceased, contain also a representation of this beetle.

"The cause which induced this ancient nation to place the Scarabæus among their sacred animals, appears to have been the provident habits and the great care for its young which it constantly displays. In Egypt this beetle is extremely common, and may be seen constantly engaged in the laborious task which seems to be the principal object of its life.

"The Scarabæi are the most voracious of the Coleoptera; the food on which they subsist is of an animal nature, and so violent are their carnivorous propensities, that, if confined in a box by themselves, the larger will prey upon the smaller.

"In walking, this kind of insects appear to move with considerable difficulty, from the apparently disproportioned size of their hinder legs. But when we inquire into their habits, we shall find that this apparent disproportion is of considerable service to the animal when engaged in preparing for the welfare of its future offspring. Their constant employ is to provide little nests in which to deposit their eggs; this they do by forming round pellets of dung in which they place the egg. These pellets, in September, they bury in the earth, three feet deep, where, in the spring, the eggs are hatched."

Besides its being worshipped as a divinity, stones cut into the form of the beetle served as talismans among the Egyptians. The under surface was filled with figures cut in intaglio of solar, lunar, and astral symbols and characters. They were held, according to Pliny, to inspire the soldier with courage, and to protect his person in the day of battle, and also to defend children from the malign influence of the evil eye. There is little reason to doubt that the Hebrews learnt the use of these things in Egypt, but they were prohibited by the Mosaic Law.

Talismanic Beetle.

The Gnostics, among other Egyptian superstitions, adopted this notion regarding the beetle, and we give the obverse of one of their gems of this kind. Dr. Walsh says, "The scarabæus or beetle is known to have been among the commonest of the emblems of the Egyptians, as a representation of the solar influence in the sidereal, and of the regal power in the political system. It is found in all their pillars, sarcophagi, and other remains of ancient art, and the enormous beetle in the British Museum, is a proof the respect in which they held the form by the immense size in which they represented it. It is consequently found on the gems of the Gnostics with different figures and inscriptions accompanying it. On one is the word ΦPH , the Coptic name for the sun; on another in a beetle with Isis on the opposite side holding in her arm two children, the emblem of maternal fecundity. On another gem the beetle is not cut on the stone, but the stone is formed into the shape of the insect; and on the convex back is represented

Isis, or the Egyptian Ceres, reclining beside the Nile, with two vases of Egyptian corn the emblem of vegetable prolificness, naturally expressed by the emblem of the sun's rays and the Nile: from the head issues the lotus, and in one hand is held a nilometer or perhaps a spade. It is the exact form of the same agricultural instrument as used at this day in the East. An amulet of Isis was held in great sanctity."

Gnostic gem of Isis, on a Scarabæus.

BEEVES, בקר *bakar*. This word collectively signifies black cattle or horned cattle, without distinction of age or gender. (Levit. 22. 19-21.)

BEG, BEGGARS. The laws of Moses furnish abundant evidence that great inequality of condition existed in his time among the Hebrews, for recommendations to the rich to be liberal to their poorer brethren are frequently met with, (Exod. 23. 11; Deut. 15. 11,) but no mention is made of persons who lived as mendicants. In the song of Hannah, (1Sam. 2. 8,) however, beggars are spoken of, and such a fate is predicted to the posterity of the wicked, while it shall never befall the seed of the righteous, in the Psalms, (37. 35; 109. 10,) so that the practice was probably then not uncommon. In the New Testament, also, we read of beggars that were blind, diseased and maimed, who lay at the doors of the rich, by the waysides, and also before the gate of the Temple. (Mark 10. 46; Luke 16. 20, 21; Acts 3. 2.) But we have no reason to suppose that there existed in the time of Christ that class of persons called vagrant beggars, who present their supplications for alms from door to door, and who are found at the present day in the East, although less frequently than in the countries of Europe. That the custom of seeking alms by sounding a trumpet or horn, which prevails among a class of Mohammedan monastics, called *kalendar* or *karendal*, prevailed also in the time of Christ, may be inferred from the peculiar construction of the original in Matthew 6. 2. There is one thing characteristic of those Orientals who follow the vocation of mendicants, which is worthy of being mentioned; they do not appeal to the pity, or to the almsgiving spirit; but to the justice of their benefactors. (Job 22. 7; 31. 16; Prov. 3. 27, 28.) Jahn, *Bibl. Arch.*

Roberts says, in India he was often reminded by beggars of the passage in Luke 16. 3, "I cannot dig." "When we tell them to work, they can scarcely believe their ears; and the religious mendicants who swarm in every part of the East, look upon you with the most sovereign contempt when you give them such advice. 'I work! why, I have never done such a thing; I am not able.' 'Surely, my lord, you are not in earnest; you are joking with me.'"

BEGINNING, כְּרֵשִׁית *bereshith*. This word, besides its ordinary import, was with the Hebrews an idiomatic form of expression for eternity. In this sense it is employed alike by Moses and (in its Greek form) by St. John.

Our Lord is also emphatically styled the Beginning, ($\alpha\rho\chi\eta$), both by St. Paul and St. John, (Col. 1. 18; Rev. 1. 8; 3. 14,) and it is worthy of remark that the Greek philosophers expressed the First Cause of all things by the same word. Macknight.

BEHEMOTH, בְּהֵמוֹת (Job 40. 15.) This word, the majestic plural, as it is termed, of בְּהֵמוֹת *behemah*, cattle, (Psal. 1. 10.) has given rise to a great variety of interpretations. Being in the plural form, although followed by singular pronouns, Professor Lee conceives that it denotes large herbivorous animals in general, and not any one animal in particular, but other commentators dissent from this, and the opinion of Bochart, that behemoth is the hippopotamus, or river-horse, (*Hippopotamus amphibius*;) is the most generally accepted. Other writers think the description more applicable to the elephant or rhinoceros, and Dr. John Mason Good believes that it can only relate to some extinct animal, like the mastodon or mammoth.

As we have said, the opinion of Bochart is the one most generally received, and many naturalists, writing without any such intention, have in their description of the hippopotamus borne testimony which confirms the accuracy of his views, being in strict accordance with many parts of the Scripture representation.

2. It may reasonably be concluded that the animal referred to was one which might probably, by being found in his neighbourhood, come under the patriarch's observation; and Virey, a French naturalist, says, "The hippopotamus is found in the rivers of Africa, and it most probably frequented the rivers of Idumæa when the country contained but few inhabitants. It is known that this colossal quadruped lives upon herbs and roots, and that it conceals itself in marshy places. Its teeth are large and strong, their hardness and whiteness render them particularly valuable. Its size is rather less than that of the elephant, and the tail is hardly a foot in length. These creatures congregate in herds or families, and roam about in the night for pasture."

The male of the hippopotamus has been found seventeen feet in length, fifteen in circumference, and seven in height. The head is enormously large, and the jaws are armed with four cutting teeth, each of which is twelve inches in length. The hide is so thick and tough as to resist the edge of a sword or sabre. Buffon says, "The cutting teeth, especially those of the under jaw, are very long, cylindrical, and chamfered. The canine teeth are also long, crooked, prismatic, and sharp, like the tusks of the wild boar. The largest of the cutting and canine teeth are twelve and sometimes sixteen inches long, and each of them weighs from twelve to thirteen pounds. The animal swims dexterously and walks under water, but cannot remain long without coming upon the surface to breathe. He comes often on shore particularly at night, as he subsists on roots and vegetables, and does much damage to the cultivated fields. He sleeps and reposes on shore in reedy places near the water."

In the great work published under the authority of the King of Naples, containing prints from antiquities found at Herculaneum, there are some pictures of Egyptian landscapes, in which are figures of the crocodile lying among the reeds, and of the hippopotamus browsing on the aquatic plants of an island. And in the piece of mosaic pavement at Præneste, the crocodile and the river-horse are associated.

When first it leaves the water, the hippopotamus is of a mouse colour inclining to a bluish-ash; while on the upper parts it assumes by moonlight a silvery appearance; but the belly, where the skin is thinner than elsewhere, is of a reddish tinge. When undisturbed, the hippopotamus is a mild and gentle animal; but if assailed in the water, it becomes a formidable enemy, and has been known to sink a boat full of people. The voice of the hippopotamus is described by Burckhardt as a harsh and heavy sound like the creaking or groaning of a large wooden door; it is made when he raises his huge head

out of the water, and when he retires into it again. The same writer informs us that the animal is sometimes taken by means of snares and pitfalls, to which there is an allusion in the passage under consideration. The hide of the hippopotamus is manufactured into whips, which inflict such severe punishment that, according to Burckhardt, they are the dread of every servant and slave in Egypt, and are sometimes sold for as much as a dollar each. The tusks of the animal are extremely hard, and are much valued in Europe, being employed in the manufacture of artificial teeth.

3. Although the hippopotamus, as well as the elephant and rhinoceros, is an animal of vast size, some writers allege that the behemoth is represented as so majestic a creature, that, after every allowance for poetic figure, some one of the monstrous beings now found in a fossil state can alone adequately answer the description. Of one of these, the mammoth, Dr. Adam Clarke observes, "That to which the part of a skeleton belonged, which I examined, must have been by computation not less than twenty-five feet high, and sixty feet in length! The bones of one toe I measured, and found them three feet in length! One of the very smallest grinders of an animal of this extinct species was full of processes on the surface more than one inch in depth, which showed that the animal had lived on flesh. I have just now weighed and found it, in its very dry state, four pounds eight ounces avoirdupois; the same grinder of an elephant I have weighed also, and found it just two pounds. The mammoth, therefore, from this proportion, must have been as large as two elephants and a quarter, and as it appears to have been a many-toed animal, the springs which such a creature could make must have been almost incredible; nothing by swiftness could have escaped its pursuit. God seems to have made it as a proof of his power; and had it been prolific, and not become extinct, it would have depopulated the earth. Creatures of this kind might have been living in the days of Job."

The Chinese are of opinion that this gigantic animal still exists. "According to several travellers of this nation," says M. Cuvier, "this animal is called Ma-men-tou-wa, and inhabits the countries of northern Russia." The people of Siberia, where the remains of the mammoth are found in great quantities, believe that it still exists under ground.

4. Professor Lee has entered at some length upon the subject of the behemoth in his translation of the Book of Job, and remarks, "It would be almost endless to cite and refute all that has been said or affirmed of the passage in Job. And it will perhaps be thought almost chivalrous to dissent from the opinion of the very learned and ingenious Bochart, which has been adopted by all the learned since his day. I object to the term Behemoth being taken as a singular noun, and thence made to mean some particular beast. Because, 1. Neither the context, nor the singular pronouns following, require any such sense. 2. The phrase 'I made with thee,' (ver. 15) will not bear the sense attributed to it by Bochart. 3. Because the passage, 'He is the chief,' (ver. 19) cannot with propriety be predicated of any one animal; and, 4. Because the descriptions given from v. 20 to 25 cannot be easily and naturally applied to the hippopotamus, nor, perhaps, to any other single animal."

5. In accordance with these views, the Professor offers the following as the more correct translation of the passage:—"Behold now the beasts which I have made are with thee, each eating grass like the ox. Behold now his strength is in his loins; and his vigour in the firmness of his bowels. He maketh his tail to bend like the cedar; the sinews of his thighs are woven together; his bones are as tubes of brass, his solid bones as bars of

iron. He is of the first of the ways of God: his Maker hath given him his weapon; for the mountains bring forth his provision, though all the wild beasts of the plain do gambol there."

Upon a full consideration of the arguments adduced, the opinion of Bochart appears to be the best founded, though it is not to be denied that other hypotheses have found able supporters.

BEHIND. This term had a symbolical signification equivalent to "remaining," or "to come," according to the Greek and Roman writers, and in Leviticus 25. 51, our translators appear to have caught the sense of the original by introducing the word "behind" in *italic*, giving the same force to the expression:—thus, whatever is said to be behind is accounted as future, coming after, and not as past. What is past is known, and therefore as present or before; but an event to come is unknown, unseen, and therefore behind, and to follow after, in order to be brought into actual existence. The word is also used in this sense in Col. 1. 24. Behind, when not taken symbolically, signifies what is past. (Phil. 3. 13.)

BEHOLD; a call for particular attention. It imparts sudden excitement, wonder, joy, certainty, momentousness. (Isai. 7. 14; Matt. 21. 5; Luke 24. 39; John 1. 29; Rev. 16. 15.)

BEKAH, בקע a half shekel. (Gen. 24. 22; Exod. 31. 6.)

In the time of Moses the weight most in use was the שקל *shekel*, together with its half, בקע *bekah*, and its twentieth part, גרה *gerah*.

BEL, בל *Bel*, contracted from בעל *Baal*, the Belus of profane historians, a Babylonian idol mentioned in Isaiah 46. 1; Jerem. 50. 2.

Some writers who treat the Belus of history as an imaginary personage, imagine that it was the planet Jupiter which was worshipped under that name, and that from a corruption of this we have the Zeus of the Greeks. That this star was clearly an object of worship in the East, as "the great lucky star," is certain, and the Rabbins, in their comments on Genesis 33. 11, suppose that Leah referred to this star, which bore among them the name of Gad, and anticipated a fortunate destiny for her child (Gad) from its appearance at the moment of his birth. The Jews styled it Mazol Tov, (*the lucky star*), and considered it astrologically as of good augury at the birth of a child, and were therefore accustomed at the marriage of their daughters to present them with a ring on which were engraved the above words. It has therefore been conjectured with some probability that Gad was the same with the planet Jupiter. Christmas, *Universal Mythology*.

BEL AND THE DRAGON (History of), an apocryphal and uncanonical book of Scripture. It was always rejected by the Jewish church, and is extant neither in the Hebrew nor the Chaldee language. Jerome gives it no better title than that of "the fable" of Bel and the Dragon; nor has it obtained more credit with posterity, except with the divines of the Council of Trent, who determined that it should form part of the canonical Scriptures. The design of this fiction is to render idolatry ridiculous, and to exalt the true God; but the author has destroyed the illusion of his fiction by transporting to Babylon the worship of animals, which was never practised in that country. This book forms the fourteenth chapter of Daniel in the Latin Vulgate; in the Greek it was called the prophecy of Habakkuk, the

son of Jesus, of the tribe of Levi; but this is evidently erroneous, for that prophet lived before the time of Nebuchadnezzar, and the events pretended to have taken place in this fable are assigned to the time of Cyrus. There are two Greek texts of this fragment; that of the Septuagint, and that found in Theodotion's Greek version of Daniel. The former is the most ancient, and has been translated into Syriac. The Latin and Arabic versions, together with another Syriac translation, have been made from the text of Theodotion. Horne.

BELIAL, בליעל *Belial*, a term applied to a worthless man. (Deut. 13. 13; 1Sam. 25. 25.) The phrase, "sons of Belial," signifies worthless, wicked men. In later times, Belial was used as an appellation of Satan, as in 2Cor. 6. 15, "What concord hath Christ with Belial?"

In some Syriac MSS. the form בליעל occurs, the ל being changed into ר

BELIEF, in its general and natural sense, denotes a persuasion or an assent of the mind to the truth of any proposition. In this sense belief has no relation to any particular kind of means or argument, but may be produced by any means whatever: thus we are said to believe our senses, to believe our reason, to believe a witness. Belief, in its more restricted sense, denotes that kind of assent which is grounded only on the authority or testimony of some person. In this view belief stands opposed to knowledge and science. We do not say that we *believe* snow is white, but we *know* it to be so. But when a thing is propounded to us, of which we ourselves have no knowledge, but which appears to be true, from the testimony given to it by another, this is what we call belief. (See FAITH.)

BELL, פעמון *paamon*. Bells of large size are of comparatively modern invention, but that small bells used in connexion with religious ceremonies are of remote antiquity, may be proved alike from sacred and profane writers.

It was enjoined on the high priest of the Hebrews that the lower hem of his robe should be ornamented with pomegranates and golden bells set alternately. With this robe he invested himself upon those solemn and peculiar occasions when he entered into the sanctuary. The use of the bells, according to the Talmudists, was, that the people might have notice of the entrance of the high priest into the sanctuary with the vessel of incense. It was then the signal to prostrate themselves before the Deity, and to commence those fervent ejaculations which were to ascend with the column of incense to the throne of heaven. Superstitious notions, however, were entertained on the subject, and Josephus informs us that these ornaments were held up to the people as something more than mere bells and pomegranates, and that the latter signified lightning, while the former denoted thunder.

Bells were also used in the East to ornament the robes of kings, that their tinkling might give notice of the approach of the royal wearer, and among the Greeks the priests of several deities used bells either as instruments of music, or to call the people to attend the sacrifices. These practices exist at the present day in India.

"One indispensable ceremony in the Indian Pooja is the ringing of a small bell by the officiating brahmin. The women of the idol, or dancing girls of the pagoda, have little golden bells fastened to their feet, the soft harmonious tinkling of which vibrates in unison with the exquisite melody of their voices." Maurice, *Indian Antiquities*.

The prophet Zachariah, in announcing the change to be wrought by the universal prevalence of true religion,

says, "In that day shall there be upon the bells of the horses, HOLINESS UNTO THE LORD." (14. 20.) These were small metal plates, which were also hung upon the necks of camels for ornament; the same Hebrew word is given 1Chron. 15. 19, and rendered in our version cymbals, and probably the "sounding brass" coupled with the tinkling cymbal was a sort of bell.

A modern traveller in Egypt says, "The Arabian horses are small, but finely shaped and extremely active. Of this I had an opportunity of judging yesterday, when the cavalry [of Mehemet Ali] had a field day in the great square [at Cairo], which from the mode of exercise called to my mind the idea of our ancient tilts and tournaments. The horses were sumptuously caparisoned, being adorned with gold and silver trappings, bells being hung round their necks, and rich housings."

CHURCH BELLS. "The invention and introduction of large bells belong exclusively to the Christian church, and must be referred to the seventh century at latest, as bells of this description were unknown to the Jews, Greeks, and Romans.

"Proof exists that bells were common in France as early as the seventh and eighth centuries. During the reign of Charlemagne they became universal in France and Germany. Nearly three centuries afterwards bells were introduced into the East; but, if even they became general there, which is doubtful, they were speedily suppressed by their avowed enemies, the Arabs and Turks. In default of bells, the Oriental Christians made use of the original methods of convening their assemblies. 1. By couriers or messengers, who gave notice of the days and hours of holding religious assemblies. 2. The tuba or trumpet, a kind of wind instrument used for signals. It was common in Egypt, as among the ancient Jews. 3. Wooden (or sometimes iron) rattles, shaken or struck by the hand.

"In the West, the use of bells came to be regarded even as an integral part of Divine worship. Bells themselves were accounted sacred. The custom of giving names to bells cannot be traced beyond the eleventh or tenth century. The various uses of church bells, real or supposed, are enumerated in the following well-known distich, with which they were frequently inscribed:

Laudo Deum verum, plebem voco, congrego clerum—

Defunctos ploro, nimbium [al. pestem] fugo, festaque honoro.

Riddle's Christ. Antiq.

BELLOWS, מַפְּוּחַ *mapuach*. This word only occurs in Jeremiah 6. 29, "The bellows are burned, the lead consumed of the fire; the founder melteth in vain: for the wicked are not plucked away." This portion of the denunciation of the vengeance of the Lord against Jerusalem, is thus explained by the Rev. William Lowth: "All the means, that can be used to purge this people of their dross, prove ineffectual: the wicked are not separated from the righteous. Therefore your city shall be

as one common furnace, wherein you shall be melted down all together."

"Among the remarkable inventions of a remote era among the Egyptians, may be mentioned the bellows and siphon. The former were used as early the reign of Thothmes III., the contemporary of Moses, being represented in a tomb bearing the name of that Pharaoh. They consisted of a leather bag, secured and fitted into a frame, from which a long pipe extended, for carrying the wind to the fire. They were worked by the feet, the operator standing upon them, with one under each foot, and pressing them alternately, while he pulled up each exhausted skin with a string which he held in his hand.

"Our common bellows, consisting of two boards joined together by a piece of leather, were known very early to the Greeks; and it also appears, from a representation on an ancient Roman lamp, engraved in Montfaucon, that even the wooden bellows were not anciently unknown; although Beckmann affirms that they were invented in the seventeenth (or perhaps the sixteenth) century by the Germans." Wilkinson.

In the East at the present day, bellows are little used except by artisans, and are of a far less ingenious and efficient construction than the ancient Egyptian ones.

BELLY. This term is often employed in a figurative sense in the Scriptures. Thus it occurs in Rom. 16. 18 for carnal pleasures; and in Prov. 20. 27, and John 7. 38 for the heart or secret springs of the mind. The "imbittering of the belly" signifies all the train of afflictions which may come upon a man, as in Jerem. 4. 19; 9. 15. The same sense is evident from the bitter waters of jealousy. (Numb. 5. 22.) The "belly of hell," is a strong phrase to express Jonah's dreadful condition in the deep. (Jonah 2. 2.)

By the ancients the belly was considered as the seat of the carnal affections; and, therefore, the Egyptians in embalming, threw that part of the body into the river, as the cause of all the sins of the deceased, in order that it might as it were take them away.

BELSHAZZAR, בֶּלְשַׁצְצָר Sept. *Βαλτασαρ*, (*Prince of Bcl.*) the last king of Babylon, and grandson of Nebuchadnezzar, is styled Nabonnedus or Labynetus by profane historians.

The only circumstances recorded of him in Scripture are his impious feast and violent death. (Dan. ch. 5.) During the period that the Jews were in captivity at Babylon, a variety of singular events concurred to prove that the sins which brought desolation on their country, and subjected them for a while to the Babylonish yoke, had not dissolved that covenant relation, which, as the God of Abraham, Jehovah had entered into with them; and that any act of indignity perpetrated against an afflicted people, or any insult cast upon the service of their temple, would be regarded as an affront to the Majesty of Heaven, and not suffered to pass with impunity. The fate of Belshazzar affords a remarkable instance of this. He had had an opportunity of seeing in the case of his ancestors, how hateful pride is, even in royalty itself; how instantly God can blast the dignity of the brightest crown, and consequently, how much the prosperity of kings and the stability of their thrones depend upon acknowledging that "the Most High ruleth in the kingdom of men, and giveth it to whomsoever he will." But this solemn lesson was lost upon Belshazzar.

From Xenophon, we learn that Belshazzar was a proud and cruel ruler, and in the Scripture is recorded his last and most heinous offence, the profanation of the sacred vessels belonging to the temple of Jerusalem. In the hand-writing on the wall the words are Chaldean,

2 C

Egyptian Bellows. From the Monuments.

but being in the ancient Hebrew character, or what we now call the Samaritan, the Chaldeans could not read them. But even if Daniel could read the words, their import could only have been made known to him by inspiration, for all the ideas the three words convey are, numbering, weighing, and dividing. In that same night, in the midst of their mirth and revelling, the city was taken by surprise, Belshazzar himself put to death, and the kingdom transferred to Darius the Mede, B.C. 538. Winer; Watson; Crosthwaite. See BALANCE.

BELTESHAZZAR, בִּלְטִישַׁצָּר (*Bel's Prince*), a Chaldaic name assigned to Daniel by the Babylonian Court. (Dan. 1. 7.) As will be observed, the only difference between the names Belshazzar and Belteshazzar is, that the first employs a preposition, *of*, and the second the genitive. Gesenius.

I. **BELUS**, the father of Dido and Pygmalion of profane history, is thought to have been the Eth-Baal, king of Sidon, mentioned in Scripture as the father of Jezebel, the wife of Ahab, king of Israel. (1Kings 16. 31.) Eth-Baal (*the Baal*), and Belus are but dialectic varieties of the same name, *Φ* and *B* interchanging very commonly in those times and languages.

Josephus quotes Menander, who says, that in the time of Eth-Baal, king of Tyre, there was a want of rain, which lasted a whole year. This was undoubtedly the drought recorded in Scripture, which occurred in the reign of Ahab. (1Kings 18. 41-45.) This drought happened B.C. 906, by the marginal chronology of the Bible. Crosthwaite's *Synchronology*.

II. The name of an idol, the same with Baal. See **BAL**.

BELZEBUB. See **BEELZEBUB**.

BENEFACITOR, εὐεργετης. "The kings of the Gentiles exercise lordship over them; and they that exercise authority upon them, are called benefactors." (Luke 22. 25.) This word was employed as a title of honour to kings and princes. Ptolemy Euergetes, king of Egypt, affords an instance of the application of the word in this sense. According to Josephus and Philo it was frequently applied to the Roman emperors.

BENEFITS. These are in Scripture the gifts and favours of God, (2Chron. 32. 25,) or the favours and useful deeds of men one to another. (2Cor. 1. 15.) Also salvation from sin and misery, to holiness and happiness, is called emphatically "the benefit" by the Apostle Paul. (1Tim. 6. 2.)

BEN-HADAD, בֶּן־חָדָד or בֶּן־חָדָד *Benhadar*, Sept. υἱος Ἀδερ. Hadad or Adad, according to Macrobius and Pliny, signified the sun, which under this name was worshipped by the Syrians. It was a very common name among the ancient Idumæan and Syrian kings, as much so as that of Ptolemy among the Egyptians. Three kings of this name are mentioned in Scripture.

I. A son of Tabrimon, king of Syria, who came to assist Asa, king of Judah, against Baasha, king of Israel. (1Kings 15. 18.)

II. The son of the above, who made war against Ahab, king of Israel, and was defeated. He was murdered by Hazael, who succeeded to the throne. (2Kings 8. 7-15.)

III. A son of Hazael, from whom Jehoash, king of Israel, recovered all that Hazael had taken from his predecessor. (2Kings 13. 3; 24. 25.)

BENJAMIN, בְּנִימִן the youngest son of Jacob and Rachel, and one of the twelve patriarchs. Rachel died immediately after he was born, and with her last breath named him Benoni, (*son of my sorrow*), but

Jacob called him Benjamin, (*son of my right hand*;) (Gen. 35. 17, 18.) No particulars are recorded of him except in connexion with the history of his brother Joseph. (Gen. ch. 42, 43, 44, and 45.)

The territory of the tribe of Benjamin lay to the north of that of Judah, and to the south of Ephraim, having Dan on the west, and Reuben on the east. It did not contain many cities and towns; but this was amply compensated for by its possessing the metropolis of all,—the city of Jerusalem. The other places of note in this tribe were Anathoth, Beth-el, Gibeah, Gibeon, Gilgal, Hai, Mizpeh, Aphrah, and Jericho.

The tribe of Benjamin gave the second judge to the nation of Israel, who delivered them from the oppressive yoke of Moab; and the first king, whose valour saved them from the iron sceptre of Ammon, and it and Judah alone remained faithful to the house of David. In the decline of the Jewish commonwealth, Esther and Mordecai, who were both of this tribe, successfully interposed with the king of Persia for the deliverance of their brethren.

BEON. See **BAL MEON**.

BERACHAH, VALLEY OF, or Valley of Blessing, a place in the tribe of Judah and in the wilderness of Tekoa, where Jehoshaphat and the people assembled to praise Jehovah for a signal victory over the Moabites, Ammonites, and Edomites. (2Chron. 20. 26.)

BEREA, a city of Macedonia, about thirty-five miles to the west of Thessalonica. It does not appear to have been a place of much consequence. Great success attended the preaching of the Gospel by St. Paul in this place, where there was a synagogue, the members of which are described as "more noble than those in Thessalonica, in that they received the word with all readiness of mind, and searched the Scriptures daily." (Acts 17. 11.) But when the Jews of Thessalonica received intelligence of the Apostle's proceedings, a party of them came to Berea, and "stirred up the people," which compelled him to leave the city, when he repaired to Athens. (Acts 17. 13-15.)

BERED, בֶּרֶד a place in the wilderness of Shur, to the south of Kadesh-barnea. (Gen. 16. 14.) It is the same, probably, as Hazar Addor. (Numb. 34. 4.)

BERESHITH, בְּרֵאשִׁית (*In the beginning*), a name which the Jews give to the book of Genesis, from its commencing with this word. See **BEGINNING**.

BERNICE, Βερνίκη, the eldest daughter of Herod Agrippa I., and sister to Agrippa II., is mentioned in Acts 25. 13, 23; 26. 30. She was first married to her uncle Herod, king of Chalcis; after whose death she became the wife of Polemon, king of Cilicia. This connexion being soon dissolved, she returned to the court of her brother. She was beloved by Titus, who would have married her, but that the Roman law did not recognise such an union. Josephus; Winer.

BERODACH BALADAN, a king of Assyria, mentioned in 2Kings 20. 12. See **BALADAN**.

BEROTHAI, a city of Syria, conquered by David, and one of those from whom he took "much brass." (2Sam. 8. 8.) This city is also called Chann, (1Chron. 18. 8,) from an idol worshipped there, supposed to be the same as the Saturn of the Greeks. Berothah, mentioned by Ezekiel 47. 16, is probably the same place. It is impossible now accurately to determine its situation. "The similarity of the name," says Rosenmüller, "would lead us to conjecture that Berothai, or Berothah, was not different from Berytus, the modern Beyroot, a sea-port town, which is still of importance."

BERRIES. See **OLIVE**.

BERYL, *תַּרְשִׁיִּית* *tarshish*, a precious stone, the tenth in the breast-plate of the high priest; (Exod. 28. 20;) also mentioned (*βηρυλλος*) as one of the foundations of the heavenly Jerusalem. (Rev. 21. 20.)

The Septuagint and Josephus consider the beryl to be the chrysolite, or topaz, a gem generally of a yellowish colour, but sometimes green, blue, or red. Bochart derives the Hebrew name from Tarshish, whence he imagines the stone was procured.

BESOM, *בֶּסֶם* *teli*. The "besom of destruction" is a term which occurs in Isaiah 14. 23, where it is used metaphorically, to denote the entire destruction of Babylon. We find, from Roberts, that a similar expression is still common in the East.

"The word besom is often used as a figure to denote the way in which people are swept from the earth. Thus, when the cholera morbus began to rage, it was said, 'Alas! alas! it is sweeping us away as with a besom.' 'How is the cholera in your village?' 'It has come like besoms.' When the people made offerings and sacrifices to the demons who were believed to produce the disease, the magician, who was believed to be the devil's agent, sometimes said, 'Make such and such offerings, or I will sweep you away with a besom.'"

BESOR, a brook in the south-west corner of the land of Canaan. (1Sam. 30. 9, 10.) Here two hundred of David's men stayed behind, being faint, while the other four hundred pursued the Amalekites, who had burnt the town of Ziklag.

The brook Besor is by some commentators identified with the "river of the wilderness," (Amos 6. 14,) or the "river of Egypt;" but Dr. Shaw seems sufficiently to prove that the brook Besor can be but a small one, and that it can scarce deserve to be called a river.

BETAH, a city which David took from Hadadezer, king of Syria; (2Sam. 8. 8;) called also Tibhath. (1Chron. 18. 8.)

BETEN, a town in the territory allotted to the tribe of Asher, (Josh. 19. 25,) supposed to be the same as Betah. Reland says it was about eight miles from Ptolemais, or Acre. Eusebius terms it Batsai, and adds that it was then called Bethlehem, in the tribe of Asher.

BETH, *בֵּת* the second letter of the Hebrew alphabet, and as a numeral standing for 2.

Beth, *בֵּית* is a house, to which the original form of the character, still preserved in the Ethiopic *bet*, *በ*, bore a rude resemblance. It is compounded with the names of many places mentioned in the Scriptures, and in some cases appears to refer to the houses or temples of idols.

BETHABARA, *Βηθαβαρα*, (the house or place of the ford, i. e. of the Jordan.) It is mentioned in John 1. 28, as "Bethabara beyond Jordan," but the best manuscripts, the Vulgate, Saxon, and both the Syriac versions, as well as the Greek paraphrase of Nonnus, read *Βηθανια*, Bethany, which must not be confounded with the Bethany near Jerusalem. The reading *Βηθαβαρα*, seems to have arisen from the mere conjecture of Origen, who, in travelling through that region, found no such place as *Βηθανια*, but saw a town called *Βηθαβαρα*, and therefore changed the common reading. Campbell, and Bloomfield.

BETH-AKAD or **BETH-EKED**, a town of Samaria, translated by some the *shearing house*, or, as in the margin of our version, *house of shepherds binding sheep*. It was here that Jehu met the brethren of Ahaziah on their way to Jerusalem, in order to salute that prince, and where he ordered them to be slain. (2Kings 10. 12-14.)

Bethany.

BETHANY, *Βηθανια*, (house of dates), a town belonging to the tribe of Benjamin, about two miles south-east of Jerusalem, on the way to Jericho, (John 11. 18,) was situated on the retired and shady side of Mount Olivet. Here Lazarus dwelt, and here he was raised from the dead. Bethany is now a mean village, inhabited by a few Turkish families, who call it Lazari, in memory of Lazarus, for whom they testify great veneration.

At present the cultivation around Bethany is much

neglected; though it is a pleasant romantic spot, abounding in trees and long grass. Various supposed sites of the houses of Lazarus, of Martha, of Simon the leper, and of Mary Magdalene, are pointed out to the credulous. The monks pretend to show even the barren fig-tree which was cursed by Our Lord. The alleged tomb of Lazarus is a large excavation in the rock, and the sepulchral chamber is at the foot of a staircase of ten or twelve steps. Richardson; Stephens.

"The path to Jerusalem," from this village, "winds

round the mount and through the vale of Jehoshaphat, precisely, to all appearance, as it did when the Messiah rode thither in regal but humble triumph, and the people strewed their garments and branches in the way." Lord Lindsay.

Somewhere on the site of that mountainous tract, which reached within eight furlongs of Jerusalem, from which it was only a Sabbath-day's journey, Mr. Jowett, with some degree of probability, places the scene of the Ascension. "For it is said, Luke 24. 50, 51, that Jesus Christ led his disciples out as far as to Bethany, and then was parted from them and carried up into heaven. The previous conversation, as related in the Acts of the Apostles, (1. 6-9,) would probably occupy some time while walking towards Bethany; for we must not judge of the length of our Lord's discourses by the brevity with which the Evangelists record them. Here the last sparks of earthly ambition were extinguished in the bosoms of the Apostles; and they were prepared to expect that purer fire which was ere long to burst forth on the day of Pentecost. Here their Head was taken from them; and two of the ministering spirits of his train, becoming visible to their eyes, interrupted their mute astonishment, and dismissed them to their proper stations." Jowett's *Christian Researches*.

II. A village on the eastern side of the Jordan, where John baptized. (John 1. 28.) Its exact position is now unknown. See BETHABARA.

BETHARABAH, a city first allotted to the tribe of Judah, (Josh. 15. 6,) and afterwards given to the tribe of Benjamin. (Josh. 18. 22.)

BETH-ARAMPHTHA, a town of Galilee, the same as Bethsaida, on the right bank of the river Jordan, on the western side of the Lake Gennesareth, at the influx of the Jordan into that lake. Dr. Lightfoot places it on the left bank of the Jordan. It was fortified and ornamented by Herod the tetrarch, and called Julias, in honour of Julia, the daughter of Augustus, and wife of Tiberius. See BETHSAIDA.

BETH-ARBEL, a name mentioned by the prophet Hosea, 10. 14, who alludes to some great military exploit performed there, and well known in his time, but not recorded in the Scriptures. St. Jerome inserts Jerubbaal instead of Beth-Arbel, in this verse, and interprets it as referring to Gideon's victory over Zalmunna. (Judges 8. 12.) Other commentators understand the verse to relate to Shalman, or Shalmanezzer, who gained a battle at Beth-Arbel against Hoshea, king of Israel.

BETH-AVEN, בֵּית אֵוֶן (*house of idols*), a city belonging to the tribe of Benjamin. (Josh. 7. 2; 18. 12; 1Sam. 13. 5.) This place must not be confounded with Bethel, which is sometimes reproachfully called Beth-Aven, by the prophets. Gesenius. See AVEN.

BETHEL, (*house of God*), the place where Jacob set up the stone that had served him for a pillow, in commemoration of the vision vouchsafed to him. (Gen. 28. 18.) The name was afterwards applied to a neighbouring city at first called Luz.

Bethel is repeatedly mentioned in the Scriptures. Jacob dwelt there for a while after his return from Mesopotamia, and at the division of the land by Joshua, it was assigned to the tribe of Benjamin. When the ten tribes revolted in the reign of Rehoboam, Bethel was included in the new kingdom of Israel. Jeroboam set up one of his golden calves at Bethel, and the other at Dan; the former being the southern, and the latter the northern, boundary of Israel. Hence the place was called, by the prophet Hosea, Beth-Aven, *the house*

of idols, or *vanity*. Abijah, king of Judah, wrested Bethel from Jeroboam, but it was soon afterwards retaken or restored to the kings of Israel. (2Chron. 13. 19.) Bethel was the scene of the punishment inflicted on the mockers of Elisha, (2Kings 2. 23,) which Bishop Wilson considers as intended as a condemnation also of the idolatrous practices of its inhabitants. The city was destroyed by the Assyrians, but was rebuilt after the return from the captivity. (Ezra 2. 28.)

Professor Robinson says, "The place now bears in Arabic the name Beit-in. We reached this spot in two hours from Tazibeh. It lies just east of the Nablous road, north-east of Bireh. Here are ruins of very considerable extent, and among them the foundations of several churches, lying in the point of a low hill, between two shallow wadys, which unite below, and run off south-east into a deep and rugged valley. This was evidently a place of note in the early Christian ages; and apparently, also, in the days of the Crusades. It is now entirely uninhabited; except that a few Arabs, probably, from some neighbouring village, had pitched their tent here for a time. In the western valley we spread our carpets, and breakfasted on the grass, within the limits of what was once an immense reservoir. We obtained here, from the Arabs, butter of excellent quality, which might have done honour to the days when the flocks of Abraham and Jacob were pastured on the hills."

BETHEL, MOUNT OF, was the name of a hill near Bethel, on which one of the divisions of Saul's army encamped, when he commenced a war with the Philistines. (1Sam. 13. 2.)

BETHER, בֵּתֵר The mountains of Bether are mentioned in Cantic. 2. 17, but the same word is afterwards, (8. 14,) by the Septuagint and our version, rendered "mountains of spices." Some commentators treat the word in all cases as an appellation, while others endeavour to identify Bether with Beth-horon, in Galilee, fifty-two miles from Jerusalem, called Bether by Josephus; but others prefer Bethtar (*house of spies*), a place twelve miles from Jerusalem, the scene of the destruction of Barcochab and his followers. It was built by Solomon. Its original name was Beth-horon, according to Jerome, but the later Jews called the place Bethtar, because, after the destruction of Jerusalem, informers watched there to discover who went up to Zion, that they might ingratiate themselves with the Romans by accusing the pilgrims, or that they might enrich themselves with the confiscated property. The Rabbins relate that the city alone contained four hundred colleges, and each college four hundred professors, and each professor instructed four hundred students, and that these united formed so powerful an army, that they sustained the first assault on the place, though armed only with the styles which they used in writing. They relate that the students, when the city was carried by storm, were burned to death with their books tied around them. See BARCOCHAB.

BETHESDA, POOL OF, a reservoir of water near the sheep-gate, or market of Jerusalem, the scene of one of the miracles of Our Lord, recorded by St. John. (5. 2-16.) The pool had five porches, in which lay "a great multitude of impotent folk," and these porches bore the very appropriate name of Bethesda (*house of mercy*).

Before narrating the miracle, the Evangelist relates that an angel of the Lord descended at certain times and troubled the water, and that the person who descended first after this, was healed of whatever infirmity he might labour under.

This account of the descent of the angel is omitted,

however, in certain Greek and Latin MSS., and likewise in the Armenian version. But as all the old and authentic Syriac versions contain the passage exactly as it is translated in our version, it is impossible to doubt its authenticity. Whether the miracles performed at the pool of Bethesda were confined to the season of the particular feast mentioned in John 5. 1, as the words "at a certain season" seem to imply, or whether that expression may be taken, in a more enlarged sense, to signify that the water had its healing quality at other Jewish festivals, cannot now be ascertained; but that it did not possess these properties at all times, is clear from the words of the Evangelist. The agitation of the water; its suddenly healing virtue as to all diseases; and the limitation to the first that should go in, are all miraculous circumstances. Commentators have, however, resorted to various hypotheses to account for the whole without Divine agency, but all these hypotheses are very unsatisfactory, nor is there any reason to resort to them; for, when rightly viewed, there appears a mercy and a wisdom in this miracle which must strike every one who attentively considers the account given by the Evangelist. It cannot be objected that this was not an age of miracles; and, if miracles be allowed, we see in this particular supernatural visitation obvious reasons of fitness as well as of Divine compassion. If, however, the ends to be accomplished by so public a

miraculous interposition were less obvious, still we must admit the fact, or either force absurd interpretations upon the text, or make the Evangelist give his sanction to an instance of credulity and superstition.

Eusebius speaks of the pool itself as existing in his time, A. D. 330, although the surrounding buildings were, as might be expected, in ruins. The place to which the name of the Pool of Bethesda is now given, is very possibly the same, although several modern travellers have doubted it, from the circumstance of the sides being perpendicular, and the plan in other respects different from that which a careful perusal of the narrative in the Gospel might lead them to expect. Chateaubriand states that it is "a hundred and fifty feet in length, and forty broad," and considers that it "offers the only specimen of the primitive architecture of the Jews at Jerusalem. The sides are based with large stones, joined together by iron cramps, and covered with flints, imbedded in a substance resembling plaster."

Mr. Robinson, who visited the place in 1836, says, that its depth is ten feet, and that it runs parallel with the southern walls of the Temple. It is at present dry, and its sides and bottom are overgrown with grass, and the prickly pear. At its eastern end are some arches dammed up. It is evidently the most ancient work in Jerusalem. The Mohammedans term the place Birket-el-Serai, or Pool of the Palace.

Pool of Bethesda.

BETH-HACCEREM, בית־חֶרֶם Sept. *Baithacharum*; Vulg. Bethacara; a city in the tribe of Judah. (Jerem. 6. 1; Nehem. 3. 14.) It was situated on an eminence between Jerusalem and Tekoah, eight miles south-west of the former.

Dr. Pococke says, "The hill on which this place was built is very high, and laid out in terraces. There was a double circular fortification at the top, and at the front of the hill, towards the north, there are the ruins of a Christian church and other buildings. On a burying ground to the west of these, there is a cistern, and the basin of a square pond, which appears to have had an island in the midst of it, and probably there was some building on it."

BETH-HARAN, Sept. *Baithara*, one of the fenced cities of the tribe of Gad; (Numb. 32. 36;) called in Joshua 13. 27, Beth-aram.

BETH-HOGLA, בית חִגְלָה There were, it is supposed, two places of this name in Palestine, one in the tribe of Judah, (Josh. 15. 6,) which Eusebius places at the distance of eight miles from Gaza; the other, mentioned in Joshua 18. 21, which belonged to the tribe of Benjamin, Jerome places at the distance of two miles from the Jordan, and three miles from Jericho. A fountain called Hajlat, on the road between Jerusalem and Jericho, in the opinion of Professor Robinson, occupies the site of this latter place.

BETH-HORON. There seem to have been three places of this name in Palestine. One, situated between Diospolis and Caesarea, has nothing remarkable recorded of it; but the others, called Upper and Lower Beth-horon, adjoining each other, in the neighbourhood of Jerusalem, are supposed to have been the Bether, or

Bethtar, defended by Barcochab against the Romans. Their site is now occupied by an Arab village called Bethor. See BETHER.

An American writer, who visited the Holy Land in 1834, states that, in his journey from Jaffa to Jerusalem, he passed "a miserable village close on the left of the road, and shortly after a cone-shaped eminence on the right, surmounted by some ruins, supposed to be the remains of Beth-horon, mentioned in 2Chron. 8. 5; 1Sam. 13. 18.

"The hill is about four hundred feet in height, and in most parts is of difficult ascent; it was well adapted for defence, and the extensive and massive ruins on the top show that it was a place of considerable strength. This was probably the upper city; for the site of the 'Nether Beth-horon,' we must look among the broken ground that skirts the lower part of the eminence. This was a place of importance, as it commands the entrance of the winding ravine along which the road ascends from the plain into the mountainous district, or what is called, in the first chapter of St. John, the 'hill country of Judea.' The entrance into this ravine is about two miles east from Beth-horon; and it stood gaping before us, with the mountains towering on either side to a great height. It was in this pass that the Roman army, under Cestius, were almost totally destroyed."

Professor Robinson, who visited the spot since the above traveller, says, in his Journal, "From Ekron to Ramleh is two hours. Here we lodged, and the next day proceeded to Jerusalem by the camel road, which also is the ancient Jewish and Roman way, over Lûd (Lydda), Gimzo, Lower and Upper Beth-horon (now Beit Ur), and Jeb, or Gibeon. The pass between the two villages of Beth-horon is a steep and rugged ascent of some fifteen hundred feet, up the point of a ridge between deep valleys. It is the ancient road, and has, in several places, steps hewn in the rock. Looking down from Upper Beth-horon, a broad valley is seen in the south-west, issuing from the mountains and hills into the plain; while, on the ridge that skirts its south-west side, is seen a village called Yulo, the Arabic form for the Hebrew Ajalon.

"This, then, is probably the spot where Joshua, in pursuit of the five kings, having arrived at or near Upper Beth-horon, looked back towards Gibeon, and down upon the valley before him, and uttered the command; 'Sun, stand thou still on Gibeon; and moon, in the valley of Ajalon!'"

BETH-JESIMOTH, a city on the east of the Jordan, (Numb. 33. 49,) assigned to the tribe of Reuben. (Josh. 13. 20.) It was first seized by the Moabites, and finally destroyed by the Chaldeans. (Ezek. 25. 9.) According to Eusebius it was situated about ten miles south of Jericho. Winer.

BETH-LEBAOTH, a city in the tribe of Simeon, (Josh. 19. 6,) called simply Lebaoth, in Josh. 15. 32. Reland supposes it to be the same as the toparchy or prefecture of Bethleptephon of Josephus. Winer.

BETHLEHEM, בֵּית לֶחֶם Sept. *Βηθλεεμ*; Josephus, *Βηθλεμα*, a city in the tribe of Judah, situated about six miles to the south-west of Jerusalem; it was formerly called Ephrath or Ephratah. (Gen. 35. 16-19; 48. 7; Micah 5. 2.) It seems to have been a city in the time of Boaz, (Ruth 1. 19,) and was fortified by Rehoboam. (2Chron. 11. 6.) In Matthew 2. 1, 5 it is called "Bethlehem of Judea," to distinguish it from another town of the same name in Lower Galilee, mentioned in Joshua 19. 15. In Luke 2. 4, it is called "the city

of David," because David was born there. Comp. John 7. 42 with 1Sam. 16. 1-18.

The road from Jerusalem to Bethlehem lies through a continued valley upwards of six miles in length and of very considerable breadth, which is generally rocky and barren, but has some cultivated spots, and abounds with objects of traditional interest, which are thus described by a recent traveller.

"In the valley of Bethlehem, which runs east and west," says Mr. Robinson, "herdmen are still seen attending their flocks, where an angel of the Lord appeared eighteen centuries ago, to other 'shepherds, abiding in the field and keeping watch over their flock by night,' to announce 'the good tidings of great joy,' 'Unto you is born this day in the city of David a Saviour, which is Christ the Lord.' We remained absorbed for a while in thought, and only recovered from our reverie, when the grotto was pointed out to us where Joseph hid the Virgin Mary and the infant Jesus before they fled into Egypt. In the same direction, but at a much greater distance, is 'the cave' where David 'cut off Saul's robes privily.' It lies to the east of the village in the direction of the Dead Sea. About midway between Jerusalem and Bethlehem, was the largest and most lofty terebinth-tree which Rauwolf had ever seen. It was too conspicuous and noble an object not to be sanctified by some tradition; and, accordingly, we are told that beneath the shade which this tree afforded, the Virgin Mary was wont to rest on her journeys between Bethlehem and Jerusalem; and some marvellous instances are given of the respect and attention which the docile tree evinced. It was burnt down by the Arabs a few years after Rauwolf saw it, and an olive-tree afterwards supplied its place. Six or seven hundred paces from this is a fine cistern, apparently made for watering the flocks pastured in the neighbouring plains. It is called the cistern of the kings, because, as the story runs, the Magi while watering their camels here, saw anew the star which guided them to the obscure birth-place of Christ in Bethlehem. Near this is the Greek monastery of St. Elias, where there is a rock on which we are told the prophet lay down to sleep when he fled from Jezebel, and on which he left the impress of his figure. Another building in ruins, about five hundred paces beyond, is announced as the house of the prophet Habakkuk, or more likely, as Morrison suggests, of a church built upon its alleged site. In the same neighbourhood a ruined tower, with some other buildings upon a height, is pointed out as the tower of Edar or Jacob; and here also occurs Rachel's sepulchre, a small Turkish building, such as is usually built over the tombs of their Saints. About twelve hundred paces from this is seen on the right hand a large and deep fosse of a round shape, which, as tradition tells, was dug to receive the bodies of Sennacherib's host, which was encamped in this valley when slain. Rauwolf mentions another ditch higher up the valley, employed for the same purpose, but the situation of which he does not clearly indicate."

"Bethlehem soon after comes in sight, seated on an elevation, and exhibiting a confused and irregular pile of white buildings. The star of the east no longer hovers over it; but the mosque and its minarets proclaim the birth-place of Christ to be under the dominion of a people who reject and despise Him. The recent hostilities between Ibrahim Pasha and the Sultan's forces have laid in ruins half of this little city. The inhabitants, a bold and hardy race, were always refractory and troublesome subjects of the Porte; their insulated situation, and the facilities for retiring to mountain fastnesses in the surrounding wild country, encouraging them to bold and independent habits.

When the general order from Mohammed Ali, the father of Ibrahim, for disarming the populace of Syria, was shown to them, they sent in about a dozen muskets, saying, these were all they possessed; nor could any threats wrest more from them, though the place had three or four hundred fighting men, well equipped, in it. When Ibrahim returned victorious from the pursuit of the Sultan's army, which he had driven out of Syria, he seems to have recollected this contumelious disrespect of his father's orders; for he fell upon the Arab population of Bethlehem, but spared the Christians, because, as he said, they had not offended—a reason that never before operated with a Mohammedan. He further observed, that Christians and Mussulmans could never live together in unity; and, therefore, he drove out of the place such Arabs as had escaped his sword, and left the city consecrated by the birth of Christ, in the exclusive possession of His followers.

"The town, surrounded with orchards of fig-trees and olives, is seated on a piece of isolated table-land, of sudden elevation on every side. On the east, this runs out into a narrow tongue, and at the extremity of this projection, two hundred yards distant from the village, are the monastery and church of the Franks, or Christians, covering the spot where the Messiah was born. These were built by the Empress Helena, after she had removed an idolatrous temple, said to have been erected by Adrian, from a feeling of contempt towards the Christians. From without, the monastery has the appearance of a perfect fortress, with heavy buttresses and small grated windows. It has been often destroyed and as often repaired; but still retains marks of its Grecian origin. The door of entrance is low and strong; for here, as in every other part of Syria, the traveller is reminded of the insecurity of life and property, 'and, unless people would live there with a martyr's spirit,' of the necessity of being constantly prepared for defence. When visited by the Rev. G. Jones, in 1834, a recent earthquake had rent the massive walls, yet not so as to endanger them.

"The monastery is occupied by monks of the Roman, Greek, and Armenian sects; to whom are assigned separate portions of the building, as well for lodging as for worship; whence some travellers have stated that each sect has its distinct convent. On certain festivals, they all celebrate the rites of their common faith on altars, which none of them has been hitherto allowed to appropriate to itself. The church is twofold: the upper edifice, on a level with the external ground, contains nothing remarkable, except a star, inlaid upon the pavement, immediately under the spot, where, says the tradition, the star in the heavens became visible to the sages, and directly over the place of the nativity in the church below. The latter, called the Chapel, or cave, of the Nativity, is an excavation in the rock, with a descent into it by steps. It is elegantly fitted up, and floored with marble, with five oratories, or recesses, for prayer, corresponding to the ten stalls, which are supposed to have been in the stable, at the time of the nativity. The main body of this sacred crypt, which is irregular in shape, is about thirty-seven feet in length by twelve in width, with a height of nine or ten feet; and on each side are benches for such as resort to the place for meditation. As it receives no light from without, it is illumined by thirty-two lamps, presents from different Christian princes. At the extremity of this church, is an arcade, containing an altar, called the Altar of the Nativity, standing on the sacred spot where the Divine Redeemer first appeared in 'the likeness of man.' A circle on the floor, composed of marble and jasper, surrounded with a silver plate, and having rays of marble mosaic, is reported to mark the very spot

where that stupendous event was realized. On the silver plate is engraved,

HIC DE VIRGINE MARIA JESUS CHRISTUS NATUS EST*.

"Adjoining the Altar of the Nativity is the manger in which was laid the 'Holy child, Jesus': it is formed of marble, and raised about eighteen inches above the floor, with a slight resemblance to the humble bed which the furniture of the stable could supply. In the opposite recess, it is said, the Magi sat; and in a third is an altar, to represent the table on which they deposited their gifts. The rock over this apartment is bare, and visitors are allowed to break off small fragments, but the rest of the cave is lined with precious marble.

"Besides the flight of steps, by which the visitor has been introduced into the Chapel of the Nativity, there is another entrance, through a tortuous subterranean passage, about fifty feet in length, on the sides of which are several tombs: in one of these, it is said, the babes murdered by Herod were buried. (Matt. 2. 16.) In another are the remains of Jerome, for whose study an adjoining cave is pointed out; and over the small chamber of the manger, some marks upon the rock are shown as his portrait, miraculously stained upon the stone; but whatever resemblance may be caught by the eye of superstition, the ordinary observer cannot recognise any likeness of a human face." *Bible Topography*.

"The walls of the convent," says Stephens, "contain all that is most interesting in Bethlehem; but outside the walls are also places consecrated in Bible history, and which the pilgrim to Bethlehem, in spite of doubts and confusion, will look upon with exceeding interest. Standing on the high table of ground in front of the convent, one of the monks pointed out the fountain where, when David was thirsting, his young men procured him water; and in the rear of the convent is a beautiful valley, having in the midst of it a ruined village, marking the place where the shepherds were watching their flocks at night when the angel came down and announced to them the birth of the Saviour. The scene was as pastoral as it had been eighteen hundred years before; the sun was going down, the shepherds were gathering their flocks together; and one could almost imagine that, on the approach of evening, they were preparing to receive another visitor from on high. In the distance beyond the valley is a long range of mountains, enclosing the Dead Sea, and among them was the wilderness of Engedi; and the monk pointed out a small opening as leading to the shores of the sea, at the precise spot where Lot's wife was turned into a pillar of salt.

"Mixed with these references to Bible history were idle legends of later days, connected with places to which the monk conducted me, with as much solemnity as he had displayed when indicating the holy places of Scripture. In a grotto cut out of the rock, is a chapel dedicated to the Virgin; and he told me that the mother of Christ had here concealed herself from Herod, and nursed the infant Jesus forty days before she escaped into Egypt."

"The dwellings of the Bethlehemites," says Mr. Robinson, "who are principally fellahs, or cultivators of the soil, are mean structures. Standing upon an acclivity, the lower part of the rock is excavated, and usually serves as a stable for cattle. As it is of a soft porous nature, it is easily cut through, and affords in winter (which in this open country is very severe) a better shelter than walls of loose stones could do. This mode of construction is not peculiar to Bethlehem. I have observed it in many parts of the East, and as habits do not undergo those changes as with us, it is fair to presume, that such was their mode of living eighteen

* Here Jesus Christ was born of the Virgin Mary.

hundred years ago. At that time the Virgin Mary came here as a stranger for the general enrolment, and as such she was accommodated. Besides, her peculiar situation made concealment desirable. (Luke 2. 4,5.) So much for the place of the nativity being under ground. Throw down these massive walls, and divest the consecrated spots of their artificial embellishments, and the usual excavation in the mountain's side for housing cattle will be found amongst the ruins, such as it still

appears beneath the neighbouring cottage. With respect to its identity, the event which occurred within it was of too important a nature to allow the early Christians to lose sight of the locality. Even those most sceptical in regard to the identity of the holy places, admit in this instance the authenticity of the tradition."

II. Bethlehem, a town belonging to the tribe of Zebulun, (Josh. 19. 15,) the situation of which is now unknown.

Bethlehem.

BETH-MEON, a city of the Moabites in the territories of the tribe of Reuben, denounced by the prophet Jeremiah. (48. 23.)

BETH-PEOR, a city in Moab, not far from the Jordan, so called from the worship of Baal Peor. In its neighbourhood was the sepulchre of Moses. (Deut. 3. 29; 4. 46; 34. 6.)

BETHPHAGE, בֵּית פַּחַז This was a village on the declivity of the Mount of Olives, adjoining that of Bethany. Here the disciples, as Our Saviour had instructed them, found the ass on which he rode into Jerusalem. (Zech. 9. 9; and Matt. 21. 1.) It derived its name from the abundance of figs which grew there. Rauwolf says that, in his time (1574), there were fig-trees at Bethphage. No remains of this village now exist.

BETHSAIDA, Βηθσαιδα. Bethsaida of Galilee was most probably a city on the western coast of the Lake of Tiberias, near the place where the river enters that sea. (John 12. 21.) It was one of the cities which Our Saviour denounced for its impenitence and infidelity, after the mighty works which had been done there. (Matt. 11. 21.) It was also the residence of the Apostles Philip, Andrew, and Peter. (John 1. 44.)

It has been conjectured that there was another Bethsaida, situated in the region of the Gaulonitis, on the eastern side of the Sea of Tiberias, and near the place where the river Jordan enters it. Winer supposes that this Bethsaida is mentioned in Luke 9. 10, where Our Lord is said to have withdrawn himself to a desert place belonging to Bethsaida, after the murder of John the Baptist by Herod; and whence also he is said to have returned across the lake to Capernaum, after he had miraculously fed five thousand men with five loaves and

two small fishes. (Matt. 14. 22; John 6. 17.) According to Josephus, Philip the tetrarch raised Bethsaida to the rank of a city, and called it Julius, after the daughter of the emperor Augustus. This would appear to have been the Bethsaida of St. Luke, as Pliny states that Julius was situated on the eastern shore of the lake, though other geographers consider that Julius was the same as Chorazin.

Mr. Buckingham observes, "It is a matter of some difficulty to fix on the site of many of the towns of this lake with any precision, more particularly Chorazin, Bethsaida, Gennesareth, and Capernaum. The city of Tiberias was unequivocally on the west, where the present town of Tabareeah stands; and we have the testimony of Pliny that Julius and Hippos were on the east, and Tarichæa on the southern shores of the lake; so that the others were probably toward the north."

Professor Robinson in his Journal says, "We encamped near where the Jordan enters the lake; and explored the eastern plain and the site of the ancient Julius, the northern Bethsaida. We made minute and persevering inquiry throughout the whole country, after the ancient names, Capernaum, Bethsaida, and Chorazin; but no trace of them remains among the Arab population. If former travellers have heard of them, it must have been from the monks of Nazareth or their dependants."

BETH-SHAN or **BETH-SHEAN**, a city in the tribe of Manasseh, not far from the western bank of the Jordan. (Josh. 17. 11; 1 Sam. 31. 10,12.) After the defeat of the Israelites, and the death of Saul and his sons, the Philistines fastened the body of Saul to the wall of this place, whence the men of Jabesh Gilead, a town twenty miles off, took it down and carried it away. In the fourth century it was a considerable town, and had

then long borne the Greek name of Scythopolis, from a tradition that a body of Scythians had settled there in the time of King Josiah. By the Talmudists it was called *Baisan*, and this is still its name. It is now a poor village, inhabited by about two hundred Arab families. Burckhardt describes its ruins as indicating its ancient greatness.

BETH-SHEMESH, a sacerdotal city in the tribe of Judah, whither the ark was brought after it had been sent back by the Philistines. Some of the inhabitants having looked into the ark with vain curiosity, fell down dead. (1Sam. 6. 19.) Josephus, who narrates the circumstance, mentions that seventy men were slain; but the reading of the Syriac and Arabic versions, as well as that in our own, is fifty thousand and seventy men. There is, however, an evident transposition of the words in the passage. Beth-shemesh was, at that time, a small village, and could not contain as many inhabitants as the number stated; the interpretation, therefore, of Bochart is far more reasonable, who renders the verse, "He smote three score and ten men, fifty out of a thousand," meaning that God was so indulgent as not to slay all that were guilty, but only seventy of them, observing this proportion, that out of a thousand persons, he smote only fifty, or the twentieth part. Bishop Patrick.

Professor Robinson, in his journal read before the Geographical Society of Berlin, says, "We bent our course northward among the hills, and passing again through Jedna, rested for a time at Terkumieh, the Tricomias of former ages; leaving Beit Jibrin on our left. The next morning descending N.N.W., we came to the site of the ancient Beth-shemesh, in the opening of Wady Surâr into the plain. The place is now called Ain Shema, although no fountain exists there; but the situation corresponds to the Scriptural accounts; and there are evident traces of a large city."

Three other places called Beth-shemesh are mentioned in the Scriptures: these are, a city of Issachar, (Josh. 19. 22), another of Naphtali (Josh. 19. 38), and a city of Egypt, the same as Heliopolis, or On. (Jerem. 43. 13.)

BETHULIA, *Βετυλουα*, a city celebrated for its siege by Holofernes, at which he was killed by Judith. (Judith 6. 7.) It was situated near Dothaim and Esdraelon, not far from the mountain known by the name of the Mount of the Beatitudes, and is generally supposed to be the "city set on a hill," mentioned in Matt. 5. 14, for it stands on a very conspicuous mountain, and is seen far and near. It is at present called Safet, and is a very strong position, and might well defy the power of Holofernes and his army. It answers exactly to the description given in the Apocryphal book of Judith. Safet is said to have been peopled by about four hundred Jewish families: for the modern town was destroyed by a calamitous earthquake in January, 1837. "Not a house remains standing," according to Mr. E. Scott Colman's interesting *Description of part of the Scene of the late great Earthquake in Syria*; "even the castle, which has many times withstood the violence of man, has given way completely to the impetuosity of the shock."

The prospect from this eminence is very extensive. "The view to the south," says Mr. Jowett, "and on either side comprehending about one-third of the circle, presents the most surprising assemblage of mountains which can be conceived. It is, if such an expression may be allowed, one vast plain of hills. To a distance of twenty or thirty miles toward Nazareth, and nearly the same toward Mount Tabor and Mount Hermon, the far-spreading country beneath is covered with ranges of

mountains; which, having passed over them, we know to be ascents and descents far from inconsiderable; but which from the eminence of Safet, appear only as bold undulations of the surface of the earth. To the left are the inhospitable and unvisited mountains eastward of the river Jordan. In the centre of the distant scene appears the beautiful lake of Tiberias, fully seen from one extremity to the other; and in the back-ground, stretching beyond the utmost power of vision, are the mountains of Gilead. On a clear day, the view in that direction must be more than forty miles."

Professor Robinson, who visited the spot in 1838, says the place is still little more than a heap of ruins. "While at Safet, we went to a point an hour north of the town, whence we could see the castle of Banias, and overlook the whole plain and lake of the Hûleh. The latter is but one lake, eight or ten miles long, by four or five miles broad; the northern half being a mere tract of marsh, covered with tall reeds or flags. Between this lake and that of Tiberias, the Jordan flows in a narrow valley, and forms no intervening lake. On the way from Safet to Tyre, nearly two hours N.W. of Safet, we saw the crater of an extinct volcano; which was probably the central point of the great earthquake of the preceding year, by which Safet and the adjacent villages were destroyed."

BETRAY. At the Last Supper, our Lord exclaimed, "He that dippeth his hand with me in the dish, the same shall betray me." (Matt. 26. 23.) This person was Judas Iscariot, who had covenanted to betray his Lord for "thirty pieces of silver."

In an old work entitled *The Sovereign Order of St. John of Jerusalem*, (by Andrew Favine, 1620,) we find a curious notice on the subject of the pieces of silver.

"In this city of Rhodes they did beate and stampe money of silver, in bignesse somewhat neare to a half teston of France, but yet much thicker, and the figures thereon more embossed than ours are. These pieces of silver are like to the half sickle of the Jews, or the diodrachma of the Romaines, but they be more worth. There is a tradition that the thirtie pence, for which the Saviour of the world was sold and delivered to the Jews by the traitor Judas, were of this kinde. And in very deede, in the church of the Holy Crosse of Jerusalem at Rome, is to be seene one of those thirtie pence, which is wholly like to that in the church of the Temple in the city of Paris. It is enchased in a shrine, and is to be seene but thorow a cristall glasse, and on the side which may be noted appeareth nothing but a head.

"I have confronted and compared it with the sight of that pennie at Rome, and the other in the Temple at Paris, and they are all three alike, both in the visage and in the circumference. Mine is in weight two groates a halfpennie less of silver, which commeth to twelve sols and one liard. On the one side it hath a visage of the sunne, like to the fashion of a young man's face, without a beard, with long locks of hayre, as here it is figured, and as poets have feigned. On the other side is a blowne rose, higher and greater than ours are; which commeth somewhat neare in resemblance to the rose which we tearme of Jericho, and which are brought from the Holy Land. Upon this pennie the rose hath on each side a button (bud), the one whereof beginneth to blome, but not the other. Above the rose, on the ring of the piece, is formed in capitall Greeke letters *ΡΟΔΙΟΝ* (Rhodion), which signifieth and would say a rose. At the foote whereof is this syllable, EY. Thirtie pence of this money," he continues, "amounteth not but altogether to the summe of eighteen pounds, seaven shillings, and sixpence of our money, and seemeth a

very small summe for buying a piece of ground or land which the Evangelists call Ackeldemach, The Potters' Field."

The Money of Betrayal, or "Price of Blood."

Basnage in his *Histoire des Juifs*, however, makes some remarks on this coin which go to show that it possesses no authority whatever. "Some authors assert that the Jews coined money which presented on one side the head of a man with a radiant crown, and on the other a rose, *Ποδίων*. They produce, in proof, one of the pieces which Judas received from the college of priests, on which this head and word might be seen; but such even is of little value, excepting at Rome and Paris, where travellers are found simple enough to be duped by purchasing it at an extravagant price, as explanatory of ancient usage, whereas it only exhibits the credulity of the age."

The *ἀργύριον*, translated "pieces of silver," is generally supposed to be a silver coin called the shekel, which, according to Josephus, was equivalent in value to four Attic drachmæ, or about 2s. 7d. "Thirty shekels make about 3l. 10s. 8d. of our money. It appears from Exodus 21. 32, that this was the price to be paid for a slave or a servant when killed by a beast. So vilely was He esteemed who shed his precious blood for man, and so true it is that Christ took upon him the form of a servant." D'Oily and Mant.

Jewish Shekel.

BETROTHING. Among the ancient Jews, betrothing was performed either by a writing, or by a piece of silver given by the man to the woman in presence of witnesses, as a pledge of their mutual engagements. Kisses also were given in token of the espousals, to which custom there appears to be an allusion in Canticles 1. 2, after which the parties were reckoned as man and wife. After these espousals, which took place usually when the parties were young, the woman continued with her parents several months, if not some years, before she was brought home by her husband. Thus we find that Samson's wife remained with her parents a considerable time after her espousals. (Judges 14. 8.) If, during the time between the espousals and the marriage, the bride acted contrary to the fidelity she owed to her bridegroom, she was treated as an adulteress; and thus the holy Virgin, after she was betrothed to Joseph, might according to the rigour of the law have been punished, if the angel of the Lord had not acquainted Joseph with the mystery of the incarnation. See MARRIAGE.

BEULAH, בעולה In the 62nd chapter of Isaiah Jehovah (in the opinion of some commentators, but the prophet according to others) in speaking of the future prosperity of the Church under the type of Jerusalem, says, "Thou shalt be called Hephzibah, and thy land Beulah; for the Lord delighteth in thee, and thy land shall be married." In the margin the word Beulah is explained as "married," and we find from Roberts that a similar figure, expressive of mutual government and dependence, is still in use in the East.

"A sovereign is spoken of in the East as being married to his dominions; they mutually depend on each other. When a king takes possessions from another, he is said to be married to what he has acquired by conquest and united to his former dominions."

BEVERAGE. The ordinary beverage of the Jews was water, which was drawn from the public wells and fountains, (John 4. 6, 7,) and which was to be refused to no one. (Matt. 25. 35.) Water also was the usual drink of the Egyptians. Modern travellers attest that the water of the Nile, after it has been deposited in jars to settle, is particularly wholesome and pleasant, and is drank in large quantities; while that from the few wells which are to be met with in that country is seldom palatable, being unpleasant and insalubrious. When the modern inhabitants of Egypt depart thence for any time, they speak of nothing but the pleasure they shall find on their return in drinking the water of the Nile. The knowledge of this circumstance gives a peculiar energy to the words of Moses, when he denounced to Pharaoh that the waters of the Nile should be turned into blood, even in the very filtering vessels; and that the Egyptians should "loathe to drink of the water of the river." (Exod. 7. 17-19.) That is, they should loathe to drink of that water which they used to prefer and so eagerly to long for. The common people among the Mohammedans drink water; the rich and noble drink a beverage called sherbet, which was formerly used in Egypt, (Gen. 40. 11,) where something like our ale or beer, termed Barley wine, was also used; though probably not so far back as the time of Moses.

The strong drink, *שכר shikar*, or *σικερα*, of Luke 1. 15, mentioned Levit. 10. 9, means any sort of fermented liquors, whether prepared from corn, dates, apples, or any other kind of fruits and seeds.

After the settlement of the Israelites in Canaan, they drank wine of different sorts, which was preserved in skins. Red wine seems to have been the most esteemed. (Prov. 23. 31.) In the time of Solomon spiced wines were used mingled with the juice of the pomegranate, (Cantic. 8. 2,) and also with myrrh. Wine was also diluted with water, which was given to the buyer instead of good wine, and was consequently used figuratively for any kind of adulteration. (Isai. 1. 22.) Wine in the East was frequently diluted after it was bought, as may be inferred from two Arabic verbs, which still remain to indicate its dilution. From the pure wine there was made an artificial drink, *חמץ hhamitz*, which was taken at meals with vegetables and bread. It was also a common drink, (Numb. 6. 3,) and was used by the Roman soldiers. (Matt. 27. 48.) Medicated wines, it seems, were given to those who were to be crucified in order to blunt the edge of pain and lessen the acuteness of sensibility, which may explain the passage in Matthew 27. 34.

The vessels used for drinking among the Jews were at first horns; but these were afterwards used only for the purpose of performing the ceremony of anointing. The other drinking vessels were cups and bowls. The cup was of brass covered with tin, in form resembling

a lily, though sometimes circular; it is used by travellers to this day, and may be seen in both shapes on the ruins of Persepolis. The bowl in form generally resembled a lily, (Exod. 25. 33,) although it may have varied, for it had many names. Some had no cover and were probably of a circular shape, as the Hebrew names seem to indicate. Bowls of this kind which belonged to the rich were, in the time of Moses, made of silver and gold, as appears from Numbers 7. 84. The larger vessels from which wine was poured out into cups were called urns, bottles, small bottles, and a bottle of shell, *בַּד kad*, with a small orifice. Jahn; Michaëlis. See WINE.

BEWARE. To beware of men, is to take heed lest they deceive us. (Mark 12. 38.) To beware of sin, is to avoid every appearance of it, and temptation to it; and to the utmost of our power to watch against and oppose it. (Matt. 16. 6.)

BEWITCH, signifies to deceive and lead astray by juggling tricks and pretended charms. (Acts 8. 9, 11.) The Greek verb *ἐξιστημι*, means to put out of one's self, to be out of one's mind. The word used by the Apostle, in the passage Gal. 3. 1, "O foolish Galatians, who hath bewitched you?" is *βασκαίνω*, which may be understood to mislead by pretences, as if by magic arts, to fascinate.

When Christianity was first promulgated, the nations under the dominion of the Romans, which comprehended the larger part of the civilized world, were greatly addicted to mysterious practices; supposing that there existed in nature certain influences which they could control and manage by occult signs, expressed in different ways and on different materials, and among the nations most notorious for these opinions, were the Jews and the Egyptians. It is not therefore surprising that some should have brought with them and engrafted on Christianity such opinions and practices as they had formerly entertained. Accordingly, we see that the Apostles found it necessary very early to guard their converts against such persons, cautioning them to avoid "profane and vain babblings and oppositions of science, falsely so called," (1 Tim. 6. 20;) and in several other passages, there are evident allusions to similar errors among the first professors of Christianity. Nor did the evil cease as the doctrines of the Gospel expanded themselves: a number of persons in succession, for two centuries afterwards, are recorded as distinguished leaders of these wild opinions, who mixed up the sacred truths of the Gospel with the fantastic imaginations of a visionary science.

The first person mentioned as a leader of these opinions was Simon, a man of Samaria. He had addicted himself to occult practices, and had so beguiled the understandings of the people, that he persuaded them he was some extraordinary person, and they all affirmed, "This man is the great power of God." (Acts 8. 10.) He and some of the people of Samaria were converted by Philip's preaching; and having become a believer in the Gospel, he was baptized; but his old habits and practices remained unchanged. His disciples preserved certain representations of him under the form of Jupiter, and of a woman whom he called Helena, that he took about with him, under that of Minerva; to these images they ascribed great efficacy and sanctity, and they were perhaps the first of those Christian amulets which afterwards became so numerous. See SIMON MAGUS.

BEYOND. The phrase "beyond Jordan" frequently occurs in the Scriptures, and to ascertain its meaning, we must of course attend to the situation of

the writer. With Moses, it signifies the country on the western side of the river, as he wrote upon its eastern bank; but with Joshua, who had crossed the river, it means the reverse. The term occurs in Matthew 4. 15, but there, according to Bishop Pearce, the passage should be "by the side of Jordan."

BEZEK, *בִּזְק* a city belonging to the tribe of Judah, originally the capital of Adonibezek, whither the men of Judah marched against the Canaanites, whom they routed and slew to the number of ten thousand. Here they found Adonibezek, on whose person they retaliated the cruelties he had inflicted on others. (Judges 1. 4-7.) Saul reviewed his army at this place before he marched against the Ammonites, to deliver Jabesh Gilead. (1 Sam. 11. 8.) Eusebius and Jerome assert that in their time there were two towns of this name near each other, and about seventeen miles from Sichem, on the road to Scythopolis, or Bethshan.

BEZER, *בִּצְר* Sept. *Βοσορ*, a city of the tribe of Reuben east of Jordan, (Deut. 4. 43; Josh. 20. 8;) where it is termed "Bezer in the wilderness." It was selected as one of the cities of refuge by Moses, and was given to the Levites of Gershom's family.

BIBLE, *το Βιβλίον*, the name applied by Christians by way of eminence to the collection of sacred writings, otherwise called the Holy Scriptures, of the Old and New Testaments. "This volume, to which both Jews and Christians respectively appeal, the former to the Old Testament Scriptures exclusively, and the latter to the Old and New Testaments combined, is termed emphatically the Bible, that is, The Book. It comprises a great number of narratives and compositions written by inspired persons at distant periods, in different languages, and on various subjects. Collectively they claim to be a *Divine revelation*, that is, a discovery afforded by God to man of Himself, or of his will, beyond what He has vouchsafed to make known by the light of nature or of reason."

2. These sacred writings have conferred solid and lasting benefits on all who have perused them with devout attention; and they still continue to afford spiritual consolation to millions of the human race. It has pleased Almighty God, by one of those mysterious ways of his providence which we are unable to fathom, to preserve to us in these later ages, through all the wondrous changes which have occurred in other things, these precious records pure and uncorrupted, and they now afford the groundwork of the faith of all the most civilized nations of the world. The Bible has long been translated into all the European languages, and under the auspices of various religious institutions, is now being rapidly diffused among the other nations of the earth.

"The Scriptures," says Bishop Horne, "are the appointed means of enlightening the mind with true and saving knowledge. They show us what we were, what we are, and what we shall be; they show us what God hath done for us, and what He expects us to do for Him; they show us the adversaries we have to encounter, and how to encounter them with success; they show us the mercy and the justice of God, the joys of heaven and the pains of hell. Thus will they give to the simple an understanding of such matters as philosophy for whole centuries sought in vain."

3. The limits of this CYCLOPEDIA will hardly admit of a general outline of the numerous subjects that might be introduced under the term BIBLE; it must suffice, therefore, to give a few historical particulars, commencing

with an account of the order of the books in the Hebrew Scriptures, and exhibiting a sketch of the manner in which our present authorized version was completed in the reign of King James I.

4. HEBREW BIBLE. With respect to the entire Hebrew Bible, it is generally admitted that about fifty years after the rebuilding of the Temple, and the consequent re-establishment of the Jewish religion, the canon of the Old Testament was settled, but by whom this great work was accomplished is a question on which there is a considerable difference of opinion. Some contend that it could not have been done by Ezra himself; because, though he has related his efforts in restoring the law and the true worship of Jehovah, yet on the settlement of the canon he is totally silent; and the silence of Nehemiah, who has recorded the labours of Ezra, as well as the silence of Josephus, who is diffuse in his encomiums on him, has further been urged as a presumptive argument why he could not have collected the Jewish writings. But to these hypothetical reasonings we may oppose the constant tradition of the Jewish church, contradicted both by their enemies and by Christians, that Ezra, with the assistance of the members of the great synagogue, did collect as many copies of the sacred writings as he could, and from them set forth a correct edition of the canon of the Old Testament, with the exception of his own writings, the book of Nehemiah, and the prophecy of Malachi; which were subsequently added by Simon the Just, who is said to have been the last member of the great synagogue.

5. The books thus collected were divided into three parts: first, Torah, the law; secondly, Nabiim, the prophets; thirdly, Chetubim, and sometimes Hagiographa, a Greek word, signifying holy writings; which division our Saviour refers to in Luke 24. 44: "These are the words which I spoke unto you, while I was yet with you, that all things must be fulfilled which were written in the law of Moses, and in the prophets, and in the Psalms, concerning me." By the Psalms he alludes to the Chetubim. Josephus mentions the same division in his book against Apion: "We have only two-and-twenty books which are to be believed as of divine authority, of which five are the books of Moses, the prophets in thirteen books, the remaining four books contain hymns to God, and documents of life for the use of man." It may be observed this division was made for the sake of reducing the books to the number of letters contained in the Hebrew alphabet.

At present the Jews reckon twenty-four books, which are arranged in the following manner: First, the law, which contains Genesis, Exodus, Leviticus, Numbers, Deuteronomy. Secondly, the writings of the prophets, which are divided into the former, the latter, and the minor prophets; the books of the former prophets are, Joshua, Judges, Samuel, Kings; the books of the latter prophets are Isaiah, Jeremiah, and Ezekiel; the twelve minor prophets, Hosea, Amos, &c., are reckoned as one book. Thirdly, the Chetubim, which comprise the Psalms, Proverbs, Job, the Song of Solomon, called the Song of Songs, Ruth, the Lamentations, Ecclesiastes, Esther, Daniel, Ezra, and the Chronicles. Under the name of Ezra, they comprehend the book of Nehemiah. From this it is easy to observe the arrangement differs materially from that in our present English version. The expression, the law and the prophets, being frequently employed in the New Testament, it is therefore highly useful to know what particular books were comprehended under those terms in the time of our Saviour, as our present arrangement leaves us at a loss to point out this distinction.

The five books of the Law were divided into fifty-four

sections, called Paraschioth. This division some Jews suppose to have been appointed by Moses himself, but others with more probability ascribe it to Ezra. The design of this division was, that one of these might be read in their synagogues every Sabbath day, the whole Pentateuch being thus read over once a year; the number of Paraschioth was fifty-four, because in their intercalated years, a month being then added, there were fifty-four Sabbaths. In other years they reduced them to fifty-two, by twice joining together two short sections. These sections were divided into verses, called Pasukim, which are marked in Hebrew Bibles by two great points at the end, called from hence, *Soph Pasuk*, the end of the verse; they are supposed to have been introduced by Ezra, or the Chaldee Targumists; for after Hebrew ceased to be the usual language of the Jews, the Holy Scriptures were from that time interpreted in their synagogues to the people, either in Greek or Chaldee. The usage was first to read in the original Hebrew, after which it was rendered by an interpreter, into the Chaldee tongue, that all might fully understand it. This was done period by period, and in order that these periods might be the better distinguished, and the reader know with certainty how much to interpret at every interval, there was a necessity that some marks should be inserted for direction on this point. The rule given is, that in the law the reader was to read one verse, then the interpreter was to render the same into Chaldee; but that in the prophets, the reader was to read three verses together.

6. After the destruction of Jerusalem by Titus, and the consequent dispersion of the Jews, some of those who were settled in the East applied themselves to literature, and opened schools in which they taught the Scriptures. One of the most distinguished of these was that established at Tiberias in Palestine, which Jerome mentions as existing early in the fifth century. The doctors of this school early in the sixth century agreed to revise the sacred text, and issue an accurate edition of it; for which purpose they collected all the scattered critical and grammatical observations they could obtain, which appeared likely to contribute towards fixing both the reading and interpretation of Scripture, into one book, which they called *מסורה Masorah*, that is, tradition, because it consisted of remarks which they had received from others. Some rabbinical authors pretend that when God gave the law to Moses on Mount Sinai, He taught him, first, its true reading, and, secondly, its true interpretation; and that both these were handed down by oral tradition from generation to generation, until at length they were committed to writing. The former of these, the true reading, is the subject of the *Masora*; the latter, or true interpretation, is that of the *Mishna* and *Gemara*. At first it did not accompany the text; afterwards the greater part of it was written in the margin. In order to bring it within the margin, it became necessary to abridge the work, which abridgment was called the *Little Masora*; but being found too short, a more copious abridgment was inserted, which was distinguished by the appellation of the *Great Masora*. The omitted parts were placed at the end of the text, and called the *Final Masora*. From the strict observance of the rules laid down in the *Masora*, we are indebted for the accuracy of the Hebrew manuscripts of the Bible. When Dr. Kennicott made his extensive collection of Hebrew MSS., he found the alterations inconsiderable since the introduction of the *Masora*, and the oldest Hebrew MSS. are more recent by some centuries than this body of rules.

7. The division of the Scriptures into chapters as we at present have them, is of modern date. Some attri-

bute it to Stephen Langton, archbishop of Canterbury, in the reigns of John and Henry III.; but the true author was Hugo de Sancto Caro, commonly called Hugo Cardinalis, because he was the first Dominican raised to the degree of cardinal. This Hugo flourished about A.D. 1240, and wrote a comment on the Scriptures, and projected the first Concordance, which was made from the Vulgate Latin version. Rabbi Nathan, about 1445, is said to have divided the chapters of the Old Testament into verses, and Robert Stephens made a similar division for that of the New, for the sake of a Concordance which he was then compiling for the Greek Testament, which was afterwards printed by Henry Stephens, his son.

8. The discovery of the art of printing in the fifteenth century, and the establishment of the Reformation throughout Europe in the next, facilitated the circulation of the Scriptures. Wherever its pure doctrines penetrated, the nations that embraced it, adopting its grand principle—that the Bible contains the religion of Protestants—were naturally desirous of obtaining the sacred volume in their respective languages. And even in those countries into which the reformed doctrines were but partially introduced, the Romish clergy found it necessary to yield so far to the spirit of the times, as to admit, in a limited degree, vernacular translations among the people. Since the Reformation, wherever learned and pious missionaries have carried the Christian faith, the Scriptures have been translated into the languages of its professors.

9. **THE ENGLISH BIBLE.** Many portions of the Scriptures were translated by various individuals, in the interval between the eighth and the fourteenth centuries, into the current language of the period, but it scarcely admits of a doubt that it was Wicliffe who first rendered the entire Bible into English*. His translation was completed about 1380, and was made from the Latin Vulgate, not from the original text. The authorities of the Church, however, were at that period strongly opposed to diffusion of the Scriptures, and to their influence it was owing that the first printed English Bible proceeded from a foreign press. For this translation of the Scriptures we are indebted to William Tyndale; it was printed in the year 1526, either at Antwerp or Ham-burgh, without a name, in a middle-sized octavo volume; and, as the Reformation was now making its way, was soon followed (in 1535) by another translation of the entire Bible, made from the Latin and German, and dedicated to Henry VIII., by Myles Coverdale, who was subsequently advanced to the see of Exeter by Edward VI.

10. We must refer our readers for a detailed account of the numerous intermediate versions, to Horne's *Introduction to the Scriptures*, Orme's *Bibliotheca Biblica*, and Lewis's *History of the Translations of the Bible*, and pass on to the period of the authorized translation now in use, which is commonly called the Bible of King James I. This prince succeeded to the throne in 1603; and several objections having been made to the Bishops' Bible, at the conference held at Hampton Court, in 1604, the king in the following year gave orders for the undertaking of a new version, and appointed fifty-four learned men to this important labour; but, before it was commenced, seven of the persons nominated were either dead or had declined the task; for the list, as given by Fuller, comprises only forty-seven names. All of them, however, were eminently distinguished for their piety and for their profound learning in the original languages of the sacred writings; and such of them as survived till the com-

mencement of the work, were divided into six classes. Ten were to meet at Westminster, and to translate from the Pentateuch to the end of the second book of Kings. Eight, assembled at Cambridge, were to finish the rest of the historical books, and the Hagiographa. At Oxford, seven were to undertake the four greater prophets, with the Lamentations of Jeremiah, and the twelve minor prophets. The four Gospels, Acts of the Apostles, and the Apocalypse, were assigned to another company of eight, also at Oxford; and the Epistles of St. Paul, together with the remaining canonical epistles, were allotted to another company of seven, at Westminster. Lastly, another company at Cambridge were to translate the Apocryphal books, including the Prayer of Manasseh. To these six companies the king gave a list of fifteen instructions, which had been very carefully drawn up.

11. The translation was commenced in the spring of 1607; it occupied nearly three years, and was first published, in folio, in 1611. After this publication, all the other versions gradually fell into disuse, with the exception of the Psalms, and the Epistles and Gospels in the Book of Common Prayer, which were still continued, the former according to the translation of Cranmer's Bible, and the latter according to that of the Bishops' Bible, until the final revision of the Liturgy in 1661; at which time the Epistles and Gospels were taken from the present version, but the Psalms are still retained according to the translation of Cranmer's Bible.

12. Upwards of two centuries have elapsed since the authorized English version of the Holy Scriptures now in use was given to the British nation. During that long interval, though many passages in particular books have been elucidated by learned men, with equal felicity and ability, yet its general fidelity, perspicuity, and excellence, have deservedly given our present translation a high and distinguished place in the judgment of the Christian world, wherever the English language is known and studied.

13. **TRANSLATIONS OF THE BIBLE.** "The total number of dialects spoken in all parts of the world," Mr. Horne observes, "is computed to be about five hundred; and of these somewhat more than one hundred appear to constitute languages generically distinct, or exhibiting more diversity than resemblance to each other. Into upwards of one hundred and fifty of these various dialects the Sacred Scriptures have been translated, either wholly or in part; and not less than sixty of them are versions in the languages and dialects of Asia; and a recent missionary from China states that, in that vast empire, containing, it is supposed, upwards of three hundred millions of human beings, about sixty-four different dialects are spoken, and that it would be requisite to have as many different versions of the Bible to enable the people in the whole of that immense region to peruse it." See **CANON; VERSIONS.**

BIBLICAL INTERPRETATION is the science of teaching or expounding the meaning of the Bible. Strictly speaking, it is either grammatical, when the meaning of words, phrases, and sentences is made out from the *usus loquendi*, and the context; or historical, when the meaning is illustrated and confirmed by historical arguments, which serve to evince that no other sense can be put on the passage, whether regard be had to the nature of the subject, or the genius and manners of the writer. It presupposes a knowledge of biblical criticism, and an acquaintance with ancient geography, chronology, the civil, religious, and political history, the manners, customs, &c., of the Jews, and of the surrounding nations, and especially with the doctrinal and pre-

* Some writers state that another translation of the entire Bible was made about the same time by John de Trevisa, of Oxford.

ceptive contents of the Bible itself as a whole, and of its different parts in particular. As the same method, and the same principles of interpretation, are common both to the sacred volume and to the productions of uninspired men, it follows that the signification of words in the Holy Scriptures must be sought in precisely the same way in which the meaning of words in other works usually is, or ought to be, sought. Hence it appears, that the method of investigating the signification of words in the Bible, is no more arbitrary than it is in other books, but is in like manner regulated by certain laws, drawn from the nature of languages. And since no text of Scripture has more than one meaning, we must endeavour to find out that one true sense precisely in the same manner as we would investigate the sense of Homer, or any other ancient writer; and in that sense, when so ascertained, we ought to acquiesce, unless, by applying the just rules of interpretation, it can be shown that the meaning of the passage has been mistaken, and that another is the only just, true, and critical sense. In order to assist in determining what is this "one meaning," the following rules have been laid down:—

1. Ascertain the *usus loquendi*, or the notion affixed to a word by the persons in general by whom the language either is now, or formerly was, spoken, and especially in the particular connexion in which such notion is affixed.

2. Retain the received signification of a word, unless weighty and necessary reasons require that it should be abandoned.

3. Where a word has several significations in common use, the one must be selected which best suits the passage in question, and which is consistent with an author's known character, sentiments, and situation, and the circumstances under which he wrote.

4. Although the force of particular words can only be derived from etymology, yet too much confidence must not be placed in that frequently uncertain science.

5. The distinctions between words which are apparently synonymous, should be carefully examined and considered.

6. The epithets introduced by the sacred writers are also to be carefully weighed and considered, as all of these have either a declarative or explanatory force, or serve to distinguish one thing from another, or unite these two characters together.

7. General terms are used sometimes in their whole extent, and sometimes in a restricted sense; and whether they are to be understood in the one way or in the other, must depend on the scope, subject matter, context, and parallel passages.

8. The most simple and obvious sense is generally the true one.

9. Since it is the design of interpretation to render in our own language the same discourse which the sacred authors originally wrote in Hebrew or Greek, it is evident that an interpretation, or version, to be correct, ought not to affirm or deny more than the inspired penmen affirmed or denied, at the time they wrote; consequently we must always take a sense from Scripture, and not bring one to it.

10. No interpretation can be just which brings out of any passage a sense that is repugnant to the ascertained nature of things.

The subsidiary means for ascertaining the sense of Scripture are the *usus loquendi*, context, scope, subject matter, philological and doctrinal parallelisms and analogies, historical circumstances, quotations, and exegetical commentators. Henderson; Ernesti's *Institutes*, by Stuart.

BIER. See BURIAL.

BILDAD, one of the three friends that came to comfort Job in his affliction. (Job 2. 11.) Bildad is supposed by commentators to have been descended from Shuah, one of the sons of Abraham and Keturah, whose descendants, the Shuhites, are believed to have inhabited a region of Arabia Deserta, called Saccra. (Ptolemy, lib. 5. 15.) In reference to the visit of the three friends to the patriarch in his affliction, Roberts observes, "Has a man fallen into some great calamity, his friends immediately go to his house to comfort him. 'Whither are you going?' 'As a comforter to my friend in sorrow.' 'How great is his distress; he will not listen to the voice of the comforters.'"

BILL, פֶּדוּ *sepher*. This word, in Hebrew, signifies anything written, and is in our version frequently rendered "book." Thus the passage in Job 31. 35, "Oh! that one would hear me! . . . that mine adversary had written a book," would be more properly rendered, "that mine adversary had given me a written accusation," or in modern phraseology, "a bill of indictment." In other places we have the word "bill," as "bill of divorcement," (Deut. 24. 1, 3,) and in Jerem. 32. 10, "the evidence," or, as in the margin, "the book," which there implies a legal conveyance of landed property.

In the New Testament, the word γραμμα is translated "bill," in the parable of the unjust steward. Here, too, a legal instrument is meant, as the lord's "debtors" are presumed to have been tenants who paid their rents in kind. The steward, it would appear, sought their good will, not merely by lowering the existing claim for the year, but by granting a new contract, under which the tenants were permanently to pay less than they had previously done. He directed the tenants to write out the contracts, but doubtless gave them validity by signing them himself.

BILL OF DIVORCEMENT. The Hebrews before the time of Moses seem to have exercised the right of oral divorce for the slightest causes, which still subsists among the Arabs. This proceeding is so contrary to the original design of the institution of marriage, that in Deut. 24. 1-4 it is strictly prohibited, and the husband is ordered to give to the wife, "who finds no favour in his eyes," (for serious offences were to be punished,) a bill of divorcement, before sending her from his house; this gave a more serious character to the proceeding, and by the delay it caused, naturally afforded time for reflection and the return of the kindly feeling which some trifling occurrence might have for a while smothered though not destroyed. In the same spirit, the husband was allowed to recall his wife at any time, if she had not in the interval contracted another alliance.

A short time before the birth of Our Saviour, a great dispute arose among the Jewish doctors concerning the interpretation of the Mosaic statutes relative to divorce; the school of Shammai contending that it was allowable only for gross misconduct, or for violation of nuptial fidelity, while the school of Hillel taught that a wife might be repudiated for the slightest causes. To this last-mentioned school belonged the Pharisees, who came to Our Lord "tempting him, and saying unto him, Is it lawful for a man to put away his wife for any cause?"—for anything whatever that may be disagreeable in her? (Matt. 19. 3.) Upon Our Lord's answer to this inquiry, that it was not lawful for a man to repudiate his wife, except for her breach of the conjugal honour; the disciples (who had been educated in Jewish prejudices and principles) hearing this, said, "If the case of the man

be so with his wife," if he be not allowed to divorce her except only for adultery, "it is not good to marry." (Matt. 19. 10.) This facility in procuring divorces, and this caprice and levity among the Jews in dissolving the matrimonial connexion, is confirmed by Josephus, and unhappily verified in his own example. In his time, the more powerful at least of the Jewish matrons appear to have adopted a practice from the Romans, and to have exercised in their own behalf the same power, that was granted by the Mosaic law to their husbands. It does not appear, however, that such a practice could have been common or popular among the Jews. The instances afforded by Josephus are those of Salome, the sister of Herod the Great, who sent a bill of divorcement to her husband, Costobarus, and dissolved her marriage with him; and that of the notorious Herodias, who divorced her husband, Philip, in order to marry his brother Herod, the tetrarch of Galilee. (Mark 6. 17-29; 10. 12.) See **DIVORCE; MARRIAGE.**

BILLOWS. This term is frequently employed metaphorically. Grievous afflictions succeeding one another, are sometimes called in Scripture "waves" or "billows;" which were sent and ordered by God, to terrify, perplex, and threaten to destroy men. (Psalm 42. 7; 88. 7.) The billows or swellings of Jordan are used by the prophet Jeremiah 12. 5, to represent the ravages of war and hostile invasion.

BIND, signifying to forbid or to restrain from acting; or confirming or removing a burden from the mind. To bind and To loose are figurative expressions; they are also taken for condemning and absolving. (Matt. 16. 19.)

Binding and loosing, in the language of the Jews, expressed permitting or forbidding, or judicially declaring anything to be permitted or forbidden. In the admission of their doctors, to interpret the Law and the Prophets, they put a key and a table-book into their hands, with these words: "Receive the power of binding and loosing," to which Our Lord alludes, (Luke 11. 52,) "Ye have taken away the key of knowledge." "To bind the law upon one's hand for a sign;" or, "To wear it like a bracelet on one's arm," (Deut. 6. 8,) was intended to imply, figuratively, an intimate acquaintance with its precepts, but the Jews take the phrase literally, and bind parts of the Law about their wrists. See **PHYLACTERIES.**

BIRDS, *ἄνθρωποι, ὄρνιθες.* Birds, (*Aves*), form the second Class in Cuvier's arrangement of animated nature. They are by him divided into six Orders, termed Rapaces, Passeres, Scansores, Gallinæ, Grallæ, and Palmipedes, of which the hawk, sparrow, woodpecker, cock, heron, and duck, may be respectively taken as examples. Other arrangements have been more recently proposed by eminent naturalists, as Temminck and Latreille, but their distinctions are by no means so obvious to the general reader. The first four Orders of Cuvier comprehend the land birds, the last two the aquatic species. In the various enumerations in Scripture, the winged tribes are divided into three classes, according as they occupy the air, the land, or the water.

The immense varieties of the species of birds, and the beauty of their external characters, have always rendered them favourite objects with the naturalist. The extraordinary degree of instinct displayed in all their habits and economy, the construction of their nests, the care of their young, and the nature of their migrations, have excited the admiration of the philosopher and the lover of nature. The splendid colouring of their plu-

mage, the powers of melody and the loveliness and docility of many species, have given them value as objects of beauty or entertainment; while others are prized as affording occupation to the sportsman, and as a delicacy to the epicure.

In Scripture, birds of prey are symbolical of armies who come to prey upon a country. (Jerem. 12. 9; Ezek. 32. 4; 39. 17.) As birds of prey feed upon carcasses, so those that take the goods of other men, eat as it were their flesh, which, in the language of metaphor, signifies riches or substance.

There is much difficulty in the identification of the birds mentioned in Scripture. Our English translators were, it may be supposed, very limited in their knowledge on this subject; for the same Hebrew words in Leviticus and Deuteronomy are not always rendered by the same term in our tongue; thus, the vulture of the former book is in the latter called the glede; and there are many similar variations in different parts of the Old Testament, with regard to other birds and other animals. We give in the following table a list of the unclean birds prohibited in Leviticus and Deuteronomy, according to our version, placing opposite to them the species most probably intended.

BIRDS OF THE AIR.

English Translation.	Probable Species.
Eagle . . .	Eagle.
Ossifrage . . .	Vulture or Great Sea Eagle.
Kite . . .	Kite.
Raven . . .	Raven.
Osprey . . .	Black Eagle.

LAND BIRDS.

Owl . . .	Ostrich.
Night Hawk . . .	Night Owl.
Cuckoo . . .	Saf-saf or Sea Swallow.
Hawk . . .	Ancient Ibis or Sparrow Hawk.

WATER BIRDS.

Little Owl . . .	Seagull.
Cormorant . . .	Cormorant.
Great Owl . . .	Ibis ardea or Ibis religiosa.
Swan . . .	Wild goose or Porphyria hyacinthinus
Pelican . . .	Pelican.
Gier Eagle . . .	Alcyon or Swan.
Stork . . .	Stork.
Heron . . .	Long Neck.
Lapwing . . .	Hoopoe.

Such birds as feed upon grain and seeds appear to have been allowed for food, and such as devoured flesh or carrion were prohibited. Birds on many occasions were offered for sacrifice. (Levit. 1. 14-17.) Moses, in order to inspire the Israelites with sentiments of tenderness towards the brute creation, enacts, that if they find a bird's nest, they are not to take the dam with the young, but to suffer the old one to fly away. (Deut. 22. 6, 7.) This is one of those merciful constitutions in the law of Moses, which respect the animal creation, and tended to humanize the hearts of the people, by inciting in their minds a sense of the Divine Providence extending itself to all creatures. Everything contrary to the spirit of mercy and kindness the Almighty has in utter abhorrence, and he who can exercise cruelty towards a sparrow or a wren, will, if circumstances should allow, be cruel to his fellow-creatures.

It seems that the Babylonians practised a species of hawking. In the Apocryphal book of Baruch (3. 17,) referring to the kings of Babylon, the writer says, "They had their pastime with the fowls of the air;" and Daniel (3. 38,) tells Nebuchadnezzar that God had made the fowls of the air subject to him.

Poultry is frequently represented on the monuments of Egypt, particularly geese, which seem to have been reared in great abundance; and in 1 Kings 4. 23, there is an expression rendered in our version "fatted fowl," which appears to denote poultry reared for the table. Fowling was a favourite Egyptian sport, in which they employed large nets spread among the aquatic plants of the Nile; a different kind of trap was requisite for birds which frequented the districts bordering on the Desert, such as the partridge, the quail, and the bustard. This was generally a net stretched over a frame which closed with a spring when the bait was touched, and the mechanism of the contrivance appears to be equally simple and ingenious. There are many allusions to this practice in Scripture. Thus Solomon says that the profligate heedlessly encounters dangers, "as a bird hasteth to the snare, and knoweth not that it is for his life." (Prov. 7. 23.) He also uses the same image to show of what little avail is human foresight without the superintendence of Divine Providence. (Eccles. 9. 12.)

From the number of persons in that country who made fowling their business or their pleasure, the timidity of the birds of Egypt was proverbial. Thus the prophet Hosea says, "They shall tremble as a bird out of Egypt, and as a dove out of the land of Assyria; and I will place them in their houses, saith the Lord." (Hosea 11. 11.) In the paintings we find entire families engaging in these fowling excursions, especially when the aquatic birds in the marshes of the Nile were objects of pursuit. Besides their wives, children, and attendants, the fowlers brought with them a decoy bird, and what to us appears very singular, a favourite cat, which, hunting through the reeds, and acting as a retriever, frequently succeeded in pouncing upon birds.

BIRTH. In Eastern countries, parturition is not an event of much difficulty, and, among the Hebrews, mothers were originally the only assistants of their daughters; although it appears from Genesis 35. 17, and 38. 28, that midwives were employed in cases of difficult labour, as they customarily were in after-times in Egypt. (Exod. 1. 15, et seq.)

The child was no sooner born than it was washed, rubbed with salt, and wrapped in swaddling clothes. (Ezek. 16. 4.) It was the custom, at a very ancient period, for the father, while music was heard to sound, to clasp the new-born child to his bosom, and by this ceremony, he was understood to publicly declare it to be his own.

The mother, after the birth of a son, was unclean or seven days, and during the thirty-three succeeding the seven of uncleanness, remained at home. If a daughter were born, the number of the days of uncleanness and seclusion at home was doubled. After the expiration of this period, she went into the tabernacle or temple, and offered a lamb of a year old, or, if she were poor, two turtle doves, and two young pigeons, for a sacrifice of purification. (Levit. 12. 6-8; Luke 2. 22.) On the eighth day after the birth of a son, the child was circumcised, by which rite it was consecrated to God. (Gen. 17. 10, comp. with Rom. 4. 11.)

The birth-day of a son was celebrated as a festival, which was solemnized every succeeding year with renewed demonstrations of festivity and joy, especially those of sovereign princes. (Gen. 40. 20; Job 1. 4; Matt. 14. 6.)

Roberts says, "When a person has succeeded in gaining a blessing, which he has long desired, he says, 'Good, good! the child is born at last.' Has a person lost his law-suit, in a provincial court, he will go to the

capital to make an appeal to a superior court; and should he there succeed, he will say, in writing to a friend, 'Good news, good news! the child is born.' When a man has been trying to gain an office, his friend, meeting him on his return, does not always ask, 'Is the child born?' or 'Did it come to the birth?' but, 'Is it a male or a female?' If he say the former, he has gained his object; if the latter, he has failed.

"The birth of a son is always a time of great festivity in the East; hence the relations come together to congratulate the parents, and to present their gifts to the little stranger. Some bring the silver anklets; others the bracelets, or ear-rings, or silver cord for the loins; others, however, take gold, and a variety of needful articles. When the infant son of a king is shown, the people make their obeisance to him." *Orient. Illus.*

This illustrates the offerings of the Magi, who came to Bethlehem to worship the infant Messiah, as recorded in Matthew 2. 11: "When they had opened their treasures, they presented unto him gifts; gold, and frankincense, and myrrh."

BIRTHRIGHT. Among the Jews, the first-born, if a son, was the object of especial affection to his parents, and was denominated, by way of eminence, פֶּתֶר רֶחֶם *pheter rechem*. Before the time of Moses, the father might, if he chose, transfer the right of primogeniture to a younger child, but this is prohibited in Deut. 21. 15-17. The first-born received a double portion of the estate. Jacob, in the case of Reuben, his first-born, bestowed his additional portion upon Joseph, by adopting his two sons. (Gen. 48. 5-8; Deut. 21. 17.) This was done as a punishment, but he, notwithstanding, was enrolled as the first-born in the genealogical registers. (1 Chron. 5. 1.) The first born was the priest of the whole family; but it seems evident, from the case of Jacob and Esau, (Gen. 25. 31-34,) that Esau did not properly estimate the value of the sacerdotal part of his birthright; for St. Paul calls Esau a profane person, rather, as it would seem, for despising his spiritual than his temporal privileges. (Heb. 12. 16.) Jarchi, in noticing the expression, "thus he despised his birthright," says, that "the impiety of Esau consisted in his despising the worship of God." The privilege of exercising the priesthood was transferred, by the command of God, communicated through Moses, from the tribe of Reuben, to whom it belonged by right of primogeniture, to that of Levi. (Numb. 3. 12.) In consequence of this fact, that God had taken the Levites from among the children of Israel, instead of all the first-born, to serve him as priests, the first-born of the other tribes were to be redeemed at a valuation made by the priest, not exceeding five shekels, from serving in that capacity. (Numb. 18. 15, 16.) The first-born also enjoyed an authority over those who were younger, similar to that possessed by a father, (Gen. 25. 23, et seq.; 2 Chron. 21. 3,) which was transferred in the case of Reuben, by Jacob, their father, to Judah. (Gen. 49. 8-10.) Accordingly, the tribe of Judah, even before it gave kings to the Hebrews, was everywhere distinguished from the other tribes. In consequence of the authority which thus attached to the first-born, he was also usually made the successor in the kingdom. There was an exception to this in the case of Solomon, who, though a younger brother, was made his successor by David, at the special appointment of God. It is easy to perceive, in view of these facts, how the word *first-born* came to express sometimes a great, and sometimes the highest, dignity. (Psalm 89. 27; Isai. 14. 30; Rom. 8. 29; Coloss. 1. 15-18; Heb. 12. 23.) *Jahn*.

"Besides his double share of the inheritance, the

first-born in patriarchal families had great privileges, and a sort of authority over his brethren, just as at present an Arab emir is, for the most part, only the first-born of the first-born of his family, and as such, rules a horde, composed merely of his kinsmen." Michaëlis; Rosenmüller.

BISHOP. I. NAME AND TITLE. The Greek word *ἐπίσκοπος*, *episcopus*, has been always employed in the Christian church to denote the chief minister in sacred things. It was sometimes, but rarely, translated by Latin writers into *inspector*, *superinspector*, *superintendens*, or *superattendens*, that is, overseer or superintendent. It is found in the Saxon, bishop; English, bishop; German, bischoff; French, évêque. Augustine explains the word as equivalent to *speculator*, overseer; and *præpositus*, president, superintendent.

In the New Testament, the terms *ἐπίσκοποι*, and *πρεσβύτεροι*, are used synonymously. In 1 Peter 5. 1, 2 we read of *πρεσβύτεροι ἐπισκοποῦντες*, i. e., presbyters exercising the episcopal functions, where the former word appears to be a title of honour, and the latter a designation of their office.

The following names and titles were also employed by the ancients, with reference to the office of these spiritual presidents, or bishops:—

The scriptural appellations, *προϊσταμενοι*, (1 Thess. 5. 12,) and *προεστώτες*, (1 Tim. 5. 17,) were translated into Latin by *præpositi* (whence our word provost), and were retained by the Greek fathers, with the addition of *πνευματικοί*, or *πνευματικὸν χορὸν*, spiritual, by way of distinction from temporal titles. Justin Martyr; Eusebius; Basil; Cyprian.

According to Theodoret, bishops in the early church were often styled *ἀποστολοι*, "apostles," in order to distinguish them from presbyters, who were also called *ἐπίσκοποι*. They were very commonly called *διαδοχοὶ τῶν ἀποστόλων*, "successors of the apostles." According to Socrates, *Hist. Eccl.*, and Jerome, in 1 Tim. ch. 3, the bishops were often called *angeli ecclesiarum*, *angels of the churches*, an appellation obviously founded upon the use of the term in the first three chapters of the Revelation.

Bishops were called *patres*, *patres ecclesiarum*, *patres clericorum*, and *patres patrum*—*fathers*, *fathers of the church*, *fathers of the clergy*, and *fathers of the fathers*, according to the Oriental idiom by which every teacher or governor is respectfully entitled *abba*, *father*.

Presbyters were called *patres laicorum*, and simply *patres*, *fathers of the laity*, *fathers*; whence the term *patres patrum*, as applied to their superiors.

In early times, bishops were called patriarchs, as being the superiors of the presbyters, who were called simply *patres*. Afterwards this title became equivalent to that of archbishop, or metropolitan; and at length (between the fourth and sixth centuries) it was appropriated to the superior of metropolitans.

After a certain time, bishops were regarded as appointed by Christ himself, and as governing the church in his name; and hence it is not surprising that they were entitled, at a very early period, representatives or vicars of Christ or of God.

Cyprian says, that everything which is done in the church, for its good, is done by bishops appointed by Christ. In the epistles ascribed to Ignatius, we often find the expression, *Τῷ ἐπισκόπῳ ὑποτάσσεσθε, ὡς τῷ Κυρίῳ*, Submit yourselves to the bishop, as to the Lord. But these writings, parts of which are supposed to be spurious, are of no authority. Basil the Great, however, says, He who presides is nothing less than one who sustains the person of the Saviour, one who occupies his

place, *Ὁ τοῦ σωτῆρος υπεχὼν πρόσωπον*. And this is in accordance with many expressions of Ambrose, Augustine, and other writers about that date.

II. OFFICE AND DUTIES OF BISHOP. The duties attached to the office of a bishop may be described in general terms as two-fold:

(i.) The celebration or conduct of divine worship, in all its parts, by the bishop in his own person, or by others acting by virtue of a commission from him.

(ii.) Church government and discipline; or the oversight of the whole church in his diocese, both laity and clergy, together with the management of the affairs of all congregations committed to his care.

(i.) *Celebration of Divine Worship.* In the very infancy of the church, before any distinction between bishop and presbyter existed, we find that many offices in divine worship were discharged by deacons and ministers. According to Justin Martyr, the consecration of the eucharist was performed by the president, who is evidently the same as the *ἐπίσκοπος*, or bishop; while the distribution of the elements was made by the hands of deacons. Other ministerial acts are likewise attributed to deacons and inferior officers. But it is carefully to be borne in mind, that in thus taking part in the celebration of public worship, these persons always acted under the immediate superintendence of the bishop or presbyter, or as commissioned by him; the bishop or presbyter being continually regarded as the representative of the whole.

This was particularly the case with regard to catechising and preaching. These duties were originally assigned especially to the bishop. It was a maxim of the early church, *Episcopi proprium munus docere populum*, "The peculiar affair of the bishop is to teach the people," (Ambrose, *De Off. Sac.*) a duty which was recognised and discharged, for example, by Chrysostom, Cyprian, Augustin, Leo the Great, and Gregory the Great.

These acts and offices, however, were not exclusively episcopal. But such, after a certain time, were the following:—1. The confirmation of baptized persons; by which the baptized were admitted as full members of the church. This sealing of the baptismal covenant was always regarded as a privilege peculiar to the bishop. 2. The ordination of ministers and ecclesiastical officers. 3. The restoration of penitents, or the public and solemn reception into the church of excommunicated persons after the completion of penance previously enjoined. This office was very rarely intrusted to a presbyter in the ancient church. 4. Various acts of consecration and benediction.

(ii.) *Church Government and Discipline.* This included (after the formation of the hierarchy): 1. The oversight and arrangement of all matters pertaining to divine worship, (which it is almost needless to say, is something different from the actual celebration of divine worship beforementioned.) The bishop appointed the Liturgy, or the form or order of worship, either in accordance with general or special regulations of the church, in compliance with precedent, or at his own discretion. His authority in these matters was exerted especially on extraordinary occasions, such as processions, pilgrimages, fasts, &c., after such ceremonies and customs had been established. 2. The oversight of all the members of the church throughout his diocese, in spiritual and ecclesiastical matters; especially with reference to ecclesiastical censures, excommunication, penances, marriage, and the like. 3. Especially all spiritual persons and ecclesiastical officers were subject to the superintendence and jurisdiction of the bishop, both as to the discharge of their offices, and as to the conduct of their lives. It was an old maxim of the

church, that the clergy stood in the same relation to their bishop as soldiers to their general; and history abounds with examples of strict discipline in this particular, and of heavy punishments inflicted by bishops upon disobedient or contumacious clergy. The clergy were punished according to their offences in various ways; sometimes by suspension from their revenues; sometimes by suspension from their office, (either in whole or in part;) and sometimes by a total deposition or degradation, whereby they were reduced to the state of a simple layman. Crimes punishable with excommunication in a layman, were usually visited with suspension or degradation in a clergyman; but for gross offences, the clergy were sometimes excommunicated. 4. The visitation of the clergy, churches, schools, and religious societies, was especially included in this charge of superintendence. Several laws were passed by the ancient church, binding the bishops to perform this duty of visitation in person; nor were they permitted, until after much resistance and delay, to employ rural bishops (*chorepiscopi*), exarchs, and *periodeutæ* (visiting presbyters), in this service. The Council of Laodicea, A.D. 361, ordained that bishops should not be appointed in villages and rural districts, but *periodeutæ* (i.e., visitors), who, however, should be bound to do nothing without the will and consent of the bishop. Also, that presbyters in like manner should do nothing without the will and consent of the bishop. 5. Presidency in all diocesan synods, and the management of the business transacted in those synods. The custom of holding ecclesiastical councils or synods, appears to have originated in the Greek church, at the latter end of the second century. After the middle of the third century, the number and importance of these conventions received a considerable increase. They tended greatly to augment the authority and influence of the bishops. 6. The management and distribution of the property of the church. At first the deacons were the assistants of the bishop in conducting these temporal affairs, and in keeping accounts. But when business of this kind had greatly increased, and accounts had become extensive and complicated, this charge was committed to special economi, or managers, under the direction of the archdeacons, all acting in subordination to the bishop, and by his sanction.

It may be here remarked that chapters of clergy and collegiate foundations were entirely unknown in the early ages of the church. They originated in the interval between the ninth and twelfth centuries.

III. DIFFERENCE BETWEEN BISHOPS AND PRESBYTERS. —Great controversy has arisen respecting the original equality or difference of bishops and presbyters in the Christian church, and various interpretations have been put upon the testimonies of antiquity which relate to this point. In a work like the present, it would be utterly impossible to state all the arguments that have been advanced in connexion with this much agitated question, or even to quote all the passages of early ecclesiastical writers to which an appeal has been made.

It does not really admit of a question whether or not the difference between the order of bishop and that of presbyter existed in the course of the second century. Many authorities concur to establish the fact that such a distinction did exist before the close of that period; and the affirmative must here be taken for granted. But this early introduction of the episcopate as a distinct order from that of presbyter being admitted, some persons contend that the institution is the result of merely an ecclesiastical arrangement made after the death of the apostles, and without any higher sanction than a sense of the necessity or expediency of the measure;

while others maintain that the introduction of episcopacy is coeval with the apostles themselves; that it was, in fact, of apostolic origin; and that it is to be regarded as a divine appointment, of perpetual obligation, for the preservation of a distinct authority, and the conveyance of a peculiar grace. In short, while some maintain that the difference between the two orders of bishop and presbyter is of merely human origin, others contend that it is the effect of Divine or apostolic institution. Of those who maintain that the difference between bishop and presbyter was established by the apostles, some suppose that it was only a difference in point of authority, jurisdiction, or discipline; while others regard it as a distinction of order in the full sense of the expression. The Church of England wisely contents herself with asserting the antiquity of the three orders or offices of bishop, presbyter, and deacon, without pretending to establish a distinction between bishop and presbyter by divine right. In the preface to the *Form and Manner of Making, Ordaining, and Consecrating of Bishops, Priests, and Deacons*, we read, "It is evident unto all men diligently reading the Holy Scripture and ancient authors, that from the apostles' time there have been these orders of ministers in Christ's church, bishops, priests, and deacons." In the Office of making Deacons, in that of ordaining Priests, and in that of consecrating Bishops, the same truth is solemnly declared in the supplications to Almighty God, who is addressed as having by his divine Providence and Holy Spirit instituted divers orders of ministers in his church, and bishops, priests, and deacons, are enumerated as these orders. An external commission, conveyed by episcopal consecration or ordination, is considered necessary to constitute a lawful ministry, and it is therefore in the ordinal declared that no man shall be accounted or taken to be a lawful bishop, priest, or deacon, or suffered to execute any of their functions, unless he has had episcopal consecration or ordination; and the power of ordaining or laying hands upon others is vested in the bishops.

The proof of this solemn and official declaration is first from Scripture. Paul and Timothy, the one an apostle, the other having the episcopal power of ordination, address themselves as servants of Jesus Christ to all the saints which are at Philippi with the "bishops," then the interchangeable name of presbyters and elders, "and the deacons." Here are certainly three orders. The apostle Paul writing to Timothy, who is elsewhere termed an apostle, (comp. 1 Thess. 1. 1, with 2. 6.) also gives him particular directions as to an order of ministers whom he calls bishops, (the same who in another place are called elders or presbyters,) and also as to an inferior order to them whom he calls deacons. Here also there are to be observed three orders of ministers. That of these three orders bishops were superior, is very evident in the cases of Timothy and Titus. Presbyters or elders had been already ordained at Ephesus and Crete. Had they the power of ordination? No; but Timothy and Titus are sent there for the express purpose of laying on of hands, of ordaining to the ministry. It is alleged by some that Timothy and Titus were extraordinary officers, and held this power as evangelists; both presbyters and deacons were also evangelists. If then the powers of Timothy and Titus ceased with them because they were evangelists, for the same reason ceased the powers of the presbyters and deacons. Thus, in destroying episcopal power, the opponents of episcopacy would also destroy the Christian ministry. Again, it is said that St. Paul's charge to Timothy implies that presbyters had the power of ordination: "Neglect not the gift that is in thee which was given thee by prophecy, with the laying on of the hands of the presbytery." But

he also says in his second Epistle, "Stir up the gift of God which is in thee by the putting on of my hands."

St. Paul, then, ordained Timothy, it would hence appear, with the concurrence of the presbytery; and that their concurrence was intended to express approbation, and not to convey authority, seems evident from the phraseology, "by the putting on of my hands," "with the laying on of the hands of the presbytery." In the Church of England this concurrence is still observed.

If from Scripture proof we proceed to the historical proof, we shall find the declaration of the ordinal fully established.

The writings of Ignatius abound with testimonies. To the Trallians he says, "He that is within the altar is pure, but he that is without, that is, does anything without the bishop, and presbyters, and deacons, is not pure in his conscience." To the Smyrneans, "Let no man do anything of what belongs to the church without the bishop." Irenæus says, "We can reckon up those whom the apostles ordained to be bishops in the several churches, and who they were that succeeded them, to our times." Clemens of Alexandria thus enumerates the three orders of the ministry. "There are other precepts without number, some which relate to presbyters, others which belong to bishops, others respecting deacons." Tertullian, writing of baptism, asserts, "The power of baptizing is lodged in the bishops, and that it may be also exercised by presbyters and deacons, but not without the bishop's commission."

Origen, commenting on the petition in the Lord's Prayer, "Forgive us our debts," thus writes, "Besides that, there is a debt due to widows who are maintained by the church, another to the deacons, another to the presbyters, and another to bishops, which is the greatest of all." Cyprian, whose epistles are many of them addressed to the presbyters and deacons, in his 32nd epistle, writes, "When Our Lord, whose precepts we ought to follow, was settling the honours of his bishop, and the regimen of his church, we find him speaking thus to Peter: 'I say unto thee thou art Peter.' From thence, in a regular succession downwards, we date the ordination of bishops and the course of ecclesiastical administration, so as that we understood the church to be settled upon her bishops. The deacons ought no more to attempt anything against bishops by whom deacons are made, than deacons should against God who makes bishops."

To add authorities would be unnecessary. One fact is, however, worthy of consideration, that there is no ancient ecclesiastical writer extant who does not speak of certain individuals as bishops of particular churches, for instance, Ignatius, bishop of Antioch, Polycarp, bishop of Smyrna; or who mentions as contemporary with them in their particular churches any other bishops. This uniformity is not to be explained, but on the principle that there was in each of those churches some one individual supreme in the powers of ordination and government, on whom was bestowed the title of bishop. It is proper in this place to make a distinction between the ministers and government of the church properly so called. The ministry is of divine constitution in the three orders of bishop, priest, and deacon. But the government of the church is of human regulation, susceptible of such modifications as circumstances may render desirable. Offices may be organized, the mode in which her ministers are invested with jurisdiction may be varied; the constitution of her legislative, executive, and judiciary powers may assume such organization as expediency may dictate. "I may securely (says Hooker) therefore conclude that there are, at this day, in the Church of England, no other than the same degrees of

ecclesiastical orders, namely, bishops, priests, and deacons, which had their beginning from Christ and his blessed apostles themselves. As for deans, prebendaries, vicars, curates, archdeacons, and such like names being found not in Scripture, we have been thereby, through some men's errors, thought to allow ecclesiastical degrees not known nor ever heard of in the better ages of former times. All these are, in truth, but titles of office, whereunto partly ecclesiastical persons and partly others, are in sundry forms and conditions admitted, as the state of the church doth need, degrees of order still remaining the same they were from the beginning."

We conclude, therefore, with a challenge from Hooker, which, as has been well remarked, has remained for two hundred years unanswered: "We require you to find out but one church upon the face of the whole earth, that hath not been ordered by episcopal regiment since the time that the blessed apostles were here conversant." And though departures from it since the time at which he spake have been but too frequent and too great, "episcopal regiment" is still maintained as Christ's ordinance for the perpetuation and government of his church, and is received as such by an overwhelming proportion of the Christian world.

For a more enlarged and luminous view of this subject, the reader is referred to RIDDLE's *Manual of Christian Antiquities*, whence some of these extracts are taken.

BITHYNIA, a country in the northern part of Asia Minor. It extended along the shore of the Euxine Sea, the Bosphorus, and part of the Propontis; having Paphlagonia on the east, Mysia on the west, and Phrygia and Galatia on the south. The country, which was exceedingly fruitful, and abounded with excellent timber, was originally called Bebrycia, and was occupied by various tribes or nations differing in their language, customs, and manners, and each under its own king. The territory had then as many kingdoms as tribes of people. All these petty sovereignties were, however, gradually reduced by one of their number, the Bithyni, a Thracian tribe, who afterwards gave their name to the whole country. The kingdom thus formed was at length conquered by Cræsus, king of Lydia, and passed with the rest of his dominions to the Persians. The places of importance in the province were Prusa, (still a considerable town, Broussa,) Nicæa, or Nice, Nicomedia, Chalcedon, Libyssa, Therma, and Myrlæa, or Apamea. Nice and Chalcedon are both celebrated in ecclesiastical history for the councils held in them in the early ages of Christianity; Nicomedia was the capital where the Roman emperors resided when the affairs of the empire called them into Asia; Heraclea was once the seat of a republic of some note; Prusa was, in the thirteenth and fourteenth centuries, the capital of the Turkish sultans before they established themselves in Europe; and Libyssa was the scene of the death of Hannibal. None of these places are mentioned in Scripture; but the first Epistle of Peter is addressed to the Hebrew Christians who were scattered abroad throughout this and the neighbouring provinces. St. Paul proposed to go into Bithynia with Timothy, "but the Spirit suffered them not." (Acts 16. 7, 8.)

Bithynia now forms one of the districts of Turkish Anatolia, and is the nearest province to Turkey in Europe, being separated from it by only the narrow strait of the Thracian Bosphorus opposite Constantinople, and contains one of the suburbs of that city called Scutari, a short distance from which is Chalcedon. A considerable proportion of the population of Bithynia belongs to the Greek and Armenian churches. Bochart; Winer.

BITTER, BITTERNESS. Bitterness, in Exodus 1. 14; Ruth 1. 20; Jeremiah 9. 15, is the symbol of affliction, misery, and servitude; and, therefore, the servitude of the Israelites in Egypt was typically represented in the celebration of the passover by bitter herbs. The prophet Amos applies the term to a day of mourning, (8. 10;) and Habakkuk (1. 6) designates the Chaldeans "that bitter and hasty nation." "The gall of bitterness," (Acts 8. 23,) refers to a state of extreme wickedness, one highly offensive to God and hurtful to others; "the root of bitterness," (Heb. 12. 15,) may signify a wicked or scandalous person, or any dangerous sin leading to apostasy. The "waters made bitter," (Rev. 8. 11,) is supposed by some to refer to the invasion of Genseric, king of the Vandals, who afflicted the Romans in the year 455, and during his reign cruelly persecuted the orthodox Christians.

Of the bitter water of jealousy, or what may be termed the ordeal oath, (Numb. 5. 11-24,) the Rabbins say, that a woman who confessed in such circumstances was not put to death, but only divorced without dowry. The Jews assert that this form of trial continued in use till towards the latter end of the second temple; but they were of opinion, that the bitter water would have no effect if the husband himself were guilty. See **ADULTERY**.

BITTER HERBS, מרורים merorim; Sept. *πικρῖδες*; Vulgate, *lactuca agrestes*. (Exod. 12. 8; Numb. 9. 11.) At its institution, the Jews were commanded to eat their passover with a salad of bitter herbs. According to the Mishna and Maimonides there were five sorts of bitter herbs, any one or all of which might be eaten; some Jewish writers think chicory, wild lettuce, and horehound, and others of this kind, are intended. Forskal says, the Jews in Egypt eat the lettuce with the paschal lamb. The *Lactuca sativa*, one of the species, is extremely bitter until it has undergone the process of blanching; and is expressly indicated by those versions which do not adhere to the general expression of the original and of our own version.

In a book descriptive of the ceremonies and prayers observed by the Jews, translated from the Hebrew, by Rabbi Gerzampel; it is stated, that at the celebration of the passover there is placed on the table, "a small quantity of raw chervil; a small cup with salt and water in it; an egg roasted hard in hot ashes; a stick of horse-radish with the green top to it; a couple of round balls about the size of an egg, made up of bitter almonds, pounded and mixed with other ingredients.

"The raw chervil is in remembrance of the herbs they were commanded to eat that night in Egypt. (Exod. 12. 8.) The salt and water is in remembrance of the Red Sea which they crossed over. The hard egg roasted in hot ashes is in remembrance of the paschal lamb, commanded that night in Egypt to be roasted whole without blemish. (Exod. 12. 5.) The stick of horse-radish is in remembrance of the hard labour that made their eyes water. The green top of the horse-radish is in remembrance of the bitterness of their labour. The round balls, which are soft and gritty like lime, are in remembrance of their working in lime and bricks in Egypt.

"The master of the house, after repeating certain prayers, breaks two whole cakes in half and leaves one half in the dish, and of the other two portions he gives every one a bit with a piece of horse-radish upon it, which he and the rest eat, saying first, 'Thus did Hillel in the time when our Temple was standing; he put the cake and horse-radish together and ate it, to fulfil what

was said, 'And their unleavened bread with bitter things they shall eat.'

"After having thus eaten they dip the horse-radish tops into the balls above-mentioned, and every one eats a small portion of the other half cake with it, saying first, 'Blessed art thou, O Lord, King of the World, who hath sanctified us with thy commandments, and commanded us the eating of bitters.'" See **PASSOVER**.

BITTERN. The word *קֶפְדִּי kephod*, is, in our version, translated *bittern*. (Isai. 14. 23; 34. 11; Zeph. 2. 14.) Gesenius thinks that it denotes the hedgehog, but other commentators mention the porcupine, otter, osprey, owl, and tortoise. Bochart, with Dr. Shaw and Bishop Lowth, renders *kephod*, porcupine; and this derives some support from Mr. Ainsworth, who, in his *Researches in Babylonia*, says, that the porcupine is called by the Arabs, kimfid. The attempt to decide on such conflicting opinions seems hopeless, and we therefore proceed to describe the creature mentioned in our version.

The bittern is a bird of the size of the common heron, but differing from it greatly in the colour of its plumage. The crown of the head is black, with a black spot also on each side about the angle of the mouth;

Bittern.

the back and upper part are elegantly variegated with different colours, black, brown, and gray, in beautiful arrangement. This species of bird is common only in fenny countries, where it is met with skulking about the reeds and sedge; and its usual posture is with the head and neck erect, and the beak pointed directly upwards. It permits persons to approach near to it without rising. It flies principally towards the dusk of the evening, and then rises in a very singular manner, by a spiral ascent, till quite out of sight. It makes a curious noise when among the reeds, and a very different, though sufficiently singular one, as it rises on the wing in the night. Willoughby's *Ornithology*.

BITUMEN is the most inflammable of known minerals. There are two or three kinds, but each have nearly the same component parts. It is usually of a blackish or brown hue, and hardens more or less on exposure to the air. In its most fluid state it forms naphtha; when of the consistence of oil, it becomes petroleum; at the next stage of induration it becomes elastic bitumen; then maltha, and so on until it becomes a compact mass, and is then called asphaltum. Herodotus states, that the Babylonians derived their supplies of this substance from Ia, on the Euphrates. This is the modern Hit, where the substance is still plentifully found. The principal bitumen pit has two sources, and

is divided by a wall in the centre, on one side of which bitumen bubbles up, and oil of naphtha on the other.

Bitumen is also found in Palestine. "The bitumen supplied by the Lake Asphaltites affords the means of a comfortable livelihood to a considerable number of Arabs, who frequent its shores. The Pasha of Damascus, who finds it a valuable article of commerce, purchases at a small price the fruit of their labours, or supplies them with food, clothing, and a few ornaments, in return for it. In ancient times it found a ready market in Egypt, where it was used in large quantities for embalming the dead: it was also occasionally employed as a substitute for stone." Russell's *Palestine*. See ASPHALTUM.

BLACK, in prophetic language, is the symbol of affliction, disaster, and anguish; particularly of affliction occasioned by famine. "Our skin was black like an oven because of the terrible famine." (Lam. 5. 10.) "My skin is black upon me, and my bones are burned with heat." (Job 30. 30.)

Black occurs as the symbol of fear, in Joel 2. 6: "All faces shall gather blackness." Jerome thus explains it: "Through the greatness of their fear, their faces shall be turned like a pot; which being burnt with fire, makes a foul appearance by its blackness and sootiness." A similar expression is found in Nahum 2. 10, to denote the extremity of sorrow and pain: "The faces of them all gather blackness."

In Zechariah 2. 2-6, four chariots are represented drawn by horses of different colours, which denote the four great empires of the world in succession: the Assyrian or Babylonian, the Persian, Grecian, and Roman, distinguishable both by their order and attributes. The black horses seem to denote the Persian empire, which, by subduing the Chaldeans, and being about to inflict a second heavy chastisement on Babylon, quieted the spirit of Jehovah (v. 8.) with respect to Chaldaea, a country always spoken of as lying to the north of Judaea.

The figure of a man, seated on a black horse, with the balance, to weigh corn and the other necessities of life, is employed in Rev. 6. 5, to signify great want and scarcity, threatening the world with famine, the next judgment of God to the sword. Also, "The sun became black as sackcloth of hair," (Rev. 6. 12,) is a figure employed, as some think, to describe the state of the church during the last and most severe of the persecutions under the heathen Roman empire. Great public calamities are often thus figuratively described by earthquakes, eclipses, and the like, as if the order of nature were inverted.

BLACKNESS OF THE FACE. In the passage in Malachi 3. 14, where it is said, "We have walked mournfully before the Lord of hosts," the margin of our version for *mournfully*, renders "in black." This is still an Eastern expression. Sir John Chardin says that the Persians, to express the sufferings of Hossein, a grandson of Mohammed, say that the heat which he suffered, when assailed by his enemies in the desert, was so great that he turned black, and his tongue was swollen out of his mouth. "The Hindoos inquire of a man who is in trouble, 'My friend, why has your face become so black?' to which the customary answer is, 'Alas! my sorrow, my sorrow; therefore my face is full of blackness.'" Roberts.

BLAIN. See DISEASES.

BLASPHEMY, βλασφημία. In the New Testament, this term is employed in reference to men and things, and signifies evil speaking, slander, reviling, (Matt. 12. 31.) In its widest acceptation, the word comprehends all sorts of verbal abuse, imprecation, reviling, and calumny. When such abuse is mentioned as uttered against God, there is properly no change made in the signification of the word. There can be no blasphemy, when there is not an impious purpose to derogate from the Divine Majesty, and to alienate the minds of others from the love and reverence of God. The blasphemer, therefore, is no other than the calumniator of Almighty God. The first Divine law published against it was, "He that blasphemeth the name of the Lord, shall be put to death." (Levit. 24. 10-14.) It was not only a crime against God, but also against the state, and was therefore punished capitally by stoning.

Michaëlis says, "It is with hesitation, and not without danger, that I venture to adopt a Jewish explanation, which has been commonly ridiculed as a piece of mere superstition, in regard to this law, in Leviticus 24. 16, which declares that, whoever shall utter the name Jehovah shall die; the whole congregation shall stone him; foreigner as well as native shall die, if he utter the name Jehovah. Instead of 'utter,' we may translate 'curse;' for the Hebrew word נָקָא *nakao*, signifies both, and then we shall have the blasphemer spoken of a second time; but to this translation there seems to be this objection, that the sixteenth verse would thus be nothing but a needless repetition of the preceding one. Thus much is certain, that at a very ancient period, long before the birth of Christ, the Jews understood the law in question, as if it prohibited them from uttering the name of Jehovah, which the true God had given Himself as His *nomen proprium*, on any other than solemnly sacred, or at any rate sacred, occasions; and, of course, from ever naming Him at all in common life. The Greek version, ascribed to the persons called the Seventy Interpreters, and which was made at least two hundred and fifty years before Christ, here renders, "Whoever nameth the name of the Lord shall die;" and we see that, by this time, the Jews were accustomed, whenever they found the word Jehovah in the Bible, to pronounce, instead of it, the name Adonai, or Lord; for, in place of Jehovah, the Seventy always put ὁ Κύριος. Philo, who lived in the time of Christ, explains the passage, connecting it with the preceding verse, in the following terms: 'Strange gods are not to be blasphemed, lest men should be accustomed to think meanly of the Deity. But if any one (I do not say blaspheme, for that is not here in question) even so much as utter unseasonably the name of the Lord of men and gods, he shall die.' We may, therefore, approve of this explanation, or not, as we please; but we must not look upon it as a piece of superstition originating with the Jews who lived after the destruction of Jerusalem, and whose opinions, in regard to the Mosaic law, I do not, for the most part, so much as notice. This prohibition of uttering the name of God, whether it please us or not, does not, by any means, appear altogether improbable; for it is in conformity with the customs and legislative policy of the Egyptians, who had secret names for their gods, which it was lawful alone for the priests to pronounce; no man being permitted to do so in common life. And, in like manner, Rhadamanthus, who herein wished to imitate the Egyptians, would not, on occasions of taking oaths, allow the names of the gods to be mentioned, but only those of the animals consecrated to them, such as dogs, rams, geese, &c."

BLEMISH. Among the heathen, persons who had any blemish were excluded from the priesthood, and a deformed person was not allowed to perform any ceremony in their temples. ~~The Greeks required that whoever was admitted to the priestly office should be perfect, it being thought a dishonour to the gods to be served by any one that was lame, maimed, or in any way disabled.~~ Seneca says, "Every priest, whose body is not faultless, is to be avoided like a thing of bad omen."

These notions were no doubt derived from the Jews; for their law required the priests to be free from all blemishes of person. (Levit. 21. 17-21.) They were not to be blind, lame, crooked-backed, nor to have a blemish in the eye, or a flat nose.

BLESS, BLESSING. From the time that God entered into covenant with Abraham, and promised extraordinary blessings to his posterity, it appears to have been customary for the father of each family, in the direct line or line of promise, immediately previous to his death, to call his children around him, and to inform them, according to the knowledge which it had pleased God to give him, how, and in what manner, the Divine blessing conferred upon Abraham was to descend among them. Upon these occasions, the patriarchs enjoyed a Divine illumination; and, under its influence, their benediction was deemed a prophetic oracle, foretelling events with the utmost certainty, and extending to the remotest period of time. Thus Jacob blessed his sons, (Gen. 49,) and Moses blessed the children of Israel. (Deut. 33.) When Melchisedec blessed Abraham, the act included in it not merely the pronouncing solemn good wishes, but also a supplicatory prayer to God that He would be pleased to ratify the blessing by his concurrence with what was prayed for. Thus Moses instructed Aaron and his descendants to bless the congregation: "On this wise shall ye bless the children of Israel, saying unto them, The Lord bless thee and keep thee; the Lord make his face to shine upon thee, and be gracious unto thee; the Lord lift up his countenance upon thee, and give thee peace." (Numb. 6. 23-26.)

David says, "I will take the cup of salvation, and call upon the name of the Lord." (Psalm 116. 13.) The phrase appears to be taken from the custom of the Jews in their thank-offerings, in which a feast was made of the remainder of their sacrifices, when, among other rites, the master of the feast took a cup of wine in his hand, and solemnly blessed God for it, and for the mercies which were then acknowledged, and gave it to all the guests, every one of whom drank in his turn. To this custom it is supposed Our Lord alludes in the institution of the cup, which is also called "the cup of blessing." (1Cor. 10. 16.) At the family feasts, also, and especially that of the passover, both wine and bread were in this solemn and religious manner distributed, and God was blessed, and his mercies acknowledged. They blessed God for their present refreshment, for their deliverance out of Egypt, for the covenant of circumcision, and for the law given by Moses; they prayed that God would be merciful to his people Israel, that He would send the prophet Elijah, and that He would render them worthy of the kingdom of the Messiah. In the Mosaic law, the manner of blessing was appointed by the lifting up of hands, and we see that Our Lord lifted up his hands, and blessed his disciples.

Roberts says, "From the numerous instances which are recorded in the Scriptures, of those who were aged or holy giving their blessings, may be seen the importance which was attached to such benedictions, and this is the general feeling at the present day in the East. Has a son or a daughter, to leave a father, an aged friend, or

a priest, a blessing is always given. To be the mother of a numerous progeny is considered a great honour. Hence, parents often say to their daughters, 'Be thou the mother of thousands.' Beggars, also, when relieved, say to the mistress of the house, 'Oh, madam, millions will come from you.' This illustrates the passage Genesis 24. 60."

In the Jewish as in the Christian church, a portion of the public service consists in imploring the blessing of the Almighty upon the congregation. Amongst the most ancient and solemn of their prayers are the *Shemoneh Eshreh*, that is, the eighteen prayers said to have been appointed by Ezra, from the time of the captivity, the last of which is thus given by Lightfoot: "Give peace, beneficence, and benediction, grace, benignity, and mercy unto us, and to Israel thy people. Bless us, oh! our Father, even all of us together as one man, with the light of thy countenance. For in the light of thy countenance hast thou given unto us, O Lord our God, the law of life, and love, and benignity, and righteousness, and blessing, and mercy, and life, and peace. And let it seem good in thine eyes to bless thy people Israel with thy peace at all times, and in every moment. Blessed art thou, O Lord, who blessest thy people Israel with peace. Amen." See **BENEDICTION**.

Blessings or benedictions were given among the ancient Jews as well as Christians by imposition of hands. And when at length the primitive simplicity of the Christian worship began to give way to ceremony, the sign of the cross was added, which was made by the hand being elevated or extended. Hence, the term benediction in the modern Romish church (*benedictio sacerdotalis*) is used in a more particular manner, to denote the sign of the cross made by a bishop or prelate, as conferring some grace on the people. The pope gives a solemn benediction three times every year: on Maunday Thursday, on Easter, and on Ascension day. The term is also employed by the priest at the death-bed of the sick, when it is called the *benedictio beatifica*.

Among Protestants, the word benediction is commonly applied to the blessing pronounced by the minister at the close of public worship.

Among the Romanists, benediction is used for an ecclesiastical ceremony, whereby a thing is rendered sacred or venerable. In this sense benediction differs from consecration, as in the latter, unction is applied: thus, the chalice is consecrated, and the *pix* blessed; as the former, not the latter, is anointed, though in the common usage these two words are applied promiscuously. The spirit of piety, or rather of superstition, has introduced into the Romish church benedictions for almost everything; we read of forms of benediction for wax candles, boughs, ashes, church vessels, flags, ensigns, &c. The forms of these benedictions are to be found in the work of Father Martene, on the *Rites and Discipline of the Church*.

BLESSING, VALLEY OF. See **BERACHAH**.

BLINDFOLDING. In the Gospel of St. Luke (22. 64) we read, that when the Roman soldiers "had blindfolded" Our Saviour, "they struck him on the face and asked him, saying, Prophecy who is it that smote thee?" The treatment which Our Saviour received from his persecutors, originated from a sport which was common among children in ancient times, in which it was the practice first to blindfold, then to strike, then to ask who gave the blow, and not to let the person go until he had named the one who had struck him. The expressions accompanying it on this occasion, were used in reproach of our blessed Lord, as a prophet or Divine teacher, and to expose him to ridicule.

BLINDNESS is a term often used in Scripture to denote ignorance or a want of discernment in Divine things, as well as the being destitute of natural sight. (Isai. 42. 18, 19; Matt. 15. 14.) "Blindness of heart," is the want of understanding arising from the influence of vicious passions, while "hardness of heart," is stubbornness of will and absence of moral feeling.

Moses extended the protection of a special statute to the blind, (Levit. 19. 14;) and in Deuteronomy 27. 18 it is said, "Cursed be he who maketh the blind to wander out of the way."

That calamities are always the offspring of crime is a prejudice which the depraved nature of man is but too prone to indulge in, and the Jews in the time of Our Lord were greatly under the power of this prejudice. A modern traveller says, "The Hindoos and Ceylonese very commonly attribute their misfortunes to the transgressions of a former state of existence, and I remember being rather struck with the seriousness of a cripple, who attributed his condition to the unknown fault of his former life." On seeing a man who had been born blind, the disciples of Our Lord fell into the same mistake, and asked him, "Who did sin, this man or his parents, that he was born blind?" (John 9. 2.) Jesus immediately solved the difficulty by giving him the use of his sight.

As this miracle has been the subject of particular remark by Rousseau, on the ground that there is a gradation in it which does not comport with a supernatural operation, and as the doubts of that sceptic have been adopted without acknowledgment by more recent opposers of revelation, it deserves some further notice.

1. The man on whom it was performed, had not become blind by any accident that admits of relief. He was certainly born blind. All who knew him were witnesses of it; and he had become very generally known by sitting and begging on the public road; and his parents affirmed the same to the Pharisees.

2. He did not ask to be restored to his sight as some others did, who had accidentally become blind. Our Lord after having sent him to the Pool of Siloam did not wait for his return, so that the blind man, on receiving sight, did not know who the person was that had cured him, or whither he had gone; therefore there could be no possibility of collusion.

3. The question proposed by the disciples, which occasioned the miracle, is a proof that the man's blindness was from his birth. Jesus in his reply did not attribute the natural defect of the blind man to a particular providence, but added, that it was for the glory of his Father, who sent him, and also to manifest his works, that this man was born blind in order to be cured.

4. The opacity of the crystalline humour, which is called a cataract, and the imperfect or periodical *gutta serena*, which does not wholly deprive of sight, or only at certain times, are maladies of the eye, that in some cases admit of a cure, which depends upon a variety of precautions, preparations, and remedies, that, if successful, take effect only with time, and in most cases very imperfectly. But no precautions or preparations whatever were employed in the cure of the man born blind. Though a cataract may be reduced, or an accidental or periodical *gutta serena* may be cured, a total blindness from the birth is incurable. Such has been the prevalent opinion in every age, and the Jews admitted this truth as a principle generally known. "Since the world began," they said, "it was never heard that any man opened the eyes of one who was born blind." (John 9. 32.) Medical men in modern times are of the same opinion; and infidelity never could produce an example of blindness, absolute and continued from the birth, that

was cured by the assistance of art. Such being the circumstances of this case, was it natural to imagine that clay put on his eyes could restore him to sight? Could any one have framed such an expedient, so improbable, so contrary to the effect desired, so proper for destroying the sight, if the power and wisdom of Our Lord had not employed it, and imparted to it the requisite virtue? Is it likely that a person who had been born blind, and had continued so from his birth to manhood, should so easily credit what Jesus said to him; that he should expose himself to public ridicule, by carrying the clay on his eyes, and causing himself to be conducted to the Pool of Siloam in the hope of being restored to his sight? Is not such a docility truly astonishing? And how could any such thing be imagined on his part before it happened?

The blindness of Elymas the sorcerer, mentioned in Acts 13. 11, is in the Greek denominated *αχλυσ*, and may be supposed to have been rather an obscuration than a total extinction of sight, occasioned by a thin coat or tunic of hard substance which spread itself over a portion of the eye, and interrupted the power of vision.

BLOOD, the red fluid circulating in the veins of men and animals. The term is employed in Scripture in a variety of senses.

The priests under the Mosaic law were constituted judges between "blood and blood;" that is, in criminal matters, and when the life of man was at stake; they had to determine whether the murder were casual or voluntary; whether a crime deserved death or admitted of remission. (Deut. 17. 8.) The object of the effusion of blood in sacrifices was the expiation of sin, as we are taught by Moses: "For the life of the flesh is in the blood, and I have given it to you upon the altar to make an atonement for your souls; for it is the blood that maketh an atonement for the soul." (Levit. 17. 11.) And the Apostle says, "And almost all things are by the law purged with blood; and without shedding of blood is no remission." (Heb. 9. 22.) Hence, also, the Jews had this proverb, "There is no expiation except by blood." These offerings of blood under the Mosaic dispensation were sacrifices, properly and strictly so called; by which we may understand the infliction of death on a living creature, by the effusion of its blood, and the presenting this act to God, as a supplication for the pardon of sin, and as a medium of compensation for the injury offered by sin to his majesty and government. The animal was immolated by cutting the throat and windpipe entirely through at one stroke; the blood being caught in a vessel and sprinkled about the altar. The blood remaining after these aspersions was poured out at the foot of the altar, either all at once, or at different times. Around the altar at the Temple there was a kind of trench into which the blood fell; whence it was conveyed by subterraneous channels into the brook Kidron. See SACRIFICE.

In its highest and most eminent sense, the word blood is employed to denote the virtue or the efficacy of the death of Christ, as an atonement for sin, whose blood is the price of our salvation. His blood has purchased the Church. (Acts 20. 28.) We are justified by his blood. (Rom. 5. 9.) We have redemption through his blood. (Ephes. 1. 7.)

Flesh and blood are placed in opposition to a superior or spiritual nature: "Flesh and blood hath not revealed it unto thee, but my Father who is in heaven." (Matt. 16. 17.) Flesh and blood are also opposed to the glorified body: "Flesh and blood cannot inherit the kingdom of God." (1Cor. 15. 50.)

"Blood of the covenant," (Heb. 10. 26; 13. 20,) figuratively denotes the death of Our Lord as the sacrifice for sin; but literally, (Exod. 24. 8,) the blood of the sacrifice under the law. "Blood of Christ," (Ephes. 2. 13; Heb. 9. 14,) denotes the virtue or efficacy of the death of Christ as an atonement for sin.

Blood is used as the symbol of slaughter and mortality. (Isai. 34. 3; Ezek. 14. 19.) It also denotes every kind of premature death. (Ezek. 32. 6; 39. 18.) "The bold imagery of the prophet," says Archbishop Newcome, "is founded on the custom of invitations to feasts after sacrifices; kings, princes, and tyrants being expressed by rams, bulls, and he-goats." Blood is sometimes put for sanguinary purposes, as in Isaiah 33. 15, "He that stoppeth his ears from hearing of blood;" or more properly, who stoppeth his ears to the proposal of bloodshed. To "wash the feet in blood," (Psalm 58. 10,) is to gain a victory with much slaughter. To "build a town with blood," (Habak. 2. 12,) is by causing the death of the oppressed labourers as slaves.

Wine is called the blood of the grape; "He washed his garments in wine, and his clothes in the blood of grapes." (Gen. 49. 11.) Here the figure is easily understood, as anything of a red colour may be compared to blood.

The singular and emphatic prohibition against using blood for food from the earliest times, which we find in the Holy Scriptures, deserves our attention. God expressly forbade the eating of blood alone, or of blood mixed with the flesh of animals, as when any creature was suffocated, or strangled, or killed without drawing its blood from the carcass. (Levit. 17. 10-14.)

Michaëlis observes, "This prohibition was binding not only on the Israelites, but also on all foreigners living among them under the penalty of death. The frequent repetition of the prohibition, together with the punishment of extirpation from among the people, annexed to the transgression of it, is quite sufficient to show that the legislator must have been more interested in this, than in the other prohibitions relative to unclean meats, and likewise that the Israelites had had peculiar temptations to transgress it. The inducement to violate this law must have proceeded from some other cause than a mere appetite for blood; and, so much the more so, as the eating of blood would appear never to have been a custom of their ancestors; for even the Arabs, who are descended from Abraham, do not eat blood; and Mohammed forbids to taste of idol offerings and blood of beasts, strangled, torn or dead, and of swine's flesh. But it must be observed, that it only extended to the blood of quadrupeds and birds; for the blood of fishes was, on the contrary, permitted to be eaten, as they were not brought to the altar. (Levit. 7. 26; 17. 13.) This point is so clear, that our modern Jews, who in most things overstretch the law of Moses, make no scruple of eating carp stewed in their own blood. The reason of the prohibition appears to be connected with one of the grand objects which the sacred institutions always had in view, namely, the exclusion of all manner of idolatry from among the people. Eating of blood, or rather drinking it, was quite customary among the pagan nations of Asia in their sacrifices to idols, and in the taking of oaths. This, indeed, was so much an Asiatic, and in a particular manner a Phœnician usage, that we find the Roman writers taking notice of it as something strange at Rome, and peculiar to those nations; and, as in the Roman persecutions, the Christians were compelled to burn incense, so were they in the Persian to eat blood. In the West the one act, and in the East the other, was regarded as expressive of conversion to heathenism; because both were idolatrous practices. This doubt-

less was the reason that the Lord prohibited blood so rigidly and under the pain of death, not only among the Israelites themselves, but among all foreigners that lived within their land; and in order to render the prohibition more sacred and the more revered, God connected with it a moral implication. (Levit. 17. 11-14.) But for this very reason also, because it was an idolatrous usage among the neighbouring nations, were the Israelites in the greater danger of being led by eating blood into idolatry, from their great propensity to that crime, and not from mere fondness for blood as a desirable article of food. In regard to many other heathenish customs, the Lord consecrated instead of prohibiting them, by commanding that they should be kept up, under an altered signification, but the eating of blood He absolutely prohibited."

BLOSSOM, צֶמֶח *nitz*, the flower of a tree. (Gen. 40. 10.) The almond rod of Aaron, which by the miraculous power of God was made to bud and blossom and bring forth almonds, (Numb. 17. 8,) was, in the opinion of some commentators, a very suitable emblem of Him who first arose from the grave; and as the light and warmth of the vernal sun seems first to affect this symbolical tree, (Jerem. 1. 11,) it was with great propriety that the bowls of the golden candlestick were shaped like almonds. Most commentators think that the rod of Aaron continued to retain its leaves and fruit after it was laid up in the Tabernacle, and some writers are of opinion, that the idea of the thyrsus, or rod encircled with vine branches, which Bacchus was represented to bear in his hand, was borrowed from some tradition concerning Aaron's rod that blossomed. See AARON; ROD.

BLOT. To blot out signifies to obliterate, therefore to blot out living things or the name or remembrance of any one, is to destroy or to abolish, as in Genesis 7. 4, where, for "destroy" we should read, as in the margin, "blot out." Also a sinful stain, a reproach, is termed a blot in Job 31. 7; Prov. 9. 7. To blot out sin, is fully and finally to forgive it. (Isai. 44. 22.) To blot men out of God's book, is to deny them his providential favours, and to cut them off by an untimely death. (Exod. 32. 32, 33; Psalm 69. 28.) When Moses says, in the passage referred to above, "Blot me, I pray thee, out of thy book which thou hast written," we are to understand the written book merely as a metaphorical expression, alluding to the records kept in the courts of justice, where the deeds of criminals are registered, and which signifies no more than the purpose of God in reference to future events; so that to be cut off by an untimely death is to be blotted out of this book. The not blotting the name of the saints out of the book of life, (Rev. 3. 5,) denotes their final happiness in heaven.

BLUE. The word תְּכֵלֶת *techeleth*, rendered blue in our version, (Exod. 25. 4,) has been variously understood by interpreters. The Seventy and most of the ancient versions, render it bluish purple, violet-coloured, *ιακινθός* and *ιακινθινός*. Josephus, Philo, Jerome, and numerous other ancient authorities, are agreed that the colour was a cerulean, or light blue, comparing it to the aspect of a serene sky, or azure blue. Gesenius thinks the colour was obtained from the juice of the *hhelzon*, a species of purple shell-fish in the Mediterranean, the conchylium of the ancients, and the *Helix isathina* of Linnæus. It was undoubtedly in great esteem among the Jews, and other Oriental nations. The robe of the ephod, in the dress of the high priest, was made of blue, and it was likewise a prominent colour in the hangings of the tabernacle. The people were also required to put a fringe of blue on the border of their

garments, and on the fringe a riband of the same colour. The palace of Ahasuerus was furnished with curtains of this colour, a proof that it was not less esteemed in Persia than in Palestine; and from Ezekiel we learn, (23. 6,) that the Assyrian nobles were clothed with blue. It is one of the remarkable vicissitudes in the customs of the East, that this colour, once associated with everything splendid and rich, should now be connected with ideas of meanness and vulgarity. In modern times, the dress of an Arabian female of humble station, consists almost entirely of blue linen, ornamented with some needle-work of a different colour, and the Arabs between Egypt and Mount Sinai are clothed in a long blue shirt.

BOANERGES. This title, bestowed by Our Lord upon the Apostles James and John, and explained in the text as meaning "sons of thunder," has caused some difficulty to commentators. Some conceive that the word is neither Hebrew nor Syriac, but a corruption of the Syriac *בני רעם* *bene raham*, which means, "sons of thunder," while others think that it is derived from another Syriac word, *beneairgeshi*, which means to assemble tumultuously, or vehemently. The sense is in either case much the same, and, as Bishop Horne observes, "By this title Our Lord intimated the powerful effects of their preaching the word, which is frequently compared to thunder; being, like that, the voice of God speaking from heaven, mighty in its operation."

BOAR, WILD. This animal is the original of all the varieties of the hog kind. He is not much larger than the domestic hog, but much stronger, and more fierce, and is found in almost every woody country from Germany to India. In his own defence, he will turn on men or dogs, and scarcely shuns any denizen of the forests where he ranges. The colour of the animal is usually an iron-gray, inclining to black; the snout is much larger than that of the tame animal, and the ears are shorter and rounder, and quite black, as are also the feet and tail. The tusks are very formidable, and bend upwards in a curve, and are exceedingly sharp at the points.

Wild Boar.

The wild boar roots up the ground in a different manner from the common hog; the one turns up the earth in little spots here and there, the other ploughs it up like a furrow, and does irreparable damage in the cultivated lands of the farmer, destroying the roots of the vine, and other plants. "The chief abode of the wild boar," says Forbes, in his *Oriental Memoirs*, "is in the forests and jungles; but when the grain is nearly ripe, he commits great ravages in the fields and sugar plantations. The powers that subverted the Jewish nation are compared to the wild boar, and the wild beast of the field, by which the vine is wasted and devoured; and no figure could be more happily chosen. (Psalm 80. 13.)"

That ferocious and destructive animal, not satisfied with devouring the fruit, lacerates and breaks with his sharp tusks the branches of the vine, or with his snout digs it up by the roots and tramples it under his feet." It was a practice among the Greeks and Romans to offer a hog in sacrifice to Ceres at the beginning of harvest, and another to Bacchus before they began to gather the vintage; because the animal is equally hostile to the growing corn and the loaded vineyard.

"The Rev. Mr. Leeves was proceeding in the dusk of the evening from Constantinople to Therapeia. Passing a vineyard, he observed an animal of a large size rushing forth from among the vines. The Greek syrogee, who was riding first, exclaimed, 'Wild boar, wild boar!' and really it proved a wild boar, who was retreating from the vineyards to the woods. 'What has the wild boar to do with the vineyards?' inquired Mr. Leeves. 'Oh!' said the syrogee, 'tis the custom of the wild boars to frequent the vineyards, and to devour the grapes.' And it is astonishing what havoc a wild boar is capable of effecting during a single night. What with eating, and what with trampling underfoot, he will destroy an immense quantity of grapes. With what fatal propriety does the affecting image, in the 80th Psalm, retain its force up to the present moment! Still is the vine of Israel broken down, ravaged, cut down, burnt with fire." *Hartley's Researches in Greece.*

Roberts says, "Wild hogs are exceedingly numerous and destructive in the East: hence, a fine garden will in one night be completely destroyed. The herd is generally led by old boars, that go along with great speed and fierceness. Should there be a fence, they will go round till they find a weak place, and then they all rush in. In travelling, sometimes, a large patch of grass may be seen completely torn up, which has been done by the wild hog for the sake of the roots."

The chase of the wild boar constitutes one of the principal amusements of the higher ranks in those countries, where it is to be found, more especially in India. Small mastiffs are generally used for this purpose; and the boar, when driven from his covert, goes slowly and uniformly forward, not much in fear of, nor very far from, his pursuers; at intervals he turns round and stops, as if desirous of attacking the dogs, but being aware of his ferocity, they keep off and bay him at a distance; he then resumes his course, till, being completely fatigued, the young dogs close in upon him, while the more experienced ones wait until the hunters come up with their spears, who either kill or disable him. This species of hunting is not without considerable danger, as his tusks are very formidable, and he not unfrequently uses them against his pursuers with terrible effect.

BOAT. This word occurs in the New Testament only in our version. Yet we may fairly infer that a boat must have been known to the Hebrews from the earliest times, in connexion with the building of ships, and also for the purpose of fishing on the lakes,—and by a reference to the Egyptian monuments, we may obtain some knowledge of the construction of boats among that people, and most probably among the Jews also. The boat used on the Nile in the age of the Pharaohs, Herodotus says, was called *bari*, or boat of the sun, a name which, at a later period, was appropriated to the boats used for the conveyance of the dead. These were built entirely of native materials, and in their form they indicate that the first idea of their construction was derived from an excavated tree. They were formed from small planks about two cubits square, cut either from the roots of the papyrus or the Egyptian acantha.

The rigging of most of the vessels on the monuments proves that they were river or canal boats. The rudder passes through the stern, and is used, as an oar is sometimes employed in the present day, as a substitute for a rudder, and in the mode of propelling a boat called sculling. In many instances, an awning is found below the main-sail, to protect the rowers from the heat of the sun. These vessels were very unfit to ascend the river against the stream, and they were always towed up except when there was a favourable wind. A singular contrivance was employed to accelerate the motion when descending the stream. They fastened, with a rope, to the prow of the vessel, a hurdle of tamarisk, which was strengthened with reeds and bands of byblus, and let it down into the water. The stream bearing upon the hurdle urged the vessel forward with such rapidity, that her head would have been run under water if they had not steadied her by a heavy weight in the stern. Coracles were used by the hunters and fowlers, who sought for game in the swamps and marshes; the fishermen used boats of a larger size; but for ferrying over the river, and the transport of goods down the stream, they generally used such boats as Ulysses is represented to have constructed for the purpose of escaping from the island of Calypso. Homer describes, in the *Odyssey*, the ancient process of boat-building, as it is found depicted on the Egyptian monuments. In Upper Egypt it would appear that coracles were sometimes formed of wicker-work covered with hides, and similar boats were used by the ancient Britons.

Large boats had generally one, small pleasure-boats two rudders at the stern. The oars were long, round, wooden shafts. At the head of the boat usually stood a man with a long pole in his hand, by which he tried, at intervals, the depth of the water, lest they should run upon any of the numerous sand-banks with which the river abounds. That the ancient Egyptian boats were built with ribs, like those of the present day, is sufficiently proved by the rude models found in the tombs of Thebes. The sails of the ancient boats appear to have been always square, with a yard above and below, in which they differ from those now adopted in Egypt.

The galleys, or ships of war, differed in their construction from the boats of the Nile. They were less raised at the head and stern, and on each side, throughout the whole length of the vessel, a wooden bulwark, rising considerably above the gunwale, sheltered the rowers, who sat behind it, from the missiles of the enemy.

Egyptian War Galley. From the Monuments.

On advancing to engage a hostile fleet, the sail was used till they came within a certain distance, when the signal being given to clear for action, it was reefed, by means of ropes running in pulleys, or loops, upon the yard.

Our wood-cut represents a war-galley, the sail being

pulled up during the action; *a* is the raised forecastle, in which the archers were posted; *c* is also another post for the archers, and the pilot, *d*; *e* is the raised bulwark to protect the rowers; *f* represents the position of the slingers in the top. It was considered of great importance to strike their opponents on the side, and when the steersmen, by a skilful manœuvre, could succeed in this, the shock was so great, that they either sank it, or obtained a considerable advantage by crippling the oars.

Our next wood-cut exhibits a boat of the Nile; showing how the sail was fastened to the yards, and the nature of the rigging.

Boat of the Nile. From the Monuments.

It seems uncertain whether they used pulleys for raising and lowering the yards, or if the halyards merely passed through a smooth dead-sheave-hole, at the top of the mast. The yards were evidently of very great size, and of two separate pieces, scarfed or joined together at the middle, as in the wood-cut; sometimes they were supported by five or six lifts, and so firmly secured, that men could stand or sit upon them, while engaged in arranging the sail; and, from the upper yard, were suspended several ropes, resembling the horses of our square-rigged ships. Many of the sails were painted with rich colours, or embroidered with fanciful devices, representing the phoenix, flowers, and various emblems; some were adorned with chequers, and others were striped like those of the present day. The edges of the sail had also a strong hem, or border, also neatly coloured. We are indebted for these illustrations and the description to Sir John Gardner Wilkinson.

In the narrative of the shipwreck of St. Paul, recorded in the 17th chapter of the Acts, it is stated, v. 17, "We had much work to come by the boat." Every ship had a boat, as at present, but it was not taken up at the commencement of the voyage, and secured on the deck, but left on the water, attached to the stern by a rope; the difference may be thus accounted for. The modern navigator bids adieu to land, and has no further need for his boat; but the ancient mariner, in creeping along the coast, maintained frequent intercourse with the land, for which the boat was always kept ready. When, however, a storm arose, and danger was apprehended, and that the boat might be dashed to pieces against the sides of the ship, it was drawn close up under the stern. In the above passage, we are to understand that this was done, and that there was much difficulty in thus securing the boat. See SHIP-BUILDING.

I. BOAZ, בֹּאֵז an Israelite, who married Ruth, (Ruth 4. 13,) and mentioned in the genealogy of Our Lord. (Matt. 1. 5.)

The Rabbi Kimchi, and other Jewish authors, conceive Boaz to have been the same person as Izban, who judged Israel immediately after Jephthah; Junius, comparing the Book of Ruth with the first chapter of St. Matthew, is of opinion that the events recorded in this history took place in the days of Deborah; and Arch-

bishop Usher, that they happened in the time of Shamgar. As the famine which caused Elimelech to leave his country "came to pass in the days when the Judges ruled," (Ruth 1. 1,) Bishop Patrick has referred the beginning of this history to the period of Gideon, about A.M. 2759, at which time a famine is related to have happened. (Judges 6. 3-6.) Considerable difficulty has arisen in settling the exact period of Boaz, in consequence of its being mentioned by St. Matthew (1. 5,6,) that Salmon, the father of Boaz, was married to Rahab the harlot, who protected the spies when Joshua invaded the land of Canaan: and yet that Boaz was the grandfather of David, who was born about three hundred and sixty years after the siege of Jericho, a length of time during which it is difficult to conceive that only three persons, Boaz, Obed, and Jesse, should have intervened between Rahab and David. But this difficulty may be solved, either by supposing that some intermediate names, of little consequence, were omitted in the public genealogies copied by the Evangelist, as is known to have been the case in some other instances, and that the word "son" is not always to be understood literally, but may imply a remoter descendant; or, by concluding, with Archbishop Usher, that the ancestors of David, being men of extraordinary piety, or designed to be conspicuous because the Messiah was to descend from them, were blessed with longer life and greater strength than ordinarily fell to the lot of men in that age. We see that Jesse was accounted an old man when his son David was but a youth, (1Sam. 17. 12,) and, since Boaz is represented as the great-grandfather of the royal Psalmist, it is evident that the period cannot be so low as the time of Eli, assigned by Josephus, nor so high as the time of Shamgar; the most probable period is, therefore, that stated by Bishop Patrick, A.M. 2759 or B.C. 1945. Our version assigns it B.C. 1322. See RUTH.

II. The name of one of those brazen pillars which Solomon erected in the porch of the Temple. (1Kings 7. 21.) The other called Jachin, was on the right hand of the entrance to the north, Boaz on the left to the south. The height of the shaft of each was eighteen cubits, the capital five cubits, and the base thirteen cubits, making the whole altitude thirty-six cubits. (1Kings 7. 15.) Jeremiah says the thickness of these columns was four fingers or a hand's breadth, for they were hollow; the circumference of them was twelve cubits, or four cubits diameter. The chapiters in different parts of Scripture are said to be of different heights, of three, four, or five cubits; because they were composed of different ornaments or members, which were sometimes considered as omitted, sometimes as included. These pillars were profusely ornamented with representations of flowers, pomegranates, &c.

As to the origin or meaning of the name, nothing certain can be stated. Gesenius conceives that the pillar was so called from the name of the architect or donor; and the authors of the *Universal History* offer the conjecture, that there was perhaps an inscription upon the base of each pillar, and that the names were respectively taken from the word with which each of the inscriptions commenced, according to the practice of the Jews; several of the Old Testament books being denominated from the initial word.

BOCCHORIS, a king of Egypt, the same as Pthamemph or Amenophis II., under whom the Exodus of the Israelites took place. The name Bocchoris is introduced here on account of the theories which prevailed among the Gentile nations of old concerning that event. One version states, that the nation of the Jews being afflicted with leprosy, and at the same time in great

want of food, fled to the temples, and many dying there the holy edifices were polluted. The wrath of the gods having been declared against the Egyptians, Bocchoris inquired of the oracle of Amoun (Hammon) how he should purify the land. In accordance with the answer he received he collected the Jews together, and causing his soldiers to fasten plates of lead to their breasts, had them cast into the Red Sea; many however escaped, and Moses, their leader, led them into the desert, from whence, after undergoing many hardships, they emerged and seized the land of Canaan. Tacitus gives an account rather nearer to the truth. A cutaneous disorder breaking out among the Egyptians, not a leprosy among the Jews, Bocchoris was counselled by an oracle to purge his country of a people that were hateful to the gods, and disperse them in foreign lands. Christmas, *Universal Mythology*.

BOCHIM, VALLEY OF, a place near Gilgal. Bochim signifies *weepers*, and the place was thus denominated from the universal mourning of the Israelites, on account of the denunciations there made against them for their disobedience to the Divine commands respecting the nations whom they had invaded. (Judges 2. 5.)

BODY. The animal frame of man as distinguished from his spiritual nature. Body is represented as opposed to shadow or figure. (Coloss. 2. 17.) The ceremonies of the law are figures and shadows realized in Christ and the Christian religion. "The body of sin," (Rom. 6. 6,) called also "the body of this death," in Romans 7. 24, is to be understood of the system and habit of sin before conversion, and which is afterwards viewed as a loathsome burden. St. Paul speaks of a spiritual body in opposition to the animal. (1Cor. 15. 44.) The term also indicates a society; the Church with its different members. (1Cor. 12. 20-27.)

"Where the carcase (or body) is, there will the eagles be gathered together," (Matt. 24. 28,) was a sort of proverb used by Our Saviour, and there appears to be in it an allusion to the body or nation of the Jews, which was preyed upon by the Roman eagles; the Roman standard being the eagle.

BOLSTER. The "pillow of goats' hair for his bolster," placed by Michal, (1Sam. 19. 13,) seems to convey the impression, that in those times it was not usual for any but sick persons to use bolsters or pillows to support the head when in bed; and that, accordingly, Michal put one stuffed with goats' hair under the head of the Teraphim, to confirm the notion she wished to convey that David lay there sick. She would then cover the head and bolster with a cloth, it being usual in the East for people to cover their heads while in bed. The Septuagint and Josephus say, that it was a goat's liver; the use of which, as explained by the latter, was, that the liver of a goat had the property of motion for some time after being taken from the animal, and therefore gave a motion to the bed-clothes, which was necessary to convey the idea that a living person lay in the bed. The Targum says, that it was a goat-skin bottle; if so, it was most likely inflated with air.

Roberts says, "In the East travellers sleep as Saul did, with his head on the bolster, and a vessel of water by his side." (1Sam. 26. 7-12.) The bolster is round, about eight inches in diameter, and twenty in length. In travelling, it is carried rolled up in the mat on which the owner sleeps. In a hot climate, a draught of water is very refreshing in the night; hence, a vessel filled with water is always near where a person sleeps." The word, however, which our version in this place renders "bolster," does not elsewhere bear that sense, and the

passage would be more correctly interpreted, "his spear stuck in the ground at his head."

BOIL, BOILS. See **DISEASES**; **LEPROSY**.

BOILING. See **COOKERY**.

BOND, is used for an obligation of any kind, in Numbers 30. 2,4,12; metaphorically, the word signifies oppression, captivity, affliction. (Psalm 116. 16; Phil. 1. 7.) The influences of the Holy Spirit are called the bond of peace. (Ephes. 4. 3.) Charity or Christian love is called the bond of perfectness, because it completes the Christian character. (Col. 3. 14.) Bonds are also bands or chains worn by prisoners, (Acts 20. 23; 25. 14,) bound or subjected to slavery. (1Cor. 12. 13; Rev. 6. 15.)

BONDAGE, a state of slavery, (Exod. 1. 14,) servitude in captivity. (Ezra 9. 8,9.) See **SLAVE**; **SLAVERY**.

BONDAGE IN EGYPT. "The pretended fear of Pharaoh lest in the event of war the Hebrews might make common cause with the enemy, was a sufficient pretext with his own people for oppressing the Jews, at the same time that it had the effect of exciting their prejudices against them. Affecting, therefore, some alarm at their numbers, he suggested that so numerous a body might avail themselves of the absence of the Egyptian troops and endanger the tranquillity and safety of the country, and that prudence dictated the necessity of obviating the possibility of such an occurrence. (Exod. 1. 10.) With this view they were treated like the captives taken in war, and were forced to undergo the gratuitous labour of erecting public granaries and other buildings for the Egyptian monarch. (Exod. 1. 11.) These were principally constructed of crude brick, and that such materials were commonly used in Egypt, we have sufficient proof from the walls and other buildings of great size and solidity found in various parts of the country, many of which are of a very early period. The bricks themselves, both at Thebes and in the vicinity of Memphis, frequently bear the names of the monarchs who ruled Egypt during and prior to the epoch to which I am now alluding.

"The crude brick remains about Memphis are principally pyramids; those at Thebes consist of walls enclosing sacred monuments and tombs, and some are made with and others without straw. Many have chopped barley and wheat straw, others bean haulm, and stubble. (Exod. 5. 12.) And in the tombs we find the process of making them, represented among the sculptures. But it is not to be supposed any of these bricks are the work of the Israelites, who were never occupied at Thebes, and though Josephus affirms they were engaged in building pyramids, as well as in making canals and embankments, it is very improbable that the crude brick pyramids of Memphis, or of the Arsinoite nome, were the work of the Hebrew captives." Wilkinson.

BONES are the hard parts of animal bodies. (Exod. 12. 46.) The expressions "bone of my bone, and flesh of my flesh," (Gen. 2. 23.) "of his flesh, and of his bones," (Ephes. 5. 30,) may be understood as implying the same nature, and being united in the nearest relation and affection. Iniquities are said to be metaphorically in men's bones, when their body is polluted by them. (Job 20. 11.) The "valley of dry bones" in Ezekiel's vision represents a state of utter helplessness, apart from Divine interposition and aid. (Ezek. 37. 1-14.)

The Psalmist says, "Our bones are scattered at the grave's mouth." (Psalm 141. 7.) This appears to be a strongly figurative expression; but that it may be strictly true, the following extract from Bruce demonstrates. "At five o'clock we left Garigana, our journey being

still to the eastward; and at a quarter past six in the evening arrived at the site of a village, whose inhabitants had all perished with hunger the year before; their wretched bones being all unburied, and scattered upon the surface of the ground where the village formerly stood. We encamped among the bones of the dead; no space could be found free from them."

The judgment of the Lord is denounced against the king of Moab, "because he burnt the bones of the king of Edom into lime," (Amos 2. 1,) or, as the Chaldee paraphrase explains it, "to plaster the walls of his house with it," which was a cruel insult. A piece of barbarity resembling this is mentioned by Sir Paul Rycant, that the wall of the city of Philadelphia was made by the bones of the besieged, by the prince who took it by storm. The passage in Amos 6. 9,10, Roberts says, "alludes to the custom of burning human bodies, and to that of gathering up the half-calcined bones, and to the putting them into an earthen vessel, and then to the carrying back these fragments to the house, or into some out-building, where they are kept till conveyed to a sacred place. In India, this is done by a son or a near relation; but in case there is not one near akin, then any person who is going to the place (as to the Ganges) can take the fragments of bones, and thus perform the last rites."

BONNET, מַגְבָּאָה *megbaah*, the cap or turban of the Jewish priests. (Exod. 28. 40.) It was different from the מִצְנֶזֶת *metznelseth*, which was worn by the high priest. Josephus says that the turban of the high priest had a purple cover over it, and that worn by the others was composed of several rounds of linen cloth turned in and sewed together so as to appear like a thick linen crown. See **AARON**; **MITRE**.

BOOK, סֵפֶר *sepher*, and מְגִלָּה *megillah*, appear to be the two words employed by the Hebrews to designate what we term a book. *Sepher* occurs frequently in the Old Testament, and signifies: (i.) Any kind of writing or knowledge. (Dan. 1. 17.) (ii.) Things written, such as a bill of sale, (Jerem. 32. 11,) a bill of divorce, (Deut. 24. 1-3,) a bill of indictment, (Job 31. 35.) (iii.) A writing or a book, (Exod. 24. 7,) as the Book of the Law, (Josh. 8. 34,) the Book of Life, (Psalm 69. 28.) The term was also applied to a scribe, or writer by profession; and, in later writings, to a person learned in the law, (1Chron. 27. 32); also, in a military sense, to a person who had under his superintendence the business of mustering and enrolment. (Jerem. 52. 25.) *Megillah* signifies a book which rolls up, more properly a volume. מְגִלַּת-סֵפֶר *Megillath Sepher* is the roll of the book or "volume of the book," (Psalm 40. 7,) as applied to the Book of the Law.

Letters or epistles, which occur under the same Hebrew word with the term book, *Sepher*, are mentioned but rarely, especially in remoter times. A letter is first mentioned in 2Sam. 11. 14. Letters when forwarded to persons of distinction were placed in a purse, which was tied and closed over with clay or wax, and then stamped with a signet, (Job 38. 14); and sending an open letter is mentioned as a mark of insult in Nehemiah 6. 5

2. Books are mentioned as known as early as the time of the patriarch Job, (19. 23.) They were written on skins, or linen, or cotton cloth, or the Egyptian papyrus; the latter is commonly supposed to be the oldest material employed for writing on, whence our word paper is derived. Tablets of wood, of lead, and of brass, were also employed, the latter of which were considered the most durable; of these we shall speak more particularly under the article **WRITING AND WRITING MATERIALS**.

3. If the book were large, it was, of course, formed of a number of skins, &c., connected together. The leaves were generally written in small columns, called דלתות *delathoth*, (Jer. 36. 23), and were rarely written over on both sides, (Ezek. 2, 10,) except when the inside would not contain all the writing.

4. Books, among the Hebrews, being usually written on very flexible materials, were rolled round a stick or cylinder; and if they were very long, round two cylinders, from the two extremities. The reader, therefore, unrolled the book to the place which he wanted, (see fig. 1), and rolled it up again when he had read it. (Luke 4. 17-20,) whence the name Megillah. (Isai. 34. 4.) The leaves thus rolled round the stick, and bound with a string, could be easily sealed. (Isai. 29. 11; Dan. 12. 4.) Those books which were inscribed on tablets (see fig. 2,) were connected together by rings at the back, through which a rod was passed to carry them by.

Fig. 1.

Fig. 2.

Ancient Books.

5. At first the letters in books were only divided into lines, then into separate words, which, by degrees, were marked with accents, and distributed by points and stops into periods and paragraphs. Among the Orientals, the lines began from the right hand and ran on to the left hand; with the Northern and Western nations, from the left to the right hand; but the Greeks sometimes followed both directions alternately, going in the one, and returning in the other, which they termed *boustrophedon*, because it was after the manner of oxen turning when at plough; an example of this occurs in the Sigeon and some of the Etruscan inscriptions. In Chinese books, the lines run from top to bottom.

6. In times of war, devastation, and rapine, it was necessary to bury in the earth whatever was thought desirable to be preserved. With this view, Jeremiah ordered the writings which he delivered to Baruch to be put into an earthen vessel. (Jerem. 32. 14.) In the same manner the ancient Egyptians made use of earthen pots of a proper shape, hermetically sealed, for containing whatever they wanted to bury in the earth, and which, without such care, would have been soon destroyed. From the paintings on the monuments, it would appear that the Egyptian scribes wrote on tablets composed of some hard material, (perhaps wood,) though it cannot be precisely determined what it was.

7. From an examination of the early Hebrew manuscripts of the Scriptures, we find, in some cases, the page is entire and uniform, in others, it is divided into columns, in others, distinguished into text and notes, either marginal or at the bottom, and they are sometimes accompanied with signatures and catch-words; and also a register to discover whether the book be complete; to these are occasionally added the apparatus of summaries, or side-notes; they were also embellished with fanciful figures of animals, and golden or figured initial letters. The Jews, at the beginning and end of books, placed the word *חזק* *hhezek*, "Be thou strong," which we find in the printed copies of the Hebrew Bible at the end of the books of Exodus, Leviticus, Numbers, Ezekiel, &c., and intended to exhort the reader to be courageous, and proceed on to the following book. The conclusions were also often guarded with imprecations against such as should falsify them; of which we have an instance in the Apocalypse. The Mohammedans, for the same reason, place the name of God at the beginning of all their books. At the end of each book, the Jews also added the number of verses contained in it, and at the end of the Pentateuch, the number of sections it contained, that it might be transmitted to posterity entire.

The Scriptural allusions to books are very numerous, and of these we may briefly notice a few. A book or roll folded up is the symbol of a law abrogated, or of a thing of no further use. A book or roll written within and without, (Ezek. 2. 10; Rev. 5. 1,) may indicate a long series of events. A book sealed is one whose contents are secret, and have been so for a very long time; and are not to be published until the seal be removed. To eat a book signifies, in symbolical language, to consider it carefully, and digest it well in the mind. (Rev. 10. 9.) "Thy words were found, and I did eat them." (Jerem. 15. 16.) Our Saviour uses the same metaphorical expression when He speaks of "the bread of life." The "book of remembrance," mentioned in Malachi 3. 16, seems to be an allusion to the records kept by Eastern princes of the good deeds of their subjects. (Comp. Esther 6. 1.) "The books were opened," (Rev. 20. 12,) also appears to be an allusion to the methods of human courts of justice.

"Book of Life." (Rev. 3. 5.) Vitringa remarks that this expression alludes to the genealogical tables of the Jewish priests, (Ezra 2. 62; Nehem. 7. 64;) as it may be rendered the "book of lives." Dean Woodhouse, on this subject, observes, "As in states and cities, those who obtained freedom and fellowship, were enrolled in the public register, which enrolment was their title to the privileges of citizens, so the King of Heaven, of the New Jerusalem, engages to preserve in his register and enrolment, in the book of life, the names of those who, like the good Sardians, in a corrupt and supine society, shall preserve allegiance and a faithful discharge of their Christian duties. He will own them as his fellow-citizens before men and angels. (Luke 12. 8.)"

BOOTH, an harbour, or tent, made of green boughs. Booths were used by the Israelites at the feast of Tabernacles, which was instituted to commemorate their journey through the Arabian wilderness, as during its continuance they dwelt in booths. (Levit. 23. 42.) See **FEAST OF TABERNACLES**; **TENT**.

BOOTY. See **SPOILS**.

BOOZ. See **BOAZ**.

BORN. See **BIRTHRIGHT**; **FIRSTBORN**.

BORROW. It was a principle universally recognised in ancient times, that all property belonging to their opponents, in the hands of any nation against which war was declared, became forfeited; and in accordance with this supposed right, the jewels, precious vases, &c., which were borrowed by the Hebrews from the Egyptians, as mentioned in Exodus 3. 22, and 11. 2, became, when Pharaoh commenced war upon them, legal spoil. Dr. Boothroyd, in these passages, instead of "borrow," translates the word "ask;" Dr. Adam Clarke says, "request, demand, require."

The Israelites wished to go three days' journey in the wilderness, that they might hold a feast to the Lord; and Mr. Roberts observes, that "when the Orientals go to their sacred festivals, they always put on their best jewels. Not to appear before the gods in such a way, they consider would be disgraceful to themselves, and displeasing to the deities. A person whose clothes or jewels are indifferent, will borrow of his richer neighbours, and nothing is more common than to see poor people standing before the temples, or engaged in sacred ceremonies, well adorned with jewels. Under these circumstances, it would be perfectly easy to borrow of the Egyptians their jewels, as they themselves, in their festivals, would doubtless wear the same things. It is also recorded, the Lord 'gave them favour in the sight of the Egyptians;' and it does not appear to have been fully known even to the Hebrews, that they were going finally to leave Egypt."

BOSOM. The Orientals generally wore long, wide, and loose garments, and when about to carry anything away that their hands would not contain, they used for the purpose a fold in the bosom of their robe. To this custom Our Saviour makes allusion. "Good measure—shall men give into your bosom." (Luke 6. 38.) To have one "in our bosom," implies kindness, secrecy, intimacy. (Gen. 16. 5; 2Sam. 12. 8.) Christ is in the bosom of the Father; that is, possesses the closest intimacy and most perfect knowledge of the Father. (John 1. 18.) Our Saviour is said to carry his lambs in his bosom, which beautifully represents his tender care and watchfulness over them. (Isai. 40. 11.)

Roberts observes, "Anything which is valuable or dear to a person is said to be *madegilla*, 'in his bosom.' When a husband wishes to express himself affectionately to his wife, he says, 'Come hither, thou wife of my bosom.' Does a man boast he will do that which is impossible, another will say, 'He is going to put fire in his bosom without being burned.' (Prov. 6. 27.) A beloved son, though at a distance, is still said to be in the bosom of his parents."

BOSSES, the thickest and strongest parts of a buckler. (Job 15. 26.) See **ARMS AND ARMOUR**.

BOTTLE. The bottles used in the East, both of old and at present, are widely different from those of Europe. They are made of the skins of animals stripped off without opening the belly, and the apertures made by cutting off the tail and legs sewed up. The neck of the animal serves as the neck of the bottle, and is secured

with a cord. Such bottles are used at this day in Spain, and are called *borrachas*.

Eastern Bottle.

Sir John Chardin states, that the Arabs keep their water, milk, and other liquors, in leathern bottles. These bottles are frequently rent when old and much used, and are capable of being mended; this they do "sometimes by setting in a piece, sometimes by gathering up the torn place in the manner of a purse, and sometimes they put in a round flat piece of wood, and by that means stop the hole."

Bruce describes a leathern bottle, which by the natives of Abyssinia is termed a *girba*. "It is made of an ox's skin, squared, and the edges sown together very artificially by a double seam, which does not let out water. An opening is left at the top of the *girba*, in the same manner as the bung-hole of a cask; around this the skin is gathered to the size of a large handful, which, when the *girba* is full of water, is tied round with whipcord. These *girbas* generally contain about sixty gallons each, and two of them are the load of a camel. They are then all besmeared on the outside with grease, as well to hinder the water from oozing through, as to prevent its being evaporated by the heat of the sun, which in fact happened to us twice, so as to put us in imminent danger of perishing with thirst."

The allusions of Scripture to bottles and their properties are numerous, and to understand them we must bear in mind what has been said of their form and material. Thus the Gibeonites, in order to deceive Joshua, took "wine bottles, old, and rent, and bound up," (Josh. 9. 4.) and such are spoken of in Matthew 9. 17, and Luke 5. 38. David (Psalm 119. 83) compares himself to "a bottle in the smoke," which is a convertible phrase with a bottle in the tent of an Arab; because, when a fire is lighted, the smoke instantly fills every part, and there is no aperture but the door from which the smoke can escape. He, therefore, seems to allude both to the meanness of a skin bottle, and to its blackness from the smoke of the tent in which it is suspended, in contrast to the vessels of silver and gold which he had used in the palace of Saul.

Job says, "My belly is as wine which hath no rent, it is ready to burst like new bottles," (32. 19); upon

which Roberts remarks, "The bottle in India at the present day, called 'turumthe,' is made of the raw hide of an animal, consequently, when any fermenting liquor is put into it, the skin being comparatively green, distends itself to the swelling of the liquor. But, should the bottle have been previously stretched by the same process, then it must burst if put to a second trial, because it cannot yield to the new pressure of fermentation."

BOTTOMLESS PIT. See **ABYSS**; **PIT**.

BOW. See **ARMS AND ARMOUR**.

BOWELS. The bowels are often represented in the Scriptures as the seat of mercy, tenderness, and compassion. Thus "Joseph made haste, for his bowels did yearn upon his brother." (Gen. 43. 30.) In the relation of the Judgment of Solomon, (1 Kings 3. 26,) speaking of the mother of the living child, the marginal reading of our version is, "her bowels were hot upon her son," and this is still an Oriental phrase. "A mother," says Roberts, "in lamenting over her suffering child, exclaims, 'Ah! my bowels are hot over the child.' 'My bowels burn in his misery.' 'My heart is burnt to ashes.'" See **BELLY**.

BOWING. This was a very ancient mode of showing respect, for we read in Genesis 23. 7, that "Abraham stood up, and bowed himself to the people of the land, even to the children of Heth." So also Jacob, when he came to meet his brother Esau, "bowed himself to the ground seven times, until he came near to his brother," (Gen. 33. 3,) and the brethren of Joseph bowed themselves before him as the governor of the land. The attitude of bowing is frequently represented in the paintings on the tombs of Egypt, particularly of captives brought before a king or conqueror.

Besides its use as a courteous demeanour, bowing is frequently mentioned in the Scriptures as an act of adoration. Thus we read of those who had, and those who had not, "bowed the knee to Baal." (1 Kings 19. 18.) In this sense the attitudes comprised under the term bowing are very various. Of the following figures, the first and second may represent some of the more ordinary

Postures of Adoration.

postures of devotion among the Hebrews, while the third shows the form of adoration mentioned in Joshua 5. 14: "Joshua fell on his face to the earth and did worship."

Roberts, in reference to Gen. 33. 3, observes, "There is something very touching, and to an Eastern mind very natural in this action of Jacob's. His arrangements also may be seen to the life at this day. His wives and children were placed behind him: they would be in a separate group in order that Esau might the more readily see them. He would then walk forward and cast himself on the earth, and rise again, till he had bowed seven times; after which, as he would walk a short distance every time he arose, he would be near to his brother. Esau could not bear it any longer, and ran to meet him, and fell on his neck, and kissed him and wept. Then came the handmaids and their children, I think I see them, and bowed themselves before Esau; the wives, also, according to their age, and their children prostrated themselves before him."

Of the mode of bowing in the East on state occasions, we have the following account by Mr. Morier: "The ambassador had his public audience, when we saw the king in great splendour: he was decked in his jewels with his crown on his head, his bazubends or armlets on his arms, seated on his throne. We approached him bowing after our own manner; but the Persians bowed as David did to Saul, who 'stooped with his face to the earth and bowed himself' (1 Sam. 24. 8.) That is, not touching the earth with the face, but bowing with their bodies at right angles, the hands placed on the knees, and the legs somewhat asunder. It is only on remarkable occasions that the prostration of the Rouee Zemeen, the face to the earth, is made."

BOWL. The art of working in metal was practised by the Hebrews in very early times, indeed, during their journey in the wilderness, and the "bowls of pure gold," mentioned in Exodus 25. 29, for the service of the Tabernacle, were most probably vases of elegant workmanship, similar to those we find depicted on the Egyptian monuments. These Egyptian vases were exceedingly elegant. They were richly chased and embossed, and the handles often appear formed of the figures of animals executed with great spirit. Their forms are very various: some are in shape like "the cup and cover" of modern days; others resemble the form of the lotus, so as to suggest to the mind this natural cup as the original from which art first drew its inspiration; and others represent a laver supported by human figures; on one of these two captive Jews are given; while the thick lips and low forehead, the plumy head-dress and the rude cincture of others, seem to prove that they were modelled from the negro race.

"So strong a resemblance do the Egyptian vases bear to the productions of the best epochs of ancient Greece, both in their shape and in the fancy devices which adorn them, that some might even imagine them borrowed from Greek patterns. But they are purely Egyptian, and were universally adopted in the Valley of the Nile, long before the graceful forms we admire were known in Greece: a fact invariably acknowledged by those who are acquainted with the remote age of Egyptian monuments, and the period when the paintings representing them were executed in the tombs, or temples, of the Thebaid.

"Some indeed of the most elegant date in the early age of the third Thothmes, a monarch who appears to have lived about the year 1490 before our era, and whom I assume to be the Pharaoh of the Jewish Exodus: and we not only admire their forms but the richness of the

materials of which they were made, the colours and the hieroglyphics themselves showing them to have been of gold and silver, or of this last, inlaid with the more precious metal." Wilkinson.

A modern traveller informs us that the bowls and dishes of the modern Arabs are of wood; those of their emirs are not unfrequently of copper, very neatly tinned.

At a collation given by the grand emir of the Arabs, whom he visited, there were large painted basins, and bowls of wood, placed before him; their being painted was, without doubt, a mark of honour, to distinguish them from the ordinary wooden bowls. The "lordly dish," mentioned in Judges 5. 25, was probably something of this kind.

Egyptian Bowls and Vases. From the Monuments.

BOX, כֶּסֶף *pack*. This word, which originally means a small leathern bottle, used for holding oil, is in our version translated "box," in 2Kings 9. 1,3; but in 1Sam. 10. 1, "vial." The word box also occurs in the New Testament in several places. See ALABASTER.

Of the form of the "box" of Scripture we have no account, but we find boxes for various uses frequently portrayed in the paintings of Thebes, and of some of these we give representations. Many of these boxes have lids, resembling the carved roof of a royal canopy; others had a simple flat cover. When cut, veneered, or inlaid with rosewood, the sides and lid were painted, and those intended for the tombs, to be deposited there in honour of the deceased, had usually a funeral inscription, or a religious subject, painted on them. The lids of many boxes were made to slide in a groove, like our small colour-boxes; others were fitted into the body, being cut away at the edges for this purpose; and some turned on a pin at the back. In opening a large box,

they frequently pushed back the lid, and then either turned it sideways, and left it standing across the breadth of the box, or suffered it to rest on the ground.

BOX-TREE, תְּאֵשֶׁר *teashur*. This word occurs only in Isaiah 41. 19; 60. 13, and it is not very clear what tree is intended. The old versions and interpreters express it variously by that of the cedar, poplar, and fir; and the Chaldee paraphrase, and several Hebrew commentators, render it by box-tree, which view our translators have adopted.

The *Buxus sempervirens*, or box-tree, is an evergreen, which, in our gardens, is generally seen only as a dwarf shrub. In the East, however, its native country, it attains the size of a forest-tree, and often forms a very beautiful feature in the landscape. Its wood, which is very hard, is extensively employed for wood-engravings, and is much valued.

BOZEZ, the name of a rock upon which Jonathan climbed to attack the Philistines: it was opposite to Michmash. (1Sam. 14. 4.)

Professor Robinson says, "North-east of Jeba, across the very deep valley, lies Mûkhmâs, the ancient Michmash, to which we came in about three-quarters of an hour. In the bottom of the valley, directly between Jeba and Mûkhmâs, are two conical hills, not very high, which are probably the scene of Jonathan's romantic adventure against the Philistines."

BOZKATH or **BOSCATH**, a town in the territory of the tribe of Judah, (Josh. 15. 39,) and the birth-place of Jedidah, the mother of Josiah, king of Judah. (2Kings 22. 1.)

BOZRAH, the Bostra of the Greeks, a city of Edom, or Idumea. (Isai. 34. 6.) It was allotted to the tribe of Reuben, and was a frontier town of Edom and Moab. From the manner in which it is mentioned in several places in Scripture, it was evidently a city of great importance. In Isaiah 63. 1, it seems to have been celebrated for its dyed garments, as some understand, or as others read, for its wine. Jeremiah mentions a Bozrah in Moab. (48. 24.) We are at present acquainted with the ruins of but one town of this name; this is situated in the southern part of the district called the Haouran, the proximity of which to

Egyptian Boxes. From the Monuments.

Moab might seem to show that this was the Bozrah mentioned as belonging to the Moabites. Lord Lindsay says, "Bozrah is now, for the most part, a heap of ruins, a most dreary spectacle. Here and there the direction of a street or alley is discernible, but that is all; the modern inhabitants, a mere handful, are almost lost in the maze of ruins. At no place during my tour did I feel more vivid pleasure from the mere consciousness of being at it; ignorant of Arabic, and unaware of the great, though perhaps only temporary, political change that for the present enables a Frank to visit these countries openly, and without disguise, I had never supposed the possibility of visiting it, yet there are few places so interesting, both to the admirer of sacred literature, and the student of history."

BRACELET, צַמִּיד *tsamed*, an ornament for the person, worn by both sexes among the Hebrews, and also among the Egyptians. (Gen. 28. 18; Ezek. 16. 11.) Bracelets formed part of Abraham's present to Rebekah, (Gen. 24. 22,) and are mentioned among the usual ornaments of the Jewish women by the prophet Ezekiel. (16. 11.) Many representations of Egyptian bracelets are to be seen on the tombs at Thebes, of which we give specimens, and those of the Hebrews were, no doubt, much like them. The kings are generally ornamented with an armlet, or bracelet, worn above the elbow. Some of these are of metal, but others appear to be rows of jewels, or coral, strung together.

Egyptian Bracelets. From the Monuments.

A bracelet is now commonly worn by the Oriental princes, as a badge of power and authority. This probably was the reason why the Amalekite brought the bracelet which he found on Saul's arm, along with his crown, to David. (1Sam. 1. 10.) It was a royal ornament, and belonged to the regalia of the kingdom.

BRAMBLE. See **THORN**.

BRANCH, צֶמַח *tsemach*, the bough of a tree. (Psalm 104. 12.) As trees, in Scripture, denote great men and princes, so boughs, branches, sprouts, or plants, denote their offspring. In conformity to this manner of speaking, Our Lord is, in respect to his human nature, styled a rod from the stem of Jesse, and a branch out of his roots, that is, a prince arising from the family of David. (Isai. 11. 1.) "The prophet," as Bishop Lowth observes, "having described the destruction of the Assyrian army, under the image of a mighty forest, represents, by way of contrast, the great person who makes the subject of this chapter, as a slender twig, shooting out from the trunk of an old tree, cut down, lopped to the very root, and decayed, which tender plant, so weak in appearance, should, nevertheless, prosper. The aged trunk, denoting the royal house of David, at that time in a forlorn and contemptible condition, like a tree of which nothing was left but a stump under-ground." (Jerem.

23. 5; 33. 15; Zech. 3. 8; 6. 12.) Branch is the symbol of posterity, in Job 8. 16; and also is the symbol of kings, descended from royal ancestors, as branches from the root. (Ezek. 17. 3, explained by v. 12; Dan. 11. 7.) In Homer, ὄξος Ἀργεος, a bough of Mars, often occurs, by which we are to understand, a son of Mars.

"An abominable branch," (Isai. 14. 19,) means a tree on which a malefactor has been hanged, for which they were held in detestation. Branches are also mentioned in many places in Scripture; in some cases as symbols of prosperity, in others of adversity, as in Gen. 49. 22; Job 15. 32; Psalm 80. 11; Isai. 25. 5; Ezek. 17. 6.

Branch is also the symbol of idolatrous worship. (Ezek. 8. 17.) The carrying of branches among the Jews was a sign of honour. And this it is that God complains of by the prophet: they carried branches as if they did Him honour, but they held them to their noses like mockers; that is, they mocked Him secretly when they worshipped Him publicly; they came with fair pretences and wicked hearts. Dathe remarks, that a writer on the religion of the Persians enumerates, among the sacred furniture, a bundle of twigs, called *barsom*, in the old Persic language, which they hold in their hands while praying. Michaëlis says that they held it before the face, opposite to the holy fire. Spencer also observes, that the heathen, in the worship of their deities, held forth the branches of those trees which were dedicated to them. See **MESSIAH**.

BRASS. The Hebrew words, נָחָשׁ *nachash*, and נְחֹשֶׁת *nechosheth*, are in our version rendered "brass," but in most cases signify native copper, brass being an alloy of copper and zinc, the preparation of which demanded more skill in metallurgy than can reasonably be supposed to have been possessed in very early times. Afterwards mixed metals were much employed, but, judging from the discoveries of ancient arms, &c., in Egypt and elsewhere, the brass of antiquity seems to have been rather a kind of bronze. Therefore we may consider Tubal-cain as a worker in copper; and we may perhaps form a just idea of the "vessels of brass" of the Temple, (2Kings 25. 14,) and the "brazen glasses of the women," (Exod. 38. 8,) from the following passage from Sir John Gardner Wilkinson. "Many of the bronze vases found at Thebes and in other parts of Egypt, are of a quality which cannot fail to excite admiration, and prove the skill possessed by the Egyptians in the art of working and compounding metals. We are surprised at the rich sonorous tones they emit on being struck, the fine polish of which they are frequently susceptible, and the high finish given them by the workmen; nor are the knives and daggers made of the same materials less deserving of notice. The mirror was of mixed metal, chiefly copper, most carefully wrought and highly polished, and so admirably did the skill of the Egyptians succeed in the composition of metals, that this article was susceptible of a lustre which has even been partially revived at the present day in some of those discovered at Thebes.

"The skill of the Egyptians in compounding metals is abundantly proved by the vases, mirrors, arms, and implements of bronze, discovered at Thebes and in other parts of Egypt; and the numerous methods they adopted for varying the composition of bronze by a judicious mixture of alloys, are shown in the many qualities of the metal. They had even the secret of giving to bronze or brass blades a certain degree of elasticity, as may be seen in the dagger of the Berlin Museum." The prophet Ezekiel alludes to this compounding of metals, in his description of the corrupt state of the Jewish nation. (Ezek. 22. 18-20.) And from the frequent mention of

2 G

"cunning workers in metals," it seems probable that the Jews were as skilful as their Egyptian teachers.

At present almost every weapon or instrument, where a fine edge is required, is formed of iron, but this was not the case formerly. It is very doubtful whether the word ברזל *barzel*, is rightly translated "iron," in speaking of Tubal-cain, (Gen. 4. 27,) and no direct mention of iron tools is made till after the Exodus. It would also appear that the Egyptians, at least in the earlier ages, were unacquainted with the use of iron, for upon the monuments, all the implements not formed of gold and silver are painted green, and were undoubtedly of copper or bronze. The wheels of their war chariots, their swords, quivers, knives, axes, and adzes, were all formed of the same metal. The great quantity of metal required in the arts was probably obtained from the interior of Africa, as there were no mines in Egypt.

In the Scriptures brass is spoken of as the symbol of insensibility, and presumption or obstinacy in sin. (Isai. 48. 4; Jerem. 6. 28.) Brass is also the symbol of strength. (Psalm 107. 16; Micah 4. 13.) Brazen walls or gates signify a strong and lasting adversary or opposer. (Isai. 45. 2; Jerem. 1. 18.)

The Macedonian empire is described in Daniel 2. 39, as a kingdom of brass, in allusion to its warlike nature. The prophet Zechariah (6. 1) alludes to mountains of brass, which we may interpret, according to Vitranga, of those firm and immutable decrees by which God governs the world. See COPPER; METALS.

BRAZEN SERPENT. See SERPENT.

BREAD. Besides its ordinary meaning, bread is often employed by a figure for all things necessary to our subsistence, and to it are likened Our Lord, who is the "living bread," (John 6. 51,) and the Gospel, which, in reference to its first promulgation among the Jews, is styled "the children's bread." (Matt. 15. 26.) The manna in the wilderness is also called bread by Nehemiah (9. 15,) and by St. John. (6. 31.)

The bread spoken of in the Sacred Writings differed very considerably from that used by European nations, and we shall therefore describe its preparation somewhat at length.

In early times corn was often eaten at first without any preparation at all, (Deut. 23. 25,) and the custom was not entirely disused in the time of Our Saviour. (Matt. 12. 1.) Parching it afterwards became so general, that the words which properly mean parched, were also used for corn or meal. (Ruth 2. 14; 2Sam. 17. 28.) Mortars were used in the time of Moses for bruising corn, as was also the mill. (Numb. 11. 8.) Fine meal, that is, corn or grain ground or beaten fine, is spoken of as far back as the time of Abraham. (Gen. 18. 6.) At first, barley alone was ground, but afterwards wheat, as only the poor used barley. Barley-bread appears to have been more suitable in the warm climate of the East than in a colder climate. On the second day, however, it becomes insipid and rough to the palate, as is likewise the case with wheaten-bread; hence the necessity of baking every day, and hence also the daily grinding at the mills about evening, alluded to by the prophet Jeremiah. (25. 10.)

The flour being mingled with water was reduced to a solid mass in a sort of wooden-tray or kneading-trough; this, after remaining a little time, was kneaded, some leaven being also added to it. (Exod. 12. 34.) In case it was necessary to prepare the bread very hastily, the leaven was left out. (Gen. 18. 6; 19. 3.) The cakes when made were round and nine or ten inches in diameter. The unleavened cakes were not thicker than a knife, but

the leavened were as thick as a man's little finger. The bread was not cut with a knife but broken, termed in Hebrew פָּרַס *paras*. (Isai. 58. 7; Lament. 4. 4.) Hence the expression in Scripture of breaking bread, refers to sitting down to table and taking a repast. Our Saviour broke the bread which He had consecrated. (Matt. 14. 19; 15. 36.)

The Egyptians who were wealthy had a baker in the house, (Gen. 40. 2-5,) but the women generally performed that office in establishments of a smaller scale, and among the poorer classes. They had loaves of bread apparently not unlike those of the present day, others flat and round as our crumpets, and others in the

Egyptian Bread. From the Monuments.

form of rolls or cakes sprinkled with seeds, such as the caraway. In the houses of the rich, bread was made of wheat, the poorer classes being contented with barley, and flour of the *Sorghum* or *Holcus sorghum*, of Linnæus.

A modern traveller, in reference to the present mode of preparing bread in the East, says that "A person accustomed to the lengthened processes by which food is got ready in Europe, is considerably surprised when brought to observe the rapidity of similar preparations in the East. A sheep is killed, flayed, and cooked, in the course of an hour and a half; coffee is roasted, ground, and boiled in about ten minutes; and meal is kneaded and baked, and perhaps the corn ground, in seldom more than twenty minutes. Much of this may be accounted for by the heat of the climate, by which many articles would be spoiled if kept too long previously to being used. Meat would be tainted in less than a day; the oily principle in coffee would soon be lost, and its pleasant aroma evaporate; and loaf bread would quickly turn sour, or be rendered unpleasant by the absorption of its moisture. The labour of grinding the corn is generally performed early in the morning by the women of the household. They sit upon the ground, commonly two to a mill, the lower part of which is held between the legs; as the upper stone is whirled round, the women beguile their labours by singing at the top of their voices, certain songs which seem almost appropriated to this service. The simultaneous noise of grinding and singing in an Oriental city, warns the indolent that it is time to rise; and the absence of such sounds, is noticed in the Old Testament as a mark of desolation. The dough is prepared in a large wooden bowl, and portions are successively moulded into the form of thick round cakes on a board or stone near the oven. These, when flattened out to about the size of a breakfast saucer, the woman takes up and tosses about on her arms with surprising dexterity and quickness, till it becomes no thicker than a pancake, and forms a circle of a foot in diameter, or an oblong of a foot and a half in length. When the cake is brought to the requisite thinness, one side is wetted with water as well as the hand and arm by which it is introduced into the oven. The wet side, by an operation which requires

much tact with a piece of dough of such tenuity and extent, is stuck against the side of the oven, where it adheres until perfectly baked, when, if not properly attended to, it would fall into the hot embers at the bottom; and if prematurely removed, cannot be again attached. Its timely removal becomes therefore an operation requiring much judgment and care. If the introduction and removal of the cakes were not rapidly performed, the heat of the oven is generally so great, that the arms and hands of the woman would be much injured. But such is the facility acquired by habit in all these operations, from the tossing of the cake to its final removal from the oven, that one woman finds no difficulty in attending to the baking of five or six cakes at once, at the same time preparing others to replace those withdrawn. The baking takes about five minutes or less, according to the heat of the oven. The women pride themselves greatly on their skill in these operations; and among the Arabs, Kourds, Armenians, and the Eelauts of Persia, the reputation of being a skilful maker of bread powerfully recommends a young woman to the attention of those who are desirous to marry.

"The bread made in the manner we have described, varies according to the prevailing taste in different countries. It is sometimes rather thin and crisp; but more generally flexible and moist: often, indeed, changed but slightly from the state of dough. In about twenty-four hours it becomes very hard, and cannot well be used without previous soaking in water; consequently, bread is only baked for the occasions of the current day. The bread is not generally liked by Europeans, and the writer felt no small satisfaction in finding at Erzeroom, all the way from thence to the Black Sea, and at Constantinople, this pancake bread superseded by loaves, which are baked in ovens not much unlike our own." See BAKER; OVEN.

BREAD, SHEW, לֶחֶם פָּנִים *lachem panim*, "Bread of the faces," or "bread of the presence," (Exod. 25. 30,) was offered every Sabbath to God on the table in the Holy place. The Rabbins say that the loaves were square, and were covered with leaves of gold. They were twelve in number, in memory of the twelve tribes of Israel, in whose names they were offered. Each loaf contained about five pints and one-tenth of flour; they had no leaven, and were presented fresh every Sabbath-day, with much ceremony and care, it being so managed that the new bread should be set on one end of the table before the old was taken away from the other, in order that the table might not be for a moment without bread. The bread that was removed might only be eaten by the priests. With this offering there was frankincense, (Levit. 24. 7,) and even wine according to some commentators (Exod. 25. 29, 30); the Septuagint adds salt. The loaves were placed one upon the other in two piles of six each; and between every loaf there were two thin plates of gold, folded back in a semi-circle of the whole length of the table in order to admit air and prevent the loaves from growing mouldy. These golden plates were supported at their extremities by two golden forks, which rested upon the ground. Jewish traditions state, that in order to render the bread more peculiar and consecrated, the priests themselves performed all the operations of sowing, reaping, and grinding the corn for the shew bread, as well as of kneading and baking the bread itself.

BREASTS. In the prophecy of Nahum against Nineveh, it is said that her women shall be led into captivity, "tabring upon their breasts," or beating their breasts in token of anguish, as if they were playing on

the tabret. The waving of the breast of the animal offered in sacrifice mentioned in Leviticus 7. 30, is supposed to be typical of giving up to God the heart and the affections.

Females in the East are more desirous than those of colder climates to have a full and swelling breast, and study *embonpoint* to a degree unusual among northern nations. That this was the case among the ancient Hebrews may be seen by reference to Canticles 8. 10. See BOSOM.

BREASTPLATE, חֹשֶׁן *hhoshen*. The breastplate of the Jewish high-priest was a piece of embroidery, about ten inches square. (Exod. 28. 15.) It was made of two pieces of the same rich embroidered stuff of which the ephod was made, having a front and a lining, so as to form inside a sort of purse or bag, (Exod. 39. 9,) in which, according to the Rabbins, the Urim and Thummim was enclosed. The front of it was set with twelve precious stones, on each of which was engraved the name of one of the tribes. They were placed in four rows, and divided from each other by the little golden squares or partitions in which they were set. In the ephod, in which there was a square space left open sufficiently large for the admission of the breastplate, were four rings of gold, to which four others at the four corners of the breastplate corresponded. The breastplate was confined to the ephod by means of ribands of dark blue, which passed through these rings, and was suspended from the shoulders by chains of gold, which were fastened to the upper corners. It was confined to the body by the same girdle which went round the ephod.

The higher Egyptian priests wore a large and splendid ornament upon the breast. It was frequently an idolatrous symbol, often a winged scarabæus, the emblem of the sun, with a connecting ring and chain to fasten it to the girdle. See AARON; HIGH-PRIEST; URIM AND THUMMIM.

For the military breastplate, see ARMS AND ARMOUR.

BRETHREN. See BROTHER.

BRICK, BRICKMAKING, לִבְנָה *lebenah*. The materials for the construction of edifices were originally stone, mud, and brick. Bricks were of different sizes, somewhat larger than those among us, and were usually hardened by the heat of the sun; but when intended for splendid and durable edifices, as in Genesis 11. 3, they were burnt in a kiln. The Hebrew term מַלְבֵּן *malben*, a brick-kiln, first occurs in 2Sam. 12. 31. In Egypt it appears that straw anciently entered into the composition of their bricks. The straw in the specimens extant, still retains its original colour, and is a proof that these bricks were never burnt in stacks or kilns. The process of manufacture, represented in the engraving, did not differ materially from that used in our own day. The clay was brought in baskets from the banks of the Nile, thrown into a heap, then thoroughly saturated with water, and worked up to a proper consistency by the feet of the labourers. The clay, when tempered, was cut by an instrument somewhat resembling the hand-plough, and moulded in an oblong trough; the bricks were then usually dried in the sun, for though some, from their colour, appear to have been baked or burned, no traces of this operation have yet been discovered on the monuments. The labour altogether was equally painful and unwholesome under the burning sun of Egypt, where the moist exhalations from the humid clay have always been found very deleterious, and it appears to have been shunned by the native Egyptians, and performed by slaves or captives taken in war. The Jews, of course, were not spared this drudgery, and

Foreign Captives employed in making Bricks at Thebes.

like the captives detained in the Thebaïd, they were condemned to the same labour in Lower Egypt. They erected granaries, treasure cities, and other public buildings for the Egyptian monarch. Sir J. Gardner Wilkinson says, "To meet with Hebrews thus engaged, in the sculptures and monuments, cannot reasonably be expected, since the remains in that part of Egypt where they lived have not been preserved; but it is curious to discover other foreign captives overlooked by similar 'taskmasters,' and performing the very same labours as the Israelites described in the Bible. Some persons have imagined that they can trace a Jewish cast of countenance in the light-brown figures; but wherever Jews are found on the monuments, and they undoubtedly occur in the painting of a triumphal procession discovered by Belzoni in the tombs of the kings, they are painted deep red, and are distinguished by large beards, bushy hair, confined within a band, and fringed garments, none of which characteristics appear in the figures of the brickmakers." It is not an improbable conjecture offered by Rosellini, that the miserable victims of tyranny here depicted on the monuments are Greeks and Anatolians, supplied by the slave-dealing Phœnicians, whose piracies in the *Ægean* and *Euxine* seas were almost as extensive as their commerce.

In the above engraving from Wilkinson, is represented the process of Egyptian brickmaking. The clay having been dug up, is conveyed away on men's shoulders in baskets, and laid in heaps, which are moistened with water from the tank at the left hand upper corner. Some of the figures are employed in shaping the tempered clay with moulds, and the piles of bricks are seen placed for drying. These operations occupy the upper compartment, while in the lower is seen, chiefly, the method employed for removing the bricks when fit for use, which is by means of a yoke and slings; the whole process being superintended by "taskmasters" armed with sticks.

The sacred historian says, "The Egyptians made the

children of Israel to serve with rigour; and they made their lives bitter with hard bondage, in mortar and in all manner of service in the field; all their service wherein they made them serve was with rigour." (Exod. 1. 13, 14.) This "service with rigour" has ever been a distinguishing feature of the Egyptian government, and in all ages the rulers of Egypt have, in the construction of their public works, caused a frightful waste of human life; one hundred thousand workmen fell victims to the toil of cutting a canal which Pharaoh-Necho opened between the Nile and the Red Sea; and in modern days, Mohammed Ali worked to death nearly twenty thousand in completing a canal between the Nile and the Sea of Alexandria. See **BABYLONIAN BRICKS**.

BRIDE, BRIDEGROOM. See **MARRIAGE**.

BRIDLE, the headstall and reins by which a rider governs his horse. (Psalm 32. 9.) The restraints of God's providence are metaphorically called his bridle and hook. (2Kings 19. 28.) The "bridle in the jaws of the people causing them to err," (Isai. 30. 28,) is God permitting the Assyrians to be directed by foolish counsels, that they might never finish their intended purpose against Jerusalem. (Isai. 37. 29.) The restraints of law and humanity are called a bridle, and to let it loose, is to act without regard to these principles. (Job 30. 11.)

BRIER. See **THORN**.

BRIGANDINE. The Hebrew word שריון *shereyon* has been variously translated in our version by breast-plate, habergeon, and brigandine, for particulars of which see **ARMS AND ARMOUR**.

BRIMSTONE, נפֿרית *gophreth*; Sept. *θειον*. Brimstone, or sulphur, is a highly inflammable mineral, found in great abundance in the neighbourhood of volcanoes, in all parts of the world. It is a principal

ingredient in gunpowder, and is very largely employed in many processes of the arts.

The word brimstone is used in the Scriptures as the symbol of a perpetual torment and destruction; thus, "Brimstone shall be scattered upon his habitation;" (Job 18. 15;) his house or family shall be destroyed for ever by an inextinguishable fire. Isaiah speaking of the enemies of the church under the designation of Edom says, "And the streams thereof shall be turned into pitch, and the dust thereof into brimstone, and the land thereof shall become burning pitch." (Isai. 34. 9.) Fire and brimstone are represented in many passages of Scripture, as the agents by which God punishes the wicked. There is in this a manifest allusion to the overthrow of the cities of the plain by showers of ignited sulphur, to which the physical appearances of the country bear witness to this day. (Deut. 29. 23; Psalm 11. 6.)

Roberts says, "When a place is noted for being unhealthy, or the land very unfruitful, it is called a *Kenthaga poomg*, a place or country of brimstone. Trincomalee, and some other places, have gained this appellation, on account of the heat and sterility of the soil." See BITUMEN; DEAD SEA; SODOM AND GOMORRAH.

BROIDERED. See EMBROIDERY.

BROIDERED HAIR. This expression refers to the hair being worn platted, and fixed with crimping pins. (1Tim. 2. 9; 1Peter 3. 3.)

"The Eastern females," says Sir J. Chardin, "wear their hair very long, and divided into a number of tresses. In Barbary, the ladies have their hair hung down to the ground, which, after they have collected into one lock, they bind and plat with ribands. The women nourish their hair with great fondness, which they endeavour to lengthen, by tufts of silk, down to the heels." See HEAD-DRESS.

BROOK, נַחַל *nachal*. A brook may be distinguished from a river by its flowing only at particular times, such as after great rains, or the melting of the snow; whereas a river flows constantly at all seasons. This distinction, however, is not always preserved in Scripture; and one is not unfrequently taken for the other; the great rivers, such as the Euphrates, the Nile, and the Jordan, being occasionally called brooks. Thus the Euphrates is called "the brook of the willow." (Isai. 15. 7.) The Hebrew word signifies also a valley, or a valley with a brook; hence the one is often placed for the other. To deal "deceitfully as a brook," and to pass away "as the stream of brooks," (Job 6. 15,) is to deceive our friend when he most needs our help and comfort, because, brooks being temporary streams, are dried up in the heats of summer, and thus the hopes of the traveller are disappointed.

BROTHER. In the Scriptures, agreeably to Oriental custom, this term has a much greater latitude than obtains among Europeans, being extended to near kinsmen or cousins. Thus, in Matthew 13. 55, James, Josés, and Judas, are called the brethren of Our Lord; but were most probably only his cousins by his mother's side; for James and Josés were the sons of Mary; (Matt. 27. 56;) and James and Judas, the sons of Alphaeus, (Luke 6. 15, 16,) which Alphaeus is, therefore, probably, the same with Cleophas, the husband of Mary, sister to Our Lord's mother. (John 19. 25.)

Roberts says, "In Eastern language, it is common to apply the word brother, or sister, to those relations who have no right to it in England. Thus, cousins are called brothers, and the sons of brothers are called brothers; but the children of a daughter, though she herself would be called sister by her cousins, would not be addressed

the same way, but styled 'machan,' that is, cousin. The name, sister, which Abraham gave to his wife, (Gen. 20. 12,) is still given to the same degree of relationship. 'She is the daughter of my father, but not the daughter of my mother.'"

BROTH, מֶרֶק *marak*. When the angel of the Lord appeared to Gideon, to encourage him to deliver his country from the yoke of Midian, Gideon requested a sign, and prepared a present, or a "meat offering," as the margin renders it. "And Gideon went in and made ready a kid, and unleavened cakes of an ephah of flour; the flesh he put in a basket, and he put the broth in a pot, and brought it out unto him under the oak, and presented it." (Judges 6. 9.) Upon the angel touching the offering with his staff, "there rose up fire out of the rock," and consumed it. We may infer that Gideon roasted one part of the kid, and stewed the other. In this case, the roasted part was probably prepared in the usual way of cooking a hasty dish, that is, by cutting the meat into small pieces, called *kaboob*, several of which are strung upon a skewer, as we do larks, and so roasted, or rather broiled. This dish is still very common in Western Asia.

When meat is thus dressed in two ways, the stew or broth is generally intended for immediate use, and the *kaboob* for a future meal. Dr. Shaw says, speaking of an entertainment among the Arabs, "Besides a bowl of milk, and a basket of figs, raisins, or dates, which, upon our arrival, were presented to us, to stay our appetites, the master of the tent where we lodged fetched us, from his flock, according the number of our company, a kid or a goat, a lamb or a sheep, half of which was immediately seethed by his wife, and served with *cuscasoe*; the rest was made *kaboob*, that is, cut into pieces and roasted; which we reserved for our breakfast or dinner the next day." All roasted meat is a delicacy among the Arabs, and rarely eaten by them, the common diet being boiled meat, with rice pottage, and pillau.

The prophet Isaiah, in speaking of the rejection of the Jews for their incredulity, idolatry, and hypocrisy, says, "The broth of abominable things is in their vessels," (65. 4,) which is explained by Bishop Hall as implying that they made no distinction of clean and unclean meats, as by the law they had been commanded to do.

BRUISE. This word is used in Scripture in a variety of significations; but implies, generally, doubts, fears, anguish, on account of the prevalence of sin. Satan is said to bruise the heel of Christ. (Gen. 3. 15.) Christ is said to bruise the head of Satan, when He crushes his designs, despoils him of his power, and enables his people to tread his temptations under their feet (Rom. 19. 20.) Our Lord was bruised when He had inflicted on him the fearful punishment due to our sins. (Isai. 53. 5.) The king of Egypt is called a bruised reed, to mark the weak and broken state of his kingdom, and his inability to help such as depended on him. (2Kings 18. 21.) Weak saints are bruised reeds which Christ will not break. (Isai. 42. 3; Luke 4. 18.)

BRUISE, BRAY. To bruise, or to pound in a mortar, is referred to by Solomon. (Prov. 27. 22.) This punishment is still in use among Oriental nations. Roberts observes, "Cruel as it is, this is a punishment of the state; the poor victim is thrust into the mortar, and beaten with the pestle. The late King of Kandy compelled one of the wives of his rebellious chiefs thus to beat her own infant to death. Hence the saying, 'Though you beat that loose woman in a mortar, she will not leave her ways,' which means, though you chastise her ever so much, she will never improve."

BUCKLER. See **ARMS, ARMOUR, ARMY.**

BUILD. Besides its proper and literal signification, this word is used with reference to children and a numerous posterity. (Exod. 1. 21; Ruth 4. 11.) The prophet Nathan tells David that God would build his house, that is, give him children and successors. (2Sam. 7. 27.) Any kind of building implies the settlement of a family, or the acquisition of some new honour, kingdom, or power, and its peaceful enjoyment. (Psalm 107. 4,7; Micah 5. 4.) See **DWELLING-HOUSE.**

BUL, בּוּל *the month of rain*, is the eighth of the ecclesiastical year of the Jews, and the second of the civil year, corresponding to our November. (1Kings 6. 38.) Originally, the Jews had no particular names for their months, but called them the first, second, &c.; but during the Babylonish captivity, they adopted the Chaldean names, of which this is one.

BULL, BULLOCK. See **Ox.**

BULLS OF BASHAN. In Scripture, bulls seem to be emblematical of violent and wicked men; and among the ancients generally, horned beasts were symbolical of power, the strength, courage, and ferocity of the bull rendering it a suitable object to symbolize with the violent and powerful oppressor.

In Psalm 22. 12, for "many bulls have compassed me," the Chaldee paraphrase has "people like pushing bulls." Roberts says, "Wicked men, or those who have much bodily strength, who insult and domineer over the weak are called bulls. 'Of what country are you the bull?' People of docile dispositions, those who live at peace with their neighbours, are called cows or calves; hence when violent men injure them, it is said, 'See those bulls how they are oppressing the calves; look at them, they are always butting the cows.'"

BULRUSH. See **ARK OF BULRUSHES; PAPYRUS; REED.**

BULWARK. See **ARMS; ARMOUR; ARMY.**

BUNDLE OF LIFE, צֶרֶר *tseror*. This word signifies a bundle, anything tied up in a cloth, anything tied up and reserved for future disposal. Thus "The transgression of Ephraim is bound up, his sin is hid," (Hosea 13. 12,) like "My transgression is sealed up in a bag," (Job 14. 17,) implies that the offence is to be punished hereafter. The speech of Abigail to David, (1Sam. 25. 29,) "The soul of my lord shall be bound in the bundle of life with the Lord thy God," may be more correctly rendered, "The life of my master is bound up in the bundle of the living by Jehovah," or written in the book of the living.

Roberts, in his interesting *Oriental Illustrations*, observes, "Anything which is important or valuable is called a katta, 'a bundle, a pack, a bale.' A young man who is enamoured of a female is said to be 'bound up in the bundle of love.' Of a just judge the people say, 'He is bound up in the bundle of justice.' When a man is very strict in reference to his caste, 'He is bound up in the bundle of high caste.' When a person is spoken to respecting the vanities or impurities of his system, he often replies, 'Talk not to me, I am bound up in the bundle of my religion.' 'Why do these people act so?' 'Because they are bound up in the bundle of desire.'"

BURDEN, מַסָּה *masa*. The Hebrew word which our translators have rendered "burden," frequently occurs in the prophetic writings, and signifies especially an oracle from God. (Isai. 13. 1; Nahum 1. 1.) It was sometimes understood in the sense of a denuncia-

tion of evil; yet it did not exclusively imply a grievous and heavy burden, but a message, whether its import were joyous or afflictive. Thus in Zechariah we read, "The burden of the word of the Lord," (9. 1,) which is prefixed to the promise of good things.

BURIAL AND FUNERAL RITES. Of the various modes of burial which have prevailed in the world, inhumation, or placing the body under the surface of the ground, seems to be the most ancient. It naturally suggested itself as the most simple and readiest method of disposing of the dead as soon as decomposition began to take place. The custom of burying families in the same place seems also to have been the natural result of the feelings of attachment to our parents and relatives implanted in us by Providence, and of the obscure and indefinite ideas entertained in remote ages of the nature of the soul, a resurrection, and a future state.

It is to be remarked, that as early as the time of the patriarchs, the custom of family burial places was already well established, as appears from the speech of the children of Heth to Abraham, recorded in Genesis 23. 6: "Thou art a mighty prince among us; in the choice of our sepulchres bury thy dead; none of us shall withhold from thee his sepulchre, but that thou mayest bury thy dead." And the simple and affecting words of Jacob, many years later, are sufficiently explanatory of the motives which have ever since influenced mankind, and which will probably ever continue to preserve this ancient custom, at least to a certain extent: "Bury me with my fathers in the cave that is in the field of Ephron the Hittite. . . There they buried Abraham, and Sarah his wife, there they buried Isaac, and Rebekah his wife, and there I buried Leah." (Gen. 49. 29-31.)

2. The funeral rites among the Hebrews are frequently mentioned in the Sacred Writings, and they appear to have differed but little from those of the Orientals at the present day. The eyes of the deceased were closed by the nearest of kin, who gave the parting kiss to the lifeless corpse; thus it was promised to Jacob, when he took his journey into Egypt, that Joseph should put his hands upon his eyes; (Gen. 46. 4;) and accordingly we read that when Jacob expired, Joseph "fell upon his face, and kissed him." (Gen. 50. 1.) The corpse was then washed with water, and except when buried immediately, was laid out in an upper room, or chamber. (2Kings 4. 21; Acts 9. 37.) This washing was also common to the Greeks and Romans, in whose writings it is frequently mentioned. They then wrapped the body round with many folds of linen, and placed the head in a napkin; (John 11. 44;) thus, when Our Lord had cried with a loud voice, "Lazarus, come forth!" it is said, "the dead came forth, bound hand and foot, in

Laying out the Dead. From the Etruscan Tombs.

grave clothes." When Our Lord was risen, Peter, who went into the sepulchre, saw the linen clothes lie, and the napkin that had been folded round his head, as this was a separate thing, not lying with the linen clothes, but in a place by itself, at some distance from the rollers in which his body had been swathed, and folded up exactly in the state it was when first wrapped round his head. (John 20. 7.)

Sometimes after washing the corpse, the Jews embalmed it, by laying around it a large quantity of costly spices and aromatic drugs, in order to preserve it as long as possible from putrefaction and decay. (See **EMBALMING**.) This embalming was usually continued for several days. Thus Joseph of Arimathea and Nicodemus, "took the body of Jesus, and wrapt it in linen clothes, with the spices, as the manner of the Jews is to bury." (John 19. 40.)

3. The Orientals of the present day, like their ancestors, give way to the most extreme grief upon the loss of their relatives. As soon as a person dies, the females in the family set up a loud and sorrowful cry. They continue it as long as they can without taking breath, and the first shriek of wailing dies away in a low sob. After a short space of time, they repeat the same cry, and although the funeral speedily takes place, they continue the practice for eight days. They sit on the ground together in a circle, in a separate apartment, until the corpse is carried away from the house. The wife, or daughter, or other nearest relation of the deceased, occupies the centre, and each one holds in her hand a napkin. They also, as did the Jews, employ "mourning women," (Jer. 9. 17,) to chant the praises of the deceased; at a sign these are silenced, and the rest of the females then arise, and wrapping together their napkins, run about as if they were frantic, the nearest relation, however, continuing fixed in her position, tearing her hair, and wounding her face, arms, and breast with her nails. The funeral dirges sung by these hired mourners among the Jews generally began with "Alas, alas! my brother!" and were accompanied by musical instruments. (Jer. 48. 36.) Thus we read that on the death of the daughter of Jairus, when Jesus entered the governor's house, he saw the minstrels and the people wailing greatly. (Matt. 9. 23; Mark 5. 38.)

4. The custom of employing music to heighten public and private grief was not peculiar to the Jews; for we find the flute also employed at the funeral solemnities of the Greeks and Romans in their lamentations for the deceased. The same custom still obtains among the Moors in Africa, the Turks in Palestine, the Hindoos, the Egyptians, and the modern Greeks. "At all their principal entertainments," says Dr. Shaw, "the women welcome the arrival of each guest by calling out several times together, Loo! loo! loo! At their funerals and other mournful occasions, they repeat the same noise, only they make it more deep and hollow, and end each period with some ventriloquous sighs. The *αλαλαζοντας* *πολλα*, or 'wailing greatly,' as our version expresses it, (Mark 5. 38,) was probably performed in this manner. The women hired to act upon these lugubrious occasions, like the mourning women of old, are skilful in lamentation, and perform their parts with such proper sounds, gestures, and commotions, that they rarely fail to work up the assembly into some extraordinary pitch of thoughtfulness or sorrow."

The Rev. William Jowett, during his travels in Palestine, arrived at the town of Napolose, which stands on the site of the ancient Shechem, immediately after the death of the governor. "On coming within sight of the gate," he relates, "we perceived a numerous company of females, who were singing in a kind of recitative,

and beating time with their hands. On our reaching the gate, it was suddenly exchanged for most hideous plaints and shrieks; which, with the feeling that we were entering a city at no time celebrated for its hospitality, struck a very dismal impression on my mind."

5. Among other indications of grief at the death of friends, the Jews employed that of rending the garment, either the outer garment, or the inner, or both, from the neck in front down to the girdle. (Gen. 37. 34; Judges 11. 35.) They also sometimes walked with their shoes off, and with their heads uncovered; they concealed the chin with the outer garment, tore or dishevelled their hair and beard, and neglected to take any care of them; but they were forbidden to shave off their eye-brows. (Deut. 14. 1,2.) Oppressed with sensations of grief, they refused to anoint their heads, to bathe, or to converse with any one; they scattered dust and ashes into the air, or placed them upon their heads, or laid down in

Casting Dust on the Head. From the Monuments.

them. They fasted, abstained from wine, and avoided mingling in festivals. (2Sam. 1. 11,12; 3. 35; Jerem. 25. 34.) After the burial, those who lived near the mourners prepared food for them, which was needed at the conclusion of such a season of suffering and grief. The refreshments supplied were sometimes denominated *לחם אונים* *lachem onem*, "the bread of bitterness;" and sometimes *כוס תנחומים* *cos tunchumim*, "the cup of consolation." (Jerem. 16. 7; Ezek. 24. 17; Hosea 9. 4.)

We see in John 11. 31, that it was customary for the relatives to repair to the grave some time after the funeral to weep there, and this is still practised in the East. The Rev. John Hartley, in his *Travels in Greece*, states that, "One morning, while taking a solitary walk in Ægina, the most plaintive accents fell upon his ear, which he had ever heard. He followed in the direction from which the sounds proceeded, and they conducted him to the newly-made grave of a young man, cut down in the bloom of life, over which a woman, hired for the occasion, was pouring forth 'lamentation, and mourning, and woe,' with such doleful strains and feelings, as could scarcely have been supposed other than sincere."

6. The custom of putting tears into the *ampulla*, or *urnæ lachrymales*, so well known among the Romans, seems to have been more anciently practised among the Orientals, and particularly by the Hebrews. These lachrymal urns were of different materials, some of glass, some of earth, and of various forms and shapes. One of the mourners went about to each person in the company, at the height of his grief, with a piece of cotton in his hand, with which he carefully collected the falling tears, and which he then squeezed into the bottle, preserving them with the greatest care. They were placed in the sepulchres of the deceased as a memorial of the affection and sorrow of their surviving relations and friends. It is doubtless to this custom that the Psalmist alludes, (Psalm 56. 8,) "Put thou my tears into thy bottle." Mr. Roberts says, lachrymatories are unknown in the present day to the Hindoos, but a person in dis-

treas says, "Ah! Lord, take care of these tears, let them not run in vain."

7. The patriarchs buried their dead a few days after death; (Gen. 23. 2-4, 19; 25. 9; 35. 29;) but their posterity in Egypt seem to have deferred burial, and it is probable that Moses, in reference to this practice, extended the uncleanness contracted from a dead body to seven days, in order to make the people hasten the ceremony of interment. In a subsequent age, Professor Jahn says, the Jews imitated the example of the Persians, and buried the body very soon after death, (Acts 5. 6, 10,) but others think that it arose from a superstitious interpretation of Deut. 21. 22, 23, which enjoined that the body of one who had been hanged on a tree should be taken down before night. The interment of Tabitha, it would seem, was delayed on account of sending for Peter. (Acts 9. 37, 38.)

8. The funeral processions of persons of distinction were generally very magnificent; they were attended by all the friends and relatives of the deceased; and at the burial of a king, or a man of rank, all the nobles of the land accompanied the train. Thus we read, in the account given of the funeral of Jacob, "And Joseph went up to bury his father; and with him went up all the servants of Pharaoh, the elders of his house, and all the elders of the land of Egypt, and all the house of Joseph and his brethren, and his father's house; only their little ones, and their flocks, and their herds, they left in the land of Goshen. And there went up with him both chariots and horsemen; and it was a very great company." (Gen. 50. 7-9.)

The burial of inferior persons was attended by their friends, and the hired mourners also accompanied the corpse to the grave. The body was carried on an open bier or couch, as is the practice in the East at the present time. The son of the widow of Nain was thus borne to his grave without the city. The box, or coffin, ארון *aron*, was not used except in Babylon and Egypt.

Egyptian Bier. From the Monuments.

Mr. Carne says, "At Cairo, we met an Arab funeral; about twenty men, friends of the deceased, advanced under a row of palm-trees, singing in a mournful tone, and bearing the body. The corpse was that of a woman, neatly dressed in white, and borne on an open bier, with a small awning of red silk over it."

9. Mr. Jowett, in his *Christian Researches in Syria*, says, "The mourning of the Montenegrins bears a great resemblance to that of the Oriental nations. On the death of any one, nothing is heard, but tears, cries, and groans, from the whole family; the women in particular beat themselves in a frightful manner, pluck off their hair, and tear their faces and bosoms. The deceased person is laid out for twenty-four hours, in the house where he expires, with the face uncovered; and is perfumed with essences, and strewed with flowers and aromatic leaves, after the custom of the ancients. The

lamentations are renewed every moment, particularly on the arrival of a fresh person, and especially of the priest. Just before the defunct is carried out of the house, his relations whisper in his ear, and give him commissions for the other world, to their departed relatives or friends. After these singular addresses, a pall or winding-sheet is thrown over the dead person, whose face continues uncovered, and he is carried to church; while on the road thither, women, hired for the purpose, chant his praises amid their tears. Previously to depositing him in the ground, the next of kin ties a piece of cake to his neck, and puts a piece of money in his hand, after the manner of the ancient Greeks. During this ceremony, as also while they are carrying him to the burial-ground, a variety of apostrophes is addressed to the defunct, which are interrupted only by mournful sobs, asking him why he quitted them? why he abandoned his family? he whose poor wife loved him so tenderly, and provided everything for him to eat; whose children obeyed him with such respect, while his friends succoured him whenever he wanted assistance; who possessed such beautiful flocks, and all whose undertakings were blessed by Heaven."

10. The most simple tombs, or monuments, consisted, in early periods, of hillocks of earth, heaped up over the grave. In the East, when persons have been murdered, heaps of stones are raised over them as signs; and to this custom the prophet Ezekiel appears to allude. (39. 15.) The earliest sepulchres, in all probability, were caverns; afterwards, the burying-places of the common class of people were, without doubt, mere excavations in the earth, but those of higher rank owned subterranean recesses or caverns, which were, in some instances, the work of nature, and, in others, were cut out of the rocks. (Gen. 23. 2, et seq.; Josh. 10. 27; Isai. 22. 16; John 11. 38; 19. 41.) The entrance into these sepulchres was by a descent of a number of steps. Many of them consisted of two, three, and even seven apartments. There were niches in the walls, where they deposited the dead bodies. The interior chambers of sepulchres were deeper than the others, and were approached by a flight of descending steps. (2 Chron. 32. 33; Psalm 88. 6.) The portals of these tombs, which were kept carefully closed, were viewed with much veneration, and they were frequently quoted as symbols of the power of death; hence they were called by the Jews, "the gates of hell," not meaning, by the word "hell," the place of torment, but the invisible world, or residence of disembodied spirits. The doors of the sepulchres, and, indeed, the whole external surface, unless they were so conspicuous without it, as to be readily discovered and known, were painted white on the last month of every year, the month Adar. The object of this practice appears to have been to prevent those who came to the feast of the Passover from approaching them, and thus becoming contaminated. (Matt. 23. 27; Luke 11. 44.)

11. A custom prevailed among many ancient nations, of throwing pieces of gold and silver, together with other precious articles, into the sepulchres of those who were buried; the Jews did not adopt this custom; but, from Ezekiel 32. 27, it appears probable that they adorned the sepulchres of heroes with their swords and other military trophies. The prophet, foretelling the fall of "Meshech, Tubal, and all her multitude," says that they are gone down to hell, (or the invisible state,) with their weapons of war; and they have laid their swords under their heads.

12. From the accounts given of the funerals of Jacob and Joseph, as well as from other passages of Scripture, it is evident that great importance was attached to the

circumstance of being buried in the family sepulchre. Indeed, kings were often more solicitous about their tombs than their palaces, which gives much force to the denunciation of Isaiah against the haughty rulers of Babylon: "All the kings of the nations, even all of them, lie in glory, every one in his own house. But thou art cast out of thy grave like an abominable branch, and as the raiment of those that are slain, thrust through with a sword, that go down to the stones of the pit; as a carcase trodden under feet. Thou shalt not be joined with them in burial, because thou hast destroyed thy land, and slain thy people: the seed of evildoers shall never be renowned." (Isai. 14. 18 20.) The deprivation of sepulture was also denounced against Jezebel, as a punishment; and we find that the prediction was fulfilled, although Jehu, by whose command she was slain, directed his servants to give her interment. (2Kings 9. 34,35.) The family sepulchres of the Jews appear to have been generally contiguous to their houses, and often in their gardens: such was the sepulchre in which the body of Our Lord was deposited.

13. The Jews used "great burnings" for their kings, composed of large quantities of all sorts of aromatics, of which they made a fire. In these they were wont to burn the clothes, armour, and other things which belonged to them. Thus it is said of Asa, that they made a very great burning for him, (2Chron. 16. 14,) which could not be meant of his corpse in the fire, for it is said, in the same verse; that they buried him in his own sepulchre. It is stated in our version, (1Sam. 31. 12,) that the bodies of Saul and his sons were taken to Jabesh and burnt there; but the Chaldee, and some other versions, read, "And they burnt or kindled a lamp over them there, as they are accustomed to burn over kings." Upon which a Rabbi observes, that this has reference to a custom delivered down from their ancestors, of burning the beds and other utensils of the dead, upon their graves, or to the burning of spices over them, as was done at the funeral of Zedekiah. (Jerem. 34. 5.)

14. The Israelites were accustomed to honour in a peculiar manner the memory of those kings who had reigned over them uprightly. The proper place of interment was in Jerusalem. There, in some appointed receptacle, the remains of their princes were deposited, and from the circumstance of this being the cemetery for successive rulers, it was said, when one died and was so buried, that he was gathered to his fathers. Several instances, however, occur in the history of the kings of Israel, wherein, for various reasons, they were not thus interred with their predecessors, but in some other place in Jerusalem. So it was with Ahaz, who, though brought into the city, was not buried in the sepulchres of the kings of Israel. It was doubtless with a design to make a suitable impression on the minds of their kings while living, that such distinctions were made after their decease. They might thus restrain them from evil or excite them to good, according as they were fearful of being execrated or desirous of being honoured when they were dead. The Egyptians had a similar custom which was observed towards all persons; but received very particular attention as far as it concerned their kings. As soon as a man was dead he was brought to trial. The public accuser was heard; if he proved that the deceased had led a bad life, his memory was condemned, and he was deprived of the honours of sepulture. The public peace was interested in the lives of their sovereigns during their administration, and, as death terminated all their actions, it was then deemed for the general welfare, that they should suffer an impartial scrutiny by a public trial, as well as the meanest subject. See **BALANCE OF JUDGMENT.**

15. The burning of dead bodies in funeral piles was a custom prevalent among the Greeks and Romans, as it is in India to this day; upon which occasion they threw frankincense, myrrh, cassia, and other fragrant articles into the fire, and this in such abundance, that Pliny represents it as a piece of profaneness to bestow such heaps of frankincense upon a dead body, when they offered it so sparingly to their gods. Two of the thirty-two charities of the Hindoos are to burn the bodies of those whose relations cannot do it, and to pay for the beating of the tom-toms to the place of burning. It is therefore considered a work of great merit to perform the funeral rites for a respectable stranger, or for those whose relations are not able to meet the expenses. The custom of burning bodies did not prevail among the Jews, for although the prophet Amos speaks of the burning of bodies, (6. 10,) it is evident from the context, that this was in the time of a great pestilence, not only when there were few to bury the dead, but when it was unsafe to go abroad and perform the funeral rites.

16. It was usual to honour the memory of distinguished persons by a funeral oration or poem: thus David pronounced one over the grave of Abner. (2Sam. 3. 33,34.) Upon the death of any of their princes who had distinguished themselves in arms, or who, by the promotion of civil arts had merited well of their country, they used to make lamentations or mournful songs for them; and we may infer from 2Chron. 35. 25, "Behold they are written in the Lamentations," that they had certain collections of this kind of composition. The author of the Book of Samuel has preserved the beautiful and affecting elegy which David composed on the occasion of the death of Saul and Jonathan; but we have no remains of the mournful poem which Jeremiah made upon the premature death of the pious king Josiah.

17. In order to do honour to the memory of the dead, sepulchres were sometimes distinguished by monuments. Thus Jacob erected a pillar upon the grave of his beloved Rachel. (Gen. 35. 20.) The monument shown as Rachel's tomb in the vicinity of Bethlehem is a modern Turkish structure, which may, perhaps, indicate the true place of her interment. In later times, inscriptions appear to have been placed on tombstones, denoting the persons who were there interred. Such was the title or inscription discovered by Josiah, which pointed out the burial-place of the prophet, who was sent from Judah to denounce the Divine judgments against the altar which Jeroboam had erected more than three centuries before. Simon Maccabæus built a splendid monument at Modin in honour of his father and his brethren. (1Macc. 13. 25-30.) It was raised of square stones and was very high. The delineation of some parts of this monument is still to be seen upon some of the Asmonean coins.

18. The modern Jews call what we term a churchyard or cemetery, "the house of the living," to show their belief of the immortality of the soul and of the resurrection of the body; and when they come thither bearing a corpse, they address themselves to those who lie there, as if they were still alive, saying, "Blessed be the Lord who hath created you, fed you, brought you up, and at last, in his justice, taken you out of the world. He knoweth the number of you all, and will in time revive you. Blessed be the Lord who causeth death, and restores life." The body is then put on the ground, and if it be that of a person of consideration, a funeral oration is made over him; they then walk round the grave reciting a prayer which they call the righteousness of judgment, because therein they return thanks to God for having pronounced an equitable judgment concerning the life and person of the deceased; it com-

2 H

mences with the words, (Deut. 32. 4,) "He is the rock, his work is perfect;" a small quantity of earth is then put under the head of the corpse, and the coffin is nailed down. If it be a man, ten persons make ten turns about him, and say a prayer for his soul; the nearest relation tears a corner of his clothes, the body is then lowered into the grave, and they cry to him, "Go in peace," or as the Talmudists say, "Go to peace." The nearest relations first throw earth on the body, and after them all present do the same. This done, they retire walking backwards, and before they leave the burying-ground, they pluck bits of grass three times, and cast them behind their backs, saying, "They shall flourish like grass of the earth." (Psalm 72. 16.)

19. The form of epitaphs used by the modern Jews is frequently thus: "This stone is placed at the head of —, the son of —, who was buried on such a day, in the year —. May he rest in the garden of Eden, with all the righteous who have been there from the beginning. Amen, Amen, Selah." Or, "This monument, or this pillar, is erected near the head of the most illustrious, most holy, and most pure virgin —, the daughter of —, who died in good reputation in the month —, in the year —. May her soul be buried in the garden of Eden. Amen, Amen."

20. The following graphic description of the Jewish burial-ground at Prague, is from a recent publication, the Rev. Mr. Gleig's *Germany, Hungary, and Bohemia*: "From the Synagogue we passed into the old cemetery, which lies contiguous to it, and looked round upon a picture of desolation more stern than the dream of the poet has perhaps ever conjured up. Extensive as the plot of ground is, there is not, throughout its compass, one foot of level soil. Graves trodden partially down, pointed grave-stones that are sloping and falling in every direction,—these, with a wilderness of alder-trees, which, whether planted by the hand of man, or sown by the winds of heaven, overshadow the crumbling tombs, constitute altogether a fitting monument to the desolate condition and broken fortunes of the Hebrew race. Yet may you easily enough distinguish, from the devices that are engraved on each of them, the rank and condition of many of those who sleep beneath these grave-stones. The lion of Judah, the upraised hands of the house of Aaron, the Nazarite's bunch of grapes, are all here; while the graves of the Rabbins are, as elsewhere, adorned, each with a sort of cenotaph. The Jews have, for some time, ceased to bury in this mass of human dust. It was filled, and filled, till it could contain the bones of no more; and now their dead are carried to a new cemetery, removed a short distance beyond the city walls."

BURNING. Burning alive is a punishment of ancient date, which was not originated, though retained, by Moses. Thus, when Judah was informed that his daughter-in-law Tamar was pregnant, he condemned her to be burnt, (Gen. 38. 24,) although the sentence was not executed. Burning was commanded to be inflicted on the daughters of priests who should prove unchaste, (Levit. 21. 9,) and upon a man should marry both the mother and the daughter. (Levit. 20. 14.) The Rabbins suppose that this burning consisted in pouring melted lead down the throat, a notion which may be considered merely as one of their dreams. Many ages afterwards, we find the Babylonians or Chaldeans burning certain offenders alive, (Jerem. 29. 22; Dan. 3. 6,) and this mode of punishment was not uncommon in the East, even in the seventeenth century. Sir J. Chardin says, "During the dearth in 1688, I saw ovens heated on the royal square in Ispahan, to terrify the bakers, and deter them from deriving advantage from the general distress."

Unhappily our own history affords instances, but of too recent date, of this cruel and dreadful punishment.

BURNT-OFFERINGS. See SACRIFICE.

BURNING-BUSH was that in which Jehovah appeared to Moses at the foot of Mount Horeb. (Exod. 3. 2.) Such was the splendour of the Divine Majesty that its effulgence dazzled his sight, and he was unable to behold it, and in token of humility, submission, and reverence, "Moses hid his face." When the Hebrew lawgiver, just before his death, pronounced his blessing upon the chosen tribes, he called to mind this remarkable event, and supplicated in behalf of the posterity of Joseph, "the good will of Him that dwelt in the bush." (Deut. 33. 16.) These last words of Moses seem to indicate that there was in this remarkable transaction something of an allegorical or mystical import, though there are various opinions as to the particular thing it was designed to shadow forth. "This fire," says Bishop Patrick, "might be intended to show that God would there meet with the Israelites and give them his Law in fire and lightning, and yet not consume them."

BUSHEL, *μοδιος*, (Matt. 5. 15.) This was a measure for dry goods, containing about a pint less than a peck English measure. The modius was one-sixth part of the Attic medimnus.

BUTTER. Whenever butter is mentioned in the Scriptures, cream, or the kind of liquid butter still common in the East, is to be understood. (Job 20. 17; 29. 6; Prov. 30. 33.) The ancient way of making it in Arabia and Palestine was probably nearly the same as is still practised by the Bedouin Arabs and Moors in Barbary, which is thus described by Dr. Shaw: "They put the milk or cream in a goat's skin turned inside out, which they suspend from one side of the tent to the other, and then pressing it to and fro in one uniform direction, they quickly occasion the separation of the unctuous or wheyey parts." Thevenot also describes the method employed at Damascus: "They tie a stick with both ends to the hind-feet of a goat's skin, which serves instead of a leathern bag; that is, each end of the stick to one foot, and the same with the fore-feet, that these sticks may serve as handles; they then put the milk into this bag, close it carefully, shake it about, holding by the two sticks; after a time add some water, and then shake it as before till butter comes."

The butter is carried to market in the same goat's skin in which it is churned. In consequence of this custom, it becomes necessary to melt and strain it, in order to clarify it; a process by which it acquires a certain rancid taste, disagreeable for the most part to strangers, though not to the natives. To this custom of melting the butter, Zophar seems to allude, in his description of the state and portion of a wicked man: "He shall not see the rivers, the floods, the brooks of honey and butter." As the flowing of honey from the comb into the vessel in which it is to be kept, may, by a bold figure, be compared to a little river; so may clarified butter when poured into the jars in which it is preserved for use. The wicked man, says Zophar, shall not see the rivulets, much less the rivers, still less the torrents of honey and butter, as it might be rendered, which the righteous hope to possess. In our excellent translation, the beauty of the climax in this instance, however, is lost; for instead of continuing to rise, it sinks in the close ending with brook, after mentioning rivers and torrents; but in the original it is equally striking and well conducted.

Roberts says, "It is customary in India to use the

following expressions to denote great prosperity: 'The man is so rich, he washes himself with *ney*,' clarified butter. 'Oh the charitable man! milk and honey accompany his feet.' 'So great was the profusion, the honey caused the feet to slip; the creepers danced, the trees nodded their heads, and milk from the dwellings of the cattle, flowed in streams through the streets.'

BY-WAYS. There are roads in Palestine, but it is very easy to turn out of them and go to a place by winding about over the lands, when such a course is thought to be safer. Dr. Shaw mentions this in Barbary, where he says they found no hedges, or mounds, or enclosures, to retard or molest them. To this Deborah doubtless refers in Judges 5. 6, "In the days of Jael, the highways were unoccupied, and the travellers walked through by-ways," or "crooked ways," according to the margin. Bishop Pococke says that the Arab who conducted him to Jerusalem took him by night, and not by the high road, but through the fields; "and I observed," he remarks, "that he avoided, as much as he could, going

near any village or encampment, and sometimes stood still, as I thought, to hearken."

Travelling in Palestine has, it appears, been deemed insecure, both in ancient and modern times; the remarks of Professor Robinson, who visited the country in 1838, in reference to this subject are interesting.

"When we arrived at Jerusalem war was raging between the Druses and the forces of the Pasha. The city was full of rumours; no one knew where Ibrahim Pasha was; and it was said his troops had been beaten. In this state of things the unquiet spirits of the land began to rouse themselves; several murders and robberies were committed on pilgrims and travelling merchants; and for a time it was doubtful whether we should be able to travel at all in the country without an armed guard. But soon the certain news arrived that Ibrahim was at Damascus and had defeated the Druses. After this, all was again still; and we travelled through the length and breadth of the land without fear or accident; indeed, with the same feeling of security as in England or Germany."

CAB, כב a Hebrew measure for dry articles. (2Kings 6. 25.) A cab contained two pints and five-eighths English corn measure. There was also a measure for liquids, of similar name, but its capacity is uncertain.

CABBALA. The word קבלה *kabbalah*, signifies tradition, doctrine, or reception, and anciently denoted all the interpretations of Scripture which the Jews pretended to have received from Moses and Ezra; but it is now restricted to signify a mysterious kind of science, comprising mystical interpretations of Scripture, and metaphysical speculations concerning the Deity, said to have been handed down by a secret tradition from the earliest ages. It consists in searching for abstruse significations of a word in Scripture, from which are borrowed certain explanations, by combining the letters which compose it.

The Jews divided the Cabbala into three kinds:—(i.) The *Gematric*, which consists in taking the letters of a Hebrew word for ciphers or arithmetical numbers, and explaining every word by the arithmetical value of the letters of which it is composed. (ii.) *Notaricon**, which consists in taking every particular letter of a word for an entire diction; and, (iii.) *Themurah*, which consists in making different transpositions, or changes of letters, placing one for the other, or one before the other, much after the manner of anagrams. Cabbala, therefore, is used to denote these mystical interpretations of Scripture, in which the Jewish Rabbis loved to indulge; mixed up in it there is much of a wild Oriental philosophy, with somewhat borrowed from the systems of Pythagoras and Plato.

Many writers have referred to this subject; but, in order to form a more correct notion, we shall enter upon it at some length, and exhibit a few specimens of the mode of interpretation adopted; as this mystical exposition was the occasion of most of the heresies amongst the early Christians.

The Jews viewed the Sacred Writings as intended not only to correct the heart but to enlighten the mind, and therefore supposed them to contain everything that can be included in the term Knowledge; hence they endeavoured to engraft their philosophical opinions on the text, and were firmly persuaded that the inspired writers

* The reason why the Jews use the Greek term *Notaricon*, in reference to the Cabbala, is, because it was practised by the Alexandrian Jews, and was mixed up with the philosophy of Pythagoras and Plato.

must have had a reason for the choice of particular words, their position in sentences, and even for chapters, between which there is no connexion. All this they endeavoured to discover, and they succeeded or failed according to the measure of their respective capacities, or according to the nature of the truths of which they were in search. They numbered all the verses of each book and section of the Law and the Prophets, and placed the amount at the end in numeral letters, or in some symbolical word formed out of them; they also marked the middle verse of each book, and noted the verses where something was supposed to be forgotten; the words they believed to be changed; the letters, which they deemed to be superfluous; the repetition of the same verses; the different reading of the words which are redundant or defective; the number of times that the same word is found at the beginning, middle, or end of a verse; the different significations of the same word; the agreement or conjunction of one word with another; what letters are pronounced; and what are inverted, together with such as hang perpendicularly; for the Jews cherish the Sacred Book with such reverence, that they make a scruple of changing the situation of a letter which is evidently misplaced, supposing that some mystery has occasioned the alteration. In their phylacteries, they asserted, were contained the ten Sephiroth, or tables of the attributes of God*, each of which was squared with the Tetragrammaton, or four sacred letters of the ineffable Name†.

All these studies and inquiries were called searches, which term was also applied to the instruction of the people by the rulers of the synagogue, whose custom it was to teach the people sometimes by way of dispute and conference, sometimes by question and answer, sometimes by continued discourses, like sermons. All these different modes of teaching they called by the general name of searching; the discourse they called a search; and he that made it, a searcher, from a Hebrew word

* These Sephiroth were sometimes drawn in ten circles, on the circumference of each of which was written some mystical word. They bear a striking analogy to the triads of Plato, called *vous*, *σοφία*, and *λογος*.

† The word *יהוה*, or the ineffable, incommunicable name of God, is never pronounced by the Jews, being considered too sacred for mortal lips to utter. The use of the Greek word Tetragrammaton, or the name of four letters, originated with the Alexandrian Jews; others called it *Shem-hamphorash*, the name explanatory.

which signifies to dive into the sublime, profound, mystical, allegorical, and prophetic senses of Holy Scripture. St. Paul asks the Corinthians, "Where is the profound searcher of this world?" evidently in allusion to this custom. It is also plain, from the Epistle to the Hebrews, that the Apostle well understood this mystical method. In order to afford an idea of this mode of interpreting, we shall adduce a few examples:—"The Holy Law, or Pentateuch, begins with the letter \beth beth." Why? "Because," says the son of Kafra, "this letter, as a numeral, represents the number two, and the Divine writer wished to indicate that there are two worlds; one the material, in which we move and exist, the creation of which he was about to describe; the other, the world of bliss, which we may enjoy hereafter." "Because, also," says another Rabbi, "the figure of this letter \beth represents a space inclosed on three sides, namely, the anterior, lower, and upper parts; one side only is left open: intimating that such a frail creature as man must not, dare not, search into what existed antecedent to the creation, nor into what is above or beneath him. All this is inclosed or interdicted; but there is still a wide open space left for his searching mind, namely, from the creation onward, in as far as God has chosen to reveal it in his Holy Word, or has laid it open to our view in the great and wonderful book of nature."

"The final letters," says one of the Talmudists, "of the three first words of the Law, compose the word אמת *ameth*, signifying truth, to indicate that the only object of the Holy Book is truth. This the divine Psalmist has distinctly expressed, by saying, 'The beginning of thy word is truth.' (Psalm 119. 160.)" They remarked, also, that the letters composing this word אמת *ameth*, are taken from the beginning, middle, and end of the alphabetical series, because they say truth ought to be the beginning, middle, and end of all our thoughts and actions, and the object of all our pursuits. They called truth the seal of God, because He has impressed it on all his works; all of which proclaim his power, intelligence, and goodness.

From the first chapter of Genesis, it would appear, that the heavens and the earth were made on distinct days; but from the fourth verse of the second chapter, it appears that they were made on the same day. Is this a contradiction? "No," said the Hebrew philosophers; "heaven and earth, and everything they contain, were created at once by the Divine will; but their development took place at different periods." To familiarize this transcendent truth to our minds, they compared the Divine fiat to the act of one who throws a handful of seeds of various kinds into the ground. The act of sowing is instantaneous and one; but the growth and development of the plants are successive.

"Let the waters be gathered together:"—the Hebrew verb corresponding with the English words, "let there be gathered together," is יָקַו *yekkavu*. As there are many Hebrew words expressive of the same action, why did the inspired writer choose this term? "Because," says Rabbi Aba, "he wished to indicate 'that God gave them (the waters) a measure:' that is to say, the primitive קָו *kav*, from which the verb is derived, signifies a straight, or levelling line, and the inspired writer wished to intimate, that the Creator impressed the waters with that peculiar property of always keeping their level; and he therefore chose a word including the idea of gathering together and making level."

In the 20th and 21st verses of the first chapter of Genesis, it is asserted that the birds were produced from the waters; yet, in the nineteenth verse of the second chapter, it is said they were produced from the ground or earth; how is this to be reconciled? "Because," says

a Rabbi, "this apparent contradiction is to teach us that birds were formed from a matter, partaking both of the properties of water and of earth, namely, the mud or slime;" or, rather, that the Almighty had given the feathered race a different organization, suitable to the element in which they were designed to move.

"And thou shalt grope at noon-day as the blind gropeth in darkness." (Deut. 28. 29.) The word בְּחֹשֶׁךְ *baaphilah*, "in darkness," appears redundant. This, Rabbi José remarked: "All my days did I feel pain at not being able to explain this verse. For what difference can it be to the blind man, whether he walketh in the light or in the dark? And yet the sacred penman would not have put down a word unnecessarily. What then does it mean?" This the Rabbi did not know, and it gave him great pain. "Till one night," continues the sage, "I met a blind man with a lighted torch in his hand. 'Son,' said I, 'why dost thou carry that torch—thou canst not see its light?'—'Friend,' replied the unfortunate man, 'true it is I cannot see it, but others can; as long as I carry this lighted torch in my hand, the sons of men see me, take compassion on me, apprise me of danger, and save me from pitfalls, from thorns and briers.'" The Rabbi was then satisfied that the apparently superfluous word was intended to depict the greatness of the calamities that were to befall the Jewish nation. Its unfortunate members were not only to grope about like the blind, but like the blind in darkness.

Such, then, is the nature of the inquiries or searches, such their moral tendency, and such the mode of interpretation adopted by those who pursued them. Though the inferences they drew are not all of equal interest or probability, yet it cannot be doubted but their motives were good. After all, they attached no such vast importance to this species of study, as is evident from their own rule, that "the text does not depart from its simple and obvious meaning;" and from their asserting, likewise, that "we must not lean or depend upon mere inference." They merely considered it as a noble and sublime science, conducting men, by an easy method, to the profoundest truths. There are many works of this kind extant, of which the Rabboth, Medrashim, and Zohar, (written by Simon, the son of Joachai, who lived a little before the destruction of Jerusalem by Titus,) are among the most celebrated.

The vague fancies of the Gnostics and other early heretics, and the application of Cabbala to the purposes of astrology and magic, will be found discussed in the articles Gnosticism and Magic.

CABUL, כַּבּוּל the name of a district comprising twenty cities in the land of Galilee, of which Solomon made a present to Hiram, king of Tyre, in acknowledgment of his great services in building the Temple. (1 Kings 9. 13.) These cities, on being viewed by Hiram, being displeasing to him, he called the country the land of Cabul, which, Josephus says, in the Phœnician tongue, signifies that which does not please. But others understand the word to signify a boundary, as it was the tract of land which bounded Lower Galilee.

CADUMIM. See KISHON.

CÆSAR, Καίσαρ , the surname of the Julian family, at Rome, was applied, after the death of Julius Cæsar, to his successors in the empire, as the customary title of dignity; at a later period it became the title of the heir apparent. In the New Testament, the title Cæsar is applied to Augustus, (Luke 2. 1,) Tiberius, (Luke 3. 1.) Claudius, (Acts 11. 28,) and Nero. (Acts 25. 8.)

CÆSAREA. See CEBAREA.

CAGE, כלוב *kelub*. We have no information in the Scriptures whether the Hebrews kept singing birds in cages. That such are not intended in Jeremiah 5. 27, "As a cage is full of birds, so are their houses full of deceit," is evident from the fact that the cage is described as full. It seems most probable that the cage was one in which birds were kept to be fattened for eating; this was, no doubt, the view of some of our translators, as we read "coop," in the margin, and it is thus understood in the Targum, which renders the word "a house or place of fattening." It may, perhaps, signify a cage in which birds taken by snares or hawking were put. The Seventy, by rendering it a snare, would seem to understand that it was a kind of decoy, in which birds were put to ensnare others, until with those already in it, and others thus taken, it was quite full. The word *kelub* is generally understood to imply a woven basket, and in Amos 8. 1,2, means a fruit-basket.

CAIAPHAS, also called Joseph, was high priest of the Jews at the time Our Saviour was crucified. He married a daughter of Annas, who is also called high priest. When the priests deliberated on the seizure and death of Jesus Christ, Caiaphas declared that there was no room for debate on the matter, because "it is expedient for us that one man should die for the people, and that the whole nation perish not." (John 11. 49,50.) This sentiment was a sort of prophecy which God suffered to proceed from the mouth of the high priest on this occasion, importing that the death of Jesus, though not by his intention, would be for the salvation of the world. When Judas had betrayed Jesus, he was first taken before Annas, who sent him to his son-in-law, Caiaphas, who probably lived in the same house. The priests and doctors of the Law assembled here in order to judge Our Saviour, and to condemn him. The depositions of certain false witnesses being insufficient to justify a sentence of death against him, and Jesus continuing silent, Caiaphas, as high priest, said to him, "I adjure thee by the living God, that thou tell us whether thou be the Christ, the Son of God?" To this adjuration, so solemnly made by the superior judge, Jesus answered, "Thou hast said; nevertheless I say unto you, hereafter shall ye see the Son of man sitting on the right hand of power, and coming in the clouds of heaven." On hearing these words, Caiaphas rent his clothes, saying, "He hath spoken blasphemy; what further need have we of witnesses? Behold, now ye have heard his blasphemy, what think ye? They answered and said, He is guilty of death." (Matt. 26. 63-66.) As the power of life and death was not, at this time, in their hands, they conducted him to Pilate, that he might confirm their sentence, and order his execution. Caiaphas was of the sect of the Sadducees. Two years after the crucifixion of Our Lord he was deposed by Vitellius, governor of Syria.

CAIN, קין the first-born among men; the eldest son of Adam and Eve. The name signifies acquisition, and it has been the opinion of many commentators that Eve thought in bringing him forth she had given birth to that seed which should bruise the serpent's head. Yet she would hardly have called her son "Jehovah" unless she had done so from inspiration, and that she was not inspired her error proves. We shall, therefore, find it preferable to take the sense of our translation, which renders the words, "I have gotten a man from the Lord." (Gen. 4. 1.) It would appear from the phrase, "and she added to bear," which is the exact rendering of the words *וַתֵּלֶד וַתִּשֶׂה* *valotseph laledeth*, that Cain and Abel were twins.

The circumstances of Abel's murder, and the difference of the sacrifices offered by the two brothers, have been noticed under the head ABEL. Faber and Kennicott, and the best critics, uniformly represent Abel as adding the piacular to the eucharistic offering, and thus acknowledging both his sin and the necessity of an atonement. The conversation which Cain had with Abel his brother, out of which arose the dispute so lamentably terminated in the death of the latter, is not given us in the sacred text, nor are any of the Jewish traditions (of which there are not a few on this subject,) entitled to much attention. The Jerusalem Targum claims to give the whole of the dialogue, and represents Cain and Abel as types of the Pharisee and the Sadducee, the latter denying, the former asserting, the supreme government of God, the existence of separate spirits, and a future state of rewards and punishments. "And because of these things they contended on the face of the field, and Cain rose up against Hebel his brother, and struck a stone into his forehead and killed him." The voice of God was immediately heard calling Cain to account for this proto-murder, and a double portion of the common curse was laid upon him. Cain, in the agony of too late remorse, called out to the Lord, "My punishment is greater than I can bear;" or as the margin more correctly renders it, "Is my iniquity too great to be forgiven?" He seems to have been apprehensive, also, that vengeance would overtake him from some of his brethren, and in order to prevent this, we find it stated, (Gen. 4. 15,) "And the Lord set a mark (תִּטָּח *oth*) upon Cain lest any one finding him should slay him." The question as to what this mark was has exercised, to no small extent, the ingenuity of commentators. One maintains that he became paralytic, another that one of the letters composing the sacred name was visibly impressed upon him, while a third insists that it was a long horn growing out of his forehead. It may be remarked, however, as Dr. Shuckford observes, that the word *oth* signifies rather a sign or token than a mark, and may mean that God appointed some token to Cain of his protection, as He afterwards appointed the rainbow to Noah. Subsequently to this, we find Cain dwelling in the land of Nod, a country to the east of Eden, and there he built a city which he called Enoch, or Chanac, after the name of his first-born. With this notice the history of Cain, as given to us in the sacred records, terminates, and though by calling his son Chanac, (*consecrated* or *initiated*,) Cain may be supposed to have effectually repented, yet we find the progeny of Cain living in forgetfulness of God, and exhibiting how deep was that depravity which through him they had derived from Adam. Cain himself, also, according to Josephus, (*Ant. Jud.*) lived no very godly life in his newly-built city. "He aimed only to procure everything that was for his own bodily pleasure, though it obliged him to be injurious to his neighbours. He augmented his household substance with much wealth by rapine and violence; he excited his acquaintance to procure pleasures and spoils by robbery, and became a great leader of men into wicked courses. He also introduced a change into that way of simplicity wherein men lived before, and was the author of measures and weights."

The Arabs, whose fondness for rhyme is remarkable, call Cain and Abel, Abel and Kabel, and an Arabic tradition relates that the mark set by God upon Cain was an immunity from natural accidents, so that the fire could not burn him, nor water drown him, the thunder-bolt could not blast him, no weapon could wound him, nor any wild beast tear him. Kennicott; Shuckford; Faber.

CAKES. The Hebrews used various sorts of cakes, which was the form usually given to Oriental bread. (2Sam. 6. 19; 1Kings 17. 12.) They also offered cakes in the Temple made of wheat or of barley, kneaded sometimes with oil and sometimes with honey. For the purposes of offering, these cakes were salted, but unleavened. If the cakes which were offered were baked in an oven, and sprinkled or kneaded with oil, the whole was presented to the priest, who waved the offering before the Lord; he then took so much of it as was to be burned on the altar, and threw it into the fire, and kept the rest himself. (Levit. 2. 4.) If the offering were a cake kneaded with oil, and prepared in the frying-pan, as our version terms it, the cake was broken, and oil was poured on it; the priest then took a handful of the fragments, which he threw on the altar fire, and the rest was his own. Cakes or loaves offered with sacrifices of beasts, were kneaded with oil, and the Law regulated the quantity of meal, wine, and oil, for each kind of victim. See BREAD.

The Egyptians made offerings of cakes to their deities on behalf of deceased relatives, as may be seen in Professor Rosellini's collection. On a mummy case a line of hieroglyphics has been thus read: "This is of Reat-mou, lord of the two regions,—chief, great god; lord of heaven, manifest in the solar disk's abode, lord of—, president of—. That they will give offerings of an abode provided with cakes, geese, oxen, frankincense, for the Osirean lady of the house, priestess for Amon-re, chief of the gods." On other parts of the case the deity is supplicated, that he will give an abode provided with bread, flesh, fowl, utensils, clothes, frankincense with perfumes, to the deceased.

In Jeremiah 7. 17, we read of the Israelites kneading their dough "to make cakes to the queen of heaven," which appears to have been, from early times, an idolatrous practice, and was also the custom among the Greeks and Romans.

CALAH, כַּלָּח a city mentioned in Genesis 10. 12. Some writers imagine that it stood on the Lycus, a tributary of the Tigris, the country about which, according to Strabo, bore the name of Calachene. "But according to the opinion of some learned men," Rosenmüller remarks, "Calach is not different from Chalach*, whether Salmanassar, king of Assyria, transplanted a colony of Israelites. (2Kings 17. 6; 18. 11.) The name Chalach is given among the Syrians to a town which is also termed by them Chulon, and by the Arabs, Cholwan or Holwan. The Arabian geographers describe it as the most north-easterly city of Arabian or Babylonian Irak, in the direction of Persia, at the foot of the mountain ridge which at present separates the Turkish from the Persian territory. This place would have been one of the most southerly of ancient Assyria, whereas the Calachene of the ancients, was one of the northernmost provinces of that empire. We, therefore, take Calach and Chalach to be two different places, the former of which gave the name to the province of Calachene, but the latter Holwan still retains its ancient name among the Assyrians."

CALAMUS, קָנֶה *kaneh*. This plant, styled also "sweet cane" by our translators, (Jerem. 6. 20,) is mentioned in Exodus 30. 23, and other places, as affording a perfume. By Gesenius and others it is thought to be the *Acorus calamus* of Linnæus, or the *Calamus odoratus* of Pliny, which grows in moist places in Egypt and Judæa, and in several parts of Syria, bearing from the root a knotted stalk, containing in its cavity a soft

* Called Halah in the English version.

white pith; it has an agreeable aromatic smell, and when cut, dried, and powdered, it forms an ingredient in the richest perfumes. Dioscorides, however, describes under the same name a species of cyperus, which has odoriferous roots used as a perfume by the people of India, which better agrees with the expression of the prophet Jeremiah, (6. 20,) "the sweet cane from a far country." Though this latter is most probably the one intended, we have no means of identifying it, and therefore present a representation of the *Acorus calamus*, which, as above stated, has some respectable authorities in its favour.

Acorus calamus.

CALDRON, כִּי *ser*. We read in Leviticus 6. 28, of "a brazen pot;" and it is very probable that the Hebrew utensils were similar to those kitchen requisites found at Herculaneum and Pompeii, which are mostly of bronze, and generally rest upon feet with handles inserted into eyes or rings attached to the vessels. Vessels for culinary purposes appear anciently to have been made of brass; of this we have clear proof in the Egyptian monuments, where round metal pots are seen employed for a variety of purposes.

Mr. Roberts says, in the East at the present day, the wealth of a person is estimated by the number of brass pots which he possesses.

CALEB, a celebrated Jewish warrior, of the tribe of Judah; who, when sent together with Joshua and others to explore the land of Canaan, gave a faithful report of the goodness of the land. In reward for this, he was, with Joshua, exempted from the curse denounced upon the existing generation, was permitted to enter the land, and had Hebron given to him for an inheritance. (Josh. 14. 6-13.) Caleb is thought to have survived Joshua. A district belonging to the tribe of Judah was called after his name. (1Sam. 30. 14.)

CALF. Our notice of this domestic animal must be directed to it solely as an object of idolatry. The first time we find any mention of religious worship being paid to a calf is in Exodus, ch. 32; and the sin was then awfully heightened by the fact, that Moses was at that very time standing in the mount before God. Under the article AARON, will be found a representation of the Egyptian Ox-God Mnevis, from whose worship, and not from that of Apis, the Jews borrowed their similar idolatry. The Jews, who in later days were believers to no small extent both in spells and incantations, and in the physical activity of evil angels, believed generally that Aaron told the exact truth when

he said, "I cast them (the earrings) into the fire, and there came out this calf;" that is, that the gold was not cast in a mould, but merely melted, and that Satan caused it to assume that form, after which Aaron finished it with a graving tool. The calf, however made, was either reduced to powder which would require some chemical preparation, or merely beaten into fine leaf and strewed upon the water. This water, Moses caused the children of Israel to drink. The worship which was on this occasion severely visited by the Divine displeasure, was subsequently restored by Jeroboam; he set up two golden calves, one in Dan and one in Bethel, and they continued to be a snare to the people of Israel until the captivity.

The bull, Mnevis or Mne, for *vis* is merely a Greek termination, was sumptuously lodged in the city On, or Heliopolis, and this is all that we find recorded of him in ancient writers. Far more ancient than Apis, the era of his consecration is lost, and perhaps for ever. The only circumstance which is of importance, save that the Israelites fell into his worship, is, that he appears to have represented the Zodiacal sign which was depicted yellow, while, by a curious anomaly, Apis, whose attributes all coincide with those of the sun, was black. The worship paid to him, though lasting till the downfall of the Egyptian hierarchy, gradually diminished before the more important and popular rites of Apis, and little is said of Mnevis in history.

It is the opinion of Bryant, an opinion supported by proofs far too numerous to be transferred to this work, that the origin of this peculiar form of idolatry, is to be sought for in the Ark. Osiris was enclosed in a bull, the bull was said to be the sacred ship Baris; and it can scarcely be a matter of doubt, that the ox and the ark were identical. This theory accounts satisfactorily both for the antiquity and the extent of ox worship, but the cause of this identity, the reasons for which the ox was chosen to represent the ark, seem not so obvious. The horns of the sacred bull, calf, or heifer, are always, or almost always, made to meet at the top, so as to form

a circle. This seems of itself to point to lunar worship; and, accordingly, Mnevis, according to Bryant, is Men-Nevas, the lunar god Nevas. Now, Men-Nevas coincides with Menes, the first king of Egypt, who taught the people to sacrifice to the gods: he was the same as the Minos of Crete, whose connexion with the Minotaur must not be passed over without remembrance. This character of Nevas and Minos, as well as the etymology of both, Men-Nevas, Min-Noas, indicate their identity with Noah, and thus carry us back at once to the Arkite period. Bryant's *Mythology*; Christmas's *Mythology*.

CALL, is to cry to another for help, and hence to pray. The first passage in the Old Testament in which we meet with this phrase is in Genesis 4. 26, where we read, "Then began men to call upon the name of the Lord." In both the Old and New Testament, to call upon the name of the Lord, imports invoking the true God in prayer, with a confession that He is Jehovah, that is, with an acknowledgment of his essential and incommunicable attributes. In this view the phrase is applied to the worship of Christ. (Acts 2. 21; 7. 59; 9. 14; Rom. 10. 12; 1Cor. 1. 2.)

CALLING, means literally, the act of inviting or summoning, (Numb. 10. 2,) and also, an occupation. (1Cor. 7. 20.) Divines, in modern times, have disputed much about the "calls and invitations of the Gospel," and many difficulties have been started. Without

entering upon the various views that are held upon this subject, we may briefly state, that in the New Testament, the word has reference to a call from darkness to light, (1Pet. 2. 9,) from bondage to liberty, from the fellowship of the world to the fellowship of Christ, (1Cor. 1. 9,) from misery to happiness, (1Cor. 7. 15,) from sin to holiness, (1Thess. 4. 7,) from all created good to the enjoyment of eternal felicity. (1Peter 5. 10.) This change is spoken of in the Scriptures as a holy calling, (2Tim. 1. 9,) a high calling, (Phil. 3. 14,) a heavenly calling. (Heb. 3. 1.)

CALNEH, כַּלְנֶה a city built by Nimrod in the plain of Shinar, (Gen. 10. 10,) supposed to be the same as the Calno of Isaiah, (10. 9,) and the Cannah of Ezekiel. (27. 23.) The site of this city is considered to be the same with that of Ctesiphon, the winter residence of the Persian and Parthian monarchs, situated upon the eastern bank of the Tigris, about eighteen miles below Bagdad; opposite to, and distant three miles from it, stood Seleucia. Ctesiphon was taken by the Arabs, A.D. 637, and from that period it rapidly declined, its ruins furnishing materials for the city of Bagdad. Some portion of the ruins still remain, consisting of a vast structure of fine brick, which is called Taik Kesra, or the Arch of Khosroes, and is believed to have been the palace of the Persian kings. It is thought to have been constructed by Greek artists, and presents a *façade* of three hundred feet in length, pierced in the middle by an arch. The height of this arch from the apex to the ground is upwards of one hundred and three feet, and it leads to a large hall of the same height, eighty-two feet broad, and one hundred and sixty in depth.

Arch of Khosroes.

CALVARY. See **JERUSALEM**.

CAMBYSES. See **AHASUERUS**.

CAMEL, גַּמַּל *gamal*. There are as many as seven species of camel discriminated by naturalists; but it is only the Arabian camel or dromedary, and the Bactrian camel, that are known in Scripture. The Bactrian camel is distinguished from the Arabian or dromedary by having two protuberances on its back; it is not so numerous as the other, and is chiefly confined to some parts of Asia. The native country of the camel is Arabia, from whose burning deserts it has been gradually diffused over the rest of Asia and Africa. The Arab venerates his camel as the gift of heaven, and without its aid, he could neither subsist, trade, nor travel.

The camel is distinguished by having only one bunch or protuberance on the back. Its general height, mea-

sured from the top of the dorsal bunch to the ground, is about six feet and a half, but from the top of the head when the animal elevates it, it is not much less than nine feet; the head, however, is usually so carried as to be nearly on a level with the bunch or rather below it, the animal bending the neck considerably in its general posture. The head is small, the neck very long, and the body of a long and meagre shape; the legs rather slender; and the tail, which is slightly tufted at the extremity, reaches to the joints of the hind legs. The feet are very large, and are hoofed in a peculiar manner, being divided above into two lobes, the extremity of each lobe being guarded by a small hoof. The under part of the foot is protected by an extremely long, tough, and pliable skin, which, by yielding in all directions, enables the animal to travel with peculiar ease and security over dry, hot, stony, and sandy regions, which would soon parch and destroy the hoof. On the legs are six callosities,—one on each knee, one on the inside of each fore leg on the upper joint, and one on the inside of each hind leg at the bottom of the thigh. On the lower part of the breast is also a large callus, or tough tubercle, which is gradually increased by the constant habit the animal has of resting upon it in lying down.

From the Scriptures, we learn that the camel constituted an important branch of patriarchal wealth. Job had at first three thousand, and after the termination of his days of adversity, possessed no less than six thousand camels. The Arabs still estimate their riches and possessions by the number of these animals; and, in speaking of the wealth of any one, they observe, he has so many camels. The Midianites and Amalekites also possessed great numbers of camels, which were often adorned with chains of gold, and other rich and splendid ornaments. (Judges 7. 12.) So much importance was attached to the care and management of camels, that a particular officer was appointed, in the reign of David, to superintend their keepers, who, being an Ishmaelite, was therefore supposed to be thoroughly skilled in the proper treatment of this quadruped.

Though of a heavy, and apparently unwieldy, form, this animal moves with considerable speed, and with a bale of goods on its back, it will travel at the rate of thirty miles a day. The prophet Jeremiah calls it, *בקר* *bakar*, "the swift dromedary." (Jerem. 2. 23.) The species termed the dromedary is remarkable for its uncommon swiftness; the Arabs affirm that it will run over as much ground in one day, as one of their best horses will perform in several. If this be true, the messengers of Esther acted wisely in choosing this animal to carry their important despatches to the distant provinces of the widely-extended Persian empire. (Esther 8. 10.) Dr. Shaw had frequent opportunities of verifying the wonderful statements of the Arabs in reference to the swiftness of this creature, as the sheikh who conducted his party to Mount Sinai rode a camel of this kind, and would frequently divert them with a display of its abilities. The Arab is himself early accustomed to the fatigues of travelling, to want of sleep, and to endure hunger, thirst, and heat; and with this view he instructs, rears, and exercises his camels. A few days after their birth, he folds their limbs, in order to remain on the ground, and in this position he loads them with a heavy weight, which is never removed, but for the purpose of replacing a greater. Instead of allowing them to feed at pleasure, and to drink when they are thirsty, he regulates their repasts, and makes them gradually travel long journeys, diminishing, at the same time, their quantity of food. When they acquire some strength, he excites their emulation by the example of horses, and in time renders them

equally swift and more robust. At length, when he is assured of the strength, fleetness, and sobriety of his camels, he loads them with whatever is necessary for his and their subsistence, departs with them, arrives unexpectedly at the confines of the desert, pillages the straggling habitations, loads his camels with the booty, and, if pursued, is obliged to accelerate his retreat. It is on these occasions that he displays his own powers and those of his camels; he mounts one of the fleetest, and, conducting the troop, makes them travel night and day, almost without stopping to eat or drink, and in this manner he easily passes over the space of three hundred leagues in eight days. During this time, the Arab never unloads his camels, and only allows them a ball of paste each day. They often journey in this manner for eight or nine days, without meeting with any water. They can scent it, however, even when more than half a league from it; thirst makes them redouble their pace, and they drink as much at once as supplies them for the time to come, as well as to quench their thirst, being furnished with an internal bag, which serves as a reservoir for a quantity of water. The driest thistle, and the barest thorn, are all the food this useful quadruped requires; and even these, to save time, he eats while advancing on his journey, without stopping, or occasioning a moment's delay.

Notwithstanding that the camel is considered so revengeful as to bear in mind and resent any injury it may have sustained, its patience is most extraordinary. Its sufferings are often great; when it is overloaded, it sends forth the most lamentable cries, but never offers to resist its oppressor. At the slightest sign, it bends its knees, and is loaded in this position; at another sign it rises with its load, and the driver, getting upon its back, encourages the animal to proceed with his voice and with a song.

Throughout Turkey, Persia, Egypt, Arabia, Barbary, and other countries, all kinds of merchandize are carried by camels. Merchants and other travellers assemble and unite in caravans, to avoid the robberies and insults of the Arabs. These caravans are often numerous, and are always composed of more camels than men. Each camel is loaded according to his strength; the larger ones carrying from a thousand to twelve hundred pounds weight, and the smaller from six to seven hundred. Burckhardt states, that a camel can never be stopped while its companions are moving on. The Arabs are, therefore, highly pleased with a traveller who jumps off his beast, and remounts without stopping it, as the act of kneeling down is troublesome and fatiguing to the loaded camel, and before it can rise again, the caravan is considerably a-head. He also affirms it to be an erroneous opinion that the camel delights in sandy ground. It is true, he remarks, that he crosses it with less difficulty than any other animal, but whenever the sands are deep, the weight of himself and his load makes his feet sink into the sand at every step, and he groans, and often sinks under his burden. Hence, Burckhardt states that he found the skeletons of such animals as had perished in the desert were most frequent where the sands were deepest: and adds, that the hard gravelly grounds of the desert are the most agreeable to this animal. In another work, he affirms it to be an erroneous opinion that camels are not capable of ascending hills.

The camel has been emphatically called, by the Arabs, the ship of the desert, and their poets speak the same language, as the following specimens, translated by Sir William Jones, will exhibit:—

Even now, she (the camel) has a spirit so brisk, that she flies with the rein, like a clear cloud driven by the wind, after it has discharged its shower.

Long is her neck; and when she raises it with celerity, it resembles the stern of a ship, floating aloft on the billowy Tigris.

Ah! the vehicles which bore away my fair one, on the morning when the tribe of Malee departed, and their camels were traversing the banks of Deda, resembled large ships,

Sailing from Adali, or vessels of (the merchant) Ibn Yamin, which the mariner now turns obliquely, and now steers in a direct course:

Ships which cleave the foaming waves with their prows, as a boy at play divides with his hand the collected earth.

The camel is included in the lists of unclean beasts, in Leviticus 11. 4, and Deuteronomy 14. 7, and the Scriptural allusions are so numerous, that we may fairly conclude that the animal was well known to the Jews.

The prophet Isaiah foretells the great increase and flourishing state of the Messiah's kingdom, by the conversion and accession of the Gentile nations, by comparing the happy and glorious concourse to a vast assemblage of camels. (60. 6.) He also predicts the march of the army of Cyrus to the conquest and destruction of Babylon, by an allusion to a chariot of camels. (21. 7.) And the folly and presumption of those is remarked upon, in 30. 6, who, in the time of their trouble, carried treasures on camels into Egypt, to purchase the assistance of that people, and acknowledged not the Lord their God, who alone could save and deliver them.

To pass a camel through the eye of a needle, was a proverbial expression, which Our Lord employed in his discourse to the disciples, to show how extremely difficult it is for a rich man to forsake all, for his cause, and obtain the blessings of salvation. (Matt. 19. 24.) Many expositors are of opinion that the allusion is not to the camel, but to the cable, by which an anchor is made fast to the ship, changing *καμηλος*, a camel, to *καμιλος*, a cable; but Lightfoot and others have shown, that to speak of a camel, or any other large animal, as going through the eye of a needle, was a proverbial expression, much used in the Jewish schools, to denote a thing very unusual, or very difficult. There is a similar expression in the Koran: "The impious, who, in his arrogance, shall accuse our doctrine of falsity, shall find the gates of heaven shut; nor shall he enter there, till a camel shall pass through the eye of a needle. It is thus that we shall recompense the wicked." Roberts mentions a parallel proverb used in India, to show the difficulty of accomplishing anything: "Just as soon will the elephant pass through the spout of a kettle."

Another proverbial expression occurs in Matt. 23. 24: "Strain at a gnat, and swallow a camel." Dr. Adam Clarke proves that "at" has been substituted for "out," by a typographical error in the edition of 1611, in our version; "out" occurring in Archbishop Parker's, of 1568. The reference is to a custom the Jews had of filtering their wine, for fear of swallowing any insect forbidden by the Law as unclean. The expression is, therefore, to be taken hyperbolically, and, to make the antithesis as strong as possible, two things are selected, the smallest insect and the largest animal. The expression is applied to those who are superstitiously anxious to avoid small faults, and yet do not scruple to commit the greatest sins.

CAMEL'S HAIR. From the long and shaggy hair of the camel, a coarse kind of stuff is made, which is used for tent covers in the East, and also forms the dress of camel-drivers and shepherds. This was the kind of dress worn of old by the prophets, (Zech. 13. 4,) and by John the Baptist. (Matt. 3. 4.) The prophet Elijah is said, in our version, (2Kings 1. 8,) to have been "a hairy man," which would be more properly translated, "a man dressed in hair."

CAMELEON. In the original of Leviticus 11. 30, occur the words *כרוך* *coach*, and *תנשמת* *tinshemeth*, the first of which, in our version, is rendered *cameleon*, and the second *mole*; but Bochart and others consider that both words relate to animals of the lizard tribe; and that what our translators have termed the mole is, in reality, the *cameleon*, (*Chamaeleo vulgaris*), while the *cameleon* of our version is the *skink*, (*Scincus officinalis*), both creatures being found in Egypt and Palestine, and therefore doubtless well known to the Israelites.

The wonderful properties commonly ascribed to the *cameleon* are well known, and some of these ascriptions at least are very ancient, as the presumed name of the creature among the Hebrews is derived from a verb, which signifies living upon air. This notion has been satisfactorily disproved, and it seems that the property of changing its colour must be received with some limitation. Belzoni, in his *Researches in Egypt*, gives us one of the best accounts of this curious animal that is to be found amongst modern travellers.

"There are three species of *cameleons*, whose colours are peculiar to themselves; for instance, the commonest sort are those which are generally green, that is to say, the body all green, and when content, beautifully marked on each side, regularly on the green, with black and yellow, not in a confused manner, but as if drawn. This kind is in great plenty, and never have any other colour except a light green when they sleep, and when ill, a very pale yellow. Out of near forty I had the first year when I was in Nubia, I had but one, and that a very small one, of the second sort, which had red marks. One *cameleon* lived with me eight months, and most of that time I had it fixed to the button of my coat; it used to rest on my shoulder or on my head. I have observed when I have kept it shut up in a room for some time, that on bringing it out in the air, it would begin drawing the air in; and on putting it on some marjoram, it has had a wonderful effect on it immediately; its colour became most brilliant. I believe it will puzzle a good many to say what cause it proceeds from. If they did not change when shut up in a house, but only on taking them into a garden, it might be supposed the change of the colours was in consequence of the smell of the plants; but when in a house, if it is watched, it will be seen to change every ten minutes; some moments a plain green, at others, all its beautiful colours will come out, and when in a passion, it becomes of a deep black, and will swell itself up like a balloon; and from being one of the most beautiful animals, it becomes one of the most ugly. It is true they are extremely fond of the fresh air, and on taking them to a window when there is nothing to be seen, it is easy to observe the pleasure they take in it: they begin to gulp down the air, and their colour becomes brighter. I think it proceeds, in a great degree, from the temper they are in; a little thing will put them in a bad humour. If you stop them, and attempt to turn them another road, they will not stir, and are extremely obstinate; on opening the mouth at them it will set them in a passion; they begin to arm themselves by swelling and turning black, and will sometimes hiss a little, but not much. The third I brought from Jerusalem, was the most singular of all the *cameleons* I ever had; its temper, if it can be so called, was extremely sagacious and cunning. This one was not of the order of the green kind, but a disagreeable drab, and it never once varied its colour for two months. On my arrival at Cairo, I used to let it crawl about the room on the furniture. Sometimes it would get down, if it could, and hide itself away from me, but in a place where it could see me; and sometimes on my leaving the room and re-entering it, would draw itself so thin as to make

itself nearly on a level with whatever it might be on, so that I might not see it. It had often deceived me so. One day having missed it for some time, I concluded it was hid about the room; after looking for it in vain, I thought it had got out of the room and made its escape. In the course of the evening, after the candle was lighted, I went to a basket that had got a handle across it; I saw my camelion, but its colour entirely changed, and different to any I had ever seen before; the whole body, head, and tail, a brown with black spots, and beautiful deep orange-coloured spots round the black. I certainly was much gratified. On being disturbed, its colour vanished, unlike the others; but after this, I used to observe it the first thing in the morning, when it would have the same colours. Their chief food was flies: the fly does not die immediately on being swallowed, for on taking the camelion in my hands, it was easy to feel the fly buzzing, chiefly on account of the air they draw in in their inside; they swell much, and particularly when they want to fling themselves off a great height. On falling they get no hurt, except on the mouth, which they bruise a little, as that comes first to the ground. Sometimes they will not drink for three or four days, and when they begin they are about half an hour drinking."

The skink, the camelion of our version, of which there are several species, some of which attain a considerable size, is a very harmless animal, of a bright green colour, and covered with scales, and is chiefly remarkable for the readiness with which it burrows for itself a hole in the ground when pursued.

CAMP. See ARMS and ARMOUR.

CAMPHIRE, כפר *kopher*, Sept. *κνμπος*, Lat. *cyprus*, rendered in our version camphire. (Cantic. 1. 14; 4. 13.)

This plant, the Al-Hennah of the Arabs, (*Lawsonia inermis* and *spinosa* of Linnæus,) is described by Dioscorides and Pliny as growing in Egypt, and producing odoriferous flowers, from which was made the *oleum cyprineum*. In appearance the plant resembles a myrtle;

Camphire.

its flowers are small, and beautifully white, exhale an agreeable odour, and produce a pod about the size of that of a pea. The women take great pleasure in them. They hold them in their hand, carry them in their bosom, and keep them in their apartments to perfume the air. To prepare the leaves for the use to which the plant is so generally applied by the women of Egypt, they are gathered about the

commencement of spring, and having been exposed to the air till thoroughly dry, are reduced to a powder, which being afterwards made into a paste, is then fit for use. This paste requires about five hours to dry upon whatever part it may be laid, and the tinge it imparts is durable. It was anciently applied to the nails of the hands and feet, to the soles of the feet and the palms of the hands, and sometimes to the hair. From the appearance of the nails of mummies there can

be no doubt that it was used in the same manner by the Egyptians, as it is by their descendants in the present day. The expression rendered in Deuteronomy 21. 12, in directing the treatment of a female captive, "pare her nails," is supposed to mean "adorn her nails," and would imply the antiquity of this practice, although others are of opinion that the marginal reading "suffer to grow," is the more correct sense, as an act of mourning.

CANA, a small town of Galilee, situated on a gentle eminence to the west of Capernaum, about sixteen miles north-west of Tiberias, and six north-east of Nazareth. This place was the scene of Our Lord's first miracle, recorded in the second chapter of John, and here the ruler of Capernaum, whose child was dangerously ill, besought Jesus to come down and heal his son. (John 4. 47-51.) Carne states that it does not now contain more than two or three hundred inhabitants; and Monro, in his *Summer Ramble in Syria*, says, that it consists of not more than twenty miserable huts. Robinson, in his *Travels in Palestine and Syria*, gives us the following account of this place.

"In five hours and a half from Tiberias we reached Kefferkenna, the Cana of Galilee, so called to distinguish it from another town of this name in the tribe of Asher. The word keffer, meaning infidel, is applied by Mahommedans to places more particularly inhabited by Christians. It is a neat village, pleasantly situated on the descent of a hill, looking to the south-west, and surrounded by plantations of olive and other fruit trees. In one of these inclosures we were invited by the owner to take up our quarters, during the few hours we intended to sojourn in the village. Availing ourselves of the permission, we spread our carpets under the shade of a magnificent fig-tree, at the foot of which ran a slender water-course. The inhabitants supplied us with bread, fruit, cheese; simple fare it is true, but, being hungry, extremely palatable. We had no wine, but the water was delicious. It came from the only large spring in the neighbourhood, about twenty yards off from where we were sitting, and must therefore have flown from the same fountain at which water was drawn at the time of Our Saviour's visit. The latter is walled round with masonry. Several young women were filling pitchers for the afternoon's meal. These pitchers are about two feet high, of compact limestone, of which the country abounds. The ruins of a house, now converted into a chapel, were shown to us as the scene of the miracle; but it did not excite in us that interest which the more indelible feature, the fountain, had done. The latter required no popular tradition to support its claims to identity. This was also the birthplace of Nathaniel, afterwards called Bartholomew."

Here, as in most other places, the spots supposed to be connected with Gospel history are subterranean, with steps to go down into them; the consequence of numerous buildings, as churches, &c., having been built over them, which having been successively destroyed, and others raised in their stead, has had the effect of raising the ground above its original level.

Dr. Clarke observes that "walking among the ruins of a church we saw large massy stone pots answering the description given of the ancient vessels of the country, not preserved or exhibited as relics, but lying about in all directions. From their appearance, and the number of them, it was quite evident that a practice of keeping water in large stone pots, each holding from eighteen to twenty-seven gallons, was once common in the country."

Cana.

CANAAN, the youngest son of Ham, and grandson of Noah, was the progenitor of the Canaanites. The posterity of Canaan was numerous. His eldest son, Sidon, founded the city of that name. Canaan had ten other sons, who were fathers of as many tribes, and settled in Palestine and Syria after the confusion of Babel, namely, the Hittites, the Jebusites, the Amorites, the Girgasites, the Hivites, the Arkites, the Sinites, the Arvadites, the Zemarites, and the Hamathites. Notwithstanding the curse is directed against Canaan the son, and not against Ham the father, it is supposed, by most commentators, that all the posterity of Ham were placed under the malediction, "Cursed be Canaan; a servant of servants shall he be unto his brethren." (Gen. 9. 25; 10. 15-19.) For an account of the Land of Canaan, see PALESTINE.

CANDACE, *Κανδακη*, a queen of Ethiopia, mentioned in Acts 8. 27. Pliny, Eusebius, Strabo, and Ptolemy, state that this was a name common to the Queens of Ethiopia in the time of Christ. Ethiopia Proper, here alluded to, was the island or peninsula of Meroë to the south of Egypt, now called Atbara.

CANDLE, *נֵר nir*, is more correctly given, in the margin of our version, "lamp." (Job 18. 6; 21. 17.)

Houses in the East were, from the earliest times, lighted up with lamps, and those of the Hebrews probably resembled those we find depicted in the tombs at Thebes. Job, describing the destruction of a family among the Arabs, and the rendering one of their habitations desolate, says, "the light shall be dark in his tabernacle, and his candle shall be put out with him." (18. 6; 21. 17.) On the other hand, when God promises to give David a lamp always in Jerusalem, it is an assurance that his house should never become desolate. In the language of Jeremiah, to extinguish the light in an apartment, is a convertible phrase for total destruction. (25. 10.) A burning lamp is, on the other hand, a symbol of prosperity. (Job 29. 3.) Maillet, in his *Lettres d'Egypte*, says, "The houses in Egypt are never without lights; they burn lamps all the night long, and in every occupied apartment. So requisite to the comfort of a family is this custom reckoned, that the poorest people would rather retrench a part of their food than neglect it." Roberts also remarks that "the people of

the East, who can afford it, have always a lamp burning in their room the whole of the night. It is one of their greatest comforts; because, should they not be able to sleep, they can then look about them and amuse themselves. 'Evil spirits are kept away, as they do not like the light.' Lechemy, the beautiful goddess, also takes pleasure in seeing the rooms lighted up. But that which is of the most importance is, the light keeps off the serpents and other poisonous reptiles." In illustration of the passage, "I will search Jerusalem with candles," (Zeph. 1. 12,) he remarks, "Does a man declare his innocence of any crime, the accusers say, 'We will search thee with lamps;' 'Yes, yes, I will look into that affair with lamps;' 'What, have your lamps gone out? You see I am not guilty.'" See LAMP.

CANDLESTICK, *מִנְרָה minorah*. As the word *nir* more properly signifies lamp than candle, so does *minorah* mean rather a stand for lamps than a candlestick. (Levit. 24. 4.) The same thing occurs in the New Testament. (Matt. 5. 15.)

The golden candlestick made by Moses, was placed in the first apartment of the Tabernacle, on the south side. It stood on a base, from which the principal stem arose perpendicularly. On both sides of the stem there projected upwards, in a curved line, three branches at equal distances, and of the same height. According to the Rabbins, the golden candlestick stood five feet from the ground, and the breadth or the space between the exterior branches was three feet and a half. The main stem and the branches were adorned with various ornaments. The lamps were kept burning perpetually, and were supplied morning and evening with pure olive oil. (Exod. 27. 20; Levit. 24. 4.) The whole number were lighted at night; but three only in the day. The weight of the whole candlestick was a talent, (Exod. 37. 24,) or 113 lbs. troy weight.

Josephus states, that, after the Romans had destroyed the Temple, the several things which were found within it were carried in triumph to Rome, namely, the golden table, and the golden candlestick with its seven branches. These were lodged in the temple built by Vespasian, and consecrated to Peace; and at the foot of Mount Palatine, there is a triumphal arch, called the Arch of Titus, upon which is represented the form of the golden candlestick

as it was actually carried in the triumphal procession. The accompanying engraving exhibits its form, as copied from the plates in Reland's *Treatise on the Spoils of the Temple of Jerusalem*, the drawings for which were made at Rome upwards of a century since, when the triumphal arch of Titus was in a much better state of preservation than it now is.

The Golden Candlestick.

The word candlestick is employed emblematically, in Revelations 1. 12, where it denotes a Christian church, the seven golden candlesticks being the symbols of the seven churches.

CANE. See CALAMUS.

CANKER, γαργαρινα, gangrene, mortification; (2Tim. 2. 17;) a disease which spreads by degrees over the whole body. See DISEASES.

CANKERWORM. The word גֵּלֵק *yalek*, is, by our translators in Joel 1. 4; 2. 25, and Nahum 3. 15, rendered cankerworm, but in Psalm 105. 34, and Jeremiah 51. 27, caterpillar. The Septuagint reads beetle. In the passage in Nahum, the creature is spoken of as winged and bristled, whence some commentators suppose that some kind of locust is intended. Roberts observes, "There are bristled caterpillars in the East, which, at certain seasons, are extremely numerous and annoying. They creep along in troops like soldiers, are covered with stiff hairs or bristles, which are so painful to the touch, and so powerful in their effects, as not to be entirely removed for many days. Should one be swallowed, it will cause death: hence, people at the particular season when they are numerous, are very cautious in examining their water-vessels, lest any should have fallen in. In the year 1826, a family at Manipy had to arise early in the morning to go to their work, and they therefore prepared their rice the evening before. They were up before day-light, and took their food: in the course of a short time, they were all ill, and some of them died during the day. The rice-chatty was examined, and there were found the remains of the micutty, or the rough caterpillar. Dr. Hawkesworth says of those he saw in the West Indies, 'Their bodies were thick-set with hairs, and they were ranging on the leaves, side by side, like files of soldiers, to the number of twenty or thirty together. When we touched them, we found their bodies had the qualities of nettles.'" See CATERPILLAR; LOCUST.

CANNEH. See CALNEH.

CANON. The word Canon is originally Greek, κανων, and signifies not only a catalogue or list, but also a law or rule. This term has been appropriated, since the fourth century, to the catalogue of writings which are admitted by Jews and Christians as a Divine rule of faith and manners. Among the earliest ecclesiastical writers it meant no more generally than a "book" and a "catalogue;" particularly, a "catalogue of things that belong to the church;" or a "book that served for the use of the church." Hence a collection of hymns which were to be sung on festivals, as also a list in which were introduced the names of persons belonging to the church, acquired the name of Canon. The word was afterwards used in the more limited sense of an approved catalogue of all the books that might be read in public assemblies of Christians for instruction and edification, and finally for a collection of Divine and inspired writings, which last signification has been generally adopted, and the terms canonical and inspired are now used as perfectly synonymous.

I. CANON OF THE OLD TESTAMENT. Soon after the return of the Jews from the captivity in Babylon, a collection was prepared of all the writings of the Hebrews then extant, which, on account of their antiquity, contents, authors, and the claims to Divine inspiration which they possessed, became revered and holy in the view of all the members of their new government. There was in the Temple a library of these sacred writings, which for a considerable time before the coming of Christ, (the particular year is unknown,) ceased to be further enlarged. After the period when this collection was made, there arose among the Jews authors of a different kind, historians, philosophers, poets, and theological dreamers. The earlier writings were held, as the productions of prophets, to be holy; the later were not, because these productions were composed in times when there was no longer an uninterrupted prophetic succession. The ancient were preserved in the Temple, the modern were not. The ancient were introduced into a public collection; the modern into none whatever, at least none of a public nature. And if the Alexandrian Christians had not added them to the manuscripts of the Septuagint, we might not have had a single page remaining of these modern Jewish writers. These two kinds of writings have long since been distinguished by appropriate names, derived chiefly from the use which was made of them; the earlier were called Canonical, the more recent were termed Apocryphal Books. And the whole collection of the former was comprehended under the appellation of Canon of the Old Testament.

2. Most authorities are agreed that the formation of the Canon of the Old Testament should be attributed to Ezra. The Jewish writers inform us that there existed in his time, a great synagogue, consisting of one hundred and twenty men, including Daniel and his three friends, Shadrach, Meshach, and Abednego, the prophets Haggai and Zechariah, and also Simon the Just, by whom he was assisted in his labours. But it is incorrect to suppose that all these individuals lived at one time, and formed one synagogue, as they have undertaken to represent it; for from the time of Daniel to that of Simon the Just, no less than two hundred and fifty years must have intervened. It is, however, by no means improbable that Ezra was assisted in this great work by many learned and pious men, who were contemporary with him; and, as prophets, had always been the superintendents, as well as writers of the sacred volume. But with respect to this great synagogue, the only thing probable is, that the men who are said to have belonged to it did not live in one age, but successively, until the time of Simon the Just, who was made

high priest about twenty-five years after the death of Alexander the Great. This opinion has its probability increased by the consideration that the Canon of the Old Testament appears not to have been fully completed until about the time of Simon the Just. The prophet Malachi is thought to have lived after the time of Ezra, and therefore his prophecy could not have been added to the canon by him. The opinion of the Jews is, that Malachi is no other than Ezra himself; they maintaining that while Ezra was his proper name, he received that of Malachi from the circumstance of his having been sent to superintend the religious concerns of the Jews; for the import of the name is, a messenger, or one sent.

But this is not all; in the book of Nehemiah mention is made of the high priest Jaddua, and of Darius Codomanus, king of Persia, both of whom lived at least a hundred years after the time of Ezra. In the third chapter of the first book of Chronicles, the genealogy of the sons of Zerubbabel is carried down at least to the time of Alexander the Great. This book, therefore, could not have been put into the canon by Ezra; nor much earlier than the time of Simon the Just. The book of Esther, also, was probably added during this interval.

The conclusion, therefore, is, that Ezra began this work, and collected and arranged all the sacred books which belonged to the canon before his time; and that a succession of pious and learned men continued to pay attention to the canon until the whole was completed, which was about the time of Simon the Just. After this nothing more was added to the Canon of the Old Testament.

3. Most authorities are, however, agreed that nothing was added after the book of Malachi was written, except a few names and notes; and that all the books belonging to the Canon of the Old Testament were collected and inserted in the sacred volume by Ezra himself. This opinion seems to be the safest, and is by no means incredible in itself. It accords also with the uniform tradition of the Jews that Ezra completed the Canon of the Old Testament; and that after Malachi there arose no prophet who added anything to the sacred volume. Whether the books were now collected into a single volume, or were bound up in several codices, is a question of no importance; if we can ascertain what books were received as canonical, it matters not in what form they were preserved.

In establishing the Canon of the Old Testament, we might labour under considerable uncertainty and embarrassment in regard to several books, were it not that the whole of what are called the Scriptures, and which are included in the threefold division, Law, Prophets, and Psalms, received the explicit sanction of Our Lord. He was not backward to reprove the Jews for disobeying, misinterpreting, and adding their traditions to the Scriptures, but He never dropped a hint that they had been unfaithful or careless in the preservation of the sacred books. So far from this, He refers to the Scriptures as an infallible rule, which "must be fulfilled," and "could not be broken." We have, therefore, an important point established with the utmost certainty, that the volume of Scripture which existed in the time of Our Lord and his Apostles, was uncorrupted, and was esteemed by them as an inspired and infallible rule. If, therefore, we can ascertain what books were then included in the sacred volume, we shall be able to settle the Canon of the Old Testament without uncertainty.

4. To do this it is necessary to resort to other sources of information; and the Jewish historian Josephus furnishes us with that which we want; not, indeed, as

explicitly as we could wish, but sufficiently so to lead us to a very satisfactory conclusion. He does not name the books of the Old Testament, but he numbers them, and so describes them, that there is scarcely room for any mistake. We are able also to adduce other testimony to prove the same thing. Philo, an Egyptian Jew, who lived in the first century of the Christian era, quoted, as having canonical authority, no other books than those which are contained in the Hebrew Bible, and which alone were acknowledged by the Jews of Palestine.

5. Philo, it is true, in none of his writings gives an express notice of the Canon of the Old Testament; but in very numerous scattered passages he has indicated his own opinion, and probably also the opinion of his contemporaries, concerning the merit and importance of each of the books which formed part of that canon. M. Hornemann, who carefully read and examined all Philo's works, for the sole purpose of ascertaining his opinion on the Canon of the Old Testament, divides them according to Philo's expressions, into three classes. (i.) Books cited with the express remark that they are of Divine origin; in this class are found the Pentateuch, the book of Joshua, the first book of Samuel, Ezra, Isaiah, Jeremiah, Hosea, Zechariah, the Psalms, and the Proverbs. (ii.) Books of which Philo makes only casual mention, without any notice of their Divine origin; this class contains the book of Judges, Job, the first book of Kings, and several detached Psalms. (iii.) Books not mentioned by Philo: Nehemiah, Ruth, Esther, the two books of Chronicles, Daniel, the Lamentations, Ecclesiastes, and the Song of Solomon; but the silence of Philo concerning any book proves nothing against its canonical authority if it be not contradicted or overturned by other positive proofs.

6. Some of the early Christian Fathers who had been brought up in Paganism, when they embraced Christianity, were curious in their inquiries into the Canon of the Old Testament, and the result of the researches of some of them still remain. Melito, bishop of Sardis, travelled into Judæa, for the very purpose of satisfying himself on this point. And although his own writings are lost, Eusebius has preserved his catalogue of the books of the Old Testament, from which it appears that the very same books were, in his day, received into the canon as are now found in our Hebrew Bibles. The interval between Melito and Josephus is not a hundred years, so that no alteration in the canon can be reasonably supposed to have taken place in this period. Very soon after Melito, Origen furnishes us with a catalogue of the books of the Old Testament, which perfectly accords with our canon, except that he omits the minor prophets; which omission must have been a mere slip of the pen by him or his copyist, as it is certain that he received this as a book of Holy Scripture; and the number of the books of the Old Testament, given by him in this very place, cannot be completed without reckoning the twelve minor prophets as one.

7. After Origen, we have catalogues in succession, not only by men of the first authority in the church, but by councils, consisting of numerous bishops, all which are perfectly the same as our own. It will be sufficient merely to refer to these sources of information. Catalogues of the books of the Old Testament have been given by Athanasius, by Cyril, by Augustine, by Jerome, by Rufin, by the Council of Laodicea, in their sixtieth canon, and by the Council of Carthage. There is also a catalogue in the Talmud, which perfectly corresponds with ours. Thus the evidence must appear complete to every impartial mind, that the Canon of the Old Testament is settled upon the clearest historical grounds. See BIBLE.

II. CANON OF THE NEW TESTAMENT. Many persons who write and speak on the subject of the New Testament Canon, appear to entertain a wrong impression in regard to it; as if the Books of the New Testament could not be of authority until they were sanctioned by some ecclesiastical council, or by some publicly expressed opinion of the Fathers of the Church; and as if any portion of their authority depended on their being collected into one volume. But the truth is, that every one of these books was of authority, as far as known, from the moment of its publication; and its right to a place in the canon is not derived from the sanction of any church or council, but from the fact that it was written by inspiration; and the appeal to testimony, is not to prove that any council of bishops or others gave sanction to the book, but to show that it is indeed the genuine work of Matthew, or John, or Peter, or Paul, whom we know to have been inspired.

9. Modern advocates of infidelity have asserted, with entire disregard to truth, that the Scriptures of the New Testament were never accounted canonical until the assembling of the Council of Laodicea, A.D. 364; the simple fact being, that the canons of this council are the earliest extant, which give a formal catalogue of the books of the New Testament. There is, indeed, every reason to believe that the bishops who were present at Laodicea, did not mean to settle the canon, but simply to mention those books which were to be publicly read. Another reason why the canonical books were not mentioned before the Council of Laodicea, is presented in the persecutions to which the professors of Christianity were constantly exposed, and in the want of a national establishment of Christianity for several centuries, which prevented any general council of Christians for the purpose of settling the Canon of Scripture. But, though the number of books thus received as sacred and canonical, was not in the first instance determined by the authority of councils, we are not left in uncertainty concerning their genuineness and authenticity, for which we have infinitely more decisive and satisfactory evidence than we have for the productions of any ancient classic authors, concerning whose genuineness and authenticity no doubt was ever entertained.

10. The books of the New Testament were of full authority before they were collected into one volume, and it would have made no difference if they had never been included in one volume, but had retained that separate form in which they were first published. And it is by no means certain that these books were at a very early period bound in one volume. As far as we have any testimony on the subject, the probability is, that it was more customary to include them in two volumes, one of which was called the Gospel, and the other the Apostles. Some of the oldest manuscripts of the New Testament extant, appear to have been arranged in this form; and the Fathers often refer to the Scriptures of the New Testament under these titles. The question, When was the Canon constituted? admits, therefore, of no other proper answer than this, that as soon as the last book of the New Testament was written and published, the canon was completed. But if the question relates to the time when these books were collected and published in a single volume, or in two volumes, it admits of no definite answer; for those churches which were situated nearest to the place where any particular books were published, would, of course, obtain copies much earlier than churches in a remote part of the world. For a considerable period the collection of these books in each church must have been necessarily incomplete; for it would take some time to send to the church or people with whom the autographs were deposited,

and to write off fair copies. This necessary process will also account for the fact, that some of the smaller books were not received by the churches so early, nor so universally as the larger. The solicitude of the churches to possess immediately the more extensive books of the New Testament, would, doubtless, induce them to make a greater exertion to acquire copies; but, probably, the smaller would not be so much spoken of, nor would there be so strong a desire to obtain them without delay. Considering how difficult it is now, with all our improvements in the art of printing, to multiply copies of the Scriptures with sufficient rapidity, it is truly wonderful how so many churches as were founded during the first century, could all be supplied with copies of the New Testament, when there was no speedier method of producing them than by writing every letter with the pen.

11. The idea entertained by some, especially by Doddwell, that these books lay for a long time locked up in the coffers of the churches, to which they were addressed, and totally unknown to the rest of the world, is in itself most improbable, and is opposed to all the testimony which exists on the subject. Even as early as the time when St. Peter wrote his Second Epistle, the writings of St. Paul were in the hands of the churches and were classed with the other Scriptures. (2Peter 3. 15, 16.) And the citation from these books, by the earliest Christian writers living in different countries, demonstrates that from the time of their publication, they were sought after with avidity, and were widely dispersed. How intense the interest which the first Christians felt in the writings of the Apostles, can scarcely be conceived by us, who have been familiar with these books from our earliest years. How solicitous would they be, for example, who had never seen St. Paul, but had heard of his wonderful conversion and extraordinary labours and gifts, to read his writings! And probably they who had enjoyed the high privilege of hearing this Apostle preach, would not be less desirous of reading his epistles. As we know from the nature of the case, as well as from testimony, that many uncertain accounts of Christ's discourses and miracles had obtained circulation, how greatly would the primitive Christians rejoice to obtain an authentic history from the pen of an Apostle, or from one who wrote precisely what was dictated by an Apostle! We need no longer wonder, therefore, that every church should wish to possess a collection of the writings of the Apostles; and knowing them to be the productions of inspired men, they would want no further sanction to their authority. All that was requisite was to be certain that the book was indeed written by the Apostle whose name it bore. Hence, some things in the epistles of St. Paul, which seem to common readers to be of no importance are of the utmost consequence. Such as, "I, Tertius, who wrote this epistle," &c.; "The salutation with mine own hand;" "The salutation by the hand of me Paul;" "The salutation of Paul with mine own hand, which is the token in every epistle." This Apostle commonly employed an amanuensis; but, that the churches to which he wrote might have the assurance of the genuineness of his epistles from seeing his own hand-writing, he constantly wrote the salutation himself; so much care was taken to have these sacred writings well authenticated on their first publication. And on the same account it was, that he and the other Apostles were so particular in giving the names and the characters of those who were the bearers of their epistles. And it seems that they were always committed to the care of men of high estimation in the church, and commonly more than one appears to have been intrusted with this important commission.

12. If it be inquired, what became of the autographs

of these sacred books, and why they were not preserved, since this would have prevented all uncertainty respecting the true reading, and would have relieved the Biblical critic from a large share of labour, it is sufficient to answer that nothing different has occurred, in relation to these autographs, from that which has happened to all other ancient writings. No man can produce the autograph of any book as old as the New Testament, unless it has been preserved in some extraordinary way, as in the case of the manuscripts at Herculaneum; neither could it be supposed, that in the midst of such vicissitudes, revolutions, and persecutions, as the Christian church endured, this object could have been secured by anything short of a miracle; when, at the same time, by a superintending Providence they could be transmitted with sufficient accuracy, by means of apographs, to the most distant generations. Indeed, there is reason to believe that the Christians of early times were so absorbed and impressed with the glory of the truths revealed, that they gave themselves little concern about the mere vehicle by which they were communicated. They had matters of such deep interest, and so novel, before their eyes, that they had neither time nor inclination for the *minutiae* of criticism. It may be, therefore, that they did not set so high a value on the possession of the autograph of an inspired book as we should, but considered a copy made with scrupulous fidelity, as equally valuable with the original. And God may have suffered these autographs of the sacred writings to perish, lest in process of time, they should have become idolized, like the brazen serpent; or lest men should be led superstitiously to venerate the mere parchment and ink, and form of the letters, employed by an Apostle. Certainly, the history of the Church is such as to render the idea far from being improbable.

13. The slightest attention to the works of the Fathers will serve to convince any one that the writings of the Apostles were held from the beginning in the highest estimation; that great pains were taken to distinguish the genuine productions of these inspired men from all other books; that they were sought out with uncommon diligence, and read with profound attention and veneration, not only in private, but publicly in the churches, and that they are cited and referred to universally as decisive on every point of doctrine, and as authoritative standards for the regulation of faith and practice.

This being the case when the books of the New Testament were communicated to the churches, we are enabled in regard to most of them to produce testimony of the best kind, that they were admitted into the canon, and received as inspired by the universal consent of Christians in every part of the world. And that other books, however excellent as human compositions, were never put upon a level with the canonical books of the New Testament; that spurious writings, under the names of the Apostles, were promptly and decisively rejected, and that the churches were repeatedly warned against such apocryphal books. This testimony we may conveniently arrange under the heads of Catalogues, Practice of the Fathers, Public Reading of the Scriptures, and Early Versions.

(i.) As in the case of the Old Testament, we find that, at a very early period, catalogues of these books were published by most of the distinguished Fathers whose writings have come down to us; the same has been done also, by several councils, whose decrees are still extant.

These catalogues are for the most part perfectly harmonious. In a few of them, some books now in the canon are omitted, for which omission a satisfactory reason can be generally assigned.

The first regular catalogue of the books of the New Testament, which we find on record, is by Origen, who lived about one hundred years after the death of the Apostle John, and whose extensive Biblical knowledge qualified him to judge correctly in this case.

In this catalogue he mentions, "the Four Gospels, the Acts of the Apostles, Fourteen Epistles of St. Paul, Two of Peter, Three of John," and "the Book of Revelation." This enumeration includes all the present canon, except the Epistles of James and Jude, but these were omitted by accident, not design; for in other parts of his writings he acknowledges these epistles as a part of the canon. And while Origen furnishes us with so full a catalogue of the books now in the canon, he inserts no others, which proves that in his time the canon was well settled among the learned; and that the distinction between inspired writings and human compositions was as clearly marked as at any subsequent period.

The next catalogue of books of the New Testament to which we may refer is that of Eusebius, the learned historian of the church; to whose diligence and fidelity, in collecting ecclesiastical facts, we are more indebted than to the labours of all other men, for that period which intervened between the days of the Apostles and his own times. Eusebius may be considered as giving his testimony about one hundred years after Origen. His catalogue may be seen in his *Ecclesiastical History*; in it he enumerates every book which we now have in the canon, and no others; but he mentions that the Epistle of James, the Second of Peter, and Second and Third of John, were doubted of by some; and that the Book of Revelation was rejected by some and received by others; but Eusebius himself, declares it to be his opinion, that it should be received without a doubt.

There is no single witness among the whole number of ecclesiastical writers, who was more competent to give accurate information on this subject than Eusebius. He had spent the greater part of his life in searching into the antiquities of the Christian church; and he had an intimate acquaintance with all the records relating to ecclesiastical affairs, many of which are now lost; and almost the only information which we have of them, has been transmitted to us by this diligent compiler.

St. Athanasius, in his festal Epistle, and in his synopsis of Scripture, has also left a catalogue of the books of the New Testament, which perfectly agrees with the canon now in use; and St. Cyril, in his catechetical work, has also given us a catalogue, perfectly agreeing with ours, except that he omits the Book of Revelation. Why that book was so often left out of the ancient catalogues and collections of the Scriptures, will be mentioned under the title of this book in another place. St. Athanasius and St. Cyril were contemporary with Eusebius; the latter, however, may more properly be considered as twenty or thirty years later.

A little after the middle of the fourth century, we have the testimony of all the bishops assembled in the Council of Laodicea, as before mentioned. The catalogue of this council is contained in their sixtieth canon, and is exactly the same as ours, with the omission of the Book of Revelation. But a few years elapsed from the meeting of this council, before Epiphanius, bishop of Salamis, in the island of Cyprus, published his work on heresies, in which he gives a catalogue of the canonical books of the New Testament, which, in every respect, is the same as the canon now received. About the same time, Gregory Nazianzen, archbishop of Constantinople, in a poem "On the True and Genuine Scriptures," mentions distinctly all the books now received, except Revelation. A few years later, we have a list of the books of the New

Testament, in a work of Philastrius, bishop of Brixia, in Italy, which corresponds in all respects with those now received, except that he mentions no more than thirteen of the Epistles of St. Paul. If the omission was designed, it probably relates to the Epistle to the Hebrews. At the same time lived Jerome, who translated the whole Bible into Latin. He furnishes us with a catalogue answering to our present canon in all respects. He does, however, speak doubtfully about the Epistle to the Hebrews, but in other parts of his writings, he shows that he received this book as canonical, as well as the rest.

The catalogue of Rufinus varies in nothing from the canon now received. Augustine, in his work on *Christian Doctrine*, has inserted the names of the books of the New Testament, which in all respects are the same as ours. The Council of Carthage, at which Augustine was present, have furnished a catalogue which perfectly agrees with ours. At this council, forty-four bishops attended. The list referred to is found in their forty-eighth canon. The unknown author, who goes under the name of Dionysius the Areopagite, so describes the books of the New Testament as to show that he received the very same as are now in the canon.

(ii.) Another satisfactory source of evidence in favour of the Canon of the New Testament, as now received, is the fact that these books alone were quoted as Sacred Scripture, by all the Fathers, living in parts of the world the most remote from each other. Now how can it be accounted for, that these books, and these alone, should be cited as authority in Asia, Africa, and Europe? No other reason can be assigned, than one of these two—either they knew no other books which claimed to be canonical; or, if they did, they did not esteem them of equal authority with those which they cited. On either of these grounds, the conclusion is the same, *That the books quoted as Scripture are alone the canonical books.* To apply this rule to a particular case,—The First Epistle of St. Peter is canonical, because it is continually cited by the most ancient Christian writers in every part of the world; but the book called the Revelation of St. Peter is apocryphal, because none of the early Fathers have taken any testimonies from it. The same is true of the Acts of St. Peter, and the Gospel of St. Peter. These writings were totally unknown to the primitive church, and are therefore spurious. This argument is perfectly conclusive, and its force was perceived by the ancient defenders of the Canon of the New Testament. Eusebius repeatedly has recourse to it; and, therefore, those persons who have aimed to unsettle our present canon, as Toland and Dodwell, have attempted to prove that the early Christian writers were in the habit of quoting indifferently and promiscuously the books which we now receive, and others which are now rejected as apocryphal; but this is not correct. The true method of determining this matter is by a careful examination of all the passages in the writings of the Fathers, where other books besides those now in the canon have been quoted. Some progress was made in collecting the passages in the writings of the Fathers in which any reference is made to the apocryphal books, by the learned Mr. Jones, in his *True Method of Settling the Canon of the New Testament*, but the work was left incomplete. This author, however, positively denies that it is common for the Fathers to cite these books as Scripture, and asserts that there are only a very few instances in which any of them seem to have fallen into this mistake.

(iii.) A third proof of the genuineness of the Canon of the New Testament, may be derived from the fact that these books were publicly read as Scripture in all the Christian churches.

(iv.) A fourth argument, to prove that our Canon of the New Testament is substantially correct, may be derived from the early versions of this sacred book into other languages.

Although the Greek language was extensively known throughout the Roman Empire when the Apostles wrote, yet the Christian church was in a short time extended into regions where the common people, at least, were not acquainted with it, nor with any language except their own vernacular tongue. While the gift of tongues continued, the difficulty of making known the Gospel to such people would, in some measure, be obviated; but when these miraculous powers ceased, the necessity of a version of the Gospels and Epistles into the language of the people would become manifest. As far, therefore, as we may be permitted to reason from the nature of the case, and the necessities of the churches, it is exceedingly probable that versions of the New Testament were made shortly after the death of the Apostles, if they were not begun before. It can hardly be supposed that the numerous Christians in Syria, Mesopotamia, and the various parts of Italy, would be long left without having these precious books translated into a language which all the people could understand. But we are not left to conjecture on this subject. We know that at a very early period there existed Latin versions of the New Testament, which had been so long in use before the time of Jerome, as to have become considerably corrupt, on which account he undertook a new version, which soon superseded those that were more ancient; and although nothing remains of these ancient Latin versions but uncertain fragments, yet we have good evidence that they contained the same books as were inserted in Jerome's version, now denominated the Vulgate.

But, perhaps, the old Peschito, or Syriac version of the New Testament, furnishes the strongest proof of the canonical authority of all the books which are contained in it. This excellent version has a very high claim to antiquity; and, in the opinion of some of the best Syriac scholars, who have profoundly examined this subject, was made before the close of the first century. The arguments for so early an origin are not indeed conclusive; but they possess much probability, whether we consider the external or internal evidence. The Syriac Christians have always insisted that this version was made by the Apostle Thaddeus; but, without admitting this claim, which would put it on a level with the Greek original, we may believe that it ought not to be brought down lower than the second century. It is universally received by all the numerous sects of Syrian Christians, and must be anterior to the existence of the oldest of them. Manes, who lived in the second century, probably had read the New Testament in the Syriac, which was his native tongue; and Justin Martyr, when he testifies that the Scriptures of the New Testament were read in the assemblies of Christians on every Sunday, probably refers to Syrian Christians, as Syria was his native place, where also he had his usual residence. And Michaëlis is of opinion that Melito, who wrote about A.D. 170, has expressly declared that a Syriac version of the Bible existed in his time. St. Jerome also testifies explicitly, that when he wrote, the Syriac Bible was publicly read in the churches; "for," says he, "Ephrem the Syrian is held in such veneration, that his writings are read in several churches immediately after the lessons from the Bible." It is also well known that the Armenian version, which itself is ancient, was made from the Syriac.

14. On the general evidence of the genuineness of our canon, the following remarks may be added:—

The agreement among those who have given catalogues of the books of the New Testament, from the earliest

times, is almost complete. Of thirteen catalogues, to which we have referred, seven contain exactly the same books as are now in the canon. Three of the others differ in nothing but the omission of the Book of Revelation, for which they had a particular reason, consistent with their belief in its canonical authority; and in two of the remaining catalogues, it can be proved that the books omitted, or represented as doubtful, were received as authentic by the persons who have given the catalogues. It may be asserted, therefore, that the consent of the ancient church, as to what books belonged to the Canon of the New Testament, was complete. The Sacred Volume was as accurately formed, and as clearly distinguished from other books, in the third, fourth, and fifth centuries, as it has ever been since.

It must be considered, moreover, that the earliest of these catalogues was given by Origen, who lived within a hundred years of the death of the Apostle John, and who, by his reading, travels, and long residence in Palestine, had a full knowledge of all the transactions and writings of the church until his own time. In connexion with this, let it be remembered, that these catalogues were drawn up by the most learned, pious, and distinguished men in the church, or by councils; and that the persons furnishing them, resided in different and remote parts of the world; as, for example, in Jerusalem, Casarea, Carthage, and Hippo, in Africa; Constantinople, Cyprus, Alexandria in Egypt, Italy, and Asia Minor. Thus it appears that the canon was early agreed upon, and that it was everywhere the same; therefore we find the Fathers, in all their writings, appealing to the same Scriptures; and none are charged with rejecting any canonical book, except heretics.

It appears, from the testimony adduced, that it was never considered necessary that any council or bishop should give sanction to these books, in any other way than as witnesses, testifying to the churches that these were indeed the genuine writings of the Apostles. These books, therefore, were never considered as deriving their authority from the church, or from councils, but were of complete authority as soon as published; and were delivered to the churches to be a guide and standard in all things relating to faith and practice. The Fathers would have considered it impious for any bishop or council to pretend to add anything to the authority of inspired books, or to claim the right to add other books to those handed down from the Apostles. The church is founded on the apostles and prophets, Jesus Christ being the chief corner-stone, and the Sacred Scriptures are not dependent for their authority on any set of men who lived since they were written.

We may remark, lastly, the providence of God towards his church, in causing these precious books to be written, and in watching over their preservation, in the midst of dangers and persecutions; so that, notwithstanding the malignant designs of the enemies of the church, they have all come down to us unmutated, in the original tongue in which they were framed by the Apostles. Our liveliest gratitude is due to the Great Head of the Church for this Divine treasure, from which we are permitted freely to draw whatever is needful for our instruction and consolation, and it is, therefore, our duty to prize this precious gift of Divine revelation above all price. Alexander, *On the Canon*; Dupin; Jones; Blair; Stosch; Eichhorn; Lardner.

CANONS, ECCLESIASTICAL, were statutes or rules fixed by councils, and possessing the force of ecclesiastical law. From the time of Constantine the Great, he first Christian emperor, many councils were held,

and canons, or laws, drawn up, for the government of the church, which were collected into three volumes, by Ivo, bishop of Chartres, in France, about A.D. 1114, and are called the Decrees; they were corrected, about thirty-five years afterwards, by Gratian, a Benedictine monk. After these followed the *Decretals*, or letters of the Popes for the determination of *controversies*; and of these there are likewise three volumes. The first volume was compiled by Raimund Barcinus, chaplain to Pope Gregory IX., and published about A.D. 1230; it was appointed to be read in all schools, and admitted as law in all the ecclesiastical courts in England. About sixty years afterwards, Simon, a monk of Walden, read these laws in the University of Cambridge, and the next year in that of Oxford. The second volume was collected and methodized by Pope Boniface VIII., and published about A.D. 1299. The third volume was collected by Pope Clement V., and published in the Council of Vienne, and likewise in England; they took from that pope the name of Clementine. These last decretals were never received anywhere but in the pope's dominions. John Andreas, a famous canonist in the fourteenth century, wrote a commentary on these decretals, which he entitled "Novella," from a very beautiful daughter he had, named Novella, whom he educated as a scholar.

Upon these decrees and decretals was founded the canon law, which was introduced into England, though its authority was not, at any time, so firmly established here as in other countries, the papal encroachments being vigorously resisted by the majority of our ancient kings. Besides these foreign canons, there were many provincial constitutions passed for the government of the English church, which derived their force only from the royal assent, and the application of which to the laity was in general strenuously resisted. At length, at the period of the Reformation, the papal power was wholly swept away, and a general revision of the canons, whether English or foreign, designed; this, however, has not been carried into effect, and the old canons continued in force till the reign of James I., (1603,) when the clergy being assembled in convocation, the king gave them leave, by his letters patent, to treat, consult, and agree on canons; which they did, and presented them to the king, who gave his assent to them, and by other letters patent, ratified and confirmed them. These canons were a collection out of the several preceding canons and injunctions; and being authorized by the king's commission, according to the form of the statute 25th Henry VIII., they were confirmed by act of parliament, and became part of the law of the land, and as binding in ecclesiastical matters as any statute whatever in civil. Some of the canons of 1603 are now obsolete, as the seventy-fourth, which requires that the beneficed clergy shall wear gowns with standing collars and square caps.

CANTICLES. See SONG OF SOLOMON.

CAPERNAUM, a town of Galilee, situated on the north-west side of the lake of Gennesareth, on the border of the tract occupied by the tribes of Zebulun and Naphtali. It was distant nearly one hundred miles north by east from Jerusalem, and about twelve miles north of Tiberias. This city is not mentioned by the Old Testament writers, and it is, therefore, probable, as Dr. Wells supposes, that it was one of the towns built by the Jews after their return from the Babylonish captivity "upon the sea-coast." (Matt. 4. 13.) But the history of all the towns on the lake of Gennesareth has been covered with a cloud which it is now impossible to dispel; and nothing is more difficult than to determine the situations they occupied; we must, therefore, receive the accounts which

2 K

Capernaum.

modern travellers have afforded us as at best conjectural and uncertain.

Our Saviour left Nazareth in the first year of his ministry, and dwelt in Capernaum, which, observes Dr. Hales, was, with the adjoining villages, "peculiarly fitted for his chief residence, as his disciples principally resided there, and the Sea of Galilee afforded him facilities for moving from place to place, and thus avoiding the importunities of the multitude." It was here the centurion visited him, whose servant was sick, and whose faith and humility obtained for him the high encomium pronounced by Our Saviour when granting his request. "Verily I say unto you I have not found so great faith, no, not in Israel." It is called, by way of local distinction, "his own city;" here he cured a man sick of the palsy, (Matt. 9. 1,2;) here he called the apostle St. Matthew when sitting as collector of the toll, or rate, paid by all persons passing over the lake; and near it, on an eminence called the Mount of Beatitudes, he delivered the beautiful and impressive discourse called the Sermon on the Mount. It is associated with Bethsaida and Chorazin as one of the cities wherein he had done many mighty works, the inhabitants of which notwithstanding obstinately rejected him as the Messiah, and upon whom a heavy doom was pronounced. (Matt. 11. 23.) This denunciation uttered against Capernaum has been strictly fulfilled, for it was destroyed by the Romans when they ravaged Palestine after the fall of Jerusalem; and although it was rebuilt, and a Christian church erected there, on the traditional site of the dwelling of St. Peter, it was finally overthrown on the conquest of the country by the Saracens, and its very site is now a matter of dispute. Pococke and the other early writers consider that no vestiges whatever of it remain, but the recent researches of Buckingham, Stephens, and others seem to identify it with Tel-Houm, a station of Bedouin Arabs, at the north-west corner of the lake, near a rivulet called El-Eshe.

Mr. Buckingham, who visited this spot in 1817, says, "Ruined buildings, hewn stones, broken pottery, are here scattered around over a wide space. The foundations of a large and magnificent edifice are still to be traced here, though there remains not sufficient of the building itself to decide whether it was a temple or a palace. It appears to have had its greatest length from north to south, and thus presented a narrow front

towards the lake. Within this space are seen large blocks of sculptured stone in friezes, cornices, mouldings, &c., and among them two masses which looked like panels of some sculptured wall. I conceived them at first to have been stone doors, but they were too thick for that purpose, and had no appearance of pivots for hinges; nor could they have been sarcophagi, as they were both perfectly solid. The sculpture seems to have been originally fine, but is now much defaced by time. The block was nine spans long, four and a half spans wide, and two spans thick in its present state, and lay on its edge against other hewn stones.

"Among the singularities we noticed here, were double pedestals, double shafts, and double capitals, attached to each other in one solid mass, having been perhaps thus used at the angles of colonnades. There were at least twenty pedestals of columns within this area, occupying their original places, besides many others overturned and removed, and all the capitals we saw were of the Corinthian order, and of a large size.

"Near to this edifice, and close to the edge of the lake, are the walls of a solid building, evidently constructed with fragments of the adjacent ruins, as there are seen in it shafts of pillars worked into the masonry, as well as pieces of sculptured stones intermingled with plain ones. This small building is vaulted within, though the Arabs have raised a flat terrace on its roof, and a poor family, with their cattle, now use the whole for their dwelling.

"To the north-east of this spot, about two hundred yards, are the remains of a small domestic bath; the square cistern and channels for supplying it with water are still perfect, and close by is a portion of the dwelling to which it was probably attached, with a narrow winding stair-case on one of its sides. The blocks of the great edifice are exceedingly large; and these, as well as the materials of the smaller buildings, and the fragments scattered around in every direction, are chiefly of the black porous stone which abounds throughout the western shores of the lake. Some masses of coarse white marble are seen, however, in the centre of the large ruin, and some subterraneous work appears to have been constructed there of that substance. The whole has an air of great antiquity, both from its outward appearance, and its almost complete destruction, but the style of the architecture is evidently Roman."

The name of Capharnaom, which is said to have been the name borne by this city anciently, is unquestionably meant for the Capernaum of Scripture, and that this was a place of some wealth and consequence may be inferred from the address to it by Our Saviour. The other name of Tel-Houm may be thought to have some affinity with that of Dalmanutha, a name given in the Gospel, seemingly to Capernaum itself, or the country about it at least; as St. Mark in his Gospel, after describing the feeding of the four thousand, says, "And straightway he entered into a ship with his disciples, and came into the parts of Dalmanutha."

Burckhardt agrees with Buckingham in supposing the ruins which the latter describes to be the site of Capernaum, mentioned in the Gospel. Pliny Fisk, the American missionary, visited the place in 1823, and says, "Here are ruins which are manifestly very ancient. A part of the wall of one building still stands, and many walls appear at the surface of the ground, as well as broken columns, pedestals, and capitals. There are now twenty or thirty uninhabited Arab huts on the ruins of the old city. Two men and one woman were repairing the roof of one to make it a storehouse for grain."

"I endeavoured, by repeated inquiries," says Lord Lindsay, "to recall the memory of its name. Truly, indeed, has Capernaum been cast down to Hades."

"I could hear nothing of Chorazin and Bethsaida, though I named them to almost every one we met. Bethsaida, however, was discovered by Pococke in ruins, and called by the same name, rather out of this immediate district; but Chorazin ought to be somewhere hereabouts. Dr. Richardson was informed that both Chorazin and Capernaum were near, but in ruins; no one, however, that we met seemed to know anything about them."

When Dr. Richardson was near the village of Mensura, about six miles west of the lake, he asked some natives if they knew such a place as Capernaum? They answered, "Cavernahum and Chorasi,—they are quite near, but in ruins." By "quite near," they probably meant the nearest part of the shore of the lake, which, from Mensura, would be a point about four miles S.S.W. of Tel-Houm, and eight nearly north of Tiberias. Bishop Pococke says he found in this neighbourhood a fine fountain, which ran off in a stream through the plain to the lake, and which he supposed might correspond to the fountain of Capharnaum mentioned by Josephus.

CAPHTOR—CAPHTORIM, the name of a country and its inhabitants, respecting which there is a considerable difference among commentators. The Targums of Jerusalem and Jonathan read Cappadocia for Caphtorim in Genesis 10. 14, as does the Septuagint in Deuteronomy 2. 23. Gesenius says, "The Caphtorim came, according to the cited passages, originally from Egypt; thence they emigrated to Caphtor, and from thence again a colony emigrated to the southern country of Canaan, and called themselves *פְּלִשְׁתִּים* *Phileshtim*." The ancient translators have almost all expressed Caphtor by Cappadocia, but the designation *N ayee* in Jeremiah, 47. 4, requires (as in the margin of our version) to be rendered by island or sea-coast; Cyprus would be more applicable, although no assertions in its favour can be cited from the ancients. Dr. Wells and others contend that Caphtor was one of the islands formed by the river Nile, and is the same with Coptus so situated. Calmet, on the other hand, alleges that Caphtor was the island of Crete, and that the Philistines came from that island. It is, perhaps, impossible now to decide the matter.

CAPITATION. See **TAXES**.

CAPPADOCIA, a country of Asia Minor, bounded on the north by Galatia and Pontus, on the west by Phrygia, on the east by the Euphrates, and on the south by Cilicia. Its eastern part was called Armenia Minor. The name of the country according to Pliny was derived from the river Cappadox, which divides it from Galatia; but according to Herodian, from Cappadocus, the founder of the kingdom. It is mentioned in the Acts of the Apostles, (2. 9,) that on the day of Pentecost, when the miraculous gift of tongues was conferred, some Cappadocians then at Jerusalem heard of the "wonderful works of God" in their own language; and it is also specified by St. Peter, (1. 1,) as one of those countries to the Christians of whom he addressed his epistles. From the faint glimmerings of ancient history we find that this country was a province of Lydia in the reign of Cræsus, about 500 B.C. It continued a kingdom until about the birth of Christ, when it was conquered by the Romans, and annexed to that empire.

The religion of the Cappadocians previous to the introduction of Christianity, seems to have been a mixture of the Persian and Grecian superstitions. It is not known by whom Christianity was first introduced there, but it made a rapid progress notwithstanding the persecutions raised by the Roman emperors. The names of Gregory Nazianzen, Gregory Nyssen, and St. Basil, occur among its bishops in the primitive times. The Gospel long flourished here, and the existence of Christian churches may be traced till the ninth or tenth century. The pretended St. George, the titular saint of England, who is celebrated in the eastern and western churches, is traditionally said to have been "a noble Cappadocian and a tribune under Dioclesian." From the Roman emperors of the East, Cappadocia passed into the hands of the Turks, and it now forms a portion of the pachalics of Konieh and Tarabozan, or Trebisond.

CAPTAIN. See **ARMS; ARMOUR; ARMY**.

CAPTIVES. See **ARMS; ARMOUR; ARMY**.

CAPTIVITY, a state of bondage to which a nation may be reduced by the fate of war. This calamity has befallen many other nations, but in no case is it so striking as in that of the Jews, it being the punishment denounced against them by the Almighty in case of their disobedience to his statutes. Thus, in the 28th chapter of Deuteronomy, it is foretold that they should be removed into all the kingdoms of the earth, scattered among all people, from one end of the earth even to the other,—find no ease or rest,—be oppressed and crushed always,—be left few in number among the heathen,—pine away in their iniquity, in their enemies' land,—and become an astonishment, a proverb, and a by-word unto all nations.

"These predictions," says Keith, "were literally fulfilled during the subjection of the Jews to the Chaldeans and Romans; and, in later times, in all nations where they have been dispersed. Moses foretold that their enemies would besiege and take their cities; and this prophecy was fulfilled by Shishak, king of Egypt, Shalmaneser, king of Assyria, Nebuchadnezzar, Antiochus Epiphanes, Sosius, and Herod, and, finally, by Titus. Though dispersed throughout all nations, they have remained distinct from them all; and notwithstanding the various oppressions and persecutions to which they have, in every age, been exposed in different parts of the world, there is not a country on the face of the earth where the Jews are unknown. They are found alike in Europe, Asia, Africa, and America. They are citizens of the world without a country."

The first captivity of the Jews may be termed that of Egypt, from which they were delivered by Moses. Six captivities are reckoned during the government by Judges; the first under Chushan Rishathaim, king of Mesopotamia, which continued about eight years; the second under Eglon, king of Moab, from which they were delivered by Ehud; the third under the Philistines, from which they were rescued by Shamgar; the fourth, under Jabin, king of Hazor, from which they were delivered by Deborah and Barak; the fifth, under the Midianites, from which Gideon freed them; and the sixth under the Ammonites and Philistines, in the time of Jephthah, Elon, Abdon, Eli, Samson, and Samuel. But the greatest and most remarkable captivities were those of Israel and Judah, under their regal government.

CAPTIVITIES OF ISRAEL. In the year A.M. 3264, B.C. 740, Tiglath-pileser took several cities, and carried away captives, principally from the tribes of Reuben, Gad, and the half-tribe of Manasseh. (2Kings 15. 29.) In A.M. 3283, Shalmaneser took and destroyed Samaria, after a siege of three years, and transplanted the tribes that had been spared by Tiglath-pileser, to provinces beyond the Euphrates. (2Kings 18. 10,11.) It is generally believed there was no return of the ten tribes from this second captivity; but when we examine carefully the writings of the prophets, we find the return of at least a great part of Israel from the captivity clearly pointed out. Hosea says, "They shall tremble as a bird out of Egypt, and as a dove out of the land of Assyria; and I will place them in their houses, saith the Lord." (Hosea 11. 11.) Amos says, "And I will bring again the captivity of my people Israel; they shall build their waste cities, and inhabit them," &c. (Amos 9. 14.) Obadiah observes, "The captivity of this host of the children of Israel shall possess that of the Canaanites," &c. (Obad. 18. 19.) To the same purport speak the other prophets: "And he shall assemble the outcasts of Israel, and gather together the dispersed of Judah." (Isai. 11. 12,13.) Ezekiel received an order from God to take two pieces of wood, and write on one, "For Judah, and for the children of Israel," and, on the other, "For Joseph, and for all the house of Israel," and to join these two pieces of wood, that they might become one, and designate the re-union of Judah and Israel. (Ezek. 37. 16.) Jeremiah is equally express: "The house of Judah shall walk with the house of Israel, and they shall come together out of the land of the North to the land that I have given for an inheritance unto your fathers." (Jerem. 3. 18; see also 31. 7-9,16,17,20; 49. 2; Zech. 10. 6; Micah 2. 12.)

In the historical books of Scripture also, we find that Israelites of the ten tribes, as well as of Judah and Benjamin, returned from the captivity. Among those that returned with Zerubbabel, are reckoned some of Ephraim and Manasseh, who settled at Jerusalem with the tribe of Judah. When Ezra numbered those who returned from the captivity, he only inquired whether they were of the race of Israel; and at the first passover, which was then celebrated in the Temple, was a sacrifice of twelve he-goats, for the whole house of Israel, according to the number of the tribes. (Ezra 6. 16,17; 8. 35.) Under the Maccabees, and in the time of Our Saviour, we see Palestine peopled by Israelites of all the tribes, indifferently. The Samaritan Chronicle asserts that, in the thirty-fifth year of the pontificate of Abdelus, three thousand Israelites returned from captivity.

CAPTIVITIES OF JUDAH. The captivities of Judah are generally reckoned four; the first occurred A.M. 3398, under king Jehoiakim, when Daniel and others were carried to Babylon; the second in the year A.M. 3401, and in the seventh year of the reign of Jehoiakim, when

Nebuchadnezzar carried three thousand and twenty-three Jews to Babylon; the third, A.M. 3406, and in the fourth of the reign of Jehoiachin, when this prince, with part of his people, was sent to Babylon; and the fourth, A.M. 3416, under Zedekiah, from which period begins the captivity of seventy years, foretold by the prophet Jeremiah. Dr. Hales computes that the first of these captivities, which he thinks formed the commencement of the Babylonish captivity, took place in the year A.M. 3399. The Jews were removed to Babylon by Nebuchadnezzar, who, designing to render that city the capital of the East, transplanted thither very great numbers of people, subdued by him in different countries. In Babylon, the Jews had judges and elders, who governed them, and who decided matters in dispute according to their laws. Of this we see a proof in the story of Susanna. Cyrus, in A.M. 3457, and in the first year of his reign at Babylon, permitted the Jews to return to their own country. (Ezra 1. 1.) However, they did not then obtain leave to rebuild the Temple; and the completion of those prophecies which foretold the termination of their captivity after seventy years, was not till the year A.M. 3486. In that year, Darius Hystaspes, by an edict, allowed them to rebuild the Temple. In A.M. 3537, Artaxerxes Longimanus sent Nehemiah to Jerusalem. The Jews assert that only the refuse of their nation returned from the captivity, and that the chief part of them continued in and near Babylon, where they had been settled, and where they became very numerous. It may, however, be doubted whether the refuse of Judah was really carried to Babylon. It appears, from incidental observations in Scripture, that some remained; and Major Rennell has offered several reasons for believing that only certain classes of the Jews were deported to Babylon, as well as into Assyria. Nebuchadnezzar carried away only the principal inhabitants, the warriors and artisans of every kind; and he left the husbandmen, the labourers, and, in general, the poorer classes, that constitute the great body of the people.

In the last captivity, under the Romans, Josephus informs us that the total number who perished by famine and war in Jerusalem and other parts of Judæa, was one million two hundred and forty-four thousand four hundred and ninety, besides ninety-nine thousand two hundred, who were made prisoners, and sold unto their enemies for bondmen and bondwomen; and after their last overthrow by Adrian, many thousands of them were sold; and those for whom purchasers could not be found (Moses had foretold that no man would buy them,) were transported into Egypt, where multitudes perished by famine or shipwreck, or were massacred by the inhabitants. Since the destruction of Jerusalem, they have been scattered among all nations. These events were foretold by the prophet Daniel, 9. 26,27.

It was also foretold that their plagues should be wonderful, even great plagues, and of long continuance! And have not their plagues continued more than seventeen hundred years? In comparison of them, their former captivities were very short; during their captivity in Chaldæa, Ezekiel and Daniel prophesied, but now they have no true prophet to foretell the end of their calamities. What nation has suffered so much, and yet endured so long? What nation has subsisted as a distinct people in their own country so long as the Jews have done in their dispersion into all countries? Hosea foretels the present state of the people of Israel in these remarkable words:—"They shall be wanderers among the nations." (9. 17.)

The following is a picture drawn by some modern travellers of the present state of the Jews in their own country:—"The condition of the Jews in Palestine is more insecure

and exposed to insult and exaction, than in Egypt and Syria, from the frequent lawless and oppressive conduct of the governors and chiefs." Carne.

"The quarter of Jerusalem now inhabited by the Jews, all travellers attest, presents nothing but filth and wretchedness. Poor wretches! everything about them exhibited signs of depression and misery; outcasts from the common sympathies of men,—oppressed and despised alike by Mohammedans and Christians,—living as aliens in the inheritance of their fathers,—what an awful lesson of unbelief do they hold out." *Three Weeks in Palestine.*

At this present time, 1840, an appeal is made in the British Parliament, on account of the cruel persecutions which the Jews are suffering at Damascus and Rhodes, imploring our government to exercise its influence to afford them protection. What a standing miracle is thus exhibited to the world, in the fulfilment, at this very moment, of prophecies delivered considerably more than three thousand years ago! What a permanent attestation to the Divine legation of Moses, and the truth of the Scriptures!

CARAITES or **KARAITES**, an ancient Jewish sect. The name signifies "Textualists" or "Scripturists," and was originally given to the school of Shammai about thirty years B.C., because they rejected "the traditions of the elders," as embraced by the school of Hillel and the Pharisees. They claim, however, a much higher antiquity, and produce a catalogue of doctors up to the time of Ezra. Dr. Prideaux gives the following account of the origin of the present sect:—"The compilation called the Talmud, appearing in the beginning of the sixth century, people of sense were so shocked with the trifles, the ridiculous and incredible fables which filled it, and to see, at the same time, men daring to

assert all this as coming from God, that many resolved to establish their faith only on the word of God, the Scriptures. This refusal to admit the Talmud as a rule of faith did not, however, for a long time, produce any schism. But about A.D. 750, Anan, a Babylonish Jew of the race of David, and his son Saul, declared openly for the written word of God alone, exclusive of tradition. Their declaration produced a schism: those who supported the Talmud and traditions being almost all Rabbins, their disciples were called Rabbinitists; and the others were called Caraites or Scripturists, from Cara, which, in the Babylonish language, signifies Scripture. The Jews pretend, that the true cause of this schism was the ambition of Anan, who was exasperated at being refused the degree of *gaon*, or excellent, (a title given to certain doctors,) and at his disappointment in not obtaining the office of prince of the captivity, to which he aspired, as one descended from David."

The Rabbinitists have been accustomed to call the Caraites, Sadducees; but they believe in the resurrection of the dead and the final judgment. They believe that the Messiah is not yet come, and reject all calculations of the time of his appearance: yet, they say, "it is proper that even every day they should receive their salvation by Messiah, the son of David." In the practice of their religion, they differ from the Rabbinitists in their observance of the festivals, and keep the Sabbath with more strictness. They extend their prohibition of marriage to more degrees of affinity, and admit not of divorce on any slight or trivial grounds. The sect still exists, but the number is very inconsiderable. They are found chiefly in the Crimea, where Dr. Edward Daniel Clarke visited a settlement of them, in Lithuania, Persia, Damascus, Constantinople, and Cairo. Their honesty is said to be proverbial in the Crimea, and their rabbis highly esteemed and exceedingly well informed.

Caravan.

CARAVAN. The mode of travelling in companies, so common at the present day in the East, more especially in Syria, Arabia, and Tartary, was equally customary of old, and is often alluded to in the Old Testament, under the term *חֵטָוּ* *orchah*, and in the New under that of *συνοδια*, which our translators have variously rendered "the people," "company," "troops," and "travelling companies." (Gen. 32. 7; 37. 25; Job 6. 19; Isai. 21. 13; Luke 2. 43.)

When persons thus journeyed, they provided them-

selves with every necessary, as there were no inns for the reception of travellers. Women and rich men frequently travelled on asses or camels, which carried not only their merchandize, but also their household goods. These goods consisted chiefly of a mattress, a coverlet, a carpet for sitting upon, a round piece of leather, which answered the purpose of a table, a few pots and kettles of copper covered with tin, also a tin plated cup, which was suspended before the breast under the outer garment, and was used for drinking, (the "cruse" mentioned in

1Samuel 26. 11,12,16,) leathern bags for holding water, tents, lights, and provisions in quality and abundance as each one could afford. (Ezek. 12. 3,4.) Every caravan had a leader to conduct it through the desert, who was acquainted with the direction of its route, and with the situation of the cisterns and fountains. These he was able to ascertain, sometimes from heaps of stones, sometimes by the character of the soil; and when other helps failed him, by the stars.

The Jews travelled in caravans, or companies, when they went up to Jerusalem at the three great annual festivals. The Psalms of Ascension, or of Degrees, as they are commonly entitled, (120th—134th,) are supposed to have received this appellation from the circumstance of their being sung by the more devout Jews, when they were ascending or travelling up to the Holy City on these occasions. It was among such a company that Joseph and Mary sought "the child Jesus," (Luke 2. 44,) on their return from the passover, when he was twelve years old. A similar custom of travelling in companies to the temples at certain great festivals still prevails in the East.

Mr. Roberts, in his *Oriental Illustrations*, observes, "The people of the East have a general propensity for associates in all their transactions and journeys; hence in India, if a man has to travel from a distant village on business, he takes with him a large company of his neighbours and friends. This circumstance may account for the brethren accompanying Peter from Joppa. (Acts 10. 23.)"

Most of the internal trade of the East and of Africa is still conducted by means of caravans. Beside those from Damascus and Cairo to Mecca, whose objects are partly religious, partly commercial, caravans annually leave Bokhara and Samarcand, and proceed to China and India; and the interior of Africa is annually thus visited by merchants from Egypt and Barbary. Every caravan is commanded by a chief or aga, who has under him a number of janizaries belonging to the states through which they are to pass, for conducting them in safety. Before a caravan can be formed, it is necessary to obtain a written permission from one sovereign prince, and it must have the sanction of at least two others. This licence must specify the number of men, and beasts of burden, as well as the quantity of merchandise of which it is composed. The owners of the caravan may choose the officers, and determine the regulations to be observed during its journey. There are commonly four principal officers attached to each caravan; the first is commander-in-chief, the second commands during the march, the third when it halts, and the fourth should it happen to be attacked by any of the predatory tribes of Arabs, numbers of whom are always lying in wait for that purpose. There is also a purser, or treasurer, having under him a number of clerks and interpreters, whose business it is to keep accurate journals of whatever occurs, from which, signed by the principal officers, those concerned may form a judgment how far their interests have been attended to. As the greater part of the Arabian princes have no other revenue than what arises from plunder, they keep spies for the purpose of informing them of the departure of the caravans, which they often attack with superior force, and frequently succeed in carrying off considerable booty; if they succeed in defeating it, the whole is entirely pillaged, and the escort, whether pilgrims, travellers, or merchants, are carried away and sold for slaves. The gains of the merchants belonging to these caravans are often incredibly great; as an instance of which, we are told of a traveller who, with the goods for which he paid only thirty pounds, by repeated barter and exchanges in the course of one

journey, gained 6,000*l*. These immense profits, which are by no means uncommon, induce numerous adventurers to accompany the caravans, notwithstanding the hardships and inconveniences of the journey, which, in many instances, are extremely severe. Unwholesome food, intolerable water, and often none at all, long and fatiguing marches over burning sands, are circumstances with which they must invariably lay their account, besides being exposed to the thefts and robberies of a crowd of vagrants who resort to the caravans for the sole purpose of living at the expense of the unwary.

When all things are in readiness, the individuals who compose the caravan assemble at a distance from the city. The commander of the caravan, who is a different person from the conductor or leader, and is chosen from the wealthiest of its members, appoints the day of its departure. The caravans start very early, sometimes before day. They endeavour to find a resting-place, or station, to remain at during the night, which shall afford them a supply of water. (Job 6. 15-20.) They generally arrive at their resting-place before the close of the day, and while it is yet light, prepare everything that is requisite for the recommencement of the journey. In order to prevent any one wandering away from the caravan, and getting lost during the night, lamps, or torches, are elevated upon poles, and carried before it. The pillar of fire answered this purpose for the Israelites when wandering in the wilderness. Sometimes the caravans lodge in cities, but when they do not, they pitch their tents so as to form an encampment, and during the night keep watch alternately for the sake of security.

The long and toilsome journeys which these caravans perform through barren deserts and uninhabited wilds, and the hardship and fatigue which travellers sometimes endure, appear to Europeans almost incredible. Provisions and water must be carried several hundred miles, for in these parched regions there are few wells, and fewer still of rivers of water, while travellers are every hour exposed to the whirlwinds and the hordes of wandering Arabs. To accomplish such painful journeys, Providence has furnished the inhabitants of these countries with a beast of burden peculiarly fitted for traversing these burning wastes. A caravan usually consists of several hundred loaded camels, attended by Arabs which are hired by the merchants at a low rate for the performance of the journey. (See CAMEL.) A modern traveller gives the following graphic picture of one of these caravans:—"It was midnight," says he, "when we arrived at the khan of Menemen, I perceived at a distance a great number of scattered lights; it was a caravan making a halt. On a near approach, I distinguished camels, some lying, others standing, some with their loads, others relieved from their burdens. Horses and asses without bridles, were eating barley out of leathern baskets; some of the men were still on horseback, and the women, veiled, had not alighted from their dromedaries. Turkish merchants were seated cross-legged on carpets, in groups round the fire, at which the slaves were busily employed in dressing pillau. Other travellers were smoking their pipes at the door of the khan, chewing opium, and listening to stories. Here were people roasting coffee in iron pots; there were hucksters going about from fire to fire, offering for sale, cakes, fruits, and poultry. Singers were amusing the crowd. Imams were performing their ablutions, prostrating themselves, rising again, and imploring the prophet, while the camel-drivers lay snoring on the ground. The place was strewn with packages, bags of cotton, &c. All these objects, now distinct, now confused, and enveloped in a half-shade, exhibited a genuine scene of the Arabian Nights." Chateaubriand's *Travels*; Jackson's *Morocco*.

Caravanserai.

CARAVANSERAI. In Luke 2. 7, and 10. 34, occur the words *καταλυμα* and *πανδοχειον*, which our translators render "inns," but which, in reality, mean caravanserais, for in the East anciently, as well as in modern times, there were no inns in which the traveller could meet with refreshment. Shade from the sun, and protection from plunderers at night, is all that the caravanserais afford; hence hospitality is deemed a duty incumbent on every one. The Sacred Writings exhibit instances of such hospitality exercised by the patriarchs, and modern travellers show that a similar practice still exists in the East. On account of the intense heat of the weather during summer, they are accustomed to travel by night, and this circumstance will serve to explain the parable of the importunate guest, who arrived at midnight, (Luke 11. 5-8,) in which the rites of hospitality are generally recognised and supposed to be acted upon, though not in this instance in so prompt a manner as was usual.

Captains Irby and Mangles partook of Arab hospitality under similar circumstances. "We arrived at a camp late at night, and halting before a tent, found the owner, with his wife and children, had just retired to rest; when it was astonishing to see the good humour with which they all arose again, and kindled a fire, the wife commencing to knead the dough and prepare our supper, our Arabs making no apology, but taking all as a matter of course, though the nights were bitterly cold."

"Most of the Eastern cities," says Forbes, "contain one caravanserai at least for the reception of travellers; smaller places, called choultries, are erected by charitable persons, or munificent princes, in forests, plains, and deserts. Near them is generally a well, and a cistern for the cattle; a brahmin, or faqueer, often resides there to furnish the pilgrim with food and the few necessities he may stand in need of. When benighted, in a dreary solitude, travellers in India were thus certain, within a moderate distance, to find one of these buildings appropriated for their accommodation, and were often supplied with provisions gratis."

"Caravanserais are not all alike, some being simply places of rest by the side of a fountain, and at a proper distance on the road, while others offer various accommodations. Many of these places are nothing more than naked walls; others have an attendant, who subsists either by some charitable donation, or the benevolence

of passengers; others are more considerable establishments, where families reside, and take care of them, and furnish the necessary provisions. Every one who travels, provided he has a beast, generally takes with him a carpet, a mattress, a blanket, one or more saucepans, dishes, plates, and a coffee-pot, all of copper, well tinned; a small wooden box for salt and pepper, a round leathern table, which he suspends from the saddle of his horse, with small leathern bottles for oil, butter, water, and spirits; and if the traveller be a Christian, a tinder-box, some rice, dried raisins, dates, Cyprus cheese, and, above all, coffee-berries, with a roaster, and wooden mortar to pound them."

De Lamartine, in his *Pilgrimage to the Holy Land*, gives a graphic sketch of these places, which we subjoin, as affording a more correct picture than that drawn by many other travellers.

"After descending for about two hours, we met with an isolated khan beneath magnificent plantains, on the edge of a fountain; it is a hut, the walls of which are of ill-joined, uncemented stones, affording no protection from wind or rain; these stones are generally blackened by the smoke of the hearth, which continually filters through the open spaces. The walls are about seven or eight feet high, and covered over with pieces of rough wood, retaining its bark and largest branches; the whole is shaded with dry faggots, answering the purpose of a roof. The inside is unpaved, and is, according to the season of the year, a bed of dust or of mud. One or two stakes support the roof of leaves, and the traveller's cloak and fire-arms are suspended thereon. In one corner is a small hearth, raised upon a few rough stones; a charcoal fire is constantly burning upon this hearth, and one or two copper coffee-pots are always full of thick farinaceous coffee, the habitual refreshment and only want of the Turks and Arabs. There are, in general, two rooms similar to the one I have described. One or two Arabs are authorized, in return for the tribute they pay to the pacha, to do the honours of the dwelling, and to sell coffee and barley-flour cakes to the caravans. When the traveller reaches the door of these khans, he alights from his horse or camel, and removes the straw mats, or damask carpets, which are to serve him for a bed; they are spread in a corner of the smoking room; he sits down, calls for coffee, lights his pipe, and waits until his slaves have collected some dry wood to prepare

his repast. This repast usually consists of two or three cakes, half-baked on a heated pebble, and some slices of hashed mutton, which is boiled with rice in a copper pot. It rarely happens that rice or mutton can be procured in the khan; the traveller must then be satisfied with the cakes and the excellent fresh water which is always to be found in the neighbourhood of khans. The servants, the slaves, the camel leaders, and the horses remain round the khan in the open air. There is generally in the neighbourhood some noted and long-standing tree, which serves as a beacon to the caravan; this is mostly an immense sycamore, such as I have never seen in Europe; it is of the size of the largest oaks, and grows to a greater age. Its trunk sometimes measures to thirty or forty feet in circumference, and is often larger; its branches, which begin to spread at an elevation of fifteen or twenty feet from the ground, at first extend in a horizontal direction to an immense distance; the upper branches then group themselves in narrower cones, and resemble from afar our beech-trees. The shadow of those trees which Providence seems to have scattered here and there, as an hospitable cloud over the burning soil of the desert, extends to a great distance from the trunk; and it is not unusual to see perhaps sixty camels and horses, and as many Arabs, encamped, during the heat of the day, under the shadow of one of these trees. In this, however, as in everything else, it is painful to notice the indifference of Eastern people, and of their government. These plantations, which should be preserved with care, as imms provided by nature for the wants of the caravan, are left to the stupid improvidence of those who benefit by their shade; the Arabs light their fires at the foot of the sycamore, and the trunks of most of these splendid trees are blackened and hollowed by the flames of Arab hearths. Our little caravan settled itself under one of these majestic sycamores, and we passed the night wrapped up in our cloaks, and stretched on a straw mat in a corner of the khan."

CARBUNCLE, ברקת *baruketh*. (Exod. 28. 17; Ezek. 28. 13.) The Septuagint and Josephus render this word emerald, which interpretation is supported by Braun, in his work, *De Vestit. Sacerdot. Heb.*

"The carbuncle is a gem of the colour of deep red. It is commonly found in a pure and faultless state, and is of the same degree of hardness as the sapphire, which is second only to the diamond. It is of an angular figure, and is found adhering by its base to a very heavy and ferruginous kind of stone. Its size is about a quarter of an inch in length, and two-thirds of an inch in diameter. In its thickest part, when held up against the sun, it loses its deep tinge, and its colour resembles a piece of burning charcoal, on which account the ancients gave it the name of anthrax. The fire produces no mutation in its colour. Hitherto it has been found only in the East Indies, and there but rarely." Hill's *History of Fossils*.

CARCASE, the body of man or beast deprived of life. (Levit. 5. 2; 11. 8; Isai. 5. 25.) The Law prohibited the touching of the carcase of any unclean beast. (Levit. 11. 8; 24. 25.) This, however, does not mean that a carcase was, in a literal sense, never to be touched, for then it must always have been in the way, whereas it was expressly ordered to be buried, but only that the person who touched it was to be deemed unclean until the evening. "The carcase of Jezebel shall be as dung," (2Kings 9. 37,) was the threatening of the Lord, as being deprived of the rites of sepulture was accounted a great calamity.

The allusion made by Our Saviour in Matthew 24. 28, "Whosoever the carcase is, there will the eagles be gathered together," is supposed to be an emblem of the state of Judæa, and the city of Jerusalem, at the time of their desolation by the Romans. The prophets employed the term to designate the transgressions of the Jewish people, which had arisen to such a height as to render them offensive in the eyes of God. (Ezek. 6. 5.)

Roberts, in his *Oriental Illustrations*, informs us, "that the sight and scent of birds of prey is much keener in the East, than those of the same species in England. Should there be a dead elephant or any other beast in the jungle, vast numbers of various birds and animals hasten to the spot. The eagles, kites, and crows, begin to tear at the carcase and attack each other, and the jackals snap at their feathered rivals; thus, though there is enough for all, they each try to hinder the other from eating. There can be no doubt that birds of prey are very useful in the East, as they carry off the putrid matter, which would otherwise infect the air. Hence, Europeans do not often destroy such birds; and in the city of Calcutta, there is a law to protect them from being injured."

CARCHEMISH, כרכמיש a fortified city on the banks of the Euphrates, probably the Circesium, or Circesium of the Greeks. Some modern writers suppose that it was the Cadytis of Herodotus. It was situated on the east side of the Euphrates at its confluence with the Chaboras, and commanded the pass into the northern part of Mesopotamia from Syria. Necho, king of Egypt, took it and left a strong garrison there, but it was taken in the fourth year of Jehoiachin, king of Judah, by Nebuchadnezzar, king of Babylon. (2Kings 23. 29; 2Chron. 35. 20.) Heine; Wimer.

CARMEL was the name of a town in the tribe of Judah, of a mountain on the sea-coast, and also a fertile district around the mountain; the word implying a well planted and fruitful country.

I. A town in the southern part of Palestine, in the tribe of Judah, near the banks of the Dead Sea, and not far from Mount Nebo. (Josh. 15. 55.) Saul came to Carmel on his return from the slaughter of the Amalekites. (1Sam. 15. 12.) Nabal, the husband of Abigail, dwelt at Carmel. (1Sam. 25.) Eusebius and St. Jerome mention, that in their time there was a town called Carmelia, about ten miles south-east of Hebron, which is supposed to be the same as Carmel.

Professor Robinson says, "Here seems to have been an important city long after the Christian era. The ruins cover a large extent of ground, and there are remains of several large churches, besides a Roman fortress. The place is now called by the natives Kûrmel. We read here the story of David and Nabal, and were deeply struck with the truth of Biblical descriptions of manners and customs, almost literally and identically the same as they exist at the present day."

II. **MOUNT CARMEL** is situated about ten miles to the south of Acre, on the shores of the Mediterranean Sea, and forms one of the most remarkable headlands on the coast. Carmel, although mentioned as a single mountain in the Scriptures, is part of a mountainous ridge, which extends about fifteen miles from south-east to north-west, while the most elevated one, which rises in the form of a flattened cone, and is about fifteen hundred feet in height, is commonly designated Mount Carmel by way of eminence. Josephus calls it a mountain of Galilee, but in another place he states, that the limits of the tribe of Issachar were Mount Carmel and the river, and that the lot of the tribe of Zebulun

Mount Carmel.

included the land which belonged to Carmel and the Mediterranean. According to the divisions made by Joshua, it belonged partly to Asher and partly to Manasseh, but as those tribes remained in captivity along with the others, it reverted to the Phœnicians or Philistines, its original possessors.

The expression "the forest of his Carmel," (2Kings 19. 23; Isai. 10. 8; 37. 24,) implies that it abounded at one time with wood; and the summits are said to abound with oaks, pines, and other trees; while, among brambles, wild vines and olive-trees are still to be found, though there is little in the present appearance of Carmel which coincides with the ancient Scriptural representations of its fertility and luxuriance. The excellency of Carmel has in a great measure passed away; the curse denounced by Amos, (1. 2,) "The top of Carmel shall wither," has fallen upon it; for it is now chiefly remarkable as a mass of barren and desolate rocks: there are no longer any rich pastures to render it the "habitation of shepherds," or to recall to the fancy the beauty of Carmel and Sharon, (Isai. 35. 2,) and to justify the comparison of it to the glory of Lebanon.

There are many caves in this mountainous range, particularly on the western side, the largest of which, called the school of Elijah, is much venerated both by Jews and Mohammedans. On the summit, tradition says, facing the sea, the prophet stood when he prayed for rain, and beheld the cloud arise out of the sea; and on the side next the sea is a lofty and spacious cave, to which tradition states that he desired Ahab to bring Baal's prophets, when celestial fire descended on his sacrifice. (1Kings 18. 19-40.)

M. Lamartine describes Mount Carmel as having its steep sides strewed with luxuriant and hardy vegetation, and its entire surface thickly clothed with shrubs, contrasted at distances by the majestic height of the oaks, whose tops tower above them. Masses of gray rock, chiselled by nature into grotesque and colossal figures, pierce the verdure here and there, and reflect the brilliant rays of the sun. "We were overtaken," he says, "by a storm in the middle of the day. I have witnessed few so terrible. The clouds rose perpendicularly like towers above Mount Carmel, and soon covered all the length of the summit of this chain of hills. The mountain, just now so brilliant and serene, was plunged

by degrees into rolling waves of darkness, split here and there by trains of fire. All the horizon sank in a few moments and seemed to close around us; the thunder did not burst in claps—it threw out one single majestic rolling, continual and deafening, like the waves of the sea during a tempest. The lightning might be truly said to revel, like torrents of fire from the heavens, on the black flanks of Carmel. The oaks on the mountain, and on the hill on which we were journeying, bent like young plants. The winds which rushed from the caverns and from between the hills, must have swept us away from our horses if we had not speedily alighted, and found a little shelter behind a fragment of rock on the then dry bed of a torrent. The withered leaves, upraised in masses by the storm, were carried above our heads like clouds, and the slender broken branches of the trees showered around us. I remembered the Bible and the prodigies of Elijah, the exterminating prophet of the mountain. His grotto was not far from us. Two vast edifices crown the mountain; one, the country house of Abdallah, Pacha of Acre; the other, a convent of Carmelite Monks, recently erected by the produce of Christian alms, and surmounted by a large tri-coloured flag, to announce to us the abode and protection of the French. A little lower than the convent, immense caverns are hollowed in the granite of the mountain. These are the famous grottoes of the prophet."

The monastery of the Carmelites is said to be situated on, or near the spot at which Elijah offered up his sacrifice. (1Kings 18. 19, &c.) In 1816, when Mr. Buckingham visited it, it was entirely abandoned, a solitary monk having the charge of it, who resided in Caypha. The convent was erected in the seventeenth century on the ruins of the ancient one, and during the campaign of the French army in Syria, was converted into an hospital for their sick. After the termination of that campaign it was ravaged by the Turks, who demolished its altars and stripped off the roof. It was subsequently destroyed by Abdallah Pacha, during the war between the Sultan and the Pacha of Egypt, lest it should be seized as a fortification by the enemy; but the monks, aided by contributions from Europe, have rebuilt two-thirds of it in a solid and substantial manner, and a few of the friars now inhabit it, who are justly distinguished for their hospitality to strangers. In the chalky beds around the

heights of the mountains are found hollow flints lined in the inside with a variety of sparry substances, having some resemblance to petrified fruit. These are commonly bestowed upon pilgrims, not only as curiosities, but as antidotes against several distempers.

Mr. Robinson says, "Nothing can be finer than the situation of the convent. It overhangs the sea and has a fine view over the other parts of the mountain, and the air is here remarkably pure. My guide, an aged monk of the order, assured me (and certainly with the appearance of belief on his part,) that he had actually seen the prophet Elijah walking one night on the terrace of the convent. He had already described to me his dress and person with the greatest minuteness, when a solution to the enigma came out by his adding, that at the time of the vision, he was lying ill on his couch."

CARNAL, signifies to be fleshly, sensual, sinful. Worldly enjoyments are carnal, because they only minister to the wants and desires of the animal part of man. (Rom. 15. 27; 1Cor. 9. 11.) The ceremonial parts of the Mosaic dispensation were carnal; they related immediately to the bodies of men and beasts. (Heb. 7. 16; 9. 10.) Wicked men are represented as under the influence of "a carnal mind, which is enmity against God," and which must issue in death. (Rom. 8. 6, 7.)

CARPENTER, CARPENTRY. The word *חרש* *hharash*, which our translators render "carpenter," is properly a general name, like our "workman," and is as applicable to an artificer in metal as in wood. We have before remarked, under the article **ARTS AND ARTIFICERS**, that mankind had, at a very early period, made considerable progress in the arts and sciences; and in the time of Moses, architecture, carpentry, metallurgy, masonry, spinning, embroidery, &c., must have attained a high degree of perfection, for the sacred writer expressly states that certain individuals among the Jews excelled in wisdom, in understanding, and in knowledge, and in all manner of workmanship, to devise curious works, to work in gold, and in silver, and in brass; and in the cutting of stones, to set them, and in carving of wood, to make any manner of cunning work; as also to engrave and embroider. (Exod. 35. 30-35.) Of their works, however, we have no existing remains, but by a reference to the antiquities of the country where their proficiency was acquired, we may obtain a satisfactory notion of their general character. The monuments and tombs of Egypt abound with illustrations of the state of the various arts, and from them we shall now proceed to draw a few illustrations of ancient carpentry, including cabinet-making.

1. *Tools.* Axes, hammers, saws, planes, chisels, and centre-bits are represented on the monuments, and to most of them do we find allusions in Scripture. Thus it is recorded among the calamities inflicted by the Philistines, that "there was no smith found throughout all the land of Israel: for the Philistines said, 'Lest the Hebrews make them swords or spears;' but all the Israelites went down to the Philistines, to sharpen every man his share, and his coultter, and his ax, and his mattock." (1Sam. 13. 19, 20.) Jael employed a hammer to destroy Sisera, (Judges 4. 21;) and the prophet Isaiah alludes to the sawyer and the saw: "Shall the saw magnify itself against him that shaketh it?" (10. 15,) and also to the plane. (44. 13.) There appears little difference between these implements and those of our time; but the blade of the Egyptian chisel was inserted obliquely, so as to make an obtuse angle with the handle; such a form rendered it more effective for hollowing out, a purpose to which it was principally applied.

It appears that the Egyptians were acquainted with the art of veneering, or overlaying wood of an inferior quality with thin plates of more valuable woods. This proves that they knew the use of glue, and accordingly in the lower part of the opposite engraving we see the glue-pot on the fire.

2. *Chairs and Couches.* The common people usually sat on the ground, in the modern Oriental fashion; but chairs were used by persons of high rank, as may be seen by the accompanying engraving, and also by that under the article **BANQUET**. The graceful form and richness of these articles could not be exceeded in our own times. In the days of Joseph, the Egyptians sat erect at their meals; for when he invited his brethren to an entertainment, we are told, "They sat before him, the firstborn according to his birthright, and the youngest according to his youth: and the men marvelled one at another." (Gen. 43. 33.) They had likewise couches similar to our modern sofas, and with these they used a curious kind of wooden pillow, the shape of which will be best understood by a reference to the illustrations given. "The couches appear also to have been intended as bedsteads; and it is not improbable they were used to sleep upon at night, and in the day time, a rich covering being substituted for the bedding, they were readily transformed into an ornamental piece of furniture. The presence of the head-pillow placed upon it, and the steps at the side for ascending the couch, argue strongly in favour of this supposition; nor is the custom unusual in the East at the present day." Wilkinson.

There are also several representations of rich chairs, or thrones, with cushioned sides, and the seat placed so high that they could not be used without a footstool, as here represented. The decorations of these couches and chairs are extremely rich and splendid, but it would be impossible to give an adequate notion of their beauty without the assistance of colour. Some of these chairs, or thrones, were elevated to a considerable height from the ground, and it is supposed that it was a fall from one of such lofty seats which occasioned the death of Eli: "It came to pass, when he made mention of the ark of God, that he fell from off the seat backward by the side of the gate, and his neck brake, and he died: for he was an old man, and heavy." (1Sam. 4. 18.)

3. *Tables, Caskets, &c.* The Egyptian tables were usually of very small size, and simple in their construction, being merely a plain round plank, or slab, supported by a pillar. At some entertainments it would appear that a separate table was provided for each individual guest; but at others, the viands were placed together on a side table, and handed round on trays by the attendants. Among the works of the Egyptian artists are found bureaus, wardrobes, and coffers; several of the latter, probably designed for jewel-cases, rival in beauty the caskets of gold and of silver. See **Box**, where some elegant specimens are given.

4. *Mummy-cases.* The manufacture of mummy-cases, or coffins, formed an important branch of Egyptian, though not of Jewish carpentry; and a glance at those in the British Museum will show the care which the former people lavished on their coffins. They are made of sycamore wood, which is very light, soft, and durable, and easily carved. After the mummy was prepared by the embalmers, and wrapped in cloth of various lengths, it was consigned to the coffin-maker, who, in the first instance, enclosed it in a case of a strong, but flexible, kind of board, something like *papier maché*, made by gumming well together several layers of hempen, or linen cloth. This was formed into the shape of the swathed mummy, which was inserted into it by means of a longitudinal slit, on the under side,

CARPENTRY AND CABINET-MAKING.

Coffin-Making.

Tools.

reaching from the feet to the head, which was stitched up after the insertion of the body. This case is, in most instances, lined, and covered with a thin coating of plaster, with a representation of a human face on the upper part. The coffin was sometimes made out of one piece of wood, and was either plain, or ornamented within and without, with representations of sacred animals, or mythological subjects. Besides this, there is often another wooden coffin, still more highly ornamented, and covered with paintings, secured by a strong varnish. The upper part of both these cases is made to represent a human figure.

The Jews do not appear to have used coffins in their funerals, but merely wrapped the dead bodies in grave clothes; and therefore the sacred historian is careful to notice that the body of Joseph was treated after the Egyptian method: "Joseph died, being an hundred and ten years old; and they embalmed him; and he was put in a coffin in Egypt." (Gen. 50. 26.) See COFFIN.

For details respecting house-carpentry, see DWELLING-HOUSES.

CART, עגלה *agalah*. In Genesis 45. 19, and 1Samuel 6. 7, this word denotes an ordinary cart or wagon; and in Psalm 46. 9, a war chariot; but the Egyptian war-chariots and chariots of state are, by the sacred writers, termed מרכבת *marcebeth*, (Gen. 41. 43,) in distinction from those used in ordinary travelling. That those called *agalah* were known and used in Egypt is evident from the passage, (Gen. 45. 19,) "Take you wagons out of the land of Egypt." Some modern authorities suppose that though carts are represented in the paintings and sculptures, they were not in use among

Egyptian Cart

the Egyptians themselves, for the Nile and the numerous canals offered such facilities for carriage and conveyance by water, that the employment of carts and wagons could not have been necessary, and that those sent for Jacob were such as had either been taken in war from a people by whom they were used, or had been left behind by the intrusive shepherd race. Such a supposition, however, seems unnecessary, for the obvious utility of a wheel carriage must have induced the Egyptians to make them for a variety of purposes, particularly agricultural, independent of their canals and boats, and accordingly we find that Jacob, when he saw the wagons that Joseph had sent to carry him, the spirit of the patriarch revived; for he seems to recognise their being of Egyptian construction, and thereupon credits the reports of that country, though he had before doubted them. (Gen. 45. 27, 28.)

Carts appear to have been sometimes covered, and were employed, during the journeyings of the Israelites in the wilderness, for carrying parts of the sacred utensils, (Numb. 7. 3;) these are termed עגלת-צב *ageloth*

tzav, signifying a covering drawn over, similar to the tilt of the carts and wagons of the present day.

It was in some such covered cart that the ark of the Lord was placed when the men of Bethshemesh looked into it, and for which they were severely punished. (1Sam. 6. 19.)

CARVE, CARVING. That the art of carving was cultivated by the Hebrews to a considerable extent, is evident, not only from the cherubim which were deposited, first in the Tabernacle, and afterwards in Solomon's Temple, but also from the lions which were placed on each side of his throne. (1Kings 10. 20.) The carving of timber is mentioned in Exodus 31. 5, and the prophet Isaiah gives us a minute description of the process of idol-making: "The carpenter stretcheth out his rule; he marketh it out with a line; he fitteth it with planes, and he marketh it out with a compass, and maketh it after the figure of a man, according to the beauty of a man, that it may remain in the house." (44. 13.)

The Egyptians were extremely fond of carving on articles of furniture, and also in the decoration of walls and ceilings, and, indeed, there was scarcely a corner in an Egyptian palace destitute of carved ornaments. The ebony and ivory required for these costly works were obtained, either as a tribute, or by traffic, from the Ethiopian nations. We frequently find both elephants' teeth and logs of ebony represented on the monuments as brought to the Egyptian monarchs; and we learn that Solomon did not erect his splendid ivory throne until he had opened a communication with the nations bordering on the Red Sea, through his alliance with the king of Tyre.

Roberts says, "The people of the East are exceedingly profuse in their carved works. See a temple; it is almost, from its foundation to its summit, a complete mass of sculpture and carved work. Look at their sacred car, in which their gods are drawn out in procession, and you are astonished at the labour, taste, and execution, displayed by the workmen in carved work; nay, the roof and doors, in private dwellings, are all indebted to the chisel of the 'cunning workmen.' The pillars that support the verandahs, their chests, their couches, as were those of Solomon, the handles of different instruments, their ploughs, their vessels, however rude in other respects, must be adorned by the skill of the carver."

CASEMENT, אשנב *eshnav*. This word, rendered in our version both "casement," (Prov. 7. 6,) and "lattice," (Judges 5. 28,) signifies a kind of barrier of open work, placed before windows, which, in the East, are not in general closed, through the apertures of which cool air is admitted to the apartment. The windows which look towards the street are guarded by a lattice, which is thrown open only on public festivities. (Cantic. 2. 9.) These windows are usually large, extending almost to the floor, so that a person sitting can look out. (2Kings 9. 30; Cantic. 2. 9.) In the winter, they are protected from the weather by very thin veils, or by shutters, through which the light is admitted by means of an orifice. (2Kings 13. 17.) See WINDOW.

CASLUHIM, כסלחים *casluhim* a people mentioned in Genesis 10. 14; 1Chronicles 1. 12. The situation of the Casluhim is pointed out by Moses, when he adds to this name, "out of whom sprung the Philistines." The Caphtorim settled near to the Casluhim, and, in all probability, blended themselves with them; for they are mentioned together in the Scriptures, and the Philistines, who are said to have sprung from the Casluhim, are, in

Deuteronomy 2. 23, denoted by the Caphtorim. Gesenius says they were a colony of the Egyptians, and Bochart styles them Colchians, a people who, by the Greek writers, are represented to be of Egyptian origin.

CASSIA, קִדְדָּה *kiddah*, one of the ingredients in the composition of the holy oil used in anointing the sacred vessels of the tabernacle. (Exod. 30. 24; Ezek. 27. 19.) According to the Syriac, Chaldee, and Vulgate, it was the Arabian cassia, or cassia bark of the cinnamon. See CINNAMON.

Cassia.

In Psalm 45. 8, the Hebrew word קִצְיוֹת *katsioth*, whence the Greek name *κασσία*, is rendered in our version cassia. This is thought to be the wild cinnamon, or *Laurus cassia* of Linnaeus. In the above passage it is conjectured to have been an extract, or essential oil, made from the bark.

CAST, signifies to fling or throw, to raise up; also to melt, make, or frame. Amaziah, king of Judah, caused the punishment of casting down from the top of a rock, to be inflicted on ten thousand Edomites, whom he had taken in war; (2Chron. 25. 12;) and the Greeks and Romans were in the habit of condemning certain criminals to be cast down from the top of a rock. "To cast up a bank," is a phrase employed to describe the siege of a city. (See ARMS AND ARMOUR.) For other significations, see METALLURGY.

CASTLE, מִצְדָּה *mitzad*, was a kind of military fortress, frequently built on an eminence. (1Chron. 11. 7.) The priests' castles, mentioned in 1Chronicles 6. 54, may also have been a kind of tower, for the purpose of making known anything discovered at a distance, and for blowing the trumpets, in like manner as the Mohammedan imams ascend the minarets of the mosques at the present day to call the people to prayers. The castles of the sons of Ishmael, mentioned in Genesis 25. 16, were watch-towers, called מִצְדֹּת *teroth*, used by the nomade shepherds for security against marauders. The Greek word *παρεμβολή*, rendered "castle," (Acts 21. 34,) refers to the quarters of the Roman soldiers at Jerusalem in the fortress Antonia, which was adjacent to the Temple and commanded it. See ARMS AND ARMOUR.

CASTOR AND POLLUX, the Dioscuri of Greek mythology, were considered the patrons of sailors, who were accustomed to implore their aid in dangers at sea. It is said that the vessel which carried St. Paul to Rome had the sign of Castor and Pollux. (Acts 28. 11.) By the word "sign," the sacred writer intends a protecting image of the deity to whom the vessel was in some sort consecrated, as at present, in Catholic countries, many of their vessels are named after some saint.

CATERPILLAR, חֲסִיל *hasil*. This word, implying a devourer, a destroyer, occurs 1Kings 8. 37; Psalm 78. 46; Isaiah 33. 4; Joel 1. 4. The Septuagint renders it βρουχος, a locust without wings. From the Syriac version, Michaëlis thinks it refers to the mole cricket, or *Gryllotalpa vulgaris*, but the insect known under this name in England is comparatively rare or unknown in others. It burrows in the ground, and forms extensive

galleries, similar to those of the mole, though smaller; and these may be always recognised by a slightly elevated ridge of mould; for the insect does not throw up the earth in hillocks, like the mole, but gradually, as it digs along, in the manner of the field-mouse; in this way it commits great ravages in gardens. See CANKERWORM; LOCUST.

CATHOLIC. The term Catholic, derived from the Greek *καθολικος*, denotes anything that is universal or general, and the name Catholici, or Catholics, denoting an adherence to the universal faith, was introduced after the rise of sects which maintained peculiar opinions, and separated themselves from the general body of Christians, and is used by ecclesiastical writers as equivalent to orthodox. It is obvious that this name would be claimed by all persons who supposed that their faith was that of the earliest ages of the church, and such as ought to be at all times universal. The Romish church now distinguishes itself by the appellation of Catholic, in opposition to all who have separated from her communion, and whom she considers as heretics and schismatics. The decrees of the Council of Trent, continued under Popes Paul III., Julius III., and Pius IV., from the year 1545 to 1563, comprehend the religious doctrines and practices adopted and maintained by the Church of Rome. One of its fundamental tenets, most strenuously maintained, is that of infallibility; though its adherents are not agreed whether this privilege belongs to the pope or to a general council, or to both united; but they assert that an infallible living judge is absolutely necessary to determine controversies, and to secure peace in the Christian church. On the contrary, Protestants allege, that the claim of infallibility in any church is not justified by the authority of Scripture, much less does it pertain to the Church of Rome; that it is inconsistent with the nature of religion, and the personal obligations of its professors; and that it has proved ineffectual to the end for which it is supposed to be granted, since popes and councils have disagreed in matters of importance, and they have been incapable, with all the advantage of this pretended infallibility, of maintaining union and peace.

CATHOLIC EPISTLES or **GENERAL EPISTLES**, a title bestowed on certain books of the New Testament. These are seven in number, namely, one of James, two of Peter, three of John, and one of Jude. They are called Catholic, because directed to Christian converts generally, and not to any particular church. The order of time in which they are supposed to have been written, is as follows:—

	Place.	Date A.D.
James	Judæa	61 or 62
Peter, 2 Epistles	Rome	64
1 John	Ephesus	about 80
2 and 3 John	Ephesus	80 and 90
Jude	Unknown	64 or 65

Eusebius uses the term Catholic, in reference to these, as a common appellation in the fourth century. Hug, in his *Introduction to the New Testament*, takes another view of the import of this term, which was certainly used at an early period by Origen and others: "When the Gospels and Acts of the Apostles constituted one peculiar division, the works of St. Paul another, there still remained writings of different authors, which might likewise form a collection of themselves to which a name must be given. It might most aptly be termed the common collection, *Katholikon Syntagma*, of the Apostles, and the treatises contained in it, *Koinai* and *Katholikai*, which are commonly used by the Greeks

as synonymous. For this we find a proof in ancient ecclesiastical language. Clemens Alexandrinus calls the epistle which was despatched by the assembly of the Apostles, (Acts 15. 23,) the 'Catholic epistle,' as that in which all the Apostles had a share. Hence our seven epistles are Catholic."

CATTLE. The Holy Land was eminently distinguished for its abundance of cattle, to the management and rearing of which the inhabitants from the earliest times chiefly applied themselves, as indeed they have always constituted the principal and almost only possession of a nomade race. The hilly country of Judæa, not only afforded them variety and plenty of pasture, but also of water, which descending thence, carried fertility into the lowlands and valleys. The most celebrated pasture grounds were situated on each side of the river Jordan, besides those of Sharon, the plains of Lydda, Jamnia, and some others of less note. The breed of cattle reared in Bashan, and on the mountains of Gilead and Carmel, were remarkable for their size, strength, and fatness, to which there are frequent allusions in the Scripture. The cattle of the Israelites comprised every sort of animal that afforded either food or clothing, or was applicable to other useful purposes, as sheep, oxen, goats, camels, and asses.

After the Hebrews had acquired possession of the promised land, they applied themselves to agriculture and the tending of cattle, following the example of their ancestors the patriarchs, whose chief riches, like those of the Arabs, Bedouins, Turcomans, and numerous tribes of Central Asia at the present day, consisted in cattle, slaves, and the fruits of the earth. Abraham and Lot must have had vast herds of cattle, as they were obliged to separate because the land could not contain them, (Gen. 13. 6;) and strifes of the nature feared by Abraham, it appears now occur between the different villagers and herdsmen of Syria. Jacob must have possessed large herds, since he was able to make a present to his brother Esau of five hundred and eighty head of cattle. (Gen. 32. 13-17.)

The greatest and most illustrious among the Hebrews did not disdain to follow husbandry and the tending of cattle. Moses was a shepherd during his exile, Shamgar was taken from the herd to be a judge in Israel, and Gideon from his threshing floor, (Judges 6. 11,) as were Jair and Jephthah from the keeping of sheep; Saul and David might also be mentioned. Some of the prophets were called from that employment to the prophetic dignity, as Elisha was from the plough, (1Kings 19. 19,) and Amos from being a herdsman. But the tending of flocks was not confined to the men. Rachel, the daughter of Laban, kept her father's sheep, (Gen. 29. 9;) and Zipporah and her six sisters had the care of their father Jethro's flocks, who was a prince or priest of Midian. (Exod. 2. 16.)

In Palestine, flocks were anciently, as they are now, tended not only by the owner, but also by his sons and daughters, as well as servants. Consequently, wealthy people were exposed to all the vicissitudes of the seasons, which circumstance explains the observation of Jacob, who in remonstrating with Laban says, that "in the day the drought consumed him, and the frost by night, and his sleep departed from his eyes." (Gen. 31. 40.) See GOAT; OXEN; SHEEP.

CAUL, יֹתֶרֶת *yothereth*, (Exod. 29. 13; Levit. 3. 4; 9. 19,) is, according to the Septuagint and Vulgate, the great lobe of the liver; the margin of our version says, "It seemeth by anatomy and the Hebrew doctors

to be the midriff." The word might be rendered, the lobe over the liver, although it makes a part of the liver itself, and this appears to be more applicable than the net over the liver, termed the lesser *omentum*. Gesenius; Rosenmüller.

CAULS. See HEAD-DRESSES.

CAUSEWAY, מַסְלָה *misellah*, a high road, or beaten way. (1Chron. 26. 16, 18.) One of these prepared ways is probably referred to by Isaiah 62. 10.

Streets in the cities of Asia are usually only from three to six feet broad. The object of this is, that the shadow which they cast may counteract, in some degree, the heat of the sun. That many of them were formerly much wider, may be inferred from the fact, that chariots were driven through them, which cannot be done in some in the present day. Josephus, in reference to Jerusalem, makes a division both of streets and gates, larger and smaller. A paved street is a rare sight in the East in modern times, although in the time of Herod, Professor Jahn says, they were by no means uncommon.

CAVES, CAVERNS, מְעָרָה *mearah*. Profane authors speak of dwellers in caves in various countries, under the name of Troglodytes; and such places appear to have been in early times the settled abode of a portion of the population of Canaan, thence called in the Scriptures Beni Anakim, (*sons of the caves*;) the Anakims of our version. (Deut. 1. 28; 2. 10; 9. 2.) The Zamzummim and Rephaim also are believed to have dwelt in similar places, caves of large dimensions being extremely common in Palestine, and affording a shelter from the fury of their enemies, of which the Hebrews in after times frequently availed themselves. (Judges 6. 2; 1Sam. 13. 6; 14. 11.)

Some of these caves were very capacious; that of Adullam afforded an asylum to David and four hundred men, including his family, who resorted thither to him, (1Sam. 22. 1, 2;) and at Engedi there was a cave so large, that David and six hundred men concealed themselves in its sides, and Saul entered the mouth of the cave without perceiving that any one was there. (1Sam. 23. 3, 4.) Carne, in his *Letters from the Holy Land*, states, that this cave "at first appears neither lofty nor spacious; but a low passage on the left leads into apartments where a party could easily remain concealed from those without. The face of the hill around it corresponds to the description: 'he came to the rocks of the wild goats.'" During the time of Herod the caverns in the mountains of Galilee were the stronghold of banditti, which required his utmost efforts to extirpate.

Many of these extensive caves have been visited by

Caves on the Jordan.

modern travellers. Maundrell has described a large cavern under a high rocky mountain in the vicinity of Sidon, containing two hundred smaller caverns; and numerous caves were noticed by Mr. Buckingham in the rock to the south of Nazareth; several of which now, as anciently, serve as dwellings to the Nazarenes. Mr. Buckingham also notices in the Mountain of the Temptation, which is one of a range of hills bounding the plain of Jordan on the west, numerous grottoes or caves of the early anchorites. "The grottoes below are in long ranges, consisting each of several separate chambers; those higher up are in general isolated ones, all in the cliff of the rock. The grottoes were all formerly inhabited, and one of the uppermost of them, which is approached by a flight of steps cut out of the solid rock, behind the immediate front of the cliff, has still its decorations of Greek saints painted on the walls with the colours perfectly fresh. All are, however, now deserted."

In Upper Egypt, caves appear to have been the settled abodes of a numerous and peaceful population. Dr. Richardson entered several mountain defiles on his way to Nubia, where he found a number of excavations extremely well executed, covered with sculpture, and painted in the most brilliant colours. But, besides these, "high up in the front, along the base of the mountain, and over the rocky flat, all the way from Medina Thabou, there are innumerable excavations, many of them large and beautifully formed, painted and sculptured with many curious devices, illustrative of ancient customs. In one place above Medina Thabou, the doors into these excavations are so numerous and so contiguous, that they resemble a row of houses in a village. They have a long piazza in front, and a large apartment within, and a long shaft running back into the rock. They rise in tiers above each other, according to the different elevations of the mountain. They have evidently been dwelling-houses, and, from the shady piazza in front, the spectator enjoys the most delightful view that can possibly be obtained of the plain of Thebes."

Caves and other subterranean recesses, consecrated to the worship of the sun, were very generally resorted to among nations where that species of idolatry prevailed. The mountains of Chusistan at the present day abound with stupendous excavations of this kind. To a similar cavern temple Ezekiel alludes in ch. 8. 7; the prophet in a vision beholds, and in the most sublime manner stigmatizes, the idolatrous abominations which the Israelites had borrowed from their neighbours of Egypt, Chaldaea, and Persia. In Egypt, these dark secluded recesses were called mystic cells, and in them were celebrated the secret mysteries of Isis and Osiris. See EGYPT.

CEDAR TREE, ٲٲٲ *erez*. There is some doubt as to the true cedar of Scripture. The sacred writers generally join the epithet Lebanon with cedar, but it is found that the timber now growing there possesses few qualities in common with what they describe, being neither fragrant nor durable, and therefore some modern authors have supposed that it must be, not the *Pinus cedrus*, but the *Juniperus oxycedrus*, that was employed in the construction of the temple and palace of Solomon. This, however, is not the received opinion, and we shall, therefore, in accordance with the Septuagint, the Vulgate, and our own version, as well as most modern interpreters, treat the *Pinus cedrus* as the cedar of Scripture.

This tree, when young, has a general resemblance to the larch, but as it grows older, it assumes a singular but most picturesque appearance. It belongs to the

order of coniferous trees, is an evergreen, and frequently attains to very large dimensions; its branches also spread very widely, and in the Scriptures it is justly spoken of as the noblest of trees. (2Kings 14. 9; Cantic. 5. 15.) "Its timber," says Rosenmüller, "was used for rafters and boards, either to cover the houses or floors; it was also employed in building the principal wall, and combined with stones, so that after three layers of stones, there followed one of cedar-wood. (1Kings 6. 36; 7. 12; Ezra 6. 3,4.) Sometimes, too, each division of the wall was built alternately with cedar-wood and stones, so that first a course of wood, and then a course of stones, extended from one division to the other. The temple at Jerusalem, as well as the palace of Solomon, was built of cedar; and in the latter there was such a quantity of this wood, that it was called the house of the forest of Lebanon." (1Kings 7. 2.) Shaw states that cedar-wood is still plentifully employed in the decoration of palaces in the East.

Of the cedars of Lebanon but few now remain; they grow among the snow, near the highest part of the mountain, and compose a little grove by themselves, as if planted by art, and are seated in a hollow amid rocky eminences, at the foot of the ridge which forms the highest peak of Lebanon. They have been ever an object of interest to travellers, and, from their notices at different dates, we are enabled to trace the progress of the desolation foretold by the prophets Isaiah, Jeremiah, and Zechariah.

Farer, in 1565, speaks vaguely of about twenty-five trees; Rauwolf, in 1575, "found twenty-four that stood round about in a circle, and two others, the branches whereof are quite decayed with age." He says he "also went about to look out for some young ones, but could find none at all." It appears, therefore, that none of the secondary growth are three hundred years old.

Fermenel, in 1630, counted . . .	22
La Roque, in 1688	20
Maundrell, in 1696	16
Dr. Pococke, in 1738	15
(and one recently blown down)	
Burckhardt, in 1810	11 or 12
Dr. Richardson, in 1818	8
Mr. Robinson, in 1830	7
Lord Lindsay, in 1836	7

Mr. Buckingham, in 1816, differs greatly from the other authorities, computing the whole number of trees at 200, of which he describes 20 as being very large.

Maundrell gives the dimensions of one, which he found to be twelve yards and six inches in girth, and yet sound; and thirty-seven yards in the spread of the boughs. "The oldest trees are distinguished by having the foliage and small branches at the top only, and by four, five, or even seven trunks springing from the base; the branches and trunks of the others are lower; the trunks of the old trees are covered with the names of travellers and other persons, who have visited them, some of which are dated back as far as 1640. The trunks of the oldest trees, the wood of which is of a gray tint, seemed to be quite dead."

Lord Lindsay gives us the following account of the trees:—"Several of the cedars, all growing promiscuously together, compose this beautiful grove. The younger are very numerous—the second-rate would form a noble wood of themselves, were even the patriarchal dynasty quite extinct; one of them, by no means the largest, measures nineteen feet and a quarter in circumference, and, in repeated instances, two, three, and four large trunks spring from a single root, but they have all a fresher appearance than the patriarchs, and straighter stems—straight as young palm-trees. Of the giants, there are seven standing very near each other, all on the same

hill; three more a little further on, nearly in a line with them, and in a second walk of discovery, after my companions had lain down to rest, I had the pleasure of detecting two others low down on the northern edge of the grove. These are the trees (there can be none nobler) which Solomon spake of, "from the cedar of Lebanon to the hyssop on the wall." Mr. Carne says, "The forests, the cedar-trees, the glory of Lebanon, have, in a great measure, disappeared, to make way for innumerable plantations of vines." In the course of another century it is probable that not a vestige of them may remain; thus the prediction of the prophets will be literally fulfilled. (Isai. 10. 33,34; 33. 9; Ezek. 31. 12,14; Zech. 11. 1,2.)

Mr. Robinson remarks that the cedars stand upon an uneven ground, covered with rocks and stones, and form a small wood about a mile in circumference. "They are not found in so large a group in any other part of Lebanon, though young trees are occasionally to be met with. But the paucity of their numbers, and their present degradation, afford no ground for the sarcasm of the infidel—on the contrary, everything in their actual appearance is calculated to substantiate the truth and precision of the prophecies concerning them. They are called by the natives *Arz Leban*. Whilst my guide was collecting some branches which had been blown down by the wind, to make a fire in the neighbourhood and prepare breakfast, I sat under a venerable cedar, indulging in the agreeable associations connected with this scriptural region, whose images are blended with the earliest pictures of our childhood."

CEDRON. See KIDRON.

CELLARS, *אצרות* *otsaroth*. This word is in 1Chronicles 27. 28 rendered "cellars," but in another verse of the same chapter, "treasures," and "store-houses," from which we may conclude that subterranean vaults are spoken of in each case. The same word is sometimes applied to the treasury of the Temple.

CENCHREA, was a harbour on the east of the isthmus of Corinth, to which city it was considered as a kind of subsidiary port. It was about nine miles distant from the city, the road to which, according to Pausanias, was lined with temples and sepulchres. It is mentioned in Acts 18. 18, as a place where St. Paul fulfilled a vow. There was a church here, during the ministry of the Apostles, of which Phœbe, a pious lady, was a member. (Rom. 16. 1.)

In 1834, the site of Cenchrea was occupied by a single farm-house. Close to the sea, and in parts even covered by its waters, are the foundations of a variety of buildings, the plans of which may yet be traced, as the walls still remain, to the height of from two feet to three feet and a-half.

CENSER. In the Hebrew text there is a distinction which is not preserved in our version, respecting the vessels employed in offering incense in the service of the Tabernacle and the Temple. In Leviticus 10. 1, the word *מַכְתָּה* *machtah* occurs, but in 2Chronicles 26. 19, *מִכְתָּרֶת* *mektareth*, and the like difference is observable in other places. The former is supposed to have been appropriated to the use of the high priest only, as in the instances where it was used by others, punishment followed, as in the case of the sons of Aaron, (Levit. 10. 1,) and Korah and his associates; (Numb. 16. 6,7;) but the mektareth were apparently inferior vessels, common to all the priesthood. It also deserves notice, that those who used these mektareth, are described as holding them in their hands, but this position

is not anywhere ascribed to the *machtah*, or censer of Aaron. From this we may infer that the mektareth were a kind of censer carried in the hand; not alone, as the heat arising from the burning embers it contained would be too great, but in a sort of dish, which dish, with the censer in it, was placed on the altar of incense, and there left, diffusing a smoke, morning and evening, during the trimming of the lamps. (Exod. 30. 7,8.) It is conjectured that this distinction is alluded to in the Book of Revelation, (5. 8; 8. 3,) where the angel is represented with a golden censer, and the twenty-four elders with golden vials.

The censers of the Jews were of brass in general, but in some instances of gold; no contemporary authority for their form has been discovered, except on the monuments of Egypt, from which it seems probable that they were a kind of ladles, or cups, with lids, so that those of the classical nations, and of the Romish church, give an erroneous notion of these sacred utensils.

Egyptian Censers.

St. Paul, in Hebrews 9. 4, speaks of the golden censer as a thing which belonged to the Tabernacle, but the Greek word *θυμιατήριον*, which we render "censer," it is supposed may signify "altar of incense." The high priest was not allowed to enter the most holy place, nor to perform any service in it, without first taking incense with him, which he was to bring in a censer from this altar. "The manner of the service of this altar," says Dr. Owen, "was briefly thus: the high priest, once a year, on the solemn day of expiation, took a golden censer from this altar; after which, going out of the sanctuary, he put fire into it, taken from the altar of burnt offerings, without the tabernacle, in the court, where the perpetual fire was preserved. Then returning into the holy place, he filled his hands with incense taken from this altar, the place of the residence of the spices; which incense he put on the fire in the censer, and so entered the holy place with a cloud of the smoke thereof."

CENTURION, *εκατονταρχης*, an officer in the Roman army, commanding a hundred soldiers. (Matt. 8. 5; Acts 10. 1.)

CEPHAS, *Κηφας*, a surname of Simon Peter, which, by the Greeks, was rendered *Πετρος*, and by the Latins, Petrus, both signifying a stone or a small rock. See PETER.

CERASTES. See ADDER; SERPENT.

CEREMONIES. See RITES.

Cesarea of Palestine.

CESAREA. A name given to several ancient cities, of which there were two in Palestine, namely, Cesarea Philippi, and Cesarea Stratonis, or Cesarea of Palestine.

I. CESAREA PHILIPPI was successively called Lais or Leshem, Dan, and Paneas, the latter name being probably given to it by the Phœnicians. It was situated east of the springs of the Jordan, about a day's journey from Sidon, and a day and a half from Damascus, and thirty miles north of the Sea of Galilee. The appellation of Dan was given to it by the tribe of that name, who took it. Philip the Tetrarch enlarged it, and named it Cesarea, in honour of the Emperor Tiberius; and afterwards Agrippa, in compliment to Nero, named it Neronias. In the vicinity of this city the conversation between Jesus and his disciples took place, in which Peter acknowledged Jesus to be the Messiah, the Son of God. (Matt. 16. 13-18.) After the time of Constantine the Great, the city became the seat of a bishop under the patriarchate of Antioch. It suffered much in the time of the Crusades, and at present contains only a few poor cottages, which are inhabited chiefly by Turks. Its neighbourhood, however, is represented as exceedingly beautiful, richly wooded, and abounding with game. Seetzen says, "This city, formerly so flourishing, is now destroyed, and on its ruins has arisen a little hamlet of about twenty miserable huts. The circuit of the walls of the ancient city is easily distinguished." Captains Irby and Mangles think, from the compressed situation, the ancient city could not have been of great extent.

II. CESAREA OF PALESTINE was originally called the town of Strato, being built around a fortification called Strato's Tower, erected by the Greeks in the time of the Seleucidæ, but which afterwards came into the possession of the Asmoneans. It was situated on the coast about thirty miles south-west of Ptolemais, or Acre. Its harbour being extremely inconvenient, Herod the Great erected a spacious mole, and greatly enlarged and beautified the city, and called it Cesarea, in honour of the Emperor Augustus, his patron; it became the metropolis of Palestine under the Romans, and the seat of the proconsul. This place is noted in the Gospel history, and is sometimes, by way of eminence, called Cesarea. Here Cornelius and his kinsmen, the first-fruits of the Gentiles, were converted under the preaching of

St. Peter. (Acts ch. 10.) Here resided Philip the Evangelist, (Acts 21. 8;) and here St. Paul nobly defended himself against the Jews and their orator Tertullus. (Acts ch. 24.) Josephus states that it was one of the largest cities in Palestine, and was inhabited principally by Greeks. In this city Herod Agrippa, the grandson of Herod the Great, and father of King Agrippa, died in the melancholy condition recorded by the inspired writer of the Acts of the Apostles. Eusebius, the ecclesiastical historian, was a native of the place.

Cesarea, or what remains of it, is now called Kasarieli, and is nearly eighty miles north-west of Jerusalem. "At the present moment," says Mr. Buckingham, "the whole of the surrounding country is a sandy desert towards the land; the waves wash the ruins of the moles, the towers and the part towards the sea, and not a creature resides within many miles of this silent desolation." Its ruins, which are very numerous, have long been resorted to as a quarry, whenever building materials are required at Acre or other neighbouring towns.

"Perhaps there has not been in the history of the world," says Dr. Clarke, "an example of any city that in so short a space of time, rose to such an extraordinary height of splendour as did this of Cesarea; or that exhibits a more awful contrast to its former magnificence, by the present desolate appearance of its ruins. Not a single inhabitant remains. Its theatres, once resounding with the shouts of multitudes, echo no other sounds than the nightly cries of animals roaring for their prey. Of its gorgeous palaces and temples, enriched with the choicest works of art, and decorated with the most precious marbles, scarcely a trace can be discerned."

CHAFF, the husks of corn, symbolical of worthless persons or designs. The ungodly are represented as the chaff, a simile most forcible and appropriate. (Psalm 1. 4.) False doctrines are called chaff; they are unproductive, and cannot abide the trial of the word and spirit of God. (Jerem. 23. 28.)

It was the custom in the East to burn the chaff after winnowing. There was danger, lest after they had been separated, the chaff should be blown again among the wheat by the changing of the wind, and to prevent this they put fire to it at the windward side, which crept on

2 M

and continued to burn till it had consumed all the chaff. (Psalm 83. 13,14; Isai. 5. 24; Matt. 3. 12.)

CHAIN. Ornaments of gold, particularly chains, belong to the costume of very high antiquity. The chain of gold about the neck was one of the symbols of authority in the court of Pharaoh, as we find from the narrative of the investiture of Joseph recorded in Genesis 41. 42; Belshazzar also did the same to Daniel. (Dan. 5. 29.) The chain, or collar of gold, is still used in the East as a badge of honour, and in the higher instances of its use is even now fastened by the hand of the sovereign. Brides received chains of gold as part of their attire, (Cant. 1. 10; 4. 9;) and they were used as ornaments by both men and women. (Prov. 1. 9; Ezek. 16. 11.) They are also mentioned as part of the Midianitish spoil. (Numb. 31. 50.) The breastplate of the high priest was fastened to the ephod with golden chains, (Exod. 39. 16-21,) and a golden chain was worn round the neck by the Egyptian chief judges, to which was suspended a small figure of the goddess Thmei, or Truth, ornamented with precious stones.

Idols, it appears, were fixed in their shrines with chains. (Isai. 40. 19.) Pride is emblematically termed a chain which keeps men under its power. (Psalm 73. 6.) St. Paul repeatedly mentions his chain wherewith he was bound as a prisoner. (Acts 28. 20; Ephes. 6. 20; 2Tim. 1. 16.) The right hand of the Apostle was fastened to the left hand of the soldier, after the manner of the Romans, with a long chain. Sometimes for greater security, prisoners were bound to two soldiers, with two chains, as was the case with St. Peter. (Acts 12. 6.)

The Scholiast on Juvenal says, "that it is called a camp prison when the captives are delivered chained, so that the same chain fastens both the prisoner and the soldier."

CHALCEDONY, Χαλκηδων, (Rev. 21. 19.) Some writers suppose this to be the stone called *ἰσὶδ* *nophet*, mentioned in Exodus 28. 18, and rendered in our version "emerald;" others consider it to be the modern carnelian, from which chalcedony, properly so called, differs only in being less transparent. The gem is a species of uncrystallized quartz, found of almost every shade of colour, from white to black, in the East, and deriving its name from Chalcedon, a city opposite to Constantinople, where it was first discovered.

CHALDÆA, a region of the East, sometimes understood to signify the whole Babylonian Empire, sometimes what may be called Babylonia Proper, and sometimes that province towards Arabia Deserta, called in Scripture "the land of the Chaldæans." The capital of this region was Babylon, well denominated the "beauty of the Chaldees' excellency." The first mention made in Scripture of the inhabitants of this country is in Genesis 12. 31, where it is stated that Terah, with his family "went forth from Ur of the Chaldees." In the Book of Job, referable to the same period, we find allusion made to the Chaldæans, which indicates that those so called in that day, were a violent and predatory people: "The Chaldæans made out three bands, and fell upon the camels, and have taken them away, yea, and have slain the servants with the edge of the sword." (1. 17.) The Sabeans also are spoken of in the same way, and these, if not merely a tribe of the people named here Chaldæans, were at least a cognate race. But though Ur of the Chaldees existed in the days of Abraham, and that probably as a city of some importance, it does not appear that the name Chaldee was yet known.

Chesed, the son of Nahor, the son of Terah, is supposed to have been the founder of the Chaldæans, properly so called. They were from him denominated Chasdim, or Chasidim, whence the term in the Septuagint, *Χαλδαιοι*.

The Chaldæan Empire was founded by Nimrod, who was probably the youngest son of Cush; the grandson, therefore, of Ham, and the great grandson of Noah. Concerning Nimrod himself very little is known; that he was a bad man, though nowhere expressly stated in Holy Writ, is asserted by the unvarying voice of tradition. All the Targums and most ancient versions paraphrase the words "mighty hunter" in an unfavourable way. He is said to have seized upon the territories of Arphaxad, and there to have built four cities, Babel, and Erech, and Accad, and Calneh, in the land of Shinar. These are spoken of by Moses as the beginning of his kingdom. After this, according to the marginal reading, which is preferable to the text, he went into Assyria, "and builded Nineveh, and the city Rehoboth, and Calah, and Resen between Nineveh and Calah: the same is a great city." Having thus obtained possession of a territory which was so fertile as to have received the highest commendations from writers both ancient and modern, Nimrod set about establishing an empire which very soon became the most eminent in the world. Struck by the advantageous situation of Babel, he rebuilt that city, and made it the capital of his kingdom. There is no doubt but that considerable progress was made in this work during the life of Nimrod, and that of Ninus his son and successor; but Semiramis, the wife of Ninus, and who reigned after him, was the person by whom Babylon was more enlarged and improved than by any sovereign till the time of Nebuchadnezzar. Herodotus gives a graphic description of this splendid metropolis as it stood in his day. (See BABYLON.) Bryant; Faber; Bochart; Newton.

CHALDÆANS, the people of Chaldæa, but more especially a caste or class among them who were pre-eminently learned, and to whom the mysteries of religion were in a peculiar manner committed. The worship of the sun, and after him of the heavenly host and of the "pure fire," in other words, Sabæism, was the religion of the Chaldæans, and it is said that the fire-worship was the invention of Nimrod himself. "If we may hazard the conjecture," says Mr. Harris, "this was most probably fire obtained from the sun, and therefore esteemed sacred as the gift of their great god. From this sacred fire was named the city or territory of Ur, the primitive meaning of which word is a blazing fire."

The gods of the Chaldæans are treated of under their several names, and to them the reader is referred; but here it will be necessary to give a brief account of the Chaldæans, as the priests and astrologers of the nation. The mass of the people were Cushites, but there exists an idea that the priestly race were descended from Shem, and drew their title from Chesed, the son of Nahor. They gave themselves up entirely to study, and made the acquisition of knowledge their whole business, in order that they might thus qualify themselves for their sacred office. As among the Egyptians, the sacerdotal dignity descended from father to son, and was thus confined to a privileged race. Free from all other business, and studying both for the sake of information and for the acquisition of power, they could hardly fail of being thoroughly versed in the sciences they professed. Their discipline was extremely strict: the son was never allowed to oppose the maxims of the father, or to maintain any opinion contrary to his; yet, in spite of this regulation, divisions arose among them. The two chief sects were

those of the Orcheni and the Borsipenni; but these were not sects holding contrary doctrines, but rather tribes of a different origin. The second city founded by Nimrod was called Erech, which has been imagined to be the same as Orchoe, a city in Chaldæa, and it is probable that the Orcheni derived their name from this city.

The prophet Daniel speaks of "wise men" under four different denominations; Magicians, Astrologers, Sorcerers, and Chaldæans; and on this account some have thought that the last-named were a separate sect, who had gained a greater insight into the secrets of nature than the rest. It is, however, quite certain that the Chaldæans were soothsayers, that they applied themselves assiduously to the study of augury, and foretold future events, from the flight of birds and the entrails of victims; but their chief sciences were astronomy and astrology, and of the latter, they are considered to have been the inventors. Practised as they were in astronomical observations, and at the same time, worshippers of those bodies whose motions they so diligently studied, it was to be expected that some importance would be attached to the "mystic dance" of the planets. They believed that each star was the abode of a spirit, which bore rule in its turn over the earth, and was a mediator between God and man. This being a part of the Chaldæan religion, and the priests of that religion peculiarly addicted to divination, it naturally suggested itself to their minds, that the rise and fall of empires, the prosperity of cities, or even of individuals, the event of wars and all other important affairs, were affected by the movements of the heavenly bodies. Maimonides, however, refers the origin of star-worship to a much earlier period.

The knowledge of astronomy among the Chaldæans must have been very great, for Callisthenes, who was with Alexander the Great when he took Babylon, found there astronomical observations for 1903 years, that is, as far back as the 115th year after the Flood, or to the 15th year after the building of the tower of Babel. Whatever other uses the Chaldæans might make of their astronomical knowledge, there seems no doubt but that they employed it in aid of their religion in predicting future events, and otherwise imposing on the credulous multitude. To this unlawful use of astronomy among the Chaldæans, is to be attributed the degeneration of their Sabæism into as gross an image-worship as prevailed in any other nation. At what period image-worship was introduced among them it is quite impossible to ascertain; probably, however, not until they fell under the Assyrian yoke, A.M. 2284; after which the Chaldæans seem to have rapidly declined into the grossest idolatry, and not content with their own peculiar divinities, to have adopted most of those of the neighbouring nations.

For other particulars respecting the Chaldæans, see ASTRONOMY AND ASTROLOGY; BABYLON; BABYLONISH ANTIQUITIES. *Universal History*; Christmas's *Universal Mythology*.

CHALDEE PARAPHRASES. The Chaldee Paraphrases are translations of the books of the Old Testament, made direct from the Hebrew text into the Chaldæan language, which after the return from the Captivity became the language of the Jews. These paraphrases were called Targums; the word תרגום *targum*, signifying to expound, explain, interpret.

These Targums were made principally for the use and instruction of the common people, after their return from the Babylonish captivity; for in that period, the Hebrew tongue had ceased to be a living language. The Book of Daniel is written in Chaldee from the

fourth verse of the second chapter to the end of the seventh chapter, and the Book of Ezra, from the eighth verse of the fourth chapter to the twenty-seventh verse of the seventh chapter. In the prophet Jeremiah, the eleventh verse of the tenth chapter is likewise written in Chaldee.

It is necessary to point out, that several of these Targums were made for different uses at different periods; some for the public service of the synagogue, and others for the private instruction of the people. Those that have come down to our times are the following:—

1. That of Onkelos, on the five books of Moses, or the Law.
2. That of Jonathan Ben Uzziel, on the Prophets.
3. That on the Law, ascribed to the same writer.
4. The Jerusalem Targum on the Law.
5. The Targum on the five lesser books, called Megilloth, namely, Ruth, Esther, Ecclesiastes, the Song of Solomon, and the Lamentations of Jeremiah.
6. The Second Targum on Esther.
7. The Targum of Joseph the one-eyed, on the Book of Job, the Psalms, and on the Proverbs.
8. The Targum on the First and Second Book of Chronicles. On Ezra, Nehemiah, and Daniel, there has been no Targum.

The Targum of Onkelos is considered the most ancient of the whole. The Jewish writers say, that Onkelos was contemporary with Jonathan Ben Uzziel, one of the earliest scholars of Hillel, who died about the time Our Saviour was born, and that Onkelos survived Gamaliel the Elder, the master of the Apostle Paul. The Targum of Onkelos, is rather a version than a paraphrase, for it renders the Hebrew text word for word, and is highly esteemed by the Jews, because it is set to the same musical notes with the Hebrew text, and is, therefore, capable of being read in the same tone in their public assemblies.

Jonathan Ben Uzziel, in his Targum, in contradistinction to Onkelos, takes the freedom of a paraphrast by numerous additions to the text. The Jews speak highly of him, and give him the first place amongst the disciples of Hillel, and make him equal to Moses. Many miraculous things are related of him whilst employed in this work, as that nothing was permitted to disturb him during its progress; that if any bird happened to fly over him, or a fly to alight upon his paper whilst writing, they were immediately destroyed by fire from heaven, without injury to his person or to the paper. They say, likewise, that on his attempting to write a Targum upon the Hagiographa, on his completion of that of the Law, he was hindered by a voice from Heaven, which forbade him to proceed in that work, because therein was contained the *end* of the Messiah.

The third Targum is ascribed to Jonathan on very doubtful authority. Who was the true author of this Targum, or when it was composed, is utterly unknown. It appears for a long time to have lain in obscurity amongst the Jews themselves.

The fourth is called the Jerusalem Targum, and is written by an unknown hand. No one has pretended to inform us when or by whom it was composed. It is called the Jerusalem Targum, because it is written in the Jerusalem dialect; for there were three different dialects of the Chaldee,—that spoken at Babylon, the Commagenian or Antiochian, and the Jerusalem, which was spoken by the Jews after their return from Babylon. The Babylonian and Jerusalem dialects were written in the same character, but the Antiochian was written in the Syriac. There are several things in this Jerusalem Targum, which are in the same words delivered in the New Testament by Christ and his Apostles. For example, (Luke 6. 38,) Our Saviour says, "With the same measure that ye mete withal it shall be measured to you again;" the same is given in this Targum on Genesis 38. 26.

In the Revelations 20. 6-14, mention is made of the first and second death; the same distinction occurs in this Targum on Exodus 19. 6. Our Saviour taught his disciples to say, "Our Father which art in Heaven;" the same expression is found in this Targum on Deuteronomy 32. 6.

The fifth Targum is that on the Megilloth, which, with the sixth and seventh, are written in the corrupt Chaldee of the Jerusalem dialect. The eighth, and last, was not known until 1680, when Beckius first published it at Augsburg, from an old manuscript.

Some of the Targums abound with fables extracted from the Talmud, particularly that on the Megilloth. The Targums of Onkelos and Jonathan were held in such high esteem by the Jews, that they considered them of equal authority with the Hebrew text; and when Our Saviour was called upon to read the second lesson in the synagogue of Nazareth, of which he was a member, he appears to have read it out of a Targum. For the words then read by him out of Isaiah 61. 1, as recited by St. Luke 4. 18, do not exactly agree either with the Hebrew original, or with the Septuagint version in that place; and therefore it seems most probable that they were read out of some Chaldee Targum which was made use of in that synagogue. When he cried out upon the cross, in the words of the Psalmist, (Psalm 20. 1,) "Eli, Eli, lama sabachthani?" that is, "My God, my God, why hast thou forsaken me?" (Matt. 27. 46;) he quoted them not out of the Hebrew text, but out of the Chaldee paraphrase; for in the Hebrew text it is, "Eli, Eli, lamah azabthani," and the word sabachthani is only to be found in the Chaldee.

The use of these Targums is principally to vindicate the genuineness of the present Hebrew text, by proving it to be the same that was in use when these Targums were made; they also serve to show that many of the prophecies of the Messiah in the Old Testament are interpreted in the same manner as the Christians do. Bishop Patrick and others have, in their respective commentaries on the Bible, inserted many valuable elucidations from the Chaldee paraphrasts. Walton; Leusden, Prideaux; Carpzov; Rambach.

CHALDEE. The language commonly called Chaldee, is, properly, Babylonian. Michaëlis has termed it the Eastern Aramaic dialect, and has thus distinguished it from the Western Aramaic, or Syriac.

The Chaldeans were a northern barbarous nation, and spoke a language totally different from the Babylonian. But after the Chaldean princes had overturned the throne and kingdom of Babylon, the ancient Babylonian tongue obtained the name of Chaldee. This language bears a still greater resemblance than the Syriac to the Hebrew, not only in the words themselves, but in their conformation, compounds, and other alterations. Both, however, are in the pronunciation of single words, as well as in verbs and nouns, and in many other peculiarities, different from each other, as may be observed by comparing the Chaldee passages which occur in the Books of Daniel and Ezra. As, however, there are but few fragments remaining of the ancient Babylonian dialect, and it has been corrupted from time to time, since the return of the Jews from Babylon, the Chaldee does not contribute much to the explanation of the Hebrew.

CHAM or HAM. See EGYPT.

CHAMBER. Oriental houses have in general a court in the centre, with cloisters and a gallery, into which the chambers open, the apartments of the women being at the back, and only to be approached by passing

through the others. Towards the street is a dead wall, with a porch, over which is a chamber, sometimes used as a lodging for guests, and sometimes as a store-room, it being well suited for either of these purposes, by being connected with the rest of the house by a door in the gallery, and having a separate staircase opening into the porch. This is the "chamber on the wall," which the Shunamite prepared for the prophet Elisha. (2Kings 4. 10.)

Chamber on the Wall.

The "upper chamber" is still the guest chamber where entertainments are made, which was the custom with the Greeks as well as the Jews. (Matt. 9. 14; Mark 14. 14.) Among the former, it occupied the upper story; among the Hebrews it seems to have been on, or connected with, the flat roof of their dwellings. Jowett, in his *Christian Researches*, describes the chief room in the houses of Haivali, (opposite Lesbos,) as in the upper or third story, secluded, spacious, and commodious, higher and larger than those below, having two projecting windows, and the whole floor so much extended in front beyond the lower part of the building, that the projecting windows considerably overhung the street. (Comp. Acts 20. 8.)

These upper chambers were also sometimes used for the performance of idolatrous rites, (2Kings 23. 12,) and in them the bodies of the dead were laid out. (Acts 9. 37.) The early Christians, too, held their meetings for worship in such places. Beside these, there were inner chambers, or a "chamber within a chamber," (1Kings 22. 25,) such as that into which the messenger of Elisha retired to anoint Jehu. (2Kings 9. 2.) See DWELLING-HOUSE.

The term chamber is used metaphorically in many places of the Scriptures, as Psalm 104. 3, 13; Proverbs 7. 27. To apply ourselves to earnest prayer and supplication, and to depend on the promises and providence of God for special protection, is to enter into our chambers, that we may be safe, as the Hebrews were in their houses, from the destroying angel. (Isai. 26. 20.)

The chambers of the South, (Job. 9. 9,) are the constellations, or clusters of stars, belonging to the southern part of the firmament.

CHAMBERLAIN, סרסר sars. This word is rendered "chamberlain," in Esther 1. 10; 2. 3; 14. 15; but in other places it is translated "eunuch." The term appears to have been applied to officers confidentially employed about the person of the sovereign; thus Potiphar, who was also captain of the guard, in the Egyptian court, is styled *sars*. (Gen. 37. 36; 39. 1.)

CHAMOIS, צֶמֶר *zamer*. (Deut. 14. 5.) The Septuagint, the Arabic, and Vulgate, understand this word to mean the camelopard, or giraffe; but Bochart and Gesenius are of opinion that it denotes an undetermined animal of the gazelle or stag species, and of a kind common in Palestine, as it could hardly be supposed that the sacred legislator would mention as food a creature rarely seen from century to century, and the nature and habits of which were barely to be ascertained even by naturalists. Our translators seem to have taken the same view of the matter, and have rendered the word *chamois*.

The *chamois* (*Antelope rupicapra*) is an animal of the antelope tribe, chiefly inhabiting the Alps and Pyrenees, and is found in flocks of from four to eighty. It is about the size of the domestic goat, of a dusky yellow brown colour, with the face, throat, and belly of a yellowish white. The horns are black, slender, upright, hooked backward at the tips, and about eight inches in height. Like all the antelope race, the *chamois* has sparkling and animated eyes. It feeds only on the finest herbage, and its flesh is of a delicate flavour; it drinks but very sparingly, and chews the cud. When alarmed, the *chamois* hisses loudly; the note being very sharp at first, and becoming deeper towards the close. Having paused a moment, the animal looks round, and perceiving his apprehensions to be well founded, he again hisses with great violence, at the same time striking the ground with his fore feet, bounding from rock to rock, and evincing the utmost agitation, till the alarm is spread to a very considerable distance, and the whole flock endeavour to provide for their safety by a precipitate flight. Their agility is wonderful, as they will throw themselves down across a rock which is nearly perpendicular, and twenty or thirty feet in height, without anything to support their feet. Their motion has, indeed, rather the appearance of flying than of leaping. Neither their vigilance nor their agility, however, can secure them from the rifle of the Alpine hunter, with whom the chase of these animals, in spite of the dangers by which it is surrounded, is an occupation of all others the most delightful.

The giraffe, or camelopard, (*Camelopardalis giraffa*), is a singular as well as beautiful creature, chiefly found in the central parts of Africa. The Jews had probably opportunities of seeing the animal while in Egypt, as had also the Alexandrian translators; for we find, upon the monuments, an animal of this description, which occurs several times among the articles of tribute brought to the Pharaohs from the interior of Africa; its figure also occurs on several ancient medals, and on the Prænestine pavement. It belongs to that order of animals which chew the cud; it is furnished with a neck of extraordinary length, which at first sight seems to give a disproportionate appearance to its figure; but we perceive the necessity for this structure, when we find that the young shoots of trees constitute its chief nourishment, and that these would otherwise be out of its reach. The animal measures generally about eighteen feet from the fore-hoof to the head; its colour is a light fawn, varied with brown spots. The speed of the giraffe at first exceeds that of the swiftest horse, but as they are not capable of sustaining exertion, a well-trained horse can overtake them after a long chase.

Although this beautiful and singularly-formed creature was well known to the ancients, and exhibited before the Roman emperors, at their festivals and triumphs, the barren knowledge of its existence was all that was possessed by Europeans in modern times, until the visit of the French traveller Le Vaillant to Southern Africa about 1780. He met with the creature and

minutely described it, but doubts existed as to his accuracy, which time has removed. The first living specimens of the giraffe known in Europe were received by the Kings of England and France from the Pacha of

The Giraffe.

Egypt in 1827, but they perished from the effects of the climate; others have since been procured by the Zoological Society and by Mr. Cross of the Surrey Zoological Gardens, but they have mostly met with the same fate.

Under the word CHAMOIS, Dr. Adam Clark makes the following remarks:—"I must once more be permitted to say, that to ascertain the natural history of the Bible is a hopeless case. Of a few of its animals and vegetables we are comparatively certain; but of the great majority we know almost nothing. Guessing and conjecture are endless, and they have on these subjects been already sufficiently employed. What learning, deep, solid, extensive learning, and judgment, could do, has already been done, by the incomparable Bochart, in his *Hierozoicon*. The reader may consult this work, and, while he gains much general information, will have to regret that he can apply so little of it to the main and grand question."

CHAMPION, עֶשׂ בִּנְיָיִם *esh binayim*, an arbiter, or one who offers a challenge, from the Hebrew word בַּיַּן *bayen*, a space between two things. Our version properly renders the Hebrew words, "champion." (1Sam. 17. 4, 23.)

Single combats, at the head of armies, were not unusual in ancient times; and, in many cases, it was a condition that the result should determine the national quarrel. An example of this kind is the combat between Paris and Menelaus, described by Homer. Burckhardt, however, affords us a striking illustration of the subject drawn from the existing practices of the Bedouin Arabs.

"When two hostile parties of Bedouin cavalry meet, and perceive from afar that they are equal in point of numbers, they halt opposite to each other, out of the reach of musket shot; and the battle begins by skirmishes between two men. A horseman leaves his party, and gallops off towards the enemy, exclaiming, 'O horsemen, O horsemen, let such a one meet me.' If the adversary for whom he calls be present, and not afraid to meet him in combat, he gallops forward; if absent, his friends reply that he is not amongst them. The challenged horseman in his turn exclaims, 'And you, upon the gray mare, who are you?' The other answers, 'I am —, the son of —.' Having thus become acquainted with each other, they begin to fight; none of the bystanders join in the combat, as to do so would be reckoned a treacherous action; but if one of the combatants should

turn back and fly towards his friends, the latter hasten to his assistance, and drive back the pursuer, who is in turn protected by his friends. After several of these partial combats between the best men of both parties, the whole corps join in promiscuous combat. Should a horseman not be inclined to accept the challenge of an adversary, but choose to remain among the rest of his friends, the challenger laughs at him with taunts and reproaches, and makes it known as a boast that such a one, would not venture to meet such a one, in battle."

In the old heroic Arabian story of Antar, we find that the challenger did not always call out the particular person whom he wished to combat; but, like the Philistine, defied any that would come against him. If the champion's reputation or appearance made any warrior unwilling to come forward from the adverse party, he paraded before them, boasting in a loud voice of his exploits, heaping insults and abuse upon them. In one of Antar's battles with the tribe of Fazarah, Hassein comes forward, and in his challenge of Antar says, "O my mother, sleep and be satisfied, and rejoice; this day will I relieve my thirst with Antar. When thou seest the birds mangle his carcase under the dust, then extol and thank me. The slave! This day I will leave him on the face of the earth, where he shall lie dead on the barren

waste. I will make him taste thrusts from my spear head, and I will smite him with my bright and unfailing scimitar. I will leave the beasts to run at and prowl around him on the wings of the turbid night. I will wipe out my shame with the sword and spear; and I will wreak my vengeance on the swarthy slave. Soon will I slay Antar with the sword of conquest, and I will leave him dead on the sand. I will seize Ibla (Antar's beloved), and return home, and she shall serve my wife as her mistress."

CHANCELLOR, בעל טעם *beil teim*, signifies a commander, or lord of the edicts or causes; it was the title of the Persian governor at Samaria, but is rendered in our version "chancellor." (Ezra 4. 8,9,17.)

CHANT, פֶּרֶט *parat*. This word occurs only in Amos 6. 5, where the passage "That chant to the sound of the viol," may be rendered, "That sing to the sound of the harp." The Chaldee, Syriac, and Vulgate read, "who sing to the sound of the psalter;" and the margin of our version gives "quaver." Josephus informs us that the instrument mentioned in this passage of Amos, termed *nebel*, was of a triangular shape, and carried in the hand. In the paintings on the monuments

Procession of Female Musicians.

at Thebes, we find players on the harp in the act of singing to the sound of their own music.

Both among the Jews and the Egyptians musical instruments were chiefly played upon by women; the Psalmist describing a musical procession, says, "The singers went before, the players on instruments followed after; among them were the damsels playing with timbrels." (Psalm 68. 25.) See HARP.

The term chant is also used for the vocal music of churches; of which, in church history, we meet with several kinds, as the Chant Ambrosian, established by St. Ambrose; and the Chant Gregorian, introduced by Pope Gregory the Great, who established schools of chanters, and corrected the church music. This, at first, was called the Roman song; but afterwards the plain song, as the choir and people sing in unison.

CHAOS, *chaos*. This term signifies the vast void, or the confused mass of elements from which it was supposed by the ancient philosophers the world was formed. The word has been employed in later times to denote the unformed mass of primeval matter described by the sacred historian in Genesis 1. 2, corresponding to the Hebrew words *tohu* and *bohu*, a waste void, a desert, a waste solitude, rendered in the Septuagint, *αορατος και ακατασκευατος*, invisible and without order.

"The sacred writer prefaces his history of God's

government over his chosen people by informing us, that in the beginning God created the heavens and the earth, and it seems equally certain that he here speaks of the original creation of all things out of nothing. This, indeed, is a great subject, and though nothing circumstantial is here revealed to us concerning it, yet the sacred importance of the truth assured to us by this simple expression, is every way suitable to the prominent place assigned to it; for it is nothing less than the authoritative statement of the first and fundamental article of all true religious faith. By it we are taught that self-existence is an attribute of the one Supreme Being, and that all things besides owe their existence to his unlimited power. How necessary it was to mankind to have an authoritative declaration on this subject, we may readily convince ourselves by adverting to the errors into which the most celebrated men of all antiquity had fallen, who presumed to speculate on these matters, so far beyond the reach of human reason, without other guidances. Among these erroneous opinions, or rather among those wild conjectures, we find the following:—that matter was eternal, that the Deity was the soul of the world; agreeably to which, the material frame of nature was to be regarded as his body, and not as his works. Now, in this his first sentence, the inspired writer settles definitively what we are to believe on this subject, by stating the primary relation which all things in common bear to the Supreme Being; and with this

information he forbears mixing up any other matter. For it will be perceived that the statement is made without any specification of time or other circumstance; seemingly because no addition of this kind could be of use in aiding our conception of a truth purely religious, or in strengthening our faith in the authority on which it was proposed; but chiefly because it was the sole object of the writer, in this first sentence, to claim for God the creation of all things whatsoever, and that this claim must remain unshaken, however we may decide on other questions which may be raised about the creation; such as that relative to the time when it occurred; how long before the origin of the human race; whether all the parts of the universe were brought into existence simultaneously, or at different and widely distant epochs. It is plain, then, that the sacred writer furnishes no help for the decision of such questions. In proceeding to those arrangements by which the earth was to be fitted for the residence and support of man, and the other inferior tribes by which it was then to be tenanted, we find him describing its preceding condition; informing us that it was then 'without form and void,' and that 'darkness was upon the face of the deep.' Now I confess that this always seemed to me very like the description of a ruined world; and if such was the earth at that time, it would be difficult to suppose that it had not existed long before. When he does come to the work of the six days, we find the description of each day's work introduced by an expression of a particular form, and concluded by another, by which it appears that the original work of creation spoken of in the first verse, is excluded from the series of performances belonging to those days; and if excluded, then perhaps removed to an indefinite distance; for had it immediately preceded, we might naturally expect to find it spoken of either as the work of the first of a series of seven days, or as part of the work of the first of the six days. This, then, would seem to remove the work of the original creation far beyond that of the reconstruction of the globe. It is true that nothing is exhibited to our imaginations to mark the interval between these performances; but to deny that there was such an interval, and for that reason, would be to conclude about as wisely as the peasant, who supposes the clouds to be contiguous to the stars, because when looking up he discerns nothing between them." Rev. B. Lloyd, Provost of Trinity College, Dublin.

Dr. Chalmers, in his *Evidences of Christianity*, speaks to the same effect: "Does Moses ever say that when God created the heavens and the earth, He did more, at the time alluded to, than transform them out of previously existing materials? Or does he ever say, that there was not an interval of many ages between the first act of creation, described in the first verse of the book of Genesis, and said to have been performed in the beginning, and those more detailed operations, the account of which commences at the second verse, and which are described to us as having been performed in so many days? Or, finally, does he ever make us understand, that the generations of man went further than to fix the antiquity of the species, and of consequence, that they left the antiquity of the globe a free subject for the speculations of philosophers?"

"We do not know," says Sharon Turner, "and we have no means of knowing, at what point of the ever-flowing eternity of that which is alone eternal—the Divine subsistence—the creation of our earth, or of any part of the universe, began, nor in what section of it we are living now. All that we can learn explicitly from revelation is, that nearly six thousand years have elapsed since our first parent began to be. Our chronology, that of Scripture, is dated from the period of his crea-

tion. But what series of time had preceded his formation, or in what portion of the antecedent succession of time this was effected, has not been disclosed, and cannot by any effort of human ingenuity be now explored. Creation must have begun at some early part of antecedent eternity; and our earth may have had its commencement in such a primeval era, as well as in a later one."

CHAPEL. The word *מִקְדָּשׁ* *mekedesh*, means properly a "sanctuary," a holy place, as in Exodus 25. 8; in Amos 7. 13 it is rendered in our version "chapel," "the king's chapel." Bethel is so called, as being the place of an idolatrous worship practised by King Jeroboam. We may form some idea of the chapel or sanctuary of a king in a heathen temple, by consulting the plates given by Rosellini, from the Egyptian monuments.

The sanctuary in the Temple of Solomon was constructed of square stones, but was covered with boards of cedar, within and without, in which a variety of ornamental figures were carved, and which was overlaid with plates of gold. The entrance into the sanctuary was closed by a valve or folding-door made of the oleaster or wild olive, which was ornamented with specimens of carved work, in the shape of cherubim and flowers, covered with gold, and which turned on golden hinges. (1Kings 6. 33-35.) See **TEMPLE**.

CHAPTER, *רֶשֶׁת* *resh*, the top of a column, mentioned in Exodus 36. 38, and 1Kings 7. 19. In the first of these passages we read of the chapters being overlaid with gold; and in the second of the chapters, on the top of the pillars, being formed of "lily work." By comparing these descriptions with the remains of ancient temples in Egypt, we find that it was the practice to gild and paint the columns in various colours. The form of the lotus or lily, was also the favourite ornament for the capitals of columns among the Egyptians.

CHAPTERS. The New Testament was at an early period portioned out into certain divisions, which appear under various names. The custom of reading it publicly in the Christian assemblies after the Law and the Prophets, which were for this end already divided into parashioth and haphtaroth, soon led to the New Testament being treated in the same way. The distribution into church lessons, was, indeed, the oldest that took place in it. The Christian teachers gave the name of pericopes to the sections read as lessons by the Jews. Justin Martyr avails himself of this expression, when he quotes prophetic passages. Such is the case also in Clemens of Alexandria; but this writer also gives the name to larger sections of the Gospels and St. Paul's Epistles. In the third century, another division also occurs into kephalaia, or chapters. Dionysius of Alexandria speaks of them in reference to the Apocalypse, and the controversies respecting it. Some, he says, went through the whole book from chapter to chapter. In the fifth century, Euthalius produced a new division into chapters, which was accounted his invention; he himself, however, lays claim to nothing more than having composed the summaries of the contents of the chapters in the Acts of the Apostles and the Catholic Epistles. For the origin of our present chapters, see **BIBLE**. For the division into verses, we are indebted to Robert Stephens the printer, who first introduced them in his edition of the New Testament, A.D. 1551, whence they were speedily borrowed by others. He made the division on a journey from Lyons to Paris; and his son Henry informs us, in the preface to the Concordance to the New Testament, that he made

it "inter equitandum," which some suppose to mean, that when he was weary of riding, he amused himself with this work at his inn.

CHARIOT. Chariots, for purposes of luxury and conveyance as well as for war, appear to have been

used by the Hebrews as well as by the Egyptians in very early times. Rosellini and Wilkinson furnish us with a variety of forms of the Egyptian chariots copied from the monuments, where also we find represented the whole process of building them, as given in the accompanying engravings.

Chariot-making. From the Egyptian Monuments.

The shafts of the chariots, and in many cases the chariots themselves, were formed of wood. It is evident that the artists displayed considerable skill both in their form and decorations. The accompanying engraving exhibits the various processes, such as making the wheels, the shafts, and the body. The Egyptians were famed for making beautiful chariots, to which the princess of that country very probably alludes, in her praise of Solomon: "King Solomon made himself a chariot of the wood of Lebanon: he made the pillars thereof of silver, the bottom thereof of gold, the covering of it of purple, the midst thereof being paved with love, for the daughters of Jerusalem." (Cantic. 3. 9, 10.) It will be perceived by a reference to the engravings, that the curved shaft was known to the Egyptians, though supposed to be an invention of a very modern date; thus illustrating the aphorism, "There is nothing new under the sun."

The war chariot has been already described, (see **ARMS AND ARMOUR**;) and it therefore only remains to notice the other kinds of chariots spoken of in the Scriptures.

The ancient Persians who worshipped the sun, dedicated to that luminary certain horses and chariots, which, in allusion to his rapid course, they consecrated to him; and the most acceptable offering, which they, according to their opinion, sanctified to their god, the sun, was a consecrated white horse, superbly harnessed. That the kings of Judah fell into this peculiar idolatry, we find recorded in their history, as chariots of the sun are mentioned as being burnt by King Josiah. (2Kings 23. 11.) In these chariots the Rabbins inform us, the king and nobles rode when they went forth to meet the morning sun. Horses and chariots were used in the sacred processions, and employed, perhaps, on such occasions, to convey the images of the sun. In the Greek mythology, the sun was supposed to be drawn daily in a chariot by four wondrous coursers through the firmament: and was represented as a young

man with a radiant head, and driving whip in hand. He is sometimes seen thus issuing from a cave to denote the commencement of his daily career. In a medal of the Emperor Heliogabalus, who had been a priest of the sun in Syria, and who established the Syrian form of this worship at Rome, the human figure is wanting, and we only see in the chariot a stone, round below, and rising in a pyramid to a point above. In the narrative of the translation of the prophet Elijah, (2Kings 2. 3,) it is said there appeared a chariot of fire and horses of fire, and a corrupt tradition of this miraculous ascension seems to have been preserved in the East.

"The Hindoos believe their supreme god Siva," says Mr. Roberts, "sends his angels with a green chariot to fetch the souls of those who are devoted to him; that there are occasionally horses, but at other times none. 'The holy king, Tirru-Sangu, was taken to heaven body and soul, without the pain of dying.' When a man, as a heathen, is very regular in his devotions, or when he reproves others for vice or neglect of duty, it is often scornfully asked, 'What! are you expecting the green chariot to be sent for you?' meaning, 'Do you, by your devotions, expect to go to heaven in the chariot of Siva, without the pain of dying?' Does a man act with great injustice, the person who finds him out asks, 'Will you get the green chariot for this?' Has a heathen embraced Christianity, he is asked the same question. 'Charity, Charity,' says the beggar at your door, 'and the green chariot will be sent for you.'" See **CART**.

CHARIOT RACES. The chariot races were the most renowned of all the exercises used in the games of the ancient Greeks and Romans, and those from which the victors were held to derive the greatest honour. There appear to be but one or two allusions to them in the New Testament, and these are involved in some uncertainty. One occurs in the First Epistle to the Corinthians, (16. 9,) where the Apostle refers to his great

success in collecting a church at Ephesus: "But I will tarry at Ephesus until Pentecost, for a great door and effectual is opened unto me, and there are many adversaries." The inspired writer, it is thought, alludes here to the door of the circus, which was opened to admit the chariots when the races were to begin; and by the word *artuloi*, which is translated "adversaries," but which Doddridge renders "opposers," means antagonists, with whom he was to contend as in a course.

The circus at Rome was rather more than a mile in circumference, and was surrounded with seats and three tiers of galleries. In the centre was a barrier twelve feet in breadth and four feet high, around which the race was performed; and at one end was a triumphal arch, through which the successful charioteer drove, amidst the shouts and applause of the assembly.

Four chariots usually started together, the drivers of which were distinguished by dresses of different colours. Each colour had its particular partisans, who betted largely on the success of their favourite.

CHARITY. True charity is an active principle; it is not properly a single virtue, but a disposition residing in the heart, as its source; whence all the virtues of benignity, candour, forbearance, generosity, compassion, and liberality flow, as so many native streams. From general good will to all, it extends its influence, particularly to those with whom we stand in nearest connexion, and who are directly within the sphere of our good offices. From the country or community to which we belong, it descends to the smaller associations of neighbourhood, relations, and friends, and spreads itself over the whole circle of social and domestic life. We mean not that it imparts a promiscuous, undistinguishing affection, which gives every man an equal title to our love. Charity, if we should endeavour to carry it so far, would be rendered an impracticable virtue, and would resolve itself into mere words, without affecting the heart. True charity attempts not to shut our eyes to the distinction between good and bad men; nor to warm our hearts equally to those who befriend and to those who injure us. It reserves our esteem for good men, and our complacency for our friends, while towards our enemies it inspires forgiveness and humanity. It breathes universal candour and liberality of sentiment, forms gentleness of temper, and dictates affability of manners; it prompts corresponding sympathies with them who rejoice and them who weep, and teaches us to slight and despise no man. Charity is the comforter of the afflicted, the protector of the oppressed, the reconciler of differences, the intercessor for offenders. It is faithfulness in the friend, public spirit in the magistrate, equity and patience in the judge, moderation in the sovereign, and loyalty in the subject. In parents it is care and attention; in children it is reverence and submission; in short, it forms the soul of social life. It is the sun that enlivens and cheers the abodes of men; not a meteor which occasionally glares, but a luminary which, in its orderly and regular course, dispenses a benignant influence.

Charity, considered as a Christian grace, ought, in our excellent version, to have been rendered love. It is the love of God, and the love of our neighbour flowing from the love of God, and is described with wonderful copiousness, felicity, and grandeur, by St. Paul, (1Cor. ch. 13,) a portion of Scripture which, as it shows the habitual temper of a true Christian, cannot be too frequently referred to for self-examination, and ought to be constantly present to us as our rule.

In the popular sense, charity is alms-giving; a duty of practical Christianity which is solemnly enjoined, and to which special promises are annexed.

CHARM. See **DIVINATION.**

CHARMER. See **ADDER**; **DIVINATION.**

CHASTEN, TO, is to chastise, or correct; to strike or afflict any one for his advantage. (Rev. 3. 19.) The overthrow of the Jewish nation by the Chaldeans, was "the chastisement of a cruel one;" it was very severe, and inflicted by cruel instruments. (Jer. 30. 14.) To chasten one's self before God, (Dan. 10. 12,) is to humble one's self.

CHAPT. This word only occurs in Jeremiah 14. 4, and refers to the cracking of the earth before the period of the autumnal rains usual in Eastern countries; but the prophet more especially alludes to a drought which was to take place in Judah. At such times, in the East, the ground is "chapt;" large fissures meet the eye in every direction, and the husbandmen know not what to do; to plough the land, under such circumstances, is of no use; and therefore they are obliged to wait till it rains. Thus, should the rains be later than usual, the people daily look for them, and, after one night's fall, the husbandmen may be seen in every direction, working in their fields with gladness, in the full hope of soon casting in the seed.

CHEBAR, *חבר* and *כבר* a river of Mesopotamia, which rises in Mount Masius, and empties itself into the Euphrates, near Circesium. It is supposed to be the Chaboras of the Greek geographers. It is mentioned in Ezekiel 1. 1; 10. 15, as the scene of one of the prophet's visions. At 2Kings 17. 6; 18. 11; 1Chronicles 5. 26, it is called Habor. Gesenius.

CHEDORLAOMER, king of Elam, supposed to be a part of ancient Persia, was one of the four kings who confederated against the kings of the Pentapolis of Sodom. (Gen. ch. 14.)

Some learned men think that Chedorlaomer was the same with Hushing, an ancient king of Persia, and that Arioch, king of Ellasar, was a prince of Arabia. We meet nowhere in profane history with the name Chedorlaomer, or with those of the kings who were confederates with him; the reason of which is, that Ctesias, from whom the profane historians took the names of their kings of Assyria, Persia, &c., did not use the original Assyrian names in his history, but such as he found in the Persian records.

CHEEK. Smiting upon the cheek is frequently spoken of in the Scriptures as a most grievous insult and injury, (Job 16. 10; Lam. 3. 30; Micah 5. 1; Luke 6. 29,) and the incidental notices of modern travellers on this, as on other subjects, exhibit the literal accuracy of the language of the inspired writers.

Lord Valentia, in his *Travels*, alluding to one of his servants, says, "Davagé was deeply incensed; nor could I do more than induce him to come to the factory on business, while I was there; Mr. Pringle having, in one of his fits, struck him on the cheek with the sole of his slipper." Sir W. Ouseley, speaking of the Persian court, remarks, "When the vizir declared himself unable to procure the money, Fathh Ali Shah reproached him for his crimes, struck him on the face, and, with the high wooden heel of a slipper, always iron-bound, beat out several of his teeth."

The Hindoo can bear almost anything without emotion, except slipping; that is, a stroke with the sole of a slipper, or sandal, after a person has taken it off his foot and spit upon it: this is dreaded above all affronts, and considered as no less ignominious than spitting in the face, or bespattering with dirt among Europeans. An

angry man often says, "I will beat thy cheek, thou low caste fellow."

CHEESE, חֶחֶלֶב *hharetsee hahhalab*; Sept. τροφαλις; Vulg. *formella casei*. The cheese of the East is little better than curds, which illustrates the expression of the patriarch Job, "Hast thou not poured me out as milk, and curdled me like cheese?" (10. 10.) Camels' milk is very rarely used for the making of cheese, but that of cows generally, as also of sheep and of goats; and the Arabs near Mount Carmel readily believed a French traveller, when, to prevent them from seizing the cheeses which formed part of the cargo of a vessel wrecked on the coast, he told them that they were made with sows' milk.

"The art of coagulating milk and converting it into cheese, was known among the Syrian shepherds from the remotest times. Instead of rennet they turn the milk, especially in the summer season, with sour butter-milk, the flowers of the great headed thistle, or wild artichoke; and putting the curds afterwards into small baskets made with rushes, or with the dwarf-palm, they bind them up close and press them. These cheeses are rarely above two or three pounds weight; and in shape and size resemble our penny loaves. Oriental cheeses are sometimes of so very soft a consistence, after they are pressed, and even when they are set upon the table, that they bear a very near resemblance to curds, or to coagulated milk, which forms a very considerable part of Eastern diet." Paxton.

CHEMARIMS, חֶמָרִים *ha-kemarim*, from a verb signifying to be made black, to be shrivelled or scorched; an order of priests of Baal, probably so called from wearing black garments while sacrificing, or as others think, because they painted their faces black: the word only occurs once in our translation, viz., Zephaniah 1. 4; but it is met with in the Hebrew in Hosea 10. 5, and in 2Kings 23. 5. "The chemarim," says Lowth, "were an order of superstitious priests appointed to minister in the service of Baal, and were his peculiar chaplains." In the passage in Zephaniah the chemarims are coupled with the priests, and the signification is, according to Lowth: "I will destroy the chemarims, together with the priests of the tribe of Levi who have joined in the worship of idols." The priests who officiated in the service of the golden calves at Dan and Bethel were also called chemarim, as we learn from Hosea 10. 5, where the word rendered in our translation "priests" is chemarim. Even to this day the Jews retain the word, and apply it in derision to Christian ministers, on account of their black robes. Lowth; Dr. A. Clarke.

CHEMOSH, an idol of the Moabites, sometimes confounded with Baal Peor. The name is derived from an Arabic root, signifying swift. It would seem that Chemosh is the sun, thus coinciding in one view with Baal, but not being the same personification of the solar orb. Strabo and Ammianus Marcellinus both identify him with Apollo, by expressly naming the latter Chomeus; and if, as others say, Ammon or Amoun and Chemosh be the same, then, as Amoun was one of those forms under which the Egyptians represented the sun, there can be no doubt but that Chemosh has a claim to the same distinction. The cause that Baal Peor and Chemosh have been confounded, is doubtless the impurities of their worship; but this is a characteristic too common among the idolatries of that age and country, to warrant the identification of two deities whose rites it signalized. The latter would appear to have been the supreme object of worship, the great solar god; and hence we find the Moabites expressly and repeatedly

called the people of Chemosh. Baal Peor was a phase of the same god, considered more especially as the presiding deity of reproduction, the same as the Mahadeva of the Hindûs, acting by means of his *sacti* or pervading energy, under his peculiar form Parvati. There are few divinities of paganism so important, and of whom so little is known, as Chemosh. Strabo; Ammianus Marcellinus; Macrobius.

CHEREM. The vow called חֶרֶם *cherem*, the accursed thing, is nowhere enjoined by Moses, nor does he specify by what solemnities or expressions it was distinguished from other vows, but takes it for granted all this was then well known. The species of cherem with which we are most familiar, was the previous devoting to God of hostile cities, against which they intended to proceed with extreme severity; and that with a view to inflame the minds of the people to war. In such cases, not only were all the inhabitants put to death, but also, according as the terms of the vow declared, no booty was made by any Israelite; the beasts were slain; what would not burn, as gold, silver, and other metals, was added to the treasury of the sanctuary; and everything else, with the whole city, burnt, and an imprecation upon any attempt that should ever be made to rebuild it. Of this, the history of Jericho furnishes an example. (Josh. 6. 17, 19, 21-24.) In the time of Moses, there was a similar vow against the king of Arad. (Numb. 21. 1-3.) See ACCURSED; ANATHEMA.

CHERETHITES and PELETHITES. The Cherethites are mentioned in several places in Scripture as inhabitants of the southern part of Canaan, (1Sam. 30. 14; Ezek. 25. 16; Zeph. 2. 5,) but the Pelethites are believed not to have had any existence as a people. Both together are mentioned as the attendants of David, (2Sam. 8. 18; 15. 18; 20. 7, 23,) but as it is not probable that that monarch would retain any of the idolatrous Canaanites about him as his body-guard, it has been supposed that the Cherethites were so called, because being old adherents of the king, they had accompanied him when he abode among the Philistines, and then the Pelethites derived their name from their commander, a person of the name of Pelet being one of David's companions at Ziklag. The Targum reads archers and slingers in the passages where the Cherethites and Pelethites are mentioned, which agrees with the Septuagint reading of "Cretans," that people being famed in antiquity as light troops. Gesenius, in reference to Eastern usages, translates the words "executioners and messengers," those functions being generally discharged by the body-guard of the sovereign at the present day. Lewis, in his *Antiquities of the Hebrew Republic*, observes, "The number of them may be conjectured from the targets and shields of gold which Solomon made, which were five hundred, and for the use of his guard. They were properly the king's domestics, and lay in a guard-chamber at the entrance of the palace, to be ready at the least notice and on the most sudden occasions."

CHERITH, כְּרִית the name of a brook, on the banks of which the prophet Elijah concealed himself from the resentment of Ahab, and where he was miraculously fed by ravens. (1Kings 17. 3, 5.) It appears to have been a winter torrent falling into the Jordan. Local traditions place the retreat of the prophet near a brook on the east of the Jordan, a few miles below the ford near Bethshan. The district is finely broken into hill and vale, and caverns being formed in the sides of some of the hills, it furnished as secure a retreat as could well be selected.

Josephus says, that the prophet went into the southern parts of the country, which does not apply to the situation mentioned, as it is nearly east from Samaria.

CHERUB, CHERUBIM, כרוב כרובים an order of angels, with representations of which the mercy-seat of the ark of the testimony was adorned. (Exod. 25. 19.) Many etymologies of this word have been attempted, but that from the Syriac כרב *charab*, "powerful, great, mighty," appears the most probable. The original meaning of the term, and the shape and form indicated, any further than that they were "winged creatures," is not certainly known; and comparisons with ancient mythologies must always remain fanciful, as winged symbolical figures occur in most of them. Josephus says, they were extraordinary creatures, of a figure unknown to mankind. The general opinion seems to be, that they were figures composed of various parts of various creatures; as a man, a lion, an ox, an eagle. But we have certainly no decided proof that the figures placed in the Holy of Holies in the tabernacle, were of the same form with those symbolic creatures described by Ezekiel; and we have no clue, beyond mere conjecture, to extricate us from our ignorance of their symbolical tendency. The reveries of Hutchinson, Parkhurst, and Bates, are too wild to be examined.

The cherubim may be traced on the insignia of the arms of the Israelites, of which the Rabbi Aben Ezra has copiously treated on. (Numb. 2. 2.) The standard of Reuben was the figure of a man; Judah's that of a lion; Ephraim's that of the ox; and Dan's that of the eagle. All the multifarious animals which we view in connexion with idolatry, owe their origin to the cherubim: they were misrepresentations of the doctrines of the mysteries, in which legends of these "overshadows of the mercy-seat" were certainly retained. The Satyrs, the Centaurs, the Sphinxes, the Chimærae, Garuda, and others, appear in every pagan system, originating from the hallowed but misunderstood remembrance of these Hebraic symbols.

They appear first as the guardians of Paradise, (Gen. 3. 24,) then as the supporters of Jehovah's throne, or rather as bearers of his chariot. (2Sam. 22. 11; Psalm 18. 10; 80. 1.) According to the representation in Exodus 25. 18, the cherubim of the sanctuary were two in number, one at each end of the mercy-seat on the cover of the ark of the covenant, between whose wings was the throne of the Shechinah. Those in the tabernacle were of beaten gold, being of small dimensions; but those in the temple of Solomon were made of the wood of the olive-tree overlaid with gold. (1Kings 6. 23.) They are called "cherubim of glory," not merely on account of their form, but because they had the glorious symbol of the presence of Jehovah, the Shechinah, resting between them. As this glory abode in the tabernacle, and as the figures of the cherubim represented the angels who surround the manifestation of the Divine presence in the world above, that tabernacle was rendered a fit image of the court of heaven, in which light it is considered in the Epistle to the Hebrews 9. 23, 24.

St. Peter is supposed also to allude to the cherubim of the tabernacle, as representing the angels who surround the Divine presence in heaven, where they behold Christ the true propitiation, which mystery of redemption they "desire to look into," (1Peter 1. 12;) a circumstance, signified by the faces of the cherubim being turned inward, and their eyes fixed on the mercy-seat.

CHESNUT-TREE, ערמון *armon*. The tree which our translation renders chesnut, (Gen. 30. 37; Ezek. 31. 8,) is by all the older versions stated to be the plane tree, (*Platanus orientalis*), or Oriental maple. The

The Oriental Plane.

Hebrew name is supposed to be derived from a root which signifies to be stripped, and this agrees with the plane, where the bark peels off from the trunk, and leaves it apparently bare. The chesnut has a wide-spreading top, but its bark, though curiously cleft into oblong cells, does not peel off. The plane is a native of Syria and Palestine, and in those countries often attains a stately size, on which account it is one of the trees employed by the prophet to exhibit the glory of Assyria. (Ezek. 31. 8.)

CHEST. See **ARK, BOX.**

CHIDON, THRESHING FLOOR OF, the place where Uzzah was suddenly struck dead for touching the ark, (1Chron. 13. 9;) it is also called Nachon, (2Sam. 6. 6;) but it is not known whether Chidon and Nachon were names of men or of places.

CHILD, CHILDREN. We learn from the Scriptures that, in the earliest ages, mothers suckled their offspring themselves, and as it would appear from various passages, until they were from thirty to thirty-six months old. On the day the child was weaned, it was usual to make a feast, (Gen. 21. 8; 1Sam. 1. 22;) and the same custom is observed in Persia and India to this day. If the mother died before the child was old enough to be weaned, or was unable to rear it herself, nurses were employed, who were ever after retained in the family. (Gen. 35. 8; 2Kings 11. 2.)

Among the Hebrews, the sons remained till their fifth year with the women; then they came into the care of the father, and were taught not only the arts and duties of life, but were instructed in the Mosaic law, and all other observances of their religion. (Deut. 6. 20, 25; 11. 19.) Those who wished to have them further

instructed, provided they did not deem it preferable to employ private teachers, sent them away to some priest or Levite, who sometimes had a number of other children to instruct. Professor Jahn conjectures that there was a school, in the time of Samuel, near the holy tabernacle, appropriated for the instruction of youth. There had been many other schools of this kind which had fallen into discredit, but were restored again by the prophet Samuel; after whose time the members of the seminaries in question were denominated, by way of distinction, the sons of the prophets.

The daughters in the early ages joined in the labours of the field, as keeping sheep, (Gen. 29. 9,) gleaning, (Ruth 2. 2,) and drawing water, (Gen. 24. 15; Exod. 2. 16;) and this last was still their duty in the time of Our Lord, (John 4. 7,) as it is at present in the same country, though it was early confined to the poorer classes, which was not at first the case. Those of better circumstances lived more retired, and the daughters of those in high stations in life, so far from going out to draw water, might be said to spend the whole of their time within the walls of their palaces. In imitation of their mothers they were occupied with dressing, singing, and dancing, but do not appear to have neglected their household duties. They went abroad but very rarely, and the more rarely, the higher they were in point of rank, but they received with cordiality female visitants.

"The Jewish law looked upon children as the property of their parents, who had power to sell them for seven years, as their creditors had to compel them to do it, in order to pay their debts, (2Kings 4. 1;) and from the Jews this usage passed to the Athenians, and from them to the Romans. Solon reformed this cruel custom, as indeed it seemed hard that the children of a poor man, who have no inheritance left them, should be enslaved in order to pay their deceased father's debts.

"Among the Jews the authority to which a father was entitled, extended not only to his wife, to his own children, and to his servants of both sexes, but to his children's children also. It was the custom anciently for sons newly married to remain at their father's house, unless it had been their fortune to marry a daughter, who, having no brothers, was heiress to an estate; or unless by some trade, or by commerce, they had acquired sufficient property to enable them to support their own family. It might of course be expected, while they lived in their father's house, and were in a manner pensioners on his bounty, that he would exercise his authority over the children of his sons, as well as over the sons themselves." In this case the power of the father had no narrow limits, and whenever he found it necessary to resort to measures of severity, he was at liberty to inflict the extremity of punishment. (Gen. 38. 24.) This power was so restricted by Moses, that the father, if he judged the son worthy of death, was bound to bring the cause before a judge. But he enacted, at the same time, that the judge should pronounce sentence of death upon the son, if, on inquiry, it could be proved that he had beaten or cursed his father or mother, or that he was a spendthrift, or contumacious, and could not be reformed. (Exod. 21. 15, 17; Levit. 20. 9; Deut. 21. 18, 21.) The authority of the parents, and the service and love due to them, are recognised in the most prominent of the moral laws of the Jewish polity, the Ten Commandments, (Exod. 20. 12;) but the Pharisees devised a mode of evasion which Our Lord strongly reprobates. (See CORBAN.) (Matt. 15. 5, 6; Mark 7. 11-13.) The prophetic curse or blessing of the father also possessed no little efficacy. (Gen. 49. 2, 28.) Children who were slaves by birth are mentioned in the Scriptures as those born in the house, the children of maid servants, the

sons or children of the house. (Gen. 14. 14; 15. 3; 17. 23; Psalm 86. 16; 116. 16.)

The duties imposed upon children have been always more severe in the East than among European nations; and to the present day, it is considered highly disrespectful for a son to sit in the presence of his father without express permission. We see from the monuments, that in Egypt one of the offices assigned to the young princes was that of "fan-bearer on the left of the king," and they were also obliged to carry the monarch in his palanquin, or chair of state. As fan-bearers, they attended him while seated on his throne, or in procession to the temples; and in this capacity they followed his chariot on foot as he celebrated his triumphant return from battle.

In Scripture, the word "child," or "children," has considerable latitude; disciples are often called children or sons. Solomon, in his Proverbs, says to his disciple, "Hear, my son;" so also Our Saviour. (John 21. 5.) The descendants of a man, how remote soever, are denominated his sons or children; as "the children of Edom," "the children of Moab," "the children of Israel." Such expressions as "the children of light," "the children of darkness," "the children of the kingdom," signify those who follow truth, those who remain in error, and those who belong to the church. Persons arrived almost at the age of maturity are sometimes called children. Thus Joseph is termed "the child," though he was at least sixteen years old. (Gen. 37. 30,) and Benjamin, even when above thirty, was so denominated. (Gen. 44. 20.) Solomon called himself a little child, when he came to the kingdom of his father. (1Kings 3. 7.) In the New Testament, believers are commonly called "the children of God" by virtue of their adoption. (Rom. 8. 14; Galat. 3. 26.)

"All who are married in the East have an intense desire for children. It is considered a mark of the displeasure of the gods to have a childless house. Under these circumstances, husbands and wives perform expensive ceremonies; and vow, should the gods favour them with a son, 'no razor shall come upon his head' until he shall be ten or twelve years of age. (Numb. 6. 5; Judges 13. 5.) In all schools, boys may be seen with elf-locks of ten or twelve years standing, giving a testimony to the solicitude, superstition, and affection of the parents." Roberts.

Few things appear more shocking to humanity than the custom of which frequent mention is made in Scripture, of making children pass through fire in honour of Moloch, a custom the antiquity of which is proved by its having been repeatedly forbidden by Moses. (Levit. 18. 21; 20. 1, 5; 2Kings 16. 3.) See MOLOCH.

In illustration of Isaiah 49. 22, "They shall bring thy sons in their arms, and thy daughters shall be carried upon their shoulders," we may remark that children of both sexes in the East are carried on the shoulders. Thus the father may be seen carrying his son, the little fellow being astride on the shoulder, having, with both hands, hold of his father's head. Girls, however, sit on the shoulder, as if on a chair, their legs hanging in front, while they also with their hands lay hold of the head. In going to, or returning from heathen festivals in India, thousands of parents and their children may be thus seen marching along.

CHILD-BIRTH. See BIRTH.

CHILMAD, כִּלְמַד the name of a place now unknown, respecting which several conjectures are offered. (Ezek. 27. 23.) The Septuagint renders it *Xappa*. Bochart supposes it to be the Syriac Chalmedda, for Chalmada, the Chalmada of Xenophon.

CHIOS, an island in the Grecian archipelago; mentioned in Acts 20. 15, now called Scio, between Lesbos and Samos, and for size and population next in rank to Lesbos; it is separated from the continent of Asia Minor by a narrow strait, and is about thirty miles in length, and fifteen in breadth. It was celebrated in ancient times for its excellent vines, as also for its figs and marble. Its chief town, also called Chios, was one of the places which contended for the honour of Homer's birth. This island was deemed by the Turks worthy of a fortress. During the late revolutionary war Chios suffered the most horrible and unprovoked cruelties from the Turks, that have perhaps been heard of in modern times.

CHIMNEY, אֶרֶבָה *arubah*, (Hosea 13.3,) rendered in our version "chimney," but merely meaning an opening through which the smoke passes. It is hardly necessary to say that houses in the East are not furnished with stoves and fire-places as among us. The fuel is heaped into a pot, which is placed in a part hollowed out for that purpose, in the centre of the paved floor. The smoke, therefore, escapes through the windows. (Isai. 44. 16; 47. 14.) Sometimes the fire is placed directly in the hollow place, or hearth, in the middle of the floor, as mentioned by Jeremiah 36. 22. Chimneys appear to have been employed in the round towers for furnaces, but never in dwelling-houses. They were termed כּוֹר אֶשָׁן *Cor Ashan*, a smoking furnace, which is the name of a city mentioned in 1 Samuel 30. 30; probably where many workers in metal resided.

CHISLEU or **KISLEV**, the third month of the civil year, and the ninth month of the ecclesiastical year, in the Jewish calendar. (Nehem. 1. 1.) It contains thirty days, and corresponds with part of our November and December. The following are the days on which religious celebrations occur:—

1. The new moon.

3. A feast in memory of the idols which the Asmo-næans cast out of the Temple.

7. A fast instituted because King Jehoiakim burned the prophecy of Jeremiah, which Baruch had written. (Jerem. 36. 23.) Scaliger believes that it was instituted on account of Zedekiah's having his eyes put out, after his children had been slain in his sight. This fast Dr. Prideaux places on the 29th of the month; but Calmet makes it the 6th, and places on the 7th a festival in memory of the death of Herod the Great, the son of Antipater.

25. Hanuca, the feast of Dedication, so called, and kept as a minor festival, in commemoration of the dedication of the altar, after the cleansing of the Temple from the pollution of Antiochus, by Judas Maccabeus; by whom it was ordered to be observed. (1 Macc. 4. 59.) This feast lasted eight days. A prayer for the world in general is offered up on the eighth day of the feast.

In this month the winter prayer for rain commences; the precise day is sixty days after the autumnal equinox, by the calculations of Rab Samuel, which varies from the 2nd to the 6th, but is generally on the 4th of December.

CHITTIM, כְּתִיִּים or כְּתִיִּים The country or countries implied by this name in Scripture are variously interpreted. The Vulgate reads Italy, as does the Chaldee Targum on 1 Chron. 1. 7, and Josephus, Cyprus; but we may suppose that the "land of Chittim," and the "isles of Chittim," denote in general the maritime countries and islands of the Mediterranean, Greece, Italy, Crete, Cyprus, Corsica, &c., which opinion is supported by Bishop Lowth, and Dr. Hales. Balaam foretold "that ships should come from the coast of Chittim, and should afflict Asshur, (the Assyrians,) and afflict

Eber," (the Hebrews,) (Numb. 24. 24,) thus foretelling the Grecian and Roman invasions. Daniel prophesied (11. 13,) that the ships of Chittim should come against the king of the North, and that he should therefore be grieved and return, which was fulfilled when Antiochus Epiphanes, the king of Syria; having invaded Egypt, was by the Roman ambassadors commanded to desist, and withdrew to his own country. Perseus, king of Macedon, is called "king of the Citima," in 1 Maccabees 8. 5.

CHIUN, the name of a Canaanitish and Moabitish idol, occurring only once in the sacred text, and then in a peculiarly obscure passage: "But ye have borne the tabernacle of your Moloch, (in the margin, *Siccuth your king*), and Chiun your images, the star of your god, which ye made to yourselves." (Amos 5. 26.) Some propose to translate the passage, "But ye have borne Sikuth your king and Chiun your image, the star," &c.; which reading the passage will bear very well, as Sikuth, which also signifies a tabernacle, is said by the Rabbis to be the name of an idol. But whether this be admitted or not, there is a passage in the Acts of the Apostles which throws strong light upon the difficulty. St. Stephen, in quoting Amos, reads the verse thus: "Yea, ye took up the tabernacle of Moloch and the star of your god Remphan, figures which ye made to worship them." The Septuagint has no mention of Chiun at all, but reads *καὶ τὸ ἀστρον τοῦ θεοῦ ὑμῶν Ραιφαν*, and Dr. Clarke supposes that Chiun is a literal corruption of Raiphan, רַיְפָן for רַיִן though he acknowledges that there is no authority, either in MSS. or versions, for this alteration. The Copts call the planet Saturn *Ρηφαν*, so that we have every reason to believe "the star of the god" here spoken of, to have been Saturn, an object of adoration in every known system of mythology.

CHLOE, a Christian woman at Corinth of some note, probably a widow, as she is represented as the head of her family, from some of the members of which St. Paul received his information of the divisions of the church there. (1 Cor. 1. 11.)

CHOOSE, CHOSEN. To choose signifies to select or make choice of; to set apart a person or thing from among others to some particular use, office, or privilege; (Exod. 17. 9; Psalm 25. 12;) to renew or manifest a choice; (Isai. 14. 1; 48. 10;) to follow, imitate, delight in, and practise. (Prov. 3. 31.) God "chooses men's delusions, and brings their fears upon them," when He gives them up to their delusions as the just punishment of their sins. (Isai. 66. 4.) Thus God gave up the Jews to their vain fancies, and brought on them the destruction by the Romans.

Chosen signifies selected among others to some honourable service or station. Chosen warriors are such as are picked out as the most valiant and skilful in an army. (Exod. 15. 4; Judges 20. 16.) The Hebrew nation was an elect or chosen people; God set them apart, not for their superior excellence, but for wise and gracious purposes of his own, to receive his word, preserve his worship, and prepare for the advent of his Son. (Deut. 7. 7; Psalm 105. 43; Nehem. 9. 7.) Jerusalem was chosen as the place where God was pleased to fix the peculiar symbols of his presence. (Deut. 12. 11; 1 Kings 11. 13.) Christ was chosen and set apart from eternity by God the Father, for the office of Mediator. (Isai. 42. 1; 1 Peter 2. 4.) Believers saved by Christ are said to be elect and chosen, separated from the rest of mankind, not of merit, but of mercy, that they might, through Christ and for his sake, receive salvation, through sanctification of the Spirit and belief of the truth. (Ephes. 1. 4; 1 Peter 1. 2; 2. 9; 5. 13; 2 John 1. 1.) The Apostles

were chosen, fixed upon and set apart from others, to bear witness to Christ, and execute all the functions pertaining to their high and sacred office. (Acts 9. 15; 10. 41.)

CHORAZIN, a small town situated on the western coast of the Sea of Galilee, against which our Saviour pronounced a woe for the incredulity of its inhabitants. (Matt. 11. 21; Luke 10. 13.) It is supposed to be the Chorazin of the Talmud Manach. Origen writes it *Χωρα Ζιβ*. Jerome says it was two miles from Capernaum; but Eusebius makes it twelve. Some writers suppose it to be the same with Kelat-el-Horsa, a place on the eastern shore of the Sea of Gennesareth, where Seetzen and Burckhardt describe some ruins.

CHRIST. See MESSIAH.

CHRISTIANS are those who profess to believe and practise the religion of Jesus Christ. The disciples and followers of Christ were first denominated Christians at Antioch, A.D. 42; (Acts 11. 26;) but commentators and critics are much divided in opinion concerning the origin of the appellation. Some are of opinion that it was first invented by the enemies of religion, and was fixed upon the disciples of Christ as a stigma of reproach, in confirmation of which opinion they refer to Acts 26. 28; 1 Peter 4. 16; others imagine that the disciples themselves assumed the appellation; while others, with more propriety, conceive that it was given to them by Divine appointment, their view being grounded upon a grammatical examination of the text in question. In every passage of the New Testament (with perhaps one exception only,) where the word *χρηματιζο* (here employed) occurs, as well as in the Septuagint version, it uniformly means being warned by a Divine oracle, as it does in certain cases among profane authors; and when we reflect that it had been predicted by Isaiah 62. 2, that the future church should "be called by a new name, which the mouth of the Lord shall name," we may admit their interpretation, and render the passage thus: "And the disciples were called Christians by Divine appointment first at Antioch." But whatever may have been the origin of this name, it was cheerfully adopted. The disciples willingly assumed the name of the Lord and Master whom they served, and in whose service they gloried and rejoiced; cheerfully complying with the rule of the Apostle: "If any man suffer as a Christian, let him not be ashamed, but let him glorify God on this behalf." (1 Pet. 4. 16.) The early Christian writers relate several instances of martyrs, who, when put to the torture, persisted in returning to the questions of their persecutors this single answer, "I am a Christian!"

The early Fathers speak with approbation of this name, inasmuch as it contains no indication of adherence to any particular sect or party in the church, but expresses only an attachment to the common religion. "I honour Peter," says Gregory Nazianzen, "but I am not a Petrian; I honour Paul, but I am not called a Paulian. I am named after no man, for I belong to God." Epiphanius observes, "No sect is called by the name of an Apostle; we hear nothing of Petrians, Paulians, Bartholomeans, or Thaddeans; for all the Apostles from the beginning had but one doctrine, preaching not themselves, but Christ Jesus the Lord. Hence they gave to all the churches but one name; not their own, but the name of Christ, from the time that they were first called Christians at Antioch."

By mistake, the professors of the Gospel were sometimes called Chrestiani, instead of Christiani. The allu-

sion in the Greek word *Christus* (the Anointed), was not understood by the opponents of the new religion, to whom the word *chrestus*, good, was more familiar; and as the members of the persecuted sect exhibited extraordinary piety and virtue, it was natural for the heathen to suppose that they had adopted a distinctive appellation from this honourable circumstance. There are many passages from ancient writers which we might quote, in which this term is employed.

The Jews were the first and most inveterate enemies of the Christians. They put them to death as often as they had it in their power; and Barcochab, who headed their revolt against the Romans in the time of the Emperor Adrian, employed the most rigorous punishments against the Christians, in order to compel them to blaspheme and renounce their Saviour. Afterwards, when they had no longer the power of persecuting them themselves, they directed the vengeance of the pagans against them by charging them with treasonable designs, and propagating the most atrocious calumnies respecting their moral conduct. But the lives and behaviour of the first Christians were sufficient to refute all that was said against them, and evidently demonstrated that these accusations were merely the effect of inveterate malice.

Pliny the Younger, who was governor of Pontus and Bithynia between the years 103 and 105, gives a very particular account of the Christians in that province, in a letter which he wrote to the Emperor Trajan, of which the following is an extract: "I take the liberty, sir, to give you an account of every difficulty which arises to me. I have never been present at the examination of the Christians; for which reason I know not what questions have been put to them, nor in what manner they have been punished. My behaviour towards those who have been accused to me is this: I have interrogated them in order to know whether they were really Christians. When they have confessed it, I have repeated the same question two or three times, threatening them with death if they did not renounce this religion. Those who have persisted in their confession have been by my order led to punishment. I have even met with some Roman citizens guilty of this frenzy, whom, in regard to their quality, I have set apart from the rest in order to send them to Rome. These persons declare that their whole crime, if they are guilty, consists in this, that on certain days, before sunrise, they assemble to sing alternately the praises of Christ as of God, and to oblige themselves, by the performance of their religious rites, not to be guilty of theft or adultery, to observe inviolably their word, and to be true to their trust. This disposition has obliged me to endeavour to inform myself still further of this matter by putting to the torture two of their women servants, whom they called deaconesses; but I could learn nothing more from them, than the superstition of these people is as ridiculous as their attachment to it is astonishing."

The purity of the Christian morality being directly opposed to the corruption of the pagans, was doubtless one of the most powerful motives of the public aversion; and this occasioned so strong a prejudice, that the pagans condemned them without inquiring into their doctrine, or permitting them to defend themselves. Besides, the worshipping Jesus Christ as God was contrary to one of the most ancient laws of the Roman empire, which expressly forbade the acknowledging of any god which had not been approved of by the senate. But notwithstanding the violent opposition made to the establishment of the Christian religion, it gained ground daily, and very soon made surprising progress in the Roman empire. In the third century there were Christians in the senate, in the camp, in the palace; in short, every-

where but in the temple and the theatres; they filled the towns, the country, and the islands. Men and women of all ages and conditions, and even those of high rank, embraced the faith; insomuch that the pagans complained that the revenues of their temples were ruined. They were in such great numbers in the empire, that, (as Tertullian expresses it,) were they to have retired into another country, they would have left the Romans only a frightful solitude.

Christians are now divided into a great variety of sects, the explanation of whose tenets does not properly come within the scope of this work. The number of Christians now in the world, of all denominations, is variously calculated at from one hundred and seventy-five to two hundred and twenty-five millions.

For an account of the persecutions of the Christians, see **PERSECUTION**.

CHRISTIANITY is "the religion instituted by Jesus Christ, comprehending doctrines of faith and rules of practice, all of which are contained in the New Testament, and are designed to recover mankind from ignorance and vice, from guilt and death, to true knowledge and virtue, to the Divine favour, and everlasting life. Its aptitude to this end, its conformity to reason, and to the state of man, the sublimity and excellence of its doctrines, the equally venerable and lovely character of its author, the purity of its precepts, its benign tendency and salutary effects, concur, with the external evidence of prophecy and miracles, to establish its Divine origin and truth."

To enter upon the evidences of Christianity, with a statement of its leading doctrines, would occupy far too large a space in this work; we must, therefore, content ourselves with giving a brief sketch of some of the main points, and refer our readers to the numerous important works that have been published on this subject.

I. THE FOUNDATION OF CHRISTIANITY. Most, if not all Christians, whatever their distinguishing tenets may be, acknowledge the Scriptures of the Old and New Testaments as the sole foundation of their faith and practice. But as these books, or at least particular passages in them, have, from the ambiguity of language, been variously interpreted, these diversities have given birth to a multiplicity of different sects. These, however, or at least the greatest number of them, appeal to the Scriptures of the Old and New Testaments as the ultimate standard—the only infallible rule of faith and manners. If asked by what authority these books claim an absolute right to determine the consciences and understandings of men, with regard to what they should believe, and what they should do, they answer that all Scripture, whether for doctrine, correction, or reproof, was given by immediate inspiration from God. If again interrogated how those books, which they call the Scriptures, are authenticated, they reply, that the Old and New Testaments are proved to be the word of God by evidences both internal and external.

II. EVIDENCES OF THE TRUTH OF CHRISTIANITY. The external evidences of the authenticity and Divine authority of the Scriptures, have been divided into direct and collateral. The direct evidences are such as arise from the nature, consistency, and probability of the facts; and from the simplicity, uniformity, competency, and fidelity of the testimonies by which they are supported. The collateral evidences are either the same occurrences supported by heathen testimonies, or others which concur with, and corroborate the history of Christianity. Its internal evidences arise either from its exact conformity with the character of God, from its aptitude to the frame and circumstances of man, or from those supernatural

convictions and assistances which are impressed on the mind by the immediate operation of the Divine Spirit. We shall here briefly allude to some of the chief evidences which have been brought forward.

1. In the first place, it must appear highly probable, as matter of theory, that such a system of love and wisdom as the Gospel presents should be indeed a Divine revelation; for it is but too evident that the case of mankind is naturally such as to need a Divine revelation, and we may easily conclude that, if a revelation were given, it would be introduced and transmitted in such a manner as Christianity is said to have been; besides that the main doctrines of the Gospel are of such a nature as we might in general suppose those of a Divine revelation would be—rational, practical, and sublime. (See particularly Heb. 11. 6; 1Tim. 2. 5; Phil. 4. 8.)

We may also feel certain that Christianity is a Divine revelation, if we attend to the following considerations.

The Books of the New Testament now in our hands were, unquestionably, written by the first preachers and publishers of Christianity; from which it follows, (1.) That Christianity is not a new religion, but that it was maintained by great multitudes very soon after the time in which Jesus is said to have appeared. (2.) That there was certainly such a person as Jesus of Nazareth, who was crucified at Jerusalem when Pontius Pilate was governor there. (3.) That the first publishers of this religion wrote books which contained an account of the life and doctrine of Jesus, their master, and that these books have been preserved uncorrupted to the present time, in the original language in which they were written. (4.) That the translation of them now in our hands may be depended upon in all things most material. From allowing, therefore, the New Testament to be genuine, it will undoubtedly follow that Christianity is a Divine revelation; for, from these books, it is evident that the writers of the New Testament certainly knew whether the facts they related were true or false; (John 27. 35; 1John 1. 3;) and the characters of these writers, so far as we can judge by their works, seems to render them worthy of regard, and leaves no room to imagine they intended to deceive us. The manner in which they tell the important facts to which they refer, is most happily adapted to gain our belief. There is no air of declamation and harangue; nothing that looks like artifice and design; no apologies, no encomiums, no characters, no reflections, no digressions, but the facts are recounted with great simplicity, just as they seem to have happened, and these facts are left to speak for themselves. Their integrity, likewise, appears in the freedom with which they mention those circumstances which might have exposed their Master and themselves to the greatest contempt amongst prejudiced and inconsiderate men, as in John 1. 45, 46; 7. 48, 52. There are throughout their writings the most genuine traces, not only of a plain and honest, but a most pious, devout, and benevolent disposition. The Apostles were under no temptation to forge a story of the kind, or to publish it to the world, knowing it to be false. Had they done so, humanly speaking, they must quickly have perished in it, and their cause must have died with them, without ever gaining any credit in the world.

2. If we reflect more particularly on the nature of those grand facts, the death, resurrection, and exaltation of Christ, which formed the great foundation of the Christian scheme, as first exhibited by the Apostles, and consider the manner in which the Apostles undertook to prove the truth of these facts; it will evidently appear that, instead of confirming the scheme, it must have been sufficient utterly to have overthrown it, had it been an imposture, though the most probable that the wit of man

could have contrived. They did not merely assert that they had seen miracles wrought by Jesus, but that he had endowed them with a variety of miraculous powers; and these they undertook to display, not in such idle and useless tricks as sleight of hand might perform, but in such solid and important works as appeared worthy of Divine interposition, and entirely superior to human power. (Acts 3. 6-9; 14. 8.) Nor were these things undertaken in a corner, in a circle of friends or dependants, nor were they said to be wrought, as might be suspected, by any confederates in the fraud; but they were done often in the most public manner. Would impostors have made such pretensions as these? or, if they had, must they not immediately have been exposed and ruined? Now it is certain that the Apostles are asserted to have wrought miracles in the very presence of those to whom their writings were addressed; nay, more, they profess likewise to have conferred those miraculous gifts in some considerable degree upon others, even on the very persons to whom they write, and they appeal to their consciences as to the truth of it. How could there possibly be room for delusion here? It is likewise certain that the Apostles did gain early credit, and succeeded in spreading their belief in a most wonderful manner, as is abundantly proved by the great number of churches established in the apostolic age.

3. Admitting the facts which they testified concerning Christ to be true, then it was reasonable for their contemporaries, and it is reasonable for us, to receive the Gospel which they have transmitted to us as a Divine revelation. The great thing that they asserted was, that Jesus was the Christ, and that he was proved to be so by prophecies accomplished in him, and by miracles wrought by him and by others in his name. If we attend to these prophecies and miracles, we shall be forced to acknowledge, that the conclusion they have drawn most easily and necessarily follows; and this conclusion, that Jesus is the Christ, taken in all its extent, is an abstract of the Gospel revelation, and therefore is sometimes put for the whole of it. (Acts 8. 37; 17. 18.)

4. The truth of the Gospel has also received further and very considerable confirmation from what has happened in the world since it was first published; and with this view we might argue at large from its surprising propagation in the world; from the miraculous powers with which not only the Apostles, but succeeding preachers of the Gospel, and other converts, were endowed; from the accomplishment of prophecies recorded in the New Testament; and from the preservation of the Jews as a distinct people, notwithstanding the various difficulties and persecutions through which they have passed; and we must not forget to mention the confirmation it receives from the methods which its enemies have taken to destroy it, which have generally been either persecution or falsehood, or cavilling at some particulars in revelation, without entering into the grand argument on which it is built, and fairly debating what is offered in its defence. The cause of truth, however, has gained by the opposition made to it; the more it has been tried, the more it has been approved, and we may boldly say that no honest man, unfettered by prejudice, can examine this system in all its parts, without being convinced that its origin is Divine.

III. GENERAL DOCTRINES OF CHRISTIANITY. It must be obvious that, whether we attempt to form the idea of any religion *à priori*, or contemplate those which have already been exhibited, certain facts, principles, or data must be pre-established, from whence will result a particular frame of mind and course of action suitable to the character and dignity of that Being by whom the religion is enjoined and adapted to the nature and situa-

tion of those agents who are commanded to observe it. Hence Christianity may be divided into doctrines and precepts. As the great foundation of his religion, therefore, the Christian believes the existence of one eternal and infinite Essence, which inherently possesses all those perfections compatible with its nature, such as almighty power, omniscient wisdom, infinite justice, and boundless goodness. This infinite Being was graciously pleased to create a universe replete with intelligences, who might enjoy his glory, participate his happiness, and imitate his perfections. But as these beings were not immutable, a degeneracy took place, and that in a rank of intelligence superior to man. But guilt is never stationary; impatient of itself, it proceeds from bad to worse, whilst the poignancy of its torments increases with the number of its perpetrations. Such was the situation of Satan and his apostate angels. They attempted to transfer their turpitude and misery to man, and were, alas! but too successful. Hence the heterogeneous and irreconcilable principles which operate in his nature; hence that inexplicable medley of wisdom and folly, of rectitude and error, of benevolence and malignity, of sincerity and fraud, exhibited through his whole conduct; hence the darkness of his understanding, the depravity of his will, the pollution of his heart, the irregularity of his affections, and the absolute subversion of his whole internal economy. The seeds of perdition soon ripened into overt acts of guilt and horror. Here the Christian appeals to fact and experience. If these things are so, he demands, how is this constitution of things to be accounted for? How can it be supposed that a being so wicked and unhappy, should be the production of an infinitely good and infinitely perfect Creator? He, therefore, insists that human nature must have been disarranged and contaminated by some violent shock, and that without the light diffused over the face of things by Christianity, all must remain in inscrutable and inexplicable mystery. To redress these evils, to re-establish the empire of rectitude and happiness, to restore the nature of man to its primitive dignity, to satisfy the remonstrances of infinite justice, to purge from any original or contracted stain, to expiate the guilt and destroy the power of sin, the Son of God descended from the bosom of his Father, assumed the human nature, became the representative of man; exhibited a pattern of perfect righteousness, and fully accomplished all the ends of his mission by a cruel and ignominious death. Before he left the world, he delivered the doctrines of salvation, and the rules of human conduct to his Apostles, whom he empowered to instruct the world in all that concerned their eternal felicity, and upon whom he bestowed miraculous gifts, to prove the reality of what they taught. To them he likewise promised another Comforter, even the Holy Spirit, who should remove the darkness, console the woes, and obliterate the stains of human nature. Soon after his departure to the right hand of his Father, the Spirit of grace and consolation descended on the Apostles with visible signs of Divine power and presence. Nor were these Divine influences confined to them, but extended to all who did not by obstinate guilt repel them. These, indeed, are now less conspicuous than at the glorious era when they were visibly exhibited in the persons of the Apostles; but though his energy be less observable, it is by no means less effectual to all the purposes of grace and mercy. The Christian is convinced that there is, and shall continue to be, a society upon earth called the Church, who worship God as revealed in Jesus Christ, who believe his doctrines, who observe his precepts, and who shall be saved by the merits of his death. He also believes that the Sacraments of Baptism and the Lord's

Supper, the interpretation and application of Scripture, the habitual exercise of public and private devotion are calculated to diffuse and promote the interests of truth and religion. He is firmly persuaded that at the consummation of all things, when the purposes of Providence in the various revolutions of progressive nature are accomplished, the whole human race shall once more issue from their graves; some to immortal felicity in the actual perception and enjoyment of the presence of their Creator, and others to everlasting shame and misery.

IV. SUPERIORITY OF CHRISTIANITY. According to the doctrines of Christianity, the two grand principles of action are, the love of God, and love towards our neighbour, which regulate our actions according to the various relations in which we stand, whether to communities or to individuals. These principles dictate every relative and reciprocal duty between parents and children, masters and servants, governors and subjects. Nor does Christianity merely enjoin the rules of equity; it likewise inspires the most sublime and extended charity; a boundless and disinterested effusion of tenderness for the whole species, which feels for their distress and comes forward for their relief and improvement.

Thus is Christianity superior to all other religions: no other system has ever yet been exhibited so consistent with itself, so congruous to philosophy, so applicable to all the necessities of our nature. Christianity is infinitely more productive of real consolation than all other religious or philosophical tenets which have ever entered the soul or been applied to the heart of man. For what is death to that mind which considers eternity as the career of its existence? What are the frowns of men to him who claims an eternal world as his inheritance? What is the loss of friends to that heart which feels, with more than natural conviction, that it shall quickly rejoin them in a more tender, intimate, and permanent intercourse, than any of which the present life is susceptible? What are the vicissitudes of external things to a mind which strongly and uniformly anticipates a state of endless and immutable felicity? What are mortifications, disappointments, and insults, to a spirit which is conscious of being the original offspring and adopted child of God, which knows that its omnipotent Father will in proper time effectually assert the dignity and privileges of its nature? And as this earth is but a speck in the creation, as time is not an instant in proportion to eternity, such are the hopes and prospects of the Christian in comparison of every sublunary misfortune or difficulty. It is, therefore, the eternal wonder of angels and opprobrium of man, that a religion so worthy of God, so suitable to the frame and circumstances of our nature, so consonant to all the dictates of reason, so friendly to the dignity and improvement of intelligent beings, so fraught with genuine comfort and delight, should be rejected and despised by any of the human race.

V. BENEFICIAL EFFECTS OF CHRISTIANITY. "Although," says Bishop Porteus, "Christianity has not always been so well understood, or so honestly practised, as it ought to have been; although its spirit has been often mistaken, and its precepts misapplied, yet, under all these disadvantages it has gradually produced a visible change in those points which most materially concern the peace and quiet of the world. Its beneficent spirit has spread itself through all the different relations and modifications of life, and communicated its kindly influence to almost every public and private concern of mankind. It has insensibly worked itself into the inmost frame and constitution of civil states. It has given a tinge to the complexion of their governments, to the temper and administration of their laws. It has restrained the spirit of the prince and the madness of

the people. It has softened the rigour of despotism, and tamed the insolence of conquest. It has, in some degree, taken away the edge of the sword, and thrown even over the horrors of war a veil of mercy. It has descended into families, has diminished the pressure of private tyranny; improved every domestic endearment; given tenderness to the parent, humanity to the master, respect to superiors, to inferiors ease, so that mankind are upon the whole, even in a temporal view, under infinite obligations to the mild and pacific temper of the Gospel, and have reaped from it more substantial worldly benefits than from any other institution upon earth. As one proof of this among many others, consider only the shocking carnage made in the human species by the exposure of infants, the gladiatorial shows, which sometimes cost Europe twenty or thirty thousand lives in a month; and the exceedingly cruel usage of slaves; allowed and practised by the ancient pagans. These were not the accidental and temporary excesses of a sudden fury, but were legal and established, and constant methods of murdering and tormenting mankind. Had Christianity done nothing more than brought into disuse, (as it confessedly has done,) the two former of those inhuman customs entirely, and the latter to a very great degree, it had justly merited the title of the benevolent religion; but this is far from being all. Throughout the more enlightened parts of Christendom there prevails a gentleness of manners, widely different from the ferocity of the most civilized nations of antiquity, and that liberality with which every species of distress is relieved, is a virtue peculiar to the Christian name." See MIRACLES; PROPHECY; REVELATION.

CHRISTMAS. It is generally agreed that the introduction of this festival into the Christian church took place during the fourth century. The attention of the early church appears to have been directed to the public ministry and acts of Our Saviour, rather than to his early personal history; in accordance with an observation of Chrysostom, "Not the day of Our Saviour's birth, but the day of his baptism, is to be regarded as his manifestation."

The institution of this festival in the fourth century has been variously traced. Some writers have derived it from the Jewish *Encenia*, or feast of the Dedication, (1 Macc. 4. 52, 58, 59; 2 Macc. 10. 6, 8;) others believe it to have been established in order to take the place of the heathen *Saturnalia*. Jablonski attempts to show that it originated with the Basilidians in Egypt; and Augusti supposes, that this festival was established in opposition to the views and representations of certain heretics, and in order to counteract their influence. But, perhaps, the institution may be sufficiently explained by the circumstance, that it was the taste of that age to multiply festivals, and that the analogy of other events in Our Saviour's history, which had already been marked by a distinct celebration, may naturally have pointed out the propriety of marking his nativity with the same honourable distinction. It was celebrated with all the marks of respect usually bestowed upon high festivals; and distinguished also by the custom of interchanging presents and making entertainments.

At first, this festival was celebrated in the East on the sixth of January. But towards the end of the fourth century, or the beginning of the fifth, we find two distinct festivals, namely, that of the Nativity of Christ, on the twenty-fifth of December, and that of Our Lord's Baptism on the sixth of January. And thus the Oriental church came to an agreement with the Western, which had previously celebrated the nativity on the twenty-fifth of December. The Oriental custom was changed,

however, only by degrees. Juvenalis, bishop of Jerusalem, adopted the Roman custom in his diocese for the first time, in the year 431; and it was not until the sixth century, that the whole Christian world concurred in celebrating the nativity on the same day.

The custom of making presents on Christmas-eve was derived from an old heathen usage, practised among the Northern nations, at the feast of the birth of Sol on the twenty-fifth of December, to which it succeeded, and retained the name of Yule or Jual; the "wheel" or revolution of the sun. Riddle.

CHRONICLES, BOOK OF, a canonical writing of the Old Testament, supplementary to the other historical books.

The Books of Chronicles have a variety of appellations. In Hebrew, they are entitled *דברי הימים* *Dibrey Ha-yamim*, that is, the "Words of Days," or "Annals;" probably from the circumstance of their being compiled out of diaries or annals, in which were fully recorded the various events related in those books. The Septuagint, followed by the Vulgate, calls them *Παραλειποmena*, *Paraleipomena*, or "things passed over or omitted;" because many things which were omitted in the former part of the sacred history, are here not only supplied, but some narrations also are enlarged, while others are added. The Arabic title is, "The Book of Annals." The Targum, with reference to the commencing genealogies, has "The Book of Genealogies, the Words of Days, which were from the days of the world;" and the Syriac, with reference to the fact that a great part of the whole is occupied with the affairs of the kings of Judah, gives the title, as the book of the things that were done in the times of the kings of Judah. The appellation of Chronicles was given by Jerome, because they contain an abstract in order of time, of the whole of the sacred history, to the time when they were written.

Concerning the author of these books, we have no distinct information, but it is evident that the present Chronicles were drawn up, after the captivity, from records left by contemporary annalists and prophets. It is generally supposed, that this work was executed by Ezra, after the return from the captivity; and the Jews assert, that he was assisted by Haggai and Zechariah, who were then living; and some add, that the work was left unfinished by Ezra and completed by Nehemiah. There does not seem to be any more probable conclusion than that which assigns the authorship to Ezra, at least in a general sense. At the end of Chapter III. the genealogy of Zerubbabel is extended to twelve or thirteen generations after the captivity, whence some think that the book must have been written in its present form much later than the time of Ezra. But as only this genealogy is thus extended, and as this was the genealogy of the royal house of David, the difference between it and the others seems to furnish a very plain indication, that the generations of this important line, from Zerubbabel, were successively added, in order to preserve in the most authentic form the means of identifying that "Son of David," whose advent the prophets had foretold.

The principal scope of these books is to exhibit with accuracy the genealogies, the rank, the functions, and the order of the priests and Levites; that, after the captivity, they might more easily assume their proper ranks and re-enter on their ministry. The author had further in view, to show how the lands had been distributed among the families before the captivity; so that the respective tribes might on their return obtain, as far as was practicable, the ancient inheritance of their fathers.

The Chronicles are an abridgment of all the sacred history, but more especially from the origin of the Jewish nation to their return from the first captivity. The First Book traces the rise and propagation of the people of Israel from Adam, and afterwards gives a circumstantial account of the reign and transactions of David. In the Second Book the narration is continued, and relates the progress and dissolution of the kingdom of Judah, to the very year of the return of the Jews from the Babylonish captivity: as very little notice is taken of the kings of Israel, it is not improbable that this book was chiefly extracted from the records of the kingdom of Judah. The period of time embraced in the Books of Chronicles is about 3468 years, and might be divided into four parts.

(1.) The genealogies of those persons through whom the Messiah was to descend, from Adam to the captivity, and thence to the time of Ezra. (2.) The history of Saul and David. (3.) The history of the kingdoms under Solomon; and (4.) The history of the kingdom of Judah after the secession of the ten tribes from Rehoboam, to its utter subversion by Nebuchadnezzar.

The discrepancies between the Books of Kings and Chronicles, though very numerous, are not of any great moment, and admit of an easy solution, being partly caused by various readings, and partly arising from the nature of the books, which being supplementary to those of Samuel and Kings, omit what is there related more at large, and supply what is there wanting. As the Books of Samuel, Kings, and Chronicles relate to the same histories, they should be read and collated together; not only for the purpose of obtaining a more comprehensive view of Jewish history, but also in order to illustrate or amend from one book, what is obscure in either of the others.

The Jews comprised the two Books of Chronicles in the original copies of the Hebrew Scriptures in one Book, but in the present Hebrew Bible they are divided in the same manner as with us.

CHRONOLOGY is the science of computing and adjusting periods of time, and is of the greatest importance towards understanding the historical parts of the Bible, not only by showing the order and connexion of the various events therein recorded, but likewise as it enables us to ascertain the accomplishment of many of the prophecies. An accurate knowledge of chronology is also of service to the Biblical critic, as it sometimes leads to the discovery and correction of mistakes in numbers and dates which have crept into particular texts. As considerable differences exist in the chronology of the Hebrew Scriptures, the Samaritan Pentateuch, the Septuagint version, and Josephus, several learned men have applied themselves to the investigation of these difficulties, and have communicated the result of their researches in elaborate systems. The principal of these are offered by Cappel, Vossius, Archbishop Usher, Bedford, Jackson, Russell, and Dr. Hales; and amongst modern commentators we may name Crosthwaite, Clinton, and Thirlwall.

There are two systems of Biblical chronology, termed the shorter and the longer, for which see *AGES OF THE WORLD*. The chronology adopted by the English translators, and placed in the margin of the larger Bibles, is that of the Masoretic or common Hebrew text; but of the authenticity of this, which is termed the shorter system, and is supported by Usher, Calmet, Clinton, and others, strong doubts are entertained by several Biblical critics. The longer system, is that of the Septuagint, and is supported by Jackson, Hales, and Russell. It also receives the authority of Josephus. Mr. Crosthwaite says, "The facts and arguments brought forward in

support of each system by its advocates are of great weight and importance, and supported with considerable talent and erudition; so as to make it very difficult to decide between them. I think, however, that the longer system will finally establish itself." The same writer very justly observes, "To establish a sound chronological connexion between the sacred Scriptures and the most authentic and respectable of the heathen historians, has been considered a very desirable object, by the religious and well informed, ever since the revival of letters in Europe. But it has been hitherto an unfortunate circumstance for such a discussion, that it requires a reference to that portion of the history of ancient heathen nations, which includes within itself the origin of their rites and superstitions, and the account of the wars and exploits of those persons, whom they worshipped as their gods and demi-gods or heroes.

"To veil those times and transactions in the most awful mystery and the deepest obscurity—to throw them back thousands and tens of thousands of years beyond all ideas of time and record—was, with the heathen priests, an object of paramount importance, to which every effort of their ingenuity was directed, and for which every artifice was employed. And to screen those matters afterwards from the scrutiny of inquisitive and philosophic minds required uncommon prudence and unceasing vigilance.

"In prosecuting the study of chronology, a science so extended, so difficult, and from its peculiarly mixed nature so liable to controversy, it is exceedingly desirable to have some fixed acknowledged principles, both to direct our inquiries and to moderate discussion; that the former may be the rational pursuit of some well-defined object; and that the latter may promise some possible advantage and probable termination. I consider it no small merit in Dr. Hales that he has laid a foundation, and, in my humble opinion, a very good one, for the methodical arrangement of chronology as a practical science. In his first volume of his *Analysis of Ancient Chronology*, he has favoured us with the following excellent maxims, which he says he deduced from Sir Isaac Newton's Rules for Philosophical Investigation.

"1. To adhere to the Scriptural standard. 2. To begin with the analytical method and end with the synthetical. 3. Not to adopt any date that shall be repugnant to any established date. 4. Never to form an hypothesis, nor to assign a conjectural date, except in case of downright necessity. 5. Carefully and critically to distinguish between different persons, in different ages and countries, called by the same name, and, on the other hand, to identify persons having different names in different authors, or at different times."

A variety of chronological tables will be found in the APPENDIX. See also AGES OF THE WORLD.

CHRYSLITE, χρυσολιθος, (Rev. 21. 20,) chrysolite, or golden stone, was a name applied by the ancients to all gems of a golden or yellow colour, but it probably designated particularly the topaz of the moderns. In the Septuagint the word is employed for תרשיש *tarshish*, the beryl of our version. (Exod. 28. 20; Ezek. 10. 9.)

CHRYSOPRASUS, χρυσοπρασος, mentioned in Revelations 21. 20, is a precious stone of greenish-golden colour, or apple green, passing into a grass green; it is an uncrystallized species of quartz, with minute quantities of nickel and iron.

CHUB, כוב, a country of the South, which occurs only in connexion with Egypt and Cush. (Ezek. 30. 5.)

Vatablus and others identify it with Cobe, a sea-port in Ethiopia, or Cobium, a district in Mærotia; Bochart takes it to be Paliurus, a city in Marmarica; but De Rossi gives the most probable rendering from a MS. of the thirteenth century, where the Masora parva reads וכונוב *vekanub*, which would refer it to Nubia, from נוב *nub*.

CHURCH. In the New Testament, and the writings of the Fathers, the word "church" usually denotes the body of believers, either in general, or as met together in a particular place, including governors and teachers, the governed and the hearers. Sometimes, however, "the church" is spoken of in early writers in contradistinction to the "ministers of the church," denoting merely the people, or those who were not employed in any ecclesiastical office. The word commonly employed in this latter sense was that which we have retained in our terms lay, laity. The Greek term λαϊκος *laikos* *anθρωπος*, signifying "one of the people," was retained in the Latin form *laicus*, being sometimes, but rarely, translated into *popularis*.

The nineteenth Article of the Church of England affords us an admirable definition of this word: "The visible Church of Christ is a congregation of faithful men, in the which the pure Word of God is preached, and the sacraments be duly ministered, according to Christ's ordinance in all those things that of necessity are requisite to the same."

In the New Testament, the word "church" denotes not only the body of believers assembled for worship, but also the place of assembly, (Acts 19. 39; 1Cor. 11. 18; 20. 22; see also Matt. 18. 17); and the same is the case in the writings of Ignatius, Clement of Alexandria, Tertullian, Cyprian, and other early ecclesiastical writers. Some critics, indeed, will not admit this early application of the term, but it seems warranted by passages cited from Tertullian and Cyprian. In the fourth century, this phraseology was decidedly established, as appears from the writings of Eusebius, Cyril, Chrysostom, and others.

It is generally admitted that the original constitution of the Christian Church was framed after a Jewish pattern; but it has been debated whether it was constructed in accordance with the Temple service, or with the worship of the Synagogue. Early ecclesiastical writers differ in their opinions on this subject. Tertullian, Cyprian, and Jerome, find the prototype of the Christian Church in the Mosaic institution; while Chrysostom, Basil, and Augustine, refer to the services of the Synagogue as the pattern which was followed in Christian worship. Modern writers, especially among Protestants, incline, for the most part, to the latter opinion, and they advance the following reasons for refusing to refer the origin of Christian ecclesiastical institutions to the service of the Temple. First, say they, although in the New Testament, especially in the Epistle to the Hebrews, Our Saviour is compared to the high priest of the old dispensation, yet no comparison whatever is instituted between the rulers or teachers of the Christian church, and the Jewish priests; but the resemblance is traced rather between those priests and believers in general, as in 1Peter 2. 9; Revelations 1. 6. Secondly, There is a greater similarity between the services of the Synagogue and the offices of the Christian church, than between the ministers of the Temple (high priest, priests, and Levites,) and the three orders of Christian clergy. Thirdly, The testimonies of the Fathers, which are urged on the other side of the question, do no more than show that the real origin of ecclesiastical offices was forgotten or overlooked at an early period of the church; which

may be partly accounted for by remembering that, after the destruction of the Jewish polity, the institutions of the Synagogue were but little known. The memory of the Temple service was, at the same time, perpetuated in the sacred records of the Old Testament; and it may have been thought more to the credit of the Christian worship to trace it to a Divine institution than to any other.

The word church is now used to denote any particular denomination of Christians distinguished by peculiar doctrines, ceremonies, &c., such as the Church of England, the Church of Rome, and others. To enter upon a discussion of the doctrines held by the different churches of Christendom would be inconsistent with our limits, and we must, therefore, refer our readers to the numerous works extant which treat on the various branches of this subject.

CHURNING, צָרַץ *metz*, signifies the act of pressing, and agrees with the Eastern mode of making butter. (Prov. 30. 33.) See **BUTTER**.

CHUSHAN-RISHATHAIM, a king of Mesopotamia, who oppressed the Israelites for eight years. This monarch must have subdued several of the surrounding nations within thirty or forty years after the death of Joshua, since his conquests extended westward as far as Canaan, and he is styled by Eutychius, king of Tyre and Sidon. The Israelites were delivered from his yoke by Othniel. (Judges 3. 8-10.)

CHUZA, or **CHUSA**, the steward or agent of Herod Antipas, whose wife was one of the pious women who ministered to Our Lord. (Luke 8. 3.) Some critics suppose that he was the treasurer or overseer of Herod's revenue, which seems groundless, as the Greek word *ἐπιτροπου* does not imply the procurator of a province, but rather an inspector of domestic matters.

CIELED, **CIELING**. There are two Hebrew words employed in the Old Testament, which our translators have rendered "cieled." The first, צִפְּהָ *chepha*, signifies to overlay, and occurs in 2Chronicles 3. 5, where it is said, "He cieled the greater house with fir-tree." The second, סָפַן *saphan*, means to wainscot, to plank, and occurs in Jeremiah 22. 14: "It is cieled with cedar, and painted with vermilion." Houses finished in this manner were called בֵּתֵי סָפִינִים *betem sephunim*, "cieled houses." (Haggai 1. 4.) They were adorned with ornaments in stucco, with gold, silver, gems, and ivory. Oriental houses appear to have been the reverse of such as we inhabit, the cieeling being of wood richly ornamented and painted, and the floor, plaster or stucco, the walls being generally wainscoted. Sir John Gardner Wilkinson gives some elegant specimens of Egyptian painted

Ornamented Cieulings. From the Monuments.

cielings, and as these no doubt much resembled similar decorations in the palaces and houses of the Hebrews, we give a few of them.

CILICIA, *Κιλικία*, a country of Asia Minor, on the sea-coast, lying south of Cappadocia and Lycania, and bounded by Syria on the east, and Pamphylia on the west. Bochart derives its name from the Phœnician word *challekim*, signifying a stone, a designation well suited to part of it, which the Turks call *Tis-Wileten*, or the stony province. Cilicia Proper is described as an extensive plain, well cultivated, and producing great quantities of timber. Tarsus, the birth-place of St. Paul, was its capital, and near to it is the tomb of Julian the Apostate. The Cilicians enriched themselves by piratical excursions, and are represented as having been cruel, dishonest, and barbarous in their manners. They were subdued by Pompey, and the country was reduced to the state of a province by Vespasian.

Cilicia is frequently mentioned in the Acts of the Apostles, and it is probable that St. Paul himself introduced the Gospel into his native country. We find the Cilicians, among others, disputing with St. Stephen; (Acts 6. 9,) and we find St. Paul, in company with Silas, proceeding "through Syria and Cilicia, confirming the churches." (Acts 15. 41.) Christianity continued to flourish here until the eighth century, when the country fell into the hands of the Saracens, by whom, and by their successors, the Turks, the light of true religion has been almost extinguished.

CINNAMON, קַיְנָמוֹן *kinnamon*, Gr. *κινναμωμ*, is mentioned in Exodus 30. 23, as among the materials in the composition of the holy anointing oil, and, in Proverbs 7. 17, Canticles 4. 14, as among the richest perfumes. The cinnamon of commerce is the *Laurus cinnamomum*, a species of laurel, or sweet bay, chiefly found in Ceylon. The tree is about twenty feet in height, and spreads into numerous branches; the fruit is about the size of a damson, and when ripe is of a black colour. Our present appellation of this production being originally Hebrew, gives rise to an interesting inquiry as to how this product of the far East found its

Cinnamon.

way at so early a period to the shores of the Mediterranean; and it may be fairly assumed that a commercial intercourse with Ceylon, or continental India, even then existed. Herodotus asserts that the Greeks obtained their cinnamon from the Phœnicians; consequently the word may be considered as derived from the Semitic dialects. It would be no improbable supposition that the products of India might be found among the spices which the Arabians, to whom Joseph was sold by his brethren, were conveying to Egypt: that instance is sufficient to prove that a spice trade was then in the hands of the Arabians. The Arabian caravan, in Genesis, appears to indicate a land journey from Persia; for if the goods came by sea from India, they would doubtless have been taken to Egypt by way of the Red Sea; and Gilead and Dothan were so much out of their way, in a land journey to Egypt, if they had come from Arabia, that we seem under the necessity of considering them as coming from the East. But it also appears that

the Arabians had an early traffic at sea; for Dr. Vincent informs us, "That the Arabians were the first navigators of the Indian Ocean, and the first carriers of Indian produce, is evident from all history, as far as history goes back; and antecedent to history, from analogy, from necessity, and from local situation." "The Arabians have a sea-coast round three sides of their vast peninsula; they had no prejudice against navigation, either from habits or religion. There is no history which treats of them, which does not notice them as pirates, or merchants by sea,—as robbers, or traders by land. We can scarcely touch upon them accidentally in an author, without finding that they were the carriers of the Indian Ocean; Sabea, Hadramaut, and Oman, were the residence of navigators in all ages from the time that history begins to speak of them; and there is reason to imagine that they were equally so before the historians acquired a knowledge of them, as they have since continued down to the present age. The monopoly of the trade with India was enjoyed much longer by the Arabs than it has been by any other nation; and to this source we may probably attribute the glowing descriptions which the ancient writers give of the wealth and prosperity of Arabia Felix. Indeed, all the nations of Egypt, Mesopotamia, Arabia, and the Phœnician coast of the Mediterranean, appears to have been given to traffic. Overland trade was carried on in co-operation with that of the sea. The many remarkable coincidences between the Egyptian and Hindoo mythology is another proof that there must have been an early and frequent intercourse with India; to name one instance only, the sacred asp of Egypt is the *Cobra di capello* of India."

CINNERETH or **CINNEROTH**, one of the "fenced cities" belonging to the tribe of Naphtali, (Josh. 19. 35). It is supposed to have stood on the site afterwards occupied by Tiberias, and to have originated the name Gennesareth, by which the sea of Tiberias, or of Galilee, is often designated in the New Testament. In the Old Testament the lake is styled the sea of Cinnereth.

CIRCLE, **חֹמֶה** *hug*, a circle, or any part of a curve, an arch; the word is applied, (Job 22. 14,) to the heavens, which the ancients supposed to be a hollow sphere. They imagined that the sky was solid, and extended like an arch over the earth. The word is also referred to the earth in Isaiah 40. 22, and to the surface of the ocean in the margin of Proverbs 8. 27.

CIRCUIT, **תְּקוּפָה** *tekuphah*. This word signifies the act of going round, a circuit, as, for example, that of the sun, (Psalm 19. 6;) it is also used in reference to the completion of a year in the original of 2Chron. 24. 23; but the Scriptures afford us very little information as to the astronomical knowledge of the Jews. See **ASTRONOMY**.

CIRCUMCISION, **מִלָּה** *mulah*. The history of Abraham proves that circumcision was an ante-Mosaic rite, for the command is expressed in such terms as to make it evident that the rite was known previous to the time of that patriarch. (Gen. 17. 10, 11.) It was practised in Egypt and Ethiopia from the earliest times, and was in use among the African Troglodytes, the Colchi, the Arabs, and several other Eastern nations, whence it assumed legendary forms in mythology, which in different places assigned a different origin to it. Herodotus and other authors acquaint us that among the Egyptians all were not obliged to submit to the operation; the priests only were compelled to undergo it, or those desirous to be initiated into the mysteries, or to obtain a

knowledge of the sacred sciences. We shall not enter into the argument as to the origin of this rite; with some of the nations it had reference, no doubt, to physical and moral reasons, and we may presume that there was a particular difference in the ordinance among the Israelites. The notion of such distinction may be suggested by an observation in the writings of St. Paul, who appears to denominate the form that was adopted by the Gentiles, "concision," whereas "circumcision" is, in his epistles, applicable to the Jews only. "Beware of the concision, for we are the circumcision, which worship God in the spirit." (Phil. 3. 2, 3.) The different senses of the original words support the argument that there was a variation in the manner of the thing itself; the former was an idolatrous ordinance contradistinguished from circumcision, and the Jew regarded the rite as heterodox, and different from his own law.

In reference to Abraham, we read that circumcision was a seal of the covenant which God made with him and his posterity. Afterwards, when God delivered his Law to the children of Israel, He renewed his ordinance of circumcision; hence the proto-martyr Stephen calls it, the covenant of circumcision. (Acts 7. 8.) The design which God proposed to Himself in establishing this ceremony, appears to have been in some circumstances suited to the Israelites, a brief consideration of which will illustrate many important passages in Scripture. In the first place, it included in it so solemn and indispensable an obligation to observe the whole law, that circumcision did not profit those who transgressed. (Rom. 2. 25.) Hence the Jews, are in the Scriptures frequently termed "the circumcision," that is, persons circumcised, as opposed to the uncircumcised Gentiles, who are styled the "uncircumcision." (Rom. 3. 30; 4. 12; Gal. 2. 7-9.) Thus Our Saviour is called the minister of circumcision; and therefore St. Paul says, that whoever is circumcised is bound to keep the whole law. (Gal. 5. 3.) For the same reason Jesus Christ was circumcised, that He might be made under the law, to fulfil the promise of the Messiah, and redeem those who were under the law. (Gal. 4. 4.) Secondly. As only circumcised persons were deemed to be visible members of the Jewish church, so none but these were permitted to celebrate the great festivals, particularly the Passover. On this account it was that Joshua commanded all the Israelites who having been born in the wilderness remained uncircumcised, to undergo the rite of circumcision, previously to their entering the land of Canaan, (Josh. 5. 2-9;) on which occasion God told them that He had removed or rolled away the reproach of Egypt from them; in other words, that they should thenceforth be regarded as his peculiar people and no longer as the slaves of Egypt. This circumstance appears to illustrate Ephesians 2. 11-13, where Paul, describing the wretched state of the Gentiles before their conversion, represents them as aliens from the commonwealth of Israel, and, consequently, excluded from all its privileges and blessings. Thirdly. Circumcision was an open profession of the worship of the true God, and consequently an abjuration of idolatry; on this account we are told, that, during the persecution of Antiochus, the heathens put to death those Jewish women who had caused their children to be circumcised; and such few as apostatised to heathenism took away as much as possible, every vestige of circumcision. As this rite was an open profession of the Jewish religion, some zealous converts from that faith to Christianity strenuously urged its continuance, especially among those who were of Jewish origin; but this was expressly prohibited by St. Paul. (1Cor. 7. 18.)

Circumcision was enjoined to be observed on the

eighth day, (Gen. 17. 12,) including the day when the child was born, and that on which it was performed; and so scrupulous were the Jews in obeying the letter of the law, that they never neglected it, even though it happened on the sabbath day. (John 7. 22, 23.) St. Paul accounted it no small privilege to have been circumcised on the eighth day, and John the Baptist and Our Saviour were circumcised exactly on that day. At the same time that the child was circumcised, we learn from the Gospel, that it was usual for the father, or some near relative, to give him a name. Thus, John the Baptist and Jesus Christ both received their names on that day. (Luke 1. 59; 2. 21.) It appears, however, that the Jews had several names during the period comprised in the evangelical history. Thus it was customary for them when travelling into foreign countries, or familiarly conversing with the Greeks and Romans, to assume a Greek or Latin name of great affinity, and sometimes of the very same signification with that of their own country, by which name they were usually called among the Gentiles. So Thomas was called Didymus, (John 11. 16;) the one a Syriac, and the other a Greek word, signifying, a twin. See also Acts 1. 23; 12. 12; Colossians 4. 11; 2Peter 1. 1. Sometimes the name was added from their country, as Simon the Canaanite, and Judas Iscariot, (Matt. 10. 4;) but more frequently from their assuming or receiving a new and different name upon particular occurrences in life. (2Kings 24. 17; 2Chron. 36. 4; John 1. 42.)

The ceremony of circumcision as practised by the Jews in our own times is thus:—If the eighth day happens to be on the sabbath, the ceremony must be performed on that day, notwithstanding its sanctity. When a male child is born, the godfather is chosen from amongst his relations, or near friends; and if the party is not in circumstances to bear the expenses, which are considerable, (for after the ceremony is performed, a breakfast is provided, even amongst the poor, in a luxurious manner,) it is usual for the poor, to get one amongst the richer, who accepts the office, and becomes a godfather. There are also societies formed amongst them for the purpose of defraying the expenses, and every Jew receives the benefit if his child is born in wedlock. The ceremony is performed in the following manner.

The circumcisor being provided with a very sharp instrument, called the circumcising knife, plasters, cummin-seed to dress the wound, proper bandages, &c., the child is brought to the door of the synagogue by the godmother, when the godfather receives it from her, and carries it into the synagogue, where a large chair with two seats is placed; the one is for the godfather to sit upon; the other, is called the seat of Elijah the prophet, who is called the angel or messenger of the covenant. As soon as the godfather enters with the child, the congregation say, "Blessed is he that cometh to be circumcised, and enter into the covenant on the eighth day." The godfather being seated, and the child placed on a cushion in his lap, the circumcisor performs the operation, and, holding the child in his arms, takes a glass of wine into his right hand, and says as follows: "Blessed be those, O Lord, Our God, King of the Universe, Creator of the fruit of the vine. Blessed art thou, O Lord, Our God! who hath sanctified his beloved from the womb, and ordained an ordinance for his kindred, and sealed his descendants with the mark of his holy covenant; therefore for the merits of this, O living God! our rock and inheritance, command the deliverance of the beloved of our kindred from the pit, for the sake of the covenant which he hath put in our flesh. Blessed art thou, O Lord, the Maker of the Covenant! Our God, and the God of our fathers! pre-

serve this child to his father and mother, and his name shall be called in Israel, A, the son of B. Let the father rejoice in those that go forth from his loins, and let his mother be glad in the fruit of her womb; as it is written, 'Thy father and mother shall rejoice, and they that begat thee shall be glad.'

The father of the child says the following grace: "Blessed art thou, O Lord, Our God, King of the Universe! who hath sanctified us with his commandments and commanded us to enter into the covenant of our father Abraham." The congregation answer, "As he hath entered into the law, the canopy, and the good and virtuous deeds."

CISLEU. See CHISLEU.

CISTERN. The cities of Palestine were generally erected on eminences, and as the rains fall only in spring and autumn, the inhabitants constructed cisterns or reservoirs for water, both in cities and in private houses; allusions to the latter are found in 2Kings 18. 31; Proverbs 5. 15; Isaiah 36. 16. Uziah, king of Judah, appears also to have cut out many cisterns for the supply of cattle, (2Chron. 26. 10,) and cisterns of very large dimensions are to be met with in Palestine at this day. In the vicinity of Bethlehem there are in particular three capacious pools, known as the cisterns of Solomon. Mr. Buckingham says, "They are seated in a valley, and are three in number, each occupying a different level, and placed in a right line with each other, so that the waters of the one may descend into the next below it. Their figures are quadrangular: the first or southern one being about three hundred feet long; the second four hundred; and, the third five hundred; the breadth of each being about two hundred feet. They are all lined with masonry, and descended to by narrow flights of steps at one of the corners; the whole depth, when empty, not exceeding twenty or thirty feet. Near these reservoirs are two small fountains, of whose waters we drank, and thought them good. These are said to have originally supplied the cisterns through subterranean aqueducts; but they are now fallen into decay from neglect, and merely serve as a watering-place for cattle, and a washing stream for the females of the neighbouring country."

Dr. Richardson observes, "The antiquity of their appearance entitles these cisterns to be considered as the work of the Jewish monarch; but like everything Jewish, they are more remarkable for strength than beauty. They are lined with a thick coat of plaster, and are capable of containing a great quantity of water, which they discharge into a small aqueduct that conveys it to Jerusalem. This aqueduct is built on a foundation of stone: the water runs through round earthen pipes, hewn out so as to fit them, and they are covered over with rough stones, well cemented together. The whole is so much sunk into the ground on the side of the hills, round which it is carried, that in many places nothing is to be seen of it; in time of war, however, this aqueduct could be of no service to Jerusalem, as the communication could be easily cut off. The fountain which supplies these pools, is about the distance of one hundred and forty paces."

"This fountain," says Maundrell, "the friars will have to be that sealed fountain to which the holy spouse is compared." (Cant. 4. 12.) And he represents it to have been by no means difficult to seal up these springs, as they rise underground, and have no other avenue than a little hole, "like to the mouth of a narrow well." "Through this hole you descend directly down, but not without some difficulty, for about four yards; and then

Cisterns of Solomon

arrive in a vaulted room, fifteen paces long and eight broad; joining to this is another room of the same fashion, but somewhat less. Both these rooms are covered with handsome stone arches, very ancient, and perhaps the work of Solomon himself. You find here four places at which the water rises. From these separate sources it is conveyed by little rivulets into a kind of basin, and from thence is carried by a large subterranean passage down into the pools. In the way, before it arrives at the pools, there is an aqueduct of brick pipes, which receives part of the stream, and carries it by many turnings and windings to Jerusalem. Below the pools, runs down a narrow rocky valley, inclosed on both sides by high mountains. This the friars will have to be 'the enclosed garden,' alluded to in the same place in the Canticles. As to the pools, it is probable enough they may be the same with Solomon's; there not being the like store of excellent spring water to be met with anywhere else throughout Palestine. But for the gardens, one may safely affirm that if Solomon made them in the rocky ground which is now assigned for them, he demonstrated greater power and wealth in finishing his design, than wisdom in choosing the place for it."

Stephens says, "You can scarcely believe your eyes when you reflect that these cisterns have been formed in the flanks of the rock, without the aid of gunpowder, which was then unknown. Not far off my attention was directed to a little spring, which, I was assured, supplies all the water in those ponds. This assertion appeared to me ridiculous; without abundant rains it is not possible that they should ever be full."

"To the north-west of the upper pool is a large fortified khan, or caravanserai, the windows of which look into an interior court. From the solidity of its construction, and its great capaciousness, it was evidently built at a time when the intercourse with the countries lying south of Jerusalem was much greater than what it is at present." Robinson.

In Jeremiah 2. 13, worldly enjoyments are called "broken cisterns that can hold no water," upon which Mr. Roberts observes: "In Eastern language, 'living water' signifies springing water, that which bubbles up. The people had forsaken Jehovah, the never-failing spring, for the small quantity which could be contained

in a cistern; nay, in broken cisterns, which would let out the water as fast as they received it. When people forsake a good situation for that which is bad, it is said, 'Yes, the stork which lived on the borders of the lake, where there was a never-failing supply of water, and constant food, has gone to dwell on the brink of a well; that is, where there is no fish, and where the water cannot be had.'"

CITIES OF REFUGE. In the East, from the earliest times, the punishment of murder, or manslaughter, was, to a great extent, a matter not of public justice, but of private, and often of precipitate violent and cruel revenge. To provide security, therefore, for those who should undesignedly kill a man, Moses was commanded to appoint six cities of refuge, that whoever should have thus spilt blood, might retire thither, and have time to prepare his defence before the judges; and that the kinsmen of the deceased might not pursue and kill him. (Exod. 21. 13; Numb. 35. 11-15; Josh. 20. 7,8.) Those on the eastern side of the Jordan were Bezer, in the tribe of Reuben; Ramoth Gilcad, in that of Gad; and Galan, in the half-tribe of Manasseh. Those on the western side were Hebron, in the tribe of Judah; Shechem, in that of Ephraim; and Kadesh-Naphtali, in that of Naphtali. These cities were to be well supplied with water and provisions; and no one was allowed to make any weapons there, in order that the relations of the deceased might not procure arms to gratify their revenge.

But though the manslayer had fled to the city of refuge, he was not exempt from the power of justice, (Numb. 35. 12.) It appears that an information was lodged against him; and he was summoned before the judges and the people, to prove that the shedding of blood was truly casual and involuntary. If found guilty, he was put to death according to the law; but if declared innocent, he dwelt safely in the city to which he had retired, and which he might quit at the death of the high priest. (Josh. 20. 6.) It is not quite clear from the Scriptures whether the affair came under the cognizance of the judges of the place where the murder was committed, or of the judge of the city of refuge to which the murderer had fled. (Comp. Deut. 19. 11,12; Josh. 20. 4,5,6.)

Maimonides says, that if the goël, or avenger of blood, should slay at the altar the unintentional manslayer, he would himself be put to death. According to Homer, the altars of the gods were the primitive court of judicature, and as the congregation (Numb. 35. 24,) was appointed to judge between the murderer and the goël, and as in Exodus 21. 14, a direction is given to snatch him from the altar for death, if found guilty of premeditated malice, so we have every reason to believe that this was the precise practice in the days of the Patriarchs. Xenophon says that if thieves and known bad men claimed the protection of the gods by fleeing to their temples, refuge was denied them, and they were torn from the altar to undergo the punishment of their crimes. Precisely the same is the opinion of the Rabbins, who, whilst they denominate the altar a place of refuge, declare that whether it is such or not, depends on the circumstances of the offender, whether the murder was designed or undesigned.

The roads to the cities of refuge were directed to be always kept in good order; and Hottinger remarks, "From this custom of preparing the way for the refugee, the prophet Isaiah represented the Baptist preparing it for the Messiah, who being about to pay the goëlic satisfaction, was prophetically designated by that name; since by abolishing the atrocities of the office, and fulfilling the purport of the cities of refuge, He is said to have revealed to all mankind the salvation of God." (Luke 3. 4, 6.)

Adair, in his *History of the North American Indians*, states that most of these nations had places of refuge, (either a house or a town,) which afforded a safe asylum to a manslayer, who fled to it from the avenger of blood. See ASYLUM; AVENGER OF BLOOD.

CITIZENSHIP. This term does not occur in the Sacred Writings, but the privileges of a Roman citizen are frequently mentioned in the Acts of the Apostles. Thus when Paul and Silas had been scourged and imprisoned by the magistrates of Philippi, they refused the offer of their liberation, and the magistrates "feared when they heard that they were Romans. And they came and besought them, and brought them out, and desired them to depart out of the city." (Acts 16. 19-24; 37-39.) So also when Paul was seized at Jerusalem, the Roman officer "bade that he should be examined by scourging," but "was afraid, after he knew that he was a Roman, and because he had bound him." (Acts 22. 24-29.)

It appears from a variety of passages in the classic writers that a Roman citizen could not be legally scourged; this punishment being deemed to the last degree dishonourable, and the most daring indignity and insult upon the Roman name. "A Roman citizen, judges," exclaims Cicero, in his oration against Verres, "was publicly beaten with rods in the forum of Messina; during this public dishonour, no groan, no other expression of the unhappy wretch was heard amidst the cruelties he suffered, and the sound of the strokes that were inflicted, but this: 'I am a Roman citizen!'"

Neither was it lawful for a Roman citizen to be bound, or be examined by the question, or torture, to extort a confession from him. These punishments were deemed servile; torture was only exercised upon slaves; freemen were privileged from this inhumanity and ignominy.

"It was," says Mr. Melmoth, "one of the privileges of a Roman citizen, secured by the Sempronian law, that he could not be capitally convicted but by the suffrage of the people. If a freeman of Rome, in any of the provinces, deemed himself and his cause to be treated by the president with dishonour and injustice, he

could, by appeal, remove it to Rome to the determination of the emperor. Suetonius informs us that Augustus delegated a number of consular persons at Rome to receive the appeals of the people in the provinces, and that he appointed one person to superintend the affairs of each province. A passage in Pliny's epistle to Trajan confirms this right and privilege which Roman freemen enjoyed of appealing from provincial courts to Rome; and, in consequence of such an appeal, being removed, as St. Paul was, to the capital to take their trial in the supreme court of judicature: 'There were others also brought before me, possessed with the same infatuation, but being citizens of Rome, I directed them to be carried thither.'

CITRON. See APPLE.

CITY, CITIES, עִיר עָרִים, ar, arim. The cities of Palestine, in the time of Joshua, it appears were very populous, since 12,000 men were slain in the city of Ai, which is said to have been a small city; and the Hebrews, in after times, must have had large cities. Jerusalem in particular must have been very extensive, since such myriads of people assembled there on the appointed festivals; for though many dwelt in tents, and many met with a hospitable reception in the neighbouring villages, yet vast multitudes were accommodated within the city. The extent of the cities in Galilee, in the time of Our Saviour, is made known to us by Josephus; and at that period Professor Jahn thinks, from the number of paschal lambs slain at one time, three millions of people were wont to assemble at Jerusalem at the feast of the Passover.

The principal strength of the cities in Palestine consisted in their situation; they were, for the most part, erected on mountains, or other eminences, which were difficult of access; and the weakest places were strengthened by fortifications and walls of extraordinary thickness. (See *Fenced Cities*, in ARMS AND ARMOUR.)

The gate of the city was the seat of justice, where conveyances of titles and estates were made, complaints heard, and all public business was transacted. Thus Abraham made the purchase of his sepulchre in the presence of all those who entered in at the gate of the city of Hebron. (Gen. 23. 10-18.) When Hamor and his son Shechem proposed to make an alliance with Jacob and his sons, they spake of it to the people at the gate of the city. (Gen. 34. 24.) In later times, Boaz having declared his intention of marrying Ruth, caused her kinsman to resign his pretensions, and give him the proper conveyance to the estate, at the gate of Bethlehem. (Ruth 4. 1-10.) From the circumstance of the gates of cities being the seat of justice, the judges appear to have been termed the "elders in the gate." (Deut. 22. 15; 25. 7.) During the Arabian monarchy in Spain, the same practice obtained; and the magnificent gate of entrance to the Moorish palace of Alhambra at Granada, to this day retains the appellation of the "Gate of Justice," or of "Judgment."

The gates of cities, or rather the vacant places adjoining them, must have been of considerable size; for we read that Ahab, king of Israel, assembled four hundred false prophets before himself and Jehoshaphat, king of Judah, in the gate of Samaria, (1 Kings 22. 6;) and besides these prophets, we may conclude that each of the monarchs had numerous attendants in waiting.

Over or by the side of many gates there were towers in which watchmen were stationed to observe what was going on at a distance. (2 Sam. 18. 25.) The Orientals employed watchmen to patrol the city during the night, to suppress any disorders in the streets, or to guard the

walls against the attempts of a foreign enemy. To this custom Solomon refers in Canticles 5. 7: "The watchmen that went about the city found me, they smote me, they wounded me; the keepers of the wall took away my veil from me." So early as the departure of Israel from the land of Egypt, the morning watch is mentioned, indicating the time when the watchmen were commonly relieved. In Persia, the watchmen were anciently obliged to indemnify those who were robbed in the streets, which accounts for the vigilance and severity which they displayed in the discharge of their office, and illustrates the character of watchman given to Ezekiel, and the duties he was required to perform: if the wicked perished in his iniquities without warning, the prophet was to be accountable for his blood; but if he duly pointed out his danger, he delivered his own soul. (Ezek. 33. 2.) They were also charged to announce the progress of the night to the slumbering city. "He calleth to me out of Seir, 'Watchman, what of the night? watchman, what of the night?' The watchman said, 'The morning cometh, and also the night.'" (Isai. 21. 11, 12.) Chardin says, that as the people of the East have no clocks, the several parts of the day and of the night, which are eight in all, are announced by a loud cry by the watchmen, from time to time, and that frequently, in order to show that they are attentive to their duty. "The watchmen in the camp of the caravans go their rounds, crying one after another, 'God is one, He is merciful,' and often add, 'Take heed to yourselves.'" In some of the Eastern cities, the parts of the night are made known by instruments of music, and small drums, as well as by cries. It is evident from several passages of Scripture, that the ancient Jews knew by some public notice how the night watches passed away; but whether they simply announced the termination of the watch, or made use of trumpets or other sonorous instruments, is not easy to determine. The probability is, that the watches were announced by the sound of a trumpet; for the prophet Ezekiel makes it a part of a watchman's duty, at least in time of war, to blow the trumpet and warn the people.

In early periods, markets were held at or near the gates of the cities, generally within the walls, though sometimes without them. Here commodities were exposed for sale, either in the open air, or in tents. (2Kings 7. 18.) But in the time of our Saviour, as we learn from Josephus, the markets were enclosed in the same manner as the modern Eastern bazaars, which are shut at night, and where the traders' shops are disposed in rows or streets.

A city and its inhabitants are frequently described in the Sacred Writings under the similitude of a mother and her children: hence the phrase "children of Zion." (Joel 2. 23.) Cities are also characterized as virgins, wives, widows, and harlots, according to their different conditions. Thus Jerusalem is called a virgin in Isaiah 37. 22; and the term harlot is used of Jerusalem, (Isai. 1. 21,) also of Tyre, (Isai. 23. 16,) of Nineveh, (Nahum 3. 4,) and of Samaria, (Ezek. 23. 5.)

CLAUDA, called Cauda in the Vulgate; a small island near the south-west coast of Crete, which St. Paul passed in his tempestuous voyage to Italy. (Acts 27. 16.) It is now called Gozo.

CLAUDIA, a Roman lady converted by St. Paul. (2Tim. 4. 21.) Some are of opinion she was the wife of Prudens, who is named immediately before her; others conjecture that she was a British lady, the sister of Lysias.

I. CLAUDIUS, the fifth emperor, or Cæsar, of Rome, mentioned in the New Testament, succeeded Caius Caligula, A.D. 41, and reigned upwards of thirteen years. He was the son of Nero Drusus, and obtained the imperial dignity principally through the influence of Herod Agrippa. In the fourth year of his reign occurred the famine predicted by Agabus. (Acts 11. 28.) In the first part of his reign he was favourable to the Jews; but in his ninth year, he banished by edict all those who had taken up their residence at Rome. (Acts 18. 2.) He died A.D. 54, of poison administered by his wife Agrippina, who wished to raise her son Nero to the throne.

II. Claudius Lysias was the name of a Roman tribune, who preserved St. Paul from a conspiracy of the Jews. (Acts 23. 23-35; 24. 1-9.)

CLAY is frequently mentioned in the Scriptures, both in reference to making bricks and the art of pottery. The formation of a beautiful vessel from the plain clay is used by the Hebrew prophets as a symbol of creation. Thus Isaiah: "O Lord, thou art our father; we are the clay, and thou our potter; and we all are the work of thy hand." (Isai. 64. 8.) The same image is still more forcibly used by the prophet Jeremiah 18. 1-6. The same illustration is also employed by St. Paul: "Hath not the potter power over the clay, of the same lump to make one vessel unto honour, and another unto dishonour?" (Rom. 9. 21.)

The Egyptians were celebrated for their pottery, in which art they acquired great perfection, and that of the Hebrews must doubtless have been very similar. See POTTERY.

Clay was also used for sealing doors. Norden and Pococke observe, that the inspectors of the granaries in Egypt, after closing the door put their seal upon a handful of clay, with which they cover the lock. This may probably explain the passage in Job 38. 14, in which the earth is represented as assuming a form from the brightness of the rising sun, as rude clay receives a figure from the impression of a seal or signet.

CLEAN, CLEANSE. See PURIFICATION.

CLEAN and UNCLEAN. "The Mosaic ordinances respecting clean and unclean animals established, as has been well observed, not only a political and sacred, but also a physical separation of the Jews from other people, thus making it next to impossible for one to mix with the other in any familiar connexion. Their opposite customs in the article of diet not only precluded a friendly and comfortable intimacy, but generated mutual contempt and abhorrence. The Jews religiously abhorred the society, manners, and institutions of the Gentiles, because they viewed their own abstinence from forbidden meats, as a token of peculiar sanctity; and, of course, regarded other nations who wanted this sanctity, as vile and detestable. They considered themselves as secluded by God himself from the profane world by a peculiar worship, government, law, mode of living, and country."

The regulations concerning clean and unclean animals are chiefly recorded in Leviticus, ch. 11, and Deuteronomy, ch. 14, where the following animals are pronounced unclean, and are consequently interdicted to be used as food.

1. Quadrupeds which do not ruminate or which have cloven feet. 2. Serpents and creeping insects; also certain insects which sometimes fly and sometimes advance upon their feet; but locusts, in all their four stages of existence, are accounted clean. 3. Certain species of birds; but no particular characters are given

for dividing them into classes, as "clean" or "unclean." Judging from those that are specified, as far as the obscure character of the Hebrew names will admit, it will be found that birds of prey generally are rejected, whether they prey on lesser fowls, or on animals, or on fish; while those which eat vegetables are admitted as lawful; so that the same principle is observed in a certain degree, as in distinguishing quadrupeds. 4. Fish without scales, and also those without fins. 5. Animals of any kind which had either died of disease, or had been torn by wild beasts. (Exod. 22. 31.)

The animal substances interdicted to the Hebrews, were, 1. Blood. (Levit. 17. 10; 19. 26; Deut. 12. 16, 23; 15. 23.) 2. The fat covering of the intestines, termed the net or caul. 3. The fat upon the intestines, called the mesentery, &c.. 4. The fat of the kidney. 5. The fat tail or rump of certain sheep. (Exod. 29. 13, 22; Levit. 3. 4-9; 9. 19.) See **FOOD**.

CLEFTS. See **CAVE**; **ROCK**.

CLEMENT. St. Paul in his Epistle to the Philippians (4. 3) names among his fellow labourers, Clement, and it is the opinion of many commentators that this person was the Clement who was one of the early bishops of Rome, and who is noted as the author of an Epistle to the Corinthians, much valued by the primitive church. Neither the date of his appointment to the superintendence of the church, nor the time of his death, can be exactly ascertained; but it is probable that he succeeded two former bishops, Linus and Anacletus (or Cletus), perhaps about the year 91 or 92, and that he died about A.D. 100.

Some disorders having arisen in the church at Corinth, in consequence of opposition offered by certain members of that church to their presbyters or teachers, Clement wrote an epistle to that community, with a view to allay these dissensions. This Epistle to the Corinthians, written probably about the year 96, was addressed in the name of the Church of Rome to that of Corinth; nor does the writer in any part of it speak of himself by name. It was so highly esteemed by the early Christians, that it was publicly read in their religious assemblies, in the same manner as the apostoline epistles. It contains gentle and brotherly exhortations to peace, expressed in a simple style, resembling that of the Apostles in the practical or hortatory parts of their epistles. The writer frequently quotes and refers to the Books of the New Testament, which at the time he wrote were generally known to Christians, although not collected into one volume. The First Epistle of St. Paul to the Corinthians is mentioned by name, quotations are made from other epistles of that Apostle, from the Epistle to the Hebrews, and from the Epistles of St. Peter and St. James, but without name. The epistle displays no assumption of authority on the part of the bishop or Church of Rome; it contains incidentally some remarkable allusions to the true and proper divinity of Our Saviour; but it consists for the most part of exhortations to concord, humility, and other Christian virtues.

There is a fragment of a Second Epistle to the Corinthians attributed to Clement, which, however, is usually regarded as spurious. It is supposed by some writers to have been forged about the middle of the third century. Other writings have been attributed to Clement which are undoubtedly spurious. These are the Recognitions, which may have been written as early as the middle of the second century; an Epistle to James, Our Lord's brother; Clementines (Homilies), and the Apostolical Constitutions and Canons. Riddle's *Christian Antiquities*.

CLEOPAS, Κλεοπας, one of the two disciples to whom Our Lord appeared on the way to Emmaus. (Luke 24. 18.) This Cleopas is stated by some of the ancient Fathers to be the same with Cleopas, or Alpheus, the husband of Mary, the mother of James the Less, (Matt. 27. 26; Mark 3. 18; John 19. 25;) although in the original of the latter passage the name is Clopas, Κλωπας. See **ALPHEUS**.

CLERK, γραμματευς, a *writer*, or *scribe*, rendered in our version, (Acts 19. 35,) "town-clerk." This was a public officer in the cities of Asia Minor, whose duty it seems to have been to preside in the Senate, to enrol and have charge of the laws and decrees, and to read what was to be made known to the people: he was thus a sort of public clerk or secretary. Others suppose, from a coin struck during the triumvirate of Augustus, Anthony, and Lepidus, that this was a sacred officer, who officiated under the presidency of the Asiarchs when the Ephesians solemnized games in honour of Diana. See **SCRIBE**.

CLIFT. See **ROCK**.

CLOAK, מִעַל miel. This word is variously rendered in our version "robe," "mantle," and "cloak." The miel was an upper garment or robe of cotton, which extended below the knees, open at the top, so as to be drawn over the head and having arm-holes. It was worn by the high-priest under the Ephod; (Exod. 28. 31;) also by kings and persons of distinction, (1Sam. 15. 27; Job 1. 20; 2. 12,) and by women, (2Sam. 13. 18.)

So in the New Testament the word *ματιον*, rendered "cloak" in Matthew 5. 40, is in its plural form taken for garments in general in other places. (Matt. 17. 2; 26. 65; Acts 7. 58; 9. 39.) The cloak was the outer garment, different from the "coat," *χιτων*, (Acts 9. 39,) and it seems to have been a large piece of woollen cloth nearly square, which was wrapped round the body, or fastened about the shoulders, and served also to wrap the wearer in at night. It might not be taken by a creditor, (Exod. 22. 26, 27,) though the tunic could, (Matt. 5. 40,) which fact gives peculiar force to the injunction of Our Lord. See **CLOTHES**; **CLOTHING**.

CLOSET, חֻפָּה chuphah. This word, signifying a bridal chamber, is in Psalm 19. 5 rendered by our translators "chamber," and in Joel 2. 16, "closet." The Jews still employ the word *chuphah*, to designate the canopy under which, among them, the marriage ceremony is performed.

The word in the New Testament rendered "closet," is *ταμειον*, signifying any place of privacy and retirement. (Matt. 6. 6; Luke 12. 3.)

CLOTHES; CLOTHING. The dress of the Oriental nations known to the inspired writers, has undergone very little change from the earliest times to the present, either as to materials or fashion. We learn from the Scriptures that their stuffs were fabricated of various materials, but wool was often used in their finer fabrics, and the hair of goats and camels were manufactured for coarser purposes, especially for sack-cloth, which they wore in times of mourning and distress. We read of the manufacture of woollen and linen garments, (Levit. 13. 47; Prov. 31. 13,) also of fine linen and silk dyed with purple, scarlet, and crimson. (2Sam. 1. 24; Prov. 31. 22.) In the more early ages garments of various colours were in great esteem; such was Joseph's robe of which his brethren stripped him, when they resolved to sell him. (Gen. 37. 23.) Robes of various colours were likewise appropriated to the virgin daughters of kings, (2Sam. 13. 18,) who also

wore richly embroidered vests. Solomon, in the 45th Psalm, thus describes the daughter of Pharaoh: "The king's daughter is all glorious within; her clothing is of wrought gold. She shall be brought unto the king in raiment of needle-work."

Their clothes appear to have been made by the women in general, as well as the material, which is still customary in the East, as it was also among the Greeks and Romans. In King Lemuel's description of a virtuous woman, (Prov. 31. 21-24,) we read, "She is not afraid of the snow for her household; for all her household are clothed with scarlet;" or, as in the margin, "with double garments." "She maketh herself coverings of tapestry; her clothing is silk and purple. Her husband is known in the gates, when he sitteth among the elders of the land. She maketh fine linen, and selleth it; and delivereth girdles unto the merchant." These girdles were frequently richly embroidered, and in almost every example of embroidery on the paintings in the Egyptian monuments, we find the mistress of the house either superintending the work, or actually engaged in it.

The prophet Isaiah alludes to the cotton manufacture of Egypt, which has been often confounded with linen, both by ancient and modern writers. The linen and cotton were exported in the shape of yarn. We are told that "Solomon had horses brought out of Egypt, and linen yarn; the king's merchants received the linen yarn at a price." (1 Kings 10. 28.) The linen of Egypt was highly valued in Palestine, for the woman in Proverbs 7. 16 says, "I have decked my bed with coverings of tapestry, with carved works, with fine linen of Egypt." The prophet Ezekiel also declares that the export of the textile fabrics was an important branch of Phœnician commerce; for in his enumeration of the articles of traffic in Tyre, he says, "Fine linen with brodered work from Egypt was that which thou spreadest forth to be thy sail; blue and purple from the isles of Elishah was that which covered thee." (Ezek. 27. 7.)

The Egyptian ladies appear to have delighted in fabrics of thin and light texture, as we see on the monuments that their muslins were extremely fine and delicate. "The glasses," mentioned in our version (Isai. 3. 23), is supposed by Bishop Lowth to refer more properly to those transparent garments, which were worn by women of rank, and also by those who dressed themselves to appear in public, as musicians and dancers. They were subsequently worn both by the Grecian and Roman ladies.

The mummy-cloth forming the bandages with which the body is swathed, affords us an opportunity of ascertaining the nature and quality of the fabrics woven by the Egyptians from the earliest times. These bandages have hitherto been considered as composed of cotton; but linen has been mentioned by many travellers, although no satisfactory evidence had been offered on the subject until the mummy-cloth from Mr. Pettigrew's Greco-Egyptian mummy was examined by Dr. Ure. To this gentleman is due the discovery of their proper texture by the aid of the microscope. Dr. Ure and Mr. Pettigrew made a precise and accurate examination of the nature of the Egyptian cloth, and thus state the result of their researches. "The filaments of cotton are rarely true cylinders, but are more or less flattened and tortuous, so that when viewed under the microscope, they appear, in one part, like a riband, from the one-thousandth to the twelve-hundredth part of an inch broad, and in another, like a sharp edge or narrow line. They have a pearly translucency in the middle space, with a dark narrow border at each side, like a hem. When broken across, the fracture is fibrous or pointed. Mummy-cloth tried by these criteria in the

microscope appears to be composed, both in its warp and woof yarns, of flax, and not of cotton. A great variety of the swathing fillets have been examined with an excellent achromatic microscope, and they have all evinced the absence of cotton filaments. In order to illustrate this subject, Mr. Pettigrew, in his lecture upon the unrolling of a mummy, showed several diagrams: first he exhibited the cotton fibre penetrated with Canada balsam. This highly refractive medium makes the edges of the riband-form filaments appear thicker, and the middle part thinner, than they really are; but it thereby displays more plainly the twisted or tortuous structure of cotton. Another view represented filaments of Smyrna cotton without balsam, viewed in contact with a micromatic glass scale, divided by parallel lines one-thousandth of an inch apart. The taper-like filaments of this cotton are fit only for making candlewicks, being very irregular in form and breadth. Another diagram exhibited the fine sea island Georgian cotton, with its regular corkscrew fibres, one-half the breadth of the Smyrna cotton, and capable of being spun into threads so fine, that one pound of cotton may reach two hundred and ten miles, or from London to Paris in a straight line. Along the middle of the flat filaments of cotton, beautiful veins like embroidery run; and the substance has a pearly lustre in the microscope. The edges have always the appearance of a thickened list. Filaments of flax viewed in air, and also in balsam, were represented. These filaments have a glassy, not a pearly lustre, and they are regular cylinders, like capillary glass tubes. When broken across, the fracture is smooth; where the cross rupture of cotton is ragged. When flax is viewed in balsam, it appears to have a great many irregular transverse lines, a few of which go round the circumference; but most of them are only partial markings. These appearances, then, enable us to distinguish flax from cotton with perfect precision, and to detect a single pearly-riband of cotton among a multitude of flaxen cylinders. Not one filament of cotton has hitherto been detected in any of the mummy-cloths unrolled from the Egyptian mummies."

The various colours of cloths, white, yellow, red, blue, and green, are met with in the highest perfection on the Egyptian monuments, for the art of dyeing had made a great progress, as had that of weaving, among that people, but without intermixture of colours, as it seems that they did not know how to produce a variety of shades by mixing and blending the colours. No one can look at the number and richness of the colours in Rosellini's plates without being compelled to inquire whether their dye stuffs were indigenous or imported. There is reason to believe that the blue was derived from indigo, which neither the monuments nor the historians notice among the productions of Egypt. It was most probably obtained from India, as it is evident that an early intercourse was maintained with that country. In a naval combat on the Red Sea, forming a compartment in one of the pictures supposed to represent the wars of Sesostrius, we find Hindoos, or a nation nearly identical with them, engaged in combat with the Egyptians, and if there was a warlike, the probability is there may have been also a commercial, intercourse between the two nations. It is probable that dye stuffs were obtained from the Tyrians; their scarlet and purple colours were always celebrated, and their trade with Egypt was so extensive that they established a factory at Memphis under the protection of their national goddess Astarte, the Ashtaroth of the Scriptures.

Among the Jews white was esteemed the most appropriate colour for cotton cloth, and purple for the others. On festival days, the rich and powerful robed themselves

in white cotton, which was considered the most splendid dress. It was denominated, in the earlier Hebrew, by the synonymous words שֵׁשׁ *shish*, and בָּד *bad*. It was called by the Egyptians *schensch*, and the Hebrews perhaps adopted the Egyptian name, though with a reference to the Hebrew etymology from the verb שָׁשׁ *shush*, to be white. After the captivity, it was denominated בּוּץ *butz*, the Greek *byssos*. The fullers had discovered the art of communicating a very splendid white to cloth by the aid of alkali, and hence we find, lest their shops should communicate a fetid odour to the atmosphere, where it might be injurious to health, they lived out of the city. (Isai. 7. 3.) Cotton cloth dyed purple was denominated in Hebrew אֲרָמָן *argaman*. (Exod. 25. 26, 27.) The dye was derived from the sea shells, *purpura*, which are plentiful on the Syrian coast, and is to be distinguished from the violet or blue purple תְּכֵלֶת *techeleth*. This latter colour was much esteemed, and was very bright, and is supposed to be nearly the same with the celebrated Tyrian purple with which kings and princes were clothed. (Ezek. 23. 6.)

The scarlet colour, so called, first mentioned in Genesis 38. 28, and occurring frequently afterwards, was very much admired. It was a different colour from the shell-fish purple, and was extracted from the insects or their eggs found on a species of oak; and thence in Hebrew it is called תוֹלַע *tola*, which Gesenius says is the Kermeze worm. The cotton cloth was dipped into this colour twice; hence the application of the Hebrew words תוֹלַעַת שְׁנִי *tolaath shane*, "twice dyed." (Isai. 1. 18; Lam. 4. 5.) Black, or sackcloth, was chiefly used on occasions of mourning, and was the distinguishing colour of the dress of the priests of Baal. See CHEMARIMS.

That the arts of weaving and embroidery were acquired by the Israelites during their bondage in Egypt, is evident from their having become hereditary in certain families; which we learn from the genealogical tables at the beginning of the Chronicles: "The sons of Shelah the son of Judah were, Er the father of Lecah, and Laadah the father of Mareshah, and the families of the house of them that wrought fine linen, of the house of Ashbea." (1Chron. 4. 21.)

Garments woven of various colours were termed רִקְמוֹת *reckmoth*, and in Psalm 45. 14, the Hebrew word occurs in the plural form, which means garments of divers colours*, and combined with צָבַע *tsaba*, means double-woven, or worked on both sides, as in Judges 5. 30.

Surcoats ornamented with needlework formed no small part of the ancient warrior's pride. An allusion is made to this custom in a very striking passage of the triumphal song of Deborah: "The mother of Sisera looked out at a window and cried through the lattice, 'Why is his chariot so long in coming? why tarry the wheels of his chariot?' Her wise ladies answered her, yea, she returned answer to herself, 'Have they not sped? have they not divided the prey? to every man a damsel or two; to Sisera a prey of divers colours of needlework, of divers colours of needlework on both sides, meet for the necks of them that take the spoil.'" (Judges 5. 28-30.) The repetition of the "divers colours" in this passage is a strong proof of the value that was anciently set on this embroidered work, of which we have another proof in the minute directions given for the preparation of the robes to be worn by the high priest. (Exod. 28. 4-8.) See AARON; HIGH PRIEST.

Embroidered garments at the present day are much esteemed in the East; and that such was also the case formerly we have abundant testimony. Moses mentions the preparation of gold in threads to be interwoven with the more precious cloths: "And they did beat the gold

* Rendered in our version, "raiment of needlework."

into thin plates, and cut it into wires, to work it in the blue, and in the purple, and in the scarlet, and in the fine linen, with cunning work." (Exod. 39. 3.) Cloth of golden tissue is also seen on the Egyptian monuments, and specimens of it have been found rolled about the mummies, but it is not easy to determine whether the gold thread was originally interwoven, or subsequently inserted by the embroiderer.

With respect to many of the articles of Jewish dress, their counterpart is still to be found in use among the nations of the East, and for others we may make reference to the dresses of the Egyptians depicted on the monuments which have survived to our times, and which were probably, in many respects, very similar, an opinion which an attentive examination of the Scripture statements will serve to strengthen.

THE TUNIC. The simplest and most ancient of all was the tunic, כְּתֹנֶת *ketoneth*, (Gen. 37. 3,) or inner garment, which was worn next the body. At first it seems to have been a large linen cloth which reached to the knees, but which was afterwards better adapted to the form of the body, and was sometimes furnished with sleeves*. Another under garment, called in Hebrew מֵעֵנָס *mechnasem*, was worn, which in the time of Moses, reached only from the loins to the knees, (Exod. 28. 42,) but in progress of time it was extended down to the ankles. Moses commands the priests to wear under garments of this description when engaged in performing the sacrifices. We find this article of dress common on the monuments. In the British Museum Egyptian Room, Case II, there is a figure of a Pharaoh, who has a collar round the neck, short garment round the loins, and fringed apron. In the Scriptures those who are clothed only with a tunic, are sometimes said to be naked. (Job 24. 7, 10.) Ordinarily the tunic was composed of two pieces of cloth sewn together; hence, those which were woven whole, or without seam in the sides or shoulders, were greatly esteemed. Such was the garment of Our Lord mentioned in John 19. 23, and a similar tunic, according to Josephus, was worn by the high-priest. The scribes among the Egyptians had the tunic fluted and gathered from the loins downwards; and high officers of state wore a long garment with full sleeves, plaited from the loins downwards, formed into an apron in front. The short garment round the loins is termed shenti, which was sometimes belted.

The tunic of the Hebrews, when it was not girded, impeded the person who wore it in walking; it was therefore fastened round the loins, whenever activity was required, by a girdle. (2Kings 4. 29; John 21. 7.) Prophets and the poorer class of people wore leathern girdles; but the girdles of the rich, especially those worn by women of quality, were composed of more precious materials, and were more skilfully wrought. (Prov. 31. 24; Isai. 3. 24; Ezek. 16. 10.) The girdle was bound round the loins, and the Hebrews carried a knife or poniard there, (2Sam. 20. 8;) it also answered the purpose of a pouch to carry money and other things, (1Sam. 25. 13; Matt. 10. 9;) being folded several times about the body, and one end folded back and sewn along the edge. The scribes suspended here their inkhorns, as the prophet Ezekiel mentions (9. 2,) "a person clothed in white linen, with an inkhorn upon his loins," or as in our version, "a writer's inkhorn by his side."

UPPER GARMENTS. Over the tunic was worn a larger vest or upper garment, which was called שָׂרָבִית

* In the Egyptian Room of the British Museum, Case M, there is an Egyptian tunic of linen-cloth, without sleeves, sewn together by the selva, which is blue. The bottom terminates in a kind of fringe; the length is four feet three inches.

shemlah, also *גָּבֵעַ* *beged*. It was a piece of cloth nearly square, like the hykes or blankets worn by the women of Barbary; it was about six yards long, and five or six feet broad. When the weather was serene, it was more conveniently worn over the shoulders than by being wrapped round the body. The two corners which were drawn over the shoulders were called the skirts, or as it is termed in the Hebrew, the wings of the garment. (Haggai 2. 12; Zech. 8. 23.) Frequently this garment was hung over the left shoulder, and was fastened by the two corners under the right cheek. While it answered the purpose of a cloak, it was at the same time so large, that burdens were frequently carried in it. (Exod. 12. 34.) The poor wrapt themselves up entirely in this garment at night, and therefore Moses enacted as a law, what had before existed as a custom, that the upper garment, when given as a pledge, should not be retained over night. (Exod. 22. 25; 26. 27; Deut. 24. 13; Job 22. 6.)

"The clothes which the Orientals wear by day serve them as bed-clothes for the night. Does a man wish to retire to rest he throws a mat on the floor, places his little travelling-bag or turban for a pillow, takes off his cloth, which is generally about nine yards long, puts one end under him, then covers his feet, and folds the rest round his body, leaving the upper end to cover his face. Thus may be seen Coolies in the morning, stretched side by side, having during the night defied all the stings of their foes, the mosquitoes." Roberts.

This garment also serves the Kabyles or Arabs for a complete dress at the present day, and in which they also sleep. It is a loose and troublesome kind of garment, frequently falling to the ground, unless tucked up, and it therefore required to be girded whenever the wearer engaged in any active employment. Roberts says, in India, "when men are about to enter upon any arduous undertaking, they remark to the person, 'Tie your loins well up.'" The outer fold served frequently instead of an apron, wherein they carried herbs, corn, &c., and may illustrate several passages in Scripture, such as gathering the lap full of wild gourds, (2Kings 4. 39,) rendering seven-fold, giving good measure into the bosom. (Psalm 129. 7; Luke 6. 38.) It was these upper garments which the Jewish populace strewed in the road during Our Lord's triumphant progress to Jerusalem. (Matt. 21. 8.) By the Mosaic constitution, given in Numbers 15. 37-40, the Israelites were enjoined to put fringes in their upper garments, that they might "remember all the commandments of the Lord to do them."

The *Miel* we have already described under CLOAK.

The *Ephod* we shall describe more particularly under HIGH PRIEST. See also AARON.

The garments of men among the Jews were sack-cloth and hair-cloth, and the last kind was the usual clothing of the prophets, inasmuch as they were continual penitents by profession; and therefore Zechariah speaks of the rough garments of the false prophets, which they wore in order to deceive the people.

It will be observed, that the articles of dress already described, were in common use both by the Jews and by the only nations with which in early times they had any intercourse—the nations of the East. But during the reign of the Asmonean princes, the Jews became familiar with both the Greeks and the Romans, and among other usages, derived several of their articles of dress from them, as is evident from the New Testament, where most of the garments mentioned are of classical origin.

Of these, we may notice the *χλαμυς* or scarlet robe, which was worn by the Roman soldiers, and with which

Our Saviour was arrayed in mock majesty. (Matt. 27. 28-31.) The *στολή*, termed "long clothing" in our version, was a flowing robe, reaching to the feet, and worn by persons of distinction. (Mark 12. 38; 16. 5; Rev. 6. 11.) The *σινδων* or "linen cloth," was a linen upper garment, worn by the Orientals in summer and by night, instead of the usual cloak, (Mark 14. 51, 52;) it was also used as a covering for dead bodies. (Matt. 27. 59; Mark 15. 46; Luke 23. 53.) The *φαιλονη* or "cloak," (2Tim. 4. 13) was the same as the penula of the Romans, a travelling cloak with a hood to protect the wearer against the weather. The *σουδαριον* or "handkerchief," corresponded to the *καψιδρωπιον* of the Greeks, the *sudarium* of the Romans, from whom the term passed to the Chaldeans and Syrians with greater latitude of signification, and by whom it was used to denote any linen cloth, (John 11. 44; 20. 7; Acts 19. 12,) and corresponded nearly to the *περιζωμα* of the Greeks.

It is evident from the prohibition against changing the dresses of the two sexes, that in the time of Moses there was a difference between the garments worn respectively by the men and the women; although it would not appear to have been very broadly marked, but to have consisted chiefly in the fineness of the materials and in the length of the garments. The arrangement of the hair in the two sexes, was likewise different, and another peculiar mark of distinction was, that the women wore a veil. All females, except maid-servants and those in a very humble condition in life, wore the veil, nor did they ever lay it aside, except in the presence of servants and those relations with whom nuptials were interdicted. (Levit. 18.) When journeying they threw the veil over the hinder part of the head, but if they saw a man approaching, they restored it to its original position. (Gen. 24. 65.) When at home they did not dare to speak to a guest, without being veiled and in the presence of maids. They never entered the guest's chamber, but standing at the door made known to the servants what they wanted. (2Kings 4. 15.)

Like the matrons of the East at the present day, those of antiquity used veils of several kinds and divers names.

Of the first of these, called *רָדֵד* *raded*, (Cantic. 5. 7; Isai. 3. 23,) Professor Jahn thinks that it somewhat resembled the hood of the French countrywomen, covering the top of the head, and extending down behind the back. Gesenius says, it was a wide and fine upper garment, and thrown over their other clothes when they went out.

The second, called *צִמָּה* *tsammah*, (Cantic. 4. 1, 3; 6. 7; Isai. 47. 2,) rendered in our version "locks," covered the breast, neck, and lower part of the face.

The third, called *רֵעֵלָה* *rialah*, (Isai. 3. 19,) termed in our version "mufflers," hung down from the eyes over the face, and probably derived its name from its trembling motion in hanging down.

The fourth kind of veil received different names. That for the summer, called *מִטְפָּחָה* *metpachah*, (Ruth 3. 15,) was the large back veil into which Boaz measured six measures of barley; it covered the body from the top of the head to the sole of the foot. The one worn in winter, was called *מַעֲטָפֶה* *maatapfeh*, (Isai. 3. 22,) rendered in our version "mantle." Of this kind, there was also the *צִנִּיף* *tsaeph*, or "double veil," of which one part hung down in front before the eyes, while another part was thrown back. (Gen. 24. 65; 38. 14.) This is so large, that in many countries the women who wear it dispense with any other.

The phrase *כִּסּוּת עֵינַיִם* *kisuth ainayim*, "covering of

the eyes," (Gen. 20. 16,) is thought by Gesenius to mean a sort of veil, in which opinion Schroeder coincides. The שֵׁבֶסֶם *shebesem*, rendered in our version, (Isai. 3. 18,) "cauls," or as in the margin "net-work," Professor Jahn thinks was a thin gauze-like fabric, which was used as a veil; but Gesenius is of opinion, that it was a kind of spangle worn on the hair, referring the name to an Arabic root, signifying little suns.

To change habits and wash their clothes were ceremonies used by the Jews, in order to dispose them for some holy action which required particular purity. Jacob after his return from Mesopotamia required his household to change their garments, and go with him to sacrifice at Bethel. (Gen. 35. 2,3.) Moses commanded the people to prepare themselves for the reception of the Law, by purifying and washing their clothes. (Exod. 19. 10.) See PURIFICATION.

To rend the clothes, was an action expressive of the highest grief. Reuben, to denote his great sorrow for Joseph, rent his clothes, (Gen. 37. 29,) and Ezra, to express the concern and uneasiness of his mind, and the apprehensions he entertained of the Divine displeasure on account of the unlawful marriages of the people, is said to have rent his garments and his mantle. (Ezra 9. 3.)

A number of sumptuous and magnificent habits was, in ancient times, regarded as an indispensable part of the treasures of a rich man. Thus the patriarch Job, speaking of the riches of the wicked, says, "Though he heap up silver as the dust, and prepare raiment as the clay." (Job 27. 16.) Joseph gave his brethren changes of raiment, but to Benjamin he gave "three hundred pieces of silver, and five changes of raiment." (Gen. 45. 22.) Naaman carried for a present to the prophet Elisha ten changes of raiment. (2Kings 5. 5.) In allusion to this custom, Our Lord, when describing the short duration and perishing nature of earthly treasures, represents them as subject to the depredations of the moth, from which the inhabitants of the East find it exceedingly difficult to preserve their stores of garments: "Lay not up for yourselves treasures on earth, where moth and rust doth corrupt." (Matt. 6. 19.) St. Paul, when appealing to the integrity and fidelity with which he had discharged his sacred office, mentions apparel with other treasures: he says, "I have coveted no man's gold, or silver, or apparel." (Acts 20. 33.) The Apostle James likewise, (as do the Greek and Roman writers, when they particularize the opulence of those times,) specifies gold, silver, and garments as the constituents of riches: "Go to now, ye rich men; weep and howl for your miseries that shall come upon you. Your riches are corrupted, and your garments moth-eaten." (James 5. 1,2.) We find that the custom of hoarding up splendid dresses still exists in Palestine and the East. D'Herbelot mentions a celebrated poet of Cufah who had so many presents made him in the course of his life, apparel usually forming a part of such gifts, that when he died he was found possessed of a hundred complete suits of clothes, two hundred shirts, and five hundred turbans. See APPAREL.

CLOUD, a collection of vapours suspended in the atmosphere. When the Israelites left Egypt, we read, (Exod. 13. 21,) "the Lord went before them by day in a pillar of a cloud, to lead them the way; and by night in a pillar of fire, to give them light; to go by day and night." We shall not enter upon a discussion of the various hypotheses that have been offered by German and other writers as to the עמוד ענן *ammood anan*, the Pillar of Cloud, and the עמוד אש *ammood ish*, the Pillar of Fire, which are all unsatisfactory. It is sufficient for

us to take the representation of the inspired writer in its plain and obvious meaning, which is, that the Israelites were led through the desert in a miraculous manner: "The angel of God which went before the camp of Israel, removed and went behind them; and the pillar of the cloud went from before their face, and stood behind them." (Exod. 14. 19.) Here we may observe that the angel and the cloud made the same motion. The cloud, by its motion, gave the signal to the Israelites to encamp or to march forward. Wherever, therefore, it rested, the people remained till it rose again; then they broke up their camp, and continued following it till it stopped.

In the Scriptures, a cloud is, in general, the symbol of protection, because it preserves from the scorching heat of the sun, and because it likewise distils rain, or imparts a cool and benign influence. Clouds are frequently represented as symbols of the power of God, thus Psalm 68. 34, "His strength is in the clouds." (Psalm 104. 3; Nehem. 1. 3.) They are also more especially the symbols of multitudes and armies, as in Jeremiah 4. 13; Isaiah 60. 8; Hebrews 12. 1. St. Peter compares false teachers to clouds carried about with a tempest. (2Pet. 2. 17.) Solomon compares the infirmities of old age which arise successively one after another, to "clouds returning after rain." (Eccles. 12. 2.) The favour of a king is compared to "a cloud of the latter rain," refreshing and fertilizing the earth. (Prov. 16. 15.) The sudden disappearance of threatening clouds from the sky is employed by Isaiah as a figure for the blotting out of transgressions. (44. 22.) "Clouds and darkness" appear to be put as representing the mysterious nature of the Divine operations in the government of the world. (Psalm 97. 2.) A day of clouds is taken for a season of calamity, in Ezekiel 30. 3; 34. 12. The majesty of Christ's appearance is described by saying, "Behold he cometh with clouds." (Revel. 1. 7.) To come in the clouds, or with the clouds of heaven, was among the Jews a known symbol of Divine power and majesty; and Grotius observes that a similar notion obtained among the heathen, who represented their deities appearing covered with a cloud.

CLUSTER. See ESHCOL; GRAPE.

CNIDUS, a city standing on a promontory of the same name in the province of Caria, more properly called Doris, in Asia Minor, mentioned in the account of St. Paul's voyage to Rome. (Acts 27. 7.) It was noted for the worship of Venus, and especially for the celebrated statue of that goddess executed by Praxiteles. It was the birth-place of Ctesias the historian, but is now a heap of ruins.

COAT. See CLOTHES, CLOTHING.

COCK, COCK-CROWING. The cock is a domestic fowl, well known in our own country. The word occurs in the New Testament in reference to a division of time termed "cock-crowing," (αλεκτοροφωνία) which in the New Testament is to be understood of the third watch in the night, about equidistant from midnight and dawn. (Matt. 26. 34; Mark 13. 35.) This watch was termed by the Romans gallicinium, and it has been supposed that Jerusalem being a military station of the Romans, the custom of that nation concerning the placing and relieving of the guard was in force there. The night was divided into four watches of three hours each, that is, from six in the evening to nine, from nine to twelve, from twelve to three, and from three to six. These watches, or guards, were declared by the sound of

a trumpet; and whenever one guard relieved another, it was always done by the military signal. The whole four watches were closed by the blowing of a shrill horn. Drakenborch says, the last trumpet, which blew at three in the morning, was sounded three times to imitate the crowing of a cock. The two last watches were both of them called cock-crowings, because cocks usually crowed in that space of time; hence the opinion that Our Lord did not refer to the crowing of a cock, but to the sounding of a shrill horn. This is supposed to agree with the declaration of the Rabbins, that cocks were not permitted to be kept in Jerusalem on account of the holiness of the place, and lest their habit of turning over dung-hills, where they might find creeping things, should expose to pollution the holy food, the peace-offerings and thank-offerings which were eaten in that city.

Lightfoot says, "It is not disputed that such a regulation existed; but it was on some account or other dispensed with;" for cocks were actually kept at Jerusalem, as in other places, and to strengthen this opinion, he instances the story in the Jerusalem Talmud, of a cock which was stoned by the sentence of the council for having killed a little child.

Roberts says, "In India it is very common for the people to regulate their time in the night by the crowing of the cock. They attach a high value to those birds which crow with the greatest regularity; and some of them keep the time with astonishing precision." See DAY; HOURS.

COCKATRICE, צִפְּהָ *tzepha*, and צִפְּפוֹנִי *tziphoni*, (Prov. 23. 32; Isai. 11. 8; 14. 29; 59. 5.) These words, rendered by our version in the first place "adder," in the others "cockatrice" or "cockatrices," doubtless refer to some creature of the serpent kind, and more probably to the naja or cobra di capello than any other. The Greek version of Aquila gives the basilisk, which is also the opinion of Bochart, but Gesenius thinks the cerastes, or horned viper, to be the one intended.

The basilisk is the name, in modern days, of a small and harmless lizard; but among the ancients, it denotes a fabulous animal of monstrous production. They considered it as the king of the serpent race, whence its name, and gravely asserted that all other species of serpents acknowledged the superiority of the basilisk by flying from its presence. It was also supposed to live longer than any other serpent; they therefore pronounced it to be immortal, and placed it in the number of their deities; and because they attributed to it the power of killing with its breath the strongest animals, it seemed to them invested with the power of life and death. It became, therefore, the favourite symbol of kings, as we find in Egypt that a serpent was significant of a powerful monarch, and in accordance with this notion, was embroidered on their robes. That it was the cobra di capello that was thus deified, we have abundant evidence on the monuments, and in the Egyptian Room of the British Museum may be seen a small figure of this species of serpent in light blue porcelain found at Thebes.

Of all serpents the cobra di capello inflicts the most deadly and incurable wounds; there are several kinds, but they are all equally dangerous, and their bite is followed by certain and speedy death. It is from three to eight feet long, with two long fangs hanging out of the upper jaw. It has a broad neck, and a mark of dark brown on the forehead, which, when viewed in front, looks like a pair of spectacles, but behind the head is like that of a cat. The eyes are fierce, and full of fire, the head small and covered with large scales of a yellowish ash colour, the large tumour on the neck is flat, and covered with oblong smooth scales.

Roberts remarks on Isaiah 59. 5, "They hatch cockatrice eggs," "So far as the strength of the poison is concerned, I believe there is scarcely any difference betwixt the oviparous and viviparous serpents. The eggs of the former are generally deposited in heaps of stones, in old walls, or holes in dry places; and under some circumstances, are soft and yielding to the touch. The pliability of the shell may be the result of being newly laid, as I have seen some shells as hard as those of other eggs. It is said of the plans of a decidedly wicked and talented man, 'That wretch! he hatches serpents' eggs.'" See SERPENT.

COCKLE, בִּיאָה *baashah*, (Job 31. 40); the plural form occurs also in Isaiah 5. 2,4. In the former passage our version renders the word "cockle," in the latter "wild grapes." Ancient and modern authorities differ considerably as to what is intended. The Septuagint renders it *βῆρος*, "the blackberry bush;" the Chaldee, "noxious herbs;" Bishop Stock and Dr. Mason Good, "the nightshade." The most probable explanation seems that of Gesenius, who says it is the *Aconitum napellus*, or wolf's bane, or monk's hood, a well-known poisonous plant, of tall growth, bearing berries in the form of grapes.

COELE-SYRIA, a term which means hollow or depressed Syria, or properly speaking, Syria in the Vale. (1Macc. 13. 10.) This name, therefore, imports the hollow land or region situated between two long ridges of mountains, being Libanus and Anti-Libanus, forming the great valley of Baalbec. These ridges run parallel for many leagues, and contain between them an extensive and extremely fruitful valley. See SYRIA.

COFFER, אֲרָגָז *argaz*. This word occurs only in the sixth chapter of the First Book of Samuel, (8,11,15,) in reference to the removal of the Ark of the Lord to Bethshemesh. Gesenius supposes it to have been a sort of chest, which was placed at the side of the wagon, and derives the name from the Hebrew root *ragaz*, to shake or swing, a nearly similar word being still used in Arabic, signifying a sack with stones hung at the side of a camel to keep the equilibrium.

COFFIN, אֲרוֹן *aron*, a mummy chest or coffin, (Gen. 50. 26;) the same word being also employed for the Ark in the Tabernacle, wherein the tables of the Law were preserved. We can have no doubt that the body of Joseph was placed in a mummy chest, after the process of embalming had taken place, very similar in most respects to those deposited in our Museums. We shall therefore describe some of the peculiar characteristics of these coffins, which were chiefly prepared for persons of wealth or distinction, the poorer classes being compelled to dispense with them.

In reference to the etymology of this word, which Gesenius thinks comes from אָרָה *arah*, "to pluck off," "to gather," we may adduce an example of what the Hebrews, as well as the Egyptians practised, the hieroglyphical application of one object to express a different idea, or an object having a similar initial syllable. On the mummy cases, and in many of the papyri, we find the representation of a dead body or mummy lying upon a couch or bier, shaped like a lion, with the limbs of that animal for its legs, which we may infer has some relation to the preparation of the body for interment. One of the names of the lion in Hebrew, is אֲרִיָּה *ariah*. We have here, then, one object placed for another, denoting a different idea, whose initial syllable must be אָרָה *ar*; to which kind of paranomasia we have already

alluded. (See ALMOND-TREE.) The sacred writer informs us that the bodies of Jacob and Joseph were embalmed in Egypt, and that Joseph was put in an ארון *aron*, a word derived from the same root as אריה *ariah*, and having the same initial syllable; consequently, the placing the body upon the lion couch by the embalmer

Egyptian Coffin and Mummy, in the British Museum.

is a typical representation of the depositing the body in the coffin. It may also have some symbolic reference to אור *Oir*, the sun, and this conjecture gains strength when we find that the lion is the emblem of Pthah or Horus, the giver of life; another type of which deity was the beetle, emblematical of the sun, and significant of a burying in the earth and reappearance after a time, a proof of the popular belief of the Egyptians, that after having passed a portion of time in the grave they should again appear on the earth. There are porcelain figures in the British Museum of lions couchant, emblems of Horus and Pthah, and also the anterior parts of two lions, supporting between them the disk of the sun, which was supposed to be the abode of the soul, as may be seen from the line of hieroglyphics copied in the article CAKE.

The cases in which the mummies are enclosed are of various kinds, as has been described under CARPENTER. The colours of the paintings on these cases are sometimes extremely vivid; the green is the only colour that appears to have faded, and it is sometimes confounded with the blue; the blue is metallic; the yellow, vegetable; the nature of the white has not yet been discovered; the red is very brilliant. The drawings on these cases are in profile, the Egyptians being ignorant of perspective; their reliefs are, notwithstanding, full of vigour, life, and expression.

An opinion formerly prevailed, that the subject of the representation on the cases, is a history of the life of the person embalmed within, but this is evidently a mistake. They are very similar in most instances, usually commencing with the same symbols, and have been considered as a collection of images offered by the deceased to Osiris; the deceased sometimes taking to himself the name of the god. Mr. Pettigrew thinks there can be no doubt that an attentive examination of the subjects and characters will satisfactorily convince any one, that the subject bears relation to the trial which the soul was to undergo, and the deities through whose intervention, or by whose intercession, it was to pass through the different stages of its progress towards another scene of

existence. If a proof were required to show that these inscriptions in general followed a particular formula, it would be afforded by an example Mr. Pettigrew had an opportunity of seeing in the collection of Mr. James Burton, where a blank was left for the insertion of the name of the deceased, the other parts being complete.

Some mummies are without any painted case, but placed in a sarcophagus, generally of sycamore-wood, formed out of the trunk of a tree, the inside of which is scooped out to receive the body, and the surface covered with pitch. Sometimes the painted cartonage is placed in a coffin of cedar, or sycamore, or deal wood; also of the wood of the *Cordia myxa* of Linnæus, the *Cordia sebestena* of Forskal, or of the *Sebestena domestica* of Prosper Alpinus, which are all three of great hardness. These cases are generally marked with the name of the deceased, and the ordinary inscription. The human face carved upon these cases, or formed of composition, (with portions of bronze for the eyebrows and eyelids,) is often of very excellent workmanship. This exterior coffin very often contains not only the cartonage, but also a wooden one painted, and gives representations of many of the deities belonging to the Egyptian mythology, and is sometimes itself enclosed within a sarcophagus.

COHORT, a military term used by the Romans, to denote a company, generally composed of six hundred foot soldiers; a legion consisted of ten cohorts, every cohort being composed of three maniples, and every manipule of two hundred; a legion consequently contained in all, six thousand men. Others allow but five hundred men to a cohort, which would make five thousand in a legion; but it is probable, that cohorts among the Romans, as companies among the moderns, often varied as to their number. Besides the regular legionary cohorts, there were certain others separate and distinct from any legion, as the Cohortes Urbane, and Pretoriæ. Such appears to have been the "Italian band," mentioned in Acts 10. 1, which was in attendance on the Roman governor, who at that time was residing at Cesarea. Of the same description also was the "Augustan band or cohort," σπειρα Σεβαστε, (Acts 26. 1,) which most probably derived its name from Sebaste, the capital of Samaria. The commanding officer of an ordinary cohort was called Tribunus Cohortis, if it was composed of Roman citizens; or Præfectus Cohortis, if composed of auxiliary troops.

COIN. Although the Scriptures frequently mention gold, silver, brass, certain sums of money, and purchases made with money, yet the use of coin or stamped money is not very clear, although it is undoubtedly of high antiquity. The primitive race of men being shepherds, and their wealth consisting in their cattle, for greater convenience, metals were substituted for the commodity itself, and it was natural enough for the representative sign to bear impressed the object which it represented; thus, accordingly, the earliest coins were stamped with the figure of an ox or a sheep. The word קשטלה *kesetlah*, translated in our version "money," is by the Septuagint rendered "sheep" or "lambs;" and according to Rabbi Akiba it was in Africa still the name of a certain coin, in his time (A.D. 130) stamped with the figure of this animal. No money has yet been found in mummies, or in any of the tombs of Egypt. Their commerce was probably partly conducted by exchange, but it is also evident from the monuments, that they settled the price of commodities by weight; for Captains Irby and Mangles inform us, that at El Cab in Egypt, on a piece of sculpture, there was represented a pair of scales; at one end was a man writing an account, while

another was weighing some small articles, probably leaves of bread. The weight was in the form of a cow couchant. Other instances have been found of a similar figure being employed as a weight. The greater commercial transactions and payments of tribute, appear to have been made in rings of pure gold, of a certain weight and size, or in rings of silver, having a name and weight equally fixed.

It is very probable that coins originally served both as weights and as money. The Attic *mina*, and the Roman *libra*, equally signify a pound, and the *stater* of the Greeks, known to be so called from weighing, strongly confirms the opinion that coins served this double purpose. The Jewish shekel was also a weight as well as a coin; the word being derived from שָׁקַל *shakal*, "to weigh." This seems to be the oldest coin of which we anywhere read, (Gen. 23. 16,) and exhibits direct evidence against those who date the first coinage of money so late as the time of Cræsus or Darius. A modern traveller states that, in considerable payments in Syria, an agent of exchange is sent for, who counts paras by thousands, rejects pieces of false money, and weighs all the sequins, either separately or together. This may serve to illustrate the phrase in the passage above cited, "current money with the merchant."

The practice of weighing money is still general in Syria, Egypt, and Turkey; no piece, however effaced, is there refused. The merchant draws out his scales and weighs it, as in the days of Abraham. (Gen. 23. 16.)

Herodotus tells us, that the Lydians were the first people who coined gold and silver for their use; Servius Tullius made copper money about the year B.C. 560, and impressed upon it the figure of a sheep, *pecus*, whence it obtained the name *pecunia*. According to Aristotle, silver was coined at Athens B.C. 512, and at Rome, as Pliny states, five years before the first Punic war, or B.C. 269. Some authorities suppose Phidon, king of Argos, to have invented weights and measures, and silver coinage, B.C. 895.

During the captivity, and after their return from it, the Jews made use of the weights and coins of other nations. Ezekiel, accordingly, mentions foreign manahs of different weight, of fifteen, twenty, and twenty-five shekels. (45. 12.) The coin which the Jews used at this period was the Persian, Grecian, and Roman, and it was not until the time of the Maccabæan princes, that they had a mint of their own, and coined gold and silver for themselves. The Jewish prince Simon struck off a currency under the denomination of shekels, (1 Macc. 15. 16,) which weighed a stater each, or, as it has been estimated, 268 grains; this shekel was of silver, and its value in English money was two shillings, three pence, three farthings; when it was coined in gold, its value was one pound, sixteen shillings, six-pence. Of those shekels which remain to our times, such only are considered genuine which have inscriptions upon them in the Samaritan character, and some that have such inscriptions may have been struck off at a comparatively recent period, in imitation of those that were really ancient. The inscriptions on them are various, as the accompanying specimens will show.

A Hebrew Samaritan Brass Coin, in the Museo-Borgian Museum.

On one side of the preceding, is the figure of a balsam-tree, and an inscription partly obliterated; the letter *W schin*, on one side of the tree, denotes the year. On the other side is the figure of a vine-leaf, with the inscription *לחרות ישראל* for *Lecharoth Yesrael*, "The Deliverance of Israel." The characters are Samaritan.

The next coin is one of Jonathan Maccabæus, with the inscriptions, in Samaritan on one side, and in Greek on the other, "Jonathan King."

The following coin has on one side, in Samaritan, the name of Simon, and some emblems, upon which it is very difficult to pronounce, and on the other, "The Deliverance of Jerusalem," with the palm-tree and two vases.

There are other coins, bearing on one side the inscription, in Samaritan, "Simon," on the other, "Deliverance of Jerusalem," which are supposed to have been

struck by Simon Barcochab, not by Simon Maccabæus. There are marks on these coins of their having been struck twice, once by the Roman authorities, and again

by the Jews; there are also examples of Greek and Roman coins of these double types applied one upon the other.

A leaf and vase appear to be the general symbols of the coins struck in Judæa during the dominion of the high priests, and the coins themselves are for the most part indifferently executed. Those of Alexander Jannæus are all of bronze, as are also the coins of Antigonus; these last bear the symbol of a cornucopia, the type invariably found upon the coins of this prince.

From the inscriptions on the above coins, it is supposed that Antigonus wished to declare that it was in the capacity of descendant of Mattathias that he was high priest.

The coins of the Judæan kings, from Herod the First, are all of bronze, with the exception of a silver one assigned

to Herod the Third, which is supposed to be unique. Of Agrippa the Second, there are many coins, struck after the destruction of Jerusalem, which present on their reverses portraits of the reigning emperors. The dates on these coins denote the year of the prince's reign.

The coins in use among the Jews at the time of Our Saviour, were the shekel and daric of gold; the shekel, stater, bekah, didrachma, denarius, and drachma, of silver; the as, gerah, quadrans, and lepton, of brass or bronze.

A shekel of gold, as we have before stated, was of the value of one pound, sixteen shillings, six-pence, and a talent of gold consisted of three thousand shekels. The daric was a Persian coin, variously estimated as to value. See ADARCONIM.

The shekel of silver, or "silverling," (Isai. 7. 23,) originally weighed three hundred and twenty barleycorns, but it was afterwards increased to three hundred and eighty-four barleycorns; it being considered equal to four Roman denarii, its value was two shillings and seven pence, or, according to Bishop Cumberland, two shillings and four-pence farthing. It is said to have had Aaron's rod on the one side, and the pot of manna on the other. The bekah was equal to half a shekel. (Gen. 24. 22; Exod. 38. 26.) The gerah (Exod. 30. 13) was the twentieth part of the shekel. The stater, or "piece of money," which Peter found in the mouth of the fish, was equal to two half shekels, and its value was about two shillings and seven-pence English. The drachma was equal to a Roman denarius, or seven-pence three-farthings of our money, and the didrachma, or "tribute-money," (Matt. 17. 24,) was equal to fifteen pence half-penny. It is said to have been stamped with a lyre on one side and a vine on the other, as on the coin of Simon Barcochab before given.

The Roman *as*, *ασσαριον*, termed "farthing" in Matthew 10. 29; Luke 12. 6, weighed nine pennyweights and three grains; its value was three farthings and one-tenth English. It anciently exhibited on one side a figure of Janus, but latterly the head of Cæsar; the representation on the reverse was the stern of a ship. The fourth part of an *as* was called quadrans, *κοδραντης*. The Greek coin called *λεπτον* was of very small value, being the fourth part of a quadrans; it is termed the "uttermost farthing," and a "mite," in Matthew 5. 26 and Mark 12. 42; it was worth about the twenty-sixth part of a penny sterling.

Professor Hug derives a very satisfactory argument for the veracity of the Gospels from the different kinds of money mentioned in them:—"The admixture of foreign manners and constitutions proceeded through numberless circumstances of life. Take, for example, the circulation of coin; at one time it is Greek coin; at another, Roman; at another time, ancient Jewish. But how accurately is even this stated according to history and the arrangement of things. The ancient imposts, which were introduced before the Roman dominion, were valued according to the Greek coinage; for example, the taxes of the temple, the didrachmon. (Matt. 17. 24; Luke 21. 2.) A payment which proceeded from the temple treasury was made according to the ancient national payment by weight, (Matt. 26. 15,) but in common business, trade, wages, sale, &c., the assis, and denarius, and other Roman coin, were usual. (Matt. 10. 29; 20. 10, 13; Mark 14. 5; Luke 12. 6; John 12. 5.) The more modern state taxes are likewise paid in the coin of the nation which exercises at the time the greatest authority. (Matt. 22. 19; Mark 12. 15; Luke 20. 24.) Writers who, in each little circumstance, which otherwise would pass by unnoticed, so accurately describe the period of time, must certainly have had a personal knowledge of it."

COLD. Although from its geographical position Palestine has generally a warm climate, this is greatly modified by local circumstances. In the plain of Jericho, the winter is more genial than the spring of northern countries, while around Jerusalem it is often much more inclement than might be expected, and quite enough so to justify the language of Our Lord, who directs his disciples to pray that "their flight be not in the winter." (Matt. 24. 20.) Jerusalem stands in a mountainous country, and in general the cold is only felt in similar situations; but most furious storms of hail are experienced all over the land in the winter season, the hailstones being very large, and sometimes fatal to large animals, and even to man. Such was the storm of hail that discomfited the Amorites, (Josh. 10. 10;) and such also the "very grievous hail" that destroyed the cattle of the Egyptians. (Exod. 9. 18, 23, 24.) A similar hailstorm fell upon the British fleet in Marmorice Bay, in Asiatic Turkey, in the year 1801, which illustrates the expression of the Psalmist, "He casteth forth his icelike morsels; who can stand before his cold?" (Psalm 147. 17.) Sir Robert Wilson says, "On the 8th of February commenced the most violent thunder and hailstorm ever remembered, and which continued two days and nights intermittingly. The hail, or rather the ice stones, were as big as large walnuts. The camps were deluged with a torrent of them two feet deep, which, pouring from the mountains, swept everything before it. The scene of confusion on shore by the horses breaking loose, and the men being unable to face the storm, or remain still in the freezing deluge, surpasses description. It is not in the power of language to convey an adequate idea of such a tempest."

We read in Jeremiah 36. 22, that "the king (Jehoiakim) sat in the winter house in the ninth month: and there was a fire on the hearth burning before him," into which he threw the roll: and we learn from the Rabbins that the winter season, by them termed *חור* *kor*, comprised the latter half of Sebat, the whole of Adar, and the former half of Nisan, or from the beginning of February to the beginning of April. See PALESTINE.

COLLEGE, *מִשְׁנָה* *mishnah*. This word is rendered "college" in our version, in 2Kings 22. 14, and 2Chron. 34. 22; but in the margin "the second part," or "the school." Its primary meaning appears to refer to the residence of the subordinate priests, to which it is supposed schools were attached. The term *Mishnah*, in the sense of "second part," or repetition, was applied at a later period to a part of the Talmud, it being the text of that work, and the Gemara, the gloss, or commentary upon it. See TALMUD.

COLONY. This word occurs only in Acts 16. 12, and does not imply that any considerable body of citizens from Rome had left their native city, and had founded a new town where there had been none, as the colonies in America were founded. No doubt a settlement of Romans might give rise to Roman colonies; and many bodies of their troops, after they were dismissed from military service, received lands in distant provinces upon which they settled, but most of the "colonies" mentioned by classical authors were of a different description. Many cities were by a decree of the senate, formally declared colonies, by which their inhabitants became entitled to the privileges of Roman citizens, and were considered as being in a manner Roman, in reward for services which they had rendered to the government of Rome, or to the emperors. Such, no doubt, was the case with Philippi.

Colosse.

COLOSSE, a city of Phrygia, in Asia Minor, situated near the conflux of the Lycus and the Mæander, was nearly equidistant from Laodicea and Hierapolis. According to Eusebius, all these cities were destroyed by an earthquake in the tenth year of the Emperor Nero, about a year after the writing of St. Paul's Epistle to the Colossians. Herodotus informs us that it was "a great city of Phrygia, standing where the river Lycus running underground disappears; but rising up again above ground, at the distance of about five stadia or furlongs, empties itself into the river Mæander;" from which it would appear that the ancient city of Colosse is represented by the modern village of Khonas, and we learn also from the Greek historian and emperor Constantine Porphyrogenetus, that in his time, the tenth century, Colosse was called *Xonas*. A few ruins are all that now remain of the ancient city. Mr. Arundell describes the village as being situated "most picturesquely under the immense range of Mount Cadmus, which rises to a very lofty and perpendicular height behind the village, and which is, in some parts, clothed with pines, and in others bare of soil, with vast chasms and caverns. The immense perpendicular chasm seen in the view, affords an outlet to a wide mountain torrent, the bed of which is dry in summer. The approach to Khonas, as well as the village itself, is beautiful, abounding in tall trees, from which vines of most luxuriant growth are suspended. In the immediate neighbourhood of the village are several vestiges of an ancient city, consisting of arches, vaults, squared stones, while the ground is strewn with broken pottery, which so generally and so remarkably indicates the site of ancient towns in the East. These ruins, together with the apostolical epistle sent by St. Paul to the church, are now the only memorials of this once noted town."

It has been alleged by some commentators that St. Paul never was at Colosse, and that consequently he was personally unacquainted with the Christian church there. This opinion is founded on what the Apostle says in the first verse of the second chapter:—"For I would that ye knew what great conflict I have for you, and for them at Laodicea, and for as many as have not seen my face in the flesh." On the other hand Dr. Lardner, arguing from the testimony of Theodoret, who lived in the fifth century, alleges a variety of reasons to prove that the

church of Colosse was planted by St. Paul himself, and that the Christians there were his own converts, which view is also taken by Bishop Tomline, Boehmer, and others; but the question admits of no positive solution.

COLOSSIANS, EPISTLE TO THE. By whom or at what particular time Christianity was first planted at Colosse, we have no certain information; but it must have been prior to A.D. 62, the date usually assigned to this epistle.

The immediate occasion of writing this epistle was partly from some difficulties that had arisen among the Colossians, in consequence of which they sent Epaphras to Rome, to acquaint the Apostle with the state of their affairs; and partly the letter (Col. 4. 16,) sent to him by the Laodiceans, who seem to have written to him concerning the errors of the false teachers, and to have asked his advice. St. Paul therefore replies in the present epistle, which he sent to the Colossians as being the larger church, and also because the false teachers had probably caused greater disturbances among the Colossians; but desired that they would send the same epistle to the Laodiceans, and ask them for a copy of their letter to St. Paul, in order that they might the better understand his answer.

Who the false teachers were is a point not satisfactorily determined. Michaëlis is of opinion that this epistle was directed against the tenets and practices of the Essenes, of which sect we shall more particularly speak in another place. But it is more probable that they were partly superstitious judaizing teachers, who diligently inculcated not only the Mosaic law, but also the absurd notions of the Rabbins, and partial converts from Gentilism, who blended Platonic notions with the doctrines of the Gospel. It is well known that the Platonists entertained singular ideas concerning demons, whom they represented as carrying men's prayers to God, from whom they brought back the blessings supplicated; and the doctrines of the Jews concerning angels were nearly the same as that of the Platonists concerning demons. It appears from Colossians 2. 16, 23, that the false teachers inculcated the worship of angels, abstinence from animal food, the observance of the Jewish festivals, new moons and sabbaths, the mortification of the body by long-continued fastings, and, in short, the

observance of the Mosaic ritual law, as absolutely necessary to salvation.

"Whoever," says Michaëlis, "would understand the Epistles to the Ephesians and Colossians, must read them together. The one is, in most places, a commentary on the other; the meaning of single passages in one epistle, which, if considered alone, might be variously interpreted, being determined by the parallel passages in the other epistle. Yet though there is a great similarity, the Epistle to the Colossians contains many things which are not to be found in that of the Ephesians; especially in regard to the worship of angels, and many single points, which appear to be Essene, and might prevail at Colosse."

COLUMN. See PILLAR.

COMING OF CHRIST. This phrase is employed both literally and metaphorically. Literally it is used in reference to Our Lord's first appearance in the flesh, (1John 5. 20; 2John 7;) or to his future appearance at the last day to fulfil his promises, to raise the dead, and judge the world in righteousness. (Acts 1. 11; 3. 20, 21; 1Thess. 4. 15; 2Tim. 4. 1; Heb. 9. 28.)

Metaphorically, Christ is said to come when his Gospel is introduced or preached in any place by his ministers, (John 15. 22; Ephes. 2. 17;) when his church or kingdom is visibly or powerfully established in the world, (Matt. 16. 28;) when He bestows upon believers the influence of his Spirit, and the peculiar tokens of his love, (John 14. 18, 23, 28;) when He executes his judgments on wicked communities who reject or corrupt his Gospel, (2Thess. 2. 8;) and when his providence calls us away from the world by death, as preparatory to the judgment of the last day. (Matt. 24. 42.)

The basis of this metaphorical usage in regard to the coming of Christ, is the same as in relation to the coming of God; that as He governs the world, every specific act of his providence and authority indicates his presence in a more striking manner to human conception; on the principle that no agent can act where He is not.

COMFORTER, *παράκλητος*, signifies literally an advocate, intercessor, one who pleads the cause of any one before a judge. (1John 2. 1.) It is one of the titles by which the Holy Spirit is designated in the New Testament. (John 14. 16, 26; 15. 26.) The name has doubtless a reference to his peculiar office in the economy of redemption, that of imparting consolation to the hearts of believers. The word has also been rendered "advocate," (1John 2. 1,) as striving and pleading with the unconverted world, and especially as convincing of sin. (John 16. 8, 11.) See HOLY GHOST.

COMMANDMENTS. See LAW.

COMMERCE. From the frequent mention made of public roads, fords, bridges, and beasts of burden, also of ships, and of weights, measures, and coin, in the oldest books of the Bible, we learn the great antiquity of the commercial intercourse of distant nations, and the notice of the caravan of Ishmaelites to whom Joseph was sold by his brethren, (Gen. ch. 37,) shows that the mode of trading most common at this day in the East, is also the most ancient. The Ishmaelites appear to have been crossing Palestine on their return from Gilead, with their camels laden with spices, and other rich articles of merchandize which they were carrying into Egypt; where doubtless they produced a great return, from the quantity consumed in that country for the purpose of embalming. There were two principal

routes from Palestine to Egypt; one along the coast of the Mediterranean Sea, from Gaza to Pelusium, which was about three days' journey; and the other from Gaza to the Elanitic branch of the Arabian gulf, which passed near Mount Sinai, and occupied nearly a month.

The inhabitants of Arabia Felix seem to have carried on a commerce by sea with India, as probably did the Egyptians, but the Phœnicians were the most celebrated traders of antiquity. They purchased the choicest productions of the East, which they carried to Africa and Europe, whence they took in return silver, and other articles of merchandize, which they again circulated in the East. The first metropolis of the Phœnicians was Sidon, and afterwards Tyre; and wherever they went they appear to have established commercial settlements, the most distinguished of which were Carthage and Tarshish. The commerce of Tyre is particularly described by the prophets Isaiah (ch. 23,) and Ezekiel (ch. 27 and 28).

Although the land of Canaan was, from its abundant produce, admirably adapted to the purposes of commerce, yet the laws of Moses give no encouragement to such pursuits, because the Hebrews being specially set apart for the preservation of true religion, could not be dispersed among idolatrous nations without danger of becoming contaminated with their abominable worship. He, therefore, only inculcated the strictest justice in weights and measures, (Levit. 19. 36, 37; Deut. 25. 13, 14;) and left the rest to future ages and governors. By the establishment, however, of the three great festivals, he gave occasion for some commercial intercourse, which the individuals of the twelve tribes would carry on with each other, either for money or produce. From Judges 5. 17, it should seem that the tribes of Dan and Asher had some commercial dealings with the neighbouring maritime nations; but the earliest direct notice contained in the Scriptures of the commerce of the Hebrews, occurs in the reign of David, who subdued the kingdom of Edom, (which he reduced to a province,) and made himself master of the two ports of Elath and Ezion-geber on the Red Sea. Part of the wealth acquired by his conquests, he employed in purchasing cedar timber from Hiram, king of Tyre; and he likewise hired Tyrian masons and carpenters for carrying on his works. This prince collected for the building of the Temple a very large sum of money, though Dr. Arbuthnot is unquestionably in error in estimating it at eight hundred millions sterling. On the death of David, his successor Solomon, cultivated the arts of peace, and was thereby enabled to indulge his taste for magnificence and luxury. He employed the vast wealth amassed by his father in works of architecture, and in strengthening and beautifying his kingdom. Finding his own subjects but ill qualified for such undertakings, he applied to Hiram, the second king of Tyre, the son of his father's friend Hiram, who furnished him with cedar and fir (or cypress) timber, and large stones properly cut and prepared for building. Hiram also sent a great number of workmen to assist and instruct the Jews, none of whom had "skill to hew timber like unto the Sidonians," (1Kings 5. 5, 6,) as the Israelites then called the Tyrians, from their having been originally a colony from Sidon. Solomon, in return, furnished the Tyrians with corn, wine, and oil. (1Kings 5. 9-11; 2Chron. 2. 10.) The intercourse which Solomon carried on with the first commercial people in the Western world, inspired him with a strong desire to participate in the advantages of trade. His father's conquests, as we have seen, had extended his territories to the Red Sea or Arabian gulf, and had given him the possession of a good harbour, whence ships might be dispatched to the

rich countries of the South and East. But his own subjects being unacquainted with the art of building and navigating vessels, he again had recourse to the assistance of Hiram. Accordingly, Tyrian carpenters were sent to build vessels at Ezion-geber on the Red Sea; whither Solomon himself also repaired to animate the workmen by his presence.

The ships of Solomon, conducted by Tyrian navigators, sailed in company with those of Hiram to some rich countries, called Ophir (probably Sofala on the eastern coast of Africa,) and Tarshish, a place by some supposed to be on the same coast, though by Bishop Lowth and others, Tartessus in Spain. The voyage required three years to accomplish, yet notwithstanding the length of time the returns were extremely profitable, consisting of gold, silver, precious stones, valuable woods, and some exotic animals, as apes and peacocks. We have no particular information of the articles exported in this trade, but in all probability the manufactures of the Tyrians, together with the commodities imported by them from other countries, were added to the corn and wine and oil of Solomon's dominions; and his ships, like the Spanish galleons, imported the bullion partly for the benefit of his commercial neighbours. Solomon also had commercial transactions with Egypt, whence he imported horses, chariots, and fine linen yarn: the chariots it appears cost six hundred, and the horses one hundred and fifty, shekels of silver each. (1 Kings 10. 28, 29; 2 Chron. 1. 16, 17.)

After the division of the kingdom, Edom being in that portion which remained to the house of David, the Jews appear to have carried on the Oriental trade from the two ports of Elath and Ezion-geber, especially the latter, until the time of Jehoshaphat, whose fleet was there wrecked. (1 Kings 22. 48; 2 Chron. 20. 36, 37.) During the reign of Jehoram, the wicked successor of Jehoshaphat, the Edomites shook off the yoke of the Jewish sovereigns, and recovered their ports. From this time the Jewish traffic through the Red Sea ceased till the reign of Uzziah; who having recovered Elath soon after his accession, expelled the Edomites thence, and having fortified the place, peopled it with his own subjects, who renewed their former commerce. This appears to have continued till the reign of Ahaz, when Rezin, king of Damascus, having oppressed and weakened Judah in conjunction with Pekah, king of Israel, took advantage of this circumstance to seize Elath; whence he expelled the Jews, and planted it with Syrians. In the following year, however, Elath fell into the hands of Tiglathpileser, king of Assyria, who conquered Rezin, but did not restore it to his friend and ally, King Ahaz. Thus terminated the commercial prosperity of the kingdom of Judah.

During the Babylonish captivity, the Jews appear to have applied themselves much more than they had previously done to commercial pursuits; for though some of them cultivated the soil, (Jerem. 29. 4, 5,) yet most others appear to have gained their subsistence by buying and selling. Hence, immediately after their restoration, there were Jewish traders, who, regardless of the Sabbath, not only bought and sold on that sacred day, (Nehem. 13. 15,) but also practised usury. (Nehem. 5. 1.)

Under the Asmonean princes, the Jews became foreign traders by sea and even pirates, but this latter practice was checked by the Romans under Pompey. Simon Maccabeus made Joppa a commodious port, (1 Macc. 14. 5,) and Herod the Great enlarged and fortified Cesarea, constructing a magnificent mole to form a harbour. During the period of the New Testament history, these ports are often mentioned, and it was most probably from them that the corn, which continued to be a

staple article of commerce with Tyre, was exported. (Acts 12. 20.)

COMMON signifies that which is profane or ceremonially unclean, (Mark 7. 2; Acts 10. 14, 15,) as also that which is ordinary or usual, as a "common death," (Numb. 16. 29,) a common evil, (Eccles. 6. 1.) It is said in Acts 2. 44, that such as believed "had all things common," that is, as to use, but not as to title.

COMMUNICANT; COMMUNICATE; COMMUNION. See **EUCCHARIST; LORD'S SUPPER.**

COMPENSATION. This was not commanded, but only allowed by the Mosaic law to be given to a person injured, that he might depart from his suit, and not insist on the legal punishment, whether corporal or capital. It is termed either כֹּפֶר *copher*, "compensation," or פְּדְיוֹן נֶפֶשׁ *pedyon nephesh*, "ransom of life." In one case it is expressly permitted, (Exod. 21. 30;) but it is prohibited in the case of murder, and also in homicide. (Numb. 35. 31, 32.) The highest fine that could be levied was one hundred shekels of silver, a large sum at that time, on account of the scarcity of the precious metals.

CONCISION. For the apostolic use of this term, see **CIRCUMCISION.**

The word "concision" occurs in Joel 3. 14, as the marginal reading of "decision," making the place of God's judgment "the valley of concision," or "threshing," instead of "the valley of decision," or "valley of Jehoshaphat," as in the text.

CONCUBINE. The word concubine with most Latin authors, and even with us at this day, signifies a woman, who, though she be not married to a man, yet lives with him as his wife; but in the Sacred Writings it is understood in another sense. There it means a lawful wife, but of a lower order, and of an inferior rank to the mistress of the family. Their issue was reputed legitimate; but in all other respects, these concubines were inferior to the primary wife; for they had no authority in the family, nor any share in household government. If they had been servants in the family before they came to be concubines, they continued to be so afterwards, and in the same subjection to their mistress as before. The father commonly provided for the children by these concubines in his own lifetime, by bestowing upon them a portion of his cattle and goods, which the Scripture calls gifts. (Gen. 25. 5, 6.) If a woman were made captive in war, she was allowed a month in which she was at liberty to mourn the loss of her parents and friends; and neither father nor son were permitted to take her as a concubine, until the expiration of that time. (Deut. 20. 10, 14.)

CONEY, יָדִי שַׁפָּחַן. The coney is joined in Leviticus 11. 5, and Deuteronomy 14. 7, with the hare, and described as chewing the cud; in Psalm 104. 18, it is spoken of as an inhabitant of the mountains and rocks; and in Proverbs 30. 26, it is represented as a gregarious and cunning animal. These descriptions Gesenius thinks agree best with the different species of the jerboa or bear mouse, the *Mus jaculus* of Linnæus. It is on the authority of Rabbinical writers that the word has, by our translators, been rendered "coney," or rabbit, which cannot be sustained, as the rabbit is not an Asiatic animal, and does not seek a rocky habitation, which is the leading characteristic by which the shaphan is distinguished. We therefore adopt the opinion of Bruce and other eminent travellers, who conceive the shaphan to be the daman, or *Hyrad Syriacus*, termed

by some the ashkoko. Mr. Bruce says, "It does not burrow and make holes as the rat or rabbit, nature having interdicted it this practice by furnishing it with feet which are round, and of a soft, pulpy, tender substance; the fleshy parts of the toes project beyond the nails, which are rather broad than sharp, much similar to a man's nails ill grown, and these appear rather given for defence of the soft toes than for any active use in digging, to which they are by no means adapted. The total length of the animal as it sits is seventeen inches. It has no tail; and gives, at first sight, the idea of a rat rather than any other creature. The colour is gray, mixed with reddish brown, and the belly white. All over the body are scattered hairs, strong and polished, like mustachios; these are, for the most part, two inches and a quarter in length. The ears are round, not pointed; the upper jaw is longer than the other. It lives upon grain, fruit, and roots; and certainly chews the cud. They do not appear to have any cry, nor do they stand upright in walking, but seem to steal along as if in fear, advancing a few steps at a time, and then pausing. They have something very mild, feeble-like, and timid in their deportment; are gentle, and easily tamed, though when roughly handled at first they will bite."

The flesh of the shaphan was forbidden the Hebrews, and it appears that the Mohammedans and Christians of the East, at the present day, abstain from the flesh of the daman.

CONFECTION, CONFECTIONER, רֹקַח *rokach*.

This word appears to have been used to denote a preparer of ointments, a perfumer, an apothecary, as well as a confectioner. These various arts were probably practised by the same person among the Hebrews in early times, but sometimes confectionary was made by females. (1Sam. 8. 13.)

In the paintings on the Egyptian monuments we find persons engaged in the preparation of confectionary of various sorts, particularly piped sweetmeats, which are still highly esteemed by the Hindoos; and we also observe that at entertainments some light confections with wine were served up before dinner. See APOTHECARY.

CONFESSION, the open and penitential acknowledgment which a person makes of his sins. Among the Jews it was the custom on the annual feast of expiation, for the high priest to make confession of sins to God in the name of the whole people; besides this general confession, the Jews were enjoined, if their sins were a breach of the first table of the law, to make confession of them to God; but violations of the second table were to be acknowledged to their brethren. Among the modern Jews some scourge one another at the confession. Confession may be considered as a part of prayer, and includes, 1. A confession of our subjection to, and constant dependence on God. 2. A confession of our sins both original and actual, in thought, life, omission, and commission. 3. A confession of our desert of punishment, and our unworthiness of mercy. 4. A confession or humble representation of our wants and sorrows of any kind.

Confession may also be considered as a relative duty, or the acknowledgment of any offence we have been guilty of against a fellow-creature.

The private or auricular confession of later centuries in the Romish church is quite different from the confession made to penitentiary presbyters in earlier times. Confession was not made to them with a view of obtaining forgiveness from God; but in order to procure resto-

ration to the forfeited privileges of the offended church. It was considered, indeed, useful and necessary to seek for both kinds of forgiveness at the same time; but no Christian minister claimed the power of pronouncing pardon in the name of God.

The regular establishment of the system of private confession and absolution is usually ascribed to Leo the Great, who represented not merely any particular penitentiary priests, but every priest as possessing the power and authority to receive confession, to act as an intercessor with God on behalf of the penitent, and to declare forgiveness of sins in the name of God. But even the system introduced by this pontiff differed from that which has prevailed since the thirteenth century in the Roman church, inasmuch as the confession of sins was left to every one's own conscience; nor was the priest supposed to possess in himself any (delegated) power of forgiving sins. And subsequently to the age of Leo, it was considered as a matter quite at the option of an offender, either to confess his sins to a priest or to God alone. Riddle.

CONFIRMATION is a rite of the church whereby a person arrived at years of discretion undertakes the performance of the baptismal vow made for him by his godfathers and godmothers. It is administered only by bishops, and consists in the imposition of hands on the head of the person confirmed. This rite of confirmation or imposition of hands with prayer, for the full admission of baptized persons into the church, is observed by nearly all the churches of Christendom at the present day, in imitation (to say the least) of an apostolical practice recorded in the New Testament. It appears from the sacred history that the Apostles conferred imposition of hands upon persons previously baptized, and no other. Thus when the Samaritans had been converted and baptized by Philip the deacon, the Apostles who were at Jerusalem sent unto them Peter and John, "who when they were come down, prayed for them, that they might receive the Holy Ghost, (for as yet he was fallen upon none of them; only they were baptized in the name of the Lord Jesus;) then they laid their hands on them, and they received the Holy Ghost." (Acts 8. 14-17.) Thus also it is said of the Ephesian disciples that when they heard what the Apostle Paul said, "they were baptized in the name of the Lord Jesus. And when Paul had laid his hands upon them, the Holy Ghost came on them, and they spake with tongues and prophesied." (Acts 19. 5,6.) It is, however, evident that, in these passages, allusion is made to the extraordinary or miraculous gifts of the Spirit imparted by the Apostles, as the narratives are explained by Grotius and other interpreters, (see Acts 5. 12-16.) Hence it is said, immediately after the former of these accounts, "When Simon saw that through laying on of the Apostles' hands the Holy Ghost was given, he offered them money, saying, 'Give me also this power, that on whomsoever I lay hands, he may receive the Holy Ghost.'" (8. 18,19.) And hence, also, we may, perhaps, rightly account for the fact that in many other histories of baptism during the time of the Apostles, no mention whatever is made of a subsequent imposition of hands. Thus in the history of baptism of three thousand men on the day of Pentecost after the preaching of Peter, although the Apostle promised them that they should receive the gift of the Holy Ghost upon their baptism, yet nothing is said respecting any laying on of hands. (Acts 2. 38-42.) Nor does this ceremony appear to have taken place at the baptism of Lydia and her household, (Acts 16. 15,) or of the Philippine jailor and his family. (Acts 16. 31-33.) In Hebrews 6. 2, mention is

made of "the doctrine of laying on of hands" immediately after that of "the doctrine of baptism;" but there is nothing in the passage to prove that these two ceremonies were immediately connected with each other; and many expositors understand the imposition of hands to be that practised in healing the sick, or in ordination to the ministry. (Mark 16. 18; Acts 6. 6; 9. 12,17.)

In Acts 15. 41, we read that St. Paul "went through Syria and Cilicia confirming the churches," upon which Dr. Burton remarks, "The great Apostle travelled through Syria and Cilicia; and the expression used by St. Luke of his confirming the churches in those countries, proves that he must have planted these churches at an earlier period. He now confirmed them; that is, he gave them such regulations as were necessary for their welfare. Wherever deacons were wanted, he ordained them; he appointed others to the office of elders; and there can be little doubt, that to some or all of these ministers he imparted those miraculous gifts of the Spirit, which were so useful for the instruction of the converts, and furnished such convincing evidence of the Gospel." We have no proof, however, that the ordination of ministers was included in this act of "confirming the churches;" nor have we any reason to suppose that the ordination or appointment of deacons or presbyters would have waited for an apostolical visit. When St. Paul found a deficiency of ministers in any of the churches which he visited, he, doubtless, recommended those churches to nominate some persons fit for the office, and then probably assisted at their ordination or solemn designation to it, before he proceeded on his journey. But, in the absence of the Apostle, the officiating presbyters would themselves have supplied the deficiency with the consent of their respective churches.

At an early period of ecclesiastical history, we find confirmation administered in immediate connexion with baptism. Throughout the East it still accompanies baptism; but the Romanists make it a distinct independent Sacrament. The age of the person to be confirmed does not appear to be fixed in the Church of England, unless implied in the term "years of discretion." Riddle.

CONGREGATION. See **ASSEMBLY**.

CONQUER; CONQUEROR. See **ARMS, ARMY, ARMOUR**.

CONSCIENCE, the moral sense, or that capacity of our mental constitution, by which we irresistibly feel the difference between right and wrong. As South observes, "It implies a double or joint knowledge, namely, one of a divine law or rule, and the other of a man's own action. The peculiar office of conscience is to arbitrate and direct all our other powers and propensities according to the will of God; and there is a certain feeling of violence and disorder when its dictates in this capacity are not obeyed. Its legitimate business is to prescribe that man shall be as he ought, and do as he ought. And its existence within us is an evidence for the righteousness of God, which keeps its ground amid all the disorders and aberrations to which human nature is liable. For as the existence of a regulator in a disordered watch shows the design of its maker, that its movement should harmonize with time; so conscience shows the design of our Creator that all our movements should harmonize with truth and righteousness."

Conscience has also been defined as that natural or common principle, which instructs men of all countries and religions in the duties to which they are all alike obliged. There seems to be something of this in the minds of all men. Even in the darkest regions of the

earth, and among the rudest tribes of men, a distinction has ever been made between just and unjust, a duty and a crime.

CONSECRATION, the act of devoting or setting apart anything to the worship or service of God. The Mosaic Law ordained that all the first-born, both of man and beast, should be sanctified or consecrated to God. The whole race of Abraham, was, in a peculiar manner, consecrated to his worship; and the tribe of Levi, and family of Aaron, were more immediately consecrated to the service of God. (Exod. 13. 2; 12. 15; Numb. 3. 12; 1 Peter 2. 9.) Besides these consecrations ordained by God, there were others which depended on the will of men, and were either to continue for ever or for a time only. Hannah, the mother of Samuel, offered her son to the Lord, to serve all his life-time in the tabernacle. (1 Sam. 1. 11; Luke 1. 15.) David and Solomon devoted the Nethinims to the service of the Temple for ever. (Ezra 8. 20.) The Hebrews sometimes devoted their fields and cattle to the Lord, and sometimes the spoils taken in war. (Levit. 27. 28,29.)

The New Testament also furnishes us with examples of consecration. Christians in general are esteemed as consecrated to the Lord, and are a holy race, a chosen people. (1 Peter 2. 9.) Ministers are in a peculiar manner consecrated or set apart, and so are places of worship; the forms of dedication varying, according to the views of different bodies of Christians. It does not appear that we have any particular accounts of the formal consecration of churches, earlier than the fourth century; a fact which may be easily accounted for, by considering the circumstances of the times before Constantine.

CONSTELLATION, a cluster of stars. Considerable doubt and uncertainty must ever attend our efforts to determine the exact meaning of the astronomical terms used in the Book of Job and other parts of the Sacred Writings; for though many ingenious hypotheses have been formed by learned men, we are not sufficiently acquainted with the origin of the terms in question, to trust with any confidence to their conjectures, however plausible they may appear. We know sufficiently well that the worship of the host of heaven, was one of the earliest forms of idolatry, and that the worshipping and deifying of early kings and heroes was mixed up with it, by giving them an imaginary place amongst the stars; but this knowledge avails us little when we have to ascertain what particular star or constellation is referred to by the inspired writers.

The mention of stars or constellations in such a way as to give any reasonable hope of identification, occurs chiefly in the Book of Job; and we shall therefore borrow from the Rev. Professor Lee some observations on the subject, which seem well considered, and as near the truth as the nature of the question will admit.

"The Hebrew words *עֵשׂ* *Ish*, *כִּסֵּל* *Kisel*, and *כִּימָה* *Kemah*, which occur in Job 9. 9; 38. 31,32, and which our translators have rendered, respectively, Arcturus, Orion, and the Pleiades, have given great trouble to commentators, and still stand in need of elucidation. Schultens is of opinion, that heathen fable ought not to be had recourse to, for the purpose of explaining the sacred writers generally. This is, perhaps, saying too much, as heathen practices certainly are occasionally mentioned by name; nevertheless, I cannot help holding with him to a certain extent. I mean, we must not make heathen principles, nor yet heathen practices, the criterion by which we measure either the sentiments or the expressions of holy men. But I think we may, when we

find that certain customs or modes of expression have a common origin—adduce the one in illustration of the other; but not to direct and overrule it. In the present case, our patriarch lived in a country bordering on Chaldaea; a place in which astronomy was certainly cultivated in very ancient times. It would be necessary in Job's country, and actually was the practice, in travelling over the deserts, to observe certain fixed stars. Now, supposing astronomy to have been highly cultivated in Chaldaea, and the constellations to have received certain names there; what impropriety could there be in Job's using those names? or, indeed, in our using, perhaps, the same names at this day?

שׁוּ Ish, the Professor thinks is Arcturus, taken in an extended sense for the constellations of Boötes and the Great Bear, four of the stars of which latter are termed by the author of an Arabic work, entitled the "Kamooa," the sons; and the remaining three constitute the daughters. See ARCTURUS.

כִּסִּיל *Kisel*, appears to signify, according to Proverbs 14. 16; 19. 1, compared with 15. 20; 21. 20; 28. 6, a confident self-sufficient insolent rich man, or something very nearly like this. Such in all probability was Nimrod; who, as many of the ancients have thought, was deified after his death, and placed among the stars under the name of Orion, from the Hebrew or Chaldean אֹר *Or*, and perhaps so called, on account of his wealth and splendour. In the Hebrew Scriptures, Nimrod is spoken of as a fierce and warlike king, (Gen. 10. 8-10,) so much so, that his character is there proverbial. Much the same is said of Orion, by heathen authors. This constellation is occasionally termed Aljerzá by the Arabs; who, like Homer, give him a dog for a companion; which seems to identify him with the great hunter of Scripture. A passage in an Arabic author reads thus: 'And it' (i. e. Sirius) 'is in its rising opposite Aljerzá; and they call it the dog of the Giant.' They represent Sirius as a dog to it, following his master.

כִּמָּה *Kemah*. This word occurs in Job 9. 9; 38. 31; and Amos 5. 8. The passage in Amos is apparently a citation from the passage in Job 9. 9. The same word is found both in the Syriac and Chaldean, and has been taken to signify the same constellation, the Pleiades. The etymology of the word receives some light from the Arabic root, signifying a heap or an accumulation; so called, perhaps, from the cluster of stars which the constellation exhibits. As it is said to announce by its rising the season of sowing, of the production of fruits, of the harvest, and ingathering of these, it was fabled by the poets, as employed in carrying ambrosia to Jupiter. Hence, perhaps, 'the sweet influences' ascribed to them. The 'bands of Orion' are supposed to indicate the influences supposed to be exercised by this constellation in bringing on the winter season, and so binding up nature as it were in a state of sterility. Because, just as the Pleiades by rising early in the spring, brought on the fruitful seasons, so Orion by rising in the autumn, was said to bring on the winter.

מִזְרֹחַ *Mizroth*, (Job 38. 32,) and מַזְלֹת *Mazzaloth*, (2Kings 23. 5,) where it occurs in connexion with Baal, sun, moon, and all the host of heaven. It is extremely probable that this word denotes either a star or a constellation. From its occurring immediately after the mention of the moon in the latter passage, one would suppose it to be a general name for the planets; and as some of these, such as Jupiter, Saturn, and others, have attendant moons, this might account for its being found in connexion with שׁוּ *Ish*, in Job 9. 9. The attempts of Michaëlis, and others, to ascertain what precise star is meant, have proved unavailing. It is most probable a con-

stellation was intended, but whether northern or southern, cannot be determined." The opinion that Mazzaloth denotes Sirius, or the dog-star, deserves further consideration. There is no doubt that the heliacal rising of this star was observed in Egypt from an early period, and was blended with their mythological system. Belzoni was asked, when he visited the pyramids, what he saw? He replied that, when he looked up, he observed Sirius, or the dog-star. We may, from this remark, obtain some further glimmering of light as to the object of these stupendous structures, and find that they were built for the observance of rites in connexion with some very ancient astronomical notions.

The Greeks and Latins, whose notions of astronomy were derived from the East, represent Arctus, *Ἀρκτος*, the Bear, as originally a daughter of Lycaon, and named Callisto; who, being pregnant by Jupiter, was changed into a bear by Juno, and was, with her son, finally translated to the heavens. Boötes, this son, was termed Arctophylax; while Arcturus, who is said to have been the father of Erigone, is the name of another star, situated near the tail of the Great Bear. Whether Callisto may have been said by the Chaldeans hence to have consoled her sons, taking this Arcturus for one of them; or whether some other such story as that of the Hyades bemoaning the fate of their brother Hyas, or that of the Pleiades weeping for their father Atlas, may be referred to, cannot be determined; but some such generally current story seems to be connected with the phraseology in Job 38. 32. See ASTRONOMY AND ASTROLOGY.

CONTENTMENT is a disposition of mind, in which our desires are confined to what we enjoy without murmuring at our lot, or wishing ardently for more. It stands opposed to envy, (James 3. 16,) to avarice, (Heb. 13. 5,) to pride and ambition, (Prov. 13. 10,) to anxiety of mind, (Matt. 6. 25, 34,) to murmurings and repinings. (1Cor. 10. 10.) Contentment does not imply unconcern about our welfare, or that we should not have a sense of anything uneasy or distressing; nor does it give any countenance to idleness, or prevent diligent endeavours to improve our circumstances. It implies, however, that our desires of worldly good be moderate; that we do not indulge unnecessary care, or use unlawful efforts to better ourselves; but that we acquiesce with, and make the best of our condition, whatever it be. Contentment arises, not from a man's outward condition, but from his inward disposition, and is the genuine offspring of humility, attendant with a deep sense of the particular providence of God, the recollection of past mercies, and a just estimate of the true nature of all earthly things. Motives to contentment arise from the consideration of the rectitude of the Divine government, (Psalm 97. 1, 2,) the benignity of the Divine Providence, (Psalm 145,) the greatness of the Divine promises, (2Peter 1. 4,) our own unworthiness, (Gen. 32. 10,) the punishments we deserve, (Lam. 3. 39, 40,) the reward which contentment brings with it, (1Tim. 6. 6,) the speedy termination of all our troubles here, and the prospect of eternal felicity in a future state. (Rom. 5. 2.)

CONTRACTS AND COVENANTS. Various solemnities were used in the conclusion of contracts or covenants among the ancient Hebrews. Sometimes it was done by a simple joining of hands, (Prov. 11. 21; Ezek. 17. 18,) and thus the Hindoos, to this day, ratify an engagement, by one person laying his right hand upon that of the other. Sometimes, also, a covenant was ratified by erecting a heap of stones, to which an appro-

prate name was given; (Gen. 31. 44-54;) that made between Abraham and the king of Gerar was ratified by the oath of both parties, also by a present from Abraham to the latter of seven ewe lambs, and by giving a name to the well which had occasioned the transaction. Festivities appear to have accompanied the ceremonies attending covenants, for Isaac and Abimelech made a feast on concluding their covenant. (Gen. 26. 30; 31. 54.) A similar practice also obtained among the heathen nations. The Scythians are said to have first poured wine into an earthen vessel, and then the contracting parties, cutting their arms with a knife, let some of the blood run into the wine, with which they stained their armour; after which they themselves, together with the other persons present, drank of the mixture, uttering the direst maledictions on the party who should violate the treaty. Another mode of ratifying covenants was by the superior contracting party presenting to the other some article of his own dress or arms. Thus, "Jonathan stripped himself of the robe that was upon him, and gave it to David, and his garments, even to his sword, and to his bow, and to his girdle;" (1Sam. 18. 4;) and at the present day, the highest honour which a king of Persia can bestow upon a subject, is to cause himself to be disapparelled, and to give his robe to the favoured individual. In Numbers 18. 19, mention is made of a covenant of salt. The expression appears to be borrowed from the practice of ratifying federal engagements by salt; which, as it not only imparted a relish to various kinds of viands, but also preserved them from putrefaction and decay, became the emblem of incorruptibility and permanence. It is well known that the Asiatics deem the eating together as a bond of perpetual friendship; and as the salt is now, as it was anciently, a common article in all their repasts, it may be in reference to this circumstance that a perpetual covenant is termed a covenant of salt; because the contracting parties ate together of the sacrifice offered on the occasion, the whole transaction was considered as a league of perpetual friendship. See OATHS.

Among the Hebrews, and, long before them, among the Canaanites, the purchase of anything of consequence was concluded, and the price paid, at the gate of the city, as the seat of judgment, before all who went out and came in. (Gen. 23. 16,20; Ruth 4. 1,2.) From the latter book, we also learn that on some occasions of purchase and exchange, the transfer was confirmed by the proprietor plucking off his shoe at the city gate, in the presence of the elders and other witnesses, and handing it over to the new owner.
